Mais ce qui se produit aujourd'hui, c'est que leurs camions, par exemple, prennent des marchandises à Moncton et en font la livraison à Fredericton au Nouveau-Brunswick et

[*Text*]

railroad. The solicitation is done by railroad people, the freight moves on a railroad bill of lading, but they are in direct competition with the for-hire truckers. The only difference is that they get $1 plus 20 cents and we only get $1. We feel it is very unfair. This applies in all provinces.

Mr. McGrath: Are CN trucks hauling LCL freight in the Atlantic Provinces?

Mr. Palmer: Yes.

Mr. McGrath: In all four provinces?

Mr. Palmer: Yes.

Mr. McGrath: You state in your brief that the MFRA tends to inhibit competition. I gather you would prefer that the MRFA were dispensed with, but on the other hand you feel that if you are to stay in business you must come under it. Is that correct?

Mr. Palmer: We feel that all we want is to be treated equally. We have our own ideas between us, as truckers and as Maritimers, on whether they should stay or should not stay, but we do not feel that is the big question. If it is going to be there, then we should be a part of it. If it is going to be taken off, then we are still equal. I feel that the subsidy that is being paid goes back a long ways. I think you are all familiar with why it was put on in the first place.

Mr. McGrath: Under whose franchise do the CN trucks operate in the various provinces?

Mr. Palmer: Each time a rail line is abandoned they apply to the motor carrier board in whichever province it may be, and so far the right has always been granted to them to run trucks to serve the same area that the rail line served.

Mr. McGrath: Did you make representations at the time of these hearings opposing this CN application?

Mr. Palmer: We have opposed every application of CNR. We have not won one yet, but we have opposed them all.

[*Interpretation*]

ne voient jamais le chemin de fer. La réclame est faite par les gens des chemins de fer, les marchandises sont transportées en vertu d'une lettre de voiture ferroviaire, mais ces gens sont en concurrence directe avec les exploitants de camions de louage. La seule différence c'est qu'ils reçoivent une dollar plus vingt cents et nous n'obtenons nous qu'un dollar. Nous croyons que c'est injuste. Ceci arrive dans toutes les provinces.

M. McGrath: Est-ce que les camions du National Canadien font le transport des chargements incomplets dans les provinces Atlantiques?

M. Palmer: Oui!

M. McGrath: Dans les quatre provinces?

M. Palmer: Oui!

M. McGrath: Vous dites, dans votre mémoire, que la Loi sur les taux de transport des marchandises dans les Maritimes tend à mettre fin à toute concurrence. Je suppose que vous préférez donc mettre de côté les dispositions de cette Loi, mais d'autre part que vous êtes d'avis que si vous voulez rester dans le monde des affaires, il vous faut être obligés par ces dispositions n'est-ce pas?

M. Palmer: Nous sommes d'avis que tout ce que nous voulons, c'est d'abord un traitement égal. Nous avons nos propres idées entre nous, entre camionneurs et résidents des Maritimes à savoir si on devrait y demeurer ou pas, mais ce n'est pas là la question qui importe. Si ce subside doit être donné, nous devrions aussi en bénéficier. S'il doit disparaître, donc nous sommes sur un pied d'égalité. Je suis d'avis que le subside payé remonte loin. Je crois que vous savez tous pourquoi on l'a donné, tout d'abord.

M. McGrath: En vertu de quelle concession les camions du National Canadien fonctionnent-ils dans les différentes provinces?

M. Palmer: Chaque fois qu'une ligne ferroviaire est abandonnée, il présente une demande à la Commission de transport par route de chacune des provinces; jusqu'ici, ils ont toujours eu l'autorisation d'un service de camionnage pour desservir la même région desservie par la ligne ferroviaire.

M. McGrath: Est-ce que vous avez fait des instances au moment de ces audiences pour vous opposer à cette demande du National Canadien.

M. Palmer: Nous nous sommes opposés à toute demande présentée; nous n'avons jamais gagné jusqu'ici, mais on s'est opposé chaque fois.

[*Texte*]

Mr. McGrath: What effect would the proclamation of Part III of the Transport Act have on the industry?

Mr. Palmer: I would like to give you my views and I would like to hear Ken add his as a Canadian. We feel that at present any company operating in more than one province has to abide by the laws of each and every province. We have felt for a long while that there should be one law governing licencing, fuel taxes, and whatnot, across Canada. We feel that if the industry is going to grow it cannot work by 10 different laws. We feel it will certainly help the trucking industry.

Mr. MacLaren: I might add to what Mr. Palmer has said, because this is one of the thing that we are working on at the present time. Hard representations have been made to the government by the Canadian Trucking Associations Inc. to have Part III implemented. The industry is unanimous across the country that we want Part III implemented, we want federal control over trucking. The reasons are numerous. The position of a trucker seeking extra-provincial operating authority in two or three provinces is that he has to make an application in each province and he often runs up against local opposition which has nothing to do with the need for the movement as an interprovincial movement.

You often have one provincial regulatory authority granting the authority, while another one will grant it with restrictions. The situation is developing where there is much more international trade, as I referred to earlier, or cross border trade with the United States. There are problems inherent in this. We feel that only the Canadian Transport Commission is in a position to deal on an equal basis with the ICC. I could really go on and on forever enumerating reasons why the trucking industry wants Part III.

We only want federal control—and this is perhaps interesting—over commerce that is moving interprovincially. In other words, we are asking that Ottawa and the provinces agree to draw the line. Any of you who are lawyers may recall the Winner case, which was decided in the Privy Council back in 1952 or 1954. The decision in that case was that if a motor carrier crossed an international boundary the whole of the undertaking would then come under federal jurisdiction. Back in the early 1950s Ottawa did not have the machinery to regulate trucking, so

[*Interprétation*]

M. McGrath: Quels effets aurait la proclamation de la partie III de la Loi sur les transports sur l'industrie?

M. Palmer: Je voudrais vous faire part de mon point de vue et je voudrais aussi que Ken nous fasse part de son point de vue en tant que Canadien. Nous sommes d'avis, en ce moment, que toute société qui fonctionne dans plus d'une provinces doit s'en tenir aux lois de chacune des provinces. Pendant longtemps nous étions d'avis qu'il devrait y avoir une loi régissant l'émission des permis, des impôts pour l'essence, et autres, à travers le Canada. Nous croyons que si l'industrie va croître, elle ne peut opérer en vertu de dix lois différentes. Nous croyons que cela aidera l'industrie du camionnage.

M. MacLaren: Je voudrais ajouter à ce qu'a dit M. Palmer, parce que c'est une des questions qui nous occupe présentement. Des instances ont été faites auprès du gouvernement par l'Association Canadienne du Camionnage pour la mise en vigueur de la partie III. L'industrie est unanime à travers le pays pour que cette troisième partie soit mise en vigueur, car nous voulons le contrôle fédéral sur le camionnage. Les motifs sont nombreux. Lorsqu'un camionneur essaie d'obtenir une autorité dans deux ou trois provinces, il doit présenter une demande à chacune des provinces et bien souvent il doit faire face à une opposition locale qui n'a rien à voir aux besoins de transport d'une province à l'autre.

Vous voyez souvent une autorité provinciale qui accorde cette autorité, tandis que l'autre l'accordera avec des restrictions. La situation, comme je vous en ai parlée plus tôt, nous avons de plus en plus un commerce international ou outre-frontière avec les États-Unis. Il y a des problèmes, et cela à notre avis, seule la Commission canadienne des transports est en mesure d'agir et de traiter directement avec l'ICC. Je crois pouvoir vous donner différentes raisons pour laquelle l'industrie du camionnage voudrait la mise en vigueur de la troisième partie.

Nous voulons le contrôle fédéral pour le commerce interprovincial; et ceci est peut-être intéressant. En d'autres mots, ce que nous demandons c'est qu'Ottawa et les provinces conviennent d'établir une ligne. Vous qui êtes avocat, vous vous souvenez, sans doute, du cas Winner qui a été décidé au Conseil privé en 1952 ou 1954. La décision fut alors que si un transporteur routier franchissait une frontière internationale, le tout relevait de la compétence du gouvernement fédéral. Au début des années cinquante, Ottawa n'avait pas les rouages pour régir le

[*Text*]

they immediately passed the Motor Vehicle Transport Act delegating their authority to the provincial boards. What we want now is a division which is not strictly along the lines of the constitutional division. We want—and Section 29 of the National Transportation Act, Part III, permits this, I think—Ottawa to regulate the flow of commerce across provincial boundaries. In other words, they will only regulate part of an undertaking, or that part of it that involves interprovincial movement. We are calling for a system that is very close to the ICC system, where the federal authorities in the United States regulate commerce moving across state boundaries.

The Chairman: A supplementary, Mr. Trudel?

Mr. Trudel: Mr. Chairman, I would like to direct this question to Mr. Palmer. You spoke about subsidies, I believe, in answer to Mr. McGrath, on the order of $50,000 per year. Is that correct?

Mr. Palmer: Yes.

Mr. Trudel: Is this in the form of a freight reduction rate?

Mr. Palmer: No. I probably should explain that. In the last fiscal year subsidies paid under MFRA in the Atlantic Provinces were in excess of $14 million. Of this $14 million, better than $12 million was paid to CNR. We have always said that some of this subsidy paid for the freight moved on trucks, not on rail. We asked that this be checked out and the auditors for the CNR in a preliminary audit said that on at least $50,000 of the subsidy paid the freight did not see the railroad at all, it moved entirely on trucks.

Mr. Trudel: The reason I asked the question, Mr. Chairman, is that in your brief you mention that you get 73.8 per cent of the ton mile traffic moved on trucks. I am trying to relate this figure to the subsidy of $14 million and it just does not seem to have any bearing on it. In the first paragraph of your brief you say that 73.8 per cent of the total per ton mile was moved by trucks.

Mr. MacLaren: Oh, no, that statement describes the for-hire trucking industry and compares it to the whole of the trucking industry. As you know, there are private

[*Interpretation*]

camionnage, et alors ils ont institué la Loi sur le transport par véhicule à moteur qui déléguait leur autorité aux commissions provinciales. Ce que nous voulons maintenant, c'est une répartition, non pas suivant le partage constitutionnel, nous voulons, et à l'article 29 de la Loi nationale sur les transports, partie III, le permet, qu'Ottawa régisse le flot de commerce interprovincial. En d'autres termes, ils ne seront responsables que d'un aspect de l'entreprise ou de cette partie qui touche le mouvement interprovincial. Nous voulons un système analogue au système du ICC où l'autorité fédérale aux États-Unis régit le commerce à travers les frontières des États.

Le président: Une question supplémentaire, monsieur Trudel?

M. Trudel: Je voudrais poser ma question à M. Palmer. Vous parliez de subsides, en réponse à M. McGrath, vous parliez de l'ordre de $50,000 par année. C'est juste?

M. Palmer: Oui.

M. Trudel: Est-ce que cela est sous la forme d'une diminution des taux?

M. Palmer: Non. Peut-être devrais-je vous expliquer. Au cours de la dernière année financière, les subventions payées en vertu de la Loi sur le transport des marchandises dans les provinces Atlantiques étaient de plus de 14 millions de dollars. De ces 14 millions, près de 12 millions furent payés au National Canadien. Nous avons toujours prétendu qu'une partie des subsides étaient pour des déplacements par camion et non pas par chemin de fer. Nous avons demandé qu'il y ait vérification et les vérificateurs du National Canadien disent qu'après une première étude qu'au moins $50,000 de subventions ont été payées pour l'expédition de marchandises et qu'elles ont été expédiées exclusivement par camion et jamis par chemin de fer.

M. Trudel: La raison pour laquelle j'ai posé la question, monsieur le président, c'est que, dans votre mémoire, vous dites que vous avez 73.8 p. 100 du trafic des tonnes-milles, transporté par camion. Alors, j'essaie de rattacher ces chiffres aux subsides de 14 millions de dollars et cela ne semble pas avoir de rapport. Par votre mémoire, au premier alinéa, vous dites 73.8 p. 100 du total par tonne-mille sont transportés par camion.

M. McLaren: Oh non, cette déclaration vous décrit ce qu'il en est pour l'industrie de camionnage à forfait et la compare à l'ensemble de l'industrie du camionnage. Comme

[*Texte*]

trucks such as delivery trucks in cities, Simpsons, the big stores and the supermarkets all have trucks that they own. That are not the for-hire regulated truckers.

Mr. Trudel: I agree.

Mr. MacLaren: We are saying there that the for-hire trucks, which are only 6 per cent of the total truck registrations, account for 73.8 per cent of the total intercity movement of freight by truck.

Mr. Trudel: This is correct. But I was also trying to relate the fact that in your statement you mention that the biggest line will have the biggest volume. Is that what you were trying to say, or is that what you said, that some of the Eastern truck lines you mentioned were the bigger operators. Did you not mention that those owned by the railroad were the bigger operators in the area?

Mr. Palmer: CNR owns Eastern Transport Limited, that is a trucking company here that is owned by CNR. They are not getting a subsidy. The only trucks that are getting a subsidy are the trucks that operate under CNTL, which is an arm of the railroad.

Mr. Trudel: Right.

Mr. Palmer: We are saying that a CNTL truck picks up a shipment of freight in Moncton on a railroad bill of lading and delivers it in Fredericton and it never sees a railroad station or a rail car, but the subsidy is still paid on that movement; whereas when the for-hire trucker picks up the same shipment and delivers it to the same place they get the rate and that is it.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Rose?

Mr. Rose: I thought Mr. Skoberg was ahead of me but I will go ahead anyway. He will not mind. Mr. Palmer, historically when your companies began business in the Maritimes there was preferential treatment as far as the railways were concerned. Is that so?

Mr. Palmer: Yes.

Mr. Rose: Therefore, you felt it was economically possible for your companies to compete at that time. You went into it under those conditions.

[*Interprétation*]

vous le savez, il y a des camions privés tels que les camions de livraison dans les villes, Simpsons, tous les grands magasins et les super marchés ont leurs propres camions, ce ne sont pas des camions de louage.

M. Trudel: D'accord.

M. McLaren: Ce que nous disons ici, c'est que pour les camions de louage, qui ne représentent que 6 p. 100 des permis, cela représente 73 p. 100 de l'ensemble du transport interrurbain par camion.

M. Trudel: C'est juste. Mais j'essaie aussi de rattacher ce fait dans votre déclaration, lorsque vous parlez de certaines des lignes de camionnage les plus importantes ou celles qui ont le plus grand volume d'expéditions. Dans les lignes de l'Est dont vous parlez, certains sont des exploitants les plus importants? Est-ce que vous n'en avez pas parlé? C'est la propriété des chemins de fer qui sont les plus grands exploitants de la région?

M. Palmer: Le National Canadien est propriétaire de *Eastern Transport*, une maison de camionnage, propriété du National Canadien, et ils n'obtiennent pas de subventions. Ils obtiennent leurs subventions où les camions du CNTL soit une émanation du chemin de fer.

M. Trudel: C'est exact.

M. Palmer: Ce que nous disons, c'est qu'un camion du CNTL prend une livraison de marchandises à Moncton avec une lettre de voiture ferroviaire et en fait la livraison à Fredericton, et ces marchandises n'ont jamais vu autre chose qu'un camion et il y a des subventions qui sont payées; alors qu'un camion à forfait qui fait la même livraison d'un colis, n'obtient pas ces mêmes subventions.

M. Trudel: Merci beaucoup, monsieur le président.

Le président: Monsieur Rose?

M. Rose: Je croyais que M. Skoberg avait la parole avant moi. Peu lui importe; donc, je prends la parole. Monsieur Palmer, sur le plan historique, lorsque votre industrie a commencé son entreprise dans les Maritimes, il y avait un traitement préférentiel pour les chemins de fer n'est-ce pas?

M. Palmer: Oui.

M. Rose: Par conséquent, il était possible, sur le plan économique, pour vous et votre compagnie, de concurrencer, et vous avez commencé alors dans de telles conditions?

[*Text*]

Mr. Palmer: I think in the case of most trucking companies—and I think this applies to North America, but it is definitely so in the Atlantic Provinces—that it was not a planned business or a planned venture. They started out by hauling fish or potatoes, or something, to market and getting a load of fertilizer or sugar or roofing, or something, to bring back. It was because our service was better. It was a case of your neighbour wanting to know if you would bring this or that back for him, and in this way you bought two crops. I think that probably every company that M.M.T.A. represents was started in that manner. We did not plan on taking on the CNR, but all at once we were caught up in it and now we are in competition with them.

Mr. Rose: In other words, you started out in a very small way and gradually as you grew and as business increased you reached the point where you are now in competition with the rail carriers.

Mr. Palmer: That is correct.

Mr. Rose: Do you know if any of the companies that you represent traditionally lose money on their lines?

Mr. Palmer: I think I can answer that. In the Atlantic Provinces there is seldom a month goes by that a small trucking company does not go bankrupt, so I am sure they have lost money. That could be due to competition, poor management or under-capitalization. It could be due to a lot of things. I think we have found in the trucking industry that when we had one truck and drove it ourselves and worked day and night seven days a week and did the bookkeeping out of our hip pocket we could compete with the railroads without the subsidy. As we got bigger and got more trucks and had to hire people to work for us—they do not seem to want to work that long and that hard—we have found that we cannot compete, but we have also found that the people want us here competing.

Mr. Rose: You really did not answer my question. I asked you if your major trucking lines traditionally lose money in this part of the country?

[*Interpretation*]

M. Palmer: Je pense que la plupart des exploitations de camionnage, et cela vaut pour l'Amérique du Nord, mais sûrement pour les provinces de l'Atlantique, ne furent pas des entreprises conçues dans leurs moindres détails. Nous avons commencé par le transport de poisson, de pommes de terre ou d'autres produits vers le marché, et d'obtenir du sucre ou des fertilisants ou quelque chose d'autre pour le retour. Nos services étaient meilleurs. Il n'y avait personne qui exploitait ceci. Tout d'abord, votre voisin voulait savoir si vous pouviez rapporté telle marchandise pour lui, et de cette façon vous achetiez deux récoltes. Je pense que chacun des membres de notre Association a commencé de cette façon. On ne prévoyait pas ainsi faire concurrence au National Canadien, mais nous avons été pris et maintenant, nous faisons concurrence au National Canadien.

M. Rose: En d'autres mots, vous avez commencé peu à peu, cela a augmenté, et maintenant vous faites concurrence avec le transport ferroviaire.

M. Palmer: C'est juste.

M. Rose: Savez-vous s'il y a des sociétés que vous représentez qui, sur le plan traditionnel, perdent de l'argent de leur ligne?

M. Palmer: Je pense pouvoir répondre à votre question. Dans les provinces de l'Atlantique, à peine un mois s'écoule pendant lequel on n'a pas une petite société de camionnage qui fasse faillite. Elles ont perdu de l'argent, c'est peut-être dû à la concurrence, à une mauvaise administration, en vertu de capitalisation ou autre chose, mais ce que nous trouvons dans l'industrie du camionnage, c'est lorsque nous avons un camion et que nous utilisons toujours le même, que nous travaillons jour et nuit, sept jours par semaine et que nous faisons la comptabilité; nous pouvons alors concurrencer avec les chemins de fer sans subvention. Au fur et à mesure où nous avons plus de camions, où nous prenons plus d'importance et nous embauchons des camionneurs, ils ne veulent pas travailler si longtemps et si dur, et maintenant nous trouvons que nous ne pouvons plus concurrencer, mais nous trouvons aussi qu'on nous veut ici pour faire la concurrence.

M. Rose: Vous n'avez pas vraiment répondu à ma question. Je vous ai demandé si certaines lignes de camionnage perdent de l'argent dans cette région du pays?

[*Texte*]

Mr. Palmer: I guess anyone who operates year after year and keeps operating is not losing money.

Mr. Rose: All right. You are making money, then. There is nothing unique about the trucking business as far as the small operator dropping out is concerned. We see this in farming, in fishing, in manufacturing and all the rest of it. We are seeing a trend in our country where the big fish eat the little fish. Would you agree with that?

Mr. Palmer: I think the trend in North America today is toward mergers; the bigger companies are getting bigger and the smaller companies are getting smaller, yes.

Mr. Rose: You do not have certain costs, sir, that the railroads have such as maintaining roadbeds, and that sort of thing. You are subsidized in a sense by the municipalities in the provinces because of your use of the highways. Is that so?

Mr. Palmer: I do not believe that at all. I think we pay our way very, very well. For a truck and trailer to operate 150,000 miles we pay $10,500 in fuel tax and licences alone, which represents 7 cents for every mile. That is not counting the sales tax we pay to the provinces, the federal sales tax we pay when we buy the equipment and the sales tax we pay on the tires and all the parts. A study was done in Ontario last year which shows that the for-hire trucking industry more than pays their fair share of the highways costs. So, I say we have that cost and we pay for it well.

Mr. Rose: You are paying your own way, then, you say.

Mr. Palmer: Very well.

Mr. Rose: I was interested in the idea you put forward that should you get this subsidy it would make you more competitive with the CNR. Is that right? In other words, we are adding more government money to the transportation industry. You said that it would make the trucks more competitive with the CNR, and that this would ultimately bring prices down. This is the part I could not understand.

Mr. Palmer: Definitely. We are hauling today at a break-even point or at a very small profit. If we were to get the subsidy or if the subsidy was taken away—I want to make that very clear we were equal in both ways—if we were to get the subsidy immediately rates would be cut to the shipper in the

[*Interprétation*]

M. Palmer: J'imagine que quiconque fait une telle exploitation annuellement et maintient ses opérations ne perd pas de l'argent.

M. Rose: D'accord. Vous faites de l'argent, alors. Il n'y a rien de particulier pour ce qui est de l'industrie du camionnage et du fait que le petit exploitant disparaît. Il y a la même chose qui se produit dans le secteur agricole, de la pêche, etc., dans le reste du pays ou ici. Les grands exploitants, le grand mange le petit? Seriez-vous d'accord?

M. Palmer: Je pense que la tendance en Amérique du Nord, aujourd'hui, est pour le fusionnement. Les grandes compagnies deviennent de plus en plus grandes, et les petites de plus en plus petites, oui.

M. Rose: Est-ce qu'il n'y a pas des frais chez les chemins de fer que vous n'avez pas, l'entretien des voies par exemple? Vous êtes subventionné en ce sens par les municipalités dans les provinces parce que vous utilisez la route n'est-ce pas?

M. Palmer: Non, je ne dirais pas cela. Nous payons notre part. Tout camion que nous avons pour, disons, faire 150,000 milles, nous payons en permis, en impôt sur l'essence, une somme qui représente 7c. le mille, sans compter la taxe de vente que nous payons à la province, la taxe de vente du fédéral pour l'équipement, la taxe de vente pour les pneus, les pièces de rechange, je suis d'avis que l'étude faite en Ontario l'année dernière, nous montre que pour l'industrie du camionnage à forfait, nous nous trouvons à payer plus que notre part de l'aménagement des routes. Et, je vous dirai donc que nous avons fait calculer ces frais. Nous payons.

M. Rose: Vous payez votre part.

M. Palmer: Oui, de beaucoup.

M. Rose: Je suis intéressé à cette idée que vous avez énoncée, si vous obteniez les subventions, vous pourriez mieux concurrencer avec le National Canadien? C'est juste? Donc, il y aurait plus d'argent du gouvernement pour l'industrie du transport, c'est que vous avez dit? Les camions pourraient mieux concurrencer avec le National Canadien? Ainsi les prix pourraient baisser, c'est ce que je ne comprends pas.

M. Palmer: Définitivement nous faisons très peu de profit, si nous en faisons, dans le camionnage actuellement. Si nous obtenions la subvention ou si la subvention était enlevée, je veux que ce soit très clair, il y a des opinions dans les deux sens. Si nous recevions la subvention, les taux seraient immé-

[*Text*]

Atlantic Provinces. We do not need nor do we want 20 per cent. We would not know what to do if we were to get 20 per cent on every pound of freight we moved. We would like a little piece of it but we are very willing to pass a good part of it back to the shipper and that is where we understand the subsidy is to go. In our opinion, at present the subsidy is not going to the shipper, it is going to the CNR.

Mr. Rose: Well, sir, I have just one or two questions, Mr. Chairman. I was relatively silent yesterday you must admit.

The Chairman: You are having a good try today.

Mr. Rose: I am always interested in this idea about competition bringing prices down. It is interesting to me that wherever I go it does not matter what brand of gas I have the price is the same. We hear that in places like Alberta there are too many gas stations but it never brings the price down. So I am not particularly convinced with that argument. Do you think any subsidy should go directly to the shipper or should it go to the trucker?

Mr. Palmer: We in the industry could care less where it is paid. If it is paid to the shipper then the shipper has the choice of using any form of transport he wants. If it is paid to the carrier then it is in our coffers and we can adjust rates accordingly. We feel as a trucking industry that it would be more easily regulated to pay it to a few carriers than to a lot of shippers, but that is strictly which ever the government feels is the best way to do it.

Mr. Rose: This is my final question, sir, unless you have something to add?

Mr. Palmer: When you speak about competition I would just like to refer you to the back pages of our brief where we have noted what competition did to rates when it started to grow here. Then I would add my own remarks. Let me take an area I know. The trucking industry started hauling potatoes, for example, from Carleton County to Montreal and in the 1940's and 1950's the rate on potatoes from our area to Montreal was 60 cents a 100 pounds.

[*Interpretation*]

diatement réduits dans les provinces de l'Atlantique pour l'expéditeur. Nous n'aurons pas besoin, nous ne voudrions pas de 20 p. 100, nous ne saurions pas quoi faire si nous obtenions 20 p. 100 pour chaque livre de marchandises que nous transportons. Nous aimerions bien en avoir une partie, mais nous sommes très consentants à en remettre une partie à l'expéditeur. Si c'est ce que nous comprenons du tout de la subvention. A notre avis, à l'heure actuelle, la subvention n'est remise à l'expéditeur, mais bien plutôt donnée aux chemins de fer nationaux du Canada.

M. Rose: Il me reste encore une autre question. J'ai été plutôt silencieux hier, vous l'avouerez.

Le président: Vous commencez bien toutefois aujourd'hui.

M. Rose: L'histoire de la concurrence qui fait baisser les prix m'intéresse toujours. Il me semble que peu importe où je vais, et peu importe la marque d'essence, nous entendons dire que dans l'Alberta, par exemple, il y a trop de postes d'essence, mais le prix est toujours le même, il n'est jamais réduit, et alors cet argument ne me convainc pas. Vous croyez donc qu'une subvention devrait être remise directement à l'expéditeur ou au camionneur.

M. Palmer: Dans l'industrie, peu nous importe à qui on le remet. Si c'est l'expéditeur qui l'a, il a donc le choix d'employer n'importe quelle forme de transport. Si c'est le transporteur qui le reçoit, alors nous pouvons ajuster nos taux de conséquence, lors de notre conférence. A titre de porte-parole de l'industrie du camionnage, ce serait plus facile si nous le versions à quelques transporteurs plutôt qu'à un très grand nombre d'expéditeurs. Mais c'est au Gouvernement de décider de la façon dont il veut procéder.

M. Rose: C'est ma dernière question à moins que vous ayez quelque chose à ajouter?

M. Palmer: En ce qui concerne la concurrence, j'aimerais bien qu'on revienne à la fin de notre mémoire, car nous y avons mentionné quelque chose à ce sujet en ce qui a trait aux taux. Ensuite je dirais au sujet de la concurrence, que l'industrie du camionnage a commencé par transporter des pommes de terre, par exemple, du côté de Carleton jusqu'à Montréal. Dans les années 1940 ou dans les années 1950, le taux de transport pour les pommes de terre dans notre région jusqu'à Montréal était de 60 cents le 100 livres.

[*Texte*]

When truck competition started taking over it came down from 55 to 50 to 45 to 40 and it is now 39 cents. I do not think the railroad would have ever cut the rate on potatoes if there had not been truck competition. Our costs are certainly more in the sixties than they were in the forties and the rates have come down only because of competition.

Mr. Rose: You have larger trucks now too, do you not?

Mr. Palmer: We have larger trucks but at present the railroad wants that haul. The trucks are not hauling the potatoes now because the railroad cut the cost down to where it is noncompensatory to either them or us but the potato farmers benefit from it, that is all.

Mr. Rose: This is my final question, sir. The railroads were established and many lines are run at a loss—this refers to something I said earlier—for various social, cultural or national reasons. Do you have any lines you operate that way, and would you operate any lines that way if you were awarded the subsidy?

Mr. Palmer: We certainly operate such lines. If you are hauling for a big customer you just cannot take his good freight, you have to take all his freight.

Our own firm serves every town and village in the Province of New Brunswick. There is not a hamlet that we do not serve. We serve places that the railroads do not serve. I think the same is true in Nova Scotia and the same is true in P.E.I. The trucking industry is serving each and every town and each and every run does not pay.

The Chairman: Mr. Mahoney.

Mr. Mahoney: That seems like a good place to begin because the impression we got yesterday, sir, was that the industry was being pretty well served in over-the-highway hauls from central Canada. However, certainly both the T. Eaton Co. Limited brief and The Enterprise Foundry Company Limited presentation indicate that there is a great lack of service within the province. I wonder if you have any explanation for that. Do you agree with the presentations?

Mr. Palmer: No, we do not agree. We heard some of those briefs yesterday—although we are here as a group today when we leave we are all competitors—and we

[*Interprétation*]

Quand la concurrence de la part des camions a commencée, le prix a baissé à 55 cents, 50, 45 et maintenant le prix est de 39 cents. Je ne croyais pas que les chemins de fer allait réduire les taux. Nos coûts sont beaucoup plus élevés aujourd'hui qu'ils ne l'étaient dans les années 1940. Mais les taux sont réduits en raison de la concurrence.

M. Rose: Vous avez des camions plus grands, maintenant, n'est-ce pas?

M. Palmer: Oui, mais en fait maintenant ce sont les chemins de fer qui veulent assumer le transport. Ce ne sont pas les camions qui les transportent maintenant, car les taux sont tellement bas que ce n'est pas payant ni pour les chemins de fer ni pour nous.

M. Rose: Ma dernière question, monsieur. Les chemins de fer ont été établis et il y a plusieurs lignes qui sont exploitées à perte comme on l'a dit plus tôt. Pour diverses raisons sociales, économiques ou culturelles. Avez-vous des lignes que vous exploiteriez de cette façon si vous obteniez une subvention.

M. Palmer: Nous exploitons certainement des lignes. Si vous avez un bon client, vous ne pouvez tout simplement pas prendre uniquement ses produits payants, il faut tout prendre.

Dans la province du Nouveau-Brunswick, notre compagnie dessert chaque ville et village de la province du Nouveau-Brunswick. Il n'y a pas un seul hameau que nous ne desservons pas. Nous desservons des endroits qui ne sont pas desservis par les chemins de fer; et je crois que la chose est vraie aussi en Nouvelle-Écosse, et à l'Île-du-Prince-Édouard. Nous desservons chaque ville et village dans l'industrie du camionnage, mais ce ne sont pas tous des parcours rentables.

Le président: Monsieur Mahoney.

M. Mahoney: Voilà il me semble un bon endroit où il faudrait répartir, car hier nous avons appris que l'industrie était passablement bien desservie par l'industrie du camionnage. Mais le mémoire de la Société Eaton et celle de la Enterprise Foundry indiquait qu'il y avait un très grand manque de service partout dans la province. Je me demande si vous auriez une explication à ce sujet, ou est-ce que vous êtes d'accord avec ce qu'il nous ont dit?

M. Palmer: Non, nous ne sommes pas d'accord. Nous avons entendu certains de ces mémoires hier. Aujourd'hui nous sommes ici à titre de groupe mais nous avons noté hier

[*Text*]

compared notes very quickly last night and found there is more than one firm that would like to have that business. We have tried to get that business. We are willing to take the business. It is strictly because of the rates they want to pay that we cannot take the business.

Mr. Mahoney: The rates they want to pay are the rates they are paying the railway?

Mr. Palmer: That is correct.

Mr. Mahoney: So you feel that the only reason you have not been able to move into this market is because of the competitive advantage the railway has in charging?

Mr. Palmer: That is correct.

Mr. Mahoney: Thank you.

The Chairman: Mr. Horner.

Mr. Horner: Mr. Palmer, would you suggest that a better way to grant the subsidy to the Maritimes might well be to give the subsidy direct to the shipper rather than to the transportation companies?

Mr. Palmer: I think I just answered that. We are not trying to set policy. As long as all modes are treated equally we are very willing to go along with any way it is done.

Mr. Horner: I noticed in your brief that before the Minister of Transport on December 7, 1967, you were told that if this subsidy were extended to the trucking industry it would cost an additional $4 million, which the government felt they could not find at that particular time. The question remaining in the air is whether or not prices would actually be lowered. Do you think that the public, or the shipper in many cases, would feel more of the direct benefit of the subsidy and be able to choose whatever means of transportation he liked if it were paid to him?

Mr. Palmer: I think personally it makes no difference. The shipper will get the same amount whether it is paid to the carrier or the shipper if it is paid to all modes of transport. I think our country is built on competition and if you put competition back into the picture it will find its own level. The company that wants to make a big profit today will only make it for a short time. Someone will pass it back to the shipper. You cannot be greedy if you are in a competitive market.

[*Interpretation*]

soir qu'il y a plus d'une société qui aimerait avoir ce genre de commerce. Nous avons essayé de l'obtenir. Nous sommes prêts à l'entreprendre mais aux taux qu'on veut nous payer on ne peut l'accepter.

M. Mahoney: Les taux qu'ils veulent payer sont les taux qui'ls payent aux chemins de fer?

M. Palmer: C'est exact.

M. Mahoney: Alors vous croyez que la seule raison pour laquelle vous n'avez pas pu obtenir une partie de ce marché c'est en raison des avantages concurrentiels des chemins de fer.

M. Palmer: C'est exact.

M. Mahoney: Merci.

Le président: M. Horner.

M. Horner: Monsieur Palmer, est-ce que vous diriez qu'une meilleure façon de donner la subvention pour les Maritimes, serait de donner la subvention directement à l'expéditeur plutôt qu'à la société de camionnage?

M. Palmer: Je crois avoir déjà répondu à cette question. En effet, nous n'essayons pas d'établir la politique à condition que tous les modes de transport obtiennent une partie des affaires. Nous sommes très consentants à procéder nous aussi.

M. Horner: J'ai remarqué dans votre mémoire présenté au ministre des Transports le 7 décembre 1967, que vous avez dit que si la subvention était étendue à l'institut du camionnage, cela coûterait quatre millions de dollars de plus selon l'estimation du gouvernement à cette époque et que les taux ne seraient pas réduits. Croyez-vous que le public ou l'expéditeur dans plusieurs cas auraient été concerné davantage en raison de la subvention et choisir le mode de transport qu'ils désiraient s'ils obtenaient la subvention?

M. Palmer: A mon sens, il n'y a aucune différence. L'expéditeur obtiendrait le même montant, que la subvention soit versés a transporteur ou à l'expéditeur. Je crois que notre pays, justement, a besoin de concurrence et a été édifié compte-tenu de la concurrence. Si on veut de gros profits, cela ne durera pas tellement longtemps. Il faudrait nécessairement remettre cet argent à l'expéditeur.

[*Texte*]

Mr. Horner: I was interested in your remarks, Mr. Palmer, with regard to Eastern Transport Limited and the application of the subsidy. We have always been told in the Transportation Committee with regard to the CNR venture into trucking, that the books on each trucking firm were kept independent of one another and that each trucking firm received no subsidy from the rail operations, You in a sense stated that, in fact, if the bill of lading goes out from the railroad company it is more or less credited to the railroad. You more or less suggested that the books are not kept separate and it is pretty near impossible to keep them separate.

Mr. Palmer: If I said that I did not mean to as far as Eastern Transport running separately is concerned. However, if Eastern Transport hauls freight for the CNR, which they do, they have a contract with the CNR and they haul per ton mile, but the freight still keeps moving on a railroad bill of lading. The CNR gets the sudsidy, Eastern Transport does not.

Mr. Horner: Then you are suggesting that Eastern Transport's books would not show as much money as they are actually making?

Mr. Palmer: I guess it could be interpreted that way. The subsidy price that the railroad is getting could be in the price they pay Eastern Transport per mile for hauling the freight. I do not know what their price is.

Mr. Horner: Is it your belief that because Eastern Transport has received part of the subsidy that in a sense they have presented themselves to be pretty stiff competition to other trucking lines?

Mr. Palmer: I would say Eastern Transport is a good trucking company. It is well managed. The management of Eastern Transport are not rail people, they are trucking people. However, I think that Eastern Transport has an advantage, there is no question about it. The same is true of Smith Transport which is owned by CPR and has an advantage over the private trucking firm. For example, Eastern Transport get their money at less than bank interest. They have become a part of the big buying volume CNR has in buying equipment and tires and all these things. I guess we cannot say too much about that, it is only good business.

Mr. Horner: Eastern Transport and Smith Transport are not members of your trucking association?

[*Interprétation*]

M. Horner: J'étais très intéressé au sujet de ce que vous avez dit au sujet de la *Eastern Transport* et de l'allocation de la subvention. On nous a toujours dit au comité des transports que dans l'industrie du camionnage en regard du CN, que la rentabilité était distincte pour chaque société de camionnage et que leur exploitation était distincte de celle des chemins de fer. Et alors, si la feuille de route est prise à titre de chemin de fer, on donne crédit au chemin de fer, d'après ce que vous dites. Vous prétendez que la comptabilité n'est pas séparée.

M. Palmer: Si c'est ce que j'ai dit, je n'avais certainement pas l'intention de le dire. En ce qui concerne la *Eastern Transport,* c'est vrai que c'est distinct. Mais si la *Eastern Transport* qui transporte justement des marchandises pour le CN, la *Eastern Transport* a un contrat avec le CN à un taux de X par milles. Toutefois, les marchandises sont toujours transportées en vertu d'une feuille de route. Ainsi, c'est le CN qui obtient la subvention et non pas la *Eastern Transport.*

M. Horner: Alors, vous suggérez que la *Eastern Transport,* dans sa comptabilité, n'indiquerait pas autant de profit qu'elle en fait effectivement?

M. Palmer: On pourrait peut-être l'interpréter de cette façon. La subvention reçue par les chemins de fer pourrait fort bien comprendre le taux par mille reçu pour le transport routier.

M. Horner: Croyez-vous que la *Eastern Transport* par sa participation à la subvention, que dans un certain sens, elle se considère comme étant un fort concurrent des autres sociétés de camionnage?

M. Palmer: Je prétends que la *Eastern Transport* est une excellente société de camionnage, très bien administrée. La direction de la *Eastern Transport* ne fait pas partie des chemins de fer. Ce sont des camionneurs. Mais, tout comme la *Smith's Transport* qu'appartient au CP elle a aussi un avantage sur le camionneur privé et indépendant—par exemple, la *Eastern Transport* obtient des capitaux au-dessous du taux bancaire. Elle devient une partie du CN, et par conséquent, a tous les avantages pour les achats, les vastes achats du CN, en pneus etc...

M. Horner: La *Eastern Transport* et la *Smith Transport* ne font pas partie de votre association?

[*Text*]

Mr. Palmer: Yes, they are and they are very good members.

Mr. Horner: I think Mr. McGrath asked this question and I do not think you answered it exactly. What percentage of the trucking industry in the Maritimes is under Eastern Transport or Smith Transport or the railroads or CNTL?

Mr. Palmer: That is a pretty hard question to answer. The only rail-owned companies in the Atlantic Provinces are Eastern Transport, which is owned by CNR and Smith Transport which is owned by CPR.

Mr. Horner: Give us a rough idea, would it be 5 per cent, 10 per cent, or 50 per cent? Surely we can hit upon an approximate percentage. You have suggested there are something like 700 firms employing 7,500 people. Could we figure it out by the number of people that Eastern Transport and Smith Transport and CNTL employ? Could we use a figure from that to give us an idea of the percentage owned by the railroads? In other words, if the railroads and the trucking industry employ 2,500 people and the total trucking industry employ 7,500 people I could then assume with a fair amount of accuracy, providing one outfit was as efficient as the other, that they have a third of the trucks.

Mr. Palmer: I am doing a quick calculation. I would not like to go into roles but I would say that Eastern Transport and Smith Transport would be doing 6 or 8 per cent of the "for hire" trucking in the Atlantic Provinces.

Mr. Horner: It is that small. Are representatives of those two trucking firms with you today?

Mr. Palmer: No, they are not here today.

Mr. McGrath: May I ask a supplementary.

Mr. Horner: Go ahead.

Mr. McGrath: When you say that this only accounts for 6 or 7 per cent of the "for hire" trucking industry you are not taking into account the fleets owned directly and operated directly by the railways?

Mr. Palmer: I was taking those in but not the arm of the railroad in CNTL. We have no idea how many trucks they have.

Mr. McGrath: The figure is not really realistic?

Mr. Palmer: It is not a good figure.

[*Interpretation*]

M. Palmer: Oui, ils font partie de l'association. Ils sont d'excellents membres.

M. Horner: Je crois que M. McGrath nous a posé la question, mais je ne crois pas que vous ayez répondu. Quel pourcentage de l'industrie du camionnage dans les Maritimes revient à la *Smith Transport*, à la *Eastern Transport*, au chemin de fer, ou à la CNTL?

M. Palmer: Ce serait très difficile de vous donner une réponse. Les seules compagnies de camionnage qui appartiennent aux chemins de fer sont la *Eastern Transport*, et la *Smith's Transport*.

M. Horner: Donnez-nous une idée, tout de même. 5 p. cent, 10 p. cent, donnez-nous une approximation? Vous avez dit qu'il y avait environ 700 compagnies employant 7,500 personnes. Pourriez-vous dire alors combien la *Eastern Transport*, la *Smith's Transport* et la CNTL emploient de personnel? Quel pourcentage fait partie des chemins de fer? En d'autres termes, si les chemins de fer et la société de camionnage emploient 2,500 personnes et que l'industrie du camionnage dans son ensemble emploie 7,500 personnes, je pourrais donc présumer assez exactement, à condition que les deux côtés soient administrés de façon efficace, qu'ils auraient, mettons le tiers des camions.

M. Palmer: Je fais un calcul rapide. Je ne voudrais pas trop me prononcer, mais je dirais que la *Eastern Transport* et la *Smith's Transport* font environ 6 ou 7 p. 100 du camionnage des Provinces maritimes.

M. Horner: C'est plutôt peu. Est-ce qu'il y a des représentants de la société ici?

M. Palmer: Non.

M. McGrath: Question complémentaire.

M. Horner: Allez-y.

M. McGrath: Quand vous dites que cela ne compte que 6 ou 7 p. cent, pour l'industrie du camionnage de louage, tenez-vous compte des sociétés exploitées directement pour les chemins de fer?

M. Palmer: Oui, je les comptais, mais non l'armée de camions du CNTL. Nous n'avons aucune idée du nombre de camions qui leur appartiennent.

M. McGrath: Monsieur, ainsi ce n'est pas exact.

M. Palmer: Non. Je dirais que non.

[*Texte*]

Mr. Horner: Do you believe if the subsidy were paid direct to truckers that there would be a definite growth in the amount of truck services in the Maritimes?

Mr. Palmer: Definitely.

Mr. Horner: Would the railroads also improve their ability to provide trucking service?

Mr. Palmer: If they were efficient I think they would.

The Chairman: Are you through, Mr. Horner?

Mr. Horner: Yes, thank you.

Mr. Skoberg: Thank you, Mr. Chairman. I believe your pen must have gone dry a little earlier in the morning. Mr. Palmer, how far do your "for hire" trucks travel out of the provinces? I realize they are interprovincial in the Maritimes. How far west, for example, do they travel?

Mr. Palmer: The group of trucks that M.M.T.A. represents covers Newfoundland, Nova Scotia, P.E.I., New Brunswick, Quebec, Ontario and the Eastern States of the United States.

Mr. Skoberg: I am just wondering about the port facilities you refer to in your brief. What type of facilities do they have at the ports for handling truck cargo and are they sufficient?

Mr. Palmer: All port facilities here were designed for rail movements. In Halifax and Saint John we have no level dock loading or unloading at the docks. The only thing we can do is back into the sheds and use fork lifts. There is no level dock loading.

Mr. Skoberg: What does your association recommend for improvement in this regard?

Mr. Palmer: This is a very controversial subject which I would rather not try to deal with because of the changes in transportation. With containerization coming in and so on and so forth, I think anything that might have been recommended a year ago would not do the trick today and possibly might not tomorrow. We feel that the trucks will probably never catch up in port traffic in the old

[*Interprétation*]

M. Horner: Vous croyez donc que si la subvention était versée directement aux camionneurs, il y aurait croissance dans le nombre des services des camionneurs dans les Maritimes.

M. Palmer: Oui, certainement.

M. Horner: Est-ce que les chemins de fer amélioreraient aussi leurs services ou est-ce qu'ils seraient plus en mesure de donner des services de camionnage?

M. Palmer: S'ils sont efficaces, oui.

Le président: Avez-vous fini M. Horner?

M. Horner: J'ai fini. Merci.

M. Skoberg: Merci, M. le Président. J'avais cru que vous aviez manqué d'encre un peu plus tôt ce matin. M. Palmer, je me demande jusqu'à quel point vos camions parcourent dans les Maritimes, jusqu'à quel point dans l'ouest vont-ils?

M. Palmer: Les camions représentés par l'association de transport des Maritimes, voyagent dans Terre-Neuve, la Nouvelle-Écosse, l'Île du Prince-Édouard, le Nouveau-Brunswick, le Québec et l'Ontario, ainsi que certains états de l'est des États-Unis.

M. Skoberg: Dans votre mémoire, j'ai lu quelque chose au sujet des installations portuaires. Quel genre d'installations a-t-on dans les ports pour les cargaisons destinées aux camions et sont-elles suffisantes?

M. Palmer: Toutes les installations portuaires ont été conçues pour le transport par chemin de fer. Les installations portuaires d'Halifax et de Saint-Jean n'ont pas de quais routiers. Nous n'avons pas de rampes pour le déchargement au quai, et nous devons reculer jusqu'aux hangars et utiliser des leviers mécaniques.

M. Skoberg: Et qu'est-ce que votre association recommande comme améliorations dans ce sens?

M. Palmer: C'est un sujet de controverse. Mais je préférerais ne pas y répondre, en raison des changements dans les transports dus aux containers. Je trouve que tout ce qu'on aurait pu recommender il y a un an ne serait pas suffisant. Aujourd'hui, et il ne le sera peut-être pas demain non plus. Nous estimons que les camions ne pourront jamais récupérer ce qu'ils avaient dans les installa-

[*Text*]

way of handling freight. We feel the trucking industry will be a big part of the containerization movement.

Mr. Skoberg: How many trucks do you have, Mr. Palmer, that are driver-owned or how many people do you have to hire in your association? Could you give me an estimtion of how many people you have to hire for driving?

Mr. Palmer: When we prepared the brief we thought the industry here was hiring around 7,500, is that correct? However, the industry is growing quite fast and probably it is close to 10,000 today.

Mr. Skoberg: Are these people organized in an official organization, in a union type of operation?

Mr. Palmer: The only companies that have unions in the Atlantic Provinces are the two companies owned by the railroads.

Mr. Skoberg: Are the which? I did not hear the last part.

Mr. Palmer: The only two companies working under union are Eastern Transport and Smith Transport.

Mr. Skoberg: I have just two more questions, Mr. Chairman. Mr. Palmer, how would you suggest controlling the truckers from the Quebec and Ontario areas bringing their loads to the Maritimes, returning home with the revenue freight and then assessing the rates far below the tariff charges or the so-called gas rates? How would you suggest that we could control this type of traffic?

Mr. Palmer: I do not think that is being controlled anywhere in North America. You will always have the person who buys a truck, or the shipper who gets his own truck and goes for gas money. I think as long as he is willing to operate the shipper should take advantage of it. He will not be there long, you generally get the business back. One comes and goes and then another one comes and goes, I think we will always have them.

Mr. Skoberg: The last question then, Mr. Palmer. Are the Atlantic truckers abiding by the tariff rates and does your trucking association or any other body audit these tariff rates or do they know what the bills of ladings are in regard to the trucks under your association?

[*Interpretation*]

tions portuaires. Nous estimons que tous les camions devront nécessairement occuper une bonne part du trafic des containers.

M. Skoberg: Combien de camions sont-ils conduits par leurs propriétaires et combien de gens devez-vous engager dans votre association pour conduire les camions? Combien d'employés, en d'autres termes?

M. Palmer: A la rédaction de notre mémoire, nous estimons que l'industrie avait environ 7,500 employés. C'est bien ça? L'industrie croît assez rapidement. Je crois que le chiffre serait peut-être de 10,000 aujourd'hui.

M. Skoberg: Les employés, sont-ils syndiqués? Font-ils partie d'un syndicat quelconque?

M. Palmer: Les seules compagnies qui ont des syndicats dans les provinces de l'Atlantique sont les compagnies exploitées par les chemins de fer.

M. Skoberg: Lesquelles?

M. Palmer: Les deux seules sont la *Eastern Transport* la *Smith's Transport.*

M. Skoberg: Juste deux autres questions, monsieur. Pour contrôler les camions du Québec et de l'Ontario, qui viennent dans les Maritimes et qui repartent avec des cargaisons payantes et fixant des taux très bas. Comment estimez-vous qu'on peut contrôler ce genre de trafic?

M. Palmer: Je ne crois pas qu'on puisse le contrôler. A n'importe quel endroit en Amérique du Nord, vous aurez toujours l'expéditeur ou le camionneur indépendant qui obtient ses expéditions. Évidemment, l'expéditeur ou le camioneur indépendant qui obtient ses expéditions. Évidemment, l'expéditeur peut en profiter mais le camionneur ne durera pas tellement longtemps. Il y a aussi l'expéditeur lui même qui emploie sa propre flotte, mais généralement, il abandonne.

M. Skoberg: Ma dernière question maintenant, M. Palmer. Est-ce que les camionneurs de l'Atlantique s'en tiennent aux taux du tarif et est-ce que votre association de camionnage vérifie ce tarif ou est-ce qu'ils savent ce que comportent les feuilles de route pour les camionneurs?

[*Texte*]

Mr. Palmer: To get a licence within the Atlantic Provinces you have to file your rates at the Board but they are not controlled or audited. Any of us who operate into Quebec or Ontario belong to the tariff bureaus there and then our rates are controlled and audited.

Mr. Skoberg: In effect then the tariff rates are not really being quoted and protected by any regulating body at this particular time?

Mr. Palmer: No, none.

Mr. Nesbitt: First of all, I was wondering Mr. Chairman, if a point of clarification could be made. Could you tell us, Mr. Chairman, if there is a member of the Canadian Transport Commission with us today?

The Chairman: Yes, by the name of Mr. Hanley. As I promised yesterday I talked to the Minister of Transport and he provided us with the services of Mr. Hanley, but only as an observer.

Mr. Nesbitt: I am sure we all welcome his presence, Mr. Chairman.

Mr. Rose: Mr. Chairman, the translator could not hear your remarks and perhaps you might like to introduce Mr. Hanley again?

The Chairman: It is not so important. If it is important everyone will hear me; do not worry. I said when this question was put yesterday we phoned Ottawa right away and the Minister provided the service of Mr. Hanley.

Mr. Horner: On a point of order, while I have no question for Mr. Hanley right now, I think if he is just along as an observer he could read the transcript when we got back. I think he should be available for questions or to provide information or advice at any time the Committee so desires.

An hon. Member: I do not support that.

The Chairman: No, I do not think he was sent here to talk for the government.

Mr. Horner: No, he is here for the CTC which is not an agency of the government. It is supposed to be an independent body.

The Chairman: Just a moment, please, Mr. Allmand.

[*Interprétation*]

M. Palmer: Dans les provinces de l'Atlantique, il faut absolument donner votre tarif à la Commission mais les taux ne sont pas vérifiés. Parmi nous il y a des camionneurs qui se dirigent vers l'Ontario et le Québec, ils donnent leurs taux à la Commission et les taux sont vérifiés.

M. Skoberg: En d'autres termes, le tarif n'est pas protégé par un organisme de contrôle à l'heure actuelle?

M. Palmer: Non.

M. Nesbitt: Tout d'abord, je me demandais si peut-être on pourrait éclairir un point. Pourriez-vous nous dire, monsieur le président, s'il y a un membre de la Commission canadienne des Transports parmi nous aujourd'hui?

Le président: Oui, M. Hanley. Comme je vous l'ai promis hier, je me suis mis en contact avec le ministre et le ministre nous a fourni les services de M. Hanley; mais uniquement comme observateur.

M. Nesbitt: Je suis sûr que nous lui souhaitons tous la bienvenue.

M. Rose: Je ne sais pas si c'est important ou non, mais apparemment l'interprète ne vous aurait pas compris. Est-ce que vous voulez répéter maintenant pour que ce soit bien inscrit sur le ruban?

Le président: Ce n'est pas tellement important. Apparemment, c'est inscrit sur le ruban. Tout le monde m'a compris. Ce que j'ai dit, c'est que nous avons téléphoné immédiatement hier lorsque la question a été soulevée. Nous avons téléphoné à Ottawa et le ministre nous a donné les services de M. Hanley.

M. Horner: Un appel au règlement, s'il vous plaît.

Même si je n'ai pas de question à poser à M. Hanley à l'heure actuelle, s'il est uniquement ici à titre d'observateur. Il aurait pu lire le compte rendu à son retour. Je pense qu'il devrait pouvoir nous répondre à tout moment si le comité le désire.

Une voix: Je n'admets pas cela.

Le président: Non, je ne crois pas qu'on l'ait envoyé ici comme porte-parole du gouvernement.

M. Horner: Non, il est ici pour la CCT qui n'est pas un organisme du gouvernement. C'est un organisme qui est censé être indépendant du gouvernement.

Le président: Un moment, s'il vous plaît, monsieur Allmand.

[*Text*]

Mr. Allmand: On the point of order, Mr. Chairman, before we met we set up a schedule of witnesses in the Maritimes whom we would hear and there were many people we decided not to hear at this time. I think we should stick to the scheduled witnesses, but when we return to Ottawa if we want to hear the Minister, a representative from the Canadian Transport Commission or anybody else, we could decide to do so.

Mr. Horner: Apparently you have misunderstood my remarks. I do not want to hear from the CTC, but if they have some knowledge and can clear up some misunderstanding in the Committee on one or two brief points we should be able to call them. That is all I said.

The Chairman: Mr. Horner, I think if you want some clarification, Mr. Hanley will be very happy to give it to you. All you have to do is sit right next to him and he will give you all the answers you require. Mr. Nesbitt.

Mr. Nesbitt: Yes, Mr. Chairman, I notice in the brief, Mr. Palmer, that you said there are 700 firms—trucking firms—in the Maritimes that are represented here. I would take it, of course, that a very large number of those firms were purely local trucking firms. Could you give us any idea of how many firms of this type there are in the Maritime provinces? Perhaps it would be better to put it this way, do you have the figures for all the firms in the Atlantic provinces that do interprovincial or international business?

Mr. Palmer: We feel about 250 to 275 trucking companies cross borders.

Mr. Nesbitt: The second question I have then is, could you give us a rough estimate, a very rough estimate—I do not expect you will have exact figures on this—of the total volume of business of the trucking companies—when I refer to trucking companies I refer to ones that cross provincial or international borders. What would be the gross volume per year?

Mr. Palmer: That figure is not available in any way because the regulatory boards do not ask for financial statements of this nature and many of the companies are very hesitant to give it out. We do have wild guesses, but that is really about all they would be.

[*Interpretation*]

M. Allmand: Sur un point de Règlement, monsieur le président. Nous avons décidé qu'il y avait plusieurs personnes qu'on avait l'intention d'entendre pendant la tournée et d'autres que nous ne voulions pas entendre. Nous devrions nous ne tenir à ce programme. Quand nous reviendrons à Ottawa, si nous voulons entendre le ministre, ou un représentant de la Commission canadienne des transports ou n'importe qui, nous pourrons le faire.

M. Horner: Vous m'avez mal compris. Je ne veux pas entendre le représentant de la CCT, mais, s'il peut éclaircir un ou deux points très rapidement, je crois qu'on devrait nous permettre de leur poser des questions. C'est tout ce qui j'ai dit.

Le président: M. Hanley sera très heureux, je pense, de vous donner des renseignements si vous en désirez, M. Horner. Tout ce que vous avez à faire, c'est de vous asseoir à côté de lui et il vous donnera toutes les réponses voulues. Monsieur Nesbitt.

M. Nesbitt: Merci, monsieur le président. J'ai remarqué dans le mémoire, monsieur Palmer, que vous dites qu'il y a 700 sociétés de camionnage dans les Maritimes, qui sont représentées ici. Je dois comprendre, bien sûr, qu'un très grand nombre de ces sociétés sont des sociétés purement locales. Pouvez-vous nous donner une idée du nombre de sociétés de camionnage de ce type qui existent dans les provinces Maritimes? Ou plutôt, avez-vous le chiffre pour toutes les formes des provinces de l'Atlantique, qui ont une exploitation interprovinciale ou internationale.

M. Palmer: Nous estimons à environ 250 à 275 les sociétés de camionnage qui traversent les frontières provinciales.

M. Nesbitt: Ma deuxième question, maintenant. Je ne m'attends pas à ce que vous ayez les chiffres exacts, mais si vous ne les avez pas, vous pourrez peut-être nous donner une idée générale, quel serait le volume total d'affaires des sociétés de camionnage; quand je parle de sociétés de camionnage, je parle de celles qui traversent les frontières provinciales ou internationales, quel serait le chiffre d'affaires brut, de ces sociétés?

M. Palmer: Ce chiffre n'est pas à notre disposition. Les organismes de contrôle n'exigent pas le chiffre d'affaires. Plusieurs compagnies évidemment, hésitent à publier ces chiffres. Nous pourrions deviner, peut-être, mais ce serait tout simplement deviner; ce ne serait pas sûr.

[*Texte*]

Mr. Nesbitt: I thought perhaps you might not be able to give me an answer, but on the other hand, there is always hope. If you ask questions you might get an answer. I suppose it will be rather difficult to get an answer to my other question, too. Would you have any idea of the percentage of the total volume of transport business in the Atlantic provinces that would be done by the trucking firms? Again, I refer to firms crossing provincial borders and international borders only.

Mr. Palmer: The only way I could give you a figure on that and probably it would not be too far out would be by knowing the percentage our own company handles, the percentage of trailers we buy in this area and so on and so forth, and multiplying it by our gross. In this way I could come up with a fair assumption of the business done.

If my figures are correct in the percentage of trailers our company owns versus the total trailers for hire—this would not include straight trucks and there are a lot of straight trucks working in remote areas, these would be the trailer fleets—the trucking industry in the Atlantic provinces would be doing somewhere in the vicinity of $50 million worth of business.

Mr. Nesbitt: Yes, but what percentage of the total transport business would this represent? What I am trying to get at, you see—

Mr. Palmer: We feel that the trucking industry is doing between 35 per cent and 40 per cent of the total business.

Mr. Nesbitt: Thank you. I have just a few other brief questions. I think of the trucking industry in terms of other transport businesses such as railways and now we have a new form, of course, coming up and that is air cargo. Would you—I do not mean you personally, I mean the trucking industry—be in favour of possible subsidies going to air carriers at some time in the future?

In other words, should they be part of the general freight rate structure of the Maritimes? You said, as I understood it, that whatever policy the government decided vis-à-vis freight rate subsidies, your only concern is that you be treated the same as the railway industry. Do you think the air industry should be treated the same way as well?

Mr. Palmer: I believe very strongly that whatever is good for rail should be good for trucks, should be good for air, should be good

[*Interprétation*]

M. Nesbitt: C'est ce que je pensais, mais j'espérais tout de même avoir une réponse. Maintenant, j'imagine, que ce serait difficile d'obtenir aussi une réponse à ma deuxième question. Auriez-vous une idée du pourcentage du volume total de transport, dans les provinces de l'Atlantique, qui est effectué par des sociétés de camionnage? Encore une fois, il s'agit des sociétés de camionnage qui traversent les frontières provinciales ou internationales.

M. Palmer: La seule façon pour moi de vous répondre, et ne ne serait peut-être pas si loin de la vérité, serait de prendre les pourcentages du chiffre d'affaires de notre propre société et de multiplier pour notre chiffre d'affaires total. De cette façon, nous pouvons avoir une idée du chiffre d'affaires réalisé.

Si les chiffres que j'ai en main sont exacts, en ce qui concerne le pourcentage de camions que nous possédons sur le total des camions de louage, il s'agit des camions-remorques et non pas tout simplement des camions, et il en a beaucoup qui travaillent dans les régions éloignées, l'industrie du camionnage dans les provinces de l'Atlantique aurait un chiffre d'affaires d'environ 50 millions de dollars.

M. Nesbitt: Oui, mais quel pourcentage du total de l'industrie du transport cela représente-t-il?

M. Palmer: Nous estimons que l'industrie du camionnage a de 35 à 40 p. 100 du total des transports.

M. Nesbitt: Merci. Encore quelques questions plutôt brèves. Je songe à l'industrie du camionnage en comparaison avec les autres modes de transport, comme les chemins de fer et maintenant, un nouveau mode de transport, le transport aérien. Seriez-vous, je ne parle pas de vous personnellement, mais de l'industrie du camionnage, seriez-vous en faveur d'une subvention donnée aux transporteurs aériens à l'avenir, par exemple?

En d'autres termes, devraient-ils faire partie de la structure générale pour le transport des marchandises? Si je vous ai bien compris, vous avez dit que quelle que soit la politique adoptée par le gouvernement, au sujet des subventions pour le tarif des marchandises, ce que vous vouliez c'est être traité de la même façon que les chemins de fer. Croyez-vous alors que les industries aériennes devraient être traitées de la même façon?

M. Palmer: Je crois fermement que ce qui est bon pour les chemins de fer, devrait être bon pour les camions, devrait aussi être bon

[*Text*]

if it goes by dog team. I think everybody in this country should be treated equally and then let them make their bed after that.

Mr. Nesbitt: I have one final question. We have heard from some other witnesses and we have heard various announcements recently about improved cargo handling services in the Atlantic area as well as elsewhere. What would improved cargo handling services in this region do to your business? Do you think it would help it; would you be able to cut your costs? Could you give us some general remarks on that?

Mr. Palmer: Definitely anything to improve cargo handling will reduce costs, especially as per hour labour costs go higher and higher. I think containerization is one form of reducing costs; I think containerization is starting to come in very fast now, not as we think of containers, but containers within trailers. If the drug companies and grocery companies instead of giving the trucking companies or railroads 99 little pieces that have to be handled 99 times, put these in one box then only one lift would have to be made instead of 99 lifts. I think this will correct itself as the labour costs go higher.

I think perhaps the reason we are behind the times here in handling freight is that our labour costs have been lower. If we used two men to do something it did not cost as much as it would to have used two men in Toronto to do the same thing.

Mr. Nesbitt: You have found in your experiences that containerization is progressing very rapidly in the Atlantic region?

Mr. Palmer: Yes.

Mr. Nesbitt: Thank you very much.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, most of my questions have already been posed, but I want to say that Mr. Palmer's organization appears to be very well established, indeed, and I am sure he can give us the answer to this question. How many Atlantic provinces' truckers have gone out of business in the past 10 years as the result of business failure? I think this is a question of some interest to us. Is the industry in trouble or is it in relatively good condition at the present time? How many business failures have involved members of your association in the past ten years or even five years?

[*Interpretation*]

pour les transporteurs aériens et même pour les traîneaux à chiens. Ça devrait s'appliquer à tout le monde, d'après nous.

M. Nesbitt: Une dernière question, maintenant. Nous avons entendu d'autres témoins et nous avons entendu parler d'amélioration dans le transport des marchandises dans la région Atlantique comme ailleurs. Qu'est-ce que cette amélioration donnerait à votre industrie? Est-ce que cela vous aiderait? Est-ce que ça réduirait vos frais d'exploitation? Pourriez-vous nous donner des commentaires généraux à ce sujet?

M. Palmer: Toute amélioration de la manutention des marchandises, réduirait certainement nos frais, notamment de main-d'œuvre qui ne cessent de croître. Je crois que le transport par cadres aiderait beacoup à réduire les frais. J'ai l'impression qu'on l'emploie de plus en plus, maintenant. Quand nous parlons de cadres vous voulons dire des cadres pour camions-remorques. Si au lieu de donner aux sociétés de camionnage ou aux chemins de fer, 99 petits colis qui doivent être manutentionnés 99 fois, on les met tous dans une seule boîte, il ne faut manutentionner qu'une seule fois au lieu de 99. Cela va se produire au fur et à mesure que le coût de la main-d'œuvre s'élève.

La raison pour laquelle nous sommes en retard, c'est parce que notre main-d'œuvre était moins coûteuse, ici. Et, alors même s'il fallait deux hommes ici pour une exploitation, ça ne coûtait pas aussi cher qu'à Toronto, par exemple.

M. Nesbitt: Alors, vous trouvez qu'on progresse rapidement dans le domaine du transport par cadre, dans les provinces de l'Atlantique?

M. Palmer: Oui.

M. Nesbitt: Merci beaucoup.

Le président: Monsieur Perrault.

M. Perrault: Monsieur le président, la plupart de mes questions ont déjà été posées, mais je voudrais dire que l'organisation de M. Palmer semble être très bien établie et je suis sûr qu'il pourra nous donner la réponse à cette question. Combien de camionneurs des provinces de l'Atlantique, ont fait faillite depuis dix ans? Je pense que c'est une question importante pour nous. Est-ce que l'industrie souffre à l'heure actuelle ou est-ce que sa situation est relativement bonne? Combien de membres de votre association ont fait banqueroute depuis dix ans ou même cinq ans?

[*Texte*]

Mr. Palmer: In the last five years we have averaged about a member a month going out of business due to financial failure.

Mr. Perrault: A member a month because of financial failure?

Mr. Palmer: Yes.

Mr. Perrault: How many truckers have gone into business during a comparable period, either the five-year period or the ten-year period which I cited?

Mr. Palmer: Most of these failures have been picked up by existing carriers.

Mr. Perrault: So the total number then is remaining relatively the same?

Mr. Palmer: It has been decreasing.

Mr. Perrault: Some of them may have gone out of business because of merges and purchases by larger trucking organizations?

Mr. Palmer: Yes, there also have been some new firms started up, but these cannot compare in numbers with those that have gone out of business.

Mr. Perrault: The figure $4 million was mentioned in the 1967 meeting with the Minister of Transport as perhaps the amount of money required to provide a subsidy to the truckers. How many dollars would be involved in a subsidy to Atlantic truckers today if they achieved parity with the railroads in this area, do you think?

Mr. Palmer: A year ago under MFRA $14 million was paid. If the trucking industry were included under this and as we are doing 35 per cent to 40 per cent of the business, then we would be talking of $5 million to $6 million.

Mr. Perrault: Five or six million dollars.

Mr. Palmer: We have no way to prove these figures, but they are probably fairly close.

Mr. Perrault: Would you say your profit margins are increasing in this industry or declining?

Mr. Palmer: Declining.

Mr. Perrault: That is the limit of my questioning.

The Chairman: Mr. Breau.

[*Interprétation*]

M. Palmer: Depuis cinq ans, nous avons perdu en moyenne un membre par mois par suite de faillite.

M. Perrault: Un par mois par suite de faillite?

M. Palmer: Oui.

M. Perrault: Combien de sociétés de camionnage ont été créés pendant cette même période de temps de cinq ans ou dix ans?

M. Palmer: La plupart de ces faillites, ont été remplacées par des transporteurs existants.

M. Perrault: Par conséquent, le nombre est demeuré relativement stable?

M. Palmer: Il a diminué.

M. Perrault: Peut-être en raison de fusionnement ou d'achat par des organisations plus importantes.

M. Palmer: Oui. Il y a eu aussi de nouvelles sociétés mais cela ne se compare pas avec le nombre de faillites.

M. Perrault: On a mentionné le chiffre de 4 millions de dollars qui seraient nécessaires pour subventionner les camionneurs. Quelle serait la somme requise pour les provinces de l'Atlantique pour en arriver au pair avec les chemins de fer dans ce domaine, à l'heure actuelle?

M. Palmer: Il y a un an, $14 millions ont été versés en vertu de la Loi sur les taux de transports des marchandises dans les provinces Maritimes. Si les sociétés de camionnage en faisaient partie, et si nous avons de 35 à 40 p. 100 des transports, alors nous parlerions d'un chiffre de l'ordre de 5 ou 6 millions de dollars.

M. Perrault: Cinq ou six millions de dollars?

M. Palmer: Il n'y a pas moyen de le prouver, mais c'est probablement très près de cela.

M. Perrault: Est-ce que vos marges bénéficiaires augmentent ou diminuent dans ce domaine?

M. Palmer: Elles diminuent.

M. Perrault: C'est tout ce que j'avais à dire.

Le président: Monsieur Breau.

[*Text*]

Mr. Breau: Mr. Chairman, I would like to ask Mr. Palmer a couple of questions. You mentioned that the 20 per cent that went to the railroads went as extra profits, but are there not extra costs that the railroads have that you do not have? For example, I would be inclined to think that their manpower would be more expensive than yours.

Mr. Palmer: It should not be because I do not think the railroad has any better men working for them than we do. Therefore, we should be paying our men the same price. If the railroads have extra costs I do not think the taxpayers of Canada should give them money. If there is another form that can do the job cheaper, that is the form that should be doing it.

Mr. Breau: Do you think you are giving a better service within the Atlantic provinces either westbound or eastbound than the CNR are giving? I would imagine the main complaint would be the amount of time taken. We have heard a lot of complaints during the last year about the CNR, for example, taking about three weeks to go from Moncton to Campbellton or something of the sort. Does this happen in your industry?

Mr. Palmer: I would like to say it never does, but yes, it does happen. However, I think over-all the trucking industry does give a better service by far than the CNR.

Mr. Breau: Would you say then that because the CNR does not have to compete with you as they have a subsidy, they are not as efficient as you would be if you had a subsidy or if their subsidy were taken off? Could they become more efficient?

Mr. Palmer: I think they could become much more efficient. If they were not so inefficient the trucking industry would not have grown as it has.

Mr. Breau: So the people of the Atlantic provinces then would be getting a better service?

Mr. Palmer: Yes.

Mr. Breau: You mentioned that the trucking industry was getting 35 per cent to 40 per cent of the business. Is this just within the Atlantic provinces? I would like to know what percentage of business you get that goes, say, from the Atlantic provinces to Toronto and eastbound. Is it about the same percentage?

[*Interpretation*]

M. Breau: J'aimerais poser quelques questions à M. Palmer. Vous avez mentionné que les 20 p. 100 donnés aux chemins de fer, étaient un profit supplémentaire, mais est-ce qu'il n'y a pas des frais supplémentaires que les chemins de fer encourent et que vous n'encourez pas? Ainsi, je serais porté à croire que leur main-d'œuvre serait plus chère que la vôtre.

M. Palmer: Ça ne devrait pas, parce que je ne crois pas que les chemins de fer aient une main-d'œuvre plus spécialisée que la nôtre. On devrait donc payer les hommes le même prix. S'ils ont des frais additionnels, je ne crois pas que le contribuable canadien doive leur donner de l'argent. S'il y a une autre méthode qui peut faire le travail moins cher c'est celle-là qu'il faut employer.

M. Breau: Croyez-vous que vous fournissez un meilleur service dans les provinces de l'Atlantique, vers l'est ou vers l'ouest, que le CN? J'imagine que les délais sont le défaut principal. Au cours des dernières années on a reçu beaucoup de griefs contre le Canadien National, voulant qu'il mette trois semaines pour aller de Moncton à Campbellton, ou quelque chose de ce genre. Est-ce que cela se produit dans votre cas?

M. Palmer: J'aimerais bien pouvoir dire que cela ne se produit jamais, mais malheureusement cela arrive. Cependant dans l'ensemble, l'industrie du camionnage donne un bien meilleur service que le Canadien National.

M. Breau: Diriez-vous que parce que le Canadien National a une subvention, il n'a pas a se préoccuper de la concurrence et n'est pas aussi efficace que si vous étiez aussi subventionné ou si la subvention disparaissait. Pourraient-ils devenir plus efficaces?

M. Palmer: Ils pourraient l'être. S'ils n'avaient pas été aussi inefficaces, l'industrie du camionnage n'aurait pas grandi autant.

M. Breau: Donc les provinces de l'Atlantique devraient obtenir un meilleur service?

M. Palmer: Oui.

M. Breau: Vous dites que l'industrie du camionnage obtenait de 35 à 40 p. 100 des affaires. Je voudrais savoir quel pourcentage vous obtenez, disons, des provinces de l'Atlantique vers Toronto et vers l'est? Est-ce à peu près le même pourcentage?

[*Texte*]

Mr. Palmer: We feel that it is about the same. It is almost next to impossible for us to come with figures that we can really hang our hat on. We only have been able to come up with these figures by comparing and watching and looking and listening and, I think, our best source is from our customers, from what they tell us and so forth.

Mr. Breau: You mentioned that some trucking firms, particularly Eastern Transports, might get a subsidy anyway—the CNR was getting a subsidy for them. There are probably many places in the Atlantic provinces that, I think, no longer are served by rail, for example, the CNR no longer delivers to some small towns. What would happen if a shipment were to come, say, from Montreal to Moncton and then go by a CN truck—I am not speaking of Eastern Transport, but a CN truck—to (inaudible), Rogersville or Buctouche or what have you. Would the CNR get the subsidy for that part of the trip made by truck?

Mr. Palmer: First, the subsidy does not apply to freight moving from west to east. It only applies from east to west.

Mr. Breau: All right, then let us suppose it came from the east.

Mr. Palmer: Yes, they get the subsidy if the subsidy is applicable, if it is on a railroad bill of lading and if the truck takes it.

The Chairman: Mr. Pringle.

Mr. Pringle: Thank you, Mr. Chairman. Mr. MacLaren mentioned a (inaudible) way about recommending that Part III of the National Transportaton Act should be enacted now or completed. He stated that there would be considerable merit in this as this will probably be the last time we will have the opportunity of meeting with the Canadian Trucking Association along with the Maritime Motor Transport Association. I wondered if he could give us an example of the application of Part III as it would apply to the Maritime provinces.

Mr. A. K. MacLaren (Executive Director, Canadian Trucking Association): If somebody were seeking authority to operate from Halifax to Toronto, say, a trucking firm, in Nova Scotia that saw some business for delivery through to Ontario, instead of having to go to four boards, turn up with all his witnesses, be met with varying degrees of local opposition, and ending up with an operating authority that would be different, perhaps, in all

[*Interprétation*]

M. Palmer: Nous sommes d'avis que c'est à peu près la même chose. C'est à peu près impossible de fournir des chiffres sûrs. On ne peut mentionner ces chiffres qu'en établissant des comparaisons, en écoutant, en observant, et je pense que la meilleure source de renseignements c'est ce que les clients nous disent.

M. Breau: Vous avez mentionné que certaines entreprises de camionnage, comme, par exemple, *Eastern Transports* pourraient obtenir des subventions tout de même car le CN les obtient pour eux. Et dans les provinces de l'Atlantique, il y a beaucoup d'endroits qui ne sont plus desservis par le CN, par exemple, le CN ne dessert plus les petites villes. Qu'arriverait-il si un colis allant de Montréal à Moncton et emprunte ensuite un camion du Canadien National, je ne parle pas de Eastern Transport, mais du CN, pour aller ensuite à Rogersville, Buctouche ou ailleurs. Le Canadien National obtient-il la subvention pour la partie du transport effectuée par camion?

M. Palmer: D'abord, la subvention ne s'applique pas au transport de l'ouest vers l'est. Elle ne s'applique que d'est en ouest.

M. Breau: Parfait disons que cela vient de l'est.

M. Palmer: Oui, ils obtiennent la subvention, si la subvention s'applique, si c'est une feuille de route du Canadien National et si un camion prend le chargement.

Le président: Monsieur Pringle.

M. Pringle: Merci beaucoup, monsieur le président. M. MacLaren a parlé de recommander que la partie trois de la Loi nationale sur les transports, soit mise en vigueur ou complétée. Il a déclaré qu'il y aurait beaucoup de mérite là dedans puisque ce sera sans doute la dernière fois que nous avons l'occasion de rencontrer l'Association canadienne du camionnage et la *Maritime Motor Transport Association*. Est-ce qu'il ne pourrait pas nous donner un exemple de l'application de la partie III en ce qui concerne les provinces maritimes.

M. A. K. MacLaren (Directeur exécutif de l'Association Canadienne du camionnage): Si quelqu'un essayait d'obtenir le droit d'opérer de Halifax à Toronto, disons une société de camionnage en Nouvelle-Écosse qui trouve des livraisons à effectuer jusqu'en Ontario, au lieu de présenter une demande d'exploitation à quatre commissions, de se présenter avec tous ses témoins, de se heurter à divers degrés d'opposition locale et de finir avec des

[*Text*]

four provinces, he could go to the Canadian Transport Commission and they would decide whether the licence should be granted on grounds of public convenience and necessity. It seems to me that on long-haul interprovincial operations the Canadian Transport Commission would decide questions of public convenience and necessity on a slightly difference basis than a provincial regulatory authority would.

Mr. Pringle: In other words, it would facilitate the trucking industry as far as the Maritimes particularly are concerned and Canada in general. Is that correct?

Mr. MacLaren: This is our very strong feeling.

Mr. Pringle: Are you getting any opposition to the...

Mr. MacLaren: We are getting very strong opposition from several provinces.

Mr. Pringle: Is the opposition a provincial matter?

Mr. MacLaren: Yes.

Mr. Pringle: You mentioned, Mr. Palmer, that when the CNR abandons a freight route or railroad, you have opposed their going into the trucking business. I wonder if it is possible that a part of the consideration with regard to the abandonment of the railroad is that the CNR must provide an alternate carrier within that area. Is this part of the reason why your opposition has been unsuccessful? Were the pre-arranged requirements essential?

Mr. Palmer: Yes, that has happened many many times in the past.

Mr. Pringle: In other words, if the abandoning of the railroad were judged just on the merits of abandoning it and not on the premise that they must replace it with a trucking system, you may have had a better chance in your opposition? Is that reasonably correct?

Mr. Palmer: I think that is a fair statement.

Mr. Pringle: I have one last question. You mentioned about the service in the Maritimes; I happen to have been associated with an industry in Prince Edward Island and I have to say in front of all your men here that the service has been certainly less than

[*Interpretation*]

droits d'exploitation différents peut-être dans chacune des provinces, il pourrait se présenter à la Commission canadienne des transports et celle-ci déciderait si ce permis doit être accordé pour des motifs de nécessité et dans l'intérêt du public. Il me semble que pour les opérations interprovinciales, la Commission canadienne des transports décidérait des questions d'intérêt public selon une toute autre optique que les commissions provinciales.

M. Pringle: En d'autres termes, cela faciliterait l'industrie du camionnage en ce qui concerne les Maritimes et l'ensemble du pays. C'est cela?

M. MacLaren: Oui, ce sont là nos impressions.

M. Pringle: Vous avez de l'opposition...

M. MacLaren: Oui, dans bon nombre des provinces, nous faisons face à une forte opposition.

M. Pringle: Est-ce que cela vient du plan provincial?

M. MacLaren: Oui.

M. Pringle: Vous avez dit, monsieur Palmer, que lorsque le Canadien National abandonne une ligne ferroviaire, vous vous opposez à ce qu'il établisse une ligne de camionnage. Je me demande si une partie des considérations, dans les cas d'autorisation d'abandon de lignes ferroviaires, n'est pas que le Canadien National fournisse un autre moyen de transport dans cette région où se trouvait le chemin de fer. N'est-ce pas là une des raisons pour laquelle votre opposition n'a pas réussi? N'était-ce pas dû à des exigences prévues à l'avance?

M. Palmer: Oui, cela s'est produit plus d'une fois dans le passé.

M. Pringle: En d'autres mots, si en abandonnant les lignes ferroviaires, on avait jugé seulement sur les mérites de l'abandon sans condidérer l'obligation de fournir un système de camionnage de remplacement, vous auriez eu une meilleure position pour votre opposition? Est-ce exact?

M. Palmer: Oui, c'est juste.

M. Pringle: Une dernière question. Vous avez parlé des services dans les Maritimes; j'ai été associé à une société dans l'Île-du-Prince-Édouard et je dois vous dire, devant vos différents représentants ici, que le service était vraiment moins que souhaitable, du

[*Texte*]

desirable as far we were concerned. We were unable to function in a satisfactory manner because of it. This happens to be a frozen food industry in Prince Edward Island. We get complaints from Montreal customers all the time about the inadequacy of the trucking out of Prince Edward Island to the point where they have been pleading with us to allow them to make arrangements to send trucks from Montreal to do this trucking. I would like to register that complaint and ask if there is some particular reason for this? Is it going to improve or all the allegations incorrect?

Mr. Palmer: No, I do not think they are. I think the trucking industry has been treated as a second class industry here. We are meeting, in fact, tomorrow night with the Department of Transport and the Canadian National Railways to see if we can upgrade the ferry service as far as trucks are concerned between New Brunswick and Prince Edward Island. I am very glad you brought this question up. Again on rates, we are not only governed by MFRA because the boats that run between New Brunswick and Prince Edward Island are owned by the Department of Transport and operated by CNR. Anyone in the private trucking industry has to pay between $15 and $16 a round trip to take a 40-foot trailer and tractor from New Brunswick to Prince Edward Island and back. The CNR pays $2 to take a loaded car over and if it comes back empty it comes back for nothing. This, we feel is not fair in any way.

An hon. Member: May I supplement that?

The Chairman: I think it would be a good idea to let this gentlemen complete his answer.

An hon. Member: I thought he was finished, Mr. Chairman, I did not intend to be rude.

Mr. Palmer: This makes us uncompetitive with their rates because they have an advantage of $14 a load over the trucking industry just in getting back and forth across the Northumberland Strait.

In the second place, the service last summer to Prince Edward Island was terrible. I am personally familiar with your company and there were times when it took us as long as three days to get back and forth. We could not hold equipment up that long.

[*Interprétation*]

moins en ce qui nous concernait. Nous étions dans l'impossibilité d'exploiter une industrie de façon satisfaisante à cause de cela. C'était une entreprise de produits congelés dans l'Île-du-Prince-Édouard. Nous avons reçu constamment des plaintes de nos clients de Montréal, tous nos clients se plaignaient du mauvais service de camionnage à partir de l'Île-du-Prince-Édouard, au point qu'ils nous priaient de les autoriser à envoyer une maison de Montréal pour faire ce transport par camion. Je veux donc vous saisir de cette plainte et vous demander s'il y a une raison particulière à un tel état de choses. Est-ce que cela va être amélioré ou est-ce que ces accusations sont injustes?

M. Palmer: Non, je ne crois pas. Je pense que l'industrie du camionnage a été traitée comme une industrie de deuxième ordre ici. Nous rencontrons, en fait, demain soir, le ministère des Transports et le Canadien National afin de voir si on ne peut pas améliorer le service de bacs pour les camions entre le Nouveau-Brunswick et l'Île-du-Prince-Édouard. Je suis très heureux que vous ayez soulevé la question. Encore une fois pour ce qui est de nos tarifs, nous ne sommes pas régis par la Loi sur le taux de transport des marchandises dans les provinces maritimes, car les bacs qui assurent le service entre le Nouveau-Brunswick et l'Île-du-Prince-Édouard sont la propriété du ministère des Transports et sont exploités par le Canadien National. Tout camionneur privé doit payer de $15.00 à $16.00 le voyage aller-retour pour un camion-remorque de 40 pieds du Nouveau-Brunswick à l'Île-du-Prince-Édouard. Le Canadian National paie $2.00 pour passer un camion chargé et s'il revient à vide il ne paie rien. Voilà donc une situation injuste, à notre avis, vraiment injuste.

Une voix: Puis-je ajouter quelque chose?

Le président: Je pense qu'il serait bon de permettre au témoin de terminer sa réponse.

Une voix: Je m'excuse si je suis impoli, monsieur le président, je pensais qu'il avait terminé.

M. Palmer: Donc, on ne peut concurrencer sur le plan des tarifs parce que pour un seul chargement, ils ont un avantage de $14.00, simplement pour franchir le détroit de Northumberland.

Deuxièmement, l'été dernier, le service était vraiment terrible. Je connais très bien votre compagnie et parfois il nous a fallu trois jours pour aller et revenir. On ne pouvait retarder aussi longtemps le matériel.

[*Text*]

You would go and not get within five miles of the ferry and when you have a $40,000 piece of equipment, you could not sit there so you went somewhere else and loaded it, and the truck that was going to get your load of trade ended up loading in New Brunswick or going empty, because in the freight business you have to haul this way; this is where you make your money. You certainly do not make it hauling west so I think that an improved ferry service plus MMTA has and will continue strongly to endorse the building of a permanent crossing between New Brunswick and P.E.I.

The Chairman: A supplementary, Mr. McGrath?

Mr. McGrath: Thank you, Mr. Chairman. I wonder if the witness could relate the same answer to the Nova Scotia-Newfoundland ferry service?

Mr. Palmer: Very definitely so. As I say, we are meeting tomorrow night. We hope we are winning a part of this battle, but again on the ferry service between Nova Scotia and Newfoundland we pay $2 a foot to cross on that ferry, so a rig that is 60 feet long costs $120 to go across. The railway pay on a very complicated formula that is written into the Constitution and is a part of Newfoundland's joining Canada. They pay according to their ton-mile revenue in the Atlantic Provinces, and crossing is considered as 90 miles.

Therefore, based on the ton-mile revenue, the CNR guess it is costing them somewhere in the vicinity of $8 to get a railcar across on the boat.

Mr. Carter: Could I ask a supplementary, Mr. Chairman?

The Chairman: Yes, Mr. Carter.

Mr. Carter: Concerning this $2 per foot charge on the ferry, I wonder whether he can tell us how this compares with regular costs when going on a highway. Ninety miles of highway would cost you so much; how much more does this 90 miles of water cost?

Mr. Palmer: Over-the-highway cost of operation runs about 50 cents a mile so it is not that far out of line in the crossing there, but the time factor well overtakes it. To operate 90 miles of highway takes two hours; to operate 90 miles between North Sydney and Port aux Basques takes eight hours, so the time factor becomes very expensive, plus the fact that we have to pay men.

[*Interpretation*]

Nous y allions, mais nous ne pouvions nous approcher à cinq milles du bac, lorsque vous avez un équipement de $40,000 vous ne pouvez le laisser attendre à rien faire, vous allez donc charger ailleurs et le camion qui devait prendre votre chargement, charge au Nouveau-Brunswick ou revient à vide, c'est ainsi si vous voulez ne pas perdre d'argent. Donc, il faudrait améliorer le service de bacs, de plus la MMTA a soutenu et soutiendra fermement l'aménagement d'une voie permanente de franchissement entre l'Île du Prince-Édouard et le Nouveau-Brunswick.

Le président: Une question supplémentaire, monsieur McGrath?

M. McGrath: Merci monsieur le président. Est-ce que le témoin ferait la même réponse en ce qui concerne le service de bacs entre la Nouvelle-Écosse et Terre-Neuve?

M. Palmer: Absolument. Comme je vous le disais, nous nous réunissons demain soir. Nous espérons gagner une partie de la bataille, mais une fois de plus, pour ce qui est du service de bacs entre la Nouvelle-Écosse et Terre-Neuve, nous payons $2 le pied pour utiliser ce bac, donc un attelage de 60 pieds de longueur, doit payer $120 de passage. Les chemins de fer paient selon un tarif très complexe inscrit dans la Constitution et faisant partie des conditions d'association de Terre-Neuve au Canada. Ils paient suivant leur revenu par tonne-mille dans les provinces de l'Atlantique et la traversée est considérée comme représentant 90 milles.

En se fondant sur le revenu par tonne-mille, le Canadien National, pense qu'il leur en coûte environ $8 pour transporter un wagon de chemin de fer par le bac.

M. Carter: Puis-je poser une question supplémentaire, monsieur le président?

Le président: Oui, monsieur Carter.

M. Carter: Pour ces $2 par pied sur le bac, comment pouvez-vous comparer cela avec les frais réguliers de parcours de 90 milles sur la grand-route, combien vous en coûte-t-il? Combien en coûte-t-il de plus pour 90 milles d'eau?

M. Palmer: Sur la route les frais d'exploitation sont d'environ 50 cents le mille, alors l'écart n'est pas tellement grand pour ce qui est de cette traversée, mais le facteur temps est énorme pour 90 milles de route il faut deux heures, mais par contre pour 90 milles de traversée entre North Sydney et Port aux Basques il faut huit heures, et ce facteur temps improductif s'ajoute aux salaires de nos hommes.

[*Texte*]

Mr. Carter: Is this reflected in the final cost to your customers?

Mr. Palmer: I think all rates are composed of final costs—all costs plus trying to get a small margin of profit, so it has to be reflected.

Mr. Pringle: Just in closing I would like to say I do not think it would be fair for me to leave this particular question without saying that we have also ordered a freight car from the railroad which took two weeks to get and when it finally arrived in the afternoon at 4 o'clock, ready to be loaded the next morning, we have gone out to find it gone, so the Prince Edward Island situation is rough in all forms of transportation.

The Chairman: I still have five more members that have asked to put questions. Would you please try to make your questions as short as you can because we are away behind in our scheduled time. Mr. Rock?

Mr. Rock: Mr. Palmer, I would like you to clarify a few answers that you gave a little while ago on certain items. You mentioned something about the stiff competition that the other truckers are getting from the two trucking companies, Eastern and Smith, which are owned by the railways.

Would you tell me if they were giving stiff competition to the other truckers before they were owned by the railway companies? Were Smith and Eastern very competitive to the other truckers before they were owned by CP and CN?

Mr. Palmer: Smith was one of the biggest, if not the biggest, company in Canada before it was purchased by CPR. Smith Transport operated here a very short time, owned as Smith Transport. It was purchased by CPR very shortly after it got operating rights within the Atlantic Provinces, so that is hard to say. Eastern Transport has been owned by CNR for 10 or 12 years—about 12 years, I think. It was two companies bought out and then made into Eastern Transport and Eastern Transport are certainly much bigger than the two companies that were purchased. Whether the two companies would have grown to the same size or not we will never know.

Mr. Rock: Do other trucking companies, say, other than Smith and Eastern use the piggyback service?

Mr. Palmer: Yes, the only piggyback service we have in the Atlantic Provinces on

[*Interprétation*]

M. Carter: Est-ce que cela se retrouve dans le prix des billets?

M. Palmer: Le coût final se retrouve toujours, il nous faut récupérer le coût et faire un bénéfice.

M. Pringle: En terminant, je ne crois pas qu'il serait juste que de laisser cette question sans dire que nous avons eu aussi un wagon de chemin de fer qui a pris deux semaines pour venir, il est arrivé à 4 heures un après-midi et prêt à être chargé le lendemain matin. Mais le lendemain matin il était déjà parti. La situation à l'Île du Prince-Édouard n'est donc pas facile quel que soit le mode de transport.

Le président: J'ai encore cinq autres membres du Comité inscrits pour poser des questions. Veuillez, je vous en prie, être aussi brefs que possible parce que nous sommes en retard sur notre horaire. Monsieur Rock?

M. Rock: Monsieur Palmer, je voudrais simplement faire préciser quelques réponses que vous nous avez fournies. Vous avez parlé de l'importance concurrence à laquelle les autres camionneurs doivent faire face de la part de deux compagnies, *Eastern* et *Smith*, qui sont la propriété des chemins de fer.

Pourriez-vous me dire s'ils faisaient une grande concurrence aux autres camionneurs avant qu'elles ne soient la propriété des chemins de fer? Est ce que *Smith* et *Eastern* faisaient une grande concurrence aux autres camionneurs avant qu'ils ne soient la propriété du CP et du CN?

M. Palmer: *Smith* était une des plus grandes, sinon la plus grande, sociétés de camionnage du Canada avant qu'elle ne soit achetée par le CP. *Smith Transport* n'a été ici que peu de temps, comme *Smith Transport*. Il a été acheté par le Canadien Pacifique, peu après avoir obtenu les droits d'exploitation dans les provinces de l'Atlantique, c'est donc difficile à dire. *Eastern Transport* est la propriété du Canadien National depuis dix ou douze ans, je dirais plutôt douze ans. C'était deux sociétés qui furent achetées et constituées en une seule, *Eastern Transport* et *Eastern Transport* est beaucoup plus grande que les deux sociétés qui furent achetées. Est-ce que les deux compagnies auraient pu croître jusqu'à une telle importance, nous ne le saurons jamais.

M. Rock: Est-ce que d'autres compagnies de camionnage autres que *Smith et Eastern* utilisent le service rail-route?

M. Palmer: Oui, le seul service rail-route que nous ayons dans les provinces de l'at-

[*Text*]

CNR is to go east or west. They will not give us piggyback service, say, to pick up in Moncton and take to Halifax, so the carriers within the province cannot use it but all carriers operating to Quebec and Ontario use piggyback from time to time.

Mr. Portelance: I have a supplementary on that, Mr. Chairman.

The Chairman: Mr. Portelance?

Mr. Portelance: If they use piggyback at that time they have a subsidy by using them, the trucking themselves?

Mr. Palmer: We thought maybe it might have been, but they tell us, no.

Mr. Portelance: You are not allowed subsidy if you use the piggyback system going west?

Mr. Palmer: If CN or CP picks up freight that is piggyback they get a subsidy on it because it does not say how it is hauled.

Mr. Portelance: What about your own firm; are you allowed to use it?

Mr. Palmer: No; we use it but we cannot get subsidy.

Mr. Portelance: You do not get subsidy?

Mr. Palmer: No.

Mr. MacLaren: If I might just add, that the National Transportation Act provides specifically—I cannot just find the section now—that independent truckers are to have the same rates as the railways for piggyback service. It is spelled right out in the act.

Mr. Rock: There is another point I would like Mr. Palmer to clarify. You know, after you answer questions sometimes certain things hang in the air without your realizing it. It does not come to a proper conclusion. I would like to know from you whether you are actually for the subsidy to be given to the shippers or that the subsidy be removed...

The Chairman: The same question was asked...

Mr. Rock: Mr. Chairman, may I finish please? You do not know what is in my mind. —or whether...

[*Interpretation*]

lantique par le Canadien National est un service est-ouest. Ils ne nous donnent pas de service rail-route pour aller de Moncton à Halifax donc les transporteurs dans la province ne peuvent y avoir recours, mais tous les transporteurs allant au Québec et en Ontario utilisent les services rail-route de temps à autre.

M. Portelance: J'ai une question supplémentaire sur ce sujet, monsieur le président.

Le président: Monsieur Portelance?

M. Portelance: Alors, lorsqu'ils utilisent le service rail-route ils ont une subvention?

M. Palmer: On avait pensé qu'il en était ainsi mais on nous a dit que non.

M. Portelance: Vous n'avez pas de subvention lorsque vous utilisez le système rail-route vers l'ouest?

M. Palmer: Si le CN ou le CP prennent des marchandises acheminées rail-route ils obtiennent une subvention, parce que rien n'indique le mode de transport.

M. Portelance: Que dire de votre maison; êtes-vous autorisé à demander la subvention?

M. Palmer: Non, nous l'utilisons mais nous n'avons pas de subvention.

M. Portelance: Vous n'avez pas de subvention?

M. Palmer: Non.

M. MacLaren: Je voudrais ajouter que la Loi nationale sur les transports prévoit, je ne trouve pas l'article, que les camionneurs indépendants devraient bénéficier exactement des mêmes tarifs que les chemins de fer pour les services rail-route. C'est écrit dans la loi.

M. Rock: Je voudrais une autre précision de la part de M. Palmer. Après avoir répondu aux questions, parfois il y a certaines choses qui restent obscures et nous n'arrivons pas à une conclusion appropriée. Je voudrais donc savoir si vous êtes en faveur d'une suvention à l'expéditeur ou que cette subvention soit supprimée...

Le président: Cette question a déjà été posée ..

M. Rock: Monsieur le président, pourriez-vous s'il vous plaît, me laisser terminer? Vous ne savez pas ce à quoi je pense. ...ou est-ce...

[*Texte*]

The Chairman: This same question was asked by four or five members this morning.

Mr. Rock: You do not know whether it was because I did not finish Mr. Chairman, please. —or whether you would like to see the subsidy removed from the railway company because you said both in the past and I would like this clarified. You said, for better competition you would rather see it removed from the railway company.

Mr. Palmer: All I am saying is that we in the trucking industry have our own ideas of what we feel would be best but we do not feel it is our place nor are we probably qualified to set the policy, so whatever policy the federal government comes up with, all we are saying is we want to be a part of that and we will be happy whatever it is.

Mr. Rock: This is exactly what I wanted you to be more specific about and you are not, so that is all right. I mean, this is again your answer. I was trying to get a better answer than that, but I understand now. The other question that I think either you or Mr. MacLaren could answer is, are you for this well-talked-about State of Maine corridor? I am asking this for a reason and that is because of the possible complications that may arise if your truckers use a corridor like this, vis-à-vis licensing and state taxes and things like that.

Mr. Palmer: I think I can answer that very quickly. If there is any shorter route to any place it is not for us to say whether we will use it or not. Road transport will always use the shortest, fastest, cheapest route available, so if it is built and the cost is a cent a mile cheaper to get to Montreal using that road, we shall use it; if it is not cheaper we will not use it.

Mr. Rock: What about the complications of taxation on the trucker? In the Montreal area some truckers have complained to me in the past about their having to pay a New York State tax and on and on, going through although, being employed by a Canadian company, they still have to pay these other income taxes. I would like to know what the complications will be for your truckers through the Maine Corridor.

Mr. Palmer: The only tax that you have to pay in the United States is the same as in

[*Interprétation*]

Le président: Quatre ou cinq autres membres du Comité ont posé la même question ce matin.

M. Rock: Vous ne savez pas si c'est la même tant que je n'ai pas fini de la poser. . . .ou est-ce que vous voulez que cette subvention ne soit plus accordée aux sociétés ferroviaires? Vous avez dit les deux, je voudrais donc savoir exactement. Vous avez dit que pour avoir une meilleure concurrence vous préféreriez que la société ferroviaire n'ait plus cette subvention.

M. Palmer: Tout ce que je dis c'est que nous avons nos propres idées quant à ce qui serait la meilleure situation, mais nous sommes d'avis qu'il ne nous appartient pas d'établir la politique et nous n'avons pas qualité pour le faire. Quelle que soit la ligne de conduite établie par le gouvernement fédéral, tout ce que nous disons c'est que nous voulons y participer, quoi qu'elle soit.

M. Rock: C'est exactement ce que je voulais vous voir préciser, j'essayais d'obtenir une réponse précise, mais vous n'en donnez pas, parfait. Maintenant, je comprends très bien. Vous ou peut-être M. MacLaren pourrez sans doute répondre à mon autre question. Est-ce que vous êtes en faveur de ce corridor de l'État du Maine dont on parle tellement? Je demande cela pour certaines raisons liées aux complications qui pourraient se présenter si vos camions utilisaient un tel corridor, disons, en ce qui concerne les permis, les impôts de l'état et autres.

M. Palmer: Je pourrais y répondre assez rapidement. S'il y a une route plus courte, ce n'est pas à nous de dire si nous l'utiliserons ou non. Le transport routier utilisera toujours la route la plus courte, la plus rapide et la moins coûteuse qui soit disponible, donc si cette route est aménagée et si il nous en coûte un cent de moins du mille pour se rendre à Montréal, nous l'utiliserons. Mais si ce n'est pas moins cher nous ne l'utiliserons pas.

M. Rock: Mais que dire des complications en ce qui concerne les impôts payés par les camionneurs? Je sais que par le passé dans la région de Montréal des camionneurs se sont plaints d'avoir à payer un impôt dans l'État de New York bien qu'ils soient à l'emploi d'une société canadienne, et qu'ils aient à payer les impôts sur le revenu. Je voulais savoir ce qu'il en serait pour vos camionneurs si on utilisait un tel corridor dans le Maine.

M. Palmer: La seule taxe que vous avez à payer aux États-Unis est la même qu'au

[*Text*]

Canada, which we in the trucking industry believe in. We believe that we should pay a fuel tax for the miles used in any province or any state. That is our toll and we think we should pay it, so whether we pay it to Maine, New Hampshire or Vermont or New Brunswick, Quebec and Ontario makes no difference to us.

Mr. Rock: Mr. Chairman, I do not think Mr. Palmer understands my question. You are talking about licensing and I did not mention licensing. I am talking about the chauffeur who may be obliged to pay income tax in another state because he is travelling through that state. Possibly 60 per cent or 90 per cent of his distance is through America rather than Canada and he has to pay that portion of his income tax to another country.

Mr. MacLaren: Mr. Rock, may I answer that? There are certain hazards involved—and this has just come to light recently. Many of the trucks coming from Western Canada to Ontario and Quebec use what they call the bridge states, the Dakotas, Michigan, Wisconsin. Usually there is a charge, a transit fee going through a bridge state.

Mr. Palmer: You either have to buy enough fuel for the mileage you travel there or you pay the tax anyway.

Mr. MacLaren: Yes, but recently the State of Wisconsin—in fact this is on now; we are finding it right now—has tried to hit one of the biggest carriers in Western Canada with corporate income tax and personal income tax on the driver, even though they are doing no business at all in the state. They are simply using it to drive through. In fact, two states are attempting to do this now. This is a problem that we are faced with. We hope we can resolve it.

Mr. Rock: You are not aware that possibly the State of New York also charges income tax to every chauffeur of Canadian firms who travels through New York State.

Mr. MacLaren: Well, it would depend; if they are doing business in New York City, if their terminal is in New York City, then, of course, they would be paying that kind of tax.

Mr. Rock: That is all, Mr. Chairman.

The Chairman: Mr. Allmand?

[*Interpretation*]

Canada. Nous sommes d'avis qu'on devrait payer toute taxe sur la vente de l'essence pour les milles parcourus dans toute province ou état. C'est notre péage et nous sommes d'avis que nous devons payer cet impôt, qu'on le paie au Maine, au New Hampshire, au Vermont, au Nouveau-Brunswick, au Québec ou à l'Ontario, peu nous importe.

M. Rock: Monsieur le président, je ne crois pas que M. Palmer ait compris ma question. Vous parlez des permis, ce n'est pas ce dont j'ai parlé. Je parle du conducteur de camion lui-même qui sera peut-être tenu de payer un impôt sur le revenu dans un autre état parce qu'il traverse cet état. Peut-être que 60 ou 90 p. 100 de sa distance à parcourir sera aux États-Unis plutôt qu'au Canada et il devra donc payer cette partie de son impôt à un autre pays.

M. MacLaren: M. Rock puis-je répondre à votre question? Il y a certaines inconnues qui se présentent. Cela n'est apparu que récemment. Bon nombre de camions qui viennent de l'ouest du Canada vers l'Ontario ou le Québec utilisent ce qu'on appelle les états de liaison, les Dakota, le Michigan et le Wisconsin. Habituellement il y a une redevance pour la traversée de ces états.

M. Palmer: Vous devez acheter suffisamment d'essence pour les distances parcourues dans cet état ou bien vous payez la taxe de toute façon?

M. MacLaren: Oui, mais récemment l'état du Wisconsin a essayé de s'en prendre à un des plus grands transporteurs de l'ouest du Canada en lui imposant un impôt corporatif et un impôt personnel aux chauffeurs bien qu'ils ne font aucun commerce dans l'état. Ils traversent simplement l'état. Il y a deux états qui essaient de le faire maintenant et c'est un véritable problème qui se pose pour nous. Nous espérons pouvoir le résoudre.

M. Rock: Vous n'êtes pas au courant du fait que l'État de New York de même prélève un impôt personnel auprès de tout camionneur de maison canadienne qui doit passer par l'État de New York.

M. MacLaren: Tout dépend s'ils font des affaires à New York, si leur terminus est à New York, alors ils paient certains impôts.

M. Rock: J'ai terminé monsieur le président.

Le président: Monsieur Allmand?

[*Texte*]

Mr. Allmand: Mr. Palmer, in answer to certain questions you stated that you thought you were paying a fair share towards the construction and upkeep of roads through licences and taxes. I want to ask you several questions on this matter. What is the difference between the diesel oil tax and the gasoline tax?

Mr. Palmer: In every province it is different.

Mr. Allmand: Do most of your trucks operate on diesel fuel?

Mr. Palmer: Almost all line haul tractors that haul the freight from one city to another use diesel fuel. The pickup trucks within the cities are mostly gas.

Mr. Allmand: Do you know the difference between the tax on diesel fuel and gasoline?

Mr. Palmer: In New Brunswick the diesel fuel tax is 23 cents a gallon and gasoline is 19 cents. In Nova Scotia it is 19 cents on gas and 27 cents on diesel.

Mr. Allmand: So it is more on diesel fuel clear through, is it, gentlemen?

Mr. Palmer: It is twenty-five cents on each in Newfoundland.

Mr. Allmand: So in every province that you know of the diesel fuel tax is higher than the gasoline tax.

Mr. Palmer: As high or higher.

Mr. Allmand: Do you know what percentage of highway costs—and here I include construction and maintenance of highways—are covered by revenue from trucking companies? You may not know. Do you know whether statistics are kept by the provinces?

Mr. Palmer: I think Mr. MacLaren can answer that.

Mr. MacLaren: There has only been one significant study in Canada that we know of. There have been studies in the United States, but the Committee on Taxation in Ontario, brought down its report—the Smith Report—a year ago. It is a most complicated matter; I do not pretend to understand it. Chapter 30 of that report goes into this in detail. They did lengthy studies. They made the calculations in two or three different ways and the conclusion was that buses and heavy high-

[*Interprétation*]

M. Allmand: Monsieur Palmer, en réponse à certaines questions vous avez dit que vous pensiez payer votre dû pour l'aménagement et le maintien des routes par les permis et les impôts. Je voudrais vous poser plusieurs questions là-dessus. Quelle différence y a-t-il entre l'impôt pour l'essence et le carburant pour diesel?

M. Palmer: Chaque province a un système différent.

M. Allmand: Est-ce que la plupart de vos camions utilisent le carburant pour diesel?

M. Palmer: La plupart des tracteurs qui font le transport d'une ville à l'autre utilisent le carburant pour diesel. Les camions qui font le ramassage dans les villes utilisent de l'essence.

M. Allmand: Quelle différence y a-t-il entre les impôts à payer sur ces deux carburants?

M. Palmer: Au Nouveau-Brunswick l'impôt sur le carburant pour diesel est de 23 cents le gallon, pour l'essence 19 cents. En Nouvelle-Écosse 19 cents pour l'essence et 27 cents pour le carburant pour diesel.

M. Allmand: C'est donc plus pour le diesel.

M. Palmer: A Terre-Neuve c'est 25 cents pour les deux.

M. Allmand: Donc en règle générale l'impôt pour le diesel est plus élevé.

M. Palmer: Plus élevé ou aussi élevé, oui.

M. Allmand: Savez-vous quel pourcentage du coût des chemins, soit pour la construction soit pour l'entretien, est couvert par les revenus provenant des sociétés de camionnage? Vous ne le savez peut-être pas. Savez-vous si les provinces ont des statistiques à ce sujet?

M. Palmer: Je pense que M. MacLaren peut répondre à cela.

M. MacLaren: Nous ne connaissons au Canada qu'une étude faisant autorité. Il y en a eu aux États-Unis, mais le Comité ontarien sur la taxation a produit son rapport, le rapport Smith, qui a été présenté il y a un an. C'est une question complexe que je ne prétends pas comprendre. Au chapitre 30 de ce rapport on a des explications détaillées. Après une longue étude, on a fait les calculs de deux ou trois façons différentes et les

[*Text*]

way trucks are more than paying their fair share of highway costs.

Mr. Allmand: I think this is very important, to answer the questions that were raised, I think, by Mr. Rose and others, and questions that are in my own mind whether or not the trucking companies are paying a fair share. I think perhaps we will study this report put out by the government of Ontario. Now, in the Maritimes you do not have any toll roads but we do in Quebec and in many of the United States there are toll roads.

Would it help your business in the Maritimes and in parts of Quebec where you do business if the governments were to build toll roads? Often they feel that they cannot build a road now due to other priorities but they can build a toll road because they know they will get back revenue to support the construction and maintenance of that road very quickly and they build the road much quicker through that means. If the provinces here in the Maritimes need the roads but feel they cannot do it out of ordinary revenues, do you support the toll road principle of getting the roads built right away, quickly?

Mr. McGrath: Mr. Chairman, on a point of order that question is irrelevant because it applies to provincial jurisdiction.

Mr. Allmand: Oh, it is very relevant.

Mr. McGrath: No, not at all.

The Chairman: Mr. Allmand.

Mr. Allmand: We have joint highway programs such as the Trans-Canada Highway. We may go into toll roads; I do not know.

Mr. Palmer: I would answer that only personally because it has never been discussed in our association.

I think no one ever wants to pay for anything as long as he does not have to. I think the toll road has a lot of merit. Certainly when you go in the United States you are on one toll road after another and they certainly get a lot of traffic. If, for example, there were a toll road running parallel to Trans-Canada I would not be in favour of it, but if the only way we were going to get a road from Moncton to Cambellton was to construct a toll road, then I think probably the industry could well afford to pay the toll versus the

[*Interpretation*]

conclusions auxquelles on en est arrivé furent que les autobus et les camions paient plus que leur juste part du coût d'entretien et de construction des routes.

M. Allmand: Je pense qu'il est très important de répondre aux questions posées par M. Rose et autres et aux questions que je me suis posées pour savoir si les sociétés de camionnage payaient leur juste part. Peut-être pourrions-nous consulter ce rapport de l'Ontario. Dans les Maritimes vous n'avez pas de routes à péage, mais nous en avons dans le Québec et dans bon nombre d'états américains.

Est-ce que cela aiderait votre entreprise dans les Maritimes et dans certaines régions du Québec où vous allez si le gouvernement aménageait des routes à péage? Souvent, ils sont d'avis qu'ils ne peuvent construire une route maintenant vu les autres priorités, mais s'ils peuvent, disons, construire une route à péage parce qu'ils peuvent obtenir un revenu pour son entretien, ils peuvent construire des routes plus rapidement. Si les provinces Maritimes ont besoin de routes mais n'ont pas la possibilité de le faire avec les revenus habituels, est-ce que vous appuieriez que le principe du péage pourrait vous aider à faire construire une route rapidement.

M. McGrath: Monsieur le président, un rappel au règlement parce que cela relève de la compétence provinciale.

M. Allmand: Cela nous concerne parfaitement.

M. McGrath: Non, pas du tout.

Le président: Monsieur Allmand.

M. Allmand: Nous avons des programmes conjoints de construction de routes, comme la Route transcanadienne, nous en viendrons peut-être aux routes à péage, je n'en sais rien.

M. Palmer: Je ne vous donnerai qu'une réponse personnelle parce que nous n'en avons jamais parlé au sein de l'association.

Je pense que personne ne veut payer pour quoi que ce soit aussi longtemps qu'il ne doit pas le faire. Je pense que la route à péage a beaucoup de mérite. Lorsque vous allez aux États-Unis vous avez une route de péage après l'autre et il y a beaucoup de circulation. Si, disons, par exemple, il y avait une route à péage parallèle à la Route transcanadienne, je ne serais pas en faveur de celle-là. Mais si la seule façon de pouvoir avoir une roue de Moncton à Campbellton était une route à péage, alors j'imagine que l'industrie

[*Texte*]

time it is taking to get there now. However, I think it is a bigger decision than I would like to make on the spur of the moment.

Mr. Allmand: All right. Now, you said that you find it hard to compete because of the subsidies paid to the railways and you say that the reason you find it hard to compete is mainly because of the rates you must charge in comparison with those that railways must charge. Yesterday we had McCain Foods Limited here and they say they use trucking as a principal means of transport and the reason they do it is because you can give them services that they cannot get from the railways, and the price of the service is not so much greater as to deter them from using the trucks.

I am questioning your principal argument that you are not competitive with the railways principally because of the cost. McCain, for example, said that they find it quicker to go out of the Maritimes by truck. They also find that they can service their customers better because of multiple drops, because of siding problems, and so on, so I think you have many competitive advantages that the railways do not have in the Maritimes and that you are competing, in fact.

Mr. Palmer: We are competing and what you say is true with a lot of companies, but also when it comes to negotiating a rate and the railway has a rate of 80 cents a hundred or 70 cents a hundred or 90 cents a hundred the choice comes down very quickly to, do you want it for this rate or do you not? This is with the food companies, the paper companies, the fish companies—any of the big companies; our rate is determined in the end by what they can get it hauled for by rail and we have met this many, many times.

We will negotiate a rate, buy equipment, get set up and then the rail comes in because they have lost the business and they cut the rate by 10 cents a hundred. We have one of two choices: we stop hauling it, or we cut our rate by 10 cents a hundred. We have a prime example of this happening right now with one of our big back hauls. Two companies, a competitor and we, have been hauling it and we are getting 63 cents a hundred to haul from Bathurst to Montreal. The railway has

[*Interprétation*]

pourrait très bien se permettre de payer le péage si on tient compte du temps qu'il nous faut pour nous y rendre maintenant. Je pense que c'est une décision trop importante à prendre pour l'adopter sans hésitations.

M. Allmand: Vous trouvez qu'il vous est difficile de concurrencer les chemins de fer à cause de la subvention qu'ils reçoivent et vous dites que la raison pour laquelle vous trouvez que cette concurrence est difficile c'est essentiellement parce que vous vous trouvez dans l'obligation d'exiger des tarifs comparativement plus élevés que ceux des chemins de fer. Hier nous avons eu les représentants de *McCain Foods Limited* et ils nous ont dit qu'ils utilisaient des camions comme moyen principal de transport parce que le service était meilleur que celui des chemins de fer et que la différence de prix était trop faible pour les dissuader d'utiliser des camions.

Donc, je mets en doute votre argument voulant que vous ne pouvez concurrencer les chemins de fer, et cela essentiellement à cause de tarifs. McCain, entre autres, ont déclaré qu'ils trouvaient qu'il était plus rapide de parcourir les Maritimes en camion. Ils ont également constaté qu'ils pouvaient mieux servir leurs clients parce qu'ils pouvaient faire des livraisons échelonnées et qu'ils avaient d'autres avantages. Donc, je pense que vous avez vraiment bon nombre d'avantages que n'ont pas les chemins de fer dans les Maritimes que vous essayez de concurrencer.

M. Palmer: Oui, nous faisons la concurrence et cela vaut pour bon nombre de sociétés, mais tout de même, lorsque nous en arrivons à la négociation d'un tarif et que les chemins de fer ont 70 ou 80 ou 90 cents le cent, alors le choix en vient rapidement à: est-ce que vous acceptez ce tarif ou pas? Que ce soit avec les sociétés de produits alimentaires, de papier, de poisson, enfin, n'importe quelle grande société, notre tarif est déterminé à la fin par le prix qu'ils obtiennent des chemins de fer, et c'est la situation que nous avons rencontrée très souvent.

Nous négocions un tarif, achetons l'équipement, constituons notre service, ensuite les chemins de fer arrivent, ils ont perdu des clients, ils baissent leurs prix et nous perdons le client ou nous baissons nos prix. Nous avons deux solutions: perdre le client ou baisser nos prix. Nous avons un excellent exemple de cette situation qui se produit maintenant avec un des grands parcours. Deux sociétés, celle d'un concurrent et la mienne faisions ce transport et nous obte-

[*Text*]

come in and said, give us 90 per cent of your business and we will give you a rate of 44 cents a hundred.

Mr. Allmand: Despite this you are still in great demand. As a matter of fact, in their brief Mr. McCain says they find there is a shortage of good trucking companies with proper refrigeration service. It is right in their brief. I do not know whether or not you read their brief.

Mr. Palmer: Yes I did and this is correct. I know that we load all the trucks we can get there and they are looking for more all the time.

Mr. Allmand: I see. All I say is that there is some doubt about the competitiveness or not. How many national trucking firms are in the Maritimes as opposed to local firms? I am speaking of companies like Smith. I do not know what other large national ones you have here.

Mr. Palmer: Smith is the largest. We have Rimouski Transport out of Rimouski. We have Daigneault out of Riviere-du-Loup; we have Speedway Express Ltd. from Montreal, etc.

Mr. Allmand: The follow-up question would be: if the same subsidies were given to the trucking industry as to the railways, would you expect more competition to come in from the trucking firms in Montreal, Toronto and Quebec City?

Mr. Palmer: I would expect the moment that trucking was put equal with other modes in the provinces you would see the intercities, the Kingsways, and all the firms immediately taking a look at the Atlantic provinces.

Mr. Allmand: And do you not feel that they may be able to put a lot of you boys out of business down here?

Mr. Palmer: No. Anyone who goes out of business by good, fair competition should go out of business—by fair competition.

Mr. Allmand: Thank you.

The Chairman: Mr. Thomas.

Mr. Thomas (Moncton): Mr. Chairman, first I would like to thank Mr. Palmer for his very timely remarks on the difficulties

[*Interpretation*]

nions 63 cents le 100 pour faire le transport de Bathurst à Montréal. Les chemins de fer sont arrivés et ont dit, donnez-nous 90 p. 100 de vos affaires et on vous consentira 44 cents le 100.

M. Allmand: Malgré tout on a toujours recours à vos services. McCain dans son mémoire dit qu'il y a insusffiance d'excellentes maisons de camionnage avec des camions réfrigérés appropriés et adéquats. C'est dans leur mémoire. Je ne sais pas si vous avez lu ce mémoire.

M. Palmer: Oui, je sais, c'est juste. Nous savons que les camions qu'on peut y acheminer sont remplis et on peut toujours en fournir plus.

M. Allmand: Très bien, je vois. Tout ce que je peux dire, c'est qu'il y a certains doutes au sujet de la concurrence. Combien de sociétés nationales de camionnage se trouvent dans les Maritimes par opposition aux sociétés locales? Je parle des compagnies comme *Smith etc...* Je ne connais pas les autres grandes sociétés nationales que vous avez ici.

M. Palmer: *Smith Transport* est la plus considérable. Nous avons aussi *Rimouski Transport* qui vient de Rimouski. Nous avons aussi *Daigneault* de Rivière-du-Loup; *Speedway*, de Montréal, etc...

M. Allmand: Et maintenant, une autre question qui fait suite à celle-ci. Si la même subvention était donnée au camionnage qu'à l'industrie des chemins de fer, est-ce que vous vous attendriez à plus de concurrence de la part des sociétés de Montréal, Toronto et Québec? Les grandes compagnies?

M. Palmer: Du moment que le transport par camion est sur un pied d'égalité avec les chemins de fer, toutes les grandes sociétés comme Kingsway et les autres regarderaient vers les provinces de l'Atlantique immédiatement.

M. Allmand: Ne croyez-vous pas que ces compagnies pourraient peut-être éliminer plusieurs de vos sociétés ici?

M. Palmer: Non. Ceux qui se retirent des affaires à la suite d'une bonne et juste concurrence devraient se retirer des affaires, à condition que ce soit une concurrence juste.

M. Allmand: Merci.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Monsieur le président, tout d'abord je voudrais remercier M. Palmer de ses observations très justes au

[*Texte*]

incurred in the expense involved in shipping to and from Prince Edward Island. I think if any of the members of this Committee had any doubts as to the validity of or the necessity for a permanent Island-Northumberland Strait crossing, you must have given them some food for thought to take back with them. Thank you very much.

In connection with Part III of the National Transportation Act which still has not been implemented, Mr. Pickersgill told us in a Committee session that negotiations were under way, I presume with the provinces and with the trucking industry, but he could not give us any idea of when this might be implemented. Do you, in your capacity with the Canadian Trucking Association, have any indication as to when this Part III may come into effect?

Mr. MacLaren: I do not think it would be appropriate for me to predict what the Commission may recommend or the government may do. All I would say is that we have been twisting arms and everything as hard as we can all over the place to try and get some action. In actual fact I do not think it is any secret that the Canadian Transport Commission is now enagaged in discussions with all the interested road transport groups, Canadian Industrial Traffic League, our association, the CWA and the warehousing association to find out exactly where they stand on this matter. We hope that a recommendation will be going forward to the government fairly soon. We are pressing for this and we hope it will happen.

Mr. Thomas (Moncton): Thank you. Mr. Palmer, we heard yesterday of several instances of, to me, ridiculous figures of differences in rates between places of similar distances or instances where the railway rate for 500 miles is lower than a rate for 200 miles; this did not seem to make sense. There was also an inference that rates across the country vary. Does this apply to the trucking industry? In other words, talking about per ton mile does it cost the same to ship 200 miles in Ontario as it does to ship 200 miles in the Maritimes? Are we paying higher rates in the Maritimes per ton mile than in other parts of the country, in your industry?

Mr. Palmer: I think I can answer this best this way; we have tried very hard to figure out how the railway sets rates. No-one has ever been able to give me an answer of how this is done. In the trucking industry our rates are set mainly on three things: distance is certainly a factor; The type of freight you are hauling is certainly a factor; and then the volume of freight that any one customer

[*Interprétation*]

sujet des difficultés et des frais encourus pour l'expédition vers et de l'Île du Prince-Édouard. Si les membres du Comité avaient des doutes sur la validité ou la nécessité d'un lien pour le Détroit de Northumberland, il a certainement donné lieu à réfléchir, et je l'en remercie.

J'aimerais bien demander à M. MacLaren en rapport avec la partie III de la Loi nationale sur les transports qui n'a pas encore été mise en vigueur, M. Pickersgill nous a dit, lors d'une séance de Comité, que les négociations étaient en cours, je présume, avec les provinces et avec l'industrie du camionnage. Mais il ne savait pas du tout quand cette partie serait mise en vigueur. Selon votre titre dans l'association, avez-vous une idée quand cela sera mis en vigueur?

M. MacLaren: Cela ne serait pas approprié pour moi de vous dire ce que la Commission peut recommender ou peut faire. Tout ce que je peux dire, c'est que nous avons essayé de faire jouer des influences partout pour essayer d'obtenir des résultats. En fait, ce n'est pas un secret que la Commission des Transports canadienne à l'heure actuelle a des pourparlers avec toutes les parties intéressées: la *Canadian Industrial Traffic League*, notre association, la *CWA*, et l'association des propriétaires d'entrepôts pour connaître leurs opinions à ce sujet. Nous espérons qu'une recommandation sera formulée auprès du gouvernement très rapidement. Nous exhortons que cela se fasse le plus tôt possible et nous espérons que cela arrivera.

M. Thomas (Moncton): Merci. Maintenant, monsieur Palmer, hier, on nous a donné plusieurs exemples de chiffres ridicules et de différences de taux sur les mêmes parcours ou des exemples, où le tarif du chemin de fer pour 500 milles était moins élevé que pour 200 milles, ce qui ne semble avoir aucun sens. On nous a dit aussi que les taux variaient d'un bout à l'autre du pays. Est-ce que cela s'applique au camionnage aussi? Est-ce que, dans l'Ontario, le prix par tonne-mille est plus élevé pour expédier des marchandises sur un trajet de 200 milles qu'aux Maritimes?

M. Palmer: Je crois que la meilleure réponse à cette question serait la suivante: quant aux taux des chemins de fer, nous avons essayé très fort de savoir de quelle façon les chemins de fer établissent leurs tarifs. Personne n'a jamais pu me donner une réponse à ce sujet. Dans l'industrie du camionnage, nos taux sont fixés selon trois éléments: la distance est certainement un des

[*Text*]

has to offer you over a period of years is certainly a factor. Putting those three factors together we have come up with a rate with which we hope can meet all our costs and make a little profit.

What we find in competing with the railway is that with some commodities in some areas we have no problem whatsoever. It seems that for the same product in a similar area somewhere else their rate is half. I do not think the trucking industry's rates vary this much. I think mileage is always a factor.

Mr. Thomas (Moncton): But is it fair to say from that that it could very well be that in the Maritimes in certain cases we are paying higher rates than Ontario because in the more highly competitive situation the railways might have reduced their rates.

Mr. Palmer: The competitive part is one thing, but I think another thing that makes rates higher here in some areas is because of the small amount of traffic that goes through the area; you could never get there with a truck-load of freight. Basically your per mile haul makes no difference whether you carry 20,000 pounds of freight or 40,000 pounds.

Mr. Thomas (Moncton): This is the core of our whole problem down here and this is what we are trying to get at.

I was also interested to hear yesterday—and this has come up before—one or two shippers make the statement that they could not use truck transportation because it was not satisfactory. In one case we had a shipper stating flatly that in Sackville he had ordered trucks to pick up two or three times. The trucks had passed by his door so he is now shipping everything by rail. This was interesting.

Also we have a case of a brief that was presented last year, and I suppose it will be presented here today, where a company declares that they are a captive shipper. This is the Chestnut Canoe Company Limited brief from Fredericton, N.B. and they say, in effect, that the railways have enjoyed them as a captive market because of inadequate truck transportation and point to the unwillingness of truck transports to carry out commodity and the outright refusal by two trucking firms to pick up canoes. This is basically what the man in Sackville said,

[*Interpretation*]

éléments; le genre de cargaisons que vous transportez aussi, ainsi que le volume d'un seul client au cours d'une année, qui est le troisième facteur. Si vous mettez les trois facteurs ensemble, nous en arrivons aux taux qui, nous l'espérions, nous permettront de faire un très petit profit.

Mais quand nous en arrivons à la concurrence avec les chemins de fer, ce que nous trouvons, c'est que pour certaines denrées dans certaines régions, il n'y a aucun problème du tout quant à la concurrence. Mais pour les mêmes produits dans d'autres régions, on découvre que le tarif est coupé de 50 p. 100. Et je ne crois pas qu'il y ait tellement de différences dans le camionnage mais je crois que le millage y est pour quelque chose.

M. Thomas (Moncton): Alors, pour être juste, est-ce que l'on peut dire que dans les Maritimes nous payons des taux plus élevés dans certains cas, alors que dans l'Ontario, en raison de la situation plus concurrentielle, les chemins de fer ont dû réduire leurs taux?

M. Palmer: Oui, dans une certaine mesure. Mais la raison pour laquelle les taux sont élevés ici dans certaines régions, c'est en raison du peu de volume qui se rend dans cette région et cela est absolument impossible de s'y rendre avec un camion de marchandises. En d'autres termes, peu importe si vous avez à transporter 20,000 livres ou 40,000 livres avec un seul camion.

M. Thomas (Moncton): Voilà la raison clé pour laquelle nous voulons obtenir le corridor. Hier, j'étais intéressé à cette question et un ou deux expéditeurs ont déjà déclaré qu'ils ne pouvaient pas employer les camions parce que le service n'était pas satisfaisant. Dans un cas, un des expéditeurs nous a dit carrément qu'il avait commandé des camions deux ou trois fois à Sackville pour venir chercher ses colis et que les camions n'étaient même pas venus. Il faisait depuis ses expéditions par chemin de fer.

Il y a un mémoire qui a été présenté l'an dernier et je suppose qu'il a été présenté cette année aussi, où l'expéditeur déclare être un expéditeur captif. Il s'agissait de la compagnie *Chestnut Canoe Company Ltd.* de Fredericton et en fait, ce qu'il ont dit, c'est que les chemins de fer nous les avaient comme clients captifs parce que les camions ne veulent pas transporter leurs produits. Il s'aggissait de canoës. C'est ce qu'il nous ont dit, que les camionneurs préfèrent la densité au volume. Et alors, ils prétendaient dans leur mémoire qu'il y avait deux sociétés de

[*Texte*]

that the trucks would not take the bulky freight; they would rather haul the high density freight. The brief goes on to say that the two truck companies have actually refused to haul their products. Have you any comments on these statements?

Mr. Palmer: I am very familiar with both of these cases. The trucking companies have not refused to haul the product. We have rates published for every product in the Atlantic provinces, but we cannot operate at a loss for any one company, because we have no-one to pick up the tab at the end of the year if we do not make a profit. Companies such as Chestnut Canoe Company Limited or Enamel and Heating Products Ltd., are both talking of bulky expensive products. At a rate for which canoes have been hauled from Fredericton to Montreal and Toronto, with the biggest vans we have, based on the same rate, we would get something like $60 or $70 to go from here to Toronto, which we cannot do. Perhaps the rails can, but we cannot.

Mr. Thomas (Moncton): Just one more short question. You indicated earlier an instance of the railways reducing their freight rates on hauling potatoes to the point where it was no longer possible for the trucking industry to carry them?

Mr. Palmer: Yes.

Mr. Thomas (Moncton): This also ties in with some evidence we heard yesterday that the railways have been following this policy of deliberately cutting their rates to put competition out of business. Is this still going on? Does this go back some years or would you say that this policy is still being followed by the railways?

Mr. Palmer: The part that bothers me very much is that the government of Canada, the people of Canada, who have been paying $14 million a year in subsidy, are saying that should be passed to the shipper so that the people in the Maritimes can get their products on the central Canadian market and be competitive. I say the railroad has taken advantage of this, because if they were using it rightfully, then they should have given the best rate to the customer who was going farthest. It is only truck or water competition that reduced that rate and it has happened many, many, many times with our own company. Anybody here will tell you that once

[*Interprétation*]

camionnage qui avaient refusé de transporter ces produits. Avez-vous des commentaires à formuler à ce sujet?

M. Palmer: Je connais les deux cas. Les compagnies n'ont pas refusé de transporter les produits. Nous avons un tarif publié pour chaque province dans les provinces de l'Atlantique. Mais nous ne pouvons subir des pertes ou exploiter à perte pour une seule compagnie, car à la fin de l'année, si nous ne faisons de profits, il n'y a personne qui va combler notre déficit. Qu'il s'aggisse de la *Chestnut Canoe* ou de la *Enamel and Heating Products Ltd.*, leurs produits sont très volumineux et coûteux. Au taux auquel on transporte les canots de Fredericton à Montréal ou Toronto avec les remorques que nous avons à l'heure actuelle, nous recevrions de $60.00 ou $70.00 pour nous rendre d'ici Toronto, et c'est absolument impossible pour nous de le faire à ce prix-là. Les chemins de fer peuvent peut-être le faire mais nous, non.

M. Thomas (Moncton): Merci. Une autre brève question maintenant. Un peu plus tôt, vous nous avez donné un exemple où les chemins de fer avaient réduit leur tarif-marchandises pour le transport des pommes de terre jusqu'au point où ce n'était plus rentable pour l'industrie du camionnage de faire ce transport.

M. Palmer: Oui.

M. Thomas (Moncton): Cela concorde avec les preuves que nous avons eues hier à l'effet que les chemins de fer suivaient cette politique de couper délibérément les taux afin d'éliminer la concurrence. Est-ce que cela se produit toujours, ou est-ce que cela remonte à plus loin, à quelques années en arrière? Est-ce que vous diriez que cette politique est toujours suivie par les chemins de fer?

M. Palmer: Ce qui me préoccupe le plus, c'est que le gouvernement du Canada, le peuple du Canada, qui versent 14 millions de dollars par année en subventions, qu'on devrait verser ces allocations aux expéditeurs, afin que la population des Maritimes puissent acheminer leurs produits vers le centre du Canada et soutenir une certaine concurrence. Je prétends que les chemins de fer en ont profité, effectivement en ont abusé car si ces subventions avaient été utilisées à bon escient elles auraient dû procurer le meilleur taux possible au client expédiant dans les centres les plus éloignés. Mais ce n'est que la concurrence du transport mari-

[*Text*]

trucks come in and get the product, immediately there is a rate cut given by the railroad.

Therefore, I can only assume that they were making excess profits before, because the trucking industry will never reduce a rate to below what they need to pay their bills. You cannot do it and stay in business. You can run for a while at break-even, or you can run a small segment of your business at a loss, but you cannot run your whole business at a loss.

Mr. Thomas (Moncton): Thank you, Mr. Palmer. In other words, if we can come up with an over-all transportation policy that will apply to the trucking industry as well as the railways, you may very well get lower rates?

Mr. Palmer: I would say immediately.

Mr. Thomas (Moncton): Thank you.

The Chairman: Mr. Portelance.

Mr. Portelance: Thank you, Mr. Chairman. Regarding subsidy from government, if this was ever desired, would you not agree that it would be easier for the government to give these subsidies to the transport companies instead of the shipper? There would be less people involved.

Mr. Palmer: We feel there would be less people involved. Also we feel that it could be better controlled through a for-hire trucker. If it is given to the licensed people in the trucking industry, a very valuable asset of that company is their franchise permit given by the different provinces or the Dominion. Therefore if it is given to the trucking industry, and if abused, the penalty clause could be that the franchise be taken away. To give it to the shippers, we feel, might be very hard to administer. However, that is out of our field.

Mr. Portelance: You were saying that you had a lot of opposition when you had to contract for permits with the different provinces. Did this opposition come from the trucking industry, the transport companies, or from the province itself, or their representative?

Mr. Palmer: I am sorry, I did not get the first part of the question.

[*Interpretation*]

time ou par camion qui a réduit ce taux. C'est une chose qui est arrivée plusieurs fois, dans notre compagnie. On vous le dira partout: du moment que nous faisons de la concurrence, il y a une réduction de tarif de la part du chemin de fer.

Je présume donc qu'ls faisaient des profits exhorbitants et excessifs avant notre arrivée car l'industrie du camionnage ne réduira jamais un taux à un montant qui soit inférieur à ce qui est nécessaire pour payer leurs comptes. C'est impossible de le faire et de rester en affaires. Vous pouvez exploiter à perte une petite partie de votre industrie mais vous ne pouvez pas faire fonctionner tout votre commerce à perte.

M. Thomas (Moncton): Merci M. Palmer. Si nous en arrivons à une politique d'ensemble qui s'applique au camionnage, vous serez donc heureux.

M. Palmer: Oui.

M. Thomas (Moncton): Merci.

Le président: M. Portelance.

M. Portelance: Merci, monsieur le président, en ce qui concerne les subventions; est-ce que vous ne seriez pas d'accord qu'il serait plus facile de donner cette subvention au camionneur plutôt qu'à l'expéditeur étant donné qu'ily a moins de gens en cause?

M. Palmer: Oui, et nous croyons aussi qu'il y aurait un contrôle plus efficace pour le camionnage de louage si on les donne à l'industrie du camionnage. Le permis d'exploitation qu'il reçoit de la part des différentes provinces ou la franchise reçue du gouvernement fédéral sont très précieux. Si on les donne à la société de camionnage, voilà la punition qu'on pourrait imposer: lui enlever son permis si elle ne remet une partie de la subvention à l'expéditeur. Ce serait très compliqué au point de vue administratif si on le donnait directement à l'expéditeur mais ce n'est pas de notre ressort.

M. Portelance: Une autre question. Vous avez di que vous aviez eu une forte opposition quand vous avez dû négocier les permis d'exploitation dans les différentes provinces. Est-ce que cette opposition vous venait de la part de l'industrie du camionnage, des transports, ou de la province ou de ses représentants?

M. Palmer: Je m'excuse. Je n'ai pas compris le début de votre question.

[*Texte*]

Mr. Portelance: Once you have a contract situation with another province—because there are four provinces here and you may have to go to Quebec also, and you have to get a licence—you seem to meet opposition. Does the opposition come from the province itself, or from the trucking industry in the province?

Mr. Palmer: No, from licensed carriers already serving the route.

Mr. Portelance: For example, if someone from outside wants a licence to come into New Brunswick, does your company or the one you represent also make opposition?

Mr. Palmer: All franchises are given on the need and necessity of the public. If we feel we could serve the industry, we would oppose. If we felt we could not, we would not.

Mr. Portelance: Thank you.

The Chairman: Mr. Nowlan.

Mr. Nowlan: Mr. Chairman, I am breaking my moratorium of silence, because I have one question to ask Mr. Palmer. I was going to ask a supplementary to someone else, but you changed too quickly. It has to do with the ferry services and the preferential treatment on some of the CN boats, or the CN trailers compared to for-hire trucks.

At long last we have a Digby-Saint John ferry announced and that is to take truck trailers which it could never take before. Is there a joint approach to this problem—not just the CN, Prince Edward Island and Newfoundland—but a joint approach to ferries, in effect, and the rates that should be charged to truck trailers regardless of whether it is owned by the CP or the CN along with the private industries? You mentioned the meeting with the Department of Transport. Is that just to do with the Canadian National, or should not the trucking industry produce some type of resolution with a uniform approach to ferry service, whether you own the truck trailer or whether it is a private truck trailer? If there is no uniform approach, why cannot there be?

Mr. Palmer: We have been working very hard on that. I think we are making some headway, but not enough. We are saying that with the ferry problem, be it Newfoundland or Prince Edward Island, that what CNR has to pay should be brought up to be equal to ours. Perhaps that is what should be done,

[*Interprétation*]

M. Portelance: Lorsqu'il vous faut traiter un contrat ou négocier un contrat avec une autre province, il y a quatre provinces ici, mais peut-être devez-vous vous adresser à Québec aussi,—il semble que vous ayez une certaine opposition à ce moment-là. D'où vous vient cette opposition? De la province elle-même ou de l'industrie du camionnage au sein de la province?

M. Palmer: Non, de la part des transporteurs qui desservent déjà la route.

M. Portelance: Et alors, si quelqu'un demandait à entrer au Nouveau-Brunswick, votre compagnie ou celles que vous représentez s'opposeraient-elles aussi lorsque quelqu'un de l'extérieur veut obtenir un permis?

M. Palmer: Toutes les franchises sont données en vertu de la nécessité et du besoin que ressent le public. Si nous estimions que nous pouvions servir le public, oui, alors nous nous y opposerions. Autrement, non.

M. Portelance: Merci.

Le président: M. Nowlan.

M. Nowlan: Je romps le silence car j'ai une question complémentaire à poser à M. Palmer. J'avais une question complémentaire aussi à quelqu'un d'autre mais vous avez passé trop rapidement. Cela avait trait aux services de bacs et au service préférentiel sur certains navires du CN comparativement aux taux des camions de louage.

En fin de compte, nous avons eu l'annonce d'un transbordeur de Digby à Saint-Jean pour transporter les camions qu'ils avaient toujours refusé de transporter jusque-là. Est-ce qu'il s'agit d'une approche conjointe d'une solution non seulement pour Terre-Neuve et l'Île du Prince-Édouard, mais pour les bacs en général, ainsi que les taux qui devraient être chargés, peu importe qui en est le propriétaire, le CN, le CP, ou l'industrie privée? Vous avez mentionné le ministère des Transports. Est-ce qu'il s'agirait tout simplement du CN ou est-ce que l'industrie du camionnage ne devrait pas avoir une résolution comportant une attitude uniforme à l'égard des services de bacs, que vous soyez propriétaire d'un camion-remorque ou qu'il s'agisse d'un exploitant indépendant? Si il n'y a pas d'attitude uniforme, pourquoi pas?

M. Palmer: Nous avons fait beaucoup de travail dans ce sens mais les progrès ne sont pas tout à fait ceux que nous aurions espérés. En ce qui concerne Terre-Neuve ou l'Île du Prince-Édouard, nous dirions que le taux payé par le CN devrait être augmenté ou porté jusqu'au niveau du nôtre, car il y a un

[*Text*]

because there is a big deficit in running these ferries, but if the government is going to pick up the deficit and not raise their rate, then our rate should be reduced to theirs. We should ask—and I can see no argument against it—to pay no different rate to cross on a ferry than does the CNR or CPR or anyone else.

Mr. Nowlan: We have never had the CPR problem, but we are going to have it, and I just wonder if you are not going to have the same discrimination unless there is some advance work done and foundation laid to try to get a uniform policy apply to CN and CP.

Mr. Palmer: The way I feel on this is that CP is putting this boat on from Saint John to Digby, and if they run that independently and the federal government is not involved and they pick up no deficits on it, then CPR could charge the trucking industry anything they want to to use that boat. Once the federal government becomes involved, then our costs should be the same.

Mr. Nowlan: I will not argue the point, but I must say, what about the terminal facilities at both ends? The Canadian taxpayer pays that. Surely, we are not going to have a private industry boat charging only the rates that it wants if the taxpayer is producing the terminals at both ends to the tune of several millions of dollars. I do not quite agree with your point, Mr. Palmer.

It is interesting, because if that is your personal view, then perhaps it is not the reason why the trucking association, to me, should be in this Committee. Perhaps it should make some type of recommendation, but certainly I think the trucking industry could help if there could be a uniform policy for ferry services. I do not care where the CP boat is going to run, they do not own the terminal facilities. They are being developed by the federal government.

Mr. Palmer: I probably did not make myself clear on this and I will try to be brief. I know we have taken a lot of your time and we appreciate it. We feel that rates should be the same for all modes of transport, as should subsidies be the same. We are not trying to say whether the rate to Prince Edward Island should be $16 or $2; we do not feel we are qualified to make that statement. However, we feel as long as we are paying the same, then we can adjust our rates and should be able to be competitive. We would like to see this followed with all ferries, and

[*Interpretation*]

déficit considérable dans l'exploitation de ces bacs. Si le gouvernement doit payer les déficits pour ne pas augmenter le taux, alors notre taux devrait être réduit en conséquence. Je ne vois aucune raison pour laquelle nous paierions un tarif différent pour les services de bac du CN ou du CP.

M. Nowlan: Nous n'avons jamais eu de problème avec le CP jusqu'ici. Mais nous allons l'avoir à moins que l'on travaille à l'avance afin d'essayer d'obtenir une politique uniforme qui s'appliquerait au CN et au CP.

M. Palmer: Ma réaction à l'égard du nouveau bac du CP qui sera mis en service entre Digby et Saint-Jean est la suivante: si c'est une exploitation indépendante, si le gouvernement n'est pas en cause et s'il ne paie pas les déficits, le CP pourra charger à l'industrie du camionnage tout ce qu'il voudra pour l'utilisation du bac. Mais du moment que le gouvernement fédéral est en cause, les coûts devraient être les mêmes pour tous.

M. Nowlan: Je n'argumenterais pas, mais qu'en est-il des frais d'exploitation des terminus? C'est le contribuable qui paie tout de même. Sûrement, nous n'allons pas avoir un bateau appartenant à l'industrie privée qui chargera des taux libres si c'est le contribuable qui paie les frais des terminus. Je ne suis pas tout à fait d'accord avec le point que vous soulevez, monsieur Palmer.

C'est très intéressant car si c'est votre opinion personnelle, ce n'est peut-être pas la raison pour laquelle l'industrie du camionnage est présente ici même. Notre Comité devrait peut-être formuler une recommandation mais je crois que l'industrie du camionnage pourrait aider si elle avait une politique uniforme pour les services de bacs. Peu importe où vont être en action les navires du CP, ils ne sont pas propriétaires des installations portuaires et des terminus qui sont, eux, la propriété du gouvernement fédéral.

M. Palmer: Je n'ai peut-être pas été aussi clair que j'aurais voulu l'être. Nous avons pris beaucoup de votre temps mais nous apprécions le temps que vous nous avez accordé. Nous croyons que les taux devraient être les mêmes pour tous les modes de transport, tout comme les subventions devraient être les mêmes. Nous n'essayons pas de dire que le taux pour l'Île du Prince-Édouard devrait être de $16.00 ou de $2.00. Nous ne sommes pas compétents pour faire ce genre de déclaration. Mais nous croyons qu'aussi longtemps que nous payons la même chose,

[*Texte*]

with all decisions made in transportation we would like to think that the trucking industry is now big enough to be a part of that policy.

Mr. MacLaren: I might add, Mr. Nowlan, that the Canadian Transport Commission has been of great assistance to MMTA in their problem with the CNR and conceivably there is some way, if the problem arose with the CP ferry, they would do the same.

Mr. Nowlan: Mr. Chairman, I wonder if I could ask one more question of Mr. MacLaren. In the experience of British Columbia, where the CP were very involved with ferry service and now, of course, the government has taken it over, was there this same type of preferential treatment to the CP tractors against the independent tractor trailers?

Mr. MacLaren: Being relatively new to the business, I do not know how Mr. Bennett runs his fleet, or how the CP ran it before that. I am sorry but I cannot answer your question.

Mr. Nowlan: All I say, Mr. Chairman, is that where it involves federal money, I quite agree with Mr. Palmer; if the CP builds the boat and runs between its own terminals they can charge anything they want, the same as they can on a train, but where federal moneys are involved, and this is a common carrier that is looked for with some expectation in western Nova Scotia and New Brunswick, I cannot understand why a uniform recommendation or resolution could not apply to the ferry service, because we only have three, basically, where this problem arises, in the east: P.E.I., Newfoundland and now the Digby-Saint John ferry, excluding Grand Manan and some of the smaller ones. Federal money is involved in the three cases. I do not see why there should be discrimination against a private industry in favour of the public where public money is involved.

Mr. MacLaren: I think your point, Mr. Nowlan, is quite well taken, that they are a common carrier and perhaps something can be done on that.

The Chairman: Gentlemen, I want to thank you.

I will now call upon the next witnesses from the Chestnut Canoe Co. Ltd., of Fredericton, N.B.

[*Interprétation*]

les taux devraient être ajustés de façon à être concurrentiels. Nous voudrions que cela se fasse avec tous les transbordeurs, et de toutes les décisions prises dans le domaine des transports, nous aimerions bien croire que l'industrie du camionnage est maintenant assez grande pour s'intégrer dans cette politique.

M. MacLaren: Je pourrais peut-être ajouter, monsieur Nowlan, que la Commission canadienne des transports a beaucoup aidé l'industrie et que, s'il y avait justement un problème à l'égard du bac du CP, il y aurait probablement une intervention de la part de la Commission.

M. Nowlan: Une dernière question à l'endroit de M. MacLaren. En Colombie-Britannique où le CP exploitait un service de bac qui est maintenant exploité par le gouvernement, est-ce que le même genre de traitement préférentiel a été donné aux remorques du CP en comparaison aux indépendants là-bas?

M. MacLaren: Étant un nouveau venu ici dans l'industrie, je ne sais pas comment M. Bennett exploite sa flotte, ou comment le CP le faisait auparavant.

M. Nowlan: Là où les fonds fédéraux sont en cause, je suis d'accord avec M. Palmer. Si c'est le CP qui construit son navire et s'en sert entre ses propres terminus, il peut en faire ce qu'il veut. Mais là où les fonds du gouvernement fédéral sont en cause, il s'agit d'un bac public comme nous espérons qu'il va en être au Nouveau-Brunswick et en Nouvelle-Écosse, je ne vois pas pourquoi une recommandation uniforme ne s'appliquerait pas au service de bacs. Nous n'en avons que trois: celui de l'Île du Prince-Édouard, celui de Terre-Neuve, et maintenant celui de Digby-Saint-Jean à l'exclusion des plus petits bacs pour Grand Manan etc... Mais là où les fonds du gouvernement fédéral sont en cause, dans les trois cas, je ne vois pas pourquoi il y aurait une distinction injuste à l'égard de l'industrie privée.

M. MacLaren: Monsieur Nowlan, vous avez certainement raison dans le sens où ils sont des transporteurs publics. Et on pourrait peut-être faire quelque chose dans ce domaine.

Le président: Messieurs, je vous remercie de votre présentation.

Et maintenant, nous allons demander à la *Chestnut Canoe Co. Ltd.* de Fredericton de nous faire sa présentation. Vous trouverez le

[*Text*]

You will find the brief on page 729. I understand there will be no opening remarks, so, if members are ready for questions, we will proceed. As you know we are behind our time schedule, so I would ask members to be brief.

Mr. G. W. Birch (President, Chestnut Canoe Co. Ltd., Fredericton, N.B.): Mr. Chairman, due to the lateness of your meetings, I am prepared to waive the summary of my previous brief in order to expedite the later meetings, and I am here to answer any questions on our previous brief, dated March 7, 1968.

Mr. Pringle: I just have a short question. You mention in your brief that rail carriers should be nationalized and become non-profit organizations to work for the good of all Canadians.

In view of the fact that the railroad that is presently nationalized is running into pretty heavy deficits and the one that is not nationalized is not considered to be running into deficits, do you feel that this statement is justified?

Mr. Birch: I feel that both railroads should be amalgamated to eliminate the duplication of services into different cities. If they were amalgamated they possibly could operate at a much lower rate than they are operating now and still break even.

Mr. Pringle: Thank you. I had only one question.

Mr. Rock: On reading your brief it seems to me that you are blaming the shipping for your loss of business. Do you not think it is more related to the new methods of building fibreglass boats? Has that not got a great deal more to do with the loss of business than shipping costs?

Mr. Birch: In my brief I refer to a loss of business in the western provinces. We were non-competitive in carload rates going in that direction, simply because at the time the railroads were providing their Ontario and Quebec manufacturers—particularly those in Ontario—with larger cars at the same price as the standard 40-foot car. I am referring now to shipments out of Ontario to Edmonton and Calgary, and particularly to Edmonton, where we have distributors who eventually changed over to the Ontario manufacturer because his rail rates were much less.

[*Interpretation*]

mémoire à la page 729 de votre compte rendu en anglais. Le représentant m'a dit qu'il n'avait pas de mémoire à présenter. Pourriez-vous s'il vous plaît poser vos questions? Comme vous le savez, nous sommes très en retard et alors je demanderais encore une fois d'être très bref.

M. G. W. Birch (président, Chestnut Canoe Co. Ltd., Fredericton, N.-B.): Merci, monsieur le président. En raison de l'heure tardive, je mettrais de côté la présentation de mon mémoire.

Je suis ici pour répondre aux questions au sujet du mémoire que nous avions présenté le 2 mars 1968.

M. Pringle: J'ai une brève question. Vous dites dans votre mémoire que les transporteurs ferroviaires devraient être étatisés et devenir des organismes sans but lucratif travaillant au bien-être de tous les Canadiens. Étant donné que la ligne de chemin de fer, nationalisée accuse un déficit assez lourd et que celle qui ne l'est pas ne semble pas être en déficit, pensez-vous que cette déclaration est justifiée?

M. Birch: J'estime que les deux chemins de fer devraient être fusionnés, afin d'éliminer le double emploi ou le chevauchement des services dans diverses villes. S'il y avait fusion des deux compagnies, elles pourraient tourner à un coût bien inférieur et boucler leur budget.

M. Pringle: Merci; je n'avais qu'une question.

M. Rock: A la lecture de votre mémoire, j'ai l'impression que vous rendez les expéditeurs responsables de vos pertes. Ne croyez-vous pas que ces pertes sont plutôt attribuables aux nouvelles méthodes de construction de bateaux en fibre de verre? N'est-ce pas là plutôt la cause de cette perte d'affaires plutôt que de l'attribuer aux frais d'expédition?

M. Birch: Si j'ai parlé d'une perte sur notre chiffre d'affaires, il s'agissait des provinces de l'Ouest. Les taux de chargements complets vers cette direction ne sont pas compétitifs, et cela pour la simple raison qu'en ce temps-là, les chemins de fer mettaient à la disposition des fabricants du Québec et surtout ceux de l'Ontario, des wagons plus grands que ceux de 40 pieds. Je parle maintenant des expéditions qui se font à partir de l'Ontario vers Calgary, et surtout vers Edmonton, plus particulièrement à Edmonton là où nous avons des distributeurs qui, en fin de compte, ont préféré faire affaire avec les fabricants de l'Ontario, car ses taux de transport par chemins de fer étaient moins chers.

[*Texte*]

If you refer to the brief, you will find we suggest that the railroad was providing the carriers in Ontario with a 50-foot car at railroad convenience, and then later, after we got this cleared up, the railroad then took the action of supplying two 40-foot cars in lieu of a 50-foot car and at the same cost.

Mr. Rock: Yes; but this does not mean that the boat manufacturers are using these facilities. This is my point. There are now manufacturers of fibreglass boats in every little nook and corner of Canada, therefore it does not pay today to make a fibreglass boat here and ship it to Montreal. Because right in the area of Montreal, or even in the outlying areas, there are manufacturers of fibreglass boats today.

Mr. Birch: Yes; but we are in the fibreglass boat business, too, and we are having difficulty getting into the Ontario and Western Canadian markets with them. Our main line of business, however, is canoes, and we have to compete with Ontario and Quebec manufacturers as well as Western manufacturers in producing them. We were doing so very successfully up to now.

Mr. Rock: Let us correct one thing. You seem to have left the impression that canoes are only made out of wood. We must admit they are also made out of fibreglass.

Mr. Birch: Yes, indeed, they are; and we are making fiberglass canoes, too, and receiving orders for them, as well.

Mr. Horner: On page 732 of your brief your recommendation (G) is:

> That all activity of rail and truck transportation be closely supervised by a national supervisory committee...

Does not the CTC fully comply with your suggestion in (G)?

Mr. Birch: I am not sure whether or not it fully complies. All I am saying is that we know for a fact that Upper Canadian manufacturers have been given agreed freight rates and combination carloads at the price of one carload—in lieu of that is, a 50-foot car they have been given 80 feet of car space by the supply of two 40s. We are saying that this is cramping our business in the western market because we in the Maritimes cannot get the same privileges.

[*Interprétation*]

Si vous consultez le mémoire, vous constaterez que les chemins de fer fournissaient aux transporteurs dans l'Ontario des wagons de 50 pieds avec tous les avantages, et après que cette affaire avait été réglée, les chemins de fer se sont permis de fournir deux wagons de 40 pieds au lieu d'un seul de 50 pieds et cela au même prix.

M. Rock: Oui, mais cela ne veut pas dire que les fabricants de bateaux emploient ces facilités; il y a actuellement tellement de fabricants de bateaux de fibre de verre partout au Canada, qu'il n'est plus payant d'en construire ici et de les expédier à Montréal, car il y a aujourd'hui dans la région de Montréal, ou même dans les environs des fabricants de bateaux de fibre de verre.

M. Birch: Oui; mais nous produisons aussi des bateaux de fibre de verre et nous éprouvons des difficultés à nous introduire en Ontaroi et au Québec. Cependant nous fabriquons principalement des canoës, et nous devons soutenir la concurrence des fabricants du Québec et de l'Ontario, ainsi que de ceux de l'Ouest. Ce que nous faisions assez bien jusqu'à maintenant.

M. Rock: Il y a une chose que nous devons mettre au clair. Vous semblez laisser entendre que les canoës ne sont faits que de bois, alors qu'ils sont faits aussi de fibre de verre.

M. Birch: Oui. En effet, nous fabriquons aussi des canoës de fibre de verre, et nous en recevons des commandes également.

M. Horner: A la page 732 de votre mémoire, vous dites dans une de vos recommandations, que:

> Tout le domaine des transports par chemins de fer et par camion devrait être étroitement surveillé par un comité national de surveillance...

La Commission canadienne des transports a-t-elle pleinement tenu compte de votre suggestion contenue dans le paragraphe (G) de votre mémoire?

M. Birch: Je ne suis pas sûr si elle s'en tient étroitement à ce que nous avons proposé. Tout ce que je sais, c'est que les fabricants du Haut-Canada ont reçu un tarif marchandises convenu, ainsi que des chargements combinés au prix d'un chargement, c'est-à-dire qu'au lieu d'avoir un wagon de 50 pieds, ils en ont reçu deux de 40. Nous sommes d'avis que cette situation gêne nos affaires sur le marché de l'Ouest, parce que nous dans les Maritimes, nous ne pouvons jouir des mêmes privilèges.

[*Text*]

Mr. Horner: Have you ever considered taking your case to the CTC so that they could...

Mr. Birch: We have taken our case, first, to the railroads on a local basis, and only received denials that this ever existed. We then took the case up with the Maritime Transportation Commission, and after about a year we find that the railroads have changed their story and have admitted that they were doing this. But before they admitted it we had an Ontario manufacturer make a shipment to us and we told him to ask for a 50-foot car, and, if they could not supply it, see what would happen on two 40s. I have with me the documents showing that he did receive two 40-foot cars for the price of a 50 out of Ontario. This established the fact that this was being done at that time.

Mr. Horner: Do you think you have rectified that situation now?

Mr. Birch: Only to a certain degree.

Mr. Horner: You are still complaining about it?

Mr. Birch: Yes, we are.

Mr. Horner: And do you propose to bring the matter before the CTC at any time?

Mr. Birch: Not at the moment; we have been working with the Maritime Transportation Commission on it and we believe that this is the body that should fight for us.

Mr. Horner: You suggest in your recommendation (D) that the railroad should become a non-profit organization. These organizations always interest me. I am a member of several in Western Canada and I have often found to my surprise that they still use profit as their guide to efficiency, if you follow what I mean.

How can you tell whether a railroad is really providing a service efficiently unless you look at their profit and loss sheet? If all railroads operated as non-profit organizations what would you use as your guide to efficiency?

Mr. Birch: This would be a management problem, would it not?

Mr. Horner: But the taxpayers would still want efficiency, I would think.

[*Interpretation*]

M. Horner: Avez-vous déjà songé à présenter votre cause devant la CTC afin qu'elle puisse...

M. Birch: Tout d'abord, nous avons présenté notre cause aux chemins de fer dans le domaine local et, évidemment, ils ont nié la chose. Ensuite, nous en avons parlé à la Commission de transport des Maritimes et une année plus tard nous constatons que les chemins de fer ont changé d'idée et ont avoué que c'était en fait ce qui se passait. Mais avant qu'ils ne l'aient avoué, nous avons demandé à un fabricant de l'Ontario d'effectuer une expédition et nous lui avons dit de demander un wagon de 50 pieds, et, s'il ne réussissait pas à l'obtenir, de demander deux wagons de 40 pieds. J'ai eu en ma possession des documents qui prouvent qu'il a effectivement reçu deux wagons de 40 pieds pour le prix d'un seul de 50 pieds, à partir de l'Ontario. Ce qui prouvait que cela se pratiquait encore à ce moment-là.

M. Horner: Croyez-vous que la situation soit différente actuellement?

M. Birch: Jusqu'à un certain point.

M. Horner: Et, vous vous en plaignez toujours?

M. Birch: Oui, certainement.

M. Horner: Est-ce que vous vous proposez d'en parler à la Commission canadienne des transports?

M. Birch: Pas pour le moment; nous avons travaillé avec la Commission maritime canadienne à ce sujet, et nous croyons que c'est cet organisme-ci qui devrait justement venir à notre défense.

M. Horner: Dans le paragraphe (D) des recommandations, vous avez dit que les chemins de fer devraient devenir une entreprise à but non lucratif. Je me suis toujours intéressé à ces organisations. Je suis membre de plusieurs d'entre elles dans l'Ouest du Canada et j'ai souvent trouvé, à ma grande surprise, qu'on considérait toujours le profit comme règle de conduite de l'efficacité.

Comment savoir si une compagnie de chemin de fer est vraiment efficace, à moins d'en examiner les pertes et profits? Si tous les chemins de fer étaient des organisations sans but lucratif, qu'est-ce qui serait le facteur déterminant pour l'efficacité?

M. Birch: C'est un problème qui concernerait la Direction, n'est-ce pas?

M. Horner: Oui, mais je pense que les contribuables voudraient de l'efficacité.

[*Texte*]

Mr. Birch: I would think so.

Mr. Horner: That is right.

Mr. Birch: But I do feel that the railroads should be amalgamated and not duplicating service. For example, we have both railroads servicing the City of Fredericton which has a population of 25,000 people. One would have a great time arguing that if one rail carrier was going out of here and taking all of the traffic their cost could not, or would not, be reduced considerably.

Mr. Horner: Could not the same be said of the trucking industry; that if one large trucking firm did all the trucking it would increase their efficiency?

Mr. Birch: It would increase the efficiency of the trucking service if there was one large trucking organization; there is no doubt about that.

Mr. Horner: And if one large canoe manufacturer in Canada had the whole business would not that increase their efficiency?

Mr. Birch: Yes, it would.

Mr. Horner: Therefore, do you not agree that if we follow that point to the inevitable you are not going to increase employment in the Maritimes particularly?

Mr. Birch: I am talking about a national service—a service for all Canadians—as a Maritime Canadian. This is a common service. It is not a competitive industry, in the sense that it should be made competitive.

Mr. Horner: It is on that rationalization that I am questioning you. It does not matter whether or not it is a common service. The public, as taxpayers—and these are the people I am concerned about—want efficiency. They want efficiency in governments, although sometimes they do not get it; they want efficiency in railroads; and they want efficiency in manufacturers, whether they be canoe manufacturers, or what they may be.

Mr. Birch: That is right.

Mr. Horner: What other guide are you going to use if you do not use profit, and does competition not make you more aware of the efficiency factor?

Mr. Birch: My reference was particularly to railroad carriers. Are the railroads operating efficiently now?

[*Interprétation*]

M. Birch: Oui, je le croirais moi aussi.

M. Horner: C'est exact.

M. Birch: Mais je crois qu'il faudrait fusionner les chemins de fer, et éviter la duplication des services. Nous avons, par exemple, deux chemins de fer qui desservent Fredericton, une ville de 25,000 habitants. Il serait difficile de prétendre que les coûts ne seraient pas réduits de beaucoup, s'il n'y avait qu'un seul chemin de fer ici, pour s'occuper de tout le mouvement.

M. Horner: Est-ce qu'on ne pourrait pas dire la même chose de l'industrie du camionnage; si l'on n'avait qu'une seule grande compagnie de camionnage qui s'occuperait de tout le mouvement, que cela augmenterait leur efficacité?

M. Birch: Cela améliorerait l'efficacité de la société de camionnage; oui, certainement.

M. Horner: Et s'il n'y avait qu'un seul fabricant de canoës au Canada, est-ce que cela n'améliorerait pas l'efficacité?

M. Birch: Oui, certainement.

M. Horner: Par conséquent, n'êtes-vous pas d'accord que si nous poursuivions ce point-là jusqu'à l'infini, il y a l'inévitable, vous n'allez certainement pas augmenter les possibilités d'emploi dans les Maritimes?

M. Birch: Je parle d'un service national, c'est-à-dire un service pour tous les Canadiens, à titre de Canadien des Maritimes. Il s'agit d'un service en commun. Ce n'est pas une industrie concurrentielle dans le sens où elle devrait être compétitive

M. Horner: C'est la raison pour laquelle je pose des questions justement. Et je mets en doute votre raisonnement. Peu importe s'il s'agit d'un service en commun ou non. Le public en tant que contribuable, et ce sont les gens dont je me préoccupe, exige un rendement efficace de la part du gouvernement, bien que parfois, ils ne l'obtiennent pas, de la part des chemins de fer et des fabricants, qu'il s'agisse d'un fabricant de canoës ou non.

M. Birch: C'est exact.

M. Horner: Quelle serait la ligne de conduite si ce n'est les profits? Et, est-ce que la concurrence ne vous rend pas plus sensible ou conscient du facteur d'efficacité?

M. Birch: Je me référais surtout aux transporteurs par chemins de fer. Le rendement des chemins de fer est-il plus efficace à l'heure actuelle?

[*Text*]

Mr. Horner: I do not think so, no.

Mr. Birch: Evidently one is not and the other is.

Mr. Horner: I would not even accept that. It depends on what is being transported. I would readily say that the CNR is operating far more efficiently than the CPR in hauling passengers. The direct reverse might be true in hauling freight. But I would not even accept that either. I think both of them operate inefficiently. I do not think that competition is keen enough, particularly here in the Maritimes. Perhaps trucking could create more competition if we allowed the truckers to have the advantage of the MFRA. Do you agree with that?

Mr. Birch: I agree to a certain extent with what you are saying, but when you consider the capital cost of laying railroads and rails into smaller cities of this country I do not agree that it is economical to do so on a duplicated basis.

Mr. Horner: Yes; but they are already laid.

Mr. Birch: They are already laid; but they have to be maintained, do they not?

Mr. Horner: Yes, to a certain extent; but what you are suggesting, sir, is that part of the trackage into Fredericton should be rolled up; that it is costing too much to maintain; and that the one track would do a more efficient job.

Mr. Birch: I am suggesting that this should be done in all small cities across Canada; not just Fredericton.

Mr. Horner: I question that as a guide to creating greater efficiency. It might create greater efficiency, but, on the direct reverse, do you not think it could bring about poorer services to many of the areas?

Mr. Birch: This would be an administration problem, to see that it did not cause that.

The Chairman: Mr. Rose, on a supplementary?

Mr. Rose: I was interested in Mr. Horner's logic about efficiency in relation to largeness, and having one large canoe firm, and so on.

[*Interpretation*]

M. Horner: A mon sens, non.

M. Birch: Apparemment, l'une est efficace et l'autre ne l'est pas.

M. Horner: Je n'accepte même pas cela; cela dépend de ce que l'on transporte. Je dirais tout de suite que le National Canadien a un rendement beaucoup plus efficace que le Pacifique canadien, pour ce qui est du transport des voyageurs, alors que l'inverse serait peut-être vrai dans le cas des marchandises, mais je n'accepterais même pas cela. Je crois que les deux sont inefficaces. Je ne crois pas que la concurrence soit assez acharnée dans ce domaine et, surtout, ici, dans les Maritimes. Le camionnage pourrait peut-être créer une plus forte concurrence, si l'on donnait aux camionneurs les avantages de la Loi. N'êtes-vous pas d'accord là-dessus?

M. Birch: Je suis d'accord avec ce que vous dites, jusqu'à un certain point, mais lorsqu'on songe aux frais d'immobilisation pour aménager des voies de chemins de fer dans les petites villes de ce pays, je ne suis pas d'avis qu'il est rentable de le faire sur une base double.

M. Horner: Oui, mais les installations y sont déjà.

M. Birch: Oui, elles le sont toujours, mais ne faut-il pas penser à l'entretien tout de même?

M. Horner: Oui, dans une certaine mesure. Mais, vous laissez entendre qu'une partie de la voie ferrée à proximité de Fredericton devrait disparaître; que le maintien coûte trop cher et qu'une seule voie serait plus efficace.

M. Birch: Je dis que cela devrait être fait dans toutes les petites villes du Canada, non pas simplement Fredericton.

M. Horner: Je doute que cela puisse servir de principe directeur menant à une plus grande efficacité. Cela pourrait mener à une plus grande efficacité, mais inversement ne croyez-vous pas que cela pourrait entraîner un service inférieur pour un bon nombre de ces régions?

M. Birch: Alors, ce serait à la direction de voir à ce qu'une telle situation ne se présente pas.

Le président: Monsieur Rose, question complémentaire?

M. Rose: Je m'intéresse à la logique du raisonnement de M. Horner, pour ce qui est de l'efficacité de rendement proportionnelle-

[*Texte*]

Perhaps he would agree that one large farm would be more efficient than, say, many small ones of the kind that he operates? I think he would probably agree that the personal interest of the management of the owner-farmer, or the family farmer, is much more efficient. All these forms of logic break down ultimately if you take them to their ludicrous extreme.

I would suggest to you, sir, that perhaps in your testimony you are looking upon the railroads as an extension of a social policy and as a service rather than as a business; is that so?

Mr. Birch: That is correct.

Mr. Rose: And would you also agree that perhaps the trucking firms are not so interested in pursuing a social policy and, because of their private ownership nature as opposed to the public ownership of, let us say, the CNR, they have less right to public support?

Mr. Birch: I believe that the truckers basically are privately owned, that they operate their business as I would try to operate mine; and that probably competition, in one sense, would be good there. But, on the other hand, let us get down to the basic fact that largeness of a trucking firm and the non-duplication of highway travel, and so on, would no doubt make trucking firms more profitable, too.

Mr. Rose: I agree with you that the railroads should be nationalized, or that at least their operations should be nationalized, so that we can avoid duplication. But, of course, the railroads are not unique in this. There are many other instances of this.

However, you were complaining about a captive market. Would you not agree that if this happened, and the two railroads were made into one, you would be more at the mercy of a captive market than you are at the moment?

Mr. Birch: I do not think so; not if it was properly supervised.

Mr. Rose: Thank you.

Le président: Monsieur Godin? Voulez-vous attendre une minute, s'il vous plaît?

M. Godin: Je vous remercie, monsieur le président. Les réponses données jusqu'à maintenant répondaient à mes questions.

The Chairman: Thank you. Mr. Allmand?

[*Interprétation*]

ment à la grandeur, et d'avoir une seule grande fabrique de canoës, ainsi de suite. Serait-il peut-être d'avis qu'une grande ferme serait plus efficace que le genre de petite ferme qu'il exploite lui-même? Je pense qu'il admettrait probablement le fait que l'administration d'une propriété agricole, c'est-à-dire le petit fermier, est beaucoup plus efficace en fin de compte. Toute cette logique s'effondre si elle est poussée à l'extrême. Je dirais que, dans votre témoignage, vous considérez peut-être les chemins de fer comme étant une expansion d'une politique sociale et comme un service plutôt qu'une entreprise n'est-ce pas?

M. Birch: Oui, c'est juste.

M. Rose: Vous conviendrez aussi que les sociétés de camionnage ne sont peut-être pas tellement intéressées à maintenir une politique sociale, et du fait que ce sont des compagnies privées, contrairement aux sociétés publiques, comme le National-Canadien, ont de moins en moins de droit à l'appui du public?

M. Birch: Je crois que les camionneurs qui sont essentiellement des sociétés privées exploitent leur entreprise comme j'essayerais d'exploiter la mienne; et que la concurrence, dans un sens, serait bénéfique là. Mais, d'autre part, revenons-en au principe fondamental à l'effet que l'envergure, d'une société de camionnage et non duplication du parcours routier rendraient sans doute les sociétés de camionnage plus rentables.

M. Rose: Je conviens avec vous que les chemins de fer devraient être nationalisés ou du moins que leurs opérations soient rationalisées pour éviter ce double emploi. Ce n'est pas une situation particulière aux chemins de fer. Elle se présente dans d'autres cas analogues. Toutefois, vous vous plaigniez à propos d'un marché captif. Ne convenez-vous pas que si nous avions une seule compagnie ferroviaire, vous seriez encore plus à la merci d'un marché captif que vous ne l'êtes maintenant?

M. Birch: Je ne le crois pas. Certainement pas si c'était bien administré.

M. Rose: Merci.

The Chairman: Mr. Godin? Would you please wait a minute?

Mr. Godin: Thank you, Mr. Chairman. The answers given so far have answered my questions.

Le président: Merci. Monsieur Allmand?

[*Text*]

Mr. Allmand: Sir, I find an interesting paragraph in your brief at page 730; in the second one from the top you say:

> Also due to the volume demand on truck transportation at this time truck transporters are now increasing their rates. They can do this knowing that they are still more than competitive with rail transporters on the cube basis of calculation.

I wish I had had that paragraph before me when I was discussing the brief with the previous witness, because you seem to think that the truckers are in a very good competitive position with the railways. As a matter of fact, you say they are increasing their rates, which conflicts with the truckers who were here before you.

Do you have any real evidence that this is so, or is this just your impression?

Mr. Birch: No; I do not have any bills of lading with me, but shortly after the cube rates, or the class 100 rates, went into effect there was a general increase in the trucking rates on some of the commodities we were bringing in from Ontario and Quebec.

I think I go on to say, too, that the service became much poorer on account of traffic loads on the trucks coming inward.

Mr. Allmand: The truck service, or the—

Mr. Birch: The truck service.

Mr. Allmand: Due to over-demand?

Mr. Birch: Because of over-demand.

Mr. Allmand: I notice that in your brief you do not recommend that the truckers be given the same subsidies as the railways under the Maritime Freight Rates Act. Would that be a recommendation, or do you think that all means of transport should be put under the MFRA?

Mr. Birch: I agree that under the Maritimes Freight Rates Act the subsidies given to the railroads are to allow shippers in the Atlantic region to be competitive with manufacturers in the central provinces, or the mass market provinces; and with the subsidy the railroads are in a position where they

[*Interpretation*]

M. Allmand: Monsieur le président, je trouve qu'il est fort intéressant de lire l'alinéa dans votre mémoire à la page 730, deuxième colonne, colonne de droite, en haut, vous dites:

> Par ailleurs, du fait que les entreprises de camionnage, sont très recherchées en ce moment, augmentent leurs taux et n'hésitent pas à le faire, sachant qu'elles peuvent encore soutenir la concurrence des transporteurs ferroviaires d'après le calcul du volume.

J'aurais bien aimé avoir cet alinéa sous les yeux lorsque nous étions en train de poser des questions au témoin précédent, parce que vous semblez croire que les entreprises de camionnage sont vraiment compétitives. Vous dites même qu'ils augmentent leurs taux, ce qui est en contradiction avec les représentants de l'Association des camionneurs, qui ont comparu avant vous. Est-ce que vous avez des preuves qu'il en est ainsi ou est-ce une impression?

M. Birch: Non. Je n'ai pas de feuilles d'expéditions ici, avec moi, mais peu après la mise en vigueur de la catégorie des taux en pieds cubes ou de la catégories 100 on a constaté une augmentation générale dans les taux de transport par camion pour certaines des denrées que nous faisions apporter à partir de l'Ontario et du Québec. Et, je pourrais ajouter que les services se détérioraient à cause des expéditions par camion qui se faisaient vers l'extérieur.

M. Allmand: Le service de camionnage?

M. Birch: Oui.

M. Allmand: Parce qu'ils avaient une trop grande demande?

M. Birch: Oui.

M. Allmand: Je remarque que dans votre mémoire vous ne recommandez pas que les camionneurs aient les mêmes subventions que les chemins de fer, aux termes de la Loi sur les taux de transport des marchandises dans les Maritimes? Est-ce que c'est là votre recommandation ou croyez-vous que tous les moyens de transport devraient être visés par la Loi sur les taux de transport des marchandises dans les provinces maritimes?

M. Birch: J'admets qu'en vertu de la Loi sur les taux de transport des marchandises dans les Maritimes, les subventions consenties aux chemins de fer ont pour objet de permettre aux expéditeurs de la région Atlantique de soutenir la concurrence des fabricants dans les provinces centrales ou des provinces

[*Texte*]

have to take below normal rates in order to protect the shipper from here so that he can get his goods on a competitive basis into the mass market. I think this is really the prime purpose of the Maritime Freight Rates Act.

Mr. Allmand: Yes; but do you think the truckers should have that same subsidy—that same benefit—in the Maritimes?

Mr. Birch: Whether or not they would utilize it to the same benefit is something else again. For instance, I cannot see shipping canoes or boats via truck and being competitive in Ontario with the 20 per cent subsidy given to the truckers. They would still want quite a premium to carry this type of product on account of its lightness and bulkiness.

Mr. Allmand: Thank you.

The Chairman: Are there any further questions, gentlemen?

Mr. Skoberg: Are you finding yourself in the position now that if transportation costs are not stabilized and the MFRA rates come off, your plant will be faced with extinction?

Mr. Birch: Yes; there is no question in our minds that if these rates come off we will have to settle in the mass market area which, in our case, is the province of Ontario. We would be foolish to stay here and try to ship, for example, a 16-foot canoe. Such a boat is now going to Montreal at $4.62, but when the rates come off it will go to $24 and something—an increase of 528 per cent. We would be foolish to try to stay in the province of New Brunswick and fight with our competitors in Ontario—even though we do produce a better quality product. We would be better to move there. A canoe such as the one I referred to would sell wholesale to the dealer at about $150.

Mr. Skoberg: Are you finding, then, that to decentralize would not be the answer; that you do not care to move into the market?

Mr. Birch: Pardon me?

[*Interprétation*]

comportant les grands débouchés commerciaux; en effet avec cette subvention les chemins de fer sont alors dans une position qui leur permet d'accepter des tarifs inférieurs à la normale afin d'assurer la protection de l'expéditeur et pour que son produit parvienne aux grands débouchés à un prix compétitif. C'était là le but essentiel de cette loi sur les taux de transort des marchandises dans les provinces Maritimes.

M. Allmand: Oui, mais ne croyez-vous pas que les camionneurs devraient recevoir cette même subvention? D'avoir ces mêmes avantages dans les Maritimes?

M. Birch: Qu'ils utilisent ces subventions aux mêmes profits ou pas, c'est une autre chose. Par exemple, je ne vois pas comment l'expédition de canoës ou de bateaux par camion peut soutenir la concurrence en Ontario avec une subvention de 20 p. 100 qui serait consentie aux camionneurs. Ils voudront quand même toute une prime pour transporter ce genre de marchandise par suite de la légèreté et du volume excessif du produit.

M. Allmand: Merci beaucoup.

Le président: Auriez-vous d'autres questions à poser, messieurs.

M. Skoberg: Une question très brève, monsieur le président. Est-ce que vous vous trouvez dans une situation telle que si ces coûts de transport ne se stablisent pas et que, si les tarifs prévus par la Loi sur le transport des marchandises dans les Maritimes sont éliminés, votre usine serait en voie de disparaître?

M. Birch: Oui. Il n'y a aucun doute. Si ces taux disparaissent, nous devrons vendre sur les grands marchés et, dans notre cas, ce sera en Ontario. Nous serions stupides de rester ici et d'essayer d'expédier un canoë de 16 pieds cubes. Un canot de ce genre est expédié vers Montréal pour $4.62, mais avec l'abolition des taux il en coûtera $24 et quelque, ce qui fera une augmentation de 528 p. 100. Il serait stupide de notre part d'essayer de demeurer au Nouveau-Brunswick et de lutter contre nos concurrents de l'Ontario, quoique nous puissons produire un meilleur produit. Nous ferions mieux d'aller nous établir en Ontario. Un canoë de ce genre, se vendrait en gros à $150.

M. Skoberg: Est-ce que vous trouvez que la décentralisation ne serait pas la réponse; qu'il vous importe peu de vous y établir?

M. Birch: Je m'excuse, je n'ai pas compris.

[*Text*]

Mr. Skoberg: You are not willing to move to where the market demand is?

Mr. Birch: We would have to move to the central market if the rates were cancelled.

Mr. Skoberg: This just multiplies the situation that already exists in this area?

Mr. Birch: That is right. It would throw about 60 men out of employment.

The Chairman: If there are no more questions, I wish to thank you, Mr. Birch, for your presence this morning.

Our next brief will be from Mr. J. W. MacDonald, Mayor of the City of Campbellton; Mr. J. W. Bird of J. W. Bird and Company Limited; and from the City of Bathurst I have on my right Mr. J. A. Picot, the Mayor.

Mr. J. A. Picot (Mayor of Bathurst): We intended to present a brief a year ago, but because of delays this was set aside and, subsequently, when the hearings were resumed, we did not have the time to meet again and to update our brief. So this is the reason that we did not file any. Would it be possible, with your permission, to update this brief and submit it at a later date.

The Chairman: How long would this take?

Mr. Picot: It would take us about 10 days.

The Chairman: We could print it as an appendix.

Mr. Picot: Thank you very much.

The Chairman: Is that the wish of the Committee?

Some hon. Members: Agreed.

Mr. Picot: I would at this time make only a few brief statements concerning primarily the City of Bathurst and transportation as it affects us.

The City of Bathurst has a population of approximately 16,000. We have in our county three other towns. Bathurst is the central point for these three towns. This is the city where these people come to market and where they take the CNR facilities to Montreal and elsewhere.

Over the past great number of years the trend as been for these people to entrain in Bathurst, therefore this pattern has been

[*Interpretation*]

M. Skoberg: Vous ne voulez pas aller vous établir là où se trouvent les marchés?

M. Birch: Nous devrions nous y établir si ces taux étaient supprimés.

M. Skoberg: Alors, cela multiplie et augmente la situation qui existe déjà dans cette région?

M. Birch: Cela ferait perdre l'emploi à 60 employés.

Le président: Nous vous remercions, monsieur Birch de votre présentation de ce matin.

La soumission suivante nous vient de M. J. W. MacDonald, maire de la ville de Campbellton. M. J. W. Bird de la *J. W. Bird and Company Limited*; et de la Ville de Bathurst. A ma droite, M. J. A. Picot, le maire.

M. Picot (maire de Bathurst): Nous songions à présenter un mémoire il y a un an, mais vu que vous avez eu des retards, nous avons mis la question de côté et par la suite, lorsque les audiences furent reprises, nous n'avons pas eu le temps de nous réunir de nouveau afin de mettre notre mémoire à jour. C'est la raison pour laquelle nous n'en avons pas déposé. Serait-il possible, avec votre autorisation, de mettre ce mémoire à jour et de le présenter plus tard?

Le président: Combien de temps cela prendrait-il?

M. Picot: Il nous faudrait environ dix jours.

Le président: Nous pourrions l'imprimer en annexe.

M. Picot: Merci beaucoup.

Le président: Est-ce que le Comité est d'accord?

Des voix: D'accord.

M. Picot: Maintenant, je me contenterai de faire quelques déclarations plutôt brèves, essentiellement sur la ville de Bathurst et la question des transports, en ce qu'elle nous concerne.

La ville de Bathurst compte environ 16,000 habitants et nous avons, dans notre comté, trois autres villes. Bathurst est le point central de ces trois villes. C'est là que les gens viennent au marché, prennent le train du CNR pour se rendre à Montréal, et ailleurs.

Au cours des dernières années, ces personnes ont pris l'habitude de prendre le train à Bathurst et, par conséquent, ces caractéristi-

[*Texte*]

established. The total population in the area, besides the City of Bathurst, is approximately 40,000 people. We established in Bathurst a few years ago an airport with a 4,000 foot runway. Incidentally, this is a municipally-owned airport.

In the past year we have established and set up facilities, including a terminal building. The Air Transport Board has granted a licence to Eastern Provincial Airways to serve the Bathurst area from an airport situated in Charlo approximately 50 miles away. This service is not what the City of Bathurst and the residents of the lower part of the County of Gloucester who traditionally come to Bathurst feel that they should have. We feel that the runway should be extended to a proper length to facilitate the landing of larger aircraft, so that a first-class service may be established from the airport in Bathurst.

These are the points that I wanted to make particularly before this Committee this morning. When you read our brief you will note that we are endorsing possibly the ideas set forth by other people, other towns and cities in the Province of New Brunswick where it concerns freight movement, passenger movement on the CNR and otherwise.

Gentlemen, I thank you very much. If there are any questions that I can answer, I will certainly be glad to do so.

Mr. Portelance: Mr. Picot, you were saying that the airport is owned by the City of Bathurst?

Mr. Picot: That is correct, yes.

Mr. Portelance: It was built with your own money. If you enlarge it do you want to pay for the enlargement too?

Mr. Picot: The surface treatment and improvements on the present runway were paid for by the Department of Transport under the shared costs agreement. The Department of Transport did spend money on the runway. The land was purchased by the municipality of Gloucester and the City of Bathurst at that time on a joint venture, and since that time it has been transferred over to the City of Bathurst. The terminal was built by the City of Bathurst.

Mr. Portelance: Which towns do Eastern Provincial Airways service right now?

Mr. Picot: They land in Charlo, which is approximately 50 miles away from Bathurst. Charlo would be northeast of Bathurst.

[*Interprétation*]

ques se précisent. L'ensemble de la population, à mon avis, dans cette région, en plus de la ville de Bathurst, est donc d'environ 40,000 personnes. Nous avons, à Bathurst, il y a quelques années, aménagé un aéroport avec une piste de 4,000 pieds. Soit dit en passant, il s'agit d'un aéroport qui est la propriété de la municipalité.

Au cours de la dernière année, nous avons constitué et aménagé les services, y compris un terminus. La Commission des transports aériens a accordé un permis à la *Eastern Provincial Airways* afin de desservir la région de Bathurst à partir d'un aéroport qui se trouve à Charlo, soit à 50 milles environ. Ce service n'est pas ce dont ont besoin la ville de Bathurst et les résidents de la région sud du comté de Gloucester, qui, traditionnellement, viennent à Bathurst. Cette piste, à notre avis, devrait être allongée pour faciliter l'atterrissage d'avions plus gros pour que nous puissions établir un service de première classe à l'aéroport de Bathurst.

Voilà donc les quelques observations que je voulais faire ce matin. Lorsque vous lirez notre mémoire, vous remarquerez que nous appuyons les idées énoncées par d'autres gens et d'autres villes et la province du Nouveau-Brunswick, en ce qui concerne le transport des marchandises et des voyageurs par le CN, et autrement. Je vous remercie beaucoup, Messieurs. S'il y a des questions, je me ferai un plaisir d'y répondre.

M. Portelance: Monsieur Picot, vous disiez que l'aéroport était la propriété de la ville de Bathurst?

M. Picot: Oui, en effet.

M. Portelance: On l'a construit avec votre argent. Si vous voulez l'agrandir, voulez-vous payer ces frais d'aménagement aussi?

M. Picot: Le traitement de la surface et les améliorations à apporter à la piste sont payés par le ministère des Transports, en vertu de l'entente de partage des frais, le ministère des Transports a dépensé de l'argent pour l'aménagement de la piste. Le terrain fut acheté par la municipalité de Gloucester et la ville de Bathurst; c'était une entreprise conjointe et depuis lors, on en a fait le transfert à la ville de Bathurst. Le terminus fut construit par la ville de Bathurst.

M. Portelance: Et maintenant, la *Eastern Provincial Airways* dessert quelles villes?

M. Picot: Charlo, qui est à environ 50 milles de Bathurst, soit au nord-est de Bathurst.

[*Text*]

Mr. Breau: Mr. Mayor, could you tell the Committee exactly what facilities and runways you would need, say, in the next year to get the air service that you need?

Mr. Picot: The information that we have at the present time is that we would require an extension of a minimum of 6,500 feet to our runway. Our runway is now laid out on a piece of property approximately 10,000 feet long. It has a solid gravel base and can be enlarged at a very low cost because of the type of soil that we have there and the easy availability of further land. What we are asking is that the federal government, through the Department of Transport, make available to us a paved runway 6,500 feet long at the minimum.

Mr. Breau: Am I correct that at the present time there is a surface treatment on it and DOT are committed to repave 4,000 feet right now?

Mr. Picot: That is my understanding. This surface treatment was laid under specifications of the Department of Transport and, because it was a chip and seal type of treatment, it did not stand up under winter conditions.

Mr. Breau: Has your terminal building that the city paid for been approved by DOT?

Mr. Picot: Yes, it has. We submitted the plans to them and the regional office in Moncton have approved the type of building that we have.

Mr. Breau: Therefore you main recommendation in your brief is for an extension of the runway?

Mr. Picot: That is what we would be asking.

The Chairman: Mr. Pringle?

Mr. Pringle: I have only one supplementary. You mentionned that the runway had not stood up. If you increased it to 6,500 feet you would also increase the size and weight of the aircraft, therefore you are probably suggesting that the entire runway would have to be rebuilt?

Mr. Picot: Not rebuilt in that sense. It would have to be paved. What happened is that the surface was prepared for paving but there was no paving put on it. I should not say that it was oil treated; it was more of a composition treatment that was put on.

[*Interpretation*]

M. Breau: Monsieur le maire, pourriez-vous dire au Comité exactement de quels services et aménagements de pistes auriez-vous besoin, disons, pour l'année prochaine pour avoir le service dont vous avez besoin?

M. Picot: D'après les renseignements que nous avons en ce moment, il nous faudrait un prolongement pour la porter à au moins 6,500 pieds. Notre piste, maintenant, est sur une propriété de 10,000 pieds de long, à base de gravier, avec peu de frais d'agrandissement ou de prolongement. C'est le genre de sol que nous avons et la disponibilité d'autres terrains. Donc, ce que nous demandons, c'est que le gouvernement fédéral, par l'entremise du ministère des Transports, mette à notre disposition une piste pavée de 6,500 pieds de long au moins.

M. Breau: A l'heure actuelle, il y a un revêtement, et le ministère des Transports s'est engagé à repaver 4000 pieds dès maintenant?

M. Picot: Oui, c'est juste. Ce fut aménagé suivant le cahier des charges du ministère des Transports. C'était plus ou moins un genre de traitement qui ne pouvait être maintenu avec les conditions en hiver.

M. Breau: Le terminus payé par la ville a-t-il été approuvé par le ministère des Transports?

M. Picot: Oui. Nous avons présenté les plans au ministère et le bureau régional de Moncton a approuvé le genre de terminus que nous y avons aménagé.

M. Breau: Donc, vous proposez essentiellement le prolongement de la piste?

M. Picot: Oui, c'est juste, c'est ce que nous demandons.

Le président: Monsieur Pringle?

M. Pringle: J'ai une seule question complémentaire à poser. Si vous portiez cette piste à 6,500 pieds, vous vous trouveriez à avoir la possibilité d'avoir un avion plus grand. Vous proposez donc qu'on reconstruise toute la piste?

M. Picot: Il faudrait la payer. Ce qui s'est produit, c'est que la surface a été préparée pour être bitumée, mais on ne l'a pas fait, on lui a donné un traitement à l'huile tout simplement. Je ne devrais pas parler de traitement à l'huile vraiment, mais il s'agit d'un composé qu'on a utilisé.

[*Texte*]

The Chairman: Mr. Skoberg?

Mr. Skoberg: Your Worship, what is the closest first-class landing field you have to your city at the present time?

Mr. Picot: Charlo Airport has a 4,000 foot runway.

Mr. Skoberg: I am thinking of distance.

Mr. Picot: It is 50 miles from Bathurst on number 11 highway which is completely built up the whole length of that 50 mile distance. To travel to Charlo, Bathurst residents have to go through anywhere between 15 to 20 speed limit zones because they travel through thickly populated villages along this highway. Conditions do not lend themselves, in my view or in the view of the citizens of Bathurst, for adequate service in that locality to the citizens of Bathurst.

Mr. Skoberg: Thank you. What rail service do you have in there now?

Mr. Picot: We are on the CNR main line from Montreal to Halifax.

Mr. Skoberg: Are you receiving satisfactory rail service? I am not using this as an argument against your other request.

Mr. Picot: I would not care to comment on that it has improved, although we still get a mentioned in our brief.

I would say that in the past six months it has improved. The system that was installed instead of the Ocean Limited for a time did give us cause for concern. We did receive a number of complaints from the travelling public in this area. I do say that in my view that it has improved, although we still get a number of complaints.

Our complaints, as far as freight service is concerned, are probably similar to other towns or cities along the main line. But I can say that we are closely related to the towns of Tracadie, Shippigan and Caraquet, which are not on the main line, and we do get a lot of complaints from those areas.

The Chairman: Mr. Breau?

Mr. Breau: Mr. Mayor, could you tell us what kind of service the parts of the county other than Bathurst are getting? Are they getting adequate service from Charlo?

[*Interprétation*]

Le président: Monsieur Skoberg?

M. Skoberg: Votre Honneur, où se trouve la meilleure piste d'atterrissage la plus rapprochée en ce moment?

M. Picot: L'aéroport de Charlo a une piste de 4,000 pieds.

M. Skoberg: Je parle de distance.

M. Picot: Il se trouve à 50 miles de Bathurst, le long de la route 11, qui est tout à fait aménagée tout le long des 50 milles. Pour se rendre à Charlo, les résidents de Bathurst doivent parcourir de 15 à 20 zones de vitesse contrôlée, parce qu'il y a un bon nombre de villages le long de cette route. Et à mon avis, et de l'avis des citoyens de Bathurst, les conditions ne se prêtent pas du tout à un service adéquat à cet endroit pour les citoyens de Bathurst.

M. Skoberg: Merci. Quels sont les services ferroviaires que vous avez?

M. Picot: Nous sommes le long de la ligne principale du National-Canadien de Montréal à Halifax.

M. Skoberg: Est-ce que le service ferroviaire est adéquat? Ce n'est pas un argument contre votre demande.

M. Picot: Je ne veux pas faire de commentaires là-dessus maintenant, mais ce sera mentionné dans notre mémoire.

Je dirais qu'au cours des six derniers mois, la situation s'est améliorée. Le système qui a remplacé l'Océan Limitée pour un certain temps nous a donné certaines préoccupations. Nous avons reçu un certain nombre de plaintes du public voyageur dans cette région, et j'ajouterais qu'à mon avis le service a été amélioré, mais nous avons toujours des griefs qui nous sont formulés.

Nos griefs, pour ce qui est des messageries, sont à peu près les mêmes que ceux formulés par ces autres villes qui se trouvent le long de l'embranchement principal, mais j'ajouterais que là où nous sommes, c'est étroitement rattaché aux villes de Tracadie, de Shippigan et de Caraquet qui ne sont pas situées le long de la principale ligne, et nous recevons un bon nombre de plaintes de ces régions.

Le président: Monsieur Breau?

M. Breau: Monsieur le maire, pourriez-vous nous dire quel genre de service les autres points du comté reçoivent, en plus de la ville de Bathurst? Est-ce qu'ils ont un service adéquat, de Charlo?

[*Text*]

Mr. Picot: I met with representatives of these towns not too long ago and they are certainly concerned with the present service to these areas. Some of these towns are as far away from Charlo as 122 miles and they feel that they are certainly not getting the service that they should be getting.

Mr. Breau: So they would rather use Moncton then?

Mr. Picot: In this sense they have indicated to me that what they are doing now is using Air Canada facilities in Moncton.

The Chairman: Mr. Corbin?

M. Corbin: Nous avons traité jusqu'à maintenant de problèmes...

Le président: M. Picot comprend le français, alors, pas de problèmes.

M. Corbin: Ce matin, nous avons parlé surtout de problèmes de transport aérien; mais, n'en existe-t-il pas aussi pour le réseau routier dans votre région? Est-ce que vous n'avez pas besoin de meilleures routes, par exemple?

M. Picot: J'y ai fait allusion en passant lorsqu'il fut question de la route nº 11 et je suis certain que nous allons apporter notre appui aux autres villes situées le long de cette route, car nous sommes d'avis qu'elle ne dessert pas adéquatement les régions de Bathurst, Campbellton, Dalhousie et quelques autres.

M. Corbin: Des améliorations s'imposent?

M. Picot: Certainement.

Mr. Picot: We feel, gentlemen, that number 11 Highway from Campbellton down to Bathurst and to Moncton certainly should be brought up to Trans-Canada standards. Bypasses should be built especially around the City of Bathurst. I know there have been steps taken in that direction. We feel this is a priority item because a lot of traffic is moving in and around Bathurst. Also, we are centrally located in the new mining development in that area, and we will certainly endorse any demands that would be made to upgrading or even relocating in some areas number 11 highway.

Mr. Corbin: I have another question, Mr. Chairman. In connection with the air service provided by EPA which is now based at Charlo, do you have the impression that EPA mainly wanted that station up there in order to get into Montreal, or do you feel they are

[*Interpretation*]

M. Picot: Eh bien, j'ai rencontré les représentants de ces villes il n'y a pas tellement longtemps, et ils sont vraiment préoccupés du service qui est offert maintenant pour ces régions. Certaines de ces villes sont aussi éloignées de Charlo que 122 milles, et ils sont d'avis, qu'ils n'ont pas le service qu'ils devraient obtenir.

M. Breau: Ils préféreraient aller à Moncton, alors?

M. Picot: En ce sens, ils m'ont indiqué que ce qu'ils font maintenant, c'est d'avoir recours au service d'Air Canada à Moncton.

Le président: Monsieur Corbin?

Mr. Corbin: So far we have been dealing with...

The Chairman: Mr. Picot understands French, so there is no problem.

Mr. Corbin: This morning we have spoken mainly about air transport problems. But is there not also a problem with regard to the road transport network in your area? Do you not need better roads, for instance?

Mr. Picot: I mentioned it in passing when highway 11 was mentioned and I am sure that we will support the other cities located on highway 11, because we are of the opinion that this highway is not adequate to service the regions of Bathurst, Campbellton, Dalhousie and a few other places.

Mr. Corbin: So it should be improved?

Mr. Picot: Yes.

M. Picot: Nous estimons, Messieurs, que la route nº 11 de Campbellton à Bathurst, et Moncton devrait être aménagée selon les normes de la route transcanadienne. Et on devrait construire des voies d'évitement, surtout autour de la ville de Bathurst. Je sais que certaines mesures ont été prises à cet égard. Nous croyons qu'il s'agit d'une priorité en raison de la circulation autour et dans la ville de Bathurst. De même, nous sommes situés au centre de la nouvelle région minière, et nous appuyerions certainement toute demande d'amélioration de la route, ou même de déplacement, de la route nº 11.

M. Corbin: J'ai une autre question à poser, monsieur le président. Quant au service aérien assuré par EPA, qui a sa base à Charlo à l'heure actuelle, avez-vous l'impression que EPA voulait cette base là-bas afin de pouvoir se rendre à Montréal, où est-ce

[*Texte*]

really serious in giving the people of the area very good service.

Mr. Picot: I am afraid, Mr. Corbin, that that is too much of a loaded question at this time for me to answer.

Mr. Corbin: I appreciate your position, sir.

The Chairman: I want to thank you, Mr. Mayor.

Mr. Picot: Thank you.

The Chairman: This completes our work for this morning. We will adjourn.

AFTERNOON SITTING

The Chairman: Gentlemen, our first brief this afternoon is from Ganong Brothers Limited of St. Stephen, New Brunswick. On my left here I have Mr. J. P. Ensor and Mr. P. D. Frye. They are going to give us a short brief and then you can ask questions after.

Mr. J. P. Ensor (Ganong Bros. Limited): Mr. Chairman, members of the Committee. The Ganong Brothers brief was submitted to the Standing Committee on Transport and Communications in order to bring to your attention the effect that the new non-carload freight rates have on our company.

Of particular concern is the new minimum shipping weight of 300 pounds and the extra charge of 20 cents for each carton over one. The 300-pound minimum and the 20-cent upcharge affect the cost of shipping confectionery to a greater degree in the Atlantic Provinces due to the fact that the average non-carload shipment is considerably smaller in this region than elsewhere in Canada. The average wholesale and retail outlet is smaller than its counterpart in the central and western regions of Canada, and consequently requires frequent shipments in order to keep inventories at a minimum and maintain fresh stocks.

The average carton weight for general confectionery is between 15 and 20 pounds, which means that an order under 300 pounds at 20 cents a carton charge becomes a very important cost.

We also pointed out in our brief the effects of the increase on inward freight. In October

[*Interprétation*]

qu'ils sont vraiment sérieux en voulant donner un excellent service aux gens de la région?

M. Picot: Monsieur Corbin, je regrette, mais j'ai l'impression que la question est trop dangereuse; je ne saurais y répondre.

M. Corbin: Je comprends parfaitement votre situation, monsieur.

Le président: Je voudrais vous remercier, monsieur le maire.

M. Picot: Merci.

Le président: Je crois que cela termine notre travail pour ce matin. Nous allons lever la séance.

SÉANCE DE L'APRÈS-MIDI

Le président: Messieurs, le premier mémoire que nous avons cet après-midi est celui de la *Ganong Brothers Limited* de St. Stephen (N.-B.)

J'ai à ma gauche M. J. P. Ensor et M. P. D. Frye. Ils vont nous donner un bref résumé de leur mémoire et ensuite vous pourrez poser des questions.

M. P. F. Ensor (Ganong Brothers Limited): Monsieur le président, membres du Comité, le mémoire de Ganong a été présenté au Comité permanent des transports et communications afin d'attirer votre attention sur l'effet que les nouveaux taux de transport des chargements incomplets ont sur notre compagnie.

Nous nous préoccupons du nouveau minimum de 300 livres et du taux supplémentaire de 20c. pour chaque boîte s'ajoutant à la première. Le minimum de 300 livres et l'augmentation de 20c. affecte les frais d'expédition des confiseries beaucoup plus dans les provinces de l'Atlantique en raison du fait que la moyenne des chargements incomplets est beaucoup plus faible dans notre région qu'ailleurs au Canada. Le grossiste et le détaillant moyen sont moins considérables que dans les parties centrales et l'ouest du Canada, et en conséquence, demandent des expéditions fréquentes afin de maintenir les inventaires au minimum et de garder des stocks frais.

Le poids moyen est de 15 à 20 livres pour une boîte ordinaire de produits de confiseries, ce qui veut dire que pour une commande de moins de 300 livres à 20c. la boîte, les frais deviennent plutôt considérables.

Nous avons aussi indiqué dans notre présentation, les effets de l'augmentation sur les

[*Text*]

1966, there was an increase in the carload rate of sugar of four cents per hundred pounds, which increased Ganong's inward freight cost by 30 per cent on its chief raw material. This rate has since been increased another one cent per hundred pounds.

In Ontario where truck competition is very keen, the rail rate between Toronto and London was not increased. So Ganong's largest competitors in general confectionery were not affected. Therefore, we feel that the new non-carload freight rate structure should be reconsidered as it puts the Ganong Company at a competitive disadvantage in its home market, particularly in regard to shipments under 300 pounds.

The Chairman: Mr. Horner?

Mr. Horner: Mr. Ensor, I find your brief quite interesting. It is once again enunciating the firm belief that in the Maritimes, the implementation of the non-carlot shipment of goods has been very detrimental to your business. This appears to be a pattern that is developing in the Maritimes. Have you considered appealing to the Canadian Transport Commission, making the case that these new rates are detrimental to the public interest?

Mr. Ensor: We have not done this.

Mr. Horner: Have you discussed it with the Maritime Transportation Commission or the...

Mr. Ensor: I believe your President has.

Mr. Horner: You do not know whether they are prepared to take your case to the CTC?

Mr. Ensor: I do not right now, I am sorry.

Mr. Horner: This is not the first time we have heard it in this series of briefs we have been hearing. You suggest that it has been an increase of 64 per cent on all shipments under 300 pounds, or something like that. To me this is a drastic increase. You suggest that if it continues you will pretty nearly be forced out of business.

Mr. Ensor: I think, sir, that 64 per cent of our shipments are under 300 pounds.

[*Interpretation*]

frais de transport des matières premières venant du Haut-Canada. En octobre 1966, il y a eu une augmentation de prix de 4 cents le cent livres, ce qui a augmenté les frais de transport de 30 p. 100 pour la matière première la plus importante de Ganong. Depuis, on l'a augmenté de nouveau de un cent le cent livres.

En Ontario où la concurrence des camions est très intenses, on n'a pas augmenté le tarif entre Toronto et London. Ce qui fait que les plus gros concurrents de Ganong dans la confiserie générale n'ont pas été touchés. Nous estimons donc qu'on devrait réévaluer le nouveau tarif-marchandises des chargements incomplets étant donné que la société Ganong est à un désavantage concurrentiel sur ses propres marchés, surtout en ce qui concerne les expéditions de moins de 300 lbs.

Le président: M. Horner.

M. Horner: Monsieur Ensor, j'ai trouvé votre mémoire très intéressant. Encore une fois, il nous montre très clairement cette croyance qu'on a que dans les Maritimes, la mise en vigueur des taux à l'égard des chargements incomplets est au détriment de votre commerce. Ce qui semble être une tendance qui se développe dans les Maritimes. Avez-vous songé à en appeler à la Commission canadienne des Transports à l'effet que ces nouveaux taux sont au détriment de l'intérêt public?

M. Ensor: Non, nous ne l'avons pas fait.

M. Horner: L'avez-vous discuté avec la Commission des transports des Maritimes?

M. Ensor: Je crois que notre président l'a fait.

M. Horner: Est-ce que vous savez s'ils sont prêts à porter votre cause devant la Commission canadienne des transports?

M. Ensor: Je ne le sais pas, je regrette.

M. Horner: Ce n'est pas la première fois que nous entendons ceci dans la série de mémoires que nous avons entendus. Vous prétendez qu'il y a eu augmentation de 64 p. 100 sur toutes les expéditions de moins de 300 livres, n'est-ce pas? Et alors, à mon sens, c'est une augmentation draconienne. Vous dites dans votre mémoire que si cela se continue, vous serez presque forcés à abandonner les affaires.

M. Ensor: Je crois que 64 p. 100 de nos expéditions sont de moins de 300 lbs, monsieur.

[*Texte*]

Mr. Horner: Are under 300 pounds. Oh. The average increase is 85 per cent?

Mr. Ensor: Yes.

Mr. Horner: The average increase is 85 per cent. In other words nearly double, and would you disagree with the suggestion I made that if it is to continue that you will pretty nearly be forced out of business?

Mr. Ensor: It would force us to take serious consideration.

Mr. Horner: Yes. I do not suppose that you or your legal advisers have made any study under Clause 16 of the new bill which set up the CTC?

Mr. Ensor: No, we have not.

Mr. Horner: The reason I bring this up is because this Section 16 was hotly debated when the bill was passed, and you have to—as a private shipper—hang your case on, if you might put it that way, on the fact that it is in the public interest. Believe me, I argued this for a number of days in the House of Commons, the fact that it would be difficult for a concern—an individual concern such as yours—to build a case around the contention that the public interest would be in jeopardy. And I say to you, and I encourage you, that I would like to see—a number of cases have come before the Committee similar to this, but no one apparently has taken it to the CTC yet.

And I encourage you to—either through your Maritime Transportation Commission, or privately yourself, because in order to really test the application of the Act, we have to have an interpretation from the CTC as to what is meant, or what is in the public interest. And I realize the plight you are faced with, and encourage you to pursue it to the ultimate limit.

The Chairman: Mr. Allmand?

Mr. Allmand: Mr. Ensor, your factory is very close to the American border; as a matter of fact it is right on the border.

Mr. Ensor: Right on the border, yes.

Mr. Allmand: What is your attitude on the proposed corridor roads up through Maine to

[*Interprétation*]

M. Horner: Oh, je vois, de moins de 300 livres. Et l'augmentation moyenne est de 85 p. 100?

M. Ensor: Oui.

M. Horner: L'augmentation moyenne est de 85 p. 100. En d'autres termes, presque le double, et est-ce que vous conviendriez alors de la suggestion que j'ai faite à l'effet que si cela se continue, ça vous forcera à vous retirer des affaires.

M. Ensor: Cela nous force à étudier la question très sérieusement, oui.

M. Horner: Oui. Je ne m'imagine pas que vous et vos conseillers juridiques auront fait une étude en vertu de l'article 16 du nouveau bill qui a établi la nouvelle Commission canadienne des transports?

M. Ensor: Non, nous ne l'avons pas fait.

M. Horner: La raison pour laquelle je soulève la question c'est que l'article 16 a été discuté très à fond et chaudement lorsque le bill a été adopté, et à titre d'expéditeurs particuliers, il faut que votre cause repose, si je puis dire, sur le fait que ce soit dans l'intérêt public. Et croyez-moi, j'ai soulevé l'argument pendant plusieurs jours à la Chambre des communes à l'effet que ce serait une préoccupation pour une entreprise comme la vôtre, que ce serait très difficile de prétendre que l'intérêt public serait en jeu, dans un cas comme le vôtre. Je vous dis donc, que j'aimerais voir, étant donné qu'il y a plusieurs cas qui sont présenté au Comité, et personne jusque là n'a porté la cause devant la Commission canadienne des transports.

Alors je vous encourage, ou par l'entremise de la Commission des transports des Maritimes, ou à titre privé, vous-mêmes, si vous le voulez, afin de bien vérifier la Loi, il faut avoir une interprétation officielle de la part de la Commission Canadienne des transports pour savoir ce que cela veut dire, ou ce qui est dans l'intérêt public. Je comprends bien la situation dans laquelle vous vous trouvez, et je vous encourage fortement à poursuivre la cause.

Le président: Monsieur Allmand?

M. Allmand: Monsieur Ensor, votre fabrique se trouve très près de la frontière américaine.

M. Ensor: En fait elle est très proche.

M. Allmand: Quelle est votre attitude au sujet de routes-corridor à travers le Maine

[*Text*]

Montreal and so forth? Would you consider shipping by truck if such a road was built?

Mr. Ensor: Yes, we certainly would. In fact we have been shipping with some truck transport to Montreal and Upper Canada.

Mr. Allmand: What percentage do you ship by truck?

Mr. Ensor: Before this new rate came in we were shipping 75 per cent rail and 25 per cent transport. Today it is just reverse; 75 per cent transport and 25 per cent rail.

Mr. Allmand: I see; since the new LCL rates have come in you have completely reversed your percentage.

Mr. Ensor: Pretty well, yes.

Mr. Allmand: Do you have contracts with trucking firms or do you have your own trucks?

Mr. Ensor: No, we do not have our own trucks. We use Day & Ross Transport Co. Ltd. mainly to Montreal.

Mr. Allmand: So you are interested in the proposed corridor road. That is all, thank you.

Mr. Trudel: Mr. Chairman, I would like to direct my question to Mr. Ensor. You mention here, Mr. Ensor, a 300-pound minimum shipment. What minimum shipment weight are you looking for that would be ideal for your business?

Mr. Ensor: In the Atlantic Provinces, sir, 150 pounds would be the good minimum shipment that we have.

Mr. Trudel: What would be the average weight of your shipments within the Maritimes?

Mr. Ensor: Our average is about 165 to 200 pounds.

Mr. Trudel: You also mentioned in your brief, Mr. Ensor, that you have a penalty per carton. Is it not possible for you to group your smaller packages into one box?

Mr. Ensor: We have investigated this and we could put perhaps four cartons in a shipping container that would save us 60 cents, but the carton itself would cost us 60 to 65

[*Interpretation*]

vers Montréal, etc? Est-ce que vous songeriez à expédier par camion, si une telle route était construite?

M. Ensor: Oui certainement. Nous le ferions. En fait, nous avons fait des expéditions par camion vers Montréal et le Haut-Canada.

M. Allmand: Quel est le pourcentage que vous expédiez par camion?

M. Ensor: Avant l'introduction du nouveau taux, nous expédiions 75 p. 100 des marchandises par chemin de fer et 25 p. 100 par camion, alors qu'aujourd'hui c'est juste l'inverse, 25 p. 100 par chemin de fer et 75 p. 100 par camion.

M. Allmand: Je vois. Depuis l'introduction du nouveau tarif pour les chargements incomplets la situation est complètement renversée.

M. Ensor: Oui, à peu près.

M. Allmand: Est-ce que vous aviez un contrat avec une entreprise de camionnage ou est-ce que vous avez vos propres camions?

M. Ensor: Non, nous n'avons pas nos propres camions. *Day & Ross Transport Co. Ltd.* assure normalement le transport jusqu'à Montréal.

M. Allmand: Alors, la nouvelle route vous intéresse. C'est tout. Merci.

M. Trudel: Monsieur le président, je voudrais poser une question à M. Ensor. Vous avez mentionné, monsieur Ensor, un chargement minimum de 300 livres. Quel serait le chargement minimum qui serait idéal pour votre commerce?

M. Ensor: Dans les provinces de l'Atlantique, monsieur, 150 livres seraient un minimum acceptable.

M. Trudel: Quel serait le poids moyen de vos expéditions dans les Maritimes?

M. Ensor: Environ 165 à 200 livres.

M. Trudel: Vous avez aussi mentionné dans votre mémoire, monsieur Ensor, qu'il y a une punition par colis. Est-ce qu'il ne serait pas possible de grouper vos petits colis en un seul?

M. Ensor: Oui, nous avons fait enquête à ce sujet et nous pourrions peut-être mettre quatre cartons dans un cadre, ce qui nous épargnerait 60 cents, mais le cadre nous coû-

[*Texte*]

cents so it is not practical. We have tried strapping and this has not worked out too successfully yet, but we are still working on it and trying to condense our shipments by strapping into larger packages.

Mr. Trudel: This has been the answer in several other areas of transportation.

Mr. Ensor: Yes.

Mr. Trudel: I have one or two more questions, Mr. Chairman. You mentioned in your brief that 50 per cent of the business in the Maritimes is being conducted or done by the independent stores, whereas it is 5 per cent in Ontario.

Mr. Ensor: This is food chains, sir.

Mr. Trudel: Yes, I understand. Taking that into consideration I think this does not give us the entire story. Although we have independent stores, we also have group stores and I think you have them here as well.

Mr. Ensor: Yes, we do.

Mr. Trudel: Most of these group stores are now drawing their goods from various warehouses in the area, but you are talking here as if all your distribution is done on a direct basis.

Mr. Ensor: In Montreal and Toronto, sir, the food chains have central warehouses where a shipment is sent for distribution, but no food chain in the Maritimes has a central warehouse where we can ship. We have to ship to individual stores.

Mr. Trudel: Yes, but taking this a little further, you are talking about food chains in Montreal. They do less than 30 per cent of the business in the Province of Quebec. Therefore, we are talking about independently-owned or group stores that are in existence here. What I am trying to arrive at is whether all of your business is done on a direct basis. You do not go through a retailer or a wholesaler?

Mr. Ensor: Wholesale and retail, sir, yes.

Mr. Trudel: Therefore, your shipments in a lot of cases would exceed 150 pounds.

Mr. Ensor: In a lot of cases through the wholesaler; they are drop shipments and they are shipped direct to the store and charged through the wholesaler.

[*Interprétation*]

terait 65 cents, de sorte que cela ne serait pas pratique. Nous avons essayé avec des lanières sans trop de succès. Nous essayons toujours de condenser nos expéditions en liant les colis ensemble.

M. Trudel: Ce fut la solution dans d'autres domaines des transports.

M. Ensor: Oui.

M. Trudel: Une ou deux autres questions, monsieur le président. Vous avez mentionné que 50 p. 100 des affaires dans les Maritimes sont entre les mains de magasins indépendants, à l'égard de 5 p. 100 dans l'Ontario.

M. Ensor: Il s'agissait des épiceries, monsieur.

M. Trudel: Oui, je le comprends et, si l'on tient compte de ce fait, je crois que cela ne nous donne pas tous les éléments en cause. Nous avons des magasins indépendants, nous avons aussi des magasins à succursales multiples et je crois que vous les avez ici, aussi.

M. Ensor: Oui, monsieur.

M. Trudel: La plupart d'entre eux tirent leurs stocks d'entrepôts de la région, mais, vous semblez dire que tout se fait sur une base directe.

M. Ensor: A Montréal et à Toronto, les magasins d'aliments à succursales multiples ont un entrepôt central qui assure la distribution, mais, aucun magasin à succursales multiples des Maritimes a un entrepôt central, où nous pourrions expédier. Il faut nécessairement expédier aux magasins mêmes.

M. Trudel: Oui, puisque vous parlez des magasins à succursales multiples de Montréal, ils représentent moins de 30 p. 100 du chiffre d'affaires de la province de Québec. Par conséquent, nous parlons des magasins indépendants et des coopératives qui existent ici. Ce à quoi je veux en venir, c'est de savoir si toutes vos affaires se font sur une base directe. Vous ne passez pas par un grossiste ni un détaillant?

M. Ensor: Par le grossiste et le détaillant, oui, monsieur.

M. Trudel: Alors, beaucoup de vos chargements dépasseraient 150 livres.

M. Ensor: Il y a beaucoup de chargements échelonnés qui sont envoyés directement aux magasins et défrayés par les grossistes.

[*Text*]

Mr. Trudel: I am thinking of some of your competitors who are also in that type of business. They are now even grouping their shipments to a group of wholesalers, let alone retailers. You are talking here about independent stores.

Mr. Ensor: Yes, we do this in Montreal but in the Atlantic Provinces there is no group to which we can ship.

Mr. Trudel: But you are able to deal on the wholesaler basis with distribution from there afterwards?

Mr. Ensor: In the Atlantic Provinces?

Mr. Trudel: In the Atlantic Provinces.

Mr. Ensor: Yes, we ship to wholesalers and we ship direct through wholesalers on a drop shipment basis. It does not go to the wholesaler.

The Chairman: Mr. Portelance?

Mr. Portelance: When you make drop shipments, do you not charge more?

Mr. Ensor: No, we do not.

Mr. Portelance: At the same price?

Mr. Ensor: We charge to the wholesaler at the same price.

Mr. Portelance: Some firms have different prices; when it is a drop shipment they usually get more for it.

Mr. Trudel: I have one more question, Mr. Chairman. Mr. Ensor, what per cent of your business would be done in the Maritimes?

Mr. Ensor: Approximately 50 per cent of our business is done in the Maritimes.

Mr. Trudel: In other words, what we are talking about now would involve about 50 per cent of your business on the LCL basis?

Mr. Ensor: That is right.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Skoberg?

Mr. Skoberg: I would like to ask, what per cent is LCL in so far as the western part of the nation is concerned?

Mr. Ensor: All carload to Western Canada, sir; we ship all carload to Western Canada.

[*Interpretation*]

M. Trudel: Je songe à certains de vos concurrents qui sont dans le même genre d'entreprise et qui groupent leurs expéditions en formant un groupe de grossistes et même de détaillants. Vous parlez de magasins indépendants.

M. Ensor: Oui, on le fait à Montréal, dans les provinces de l'Atlantique, il n'y a pas de tels groupes auxquels nous pourrions expédier.

M. Trudel: Mais vous pouvez le faire avec un grossiste qui assure la distribution.

M. Ensor: Dans les provinces de l'Atlantique?

M. Trudel: Dans les provinces de l'Atlantique.

M. Ensor: Oui, nous expédions à ou par l'entremise de grossistes. Ce sont des expéditions échelonnées qui ne se rendent pas au grossiste.

Le président: Monsieur Portelance?

M. Portelance: Est-ce que vous chargez davantage lorsqu'il s'agit de chargements échelonnés?

M. Ensor: Non, c'est le même prix.

M. Portelance: C'est le même tarif?

M. Ensor: Nous chargeons le même prix qu'aux grossistes.

M. Portelance: Certaines sociétés ont des tarifs spéciaux; ils obtiennent davantage quand il s'agit de chargements échelonnés.

M. Trudel: Une autre question, monsieur le président. Quel pourcentage de vos affaires se fait dans des Maritimes?

M. Ensor: Environ 50 p. 100.

M. Trudel: On parle donc, de la moitié de votre commerce qui est touché par le tarif des chargements incomplets.

M. Ensor: Oui, c'est exact.

M. Trudel: Merci beaucoup, monsieur le président.

Le président: Monsieur Skoberg?

M. Skoberg: Quel pourcentage de vos expéditions vers l'Ouest de notre pays est affecté par le tarif des chargements incomplets?

M. Ensor: Toutes nos expéditions vers l'Ouest sont des chargements complets.

[*Texte*]

Mr. Skoberg: That is straight carload lots?

Mr. Ensor: Straight carload lots yes.

Mr. Skoberg: What would your position be, sir, in regard to the Atlantic free trade policy and what would your market possibly be across the line?

Mr. Ensor: In the United States?

Mr. Skoberg: Yes.

Mr. Ensor: We are doing very little export at the present time.

Mr. Skoberg: What is your policy on the Atlantic free trade thought?

Mr. Ensor: I do not wish to state it now; I am sorry.

Mr. Skoberg: I have one other question. Has your company any interest in the trucking firms in the Atlantic Provinces?

Mr. Ensor: Any interest in the trucking firms?

Mr. Skoberg: Yes.

Mr. Ensor: Financial interest?

Mr. Skoberg: Yes.

Mr. Ensor: No.

Mr. Skoberg: I notice in the final paragraph of your brief, sir, that at least there is a possibility of your relocating outside the Atlantic Provinces. With that in mind, could you give us an indication of what you mean by that and what location you were thinking of, taking into consideration that 50 per cent of your market is here and 50 per cent is the rest of the nation?

Mr. Ensor: This has been considered but as this brief was made by the President of our Company I do not feel qualified to comment further than what the brief says right now. I am sorry.

Mr. Skoberg: That is fine; thank you.

The Chairman: Mr. Horner?

Mr. Horner: I have a supplementary. I was interested in your remarks concerning the free trade area. Could you give this Committee—and the question has been brought up a number of times—any idea of the difficulty you may be having in getting your product to the market in the United States? Is there a tariff or is there not?

Mr. Ensor: There is a tariff.

[*Interprétation*]

M. Skoberg: Des chargements complets?

M. Ensor: Oui, monsieur.

M. Skoberg: Et, quelle est votre attitude envers la politique de libre échange pour la région de l'Atlantique et quel est votre marché aux États-Unis?

M. Ensor: Aux États-Unis?

M. Skoberg: Oui.

M. Ensor: Nous exportons très peu à l'heure actuelle.

M. Skoberg: Quelle serait votre attitude quant à l'idée du libre-échange dans la région de l'Atlantique?

M. Ensor: Je regrette, je préfère ne pas l'exprimer pour l'instant.

M. Skoberg: Est-ce que votre compagnie a un intérêt quelconque dans les entreprises de camionnage des provinces de l'Atlantique?

M. Ensor: Des intérêts dans les entreprises de camionnage?

M. Skoberg: Oui.

M. Ensor: Un intérêt financier?

M. Skoberg: Oui.

M. Ensor: Non.

M. Skoberg: Je constate dans le dernier paragraphe de votre mémoire, qu'il y a au moins une possibilité que vous vous retiriez des provinces de l'Atlantique. En songeant à cela, pourriez-vous nous dire ce que vous aviez en vue, compte tenu du fait que 50 p. 100 de vos débouchés se trouvent ici et que 50 p. 100 se trouvent dans le reste du Canada?

M. Ensor: Nous y avons songé, mais comme le mémoire a été rédigé par le président de notre société, je ne crois pas pouvoir commenter davantage sur ce que dit le mémoire à l'heure actuelle. Je m'excuse.

M. Skoberg: C'est très bien. Merci beaucoup.

Le président: Monsieur Horner.

M. Horner: Une question complémentaire. Ce que vous avez dit au sujet de la zone de libre échange m'intéresse beaucoup. La question a déjà été soulevée plusieurs fois, mais pourriez-vous donner une idée, au Comité, des difficultés que vous pourriez éprouver à vendre vos produits aux États-Unis? Est-ce qu'il y a un tarif?

M. Ensor: Oui, il y a un tarif.

[*Text*]

Mr. Horner: There is a tariff?

Mr. Ensor: Yes 12 per cent, but this is pretty well offset because we are exempt the 12 per cent excise tax in Canada if we export. It is pretty well an offsetting tariff.

Mr. Horner: Therefore, it is nearly a free trade basis for your product anyway?

Mr. Ensor: Yes.

Mr. Horner: Have you made any inroads at all into the American market?

Mr. Ensor: Some; we have just started in the past 12 months and we have made some in Maine. We have not gone beyond the State of Maine yet.

Mr. Horner: You have not tried Boston, or...

Mr. Ensor: Not yet.

The Chairman: Mr. Breau?

Mr. Breau: Mr. Chairman, I have just one question for the witness. You left the impression a while ago that you were favouring the corridor road. Are you saying that you can prove it would be cheaper for you if there were a corridor road, or did you want to leave the impression that if it were proven to you that it would be cheaper you might agree with it?

Mr. Ensor: I do not know what the rates would be with a corridor road. We would favour this because it would be a more direct line for shipping to Montreal and Ontario markets, but what the rate would be I have no idea.

Mr. Breau: But you would favour the corridor road if it were cheaper for you?

Mr. Ensor: Certainly.

Mr. Breau: But I mean you are not ready to say that you can prove it would be cheaper?

Mr. Ensor: No, I could not prove it.

The Chairman: Gentlemen, are there any more questions? Thank you, Mr. Ensor.

Next will be the Fredericton Board of Trade.

Gentlemen, on my right are Mr. Bidlake, Mr. Rioux, Mr. McKenzie and Mr. Logue. They will make a short presentation. They have no brief. We have the brief here and I

[*Interpretation*]

M. Horner: Il y a un tarif?

M. Ensor: Oui, de 12 p. 100, mais il est compensé par le fait que nous sommes exemptés de la taxe d'accise de 12 p. 100 au Canada, si nous exportons les produits. Alors, l'un compense l'autre.

M. Horner: Donc, il s'agit effectivement d'un libre échange de toute façon?

M. Ensor: Oui.

M. Horner: Est-ce que vous avez réussi à pénétrer le marché américain?

M. Ensor: Nous ne l'avons tenté que depuis un an. Nous avons réussi quelque peu dans le Maine. Nous ne sommes pas allés au-delà.

M. Horner: Vous n'avez pas encore tenté à Boston?

M. Ensor: Pas encore.

Le président: Monsieur Breau.

M. Breau: Monsieur le président, une seule question que je voudrais poser au témoin. Vous avez laissé l'impression, tout à l'heure, que vous étiez en faveur de la route-corridor. Est-ce que vous dites que cela vous coûterait moins cher où est-ce que vous vouliez dire que si on pouvait vous prouver que c'était plus économique vous seriez en faveur?

M. Ensor: Je ne sais pas quels seraient le tarif par la route-corridor. Nous serions en faveur car ce serait une route beaucoup plus directe pour les expéditions vers Montréal et l'Ontario, mais je n'ai pas idée de ce que serait le taux.

M. Breau: Mais vous seriez en faveur de la route-corridor si elle était plus économique.

M. Ensor: Oui, certainement.

M. Breau: Vous n'êtes pas prêt à dire que vous seriez capable de prouver qu'elle serait plus économique?

M. Ensor: Non, je ne serais pas capable.

Le président: Messieurs, s'il n'y a pas d'autres questions je remercierais M. Ensor. Merci.

Voici maintenant la Chambre de Commerce de Fredericton.

Messieurs, j'ai ici à ma droite MM. Bidlake, Rioux, McKenzie et Logue. Ils présenteront un bref exposé. Ils n'ont pas de mémoire. Nous avons leur mémoire ici; je ne

[*Texte*]

do not believe there are enough copies for everyone of you but you can ask questions.

Now I ask for a very brief comment.

Mr. A. J. Rioux (Director Fredericton Board of Trade): Mr. Chairman and gentlemen, we wish to thank you for the privilege of appearing before you today. In summary we wish to bring to your attention four points on transportation which are more fully explained in our brief. The first is LCL freight rates, which have been in force over 12 months. You will be receiving many briefs on this issue so we will not dwell on this subject except to say our concern lies in industry.

These new rates are a severe blow to Maritime-based industry, and are also a severe blow when trying to attact new industry to our province. Second, the proposed corridor road linking Sydney, Nova Scotia and Montreal via the State of Maine, we believe, would give the Atlantic provinces speedy and efficient access to the heartland of Canada, the Atlantic Coast to the U.S.A. and sport-loving enthusiasts of Quebec to Maine. We would like to see this corridor road a reality, but built and maintained by the U.S.A. Residents of Maine need our assurance that the Canadian portion will be built.

Our third point is that we are asking for improved air flights from Fredericton to Prince Edward Island and Fredericton to New England; for the present time they are inadequate.

The fourth point is, are you aware, sir, that we have no direct passenger service in our capital city? Should we desire to travel by train to Montreal, we have a choice, if I may call it such, to take a bus to Fredericton Junction, a distance of 30 miles, or a bus to McGivney Junction, a distance of 35 miles. Returning to the city, we must again travel by bus. We have joined forces with the Saint John Board of Trade in the submission of a brief on an international airport. This was presented to you yesterday by the Saint John Board. We are not prepared at this time to make a suggestion on a suitable site midway between Saint John and Fredericton that would suit our cause. We intend to further investigate this project. In the light of future changes we are prepared to work toward the betterment of our rail, air and transportation

[*Interprétation*]

crois pas qu'il y ait suffisamment d'exemplaires pour chacun d'entre vous, mais vous pouvez toujours poser des questions.

Nous allons leur demander de faire un bref exposé.

M. A. J. Rioux (Directeur de la Chambre de commerce de Fredericton): Monsieur le président, messieurs, nous désirons vous remercier d'avoir le privilège de comparaître ici aujourd'hui. Tout d'abord, nous voulons vous signaler quatre points sur la question des transports qui sont beaucoup mieux expliqués dans notre mémoire. Tout d'abord, le tarif des chargements incomplets qui ont été mis en vigueur il y a plus d'un an. Je sais que vous recevrez un bon nombre de mémoires à ce sujet, c'est pourquoi nous nous contenterons de dire que nous nous inquiétons pour les industries.

Le nouveau tarif est un dur coup pour les industries des Maritimes, mais surtout lorsqu'il s'agit d'attirer de nouvelles industries dans notre province. Deuxièmement, la route-corridor entre Sydney (Nouvelle-Écosse) et Montréal en passant par l'État du Maine, donnerait à notre avis aux provinces de l'Atlantique un accès rapide et efficace à l'intérieur du Canada, au littoral de l'Atlantique et aux États-Unis et, pour les Québécois qui aiment le sport, au Maine. Nous voudrions que cette route devienne réalité, mais qu'elle soit maintenue et construite par les États-Unies. Il faudrait que les habitants du Maine soient assurés que nous aménagerons la partie canadienne.

Troisièmement, nous demandons l'amélioration des vols entre Fredericton et l'Île du Prince-Édouard et entre Fredericton et la Nouvelle-Angleterre. En ce moment, ces vols sont complètement insuffisants.

Quatrième point: êtes-vous au courant, monsieur le président, que nous n'avons pas de service passager direct dans notre capitale? Si nous voulons aller à Montréal, par train, nous le pouvons, mais en nous rendant par autobus jusqu'à Fredericton Junction, une distance de 30 milles, ou jusqu'à McGivney Junction, une distance de 35 milles. Pour revenir nous devons une fois de plus emprunter l'autobus. Nous nous sommes joints au Board of Trade de St-Jean dans la présentation d'un mémoire pour obtenir un aéroport international.

Hier, le Board of Trade de St-Jean vous en a fait la présentation. Nous ne sommes pas prêts, en ce moment, à vous proposer un emplacement précis entre St-Jean et Fredericton. Nous avons l'intention d'étudier le projet plus longuement. Vu les modifications

[*Text*]

network for we are confident therein lies the future of the Atlantic Provinces.

Therefore we appreciate this opportunity to present our views to you, sir, and your Committee for your findings will have a bearing on what will happen transportation-wise. We recognize that we must have faster service at reasonable cost to attract outside interests. It is our earnest hope, through our submission and others, and your good offices, transportation in the Atlantic Provinces will be elevated to equal that of the other Provinces. Thank you very much.

The Chairman: Mr. Corbin.

Mr. Corbin: Mr. Chairman, on the subject of the corridor road, I wonder if these gentlemen are aware of the fact that the Province of New Brunswick does not consider its end of the corridor road as being among the priorities as far as road building in this province is concerned.

Mr. Rioux: Pardon me, Mr. Corbin, I saw the comments from one of the Ministers yesterday. I think it is pathetic, myself. I think that for those of us that have studied this problem for the past four years, it does not show much wisdom on the part of the gentleman making the comment. He presumes, I believe, that we have to pay part of the cost of the corridor road and that is not true.

An hon. Member: That is, the New Brunswick end.

Mr. Rioux: The New Brunswick end is already there. It is just a matter of improvement of the road and it needs improvement now that it has to be done in a short time. It could be brought up to Trans-Canada specifications very easily and probably requires two by-passes of two small villages, and that is all. So, when we talk about the cost to New Brunswick, it is ridiculous when one considers the overall benefit to the Maritime Provinces.

The Chairman: Are there any further questions on the same subject?

Mr. Corbin: Why do the Americans not build the road?

Mr. Rioux: The Americans have stated that if we will do our end to improve our road to their border, and Quebec does likewise from Sherbrooke to the Canadian-American border

[*Interpretation*]

à venir, nous sommes prêts à travailler pour améliorer le réseau de transport par air et par terre car nous sommes convaincus que c'est là que se trouve l'avenir des provinces atlantiques.

C'est pourquoi nous sommes très heureux d'avoir cette occasion de faire part de notre point de vue, à vous, monsieur le président et votre Comité, parce que vos conclusions influeront sur ce qui se produira dans le domaine du transport. Il nous faut un service plus rapide à un coût raisonnable pour attirer des intérêts de l'extérieur. Nous espérons sincèrement que notre présentation, celle des autres personnes, et votre travail permettront de placer le domaine du transport dans les Maritimes sur un pied d'égalité avec celui des autres provinces du pays.

Le président: Monsieur Corbin.

M. Corbin: Pour ce qui est de la route corridor, ces messieurs savent-ils que la province du Nouveau-Brunswick ne considère pas comme priorité l'aménagement de cette partie de la route dans cette province?

M. Rioux: J'ai pris connaissance des commentaires formulés, hier, par l'un des ministres. Je trouve cela malheureux. Je trouve, pour ceux d'entre nous qui étudient ce problème depuis quatre ans, qu'il ne s'agit pas d'une preuve de sagesse de la part de celui qui a émis le commentaire. Je crois qu'il suppose que nous devons défrayer une partie du coût de cette route, ce qui n'est pas vrai.

Une voix: La partie du Nouveau-Brunswick.

M. Rioux: La partie du Nouveau-Brunswick s'y trouve déjà. Il s'agit tout simplement d'améliorer la route. Il faut l'améliorer. Il serait facile de faire en sorte qu'elle atteigne les normes établies pour la route transcanadienne. Il suffirait de construire deux tronçons pour permettre d'éviter deux petits villages. Le coût, pour le Nouveau-Brunswick, est ridiculement bas si l'on considère tous les avantages qu'en retireront les Maritimes.

Le président: Il y a d'autres questions sur le même sujet?

M. Corbin: Pourquoi les Américains ne construisent-ils pas cette route?

M. Rioux: Les Américains ont déclaré que, si nous faisions notre part pour améliorer notre route vers leurs frontières, et si le Québec agit de la même façon entre Sher-

[*Texte*]

at Jackman or Mégantic, whichever one you want to use, which Quebec has agreed to, they will build the corridor road, but they must have the co-operation from the two connecting points in Canada.

Mr. Corbin: When you say "they will build the corridor road if we do our end" which you agree is already there but needs some up-grading, who do you mean by "they"? Are you talking about the Maine authorities, the government?

Mr. Rioux: Yes, the Maine authorities have stated—this is in one of the briefs presented to the Premiers by the international committee on the corridor road—that if the road known as the "Sherbrooke Autoroute" were extended to the American border, that they will take it from there and extend it to the Canadian border on this side of Maine. That is not hearsay; it is fact.

Mr. Corbin: You are Mr. Rioux, I understand?

Mr. Rioux: Yes.

Mr. Corbin: Economically, do you not think that Canada will lose very much by having a lot of our traffic going through Maine? Here I refer particularly to the services that already exist along the Trans-Canada Highway from Fredericton, through Edmundston, through Rivière du Loup, to Quebec, through Montreal. What would be the loss to the Canadian economy?

Mr. Rioux: If we were going to use it the way you are thinking, then by improving the Maritimes Canada is losing.

Mr. Corbin: I have asked you a question, I am not asking you to comment on my thinking. I have asked you a question and I want an answer, if you have one.

Mr. Rioux: Sir, I believe that the route you are talking about would have the effect of improving traffic conditions because it would give people an alternate route, say for a long weekend, to come down the St. Lawrence, come down into Fredericton, follow the Saint John River, Mactaquac, and across through Maine, back home in the least possible time, with a change of scenery all the way. Now I do not think that you will find this is going to affect the economy very seriously to the extent of being detrimental which you . . .

Mr. Corbin: Have you made a study of that problem?

[*Interprétation*]

brooke et la frontière canado-américaine, à Jackman ou Mégantic, ce que le Québec a accepté, ils construiront cette route, mais il leur faut notre collaboration à ces deux endroits.

M. Corbin: Lorsque vous dites, «ils construiront la route corridor si nous effectuons le travail à notre extrémité» après avoir admis que la route existe mais qu'elle a besoin d'amélioration, que voulez-vous dire par «ils»? S'agit-il du gouvernement du Maine?

M. Rioux: Oui. Le gouvernement du Maine a déclaré dans un mémoire, présenté aux premiers ministres par le comité international pour l'aménagement de cette route, que si l'autoroute de Sherbrooke était prolongée jusqu'à la frontière américaine, qu'il la prolongerait jusqu'à la frontière canadienne de ce côté-ci du Maine. Ce ne sont pas des racontars, mais des faits.

M. Corbin: Vous êtes M. Rioux, n'est-ce pas?

M. Rioux: Oui.

M. Corbin: Sur le plan économique, ne croyez-vous pas que le Canada y perdrait beaucoup, si une partie de notre trafic passait par le Maine? Je veux surtout parler des services qui existent déjà le long de la route transcanadienne, à partir de Fredericton et en passant par Edmundston, Rivière-du-Loup, Québec, Montréal. Quelles pertes enregistrerait alors l'économie canadienne?

M. Rioux: En admettant votre raisonnement il faudrait en conclure que le Canada y perdrait à améliorer la situation aux Maritimes.

M. Corbin: Je vous ai posé une question. Je ne vous demande pas de commenter ma façon de pensée. J'ai posé une question et je désire une réponse, si vous en avez une.

M. Rioux: Je pense que cette route, dont vous parlez améliorerait la circulation parce qu'elle permettrait aux voyageurs d'emprunter une autre route, lors d'un long weekend, pour se rendre à Fredericton et en revenir par le Maine, très rapidement et en jouissant d'un coup d'œil différent. Je ne crois pas vraiment que cela puisse affecter l'économie de ces régions dans la mesure où cela nuirait. . .

M. Corbin: Vous avez étudié ce problème?

[*Text*]

Mr. Rioux: We have made a study.

Mr. Corbin: Of the detrimental effects that a corridor route would have on the upper portion of the Saint John River Valley and all the routes, the Trans-Canada Highway, through Quebec to Montreal? Have you studied the detrimental effects?

Mr. Rioux: Yes we have.

Mr. Corbin: What conclusions have you arrived at?

Mr. Rioux: We find, for instance, that there are 1.5 million vehicles going through McAdam in the course of a year that are going through to the Montreal area and not using that route now. They are going through not because it is 50 miles shorter, even now, but because they want to go through there.

Committees are going to tell you that the transports buy petrol in Quebec now and again in Nova Scotia and by-pass New Brunswick altogether. We find that they do not stop that much in New Brunswick. This will come from the Maritimes Transportation Commission who will give you all these facts. We were presented with those facts on the Committee when we studied the corridor road.

Again, I think it is a parochial approach to think of one small section of the northern part of the province, who are very fluent in their criticism of the corridor road, when we must think for the rest of the people in the Atlantic Provinces.

Mr. Corbin: Speaking about parochialism, or whatever you want to call it, is it not true that it would be mainly southwest New Brunswick and southwest New Brunswick alone that would be the main beneficiary of the main corridor route, because there is another alternate easy and short access route to Montreal through Newcastle, Renauds, Plaster Rock and on through existing Canadian highways? You are still going to cut the time. You cannot go around the circumference of the circle as quickly as you can go through the diameter.

Mr. Rioux: There would be a saving through the Corridor route of no more than 15 miles and this has been...

Mr. Corbin: Have you studied those figures?

Mr. Rioux: I have studied the figures for the past five years.

Mr. Corbin: You still have not answered my questions as to what effects the Corridor

[*Interpretation*]

M. Rioux: Nous l'avons étudié.

M. Corbin: Vous avez étudié les effets nuisibles que cette route aurait sur la portion supérieure de la Vallée de la rivière Saint-Jean, sur toutes les routes et la transcanadienne en passant par Québec et jusqu'à Montréal? Vous avez étudié ces effets nuisibles?

M. Rioux: Oui. Nous l'avons fait.

M. Corbin: A quelles conclusions en êtes-vous arrivés?

M. Rioux: Il y a, par exemple, un million et demi de véhicules qui passent par MacAdam en un an, qui se rendent à Montréal, et qui n'utilisent pas cette route. Ils y passent, non pas parce que c'est plus court de cinquante milles, mais simplement parce qu'ils veulent passer par cette région. Des comités vous diront que les chauffeurs de camions achètent leur essence au Québec, de temps à autre en Nouvelle-Écosse, et qu'ils ignorent le Nouveau-Brunswick. Nous avons remarqué qu'ils n'arrêtent pas beaucoup au Nouveau-Brunswick. La Commission des Transports des Maritimes vous transmettra ces détails. Nous en avons déjà pris connaissance.

Je crois qu'ils font preuve d'esprit de clocher ceux qui s'inquiètent d'une parcelle du nord de la province alors qu'il faudrait songer au reste de la population des provinces de l'Atlantique.

M. Corbin: Vous voulez parler d'esprit de clocher, mais n'est-il pas vrai que seul le sud-ouest du Nouveau-Brunswick pourrait bénéficier de cette route corridor, parce qu'il y a une autre route vers Montréal en passant par Newcastle, Renauds, Plaster Rock et par les autres routes canadiennes déjà existantes? Le temps nécessaire au trajet sera réduit.

M. Rioux: Le corridor ne réduirait la distance que de 15 milles et...

M. Corbin: Vous avez étudié ces chiffres?

M. Rioux: Je les étudie depuis cinq ans.

M. Corbin: Vous n'avez pas encore répondu à ma question, quant aux effets que cette

[*Texte*]

route would have on the economy of the upper portion of the Saint John River Valley from Woodstock up and the Quebec Trans-Canada Highway sections.

Mr. Logue: Well, we did not study that part.

Mr. Corbin: You told me you had.

Mr. Logue: We have studied the benefits to the Atlantic Provinces as a whole and we find them to be quite favourable.

Mr. Corbin: Well, Mayor Jones, for one, does not agree with your stand on the project of the Maine corridor route and he is entitled to his opinions, I guess...

Mr. Logue: The Atlantic Premiers do.

Mr. Corbin: ...and so are you and I respect your opinions. I am just trying to get to the heart of the matter here.

But let us look at it another way, and let us have another fair opinion. If we were to improve the existing Trans-Canada truck highway to a four lane highway through the Maritimes and on to Montreal, would that not help or solve to a very great extent the transport problems you have in getting to the heart of Canada?

Mr. Rioux: Go back 100 years when they built the CP across Maine—I am sure they went through the same battles that we are going through over the corridor road now—and tell me that the railroad through Maine now is not a necessity. Let us double the line of the CNR and see whether we cannot accomplish the same thing.

Mr. Corbin: I think we are ready to draw conclusions here; if the Maine authorities do not want to build it and they are much better off than we are here in New Brunswick and in Quebec, it goes to show that they do not believe in the project as being economically wise, does it not?

Mr. Rioux: You say they do not want the corridor road?

Mr. Corbin: It boils down to that, does it not?

Mr. Logue: Where did you get your figures?

Mr. Corbin: I am not talking about figures. I am talking about attitudes on the part of the Maine authorities. They have the money and the power and we do not. They have a

[*Interprétation*]

route corridor aurait sur l'économie de la partie supérieure de la vallée de la rivière Saint-Jean, et aussi pour la route transcanadienne au Québec.

M. Logue: Nous n'avons pas étudié cet aspect.

M. Corbin: Vous m'avez dit que vous l'aviez fait!

M. Logue: Nous avons étudié les avantages qu'en tireront les provinces de l'Atlantique, et nous trouvons que c'est tout à fait favorable.

M. Corbin: Le maire Jones n'est pas tout à fait d'accord avec votre ligne de conduite sur ce projet de la route corridor, et il a droit à son avis, je suppose...

M. Logue: Les premiers ministres des provinces Maritimes sont d'accord.

M. Corbin: ...et vous aussi, et je respecte votre opinion. Je veux tout simplement savoir ce qui en est.

Regardons le tout d'un autre angle. Si nous améliorions la transcanadienne pour en faire une route à quatre voies depuis les Maritimes jusqu'à Montréal, ne croyez-vous pas alors que cela pourrait résoudre dans une grande mesure les problèmes de transport que vous éprouvez en ce moment pour vous diriger vers le cœur du Canada?

M. Rioux: Revenons à 100 ans en arrière, alors qu'on aménageait la voie du CP au Maine, et je suis convaincu qu'on affrontait alors les mêmes difficultés, oserez-vous affirmer que cette voie n'est pas une nécessité de nos jours? Doublons les voies du CN et voyons s'il n'est pas possible d'atteindre le même but.

M. Corbin: Je crois que nous sommes prêts à tirer des conclusions: si les autorités du Maine ne veulent pas construire cette route, ils se trouvent beaucoup mieux que nous d'ailleurs ici au Nouveau-Brunswick et au Québec, cela vous prouve qu'ils ne croient pas que ce soit rentable, n'est-ce pas?

M. Rioux: Il ne veulent pas la route corridor, dites-vous?

M. Corbin: C'est la conclusion qu'on peut en tirer, non?

M. Rioux: Où avez-vous obtenu vos chiffres?

M. Corbin: Je ne parle pas de chiffres. Je parle de l'attitude du gouvernement du Maine. Ils ont l'argent et le pouvoir, ce que nous n'avons pas. Ils ont un niveau de vie

[*Text*]

higher standard of living. The people of Maine, the residents of those areas three years ago in a referendum, actually rejected expenditures to improve the existing highways that would eventually be a corridor road.

Mr. Rioux: You have in Maine the same attitude that you have in Upper Canada and the Maritime Provinces right now. The southern part of Maine is opposed to the Corridor Road but the northern part of Maine, which could be compared economically to the depressed area of the Maritime Provinces want the Corridor Road for the same reason that we want it.

Mr. Corbin: How many people are involved when you speak of northern Maine? And actually you are not taking the people along the Saint John River Valley.

Mr. Rioux: 20 per cent of the population, probably, of Maine; no more.

Mr. Corbin: What would be the cost to Maine of improving their trunk?

Mr. Rioux: They voted last year—I do not recall the figure—but they voted some improvement to the road now. The total cost has been stated from anywhere from $150 million to $250 million; that is for Maine's part.

Mr. Corbin: On a final question—I do not want to take any more of your time—do you not feel that roadwise there are other priorities in New Brunswick at this time?

Mr. Rioux: We are talking about getting Maritime products into Upper Canada...

Mr. Corbin: They will get there eventually anyhow.

Mr. Rioux: Of course, they will, but at what costs? This is what the corridor road is all about. It is to lower the cost of transporting their goods to and from Upper Canada and in between.

Mr. Corbin: Are there other priorities in New Brunswick at this time in your opinion?

Mr. Rioux: Well, I am not prepared to talk about that. We are talking about corridor roads.

Mr. Corbin: You are from Bathurst, are you not? You are originally from the Bathurst area?

Mr. Rioux: That is right.

[*Interpretation*]

plus élevé que le nôtre. Les habitants du Maine se sont opposés, il y a trois ans, au cours d'un référendum à ce que des sommes d'argent soient utilisées pour améliorer le réseau routier.

M. Rioux: Vous retrouverez, au Maine, la même attitude qu'au Haut-Canada et dans les provinces Maritimes en ce moment. La partie sud du Maine est opposée à cette route corridor, mais la partie nord, dont la situation économique ressemble à celle des régions défavorisées des Maritimes, désire cette route pour les mêmes raisons que nous.

M. Corbin: Combien de personnes sont en cause ici quand vous parlez du nord du Maine? Et vous ne parlez pas de la population de la vallée de la rivière Saint-Jean.

M. Rioux: Environ 20 p. 100 de la population du Maine, pas plus.

M. Corbin: Qu'est-ce qu'il en coûterait au Maine pour améliorer cette route?

M. Rioux: Les autorités ont approuvé certaines dépenses pour l'amélioration de la route, l'an dernier, mais j'ignore de quel montant il s'agit. Le coût total serait de cent cinquante à deux cent cinquante millions de dollars, pour le Maine.

M. Corbin: Une dernière question, ce sera tout: ne croyez-vous pas que, pour ce qui est des routes, il y aurait d'autres priorités plus importantes au Nouveau-Brunswick en ce moment?

M. Rioux: Il est question de l'acheminement des produits des Maritimes vers le Haut-Canada...

M. Corbin: Ils y parviendront d'une façon ou d'une autre.

M. Rioux: Oui, mais s'il y a le facteur coût. C'est la raison pour laquelle nous voulons une route corridor pour réduire les frais de transport entre les Maritimes et le Haut-Canada.

M. Corbin: Y a-t-il d'autres priorités dans les Maritimes, en ce moment, à votre avis?

M. Rioux: Je ne suis pas prêt à en parler maintenant; nous parlons de la route corridor.

M. Corbin: Vous venez de la région de Bathurst?

M. Rioux: Oui!

[*Texte*]

Mr. Corbin: Do you not think that there could be some improvement in the Route 11?

Mr. Rioux: Absolutely.

Mr. Corbin: Thank you very much

The Chairman: Mr. Mahoney.

Mr. Mahoney: Purely on a question of fact, Mr. Chairman, on page 2 of the brief, the gentlemen state categorically:

> We are the only provincial capital not served by direct passenger train service.

I think, for the record, we should correct that. Neither Victoria, B.C. nor Charlottetown, P.E.I. are served by train service, and I understand that St. John's, Nfld. is quite likely to join the club soon.

The Chairman: Order, order. To whom did you address your question?

Mr. Mahoney: I just...

Mr. Logue: We have found that out since this was prepared. Our brief was prepared in April of last year and that was the information we had at that time. Of course, we sent in our brief when it was required, and since we were asked not to change any of our submission, there is nothing much we can do about it at this moment.

The Chairman: Mr. Carter.

Mr. Carter: A supplementary question. Did the City of Fredericton ever have a rail passenger service?

Mr. Rioux: Yes.

Mr. Carter: How long ago was this discontinued?

Mr. Rioux: It has been some years since we had it. I know the train used to go out of here at 6 o'clock in the morning, came back in at 9; it went out at 10, and came in at 12. It went out at 3 o'clock in the afternoon, came back in at 6 and went out at 8.30 in the evening. And now we have no train service.

Mr. Carter: What was the basis for the discontinuation of it?

Mr. Rioux: They said lack of support from the travelling public.

Mr. Carter: Did they put buses on at the same time or...?

[*Interprétation*]

M. Corbin: Ne croyez-vous pas qu'on pourrait améliorer la route 11?

M. Rioux: Certainement.

M. Corbin: Merci beaucoup!

Le président: M. Mahoney.

M. Mahoney: A la page 2 du mémoire, on déclare de façon catégorique:

> Nous sommes la seule capitale provinciale qui n'a pas un service passager direct.

Je pense que nous devrions apporter une rectification. Charlottetown, dans l'Île du Prince-Édouard et Victoria, en Colombie-Britannique n'ont pas de service voyageur ferroviaire, et il semble que St-Jean, Terre-Neuve, va se joindre à ce groupe d'ici peu.

Le président: A l'ordre, s'il vous plaît! A qui avez-vous posé la question?

M. Mahoney: C'est une simple observation que je faisais.

M. Logue: Nous nous sommes aperçus de l'erreur. Notre mémoire a été préparé, en avril dernier, d'après les renseignements que nous possédions à ce moment-là. Nous avons envoyé notre mémoire en nous conformant aux directives reçues, mais puisqu'on nous avait demandé de ne rien modifier à notre présentation, il n'y a pas grand-chose que nous puissions faire.

Le président: M. Carter.

M. Carter: Question complémentaire. Est-ce que la ville de Fredericton n'a jamais joui d'un service ferroviaire voyageur?

M. Rioux: Oui!

M. Carter: Quand ce service a-t-il été interrompu?

M. Rioux: Il y a quelques années déjà. Je me souviens que le train partait à six heures le matin, revenait à neuf heures; partait à 10 heures, revenait à midi; partait à trois heures et revenait à six heures, pour repartir ensuite à huit heures trente le soir. Maintenant, il n'y a plus de service ferroviaire.

M. Carter: Pourquoi a-t-on interrompu le service?

M. Rioux: On disait qu'il n'y avait pas assez de voyageurs.

M. Carter: Est-ce qu'ils ont été immédiatement remplacés par des autobus, ou...

[*Text*]

Mr. Rioux: No, they were not put on until they started running to the junction to pick up the train out there.

Mr. Carter: Does the Canadian National now have buses leaving Fredericton and connecting with the various...

Mr. Rioux: There is a bus that leaves here for McGivney, for the CNR, and there is a bus that leaves here for Fredericton Junction to connect with the CPR.

Mr. Carter: What would be your reaction today if you had a passenger train service and found it was to be discontinued? Would you fight it or would you go along with it?

Mr. McKenzie: We thought that they should have a sleeper-car service in the area to connect with the Junction, and then the businessmen in the community would use that service.

Mr. Carter: Was there any attempt by Canadian National, when this train was running, to downgrade it, to provide not a good service in order to justify its elimination completely?

Mr. McKenzie: Yes.

Mr. Carter: So there was an attempt by C.N. to downgrade this service to perhaps discourage people from using it to justify eventually discontinuing it? Am I right in saying that?

Mr. McKenzie: The trolley that they ran from here to Newcastle was a very slow service and of no advantage to us.

Mr. Carter: Slow by choice or design?

Mr. McKenzie: It was easier for us to drive to the junction and leave the car there and go by train.

Mr. Carter: I see. Thank you, Mr. Chairman.

The Chairman: Mr. Skoberg.

Mr. Skoberg: A supplementary on that very same point. Did the Fredericton Board of Trade make representations before the Board of Transport Commissioners before the decision was made to abandon that particular passenger train?

Mr. Bidlake: I believe the City of Fredericton did at the time.

Mr. Skoberg: Did the Board of Trade?

Mr. Bidlake: I am not familiar with that. I think they did but I was not a member at that time.

[*Interpretation*]

M. Rioux: Non. Le service d'autobus a été inauguré pour aller quérir les passagers du train à Frédéricton Junction.

M. Carter: Est-ce que le National-Canadien maintient un service d'autobus qui relie Frédéricton à...

M. Rioux: Il y a un autobus qui se rend à McGivney, où passe le train du CN, et un autre à Frédéricton Junction, où passe celui du CP.

M. Carter: Qu'arriverait-il si vous jouissiez présentement d'un service ferroviaire et qu'on décidait de le supprimer? Vous opposeriez-vous au projet ou l'approuveriez-vous?

M. McKenzie: Nous croyons qu'il devrait y avoir un service de wagons-lits dans la région jusqu'à Frédéricton Junction. Alors les hommes d'affaires y auraient recours.

M. Carter: Est-ce que le National-Canadien a essayé, lorsque ce train fonctionnait, d'amoindrir le service afin de justifier sa disparition?

M. McKenzie: Oui.

M. Carter: Donc, le National-Canadien a essayé d'amoindrir ses services, peut-être même de décourager les gens pour qu'ils ne l'utilisent pas, afin de justifier l'abandon du service. Est-ce exact?

M. McKenzie: Le train qui roulait entre cette ville et New Castle était très lent. Il n'y avait pas vraiment d'avantages à l'utiliser.

M. Carter: Était-ce de propos délibéré?

M. McKenzie: Il était plus facile de se rendre en automobile jusqu'à la jonction et, là, de prendre le train.

M. Carter: Je vois. Merci, monsieur le président.

Le président: Monsieur Skoberg?

M. Skoberg: Le *Board of Trade* de Fredericton a-t-il fait connaître son point de vue à la Commission des transports avant que la décision ne soit prise d'abandonner ce service-voyageur?

M. Bidlake: Je pense que la ville de Frédéricton l'a fait, à ce moment-là.

M. Skoberg: Et le *Board of Trade*?

M. Bidlake: Je ne sais pas. Je pense qu'il l'a fait. Mais, je ne faisais pas partie du *Baord of Trade,* alors.

[*Texte*]

Mr. Skoberg: I see you have a member of the Transportation Committee of the Board of Trade here present. Is he aware of it?

Mr. Bidlake: I believe so; it was part of the plan. However, each year we change our chairman, and this took place many years ago. I am pretty sure the records will show it did appeal before the Board.

Mr. Skoberg: I believe there was an indication given by one of the other witnesses here that there was a very small deficit incurred by passenger operations before the abandonment of that particular train and I am just wondering whether or not the actual figures were substantiated in co-operation with the City and your Board of Trade before the BTC.

Mr. Bidlake: I cannot quote figures because I was led to believe that there was a difference of roughly $5,000 a year and I understand that they haul the mail in by contract now, and it is around $20,000 or $21,000 a year for a mail contract. So it would have been better to pay the deficit and have the train continue to operate and haul freight and baggage and the mail. But I believe the City of Fredericton made some comment in this regard in their brief.

The Chairman: Mr. Horner.

Mr. Horner: Yes, Mr. Chairman. I am interested in this corridor road. We find many things dividing Canada today. I like to look upon those things which would unite Canada, and as I envisage the corridor road for this part of Canada, linking it with Central Canada, could it not be built on the style of a turnpike, a straight-through road, with very few avenues off it, directly through from the east and the Maritimes to Central Canada? Is this the way you people envisage it?

Mr. Rioux: That is exactly the way we envisage it. Crawling before running is a way of life, and we have been crawling through there in the hope of improving what is there and eventually they will by-pass it for small communities and then go into four-lane highway all the way—take the autoroute from Montreal to Fredericton all the way.

Mr. Horner: Therefore, very few Canadian dollars will be spent in points outside of Canada, really? While they might be passing through the United States, most Canadians would spend very little money outside of Canada.

[*Interprétation*]

M. Skoberg: L'un des membres du comité des transports du *Board of Trade* est ici. Est-ce qu'il est au courant?

M. Bidlake: Je le crois. Le président est remplacé d'une année à l'autre, et cela s'est produit il y a quelques années. Je suis à peu près sûr que les dossiers permettront d'établir que le *Board of Trade* s'est présenté devant la Commission.

M. Skoberg: Je pense qu'un autre témoin a dit qu'un léger déficit a été enregistré par le service-voyageur avant qu'il ne soit mis au rancart. Je me demande si le bien-fondé de ces chiffres a été établi devant la Commission.

M. Bidlake: Je ne puis vous donner de chiffres parce que je suis porté à croire qu'il y avait un écart d'environ $5,000 par année. Je crois savoir qu'ils amènent le courrier jusqu'ici maintenant, ce qui représente environ $20,000 ou $21,000 par année. Il aurait été préférable de payer le déficit et d'exploiter ce train, le service-voyageur, le service des messageries et le courrier. Je crois que la ville de Fredericton traite de ce sujet dans son mémoire.

Le président: Monsieur Horner.

M. Horner: Oui, monsieur le président. Je m'intéresse à cette route corridor. Plusieurs points divisent le Canada, aujourd'hui. Je préfère songer à ceux qui favorisent l'unité. Telle que je la conçois, la route corridor serait une autoroute dotée de très peu de voies d'accès qui relierait directement les Maritimes au centre du Canada. Est-ce ainsi que vous la concevez?

M. Rioux: Exactement. Il faut apprendre à marcher avant de courir. Mais, nous espérons éventuellement améliorer ce que nous avons et aussi faire des détours et ne pas passer par les petites collectivités, avoir une route à quatre voies de Montréal à Frédéricton.

M. Horner: Très peu de dollars canadiens seraient alors dépensés à l'extérieur du Canada. Même en traversant une partie du territoire américain, les Canadiens dépenseraient très peu d'argent en dehors du Canada.

[*Text*]

Mr. Rioux: You could drive from Fredericton to Montreal or Sherbrooke pretty well non-stop, except perhaps for the odd meal.

Mr. Horner: So, while it might do a great deal to link Canada together, it would do very little to divide it or to allow Canadian dollars to be spent outside of Canada.

Mr. Rioux: I do not think that the outflow of Canadian dollars to the United States is going to be that great to be of any concern. I think the American interest in this is in attracting tourists to the state of Maine, which is a beautiful country, not only from, say, the Montreal area with its 5 million people, but they are thinking also of drawing tourists from the lower states. This is where they find the attraction.

Mr. Horner: You would agree with me that we are in the throes of devising a new constitution to tie Canada more firmly together. Do you not believe that the Maritimes needs to be tied more economically and I say that using the word in the sense that the railroads of the past used to be the tie through the Maritimes Freight Rates Act, whereas today it does not appear to be quite as firm a bond as it was in 1867?

Do you not believe that the corridor road, built by Canadians for the sole purpose of tying the Maritimes to the mainland, could well be one of the spokes in the wheel that rolls Canada and keeps Canada together in the new drafting of the Constitution.

Mr. Rioux: I think you answered your own question because the CPR was built for that purpose, was it not? It was built for that purpose, to tie Canada together by cheaper transportation. And I think the corridor is going to do the same thing, and I think that you will find that people who come down here like yourselves and spend a couple of days here, you are not going to know very much about the Maritimes when you leave. If you are able to drive down here in eight hours for a long weekend and spend the time, there may be better understanding between Upper Canada and Lower Canada.

Mr. Perrault: A supplementary question, Mr. Chairman. What is the price tag for the corridor road? How much is it going to cost? There are meany theoretical assumptions in this deal. How much is it going to cost and what specific economic incentive exists for the United States to build a Danzig-type corridor across Maine which would provide no

[*Interpretation*]

M. Rioux: Vous pourriez aller de Frédéricton à Montréal ou Sherbrokke, sans arrêter. Sauf, peut-être, pour un repas.

M. Horner: Tout en reliant diverses parties du pays, cette route permettrait que peu de dollars canadiens soient dépensés à l'extérieur du pays.

M. Rioux: Je ne crois pas que l'exode de dollars canadiens vers les États-Unis soit vraiment un sujet de préoccupation. Je pense que ce qui intéresse les Américains, c'est d'attirer les touristes au Maine, non seulement les touristes de la région de Montréal mais également ceux qui habitent les états situés plus au sud. C'est ce qu'ils trouvent d'intéressant au projet.

M. Horner: Vous conviendrez avec moi que nous voulons rédiger une nouvelle constitution pour mieux unir le Canada. Ne croyez-vous pas que les Maritimes ont besoin d'être rattachées beaucoup plus étroitement et intimement sur le plan économique, en ce sens que, autrefois, c'était le chemin de fer qui était le lien grâce à la *Loi sur les taux de transport des marchandises dans les provinces maritimes,* alors qu'aujourd'hui ce n'est pas un lien aussi ferme, aussi solide que ce ne l'était en 1867.

Ne croyez-vous pas que la route corridor, aménagée et construite par des Canadiens aux seules fins de rattacher les Maritimes à la terre ferme pourrait être l'une des raies de la roue qui maintient le Canada et nous permettrait de mieux considérer ainsi la Constitution.

M. Rioux: Vous avez répondu vous-même à votre question. Le CP a été construit précisément pour raffermir le Canada du fait qu'il constitue un moyen de transport moins coûteux. Je pense que la route corridor tend vers cet objectif, et vous verrez que les personnes qui viennent passer quelques jours ici n'en sauront pas beaucoup sur les Maritimes à leur départ. Si vous venez ici pour une longue fin de semaine et que vous passez tout votre temps chez nous, il y aura peut-être une meilleure compréhension entre le Haut et le Bas Canada.

M. Perrault: Question complémentaire, monsieur le président. Qu'est-ce qu'il en coûtera pour aménager cette route corridor? Il y a beaucoup d'hypothèses à ce sujet. Qu'est-ce qu'il en coûtera et quels avantages économiques peuvent bien pousser les États-Unis à aménager dans le Maine un corridor du type Dantzig, qui ne présente aucun avantage par-

[*Texte*]

incidental economic benefit to surrounding communities? We are all interested in uniting Canada, but let us get down to some economic facts. How much is it going to cost and what specific incentive does this have for the United States in dollars?

The cost to Canada and the United States, this is the relevant factor. And also what are the economic benefits?

Mr. Rioux: The cost to the United States does not concern us one bit. The cost to Canada is the cost to the two provinces. One concept we had about sharing the costs, as far as New Brunswick was concerned, was to get a grant or seek a grant from the ADB, which is not longer in force, because we felt that a grant from the ADB was a logical one because this was to benefit the whole of the Atlantic area. And our request for a grant would probably have been in the vicinity of $6 million, for all the provinces, and that is a lot of money to spend to allow us to buy cheaper and to sell at a far greater speed than we do now.

Mr. Perrault: What would the American . . .

Mr. Rioux: I am not concerned, and I am not prepared to answer it, and I do not care, and I do not know what the cost to the Americans is.

The Chairman: Mr. Mahoney.

Mr. Mahoney: A further supplementary question. Could the witness tell us how many miles of this road are to be located in New Brunswick, how many miles in the State of Maine, and how many miles in the Province of Quebec?

Mr. Rioux: The road in New Brunswick is already there. From Fredericton, it is 61 miles. It is already there. It is brand new for 20 miles already, the long stretch, because of the Mactaquac Dam. So that brings it down to 40 miles, and it is a fairly good road now, but it would not meet Trans-Canada specifications. In Maine it is about 250 miles I believe—no, 150 miles—and in from Sherbrooke to Megantic is some 60 miles, and maybe 20 miles to the border, to Jackman, another 20 miles to Jackman.

There is another thing that you must consider when you are thinking of a corridor road. The Kennedy auto route coming down from Quebec City now would join the corridor road at Megantic, between Megantic and Jackman.

[*Interprétation*]

ticulier pour les collectivités environnantes? Nous sommes tous pour l'unité du Canada, mais nous devons nous en tenir à la réalité économique. Combien en coûtera-t-il et quels avantages particuliers en retireront les États-Unis, en dollars?

Je parle de ce qu'il en coûtera au Canada et aux États-Unis, c'est là une chose importante; je parle également des avantages économiques.

M. Rioux: Ce qu'il en coûtera aux États-Unis ne nous intéresse pas. Ce qu'il en coûtera au Canada, c'est ce qu'il en coûtera aux deux provinces. En ce qui concerne le partage des frais avec le Nouveau-Brunswick, nous avons tenté d'obtenir une subvention de l'Office d'expansion économique de la région atlantique (OEERA), qui a cessé de fonctionner, car nous étions d'avis qu'une subvention de l'OEERA était une solution logique, étant donné qu'elle devait bénéficier à l'ensemble de la région atlantique. Nous aurions probablement demandé une subvention de l'ordre de 6 millions de dollars, pour toutes les provinces; cette somme est suffisante pour nous permettre d'acheter à meilleur prix, et de vendre plus rapidement qu'on ne peut le faire maintenant.

M. Perrault: Et pour les Américains?

M. Rioux: Peut m'importe je ne veux pas le savoir; je ne sais pas combien il en coûterait aux États-Unis.

Le président: Monsieur Mahoney?

M. Mahoney: Une autre question supplémentaire. Est-ce que le témoin pourrait nous dire combien de milles de cette route se trouveraient au Nouveau-Brunswick, combien dans l'État du Maine et combien au Québec?

M. Rioux: La portion du Nouveau-Brunswick existe déjà. De Fredericton, elle a 61 milles. Elle est entièrement nouvelle sur 20 milles, partie la plus difficile à cause du barrage Mactaquac. Il en reste donc 40 à aménager, et la section qui reste est assez bonne, même si elle ne répond pas aux spécifications de la route Trans-Canadienne. Dans le Maine il y en a 150 milles, et de Sherbrooke à Mégantic 60 milles et peut-être 20 milles jusqu'à Jackman, sur la frontière. Il y a une autre chose dont il faut tenir compte au sujet de cette route corridor. L'autoroute Kennedy venant de Québec se joindrait à cette route corridor entre Mégantic et Jackman.

[*Text*]

Mr. Mahoney: Just to get this clear. Are there only 20 miles of new road required in Quebec? Are the other 40 miles already there?

Mr. Rioux: In New Brunswick there is no new road required.

Mr. Mahoney: So it is built as far as New Brunswick is concerned.

Mr. Rioux: That is right.

Mr. Mahoney: In Quebec, how much new road?

Mr. Rioux: Well, from Megantic to Jackman, whatever that is. It is not very far.

Mr. Mahoney: And in the State of Maine, is it mostly built?

Mr. Rioux: It is mostly built. There is no connection right now between Megantic and Jackman. There is none. It is about 20 miles. I am not positive. I think somebody from Quebec here probably would know more about that than I do. I think it is about 20 miles. I cannot remember all the distances, but it is very little new road.

The Chairman: Mr. Thomas.

Mr. Thomas (Moncton): A supplementary question, Mr. Chairman. I am very disturbed at the trend this dialogue is taking. As a member from the Maritimes, I feel that we need additional roads. We should not be arguing that we do not need additional roads, and anything we can get to take care of the increasing traffic we should fight for.

I would refer you gentlemen to the Economists Intelligence Unit. Volume 1. All the figures you gentlemen have been asking for are in here, and this points out that traffic will increase by 80 per cent. Intercommunity traffic by 1980 will increase by 80 per cent. Now, we do not have the existing roads to handle this, and my question to Mr. Rioux is this, and I would ask him if he would not agree. I do not care where the corridor goes. But I say we in the Maritimes need one more link with the rest of Canada. Would you agree, Mr. Rioux, that the development of this road, with the normal generation of traffic in the next 20 years, this road would have all the traffic it could handle, and it would not detract from traffic on any existing highways, whether they be Route 2, Route 11, or Trans-Canada? Is that a fair assumption?

Mr. Rioux: I think it is absolutely essential if we are going to handle the traffic that we need in this area to make it prosperous.

[*Interpretation*]

M. Mahoney: Est-ce qu'il n'y a que 20 milles de nouvelle route à construire dans le Québec? Est-ce que les autres 40 milles sont déjà faits?

M. Rioux: On n'a pas besoin de nouvelles routes au Nouveau-Brunswick.

M. Mahoney: Donc tout est prêt au Nouveau-Brunswick?

M. Rioux: Ce'st exact.

M. Mahoney: Au Québec, combien de milles de nouvelle route faudra-t-il construire?

M. Rioux: De Mégantic à Jackman; ce n'est pas très long.

M. Mahoney: Dans l'État du Maine, cette route est-elle déjà construite?

M. Rioux: En grande partie, oui. Il n'y a pas encore de lien entre Mégantic et Jackman. C'est une distance d'environ 20 milles; je n'en suis pas sûr; quelqu'un du Québec le saurait mieux que moi. Je ne me souviens pas de toutes les distances, mais le tronçon à construire est très court.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Une question supplémentaire, monsieur le président. Je suis inquiète de la tournure du dialogue. En temps que représentant des Maritimes, je pense qu'il nous faut d'aures routes. N'allons pas dire que nous n'avons pas besoin de nouvelles routes; il nous faut réclamer tout ce que nous pourrons obtenir pour décongestionner nos routes.

Je vous renvoie au volume 1 du rapport de l'*Economist Intelligence Unit*. Tous les chiffres que vous demandez s'y trouvent. On nous signale que la circulation augmentera dans une proportion de 80 p. 100. La circulation interurbaine augmentera de 80 p. 100 d'ici 1980. Nous n'avons pas assez de routes voulues pour une telle circulation. Voici donc la question que je voulais poser à monsieur Rioux, en lui demandant s'il est d'accord. Peu importe où va le corridor routier: les Maritimes ont besoin d'un autre lien avec le reste du Canada. Ne pensez-vous pas, monsieur Rioux, que l'aménagement de cette route, compte tenu de la circulation que nous aurons d'ici 20 ans, attirerait toute la circulation qu'elle pourrait écouler et que cela détournerait pas la circulation de nos routes actuelles, la 2, la 11, et la Trans-Canadienne? N'est-ce pas là une supposition fondée?

M. Rioux: Il est essentiel à la prospérité de notre région que nous ayons cette route si nous voulons régler le problème de la circu-

[*Texte*]

Tourism is the biggest industry we have, and we are going to bring 5 million people four hours closer to the Maritime Provinces than they are now.

Mr. Thomas (Moncton): In other words, is it fair to say this is an essential part of our over-all transportation scheme? We need new highways?

Mr. Rioux: Absolutely.

Mr. Thomas (Moncton): Thank you.

The Chairman: Mr. Breau.

Mr. Breau: Mr. Chairman, I have some questions here. I do not know who could answer them, but I will just put them. I expected before we left that we would have more evidence on this corridor road. We have had many comments, but it is difficult to recommend something or to accept something by comment. It should be substantiated.

To be objective about this, we should ask the question, say, if you were in Moncton, New Brunswick, if you were to go to Montreal from Moncton, not from Fredericton, through some corridor road, or if you were to go by Route 11 to a proposed highway between Newcastle and Plaster Rock, and then go up northwestern New Brunswick to southern Quebec, just how many miles would be the difference between Moncton? Can somebody tell me that?

The Chairman: Mr. Breau, I think you are asking a question which would take quite a lot of time. If you agree, I will ask these gentlemen if they could give us the information, have them send this information to me and I could deliver it if you will agree.

Mr. Breau: All right. Will I have some other information? Before we make a decision we have to know how many miles will be paved. We have to know exactly what the cost will be to build this road. The study of Atlantic advantages, economic advantages, which has been referred to, I admit, being from New Brunswick, I have never heard of it.

And then the Atlantic Premiers, not individually, but collectively must agree with this. We would also have to know the priority which was questioned here this afternoon. Of course, we are concerned with transportation; I agree with that. But highways still remain a provincial responsibility, and it has to be done in accordance with the provinces. This Committee must know exactly what the priorities of the provinces are as far as highways are concerned. We heard yesterday that Route 11 was a priority.

[*Interprétation*]

lation. Le tourisme est notre plus grosse industrie, et 5 millions de personnes seront de 4 heures plus près de chez nous.

M. Thomas (Moncton): Peut-on dire que cette route est essentielle à votre programme global en matière de transports? Nous avons besoin de nouvelles routes?

M. Rioux: Absolument.

M. Thomas (Moncton): Merci.

Le président: Monsieur Breau.

M. Breau: Monsieur le président, j'ai quelques questions à poser. Je ne sais pas qui pourra y répondre, mais je me contenterai de les poser. Je m'attendais à avoir d'autres témoignages sur ce corridor routier. Nous avons entendu de nombreux commentaires, mais il est difficile de faire des recommandations d'après ces commentaires et d'admettre leur bien-fondé. Il faudrait les prouver.

Faisons preuve d'objectivité: si vous vous trouvez à Moncton, au Nouveau-Brunswick, et que vous voulez aller à Montréal, non pas de Fredericton, mais de Moncton, par la route corridor, ou que vous vouliez emprunter la route 11 jusqu'à un embranchement quelconque entre Newcastle et Plaster Rock en passant par le nord-ouest du Nouveau-Brunswick et le sud du Québec, quelle serait la différence de millage entre les deux parcours? Quelqu'un pourrait-il répondre?

Le président: Monsieur Breau, vous posez une question qui demande du temps. Si vous le voulez bien, je demanderai à ces messieurs de me communiquer ces renseignements, que je vous transmettrai.

M. Breau: D'accord. Je voudrais avoir d'autres renseignements. Avant de prendre une décision, nous aimerions savoir combien de milles seront asphaltés. Il nous faut savoir exactement quel sera le coût de la construction. Je n'ai jamais entendu parler d'une étude sur les avantages économiques dont bénéficierait la région de l'Atlantique, avantages dont il a été question tout-à-l'heure.

Les premiers ministres de l'Atlantique devront donner leur accord, non pas un à un, mais ensemble. Il vous faudrait également savoir en quoi consiste la priorité dont on a parlé cet après-midi. Nous étudions les transports, certes, mais les routes relèvent toujours des provinces et nous devons agir en accord avec elles. Le Comité doit savoir exactement quelles sont les priorités des provinces en matière de construction routière. Hier, on nous a dit que la route 11 était une priorité.

[*Text*]

We have to know exactly how much truck traffic would go through this corridor road, or how much truck traffic would go to central Canada. We heard the figure this morning that about 35 per cent of freight going out of the Atlantic Provinces was by road and about 65 per cent by rail or boat, so we would have to know the future of truck transportation.

And then we would have to know whether it will be a non-stop route or not. Is it going to be a turnpike with no access? That is the information we need, and I hope somebody can supply it to us.

The Chairman: We will get the information, and when the time comes you will receive it, Mr. Breau.

Mr. Rioux: Mr. Chairman, could I just make a comment on that. We have that information, and if you will allow us we will mail you copies of the briefs that were presented to the Province of New Brunswick, the Premiers of Nova Scotia and P.E.I., and the Governor of the State of Maine, and also the one presented to the Quebec Legislature by the International Corridor Road Committee. We will send you these briefs which contain information on traffic, tonnage, rates, and everything else.

Mr. Breau: That is exactly what we are asking for.

The Chairman: Mr. Trudel.

Mr. Trudel: Mr. Chairman, I would like to refer to the brief for a moment, and I believe at the bottom of the first page you refer to a map as Appendix A, but I have yet to find it in the...

Mr. Rioux: They were attached to the original sent to Ottawa.

Mr. Trudel: Fine. Now, I do not want to start an argument, but I would like to get a little clarification. Are we not talking about different routes? Is not the existing grid plan worked out on the American highway system? I think we are going far north of what they intend, and that is the reason why we are not getting the co-operation from Maine. I think if you will look at your map you will see they have an existing connection plan to the auto route in the township, but this would connect directly between Saint John, Moncton, Bangor and then back into Quebec, rather than the route that you are suggesting now.

[*Interpretation*]

Il nous faudra savoir exactement quelle est l'importance du transport routier par le corridor ou quelle proportion du transport routier passera par le centre du Canada. On nous a dit ce matin que 35 p. 100 des marchandises exportées des provinces Maritimes étaient transportées par camion et 65 p. 100 par chemin de fer ou par bateau; nous nous interrogeons donc sur l'avenir du transport routier.

Il nous faudra également savoir s'il s'agit d'une voie directe ou non. Sagira-t-il d'une autoroute sans voie d'accès? Voilà donc les renseignements dont nous avons besoin. J'espère que quelqu'un pourra nous les donner.

Le président: Nous obtiendrons ces renseignements, et vous les recevrez en temps voulu, monsieur Breau.

M. Rioux: Monsieur le président, puis-je faire un commentaire à ce sujet. Nous avons ces renseignements, et si vous le voulez bien, nous vous ferons parvenir plusieurs exemplaires du mémoire présenté à la province du Nouveau-Brunswick, aux premiers ministres de la Nouvelle-Écosse et de l'Île du Prince-Édouard, au gouverneur de l'État du Maine et à l'Assemblée nationale du Québec par le Comité international du corridor routier. Nous vous enverrons ces mémoires, qui contiennent des renseignements sur la circulation, le volume des marchandises transportées, les prix, etc ...

M. Breau: C'est exactement ce que nous voulons.

Le président: Monsieur Trudel.

M. Trudel: Monsieur le président, je voudrais me rapporter au mémoire pour un instant; au bas de la première page, vous classez une carte à l'Annexe A, mais je ne l'ai pas trouvée dans le...

M. Rioux: Elle était annexée au mémoire original que nous avons envoyé à Otawa.

M. Trudel: Bon. J'aimerais avoir quelques précisions. Ne parlons-nous pas de tracés différents? Le plan actuel n'a-t-il pas été établi en fonction du réseau routier américain? Je crois que nous tirons plus vers le nord qu'il ne l'avaient prévu, et c'est pourquoi le Maine ne nous prête pas sa collaboration. Si vous jetez un coup d'œil sur la carte, vous verrez qu'ils ont prévu un embranchement qui les relie à Saint-Jean, Moncton, Bangor et au Québec.

[*Texte*]

Mr. Rioux: What page are you looking at?

Mr. Trudel: This is on page 696. My interpretation of Mr. Rioux's explanation is that the route that he was supporting was further north. Is that correct, Mr. Rioux?

Mr. Rioux: It is north of St. Stephen, yes.

Mr. Trudel: Thank you.

The Chairman: Mr. Rock.

Mr. Rock: I have one question. I am looking at this map that was submitted to us by the Saint John Board of Trade. You have the line crossing from Saint John to Bangor, to Amsterdam, to the proposed highway.

And then you have this Y jutting out a little after Bangor towards Montreal, and I am just wondering if that is actually necessary since this other line going to Amsterdam is crossing one of the biggest highways in North America and that is the one from New York City to Montreal? Why is it necessary to make this Y through there, which would be considered your corridor, when all you have to do is come right down to, say, Burlington and go right up? It is a matter of maybe three-quarters of an hour difference. Why spend the millions of dollars for that three-quarters of an hour, which it takes to travel say from Burlington to Montreal these days on the new network? In other words, all you have to do is let the Americans build it and you will use it, without any complications whatsoever. Have you looked into it in this manner?

Mr. Rioux: Are you asking me?

Mr. Rock: Yes, I am asking any of you gentlemen.

Mr. Rioux: The proposal that you are looking at was by the group that is opposing the corridor road in the area in which we—the map that you are talking about is the lower. There have been two proposals of a corridor road.

Mr. Rock: Oh, excuse me, are you proposing the actual corridor through, or the one to Amsterdam?

Mr. Rioux: No. We are proposing the one through the Moosehead Lake area, McAdam, N.B., Bangor in Maine, and on through to Sherbrooke, a direct line.

As far as Saint John goes, if you knew the area, I do not know if you do or not, but just about 40 miles west of Bangor on the American side there is another road that goes

[*Interprétation*]

M. Rioux: A quelle page êtes-vous?

M. Trudel: A la page 696. Si j'ai bien compris l'explication de M. Rioux, la route qu'il proposait se trouvait plus au Nord, n'est-ce pas?

M. Rioux: C'est au nord de St-Stephen, oui.

M. Trudel: Merci.

Le président: Monsieur Rock.

M. Rock: J'ai une question. Sur la carte qui nous a été présentée par la *Saint John Board of Trade*, figure une ligne qui va de St. John à Bangor et à Amsterdam jusqu'à l'autoroute proposée.

Vous remarquerez ensuite un embranchement en «Y» un peu après Bangor, en direction de Montréal. Je me demande si cela est vraiment nécessaire étant donné que l'autre ligne en direction d'Amsterdam traverse une des plus grandes routes de l'Amérique du Nord, soit la route de New York à Montréal. Pourquoi alors cet embranchement supplémentaire, qui constituerait votre corridor, alors que vous pouvez vous rendre à Burlington et monter. Cela peut prendre au maximum trois quarts d'heure. Pourquoi dépenser des millions de dollars pour gagner trois quarts d'heure, temps qu'il faut pour aller de Burlington à Montréal par le nouveau réseau routier? Laissons-donc construire la route aux Américains, et servons-nous-en: c'est aussi simple que cela. Avez-vous songé à cela?

M. Rioux: Est-ce à moi que vous posez la question?

M. Rock: Oui, à n'importe lequel d'entre vous.

M. Rioux: La proposition dont vous parlez est celle du groupe qui s'opposait à l'autre corridor—la carte à laquelle vous vous référez est celle du bas. Il y a eu deux propositions relativement au corridor routier.

M. Rock: Je m'excuse. Est-ce que vous proposez le corridor routier ou la route par Amsterdam?

M. Rioux: Non. Nous proposons une route qui emprunte la région de Moosehead Lake, passe par McAdam (N.-B.), Bangor (Maine) et Sherbrooke, en ligne directe.

En ce qui concerne Saint-Jean, si vous connaissez la région, vous saurez qu'à environ quarante milles de Bangor, du côté américain, il y a une autre route qui s'en va

[*Text*]

directly down to St. Stephen, a very short route that would serve that same purpose, to go to Montreal from Saint John using the corridor road but joining it into the State of Maine about 40 miles.

The one they are proposing is a direct route from Saint John through the lower part of Maine into Montreal. I do not think it will save much. It might help the southern part of the province and southern Maine, but it would not help the Atlantic Provinces as a whole, I do not think, or the northern part of Maine.

Mr. Rock: Why do you say that? It seems that in this case here the Americans will spend all the money and you will be able to use it, and I do not think any other alternate route is going to save much more except maybe three-quarters of an hour.

Mr. Rioux: Let me repeat. Our proposal is that the State of Maine would still build the corridor road that we are proposing, in order to develop the northern part of the state, the same as we build roads to resources here in New Brunswick or in the Maritime Provinces. We build roads to resources to help people in depressed areas, and northern Maine is a depressed area. And that is why the northern part of the state is seeking the corridor road, and the cost would all be borne by the Americans, not by ourselves.

The Chairman: Gentlemen, this completes our study. I want to thank you for your recommendations.

Mr. Rioux: Thank you very much, sir.

Mr. Thomas (Moncton): Mr. Chairman, we may go through this day after day, and it is embarrassing to witnesses. It shows them that we have not done our homework. All these figures, and all this information that we have been asking for is all in this Atlantic Provinces transportation study by the E.I.U. All these figures on traffic flow, on corridor roads and all these figures on why additional highways are needed here. Why do we not get this, rather than ask these witnesses questions that obviously we should know the answers to?

An hon. Member: Who has one?

Mr. Thomas (Moncton): I have one.

An hon. Member: Where did you get it?

Mr. Thomas (Moncton): From the Queen's Printer. These witnesses must think we are

[*Interpretation*]

directement à St. Stephen. La route est très courte, mais aurait la même utilité que le corridor routier, de Montréal à Saint-Jean avec un embranchement vers le Maine à environ quarante milles.

La route qu'ils proposent est une voie directe de Saint-Jean, par la partie inférieure du Maine, jusqu'à Montréal. Je ne pense que cela aide beaucoup. Cela pourrait être avantageux pour la partie sud de la province et du Maine, mais non pour les provinces atlantiques, ni le nord du Maine.

M. Rock: Pourquoi cela? Il me semble que dans ce cas les Américans fourniraient tous les fonds et que vous pourriez utiliser la route. Je ne crois pas qu'une autre route nous permette de gagner beaucoup plus de temps: trois quarts d'heure au plus.

M. Rioux: Notre proposition, c'est que le Maine construise le corridor routier que nous envisageons pour assurer le développement du nord de l'État, tout comme nous avons construit des routes pour les ressources du Nouveau-Brunswick ou des Maritimes. Nous construisons des routes pour exploiter nos ressources et aider les gens des régions défavorisées, et le nord du Maine est une région défavorisée. C'est pourquoi l'État du Maine a besoin du corridor routier; les frais seraient entièrement assumés par les américains.

Le président: Messieurs, voilà qui termine notre étude. Je vous remercie.

M. Rioux: Merci beaucoup, monsieur.

M. Thomas (Moncton): Monsieur le président, nous pouvons continuer ainsi jour après jour, ce qui ennuierait les témoins. Cela leur prouve tout simplement que nous n'avons pas fait nos devoirs. Tout les chiffres, tout les renseignements que nous avons demandé se trouvent dans l'étude des transports de la région atlantique faite par l'*Economic Institute*. Tous les chiffres relatifs à la densité de la circulation, au corridor routier, aux routes prévues, figurent dans cette étude. Pourquoi ne pas s'en servir, plutôt que de poser aux témoins des questions dont nous devrions connaître les réponses?

Une voix: Qui l'a, ce rapport?

M. Thomas(Moncton): J'en ai un.

Une voix: Où l'avez-vous pris?

M. Thomas (Moncton): Chez l'Imprimeur de la Reine. Les témoins doivent penser que

[*Texte*]

completely devoid of information. It is all in this report.

The Chairman: And we can get that from the Queen's Printer?

Mr. Thomas (Moncton): You can get it, sure.

Mr. Perrault: Mr. Chairman, the opinions of witnesses are most valuable.

Mr. Breau: If the member would have something that he could give us, I would really appreciate it. If I had known that there was such a study before I would have obtained it. I tried to get all the information that was available.

The Chairman: Mr. Thomas, did you obtain this information before you came down here?

Mr. Thomas (Moncton): Yes. I think the Committee received it last year. I received it last year. I was not here last year either, but I made a point of getting it.

Mr. Perrault: Mr. Chairman, the point is that the value of these public hearings is distinct from any resource material which we may have access to. The fact that we have these written reports does not rule out the value of these public hearings. I think the recent information that these witnesses bring is most important.

The Chairman: I will now call upon the Atlantic Development Board. Stand.

The University of New Brunswick. This brief was prepared by five students. I wonder if they are here today. Stand.

Mr. Skoberg: Mr. Chairman, can we obtain that brief for our files, even though they are not here?

The Chairman: Which brief?

Mr. Skoberg: The University of New Brunswick.

The Chairman: It will be printed if you wish. We have a motion to carry this. Is it agreed?

Some hon. Members: Agreed.

The Chairman: Every brief will be printed. Commuter Air Services Ltd. Mr. Robert D. Thomson, do you have a brief?

I would ask Mr. Thomson to make a brief

[*Interprétation*]

nous manquons complètement de renseignements. Tout est dans le rapport.

Le président: Et on peut se le procurer chez l'Imprimeur de la Reine?

M. Thomas (Moncton): Certainement.

M. Perrault: L'opinion des témoins est précieuse.

M. Breau: Si l'honorable député pouvait nous le procurer, j'en serais ravi. Si j'avais su qu'une telle étude existait, j'aurais cherché à l'avoir. J'ai essayé d'obtenir le plus de renseignements possible.

Le président: Monsieur Thomas, est-ce que vous avez eu ces renseignements avant de venir ici?

M. Thomas (Moncton): Oui, je crois que le comité les a reçus l'an dernier. En tout cas, je l'ai eu l'an dernier. Je n'étais pas au Parlement l'année dernière, mais je me suis procuré un exemplaire du rapport.

M. Perrault: Monsieur le président, les renseignements que nous pouvons recueillir dans ces séances publiques sont distincts de ceux que nous pourrions trouver dans des documents existants. Le fait que nous ayons des rapports écrits n'enlève rien à la valeur de ces audiences publiques. Je crois que les renseignements que les témoins nous donnent sont très importants.

Le président: Alors, je demanderais maintenant à l'Office d'expansion économique de la région atlantique de s'avancer.

L'Université du Nouveau-Brunswick. Ce mémoire a été rédigé par cinq étudiants. Je me demande s'ils sont ici aujourd'hui. Réservé.

M. Skoberg: Monsieur le président, est-il possible d'avoir leur mémoire, même s'ils ne sont pas ici?

Le président: Lequel?

M. Skoberg: Celui de l'Université du Nouveau-Brunswick.

Le président: On le fera imprimer, si vous le désirez. Nous avons une motion à cet effet. Est-ce adopté?

Des voix: Adopté.

Le président: Tous les mémoires seront imprimés. Monsieur Robert D. Thompson, de *Commuter Air Services* Limitée, a-t-il un mémoire?

[*Text*]

resume of his brief.

Mr. Robert D. Thomson (Commuter Air Services Ltd): Monsieur le président et honorables députés. Je regrette infiniment que notre compagnie n'ait pas pu encore vous fournir des exemplaires de notre mémoire en français. Comme nos activités s'adresseront à une clientèle, tant d'expression française que d'expression anglaise, dans cette région, nous nous efforcerons d'adopter le bilinguisme dans le plus bref délai, afin de donner au public le meilleur service possible. Donc, nous comptons sur votre indulgence et vous prions d'accepter que ce mémoire soit rédigé en anglais.

Commuter Air Services Ltd. is a company formed to provide commercial air services throughout the Province of New Brunswick. The company has applications pending before the Air Transport Committee of the Canadian Transport Commission for interurban services connecting Fredericton, Moncton, Saint John, Chatham, Bathurst, Campbellton, Edmundston, Grand Falls, Woodstock, St. Stephen, Rivière-du-Loup, Quebec and Bangor, Maine. These services are planned to connect with Trunk Carrier services at Fredericton, Moncton, Charlo, Bangor and Rivière-du-Loup, thus offering each community a closer air link with Central Canada and the U.S. At the same time the availability of the feeder flights enables the company to offer fast economical interurban flights for intraprovincial travel, air express and mails.

It is the purpose of this brief to inform the Standing Committee on Transport of the plans of the Company so that it may be aware of developments which may have significant effects on transportation within the region. It is submitted without intent to influence or prejudice the hearings before the Air Transport Committee. We respectfully submit comment on three areas related to our sphere of activities:

1. Local Regional Air Transportation.
2. Airport Development within New Brunswick.
3. Interurban Transportation—Fredericton/Saint John.

On the first item:

Local Regional Air Transportation

Within the framework of transportation needs in this region a basic twofold problem

[*Interpretation*]

Je demanderai à M. Thomson de résumer brièvement son mémoire.

Mr. Robert D. Thomson (Commuter Air Services Ltd.): Mr. Chairman, distinguished Members, I regret sincerely that our company has not yet been in a position to provide copies of our brief to you in French. Since our activities will be directed at both French-speaking as well as English-speaking customers throughout this region, we shall attempt to adopt bilingualism in the shortest possible time so as to be able to give to the public the best possible service. Consequently, we ask you to show forbearance and to please accept the brief in English.

La *Commuter Air Services* est une société qui organise des services commerciaux aériens dans l'ensemble de la province du Nouveau-Brunswick. La Compagnie a présenté une demande au comité du Transport aérien de la Commission canadienne des Transports afin d'obtenir les services interurbains reliant Fredericton, Moncton, Saint-Jean, Chatham, Bathurst, Campbellton, Edmunston, Grand Falls, Woodstock, St-Stephen, Rivière-du-Loup (Québec) et Bangor (Maine). Nous projetons que ces services soient reliés avec les services de transport interurbains de Fredericton, Moncton, Charlo, Bangor et Rivière-du-Loup, offrant ainsi à chaque collectivité de meilleures communications aériennes avec le centre du Canada et les États-Unis. En même temps, les vols d'embranchement permettraient à la compagnie d'offrir des vols interurbains économiques pour les déplacements intra-provinciaux, les messageries aériennes ainsi que les postes.

L'intention de notre mémoire, c'est d'informer le comité permanent des transports des projets de la compagnie, afin qu'il soit au courant des développements qui pourraient avoir un effet significatif sur les transports au sein de la région. Nous le présentons sans vouloir influencer ni porter préjudice à l'audience devant le comité des transports aériens. Nous vous présentons respectueusement nos observations sur trois domaines qui ont trait à notre champ d'activité.

1. Le transport aérien local et régional.
2. L'aménagement d'aéroports au Nouveau-Brunswick.
3. Le transport interurbain entre Fredericton et Saint-Jean.

Le transport aérien local et régional

Dans le cadre des besoins de transport dans la région, le problème est double, en ce

[*Texte*]

exists in that there is an urgent need for better connection to the continental market while at the same time local travel and transportation requires to be drastically improved.

Proposals from various individual towns and cities for direct airline service to Central Canada are usually based on the understandable desire of the communities for 'trunk' service to eliminate the irritations and frustrations involved in getting to and from the main centres. Rail travel is no longer fast enough or convenient; two- to three-day mail delivery is grossly inefficient; seven- to ten-day delivery of parcels and express is frustrating. While these municipalities also appreciate the need for improved local regional transportation there is usually a tendency to subordinate the relative importance of this field to that of the claim for trunk route priority. This tendency overlooks the fact that it may be totally impractical to improve 'local' transportation after 'trunk' services are set up. We feel that the problem must be viewed as a whole and that the best solution lies in the most efficient blend of the two facets.

It is our contention that a major contribution can be made to improved regional transportation if significant developments are initiated at the local level. The present Trunk Air Routes to this area from Central Canada are subject to some degree of criticism but they are not entirely out of context with the economics of the region. We consider that it makes good fiscal sense to complement these existing services with effective local services using equipment suitable to the traffic volume emanating in the smaller centres of population.

A proper system of local air travel, well organized, feeding to the major Airlines at specific points can bring virtually all of the smaller centres within one additional hour's travelling time of the cities of Central Canada. The available capacity of such feeder flights would permit utilization by intercity travellers and local air freight.

It is respectfully suggested that copies of our complete brief to the Air Transport Committee may be made available upon request if the Standing Committee wishes to study it. This brief includes details of the economic and feasibility studies made by this company to determine the viability of our project, together with the opinions and endorsements of many civic and corporate bodies in the towns included in the proposed service.

[*Interprétation*]

sens qu'il faut de nécessité prévoir de meilleurs liens avec les marchés continentaux, alors même que le secteur des déplacements et des transports locaux nécessitent une amélioration sensible.

Les propositions de la part de diverses villes en vue d'un service direct aérien avec le centre du Canada se fondent ordinairement sur leur désir compréhensible d'être reliées aux lignes principales pour éliminer les ennuis et tracas qu'entraîne leur éloignement des grands centres. Le chemin de fer n'est plus ni assez rapide, ni convenable, il faut compter de deux à trois jours pour le courrier, de même que de sept à dix jours pour la livraison des colis et les messageries. Alors que les municipalités admettent la nécessité qu'il y a d'améliorer le transport local et régional, elles ont normalement tendance à subordonner cette question importante à leurs réclamations visant leur raccord aux routes principales. On oublie qu'il pourrait être impossible d'améliorer le transport local, une fois les services principaux établis. Nous estimons qu'il faut examiner la question dans son ensemble et que la meilleure solution se trouve dans une fusion de ces deux aspects.

Nous prétendons alors qu'un effort majeur à l'amélioration du transport régional consisterait à développer de manière notable le secteur local. Les principales routes aériennes qui sont présentement établies à partir du centre du Canada, font l'objet de certaines critiques, mais elles ne sont pas tout à fait incompatibles avec l'économie de la région. Nous estimons sensé, du point de vue financier, de compléter les services existants par des services locaux, à l'aide des équipements appropriés au volume de trafic émanant des petites agglomérations.

Un réseau aérien local, bien organisé, qui rejoindrait les principales lignes aériennes à des endroits déterminés, mettrait à peu près toutes les petites agglomérations à une heure d'accès des villes du centre du Canada. Il faciliterait aussi les déplacements interurbains et le transport de marchandises sur le plan local.

Nous envisageons de mettre à votre disposition des exemplaires du mémoire que nous avons présenté au comité du transport aérien, si le comité le désire. Ce mémoire donne des détails sur les études de praticabilité et de rentabilité faites par la compagnie afin de déterminer si le projet était viable; il comprend aussi les vues favorables de nombreux organismes commerciaux et municipaux qui se trouvent dans les villes touchées par le service projeté. L'aménagement d'aéroports au Nouveau-Brunswick.

[*Text*]

On the second item:

Airport Development Within New Brunswick

In relation to its commercial air service proposals this company is vitally interested in the adequate development of suitable airport facilities throughout the region.

It is felt that significant savings in public expenditures can be achieved by tailoring airport development to the trunk and feeder line system. By this we mean that there need not be extravagant expenditures on new major facilities—I emphasize the point "New"—to provide for transcontinental or international jet services where present facilities can be modified or extended suitably at lesser cost. We are not recommending the maintenance of existing facilities where these are not suitable by location, environment, or weather, for provision of economic and safe air services. We do recommend, however, that serious consideration be given only to the extension of the available facilities *most suited* to the regional off- and on-loading of trunk airline passengers and freight and appropriate or commensurate with the technological advances in equipment adopted by the Trunk carriers for regional continental traffic.

We also respectfully recommend to the Standing Committee that a field most worthy of public development expenditures would be the improvement of local airport standards at the other urban centres in the region to meet the operating requirements of safe all-weather service for the size and scope of aircraft most suited to the local regional airlines, which will expedite the efficient movement of passengers and freight at those places.

By virtue of our corporate entity we recognise that we have a special interest in making these recommendations, but we are certain that any study in depth of the economics of the alternates to our suggestions would confirm our own findings.

We humbly state that we would be prepared to develop these arguments in detail with the Standing Committee or the appropriate government agency involved.

Interurban Transportation—Fredericton/Saint John

On the third item we delve into an element of the project which is not quite within

[*Interpretation*]

Dans ses propositions concernant un service commercial aérien, la compagnie s'intéresse de près à l'aménagement d'aéroports appropriés par toute la région.

Nous croyons que d'importantes économies pourraient être réalisées dans le secteur public si pareilles installations étaient convenablement reliées aux réseaux principal et secondaire. Il ne faudrait pas nécessairement faire des dépenses extravagantes pour de nouvelles infrastructures, et j'insiste sur le mot «nouvelles», qui conviendraient aux avions à réaction sur les lignes transcontinentales ou internationales, là où les infrastructures actuelles peuvent très bien être modifiées ou agrandies de manière économique. Nous ne proposons pas, non plus, le maintien des infrastructures existantes, si elles ne conviennent pas, en raison de leur emplacement ou de facteurs écologiques ou météorologiques, à l'établissement de services aériens qui soient économiques et sûrs. Nous recommandons, toutefois, qu'on étudie sérieusement la possibilité d'agrandir les installations qui conviennent *le mieux* au raccord régional avec les services pour passagers ou marchandises, mais qui soient aussi appropriées ou compatibles par rapport au progrès technologique du matériel adopté par les principaux transporteurs pour le trafic régional et continental.

Nous recommandons aussi respectueusement au comité permanent, que l'activité qui mériterait le plus l'attention du secteur public serait l'amélioration des normes pour les aéroports locaux dans les autres centres urbains de la région, afin d'assurer en pratique un service sûr en tout temps pour les avions dont la grosseur et le champ conviennent le mieux aux lignes aériennes régionales, ce qui accélérerait le transport efficace des passagers et des marchandises à ces endroits.

Étant donné notre statut de société, nous nous reconnaissons un intérêt particulier dans ces recommandations, mais nous sommes sûrs que toute étude approfondie de l'aspect économique d'autres options confirmerait nos propres conclusions.

Nous déclarons donc que nous serions prêts à développer nos arguments auprès du comité permanent ou de l'organisme gouvernemental en cause.

Le transport interurbain entre Frédéricton et Saint-Jean.

En ce qui concerne le troisième sujet, nous discutons d'un aspect du projet qui ne relève

[*Texte*]

our sphere but it came up as very much a possibility when we were investigating the original context. In the course of our investigations into the feasibility of our proposed feeder airline system we became aware of the particular combination of factors relating to the Saint John /Fredericton area of the Province.

By virtue of the relative positions of the airports at these two cities interurban air service has minimal advantage over road travel when waiting and loading time are considered. Also, the airport at Saint John suffers from a substantial proportion of unfavourable weather causing diversion, usually to Fredericton.

The suitability of Saint John as a safe all-weather airport can not be improved without major alterations to contours and environment as well as to aircraft visibility aids.

It appeared to us in our deliberations that a detailed study of the Saint John area to determine the relative costs of providing the most efficient transportation for that city and its environs would be well worth while.

Specifically we arrived at the tentative conclusions, based on our own limited investigations, that the whole concept of trunk, interurban, and suburban transportation for the City of Saint John and hinterland would warrant particular study towards the possible installation of an integrated transportation system for the whole area.

It appeared to us that there are existing rail facilities, for example, which might be adapted and developed in the style of the Government of Ontario transit system or in the style being investigated for the state of Pennsylvania in the U.S., emanating from Saint John and linking suburban and semirural centres in a northwesterly direction to Fredericton, including Fredericton Airport, and in a northeasterly direction towards Sussex.

Such development might prove to have these ramifications:

(a) Growth of suburban and semirural communities in a planned manner around the focal points of the new transit media.

(b) We do not want to prejudge the provincial government but the second item that we felt would come of this is that we would possibly reinforce the potential setting up of an industrial park of major significance by facilitating easy mass transit throughout the area.

[*Interprétation*]

pas, à proprement parler, de notre compétence, mais dont l'éventualité s'est manifestée lorsque nous faisions enquête sur la situation initiale. Au cours de nos études de praticabilité concernant le projet de réseau aérien secondaire, nous avons pris conscience de divers facteurs qui se rapportent à la région de Saint-Jean et de Frédéricton.

En raison de l'emplacement de l'aéroport dans ces deux villes, le service aérien interurbain offrent des avantages minimes en comparaison du transport routier, compte tenu des périodes d'attente et d'embarquement. De plus, l'aéroport de Saint-Jean souffre, est souvent le siège de conditions climatiques défavorables qui obligent les appareils à emprunter d'autres pistes, d'ordinaire celle de Frédéricton.

Pour que l'aéroport de Saint-Jean devienne sûr en tout temps, il faudrait apporter des changements sensibles aux abords de la piste et y prévoir des moyens de visibilité supérieurs.

Nos discussions ont mis en évidence l'opportunité d'une étude détaillée de la région de Saint-Jean, afin de déterminer le coût relatif d'un service de transport des plus efficace pour cette ville et ses environs.

Plus précisément, nous en sommes provisoirement venus à la conclusion, fondée sur nos propres enquêtes limitées, que toute la question des services principaux, urbains et interurbains pour la ville de Saint-Jean et les environs pourrait sciemment donner lieu à une étude particulière concernant la mise en place d'un réseau de transport intégré pour la région entière.

Il nous a semblé qu'il existe déjà des aménagements pour les chemins de fer, par exemple, que l'on pourrait adapter et développer, comme l'a fait l'Ontario pour son réseau de transport, ou encore l'État de la Pennsylvanie, aux États-Unis, ce nouveau réseau, à partir de Saint-Jean, relierait les banlieues et les centres semi-ruraux, au nord-ouest, à Frédéricton (et à l'aéroport), et au nord-est, à Sussex.

L'entreprise pourrait donner lieu aux avantages suivants: a) la croissance planifiée des banlieues et des collectivités semi-rurales autour des nouveaux centres de transport.

b) Nous ne voulons pas anticiper sur le gouvernement provincial, mais nous estimons que le deuxième avantage qui en découlerait, c'est de permettre davantage l'établissement d'un parc industriel important, grâce au nouveau réseau dans la région. c) ce serait promouvoir, à notre avis, la transformation de l'aéroport de Frédéricton et lui donner toutes les caractéristiques d'un aéroport régional

[*Text*]

(c) We feel that this would promote the development of the Fredericton Airport to full regional jetport standards—again I emphasize "regional jetport standards"—taking advantage of its central location and good weather pattern.

(d) I think such a service would also enhance the intercity travel facility between the major commercial centre of Saint John and the seat of the provincial government at Fredericton.

This suggestion assumes that a long-term forward view be taken, rather than a view based on the present population or industrial status. It is recognised that the relative population distribution at this time is not comparable to the megalopolis in Ontario but we feel that focussing of concentrated thought and study on this area could well produce an ideal system which will both encourage and withstand constant growth around it.

Commuter Air Services gratefully acknowledges the acceptance by the Standing Committee of these brief but relevant comments and suggestions, and we hope that our contribution may be helpful in some small way in improving the transportation and communication facilities in this region so that the best potential may be obtained from the resources and the peoples of the Atlantic Provinces.

Thank you, gentlemen.

The Chairman: Could you tell me how long it would take to get copies of your brief so that we could have them in Ottawa?

Mr. Thomson: I have copies of it here—or a copy, but I think it would be available from the Air Transport Committee on request. It is in dossier form with multicopies available at this time.

The Chairman: About 10 days?

Mr. Thomson: I do not think it would take that long. I think the copies are before the Air Transport Committee at this time for study. I think this would be available.

The Chairman: Does the Committee agree?

Some hon. Members: Agreed.

Mr. Nesbitt: Just a very brief question, Mr. Chairman. I do not have a copy of the brief but I gather from the witness' remarks that this company is just getting nicely organized and it apparently has representations before the Air Transport Division of the Canadian

[*Interpretation*]

pour avions à réaction, chose que je tiens à souligner, en tirant profit de son emplacement central et du bon climat dont il jouit. *d*) Un tel service faciliterait les déplacements interrurbains entre le centre commercial de Saint-Jean et le siège de l'administration provinciale, à Frédéricton.

En l'occurrence, nous supposons que l'on adoptera une attitude à long terme, plutôt que de tenir compte des seuls facteurs démographiques ou industriels que l'on retrouve présentement. Il est admis que la répartition de la population dans ce secteur diffère de celle qui régit l'agglomération ontarienne; néanmoins, une étude approfondie et serrée de cette région pourrait bien donner naissance, selon nous, à un réseau idéal qui en favoriserait la croissance et l'expansion.

La *Commuter Air Services* remercie le Comité d'avoir bien entendu ses remarques et commentaires brefs mais pertinents. Elle espère qu'ils contribueront utilement dans quelque mesure à améliorer les infrastructures de transport et de communications dans la région, afin que l'on puisse tirer le plus grand profit des ressources matérielles et humaines des provinces de l'Atlantique.

Merci, messieurs.

Le président: Pourriez-vous me dire combien de temps il faudra pour obtenir des exemplaires de votre mémoire, de sorte que nous pourrons l'avoir en main à Ottawa?

M. Thomson: J'en ai des exemplaires ici, ou plus tôt un, mais je crois que le comité des transports aériens pourrait vous en transmettre sur demande; il tient un dossier où se trouvent plusieurs exemplaires de ce document.

Le président: Dans une dizaine de jours?

M. Thomson: Moins que cela, je pense. Le comité des transports aériens en tient déjà des exemplaires pour fins d'étude, alors il pourrait peut-être vous en transmettre quelques-uns.

Le président: Le Comité est-il d'accord?

Des voix: D'accord.

M. Nesbitt: Juste une question très brève, monsieur le président. Je n'ai pas de copie du mémoire, mais d'après ce qu'a dit le témoin, je crois comprendre que la compagnie s'organise à peine et qu'elle a formulé des instances après du comité des transports aériens de

[*Texte*]

Transport Commission. Could the witness tell us how long the Company has been in being and what equipment it has at the moment?

Mr. Thomson: The Company was originated to make application for this complete system. It was originated in May of 1968, and since that time the application has been developed, studied and placed before the board in full detail as a total project. There is no equipment at this time; immediately licences are granted capital investment will be made in the company.

Mr. Nesbitt: Out of idle curiosity, what type of equipment do you envisage using?

Mr. Thomson: We would start using, in a test of the market, a light type of aircraft—a small airliner with approximately eight-to 12-passenger capacity. The logical development from this—and we hope that the market warrants it—will be to an airliner with a maximum capacity of 20—probably 15 to 18 passengers, which appears to us to be the true logical development but which would not be warranted on an initial attempt.

Mr. Nesbitt: Should your application prove successful before the Canadian Transport Commission would you eventually be looking for some subsidy for the purpose of either purchasing equipment or obtaining some of the present Air Canada routes or some sort of freight subsidy?

Mr. Thomson: No, sir. It is expressly stated in our brief that we consider that a properly organized company, operating with the type of equipment which is best suited to the market, can make a viable contribution and provide a solution to the internal transportation market.

Mr. Nesbitt: Would you be expecting to carry much freight or mostly passengers?

Mr. Thomson: We would expect to develop into the carriage of mails and light local freight. We would expect to go into the onward transmission of air freight from Air Canada at, say, Moncton—particularly Moncton to the north, and perhaps Fredericton.

Mr. Nesbitt: You would not be considering then at some future date applying for some of Air Canada's routes in the area?

Mr. Thomson: No, we do not contemplate that type of activity at this time.

Mr. Corbin: Some of my questions have already been answered. Your main purpose,

[*Interprétation*]

la Commission canadienne des transports. Le témoin pourrait-il me dire depuis combien de temps la compagnie existe et de quel équipement elle dispose?

M. Thomson: La compagnie s'est rétablie en mai 1968 en vue de mettre en place ce réseau complet; depuis lors, elle a élaboré par le détail un système total qu'elle a présenté à la Commission. Elle ne tient pas d'équipement à l'heure actuelle, mais du moment où les permis seront délivrés, elle procédera à sa capitalisation.

M. Nesbitt: Par simple curiosité, quel genre de matériel avez-vous en vue?

M. Thomson: Au départ, nous utiliserons, à titre d'essai, un petit avion léger à huit ou douze places. A l'étape suivante, si le marché semble prometteur, nous nous servirions d'aéronefs à 20 places, tout au plus, mettons 15 ou 18 places, ce qui nous paraît une formule d'expansion logique, mais qui ne serait pas justifiée au début.

M. Nesbitt: Si votre demande est agréé par la Commission des transports, chercheriez-vous à obtenir une subvention quelconque pour l'achat du matériel, l'exploration de certains parcours actuellement desservis par Air Canada ou le transport des marchandises?

M. Thomson: Non, monsieur. Nous avons précisé dans notre mémoire qu'à notre sens, une compagnie bien organisée, qui est exploitée avec le genre d'équipement le mieux adapté au marché, pourra réaliser un apport très valable et fournir la solution au problème des transports internes.

M. Nesbitt: Vous attendez-vous de transporter surtout des passagers ou surtout des marchandises?

M. Thomson: Nous escomptons assurer le transport du courrier et des petits colis d'une localité à l'autre, mais aussi des marchandises à bord des appareils d'Air Canada et déchargées à Moncton, au nord de celle-ci, et peut-être aussi à Frédéricton.

M. Nesbitt: Alors, vous ne songez pas à demander plus tard certaines des routes d'Air Canada dans la région?

M. Thomson: Non, nous ne l'envisageons pas en ce moment.

M. Corbin: Certaines de mes questions ont déjà trouvé réponse. Donc, votre principal

[*Text*]

Mr. Thomson, is to make available to people in smaller centres air transport to the larger centres, to the main routes of the national airlines, but in some cases you will be backtracking. For example, if you pick up somebody in Edmunston and bring him either to Mont Joli to get on Quebecair or to Fredericton to get on Air Canada, you are backtracking. What kind of agreement will you have with the largers carriers as far as rates are concerned? The travelling public is not only concerned with getting good service and getting rapid service but is also concerned in paying a decent rate for the service it is getting, and I understand that in the type of service you are trying to provide to these smaller centres, which is most welcome, I can assure you, there will be a lot of backtracking. What kind of rates and agreements will you have with the larger carriers?

Mr. Thomson: In answer to the first part of the question, the geography of New Brunswick necessitates backtracking to Edmunston by its very location unless someone were to fly, say, from the area of Quebec City to Edmunston. The possibility of negotiating joint ticketing and joint billing with the major airlines has been taken up but is in such an early stage that I could not presume to give an answer for the major airlines—Air Canada and Quebecair specifically. We feel that something can be worked out apropos fare structure which can make for economic transportation and avoid the necessity of a major airline's having to provide, or attempting to provide, direct service into an area where they would almost have to apply for subsidy to be able to provide that service. And I think we can work something out with them.

The Chairman: A supplementary question, Mr. Thomas?

Mr. Thomas (Moncton): What type of aircraft are you planning on using?

Mr. Thomson: We have initially planned on two types of aircraft; one is known as an *Islander* which is a high-wing, fixed-wheel type of aircraft carrying 10, possible 12 persons. It is being extended for this. This is a rugged type of aircraft which requires a very, very small landing area.

Mr. Thomas (Moncton): This was the purpose of my question.

[*Interpretation*]

but, monsieur Thomson, serait de fournir aux gens des petites agglomérations des services de transport aérien vers les grands centres, vers les routes principales des sociétés aériennes nationales, n'est-ce pas? Mais, dans certains cas, il vous faudrait revenir en arrière. Par exemple, si l'on prend un passager à Edmundston pour qu'il prenne l'avion de Québec Air à Mont-Joli ou celui d'Air Canada à Fredericton, c'est faire marche arrière, n'est-ce pas? Quel genre d'accord auriez-vous avec les principaux transporteurs en ce qui concerne les tarifs?

Le public voyageur non seulement se préoccupe d'un service prompt et excellent, mais il est intéressé aussi à payer un taux raisonnable pour ce service. Or, si j'ai bien compris, le genre de service que vous voulez donner aux petites agglomérations, service qui serait des plus souhaitable, je vous l'assure, vous obligerait souvent à revenir sur vos pas. Quelle sorte d'arrangements pour les tarifs auriez-vous avec les principaux transporteurs?

M. Thomson: Pour ce qui est de la première partie de votre question, je répondrai que la situation géographique du Nouveau-Brunswick exige que nous revenions jusqu'à Edmunston, vu l'emplacement même de cette ville à moins que l'avion ne soit parti, mettons, de Québec. On a déjà envisagé la possibilité de négocier un contrat visant à la facturation en commun avec les grandes sociétés aériennes, mais je ne saurais présumer, à ce stade, de vous répondre au nom de celles-ci, tout particulièrement Air Canada et Quebec Air. Nous croyons qu'il y a un moyen d'en venir à un arrangement quelconque, en ce qui concerne les tarifs, pour assurer un service économique et pour éviter que les grandes lignes aériennes aient ou cherchent à desservir directement une région où, pour ce, elles devraient presque nécessairement exiger une subvention. Je crois que nous en arriverons à un accord avec elles.

Le président: M. Thomas, vous avez une question supplémentaire à poser?

M. Thomas (Moncton): Quel genre d'appareil avez-vous en vue?

M. Thomson: En fait, nous avons deux types d'appareil en vue: l'un l'«*Islander*», est un avion à 10 ou 12 places, à ailes supérieures et à train d'atterrissage fixe, qui est adapté au trafic-voyageurs. C'est un avion très solide qui peut atterrir sur une très petite piste.

M. Thomas (Moncton): C'est ce que j'allais vous demander justement.

[*Texte*]

Mr. Thomson: This is the precise reason for that type of aircraft—for short fields and rough strips.

The Chairman: Mr. Corbin, would you try to plan your questions to make them a little shorter? I believe it would be much easier for the witness.

Mr. Corbin: Mr. Chairman, with all due respect we are here to get some information from these people.

The Chairman: That would not stop you from getting information. If your questions were divided it would be much better for all of us.

Mr. Corbin: I am coming to the point, sir. Are you planning on also giving at a later date service into the State of Maine at Bangor or Portland?

Mr. Thomson: This is a part of our application currently. We feel that there is a demand for a service particularly from northwestern New Brunswick and the Fredericton and western area of New Brunswick for easy connection to southbound U.S. flights. Air Canada presently provides a service out of Saint John to Boston but this requires a very long wait or delay for passengers from any of the other places in New Brunswick. Our service would connect with Northeast Airlines at Bangor.

Mr. Corbin: Thank you for your kind indulgence, Mr. Chairman.

Mr. Thomson: May I interject. I put a rough map as Appendix "A" to our brief which I emphasize is not intended to be a route map but simply a schematic diagram of the trunk and feeder system, which emphasizes the concept of the central location of Fredericton and also the convenient location of Moncton for development in this line.

The Chairman: Mr. Pringle.

Mr. Pringle: Thank you, Mr. Chairman. May I ask you how long your applications have been in the hands of the Air Transport Committee?

Mr. Thomson: Totally since May of 1968 but officially accepted since July 17, 1968.

Mr. Pringle: And what information have you received from the Air Transport Committee with regard to their processing?

Mr. Thomson: I am aware that the application is now in its final stages before the

[*Interprétation*]

M. Thomson: Nous voulons un type d'avion qui convienne à des pistes courtes et assez mauvaises.

Le président: Monsieur Corbin, pourriez-vous poser vos questions de manière brève; cela facilitera la tâche du témoin.

M. Corbin: Sauf votre respect, monsieur le président, il me semble que nous sommes ici pour obtenir des renseignements.

Le président: Cela ne vous empêchera pas de vous renseigner, et les choses iront mieux pour tout le monde.

M. Corbin: Je vais droit au sujet. Est-ce que vous avez l'intention plus tard de desservir l'État du Maine à Bangor ou à Portland?

M. Thomson: Il en est fait mention dans notre demande. Nous estimons qu'un tel service s'impose, surtout pour relier le nord-ouest du Nouveau-Brunswick, la région de Fredericton et l'ouest de la province aux vols à destination du sud des États-Unis. A l'heure actuelle, Air Canada assure le service de Saint-Jean à Boston, mais cela exige un délai, une période d'attente fort longue pour les passagers qui viennent d'ailleurs au Nouveau-Brunswick. Nous ferions la liaison avec la Northeast Airlines à Bangor.

M. Corbin: Merci de votre bienveillante indulgence, monsieur le président.

M. Thomson: Puis-je dire que la carte figurant à l'annexe «A» de notre mémoire n'est pas censée être une carte routière, mais tout simplement un schéma du réseau qui relierait la ligne principale et l'embranchement, et qui insiste un peu sur l'aspect central de Fredericton ainsi que sur l'emplacement convenable de Moncton pour l'inauguration de cette ligne.

Le président: Monsieur Pringle.

M. Pringle: Merci beaucoup, monsieur le Président. Je voulais vous demander depuis combien de temps vous avez présenté votre demande au Comité des transports aériens?

M. Thomson: Depuis le mois de mai 1968, mais elle a été acceptée officiellement le 17 juillet 1968.

M. Pringle: Quels renseignements avez-vous reçu du Comité de transports aériens pour ce qui est de leur marche à suivre?

M. Thomson: Je sais que la demande en est rendue à l'étape finale. Elle a passé par les

[*Text*]

Committee. It has been processed through all of the departments and is before the Committee for study, and I believe we await decision by the day.

Mr. Pringle: Have you had any hearings with respect to opposition from other areas?

Mr. Thomson: There have been interventions by other carriers and these have been discussed, and our answers to those queries have been put before the Board.

Mr. Pringle: Do you anticipate that you will be able to get by the opposition of the other carriers?

Mr. Thomson: We sincerely think that our application is of such value that the Air Transport Committee in its wisdom will accept it.

Mr. Pringle: With regard to the possibility of flying into the United States, will you still be subject to bilateral agreements on a *quid pro quo* basis or will you have to be able to arrange for an exchange with regard to being able to...

Mr. Thomson: I do not think at our level of air transportation that the bilateral agreements are very severely enforced. In the United States what is known as the third we do not like it to be known as the third—level of air transportation, the feeder concept of air transportation, is not governed by the federal aviation authority, as is the case in Canada.

Mr. Pringle: I understand, but you call this regional. You are calling it local regional, is that your interpretation, instead of third level?

Mr. Thomson: Yes, local regional.

Mr. Pringle: Will this be accepted in Canada? I understand the Department of Transport is now using the term "third level"?

Mr. Thomson: For want of a better term they have taken the expression "Third level" and continued to use it, but from my discussions with the Committee members I think they are in sympathy with finding a better name. My suggestion is "local regional" as opposed to "regional", which is Quebecair EBA style.

Mr. Pringle: I have just one final question. What about air navigational facilities at the present time, will there need to be a great

[*Interpretation*]

différents services et le comité est maintenant en train de l'étudier, et je pense que nous attendons la décision d'ici quelques jours.

M. Pringle: Est-ce que vous avez des témoignages d'autres régions à l'encontre de votre demande?

M. Thomson: Il y a eu des interventions de la part d'autres transporteurs qui ont été discutées et nous avons répondu devant la commission...

M. Pringle: Est-ce que vous prévoyez que vous pourrez contourner ces oppositions présentées par d'autres transporteurs?

M. Thomson: Nous croyons vraiment que notre demande a une telle valeur que le comité dans sa sagesse jugera bon de l'accepter.

M. Pringle: Pour ce qui est de la possibilité d'avoir des vols vers les États-Unis, est-ce que vous serez toujours l'objet d'ententes bilatérales en vertu d'un quiproquo ou est-ce qu'il faudra toujours faire des échanges pour être en mesure de le faire?

M. Thomson: Je ne crois pas qu'à notre niveau de transport aérien, les ententes bilatérales soient vraiment mises en vigueur avec beaucoup de rigueur. Aux États-Unis, il y a le troisième niveau de transport aérien qui est connu ainsi et que nous ne voulons pas reconnaître comme le troisième, soit l'aspect d'alimentation du transport aérien ne fait pas l'objet de l'administration fédérale de l'aviation comme c'est le cas au Canada.

M. Pringle: Je comprends, mais vous parlez d'aspect régional. Vous l'appelez local, régional. Est-ce là votre interprétation, plutôt que le troisième niveau?

M. Thomson: Oui, régional local.

M. Pringle: Est-ce que cela sera accepté au Canada? Si je comprends bien, le ministère des Transports utilise maintenant l'expression «troisième niveau»?

M. Thomson: Faute d'une meilleure expression, ils ont parlé du «troisième niveau» et utilisent toujours cette expression, mais, au cours d'entretiens avec les membres du comité, je pense qu'ils aimeraient mieux trouver un meilleur terme. Je parle plutôt de service régional local, par opposition à service régionale du style Quebecair.

M. Pringle: Une dernière question. Que dire maintenant des installations de navigation aérienne à l'heure actuelle? Est-ce qu'il

[*Texte*]

improvement in this respect? I presume you expect to fly in all weather, and if this is the case what reaction do you get from the Department of Transport with regard to air navigational facility improvements on the various airports you are suggesting be used?

Mr. Thomson: So far my discussions with the Department of Transport officials have been most favourable, in that they recognize and accept the desire to improve the services provided at the local airports. There are one or two that have some geographical or environmental difficulties but we feel that with an established carrier providing a service in conjunction with the local authorities, the local civic bodies and the DOT that the three of them can obtain very satisfactory results in local developments an improvements.

Mr. Pringle: Thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. Thomson, do you or your association consider that the cost of building or improving local airfield strips should be borne by the municipalities, the provincial or the federal authorities? Could you give me an expression of opinion on that, please?

Mr. Thomson: It is not quite in our bailiwick, but I would say that just as much importance should be placed on local airfield federal development—to the appropriate size, not necessarily larger—as would be placed on the establishment of major facilities at a few points.

Mr. Skoberg: In that regard, then, you would use that as a feeder line service and this is why you are suggesting the federal authority should be involved in this?

Mr. Thomson: Yes. I think this is very much a complementary facet of taking the passenger from the closest point to home to his destination, whether it be international or transcontinental.

The Chairman: A supplementary question, Mr. Horner?

Mr. Horner: The witness suggested that their application before the CTC was opposed, but are there similar people who are

[*Interprétation*]

faudra que ces services soient vraiment améliorés à cet égard? J'imagine que vous vous attendez à avoir des vols en tout temps, et si tel est le cas, quelle serait la réaction du ministère des Transports face à l'amélioration des installations de navigation aérienne dans les divers aéroports que vous vous proposez d'utiliser?

M. Thomson: Jusqu'ici les fonctionnaires du Ministère ont été des plus favorables en ce sens qu'ils reconnaissent et acceptent ce désir d'améliorer les services fournis dans les aéroports locaux. Il y en a un ou deux qui présentent des difficultés en raison de leur emplacement géographique ou de leur environnement, mais nous sommes d'avis qu'avec un transporteur qui assure un service de concert avec les autorités locales, les organismes civiques locaux et le ministère des Transports, enfin les trois ensemble peuvent obtenir des résultats très satisfaisants relativement aux perfectionnements et améliorations locales.

M. Pringle: Merci bien.

Le président: Monsieur Skoberg.

M. Skoberg: Monsieur Thomson, est-ce que votre association et vous-mêmes trouvez que le coût de construction ou d'amélioration des terrains d'atterrissage locaux devraient être assurés par les municipalités, les autorités provinciales ou fédérales? Pourriez-vous me dire ce que vous en pensez?

M. Thomson: Ce n'est pas tout à fait, mais je dirais qu'on devrait attacher tout autant d'importance à l'aménagement des terrains d'aviation locaux par le gouvernement fédéral et les mettre au niveau approprié et non pas nécessairement plus grand et qu'aux principales installations à certains endroits.

M. Skoberg: Donc, ce serait un service de ligne d'alimentaiton, et c'est pourquoi vous proposez que l'autorité fédérale s'y intéresse.

M. Thomson: Oui, je pense que c'est vraiment un aspect complémentaire puisqu'il s'agit d'amener le passager à partir des points les plus rapprochés de son foyer à son point de destination, que ce soit sur le plan international ou transcontinental.

Le président: Une question supplémentaire, monsieur Horner?

M. Horner: Le témoin a insinué que la demande qu'ils ont présentée à la Commission canadienne des transports avait rencon-

[*Text*]

providing this service or are prepared to provide it?

Mr. Thomson: Not to the extent that we have proposed, and certainly not based on the inter-air line feeder system which we have set down. Beyond that I would say there is no comparable application in process.

Mr. Horner: Which company opposed you, or would that be public knowledge?

Mr. Thomson: I think it is public knowledge. We have been opposed by some air charter carriers, for example, who would not be providing the same type of service. We have been opposed by a company that is presently licenced and providing service from Saint John to the north shore. This is interurban transportation rather than a feederline to the major air line.

Mr. Horner: I see that Campbellton and Bathurst each have individual airports. Do you envision at some time in the future, with the greater use of small jets, that one airport would serve that total area?

Mr. Thomson: If you had travelled by road between Campbellton and Bathurst you would certainly say no, sir. I would say from an economic standpoint it might be suitable to have one airport for the three cities of Dalhousie, Bathurst and Campbellton, but winter travel on the roads across the north shore is particularly hazardous. Again, it defeats the concept by which we intend to operate, that is, approximately in stage distances of a minimum of 60 miles. We do not especially advocate the duplication of services. We are willing to locate our service where the best airport facilities are.

The Chairman: Mr. Mahoney?

Mr. Mahoney: Mr. Chairman, I understand we have agreed to request copies of the brief from the CTC on this. I think perhaps in fairness we should also request copies of the opposing briefs in case they add anything further.

Mr. Thomson: These would be included, sir.

Mr. Mahoney: Thank you. Your company is very new, sir, but I would guess from listening to you and from reading your brief

[*Interpretation*]

tré des oppositions mais, est-ce que ce sont les mêmes personnes qui assurent ce service, ou qui projettent de l'assurer?

M. Thomson: Non pas dans la mesure où nous l'envisageons et certainement pas en se fondant sur le système d'alimentation interligne que nous avons mis au point. Je dirais en outre qu'il n'y a tout simplement pas de demande comparable à celle que nous avons présenté.

M. Horner: Quelle compagnie s'y est opposé? Ou est-ce que cela sera rendu public?

M. Thomson: Je crois que ce l'est. Certains transporteurs aériens de frètement qui par exemple, n'asssureraient pas le même service, s'y sont opposés. Il y a en outre une compagnie qui détient un permis et qui assure ce service entre Saint-Jean et la Côte Nord. Il s'agit plutôt d'un service interurbain de transport que d'un embranchement d'une ligne aérienne principale.

M. Horner: Je vois que Campbellton et Bathurst, ont tous deux leur aéroport. Est-ce que vous prévoyez qu'à un moment donné avec une utilisation plus grande de petits avions à réaction qu'un aéroport desservirait toute cette région?

M. Thomson: Si vous aviez parcouru le chemin qui sépare Campbellton de Bathurst, vous répondriez sûrement par non monsieur. Je dois dire que sur le plan économique, il se pourrait que ce soit préférable d'avoir un aéroport pour les trois villes, Dalhousie, Bathurst et Campbellton. Mais la circulation en hiver sur les routes de la rive nord est assez dangereuse. Une fois de plus, cela va à l'encontre du concept que nous entendons suivre, soit environ des parcours de 60 milles au minimum. Nous ne proposons pas particulièrement un double emploi des services. Nous espérons offrir nos services là où se trouvent les meilleurs installations d'aéroports.

Le président: Monsieur Mahoney?

M. Mahoney: Monsieur le président, si je comprend bien, nous avons convenu de demander des copies du mémoire de la CCT à ce sujet. En toute justice, nous devrions aussi demander des copies des mémoires des personnes qui sont opposées à la demande, au cas où ils ajoutent quelque chose.

M. Thomson: Ce sera inclu, monsieur.

M. Mahoney: Merci beaucoup. Votre compagnie est assez récente, mais après vous avoir entendu et avoir lu votre mémoire, j'en

[*Texte*]

that you have had considerable experience in this area. Would you perhaps qualify yourself as an expert?

Mr. Thomson: I qualify myself as having only a certain degree of expertise. My studies have been in economics. I have been employed in logistic transportation mainly by sea, land and rail but the same logic and the same degree of economic study can be applied to air lines, and in this respect it is simply a throwback to when I was flying several years ago.

Mr. Hahoney: I like your integrated transportation system approach. To be specific, sir, in your brief, in summarizing the suitability of Saint John as a safe all-weather airport, you say that it cannot be improved without major alterations to contours and environment. Is that a nice way of saying that it will have to be moved?

Mr. Thomson: Yes, sir.

Mr. Mahoney: Thank you. You apparently note the possibility or feasibility of further development of the Fredericton airport to full regional jetport standards. In your opinion this is possible?

Mr. Thomson: I believe there are a few minor difficulties, and when I say minor I mean that I think the railroad track would have to be moved, but there are no topographical difficulties to enlarging the Fredericton airport.

Mr. Mahoney: From the traffic studies that you undoubtedly have done in preparing your brief, would you say that this type of modification or expansion would serve the region adequately in the foreseeable future?

Mr. Thomson: I very much believe so. I very much believe that the location of Fredericton airport approximately 50 miles from the City of Saint John is within very reasonable fast electric or fast go-type transit train distance from Saint John—or even by an improved road system the distance of 50 miles is most acceptable as a delivery point for a major city. After all, the City of Hamilton, Ontario is approximately 34 miles from Malton.

Mr. Breau: You are proposing an alternative service to what nothern New Brunswick is presently expecting. Instead of having an air service from one point in northern New Brunswick to Montreal, you are propos-

[*Interprétation*]

conclue que vous avez beaucoup d'expérience dans ce secteur. Est-ce que vous vous considérez comme un spécialiste?

M. Thomson: Je trouve que j'ai seulement une certaine expérience. J'ai fait des études en économique. J'ai travaillé dans la logistique des transports par terre, par eau et par chemin de fer, mais la même logique et la même étude en économique peuvent s'appliquer aux lignes aériennes. Et ces efforts sont simplement un recul à plusieurs années en arrière, alors que j'allais en avion.

M. Mahoney: J'aime vraiment votre philosophie d'un système intégré de transport. Pour être précis, vous dites, dans votre mémoire, en résumant la sécurité de Saint Jean, en tant qu'aéroport en tous temps, qu'elle ne pourrait être améliorée vraiment sans en modifier les contours et le milieu. Est-ce une manière polie de dire qu'il faudrait le déplacer?

M. Thomson: Oui, monsieur.

M. Mahoney: Merci. Vous remarquez en apparence la possibilité d'aménager encore l'aéroport de Fredericton pour le relever entièrement au niveau d'aéroport régional d'avions à réaction. Vous croyez que c'est possible n'est-ce pas?

M. Thomson: Je crois que ce ne sont que difficultés d'importance mineure et lorsque je dis mineure, je pense que la voie ferrée devrait être déplacée mais il n'y a pas de difficultés topographiques pour agrandir l'aéroport de Fredericton.

M. Mahoney: D'après les études que vous avez faites pour préparer votre mémoire, croyez-vous que ce genre de modification ou d'expansion pourrait desservir la région d'une façon appropriée dans un avenir prévisible?

M. Thomson: Oui, je le crois vraiment. Je pense que l'aéroport de Fredericton, situé à environ 50 milles de la ville de Saint-Jean, s'en trouve à une distance très raisonnable par train électrique ou par express—ou même par un réseau amélioré de routes, un parcours de 50 milles est tout à fait acceptable pour ce qui est d'un centre de livraison pour une ville principale. Après tout, la ville de Hamilton, en Ontario, se trouve à 34 milles environ de Malton.

M. Breau: Vous proposez, un service autre que celui qui est actuellement prévu pour le nord du Nouveau-Brunswick. Au lieu d'un service aérien entre un certain point au nord du Nouveau-Brunswick et Montréal, vous

[*Text*]

ing a service from northern New Brunswick to southwestern New Brunswick and then fly to Montreal.

Mr. Thomson: No. Our original concept was a combination of either line to the major airlines and intra-provincial travel. Although there are individuals in Campbellton and Dalhousie who would wish to travel to Montreal, there are just as many, in our opinion, who wish to travel to other points within the province—and in an easterly direction.

Mr. Breau: Therefore it is not an alternative service westbound?

Mr. Thomson: By no means. It is complementary and offers in fact the ability to move passengers northwest to Charlo to that Montreal westbound service also, if they so wish to take it.

Mr. Breau: In other words, the Campbellton-Bathurst area would not be regarded as backtrocking on the way to Montréal.

Mr. Thomson: No.

Mr. Breau: Thank you.

Mr. Chairman: This ends the question period.

Our next brief is a joint brief from two different cities. I would like to call upon His Worship the Mayor, Mr. Earle McKenna from Newcastle and Mayor Robart Martin from Chatham.

I will ask His Worship, Mayor McKenna, to make a short statement.

Mayor Earle McKenna (Newcastle): Mr. Chairman, Mayor Martin of Chatham and myself, representing the town of Newcastle, will endeavour to make our submission as brief as possible. From here on we will not refer to Newcastle and Chatham directly but to the whole Miramichi area because we are confident that we speak on behalf of this area and its 50,000 or more people.

Due to the fact that transportation on the whole north shore of New Brunswick has an effect on the Miramichi area, we should point out some interesting facts at the outset. Mr. Chairman, we ask you to refer to the New Brunswick provincial county map. You will note that close to half of the 600,000 provincial population or 241,000 persons, live in the northern half of the province. This map, sir,

[*Interpretation*]

proposez d'avoir un service entre le nord du Nouveau-Brunswick et le sud-ouest de cette province, puis un service aérien de là à Montréal.

M. Thomson: Non. Nous pensions, à l'origine, à combiner l'une ou l'autre ligne aux grandes lignes de transport aérien, en plus des voies de déplacement à l'intérieur de la province. S'il y a des personnes de Campbellton et de Dalhousie qui peuvent vouloir se rendre à Montréal, il y en a tout autant, à notre avis, qui veulent se rendre à d'autres endroits de la province et aller vers l'est.

M. Breau: Il ne s'agit donc pas d'un autre service vers l'ouest?

M. Thomson: Absolument pas. C'est un service complémentaire qui offre en fait la possibilité de transporter les voyageurs qui vont vers le nord-ouest, à Charlo, par le service vers l'ouest qui va sur Montréal, s'ils veulent l'emprunter.

M. Breau: Donc, la région de Campbellton-Bathurst ne représenterait pas un retour en arrière lorsqu'on se rend à Montréal.

M. Thomson: Non.

M. Breau: Merci.

Le président: Voici la fin de la période des questions.

Le mémoire suivant est présenté conjointement par deux villes. Son Honneur le Maire de Newcastle, M. Earl McKenna, ainsi que le maire de Chatham, M. Robert Martin.

Je vais demander à Son Honneur, le maire McKenna, de faire une brève déclaration.

M. Earle McKenna (maire de Newcastle): Monsieur le président, M. Martin, maire de Chatham, et moi-même, qui représente la ville de Newcastle, allons essayer de faire un exposé aussi bref que possible. Désormais, nous n'allons plus parler de Newcastle et de Chatham directement, mais plutôt de toute la région de Miramichi, car nous sommes convaincus que nous parlons au nom de cette région et de ses 50,000 habitants ou plus.

Étant donné que le transport sur la rive nord du Nouveau-Brunswick a des répercussions sur la région de Miramichi, nous voudrions signaler certains faits intéressants dès le début. Monsieur le président, nous vous demandons de vous reporter à la carte des comtés du Nouveau-Brunswick. Vous remarquerez que, des 600,000 habitants de la province, 241,000, soit près de la moitié, vivent

[*Texte*]

will emphasize that fact. We now refer you to the same map and the airports shown.

Three of the main airports which handle scheduled air services are located in the southern half of the province, namely Moncton, Fredericton and Saint John. This has also been emphasized by gentlemen from Commuter Air Services Ltd. on this map here, except that it has been emphasized a little stronger. I would like to emphasize that on this map, we have taken an imaginary line. You notice that we kind of dip down a county line because we did not want you to think there was an extra county in the province. We estimate there are 241,000 people above this line and 376,000 below it. If you will also notice everything is concentrated on the lower end.

We now refer you to the map showing the Atlantic Provinces airline routes. This is a map which you can find in any Air Canada aircraft. As you will notice, the complete northern part of the province is nothing but bypasses and overpasses. The Miramichi area is 135 miles from Charlo airport, 110 miles from the Fredericton airport and 100 miles from the Moncton airport. These are approximate figures. A good percentage of the Air Canada traffic through Moncton and Fredericton originates from the Miramichi and other north-shore areas such as the Caraquet coast. To obtain scheduled air service to either Montreal and points west, or Halifax and points east we must travel distances ranging from 100 miles in the case of the Miramichi to 170 miles if you are coming from the Caraquet Coast.

We now refer this Committee to a brief submitted to the Air Transport Committee on February 20, 1968, which had a hearing in Bathurst. This was a hearing with regard to a scheduled air service to the northern portion of the province. We are now well aware of the fact that Eastern Provincial Airways was successful in their bid to fly from Charlottetown to Montreal via Charlo. We refer you to page 3, paragraph 2, Mr. Chairman, which I will read.

> A multi-million dollar Department of National Defence air base at Chatham can at a minimum cost be made available for use by a commercial airline. Attached hereto Appendix U outlining the conditions laid down by the Department of National Defence for the use of this facility and also attached hereto Appendix V particulars of Canadian Forces Base, Chatham, N.B. The airport

[*Interprétation*]

dans la partie septentrionale de la province. Cette carte l'indique très clairement. Vous pouvez y voir les aéroports.

Trois des principaux aéroports qui ont un service de transport aérien régulier se trouvent dans la partie méridionale de la province; ce sont ceux de Moncton, de Fredericton et de Saint-Jean. Cela a été aussi indiqué clairement, mais de façon plus prononcée, sur cette carte, par les gens de la *Commuter Air Services Ltd.* Je voudrais vous faire remarquer sur cette carte que nous avons pris une ligne imaginaire. Nous avons abaissé un peu la ligne le long de la limite d'un comté, car nous ne voulions pas que vous croyiez qu'il y avait un comte supplémentaire dans la province. Nous estimons qu'il y a 241,000 habitants au nord de cette ligne, et 376,0000 au sud: Vous pouvez voir aussi que tout se trouve concentré dans la partie sud.

Maintenant, veuillez vous reporter à la carte qui montre les lignes aériennes des provinces Atlantiques. C'est une carte que vous trouvez dans tout avion d'Air Canada. Comme vous le voyez, les lignes aériennes ne font que survoler la partie septentrionale de la province sans s'y arrêter. La région de Miramichi se trouve à 135 milles de l'aéroport de Charlo, à 110 milles de celui de Fredericton et à 100 milles de celui de Moncton. Ce sont là des chiffres approximatifs. Un bon pourcentage du trafic d'Air Canada par Moncton et Fredericton vient de la région de Miramichi et d'autres régions de la rive nord, comme la côte de Caraquet. Pour prendre un service aérien régulier vers Montréal et l'Ouest ou Halifax et l'est, il nous faut parcourir 100 milles, dans le cas de Miramichi, ou 170 milles, dans le cas de la côte du Caraquet.

Maintenant, veuillez vous reporter à un mémoire présenté au Comité des transports aériens le 20 février 1968, au cours d'une audience à Bathurst. Il s'agissait d'une audience relative à un service aérien régulier pour la partie septentrionale de la province. Nous savons tous que l'*Eastern Provincial Airways* a obtenu l'adjudication d'un service de Charlottetown à Montréal, par Charlo. Monsieur le président, je vais vous lire le paragraphe 2 de la page 3:

> Le ministère de la Défense a une base aérienne à Chatham, au Nouveau-Brunswick, qui vaut des millions de dollars, et qu'il peut mettre, pour un coût très modeste, à la disposition d'une ligne aérienne commerciale. Ci-joints l'Appendice U, qui donne les conditions posées par le mnistère de la Défense nationale pour l'utilisation des installations, et l'Appendice V, qui donne des détails sur

[*Text*]

at Chatham has been in operation for the past 28 years ..

Mr. Chairman, I would like to refer very briefly to Appendix U, which is a letter from our former member of Parliament, Mr G. Roy McWilliam, a predecessor to Mr. Smith who is sitting at the table with us.

The Honourable Leo Cadieux, Minister of National Defence, has advised me that the Department of National Defence agrees in principle to the use of the Chatham airfield for a tri-weekly or daily service, operated by a commercial airline.

The three general conditions are:

1. that Canadian Armed Forces operations have privacy and that civil operations not interfere with Canadian Forces operations;

2. that Base security be maintained, including separate access to the civil emplaning area.

3. that there be no cost to the Department of National Defence.

I will now sir, refer you to Appendix V, the Canadian Forces Base data. This information has been supplied to us by the base itself:

The airfield at CFB Chatham consists of a primary Runway, two parallel taxistrips and aircraft parking facilities.

The runway is 10,000 ft. long. I repeat: 10,000 feet—and on each end of it, gentlemen, it has an extra 1,000 feet of overrun. It is 150 feet wide. The overshoot has 5,000 feet of approach lighting at each end and a high speed turnoff is located 2,500 feet from the runway.

The taxistrips are equipped with taxi and turn off lights. There is sufficient concrete aircraft parking area at the west end of the airfield for two or three passenger aircraft or more depending upon size.

Navigational aids consist of a Visual Control Approach Indicator System, Ground Control Approach,

All civilian use of the CFB should be restricted to one section. Then at the bottom of Appendix V:

The 10 year average bright sunshine hours per year for Chatham total 1,929.

[*Interpretation*]

la base des Forces armées du Canada de Chatham (N.-B.). L'aéroport de Chatham est en service depuis 28 ans...

Monsieur le président, je voudrais citer brièvement l'appendice U, qui est une lettre de notre ancien député, M. G. Roy McWilliam, celui qui a précédé M. Smith qui est ici avec nous.

L'honorable Léo Cadieux, ministre de la Défense nationale, me dit que le Ministère accepte, en principe, l'utilisation du terrain d'aviation de Chatham pour un service tri-hebdomadaire ou quotidien par une ligne aérienne commerciale.

Voici les trois conditions générales qu'il pose:

1. que les opérations des forces armées du Canada aient la priorité, et que les opérations civiles n'y nuisent pas;

2. que la sécurité de la base soit maintenue, y compris un accès séparé à la zone d'atterrissage des avions civils;

3. que cela ne coûte rien au ministère de la Défense nationale.

Maintenant, je voudrais vous reporter à l'appendice V, qui renferme des données sur la base des Forces armées du Canada. Ces renseignements nous ont été fournis par la base elle-même.

Le terrain d'aviation de la base de Chatham comprend une piste d'envol principale, deux pistes d'accès parallèles, et des installations pour le garage des avions. La piste a 10,000 pieds de long. Je le répète, messieurs, 10,000 pieds et, à chaque extrémité, 1,000 pieds de plus. Elle a 150 pieds de large. Les approches sont balisées sur 5,000 pieds à chaque extrémité, et il y a un signal de ralentissement à 2,500 pieds de la piste.

Les pistes d'accès sont balisées. Il y a une aire de garage en béton suffisamment grande, à l'extrémité ouest du terrain d'aviation, pour recevoir deux ou trois avions de passagers ou plus, suivant leur dimension.

Les instruments d'aide à la navigation aérienne consistent en un dispositif d'indication d'approche à contrôle visuel, d'un dispositif de contrôle d'approche au sol, etc.

L'usage de la base des Forces armées du Canada devrait se limiter à une partie de la base. On dit ensuite, à la fin de l'Appendice V, que la moyenne annuelle, sur dix ans, d'heures de soleil est de 1,929 heures pour

[*Texte*]

The 10 year average for Moncton is 1,877.

Since Appendix V was compiled we have more recent developments to report.

On the 3rd, 4th and 5th of this month, February 1969, a group of federal government directors, namely the Director of Policy and Planning, Department of Forestry and Rural Development, the Director of the Engineering Planning Branch of the federal Department of Public Works and the Director of the Marine Works Branch of the Department of Transport were in the Miramichi investigating our transportation problems. At that time the Commanding Officer of the Chatham Forces Base stated that a scheduled air service could commence at the Chatham base in 24 hours.

The Commanding Officer advised that they would provide at once, on a temporary basis until such time as permanent arrangements could be made, waiting room facilities and personnel to refuel and service aircraft where required. He followed this up by stating that they had designated an area on the base for civil use, which, we believe, has approximately four acres of paved parking and taxi strips.

We would eventually be supplied with our own entrance to the base and could construct a permanent passenger ticket office, waiting rooms, washrooms and freight and express facilities. Since the fall of 1967 we have been endeavouring to obtain a scheduled air service to the Miramichi area.

On February 12, 1967, we received word from our Member of Parliament, Mr. Chairman, that the base could be used for civilian use, and we have contacted one agency after another trying to obtain air services. We have discussed the subject with each of the following, and how many more I do not know: the Air Transport Committee, the Canadian Transport Commission, the Eastern Provincial Airways, Air Canada, the directors of various federal departments, whom we had on the Miramichi this month and the Maritime Transportation Commission located in Moncton; and we are now appealing to you.

Gentlemen, you should have been here earlier, believe me. We have a multi-million dollar air base at our disposal, with runways, navigational aids and facilities second to none in the world, plus, I would estimate, in

[*Interprétation*]

Chatham, et de 1,877 heures pour Moncton. Depuis que l'Appendice a été rédigé, il y a eu des nouveautés.

Les 3, 4 et 5 février 1969, un groupe de directeurs du gouvernement fédéral, soit le directeur de la Planification et des Politiques du ministère des Forêts et du Développement rural, le directeur de la Direction des études techniques du ministère fédéral des Travaux publics, et le directeur de la Direction des travaux maritimes du ministère des Transports, étaient dans la région de Miramichi pour étudier nos problèmes de transport.

Le commandant de la base des Forces armées du Canada a dit alors qu'un service aérien régulier pourrait débuter à la base de Chatham dans 24 heures. Il a dit que l'on allait fournir tout de suite, de manière temporaire jusqu'à ce que l'on puisse avoir des installations permanentes, des salles d'attente et le personnel nécessaire pour refaire le plein de combustible des avions et les réviser lorsqu'il y aurait lieu. Puis il a déclaré que l'on avait désigné une section de la base pour usage civil, qui a, je crois, environ quatre acres de terrain de garage et de pistes d'accès pavés.

Nous aurions notre propre accès à la base et pourrions y aménager un bureau permanent de vente des passagers, des salles d'attente, des salles de bain et des installations de transport de marchandises et de messagerie. Et depuis l'automne de 1967, nous avons essayé d'obtenir un service commercial aérien pour desservir la région du Miramichi. Le 12 février 1967, notre député nous informait que l'on pourrait utiliser cette base à des fins civils. Nous avons alors communiqué avec une agence après une autre pour essayer d'obtenir des services aériens. Nous en avons parlé avec les suivants et combien d'autres en plus: Le Comité des transports aériens, la Commission canadienne des transports, *l'Eastern Provincial Airways,* Air Canada, les directeurs des différents ministères fédéraux qui sont venus dans la région de Miramichi, au cours de ce mois et la Commission des Transports maritimes située à Moncton et maintenant c'est à vous que nous nous adressons.

Messieurs, vous auriez dû venir ici plutôt, croyez-moi. Nous avons à votre disposition une base qui vaut plusieurs millions de dollars et qui comprend des pistes, des aides à la navigation, et des installations unique au

[*Text*]

excess of 75,000 people—and that is an underestimate. I know you gentlemen like exact figures so I am giving you an approximation; but I am underestimating, I am sure. We are within a reasonable driving distance of this base—people whose taxes help pay for this base—and we cannot beg, borrow or steal the scheduled service which is so badly needed to assist our economic development.

There are rumours—and they are proven by these hearings—to the effect that consideration is being given to constructing at least one more airport in the province, and possibly an international airport. We cannot see why the taxpayer's money should be wasted on further airport facilities when we have an airport at Chatham which is second to none in the world.

I refer you to picture No. 6, Mr. Chairman, which shows the main Chatham runway, and I point out that there are three other runways which are covered with snow in this picture and cannot be distinguished.

You will notice in this picture, gentlemen, that I have circled the top righthand corner. That is the section of the base which has been allotted by the Department of National Defence for a scheduled passenger ticket office, and so on.

I will move from air to highways. We believe that the Provincial Government is now negotiating with the federal government for funds to up-grade highways in our area. I am referring to the northeastern portion of the province.

At this point, we are sorry, gentlemen, that this Committee cannot take time to drive over our roads on the Miramichi and the North Shore area. We are sure that if you drove over these roads you would strongly recommend that the federal government strongly support our provincial government's request for financial aid in this regard. We wish to point out that the southern and the west side of the Province benefit from the Trans Canada Highway.

Rail Travel. It has been many years since any appreciable improvement has taken place in the Canadian National Railways' service. The last up-grading was from steam to diesel. We are sure there is nothing more to be said about rail transportation; and we will leave freight rates to the people who are more conversant with them, the economists, and so on.

[*Interpretation*]

monde et en plus, 75,000 personnes qui attendent nos services. C'est une évaluation en deça de la réalité. Messieurs, je connais les chiffres exacts, mais je ne vais vous donner qu'une évaluation approximative, mais c'est une sous-estimation, j'en suis certain. Nous sommes à une distance de route raisonnable de cette base et nous ne pouvons pas demander, emprunter, ou voler les personnes qui, par leurs taxes, paient pour cette base, un service à horaire fixe dont on a vraiment besoin pour aider le développement économique de notre région.

Des rumeurs veulent, et c'est prouvé par ces audiences, que l'on songe à aménager au moins un autre aéroport dans la province et peut être un aéroport international. On se demande pourquoi l'argent des contribuables devrait être ainsi gaspillé pour d'autres installations d'aéroport, lorsqu'il y en a un qui est excellent à Chatham. Je vous reporte à la photo No. 6, monsieur le président, où l'on voit la piste principale de Chatham pour vous signaler que trois autres pistes recouvertes de neige dans cette photo ne paraissent pas sur cette photo. Vous y verrez, Messieurs, un cercle en haut au coin droit. C'est la partie de la base qui a été mise de côté par le ministère de la Défense nationale pour un bureau d'émission de billets des passagers pour les services à horaires fixes et autres. Je parlerai maintenant des réseaux routiers.

Nous croyons que le gouvernement provincial est en train de négocier en vue d'obtenir du gouvernement fédéral des sommes d'argent afin d'améliorer le réseau routier dans notre région. Je parle de la région nord-est de la province. Et maintenant, nous nous excusons, Messieurs, que ce Comité ne puisse prendre le temps pour emprunter nos routes de la région de Miramichi et de la rive nord. Je suis sûr que si vous parcouriez ces routes, vous recommanderiez fortement au gouvernement fédéral d'appuyer la demande de notre gouvernement provincial à l'égard de l'aide financière. Nous voulons vous signaler que la partie sud et la partie ouest de la province bénéficient des services de la route trans-canadienne.

Le voyage par chemins de fer: Un bon nombre d'années se sont écoulées depuis que des améliorations marquées ont été apportées au service des chemins de fer Nationaux du Canada. La dernière fois, c'était lorsque l'on a passé des locomotives à vapeur aux locomotives diesels. Je suis sûr qu'il n'y a rien de plus à dire en ce qui concerne le transport ferroviaire, nous laisserons aux spécialistes, les économistes, la question des tarifs mar-

[*Texte*]

Marine Transportation: Although air, rail and highway problems are acute, our marine transportation on the Miramichi River presents an even more serious problem.

We have three large exporting industries, two pulp mills and one mining company which exports lead, zinc and copper concentrates—and I refer to concentrates, not the ore; it is concentrated and then shipped.

These companies employ approximately 3,000 people. All three are endeavouring to compete in a highly competitive industrial market.

Every ton of material exported from these three industries has a surcharge of $6 per ton because of the primitive shipping facilities in the Miramichi area. The Chatham wharf, which again is on the Miramichi—as is Newcastle—is falling into complete disrepair. The Newcastle wharf has been 50 per cent rebuilt in the last few years. The other 50 per cent was left to fall into disrepair. It has extremely limited trackage, which stops several hundred feet from the wharf base.

I refer you, Mr. Chairman, to picture No. 1. You will notice on that picture the hole in the wharf, which fell in a year or so ago; and it shows where the trackage stops. You can see two little lines there.

Picture No. 2, Mr. Chairman, was taken in November, 1968, and it proves that the shipping on the Miramichi is quite heavy at times. This picture was taken on the day that the delegation of 13 businessmen from Newcastle left to meet the Hon. Jean Marchand to present our case on transportation last November. On that particular day, as the picture shows, three ships were tied up at the Newcastle wharf, plus five other ships in the harbour between Newcastle and Chatham.

Picture No. 3, Mr. Chairman, is another picture of the Newcastle wharf from the air.

Picture No. 4, Mr. Chairman, shows the J. D. Irving Limited icebreaking tanker, *Ours Polaire*, which navigated the river through heavy ice, and does quite frequently.

Picture No. 5, Mr. Chairman, which is, I think, the most important picture, shows two of the pulp mills, one in the foreground and one in the background.

There is a complete lack of transit sheds in the Miramichi for either ore concentrates or paper products Picture No. 1 shows very little paving on the wharf. The most important problem is the draft limitation imposed by a sand bar at the mouth of the Miramichi River. The maximum draught at present is 21

[*Interprétation*]

chandises. Le transport maritime: Le transport par air, par terre et par chemin de fer présentent des problèmes aigus, mais le long de la rivière Miramichi le transport maritime est une question beaucoup plus grave. Nous comptons trois grandes industries d'exportation, deux moulins à papier, et une société minière qui exportent du plomb, du zinc et des concentrés de cuivre, je dis bien des concentrés et non pas du minerai. C'est concentré et ensuite expédié.

Ces compagnies ont environ 3,000 employés. Ces trois essaient de lutter sur un marché industriel hautement concurrentiel et chaque tonne exportée à partir de ces trois industries, a une surcharge de $6 la tonne dû aux installations de transport inadéquates dans la région de la Miramichi. Le quai de Chatham qui, une fois de plus, se trouve sur la Miramichi, tout comme Newcastle, est dans un état d'abandon. Le quai de Newcastle a été reconstruit à moitié au cours des dernières années et l'autre moitié est laissée à l'abandon, et le réseau ferroviaire est extrêmement limité et il y a un arrêt à plusieurs centaines de pieds du quai.

Je vous reporte à la photo nº 1. Vous y remarquerez un cercle autour du trou dans le quai qui s'est effrondré, il y a un an environ, et qui montre l'endroit où s'arrête la voie. Vous pouvez y voir deux petites lignes. La photo nº 2, monsieur le président, a été prise au mois de novembre 1968, vous y voyez que la navigation sur la Miramichi est parfois assez pénible. Cette photo fut prise le jour où la délégation de Newcastle, composée de 13 hommes d'affaires est partie pour rencontrer Monsieur Jean Marchand pour présenter votre demande sur les transports en novembre dernier. Ce jour, comme le montre la photo, trois navires étaient amarrés au quai de Newcastle et cinq autres navires dans le port entre Newcastle et Chatham.

Le photo nº 3 est une autre photo du quai de Newcastle et cinq autres navires dans le montre l'Ours Polaire, navire-citerne brise-glace de la J. D. Irving Limited Icebreaking qui navigue assez fréquemment dans la glace épaisse de la rivière. La photo nº 5 est à mon avis la photo la plus importante. Elle montre deux des usines à papier, une à l'avant-plan et l'autre à l'arrière-plan. Il y a un manque total d'entrepôts de transit pour les concentrés ou encore pour les produits du papier. La photo nº 1 montre que le quai est à peine pavé. Le problème le plus grand, c'est le tirant d'eau restreint par l'ensablement à l'embouchure de la rivière Miramichi où il faut au moins 27 pieds de tirant d'eau. Il est de plus en plus difficile pour les trois ou quatre industries susmentionnées de trouver

[*Text*]

feet at high tide, whereas a minimum 27-foot draught is required. Because of the sand bar problem at the moment it is becoming ever more difficult for the three afore-mentioned industries to find ships that will navigate the Miramichi River.

If the marine transportation facilities are not brought up to a reasonable standard the companies will not be able to operate in a competitive market with a $6 shipping surcharge. One hundred ships used the Miramichi River—and I repeat 100 ships used the Miramichi River—in 1968. This can be verified. If I am out, I am out only one or two ships. The majority of them were restricted to 50 per cent cargo—50 per cent cargo—because of one sand bar, or two, at the mouth of the river.

Gentlemen, we have kept our brief as simple as possible, but I am sure you see the urgency. Your sincerity in wanting to assist our regional economy through improved transportation is well accepted, and the Miramichi is a good place to start.

We refer you to Leonard Poetschke, Director of Policy and Planning in the new Regional Development Office in Mr. Marchand's office. I am sure he can fill any of you in on the problems of the Miramichi.

In closing, Mr. Chairman, we refer you to three other items in the envelope which we have supplied. One is a list of persons and the companies they represented at a meeting on transportation held on August 21, 1968, in the town hall at Newcastle. There were 32 business people and government people, and very few politicians. There were all business men directly interested in this.

We are sure that 32 people would not show up for such meetings unless there was the utmost urgency.

There is also a letter received from Air Canada and this is the lulu of lulus, gentlemen! It was written on February 10, and I refer you to three lines in the first paragraph. We were asking for air service and this is Air Canada replying. It is signed by Mr. J. E. Nickson, who, I believe, is Assistant Vice-President, Sales: "We have now been advised that the Canadian Transport Commission do not feel this is in their area of responsibility since it only involves one load of transport".

If the Canadian Transport Commission is not responsible for transportation in this

[*Interpretation*]

des navires qui pourront emprunter la rivière Miramichi, à cause de cet ensablement.

Si les installations de transport maritime ne sont pas élevée à un certain niveau, les compagnies ne seront pas en mesure de concurrencer avec une surcharge de $6.00 pour le transport de leurs produits. Cent navires ont emprunté la rivière Miramichi en 1968. Je dis bien cent navires. Vous pouvez le vérifier. Si je me trompes c'est à peine d'un ou de deux navires. Mais la plupart ont dû s'en tenir à 50 p. 100 de la cargaison, à cause de cet ensablement à l'embouchure de la rivière. Messieurs, notre mémoire est le plus simple possible, mais je suis certain que vous en voyez le caractère d'urgence. Votre sincérité à aider vraiment l'économie de notre région en améliorant les transports est des plus appréciée et Miramichi est un excellent endroit pour commencer ce travail. Nous vous referrons à monsieur Leonard Poetschke chef de la Direction de la ligue de conduite et de la planification du nouveau Bureau de développement régional du bureau de monsieur Marchand. Je suis sûr qu'il peut vous donner tous les détails et les renseignements voulus sur les problèmes de la région de la Miramichi.

En terminant, nous vous reportons trois documents qui se trouvent dans l'envelope que nous vous avons distribuée, soit une liste des personnes et des compagnies, qu'ils ont représenté au cours d'une réunion sur les transports tenue le 21 août 1968 à l'Hôtel de Ville de Newcastle. Il y avait 32 hommes d'affaires, fonctionnaires et très peu d'hommes politiques. Ils étaient tous des hommes d'affaires qui s'intéressent directement à la question.

Je suis sûr que 32 personnes ne seraient pas venu à cette réunion à moins que ce ne soit de toute urgence. Il y a aussi une lettre d'Air Canada et voilà la meilleure d'entre toutes. Elle a été écrite le 10 février et je vous reporte aux trois lignes du premier paragraphe. Nous leur demandions un service aérien et voici ce qu'Air Canada nous a répondu. La lettre est signée par monsieur J. E. Nickson qui, je crois, est vice-président adjoint des ventes, qui dit qu'Air Canada a été informé que la Commission canadienne des transports n'est pas d'avis que ce domaine relève de sa compétence, étant donné que cela n'implique d'une charge de transport. Si la Commission canadienne des transports ne se tient pas responsable du

[*Texte*]

country who is? I do not know. But there it is, sir; and there is another one.

We ask, Mr. Chairman, that the Canadian Transport Commission investigate air service and other transportation, which particularly affects 75,000 people in our area. I am referring to 50,000 in the Miramichi and another 25,000 within reasonable distance.

For your information, Mr. Chairman, we are enclosing a copy of the submission made to the Hon. Jean Marchand in October, 1968, by the 13 businessmen.

The Chairman: Thank you.

Mr. McKenna: Sir, that is the end of my submission. I am sorry if I went a little fast, but I know that Mayor MacDonald from Campbellton is a little bit concerned about not being heard and I will stop now.

The Chairman: Do you have a word to say, Mr. Martin?

Mr. Robert Martin (Mayor, Chatham, New Brunswick): I merely wish to say, Mr. Chairman and gentlemen, that this is basically a joint submission by the Miramichi area. What we are trying to tell you is that the Northern part of New Brunswick has been criminally neglected for a couple of hundred years, not only in transportation but in every other field.

Mr. G. A. Percy Smith (Northumberland-Miramichi): Mr. Chairman, I just have a word to say as member of Parliament for the area concerned.

The Chairman: May I have your name for the record?

Mr. Smith (Northumberland-Miramichi): Percy Smith, M.P. I want to associate myself completely and fully with the brief that has just been submitted.

The Chairman: Thank you. Mr. Corbin.

Mr. Corbin: I have a question which I think Mr. Martin can answer. It has nothing to do with the airport as such, it is a general transportation problem. Could you comment briefly, sir, on the roads in your area and also about a proposed trans-New Brunswick corridor route linking Renous to Plaster Rock, please.

[*Interprétation*]

transport dans ce pays, qui peut le faire alors? Je n'en sais rien.

Mais voilà, messieurs, et il y en a une autre. Nous demandons donc, monsieur le président, que la Commission canadienne des transports fasse enquête sur le service aérien et sur les autres moyens de transport qui touchent en particulier 75,000 personnes dans notre région. Je parle des 50,000 personnes dans la région de la Miramichi et des 25,000 dans un rayon normal. Pour votre gouverne, monsieur le président, nous y joignons une copie de la demande présenté à l'honorable Jean Marchand, au mois d'octobre 1968, par 13 hommes d'affaires.

Le président: Merci.

M. McKenna: Voici la fin de ma demande. Je m'excuse si ce fut un peu rapide, mais je sais que Son Honneur le maire MacDonald de Campbellton se demande un peu s'il pourra être entendu. Je me tais donc.

Le président: Est-ce que vous avez quelque chose à dire, monsieur Martin?

M. Robert Martin (maire de Chatham (N.-B.)): J'aimerais simplement dire qu'il s'agit d'une demande conjointe présentée par les représentants de la région de la Miramichi. Au fond, ce que nous essayons de vous dire, c'est que la partie septentrionale du Nouveau-Brunswick a été négligé de façon inadmissible depuis une couple de centaines d'années, non seulement dans le domaine des transports mais dans tous les autres domaines aussi.

M. G. A. Percy Smith (Northumberland-Miramichi): Monsieur le président, juste quelques mots à titre de député de la région en cause.

Le président: Votre nom, je vous prie?

M. Smith (Northumberland-Miramichi): Monsieur Percy Smith, député. Je voudrais justement être complètement associé au mémoire qui vient d'être présenté.

Le président: Merci. Monsieur Corbin.

M. Corbin: Il y a une question à laquelle, je crois, pourrait répondre monsieur Martin. Cela n'a pas trait du tout à l'aéroport en tant que tel. Cela regarde le problème des transports dans leur ensemble. Est-ce que vous pourriez nous parler brièvement, monsieur, des routes de votre région, et aussi du projet d'un corridor à travers le Nouveau-Brunswick qui relierait Rinouse à Plaster Rock.

[*Text*]

Mr. Martin: Mr. Corbin and gentlemen, of course, our road system on the eastern coast of New Brunswick is terrible. Our roads are not there. Of course, we are encouraged that at least the provincial government has put highway No. 11, which runs up the coast of New Brunswick, on a priority basis. We take that to mean—at least, I hope this is what it means—that it will be the next major road development in the Province of New Brunswick. In the light of that and because of the fact the government of New Brunswick has pretty well decided that a corridor road must wait—I think everybody knows that money is at the root of all our problems—we have not gone into the matter of corridor roads to any great extent. As I say, we are talking about roughly 300,000 people, which is half the population of the province, and a corridor road through Maine, where it is suggested, does not seem to be the answer for our part of the country. That is all I feel I can say on that.

Mr. Corbin: What about Renous-Plaster Rock?

Mr. Martin: Renous-Plaster Rock, of course, is an alternate and it would open up the whole of New Brunswick. You see, there is nothing through the middle of New Brunswick and Renous-Plaster Rock would do a big job in opening the whole country up. That is where all the mining is.

Mr. Corbin: Yes, but do you feel that the Plaster Rock-Renous road would be a better solution to Maritime access into central Canada by way of highways than the proposed Maine Corridor Road?

Mr. Martin: I certainly do, but here again I am not really in a position to try to argue with figures, and so on, I do not have them, but it seems to me that everything indicates we should open up that part of the country.

Mr. Corbin: Thank you.

The Chairman: Mr. Pringle.

Mr. Pringle: I am referring to your remarks regarding the airport, which seem rather difficult to understand. You have been waiting since 1967 to get permission but you apparently have already received permission from the Department of National Defence. Is that correct?

Mr. McKenna: The Department of National Defence, yes. As you realize, they gave their permission to land on the base and they have offered their facilities, including

[*Interpretation*]

M. Martin: Monsieur Corbin, évidemment, le réseau de nos routes le long de la Côte est du Nouveau-Brunswick est affreux. Les routes n'existent pas. Évidemment, nous sommes encouragés quelque peu par le fait que le gouvernement provincial a donné un caractère prioritaire à la grande route nº 11, qui longe la côte du Nouveau-Brunswick. Par conséquent, nous espérons que cela constituera le prochain agrandissement routier dans la province. A la lumière de ce fait, et en raison du fait que le gouvernement du Nouveau-Brunswick a pratiquement décidé qu'un corridor routier devrait attendre, je crois que tous les gens savent que l'argent est la source de tous nos problèmes. Nous n'avons pas étudié la question du corridor routier dans ses moindres détails. Il s'agit de 300,000 personnes, soit environ la moitié de la population de la province et un corridor routier à travers le Maine là où on propose de le placer ne semble pas être la solution idéale pour notre province. C'est tout ce que j'aurais à dire à ce sujet, monsieur.

M. Corbin: Et Rinouse-Plaster Rock?

M. Martin: Il s'agit d'une autre solution qui passerait à travers le Nouveau-Brunswick. Vous voyez qu'il n'y a rien qui passe au milieu du Nouveau-Brunswick et Rinouse-Plaster Rock serait un grand travail d'ouverture du pays. Toutes les mines sont là.

M. Corbin: Mais, croyez-vous que la route Plaster Rock-Rinouse serait une meilleure solution d'accès au centre du Canada, par la route plutôt que par le corridor du Maine?

M. Martin: Oui, certainement, mais je ne pourrais essayer de vous le prouver avec des chiffres car je ne les ai pas en main. Mais, tout indique que nous devrions ouvrir cette partie de la province.

M. Corbin: Je vous remercie, monsieur.

Le président: Monsieur Pringle.

M. Pringle: Je voudrais parler de ce que vous avez dit au sujet de l'aéroport et qui semble assez difficile à comprendre. Vous attendez depuis 1967 pour avoir la permission mais vous avez apparemment reçu déjà la permission du ministère de la Défense nationale. Est-ce juste?

M. McKenna: Oui, le ministère de la Défense nationale. Comme vous le savez probablement, le ministère a donné la permission d'atterrir sur la base, et ils nous ont offert

[*Texte*]

the waiting room and everything else, but the thing is who is going to land, Air Canada or a regional carrier?

Mr. Pringle: So you have an air service in mind that would like to use the airport and are prepared to go ahead and operate out of it if you can get the proper permission from the various authorities?

Mr. McKenna: Apparently from talking to Air Canada and from a letter I see here, it is obvious that they are not interested. The only thing to do is to turn to regional carriers, and the regional carriers are making a survey now. In fact, there is a gentleman right here who is going over to Chatham tomorrow with them I believe to start a survey. In fact, they were talking to the Premier today on this same subject, but there does not seem to be any regional policy.

Let us say, for instance, that you have 75,000 people within a reasonable driving distance—say 50 miles of Chatham in all directions—the first argument you will get from an air service is that the people are not oriented with respect to flying, they are just not interested in flying, but this is not true. It is the same thing as in 1920 and 1930 when I was eating porridge, I did not know what bacon or eggs were until I ate them, but now I eat them every morning.

Mr. Pringle: In other words, you really have not interested a regional air line in making proper application for service out of your airport?

Mr. McKenna: We definitely have interested them and they are starting a survey tomorrow.

Mr. Pringle: So that is waiting. What about the use of navigational facilities, tower control, and so forth? You referred to the various all-weather equipment available on the field and the facilities. Will you be able to make arrangements for the use of these facilities with the Department of National Defence without additional cost to somebody?

Mr. McKenna: They are made.

Mr. Pringle: In other words, the tower operators are prepared to handle your traffic and the GCA boys will take care of your...

Mr. McKenna: I could add something to that, sir. One of the larger radar bases is

[*Interprétation*]

leurs installations, y compris la salle d'attente et le reste, mais il reste à déterminer qui va atterrir: Air Canada ou un transporteur régional?

M. Pringle: Avez-vous un service aérien en vue qui aimerait utiliser l'aéroport et qui serait prêt à aller de l'avant et à exploiter cet aéroport à condition de pouvoir obtenir la permission des diverses autorités en cause?

M. McKenna: D'après ce que j'ai vu de la lettre d'Air Canada et après en avoir parlé aux autorités, il est évident qu'ils ne sont pas intéressés. Par conséquent, nous ne pouvons nous tourner que vers un transporteur régional. Quelques-uns font actuellement des études à cet effet. En fait, cet homme doit aller à Chatham demain avec eux pour commencer une enquête, je crois... Ils en ont parlé au premier ministre aujourd'hui, mais, il ne semble pas y avoir de politique régionale à ce sujet.

Disons, par exemple, que vous avez 75,000 personnes dans un rayon raisonnable, de 50 milles de Chatham. Le premier argument que vous donnera un service aérien, c'est que les gens ne pensent pas à utiliser le transport aérien, mais ce n'est pas vrai. C'est la même chose qu'en 1920 et en 1930, alors que je mangeais du gruau je ne connaissais les œufs, ni le bacon jusqu'à ce que j'en mange et depuis lors j'en mange tous les matins.

M. Pringle: En d'autres termes, vous n'avez pas en vue un transporteur régional qui pourrait présenter une demande en vue de desservir à partir de notre aéroport?

M. McKenna: Nous avons réussi à les intéresser, ils commencent une étude demain.

M. Pringle: Qu'est-ce qui en est au sujet des installations à la navigation, les tours de contrôle et ainsi de suite. Vous avez mentionné le matériel en tout temps et les installations qui seraient à votre disposition sur le terrain. Est-ce que vous pourriez utiliser ces installations sans d'autres frais supplémentaires, en vous arrangeant avec le ministère de la Défense nationale?

M. McKenna: Cela existe déjà et les arrangements sont déjà pris.

M. Pringle: En d'autres termes, les opérateurs de la tour sont prêts à accepter le trafic et les garçons de la GCA prendront soin de votre...

M. McKenna: Je pourrais peut-être ajouter quelque chose à ce sujet, monsieur. Une des

[*Text*]

only 10 miles from there and I am sure they would be glad of the practice.

Mr. Pringle: What would you consider to be the existing status of your request with regard to governmental authorities, without reference to interesting regional carriers.

Mr. McKenna: Our present status?

Mr. Pringle: Yes.

Mr. McKenna: Other than the Department of National Defence, we do not have any status.

Mr. Martin: One thing we may need from the Air Transport Committee is that eventually whoever the carrier is that comes in may have to have a new pick-up point—maybe Moncton or Halifax—and of course that is going to cause a fight.

Mr. Pringle: I do not quite follow you.

Mr. McKenna: We have a map here.

Mr. Pringle: It is all right.

Mr. Martin: In other words, perhaps the carrier, wherever he comes from, is going to have to justify giving a proper service to northeast New Brunswick. He is going to have to have a better starting point.

Mr. Pringle: A bit more traffic?

Mr. Martin: Yes.

Mr. Pringle: In other words, he would not only have to get permission to operate off your field but he would also have to get permission to operate other fields, and this is creating a problem.

Mr. Martin: Yes. That is a strong possibility.

Mr. Pringle: Thank you very much.

Mr. Rock: A supplementary, Mr. Chairman.

The Chairman: Mr. Rock.

Mr. Rock: I am not aware if they submitted anything to this task force or whether they were asked to submit anything.

Mr. McKenna: I have a telegram here which was sent to the Honourable R. J. Higgins and it is dated January 17, 1968, in which we made representations concerning the problems we were having with the CNR when they took the Ocean Limited off our run,

[*Interpretation*]

bases les plus considérables de radar n'est qu'à 10 milles de cet endroit, et on pourrait s'en servir, j'en suis sûr.

M. Pringle: Quelle est, à votre avis, l'importance actuelle de votre demande en ce qui concerne les autorités gouvernementales en parlant des transporteurs régionaux qui pourraient peut-être être intéressés?

M. McKenna: Notre état actuel?

M. Pringle: Oui.

M. McKenna: A part le ministère de la Défense nationale, nous n'en avons pas.

M. Martin: Il y a une chose dont nous aurions peut-être besoin du Comité des transports aériens, c'est que, quel que soit le transporteur provincial intéressé, il devra peut-être choisir un autre point de départ. Peut-être Moncton ou Halifax, ce qui ne manquera pas de causer des ennuis.

M. Pringle: Je ne vous suis pas tout à fait.

M. McKenna: Voici une carte géographique.

M. Pringle: Très bien.

M. Martin: En d'autres mots, peu importe d'où vient le transporteur, il faudrait qu'il justifie le service pour la partie nord-est du Nouveau-Brunswick. Il lui faudra un meilleur point de départ.

M. Pringle: Un plus grand trafic?

M. Martin: Oui.

M. Pringle: Si j'ai bien compris, il lui faudrait non seulement la permission d'exploiter votre terrain, mais il faudrait peut-être la permission d'exploiter d'autres aéroports aussi et c'est ce qui crée un problème.

M. Martin: Oui. C'est très possible.

M. Pringle: Merci beaucoup.

M. Rock: Une autre question, monsieur le président.

Le président: Monsieur Rock.

M. Rock: Je ne sais pas s'ils ont présenté un document au comité d'étude ou si on le leur a demandé.

M. McKenna: Voici un télégramme qui a été envoyé à l'honorable R. J. Higgins, en date du 17 janvier 1968, où nous faisions des propositions au sujet des problèmes que nous avons eus avec les chemins de fer Nationaux du Canada lorsqu'ils ont éliminé l'*Ocean*

[*Texte*]

which had been there for 60 years, and diverted it in another direction, which...

Mr. Rock: I am talking about the transportation task force.

Mr. McKenna: Yes, this is what I am referring to. I believe, Mr. Higgins is the chairman of that task force, is he not? I think he was at one time. Our telegram on that day was to the effect that an investigation is presently being carried out to support the need for a passenger and freight air service and the Miramichi-Chatham air base is the obvious landing site, and we asked that they consider our rail problem, and so on. That was away back in January of 1968.

Mr. Rock: Yes, but you did not send them a brief, or anything. They did not ask you to appear in front of them.

Mr. McKenna: We did not appear in front of them, no.

Mr. Rock: Did they not hold any hearings in the area? It is a task force and...

Mr. Martin: They did not pass our way.

Mr. McKenna: Not our way. We were not invited.

Mr. Rock: Thank you.

The Chairman: Mr. Horner.

Mr. Horner: Just to clear up a point with regard to the Chatham air base. EPA now has the right to fly Charlottetown—Charlo—Montreal. Is that right? Is this what you said?

Mr. Martin: Yes.

Mr. Horner: Did you know whether they applied or were even interested in applying to fly into Chatham rather than Charlo?

Mr. McKenna: I do not know. In the back of my mind it seems that possibly if Charlo did not have enough air traffic to warrant a seven day a week service that possibly EPA would come in, but I now find out to everybody's surprise that there is more traffic coming out of the Charlo airport—in fact, I think it is over double what they had anticipated—so this is out of the question. I am sure that the Chatham air base, with the industry that is involved and the people who are oriented to fly—mainly because we drive from Fredericton to Moncton now—would even double that.

[*Interprétation*]

Limited, après 60 ans, et qu'ils l'ont dirigé vers un autre endroit qui...

M. Rock: Je parle du Comité d'étude sur les transports.

M. McKenna: Oui, c'est ce à quoi je me réfère. Je crois que monsieur Higgins en était le président, n'est-ce pas? Je crois qu'il le fut déjà. Notre télégramme disait que nous faisions des enquêtes pour appuyer la demande d'un service aérien pour le transport des passagers et des marchandises à partir d'une base située à Miramichi-Chatham. Nous demandons aussi qu'on étudie notre problème de transport ferroviaire, et ainsi de suite. C'était en janvier 1968.

M. Rock: Vous n'avez pas envoyé de mémoire ou quoi que ce soit? On ne vous a pas demandé de comparaître?

M. McKenna: Nous n'avons pas comparu.

M. Rock: Est-ce qu'ils n'ont pas tenu d'audience dans la région? Étant donné qu'il s'agissait d'un comité d'étude, et...

M. Martin: Ils ne sont pas passés dans notre région.

M. McKenna: Pas dans notre région. On ne nous a pas invités.

M. Rock: Très bien, merci.

Le président: Monsieur Horner.

M. Horner: Au sujet de la base aérienne de Chatham. EPA a maintenant la permission de desservir Charlottetown, Charlo, Montréal, n'est-ce pas?

M. Martin: Oui.

M. Horner: Savez-vous s'ils ont présenté une demande ou s'ils étaient intéressés à demander la permission de desservir Chatham plutôt que Charlo?

M. McKenna: Je ne sais pas. J'ai dans l'esprit l'idée qu'à un moment donné, si Charlo n'avait pas eu suffisamment de trafic aérien pour justifier un service de 6 ou 7 jours, peut-être que EPA viendrait. Mais, maintenant j'apprends à l'étonnement de tous qu'il y a plus de trafic en provenance de l'aéroport de Charlo. Je crois, en fait, que c'est le double de ce qu'on prévoyait. Et, alors, inutile d'y penser. Je suis sûr que la base de Chatham avec toute l'industrie en cause et les gens qui sont prêts à voyager en avion, surtout maintenant que nous nous rendons jusqu'à Fredericton à Moncton, va doubler de trafic.

[*Text*]

Mr. Horner: Have you people gotten in touch with EPA to see whether or not you could interest them in stopping at Chatham?

Mr. McKenna: The vice-president of EPA is right here and he has a research man with him from Unika research to look into this. The problem is going to come. The question, possibly, is whether it is going to be economical to do this. What happens if it is not economical? Do they say all right and walk away from us and leave the 75,000 people hoofing across the road that we were just talking about, or are they going to give us a subsidy to keep it going?

Mr. Horner: The Department of National Defence has given complete approval for a civilian air line to fly in there. How much difficulty would a civilian air line have with regard to right-of-way, and so on, in approaching, landing and taking off? Is it a busy Department of National Defence air base or is it...

Mr. McKenna: It is reasonably busy. It is a Voodoos atomic base with atomic missiles, and it will likely be there for a long time because of this. According to the commanding officer—and I am sure Mr. Martin will verify this—there is absolutely no problem.

Mr. Horner: Do you know the general attitude that a civilian air line takes with regard to flying into a military base? Do they look upon this as a favourable thing, with passengers and all, or do they shun the idea?

Mr. McKenna: I do not think so. I think Bagotville, Quebec, has one. Shearwater, Nova Scotia, used to have one, and you have Gander.

Mr. Horner: I wish you luck.

The Chairman: Mr. McGrath.

Mr. McGrath: Mr. Chairman, my question has already been answered because it would appear to me that the resolution of this problem has already presented itself in the evidence in that EPA has expressed an interest in this service. Whether or not it can be done economically, of course, is another question.

The Chairman: Thank you.

Mr. McKenna: Mr. McGrath answered his own question but I would like to say that if it cannot be done economically then I feel that the federal government has an obligation to subsidize it until it is economically feasible.

[*Interpretation*]

M. Horner: Est-ce que vous avez communiqué avec EPA pour savoir s'ils seraient intéressés à desservir Chatham?

M. McKenna: Le vice-président de EPA est ici, il a, avec lui, un employé de *Unika research* qui doit faire enquête sur cela. Un problème va surgir. La question peut-être serait de savoir si c'est rentable ou non. Si ce n'est pas rentable, qu'est-ce qui arrive? Est-ce qu'ils doivent dire très bien, on n'insiste pas et on laisse 75,000 personnes marcher sur la route dont on vient de parler ou on demande une subvention pour continuer?

M. Horner: Le ministère de la Défense nationale a donné toute son approbation pour une ligne aérienne civile. Quelles seraient les difficultés d'une compagnie civile en ce qui concerne les priorités, au moment de l'approche, de l'atterrissage et des décollages? Est-ce que la base militaire est très occupée ou...

M. McKenna: Elle est assez occupée. C'est une base atomique, avec des Voodoo, des fusées à charge nucléaire, et ils seront là pendant longtemps encore de ce fait-là. Selon le commandant, et je suis sûr que M. Martin pourrait vérifier la chose, il n'y a aucun problème.

M. Horner: Connaissez-vous l'attitude générale d'une compagnie aérienne civile qui utilise une base militaire? Est-ce qu'elle considère cela comme étant favorable en ce qui concerne les passagers ou est-ce qu'elle désapprouve l'idée?

M. McKenna: Je ne pense pas. Je pense que c'est le cas à Bagotville (Québec), à Shearwater (Nouvelle-Écosse) et à Gander.

M. Horner: Je vous souhaite bonne chance.

Le président: M. McGrath.

M. McGrath: M. le président, la réponse à ma question apparaît d'elle-même en ce sens que *EPA* a manifesté de l'intérêt pour ce service. Qu'on puisse le faire de façon rentable ou non ça c'est une autre chose.

Le président: Merci.

M. McKenna: M. McGrath a répondu lui-même à sa propre question, mais je voudrais dire que si cela n'est pas rentable, le gouvernement fédéral a l'obligation de subventionner jusqu'à ce que le service soit économiquement rentable.

[*Texte*]

Mr. McGrath: Sir, I agree with you 100 per cent.

The Chairman: Mr. Breau.

Mr. Breau: Mr. Chairman, perhaps it would help if you brought in that map again.

The Chairman: The big map?

Mr. Breau: Yes. At present EPA has a service out of Charlo. As Mayor McKenna so eloquently pointed out—and by the way, I would like to compliment you on your well-presented brief—this does not give much of a service to Northern New Brunswick as a whole, not much better than we had before.

You have, for example, the City of Bathurst which has a better service but you have all the Caraquet coast—Tracadie, Shippegan, Caraquet, Chatham, Miramichi—as you said, which does not have a better service than before. I agree with Mayor McKenna, with the facilities all being in Chatham and because an airliner can land there practically 24 hours, that it seems very reasonable, very feasible. But we are going to leave the people from Campbellton without a service. They would be about 100 miles from Chatham.

Mr. McKenna: More than that. But you would not leave them without a service because you have your service. You see, we are not asking that you lose any...

Mr. Breau: You are not asking for an alternative service?

Mr. McKenna: Oh, no, no.

Mr. Breau: Another one completely.

Mr. McKenna: Sure. You people are entitled to your service and the people in Prince Edward Island are.

Mr. Breau: No, but my service would be yours.

Mr. McKenna: Oh, pardon me. I was thinking you were farther north.

Mr. Breau: This is what I am coming at. If you look at the map again, and considering that the Mayor of Bathurst said to us this morning that all you need in Bathurst is an extension of about 2,000 feet of runway to have the jets to which EPA will probably go before too long, instead of having two within 110 miles from one another would you not

[*Interprétation*]

M. McGrath: Je suis tout à fait de votre avis, Monsieur.

Le président: M. Breau.

M. Breau: Monsieur le président, ça aiderait peut-être si vous pouviez montrer cette carte encore une fois.

Le président: La grande carte?

M. Breau: Oui, actuellement *EPA* a un service de Charlo. Comme M. le maire McKenna l'a si bien fait remarquer, et je voudrais le féliciter de son mémoire si bien présenté, cela ne fournit pas un meilleur service au nord du Nouveau-Brunswick. Pas bien meilleur que ce qu'on avait auparavant.

La ville de Bathurst, par exemple, a un meilleur service, mais vous avez tout le littoral de Caraquet, Tracadie, Shippegan, Caraquet, Chatham, Miramichi comme vous disiez, n'a pas un service amélioré. Je suis du même avis que le maire McKenna, étant donné que toutes les installations sont à Chatham, et qu'un avion de ligne peut atterrir là pratiquement vingt-quatre heures sur vingt-quatre, cela nous semble très faisable. Mais je me dis que nous allons laisser les gens de Campbellton sans aucun service. Ils seront à environ 100 milles de Chatham.

M. McKenna: Plus que cela, mais vous ne les laisserez pas sans service tout de même puisqu'ils ont déjà votre service. Nous ne vous demandons pas d'en abandonner.

M. Breau: Vous ne demandez pas un service de remplacement?

M. McKenna: Oh, non, non.

M. Breau: Vous demandez un nouveau service?

M. McKenna: Évidemment. Vous avez droit à votre service de même que les gens de l'Île du Prince-Édouard.

M. Breau: Oui, mais mon service sera le même que le vôtre.

M. McKenna: Je m'excuse. Je pensais que vous étiez plus au nord.

M. Breau: J'y arrive. Si vous regardez la carte encore une fois et étant donné ce que le maire de Bathurst nous a dit ce matin, que tout ce qu'il fallait c'était une extension de 2000 pieds de la piste d'envol pour recevoir les avions à réaction que EPA aura probablement avant longtemps, au lieu d'avoir deux aéroports à 110 milles l'un de l'autre. Ne croyez-vous pas alors qu'un compromis rai-

[*Text*]

think that a reasonable compromise could be made with Bathurst to have one airline?

Campbellton would only be about 65 or 70 miles from Bathurst, the Miramichi would only be 40 miles from Bathurst, and the Caraquet Coast, the extreme of the coast, say Miscou Island, from which there would not be much traffic, would be 60 miles or so from Bathurst.

Mr. McKenna: I will answer that question and I will answer it for the whole board to hear very clearly. As I said in my brief, why spend any more money on airports when you have an airport which is one of the best in the world? That is number 1. Number 2, you have one in Charlo which is flying aircraft out of there or flying passengers out. As far as the people of the Miramichi going north to Bathurst are concerned, because of the weather conditions—and it is right here in this brief to the Air Transport Committee—we would not be interested.

I sincerely mean this; that our people would not drive the 50 or 60 miles to a Bathurst airport, particularly under winter conditions when you do not even know whether or not you are going to get through. This happens so many times in winter that you are better to go south where the weather conditions are better and get on an aircraft in Moncton or go west and get on an aircraft in Fredericton.

Mr. Breau: Mr. Chairman, as I said before, the fact that you have the airport there is very favourable to the Miramichi and I agree with that completely. It would give better service because having a better runway you would have bigger planes, but do you think that two air services would be economically feasible for Northern New Brunswick?

Mr. McKenna: We already have one. We only need one more.

Mr. Breau: But do you think the other one could live?

Mr. McKenna: Sure it could live. When we supported EPA to go into Charlo we supported them for several reasons which were selfish because we felt that the farther north the air base was, the better chance they would have of using the Chatham base. So if you take the province and part of Quebec and you take the Charlo base, it handles services in the northern part of the province and part of the Quebec province.

[*Interpretation*]

sonnable pourrait être trouvé avec Bathurst, pour avoir une seule ligne aérienne.

Campbellton se trouverait à environ 65 ou 70 milles de Bathurst et la côte de Caraquet, la côte extrême, disons l'île Miscou, d'où il ne viendrait pas grand chose se trouverait à moins de 60 milles de Bathurst.

M. McKenna: Permettez-moi de répondre à cette question et je répondrai de façon très claire. Comme je l'ai dit dans mon mémoire, pourquoi dépenser encore des fonds pour un aéroport alors que vous en avez déjà un qui est l'un des meilleurs du monde? C'est le premier point. Deuxième point, vous en avez un à Charlottetown pour le frêt et les passagers. En ce qui concerne les gens de Miramichi qui se rende à Bathurst, en raison des conditions climatiques vers le Nord, et c'est dans ce mémoire que nous avons présenté au comité du transport aérien, nous ne sommes pas intéressés.

Je vous le dis sincèrement; nos gens ne conduiront pas 50 ou 60 milles jusqu'à l'aéroport de Bathurst en hiver, alors que vous ne savez même pas si vous pouvez partir. Cela arrive tellement souvent pendant l'hiver qu'il vaut mieux vous rendre vers le sud où les conditions atmosphériques sont meilleures et prendre l'avion à Moncton ou vous rendre vers l'ouest et le prendre à Fredericton.

M. Breau: Oui, monsieur le président, comme je l'ai dit auparavant, le fait que vous ayez déjà l'aéroport est très favorable pour la région de Miramichi et je suis tout à fait d'accord. Cela donnerait un meilleur service, car ayant une meilleure piste d'atterrissage vous pourriez avoir de plus gros avions. Mais croyez-vous que deux services aériens seraient rentables pour le nord du Nouveau-Brunswick?

M. McKenna: Nous en avons déjà un. Nous avons seulement besoin d'un autre.

M. Breau: Mais pensez-vous qu'un deuxième serait rentable?

M. McKenna: Certainement, quand nous vons appuyé EPA pour qu'elle desserve Charlo, il y avait plusieurs raisons pour cela. Tout d'abord, des raisons égoïstes parce que nous considérions que plus l'aéroport se trouvait au nord, plus ils auraient de chance d'employer la base de Chatham. Donc, si vous prener la province et une partie du Québec et la base de Charlottetown, elle dessert le nord de la province et une partie du Québec.

[*Texte*]

The next one is down in Moncton, which handles part of Nova Scotia, Moncton and the southern part of the province. If you put an air service into Chatham you service the middle of the east coast without spending five cents. You do not have to spend five cents—not millions, or $65,000 to extend the runway or anything like that; not a nickle.

Mr. Breau: So in other words what you are advocating is to have two services on the north shore.

Mr. McKenna: Sure.

The Chairman: Mr. Allmand.

Mr. Allmand: Sir, were you here when Commuter Air Services gave their brief?

Mr. McKenna: Yes, I was.

Mr. Allmand: If your discussions with EPA do not work out, what do you think about the proposals of Commuter Air Services as a possible link with Chatham? I notice on their map they propose a feeder service from Chatham.

Mr. McKenna: As far as the scheduled service is concerned, sir, my personal opinion is that Commuter Air Services will not be used, with the exception of maybe going to Saint John or this type of thing. My feeling is—and this is the feeling of most people—that if I am going to go to Montreal or to Halifax, I am going to drive to Moncton, as it is now. I am not going to get on any small aircraft with five or six or seven passengers—and this is the feeling of most people—because I am scared, the same as you are, of flying in anything but proper and big aircraft. I will speak for myself but that is exactly the reason. I am just as nervous about flying as most people are and I want to fly in a good sized aircraft.

Mr. Allmand: What sort of schedule had you in mind with a service into Chatham? Chatham to where?

Mr. McKenna: I would like to answer this gentlemen's question. He asked me about politicians a little while ago, sir, and I would like to answer his question. He is needling me now.

The Chairman: I do not think we should introduce politics here. We have been doing very well so let us continue.

[*Interprétation*]

Le suivant se trouve à Moncton qui dessert un peu la Nouvelle-Écosse, Moncton et la partie sud de la province. Si vous mettez un service aérien maintenant à Chatham, vous desservez le milieu du littoral Est sans dépenser un sous. Il n'est pas nécessaire de dépenser un seul sou, non pas des millions, non pas $65,000 pour allonger la piste d'envol, rien.

M. Breau: En d'autres termes, ce que vous préconisez c'est que nous ayons deux services aériens sur la côte Nord.

M. McKenna: Bien sûr.

Le président: Monsieur Allmand.

M. Allmand: Étiez-vous ici quand *Commuter Air Services* a présenté son mémoire?

M. McKenna: Oui, j'étais là.

M. Allmand: Si vos discussions avec EPA n'aboutissent à rien, qu'est-ce que vous pensez des propositions de *Commuter Air Services* comme étant un lien possible avec Chatham? J'ai constaté que sur leur carte on voudrait qu'ils proposent un embranchement vers Chatham.

M. McKenna: En ce qui concerne les services à horaires fixes, je ne pense pas que nous puissions utiliser *Commuter Air Services* sauf peut-être pour aller à Saint-Jean ou quelque chose comme ça. Mon impression et c'est l'impression de la plupart des gens, est que si je dois me rendre à Montréal ou à Halifax, je devrais me rendre en automobile à Moncton, comme je le fais à l'heure actuelle. Je ne prendrai pas un petit avion de cinq, six ou sept passagers, et c'est le sentiment de la plupart des gens, tout simplement parce que j'ai peur dans un petit avion, tout comme vous. Je suis tout aussi nerveux que la plupart des gens quand il s'agit de voler. J'aime un avion de taille raisonnable.

M. Allmand: Quel genre d'horaires aviez-vous en vue avec le service de Chatham? De Chatham à quel endroit?

M. McKenna: J'aimerais bien répondre à la question de ce monsieur. Il m'a posé une question tout à l'heure au sujet des hommes politiques et je voudrais lui répondre.

Le président: Je ne crois pas que nous devions introduire la politique dans cette question. Continuons comme nous avons commencé.

[*Text*]

Mr. McKenna: There is a flight twice a week now going from Moncton to Charlo to Seven Islands. We would like to see this increased to seven times a week—daily service.

This would be from Moncton to Charlo to Seven Islands on our present schedule twice a week, and then from Moncton to Chatham to Charlo back and forth on the other five days. This would be two flights a day, one each way.

Mr. Allmand: Excuse me. In other words, you would like EPA to stop maybe on alternating days in Charlo, and other days in Chatham on their trip northward from Moncton and back and forth.

Mr. McKenna: No, I think I am...

Mr. Allmand: You do not want the plane to stop both in Chatham and Charlo, do you?

Mr. McKenna: Sure, why not?

Mr. Allmand: You do?

Mr. McKenna: It is stopping in Charlo now. Mr. Harris over here could explain it a little better.

Mr. Allmand: I do not want you to go into details. I just want to know what sort of service you have in mind and I have my answer.

Mr. McKenna: One flight a day in and one flight a day out.

The Chairman: Mr. Skoberg.

Mr. Skoberg: The brief mentions 100 ships standing there with 50 per cent of the cargo. How deep is your harbour at that particular location?

Mr. McKenna: Where the ships are tied up?

Mr. Skoberg: Yes, the sand bars you referred to.

Mr. McKenna: It is over 30 feet deep where you saw the ships, but when you get to the mouth of the harbour you run into I think two sand bars, which drop the draught of the river to 21 feet rather than 30. This is where the trouble is—at the mouth of the river.

Mr. Skoberg: Has representation been made to the National Harbours Board in this regard?

Mr. McKenna: It is not a National Harbours Board problem, sir. The National Har-

[*Interpretation*]

M. McKenna: Il y a un bi-hebdomadaire à l'heure actuelle qui va de Moncton à Charlottetown et Sept-Îles. Nous aimerions que ça devienne un quotidien.

De Moncton à Charlo et Sept-Iles, selon l'horaire actuel, deux fois par semaine, et ensuite de Moncton à Chatham et Charlo les cinq autres jours de la semaine. Nous aurions donc deux vols par jour, un dans chaque sens.

M. Allmand: Excusez-moi. En d'autres termes, vous voudriez que EPA s'arrête peut-être tous les deux jours à Charlo et les autres jours à Chatham sur le vol qu'ils ont vers le nord de Moncton dans les deux sens.

M. McKenna: Non, je pense que je suis ...

M. Allmand: Vous ne voulez pas que l'avion s'arrête aux deux endroits, n'est-ce pas, à Charlo et Chatham?

M. McKenna: Oui, pourquoi pas.

M. Allmand: Vraiment?

M. McKenna: Il s'arrête à Charlo à l'heure actuelle. M. Harris, ici, pourrait vous expliquer cela peut-être un peu mieux.

M. Allmand: Je ne veux pas que vous entriez dans les détails. Je veux seulement savoir quel genre de service vous aviez en vue. J'ai eu la réponse.

M. McKenna: Un départ et une arrivée par jour.

Le président: Monsieur Skoberg.

M. Skoberg: Le mémoire mentionne 100 navires qui sont là, chargés à 50 p. 100. Quelle profondeur est le port à cet endroit?

M. McKenna: Là où se trouvent les navires?

M. Skoberg: Oui, à l'endroit de l'ensablement.

M. McKenna: Là où se trouvent les navires, il y a plus de trente pieds d'eau, mais lorsque vous entrez dans le port, vous avez deux bancs de sable, je crois, qui réduisent le tirant d'eau à 21 pieds au lieu de 30.

M. Skoberg: Est-ce qu'on a fait part de cet état de chose au Conseil des ports nationaux?

M. McKenna: Ce n'est pas le problème du Conseil des ports nationaux, monsieur. Le

[*Texte*]

bours Board does not have anything to do with the Miramichi. It is the Department of Transport.

Mr. Skoberg: Even for the harbour? Will representation be made to them?

Mr. McKenna: We have already made it.

Mr. Skoberg: What kind of money are you looking at? What do they suggest to you in so far as trying to do something with the harbour?

Mr. McKenna: It is in this brief.

Mr. Skoberg: Well, just roughly.

Mr. McKenna: I think it is about $3 million to dredge the river; then, although there is a big argument here about how much it is going to cost to maintain it, I think you are talking several hundred thousand dollars to begin.

Mr. Skoberg: Do you anticipate a great increase in business if this is dredged to the depth required?

Mr. McKenna: I would definitely say yes, that there would be a great increase in business. Right now because of not being able to get ships of any more draught than 21 feet up the river, you have heard me mention a $6 surcharge per ton. This is caused not only by lack of facilities in the Newcastle wharf but in some cases you have to ship out of Saint John and other areas as the ships will not come up the river because of the sand bars. This causes another $6 per ton. I might say it is a case of survival for one of our pulp mills. Either it is corrected or they close the doors.

Mr. Skoberg: Is the sand bar and the buildup continually getting worse?

Mr. Martin: No.

Mr. Skoberg: It is remaining constant.

Mr. Martin: We have used it for 45 years without spending a dollar on it.

Mr. McKenna: They never spent a dollar on the river except the bridge.

Mr. Skoberg: Thank you.

The Chairman: Thank you very much, gentlemen. We still have one brief—from the Campbellton City Council. His Worship called me at noontime and asked me if he could be heard this afternoon. He said he was sorry he could not make it this morning.

[*Interprétation*]

Conseil des ports nationaux n'a rien à voir avec Miramichi. C'est le ministère des Transports.

M. Skoberg: Même pour le port? Leur avez-vous présenté un mémoire?

M. McKenna: Oui, nous l'avons fait.

M. Skoberg: Quel argent cherchez-vous? Qu'est-ce qu'ils ont dit en ce qui concerne les travaux à accomplir?

M. McKenna: Cela figure dans le mémoire.

M. Skoberg: A peine.

M. McKenna: Je crois qu'il faut environ 3 millions de dollars pour le dragage de la rivière; ensuite il faut savoir combien coûtera l'entretien, et je crois que cela reviendrait à quelques centaines de milliers de dollars, pour commencer.

M. Skoberg: Est-ce qu'il y aurait un fort accroissement du trafic, si on faisait le dragage à la profondeur requise?

M. McKenna: Oui, il y aurait une grande augmentation du commerce. A l'heure actuelle, en raison du fait qu'on ne peut recevoir de navires ayant un tirant d'eau de plus de 21 pieds, vous m'avez entendu mentionner ici une surcharge de $6 la tonne. C'est dû non seulement au manque d'installations du quai de Newcastle, mais aussi au fait que parfois il faut expédier de Saint-Jean ou d'autres régions parce que les navires ne pourraient pas remonter la rivière, à cause des bancs de sable, ce qui coûte encore $6 la tonne. C'est une question de survie pour une de nos usines de pâte à papier. Ou bien on va corriger la situation ou bien ils vont fermer leurs portes.

M. Skoberg: Est-ce que la situation est fixe ou est-ce qu'elle empire?

M. Martin: Non.

M. Skoberg: La situation est constante.

M. Martin: Je l'ai utilisée pendant 45 ans sans dépenser un sou.

M. McKenna: On n'a jamais dépensé un seul sou pour la rivière à l'exception du pont.

M. Skoberg: Merci.

Le président: Merci beaucoup, messieurs. Il nous reste encore un mémoire du conseil municipal de Campbellton. Son Honneur le maire m'a téléphoné à midi et m'a demandé si on pourrait l'entendre cet après-midi. Il m'a dit qu'il était désolé, qu'il n'avait pu venir ce

[*Text*]

I told him if he could come this afternoon we would hear him.

His Worship Mayor J. W. MacDonald and Mr. J. M. Harquail.

Mayor J. W. MacDonald (Campbellton City Council): Mr. Chairman and members of the Committee, I am certainly very pleased to have this opportunity. I thank you, sir, for allowing us to appear before you. I am sorry we could not make the appointed time this morning.

You all have a copy of our brief. It is philosophical in nature as opposed to being in detail. We are discussing in it our geographical problems. I am sure you have heard for the past two days about the geographical problems of the Atlantic Provinces and how they put us in a difficult position to get our goods to market at a reasonable cost. If the Atlantic Provinces have a disparate economic condition, certainly we in the northern part of New Brunswick in relation to the rest of the Atlantic Provinces have an even more disparate position. We look upon Saint John, Halifax, Fredericton and Moncton with a great deal of envy. There is a lot of money spent down there on infrastructure—on transportation infrastructure. We would like to see more spent on the north shore.

We all agree that we need industrial development in the Atlantic Provinces, and in order to get industrial development we need transportation infrastructure and a rationalized transportation policy which will allow us to get our goods to market at a reasonable cost.

I have listened here this afternoon to a great amount of detail and I think it is a shame because when you talk about a corridor road, sure we need a corridor road. When you talk about Route 11, it goes without saying Route 11 is a cow trail at the moment and it is impossible to create any meaningful sort of economic development with a cow trail.

Our brief, you will notice, has mostly to do with rail and highways—the need for highways. We have dealt with rail on a philosophical basis; that is, we have examined an approach for higher subsidies to the railways and we also include in that the trucking firms. We feel that subsidies should go to the trucking firms as well. We feel that higher subsidies are in order.

The problem is how to get those subsidies to the carriers in the best possible fashion. We suggested that the CNR, for instance,

[*Interpretation*]

matin. Je lui ai dit que s'il voulait venir cet après-midi, nous l'entendrions. Son Honneur le maire J. W. MacDonald et M. J. M. Harquail.

Son Honneur le maire J. W. MacDonald (Conseil de la ville de Campbellton): Monsieur le président, messieurs les membres du comité, nous apprécions beaucoup cette occasion. Nous vous remercions de nous avoir permis de paraître devant vous.

Vous avez tous une copie de notre mémoire. Je dirais qu'il est plus philosophique que détaillé. Nous y discutons de nos problèmes géographiques. Je suis sûr que vous avez entendu depuis deux jours, tous les problèmes géographiques des provinces de l'Atlantique, et comment ces problèmes nous placent dans une situation difficile pour essayer de mettre nos produits sur les marchés à des prix raisonnables. Si la situation est disparate du point de vue économique dans les provinces de l'Atlantique, dans le nord du Nouveau-Brunswick, notre situation est encore plus disparate. Nous regardons avec envie vers Saint-Jean, Halifax, Fredericton et Moncton. Beaucoup d'argent a été dépensé sur l'infrastructure mais nous voudrions qu'on fasse plus pour le nord.

Nous sommes tous d'accord qu'il nous faut développer industriellement les provinces atlantiques et pour le faire, il nous faut une infrastructure de réseaux de communications et une politique des transports qui nous permettraient de mettre nos produits sur les marchés à un prix raisonnable.

J'ai entendu beaucoup de détails cet après-midi, et je trouve que c'est dommage. Évidemment, nous avons besoin d'un corridor routier, mais quand vous parlez de la grande route nº 11, il faut dire qu'elle est en piteux état à l'heure actuelle, et il est absolument impossible d'espérer un développement économique avec une route comme celle-là.

Notre mémoire traite principalement de grandes routes et de chemins de fer. Nous avons parlé des chemins de fer d'un point de vue philosophique; nous avons examiné la possibilité d'obtenir des subventions plus élevées pour les chemins de fer, et nous incluons là-dedans les sociétés de camionnage. Nous estimons que les sociétés de camionnage devraient être l'objet de subventions aussi. Des subventions plus élevées seraient souhaitables.

Maintenant, le problème c'est de savoir comment les remettre aux transporteurs de la façon la plus efficace? Nous avons dit, par

[*Texte*]

since Donald Gordon's time has become more autonomous. It is profit motivated.

We feel that profit motivation makes for more efficient and effective use of that transportation facility and we feel that any form of subsidization should not affect the autonomy of the railroad and the carrier—any carrier, highway carrier as well. We feel that some system, possibly financing or subsidizing the shipper, may be some answer—but that is your problem, not ours. We feel there should be more subsidies and we feel that the autonomy of the carrier should be left intact.

That, briefly, is our position on highways. Certainly a highway is extremely important for a number of different reasons. The Province of New Brunswick is a poor province and if we are to have growth centres where we can accumulate much-needed community services such as schools, educational facilities, medical facilities, recreational and various community services, we have to get growth centre concepts to work and we need highways to do that.

We also have a beautiful province for tourist development and we in the northern part of the province, in my own city of Campbellton, have many hundreds of thousands of cars travelling in the area from the Gaspe Coast. We have a built-in tourist attraction in the Gaspe Coast and when they come into New Brunswick they scoot right across the northern part of the province because they do not dare go down Route 11. As I mentioned, it is in very bad condition.

Then there is the human side of this highway situation—the high death toll in New Brunswick. In Northern New Brunswick it is the highest on the continent, and no wonder it is the highest on the continent. The roads are in terrible shape. That is our position on highways.

On air transport we would like to update our brief somewhat. I believe we said in the last couple of paragraphs that last year no airport facilities or air services existed. Indeed within the past year Charlo airport has been the beneficiary of direct air service from Charlottetown to Charlo to Montreal. That service, as has been mentioned by Mayor McKenna, is being used to a much greater degree than was thought to be possible by the air carrier, EPA. Our position with regard to air facilities is that we really need them.

We agree with Mayor McKenna that we need another air service in the northern part

[*Interprétation*]

exemple, que depuis l'arrivé de Donald Gordon, le CN est devenu plus autonome et il est plus orienté vers la rentabilité.

Cela rend beaucoup plus efficace l'emploi de leur mode de transport. Par conséquent, nous croyons que le mode de subvention ne devrait pas affecter l'autonomie du transporteur, qu'il s'agisse d'un transporteur routier ou non. Par conséquent, un système quelconque de subvention seraient peut-être la réponse, c'est votre problème et non le nôtre. Nous pensons qu'il devrait y avoir plus de subventions et que l'autonomie du transporteur devrait rester intacte.

Brièvement, voilà notre position en ce qui concerne cet aspect. Une autoroute est extrêmement importante pour beaucoup de raisons. Notre province est pauvre et si nous devons avoir des centres de croissance où nous pourrons avoir un regroupement des services nécessaires comme les écoles, les services médicaux, les services éducatifs, les services de loisirs et tous les services communautaires. Il faut absolument que cette idée des centres de croissance soit mise en vigueur et il nous faut des voies d'accès.

Nous avons une très belle province du point de vue de développement touristique, même dans ma propre ville de Campbellton, dans le nord de la province, il y a des milliers d'automobiles qui passent, venant de la côte de la Gaspésie. La côte de Gaspésie est pour nous une bénédiction, mais quand les touristes arrivent au Nouveau-Brunswick, ils coupent à travers le nord, car ils ont peur de prendre la route nº 11 qui, comme je l'ai dit, est en très mauvais état.

Ensuite, il y a l'aspect humain de cette question des grandes routes. Le taux d'accident est très élevé. Dans le nord du Nouveau-Brunswick, c'est le plus élevé du continent. La raison est très simple, c'est que les routes sont en très mauvais état. Voilà ce que nous pensons des routes.

Pour le transport aérien, nous voudrions mettre notre mémoire à jour. L'an dernier nous avions dit qu'aucun service aérien n'existait, mais depuis un an, l'aéroport de Charlo a bénéficié d'un service aérien direct de Charlottetown à Charlo et Montréal. Comme vous l'a mentionné le maire McKenna, on emploie ce service beaucoup plus que ne l'avait envisagé celui qui dessert la région, EPA. En ce qui concerne les installations de transport aérien, nous croyons qu'elles sont nécessaires.

Nous sommes du même avis que M McKenna. Il faut un autre service aérien dans

[*Text*]

of the province and in the central part of the province. Charlo very definitely looks after a very large central area including the Gaspe Coast and the Kedgwick region and comes around and picks up Bathurst on the southern part so that it is performing a very valuable function. We also believe that feeder service is also very important in the Maritime Provinces.

We feel that Air Canada should be a trunk carrier with possibly two stops and that one regional air carrier doing a very good job and being given the opportunity to make some money by virtue of the fact that it has an opportunity to carry more passengers is the answer; in other words, a very strong regional air carrier that is making money.

That is our submission, Mr. Chairman, and we will be pleased to answer any questions.

Mr. Rose: Your Worship, I am very much interested in your presentation and also sympathetic to your problems which I have heard about in my two days in the Maritimes. I am not from the Maritimes myself but I can see that you have many problems similar to those in Western Canada, especially the far west where I live. I was interested in what I feel is an internal inconsistency in what you had to say here and I would like you to clarify it for me. You said that you believe in the autonomy of a carrier or that the autonomy should not be altered of the CNR.

Autonomy to me means independence or self-direction. It seems to me that that is precisely why you are here—to alter this autonomy in the direction that would best serve you. Is that not so?

Mr. MacDonald: Not really. I feel that the CNR is the instrument of the policy which you gentlemen set and it does what is is told to do in certain basic areas. If what you ask it to do does not allow it to make a profit, then you have to subsidize it and it is at this very point that I am talking about autonomy.

It should be in the autonomous position of making profits—in other words, that when the financial statement is presented it does not show a tremendous loss because of bond interest, for instance. I feel that bond interest, the old bonds that are in the CNR's statement, should be taken right out. And if you are paying a subsidy maybe you should pay it to the shipper so that he can pay the rate that the CNR needs to operate.

[*Interpretation*]

le nord et dans le centre de la province. Charlo s'occupe certainement d'une très vaste région centrale, y compris la côte de la Gaspésie et la région de Kedgwick, il vient chercher des clients à Bathurst et dans le sud. il rend donc un très grand service. Nous croyons aussi qu'un embranchement serait très important pour les provinces Maritimes.

Nous estimons qu'Air Canada devrait être un transporteur pour la région, ayant peut-être deux escales, et le seul transporteur régional fait un excellent travail et aurait l'occasion de faire quelques profits, étant donné qu'il aurait l'occasion de transporter plus de voyageurs, voilà la réponse pour nous.

Voilà notre opinion, monsieur le président. Nous répondrons avec plaisir à vos questions.

M. Rose: Votre Honneur, j'ai été très intéressé dans votre mémoire et je compatis à vos problèmes, problèmes dont j'ai entendu parler au cours de ces deux jours dans les Maritimes. Je ne suis pas de la région, mais je peux voir que vous avez des problèmes analogues à ceux de l'ouest du Canada. Mais j'ai constaté une incohérence interne dans vos propos et je voudrais que vous précisiez. Vous dites que vous croyez dans l'autonomie d'un transporteur et qu'on ne devrait pas modifier l'autonomie du Canadien National.

L'autonomie signifie indépendance en ce qui nous concerne ou auto-gestion. C'est exactement la raison pour laquelle vous êtes ici pour modifier cette autonomie dans la direction qui vous servirait le mieux. Exact?

M. MacDonald: Non pas exactement. Je suis d'avis que le National Canadien est l'instrument de la politique que vous établissez vous-mêmes, messieurs, et il fait ce que vous lui dites de faire dans certains secteurs donnés. Ce que vous lui demandez de faire ne lui permet pas de faire un bénéfice, alors vous devez le subventionner et c'est à ce sujet-là que je parle d'autonomie. Il doit être dans la situation autonome de faire des bénéfices.

En d'autres mots, lorsque le bilan est présenté, qu'il ne montre pas une perte très grande à cause de l'intérêt sur les obligations par exemple. Les anciennes obligations du bilan du National Canadien devraient disparaître. Si vous payez une subvention, vous pourriez la payer à l'expéditeur pour que ce dernier puisse payer les tarifs exigés par le National Canadien pour continuer son exploitation.

[*Texte*]

Mr. Rose: You also mentioned that since Donald Gordon took over, the CNR was profit oriented, and you also said, if I am quoting you or paraphrasing you correctly, that this type of profit orientation brings about efficiency. Is that not exactly what you are suffering from in the northern part of New Brunswick—the efficiency of the CNR?

Mr. MacDonald: Exactly, because we do not have a national transportation policy.

Mr. Rose: Are you attempting to destroy this efficiency?

Mr. MacDonald: No, we are asking for higher subsidies. All we are saying is that in paying those higher subsidies, be careful not to interfere with the profit autonomy of the CNR.

Mr. Rose: You just want to take it out of one pocket and put it in another.

Mr. MacDonald: As I say, it is a philosophical brief.

Mr. Rose: I am also arguing on philosophical grounds.

Mr. MacDonald: Well, I am saying that we need more subsidies. And in the brief we say there should be only token freight rates.

Mr. Rose: You believe that the railroad then should serve a social policy.

Mr. MacDonald: Absolutely.

Mr. Rose: ...to bind the country together rather than be interested in a profit at all perhaps.

Mr. MacDonald: No, no, I did not say that. I said that you people have to pay the subsidy and the railway, in order to be efficient, has to make a profit. The problem is how do you pay those subisides and allow the railway to feel that it is making a profit—because you have told us it cannot in a certain area.

Mr. Chairman: Mr. Corbin.

Mr. Corbin: On page 4 you complain about the removal of the Ocean Limited from the Moncton-Campbellton-Montreal line. Naturally it was re-routed to our area from Moncton, Edmundston to Montreal. Now, do you not have other passenger trains?

Mr. MacDonald: Yes, we do.

[*Interprétation*]

M. Rose: Vous avez dit aussi que depuis le début de l'administration de M. Gordon, le National Canadien était orienté vers de plus grands bénéfices. Vous avez dit également que ce genre d'orientation entraîne une plus grande efficacité. N'est-ce pas exactement ce dont vous souffrez dans la région nord du Nouveau-Brunswick, l'efficacité du service du National Canadien?

M. MacDonald: Exactement, parce que nous n'avons pas de politique de transport national.

M. Rose: Vous voulez détruire cette efficacité?

M. MacDonald: Non, nous demandons des subventions plus élevées. Tout ce que nous avons à dire est que, en payant des subventions plus élevées, faites attention de ne pas vous ingérer dans l'autonomie des bénéfices du National Canadien.

M. Rose: Donc, vous voulez le prendre d'un côté et le mettre de l'autre.

M. MacDonald: Comme je dis, c'est un exposé philosophique.

M. Rose: Mes arguments sont également philosophiques.

M. MacDonald: Je dis que nous avons besoin de plus de subventions et nous disons dans le mémoire qu'il nous faudrait un tarif marchandise qui ne soit que symbolique.

M. Rose: Alors, vous croyez que le chemin de fer devrait être sur un plan social...

M. MacDonald: Absolument.

M. Rose: ...pour lier le pays dans son ensemble plutôt que de s'intéresser à des bénéfices, peut-être?

M. MacDonald: Non, ce n'est pas ce que j'ai dit. J'ai dit que vous devez payer les subventions, et les chemins de fer, pour être efficaces, doivent réaliser des bénéfices. Alors, comment payer ces subventions et permettent aux chemins de fer de croire qu'ils peuvent faire des bénéfices, parce que vous nous avez dit qu'ils ne pouvaient pas le faire dans certains secteurs.

Le président: Monsieur Corbin.

M. Corbin: A la page 4, vous vous plaignez du fait qu'on a fait disparaître le service de l'Océan Limitée de la ligne Moncton-Campbellton-Montréal. Naturellement, l'itinéraire a été changé vers notre région, de Moncton-Edmundston à Montréal. A présent, n'avez-vous pas d'autres services-voyageurs?

M. MacDonald: Oui.

[*Text*]

Mr. Corbin: How many?

Mr. MacDonald: I believe we have two daily.

Mr. Corbin: You have two now. Would you not agree in principle that as Edmundston did not have one before, has one now, that everyone should be happy at the results.

Mr. MacDonald: We are not nearly as unhappy, Mr. Corbin, now that we have air service. But before we had air service it was an important and integral part of our passenger service. We felt that the government should have supplied Edmundston with an alternate service, that rather than take one from one place and put it in another they should have provided another train. And they did in fact provide the Cabot which I believe they then found cost too much money and took it off the service.

Mr. Corbin: But do you not think it is a little exaggerated to have three passenger trains on that line for a day?

Mr. MacDonald: I think it is more exaggerated for us to attempt to move a lot of passengers by rail. I think we need more air traffic.

Mr. Chairman: Mr. Breau.

Mr. Breau: Mr. Chairman, first I would like to compliment the Mayor on this brief.

Do you think it would be more helpful to the Campbellton area, the northern New Brunswick area to have a transportation policy advocating transportation subsidies to provide industrial incentives rather than incentives to create jobs?

The Maritime Provinces Board of Trade wanted a subsidy so that they could get their materials to Montreal and be competitive. Do you people think that such a policy would be better than one that would create jobs?

Mr. MacDonald: I think we need both in the first instance.

Mr. Breau: But if you had a choice, which would you choose. I will refer directly to the program which gives a grant to get an industry started but does not look after the ones existing. Do you people think that this should be changed and should be taken care of by a transportation policy?

[*Interpretation*]

M. Corbin: Combien?

M. MacDonald: Deux par jour, je crois.

M. Corbin: Vous en avez deux maintenant, alors ne trouvez-vous pas, en principe, que si Edmundston n'en avait pas auparavant, et qu'elle en a un maintenant, tout le monde devrait être heureux de ce résultat?

M. MacDonald: Nous ne sommes pas si malheureux. Monsieur Corbin, maintenant que nous avons un service aérien. Mais avant que nous ayons le service aérien, cela constituait une partie importante et intégrante de notre service-voyageurs. Nous étions d'avis que le gouvernement aurait dû donner à Edmundston un autre service plutôt que d'en prendre à un endroit et le transporter dans un autre endroit. Vous auriez dû donc, nous donner un autre train. De fait, ils nous ont donné le Cabot, qui je crois, s'est révélé trop dispendieux et fut retiré du service.

M. Corbin: Ne croyez-vous pas que c'est exagéré que d'avoir trois services-voyageurs passagers par jour sur cette ligné?

M. MacDonald: Je crois que c'est plus exagéré pour nous que de tenter de déplacer bon nombre de voyageurs par rail. Nous avons besoin d'un meilleur service aérien.

Le président: Monsieur Breau.

M. Breau: Monsieur le président, tout d'abord, je désire féliciter le maire pour son exposé.

Croyez-vous que ce serait plus heureux pour la région de Campbellton, pour la région nord du Nouveau-Brunswick, d'avoir une politique en matière de transport qui préconiserait des subventions pour les transports afin d'encourager l'industrie plutôt que d'encourager la création d'emplois.

Le *Board of Trade* des provinces Maritimes voulait une subvention pour apporter leurs matériaux à Montréal et y faire concurrence. Croyez-vous que cette politique serait plus avantageuse que la politique de création d'emplois?

M. MacDonald: Je pense que nous avons besoin des deux, en tout premier lieu.

M. Breau: Mais si vous aviez le choix, lequel choisiriez-vous? Je vais parler directement du programme qui donne une subvention pour ouvrir une industrie, mais ne s'occupe pas des industries actuelles. Croyez-vous qu'on devrait être changé et qu'une politique en matière de transport devrait s'en occuper?

[*Texte*]

Mr. MacDonald: There is no question about it, you cannot put industry in an area and expect it to sustain itself and be viable unless the basic ground work is there. Transportation costs are too high. If you financed the industry 100% you still could not make a profit. So if they were a choice, obviously we would take lower transportation costs.

Mr. Breau: Now that Chatham is advocating two air services for the North shore and Bathurst is trying to get an air service—EPA intended originally to go there but because of lack of facilities it had to go to Charlo—

Mr. MacDonald: They are very happy too, I might say.

Mr. Breau:—do you not think it is time to have a good study made of regional air policy?

Mr. MacDonald: Very definitely so.

Mr. Breau: We have a problem in northern New Brunswick now—it is not really a problem but somebody has to make up their minds where they are going to stop. Would you not think it would be better to have a very good study made and a policy decided upon rather than having two or three people saying that they are speaking for the same 200,000 people.

Mr. MacDonald: Well, the biggest problem on the North shore gets right back to Route 11, the highway system. I think that if we had a good highway system between Campbellton and Bathurst, either Charlo or Bathurst would be a good spot. Then you need a study to indicate the better area. We are confident that Charlo is and you are confident that Bathurst is, so obviously we need some kind of a study.

Mr. Breau: No, no, I am not necessarily saying that. I wholeheartedly agree with Charlo, but the only problem is that south of Bathurst—like you said, it takes in Bathurst—there is nearly 100,000 people that do not have sufficient air service. So the necessity for a study is indicated.

Mr. MacDonald: I think the study will prove that there is a need for two air services...

Mr. Breau: In the North shore area.

[*Interprétation*]

M. MacDonald: C'est bien évident. On ne peut établir une industrie dans une région et s'attendre à ce qu'elle se subvienne à elle-même et soit viable à moins que le travail essentiel ait été fait. Les coûts de transport sont trop élevés. Si vous financez l'industrie à fonds 100 p. 100, vous ne pourriez toujours pas réaliser de profit. Donc, s'il y avait un choix, il est évident que nous choisirions des coûts de transport moins élevés.

M. Breau: Maintenant que Chatham préconise deux services aériens, pour la côte Nord et que Bathurst essaie d'obtenir un service aérien aussi, E.P.A. avait d'abord l'intention de s'y rendre; et comme il n'y avait pas d'installations, ils ont dû se rendre à Charlottetown.

M. MacDonald: Ils sont heureux aussi, très heureux même.

M. Breau: Ne croyez-vous pas que le moment serait venu de faire une étude de la politique aérienne régionale?

M. MacDonald: Oui, définitivement.

M. Breau: Nous avons un problème dans le nord du Nouveau-Brunswick, pas un problème, mais quelqu'un doit décider où l'on doit s'arrêter. Ne croyez-vous pas qu'il serait préférable de faire une très bonne étude plutôt que d'avoir deux ou trois personnes qui disent parler pour les mêmes 200,000 personnes.

M. MacDonald: Tout d'abord, le plus grand problème qui se pose sur la côte Nord a trait directement à la question de la route 11, au réseau routier. A mon avis, si nous avions un excellent réseau routier entre Campbellton et Bathurst, Charlo ou Bathurst serait un excellent emplacement. Ensuite, il faudrait une étude pour indiquer quelle région serait la meilleure. Nous sommes persuadés que c'est Charlo et vous êtes convaincus que c'est Bathurst. Il faut donc qu'une certaine étude se fasse.

M. Breau: Non, ce n'est pas nécessairement ce que je dis. Je suis d'accord pour ce qui est de Charlo mais le seul problème est qu'au sud de Bathurst, comme vous dites, cela comprend Bathurst, il y a environ près de 100,000 personnes qui n'ont pas un service aérien convenable. Ainsi, la nécessité de faire une étude est toute indiquée.

M. MacDonald: Je pense que c'est l'étude qui prouvera que nous avons besoin de deux services aériens.

M. Breau: Sur la rive nord?

[*Text*]

Mr. MacDonald: . . .in the North shore.

Mr. Breau: That is all.

Mr. Chairman: Mr. Rock.

Mr. Rock: Your Worship, you said a while ago that people should use aircraft more than train, that the train is more or less obsolete for passenger service. At least this is the way I interpreted your remark. Are you not aware that there is an actual breakthrough today with the invention of the Turbo jet train which can do between 120 to 175 miles an hour?

There are some bugs in it right now but, like anything that is new, this is the case. If this is an actual breakthrough there will be a different outlook completely in respect of passenger service, more competition will be provided air services on short runs and possibly even stiffer competition to the trucking industry—if ever this fast train goes into production to provide passenger and possibly even freight service in the future.

Mr. MacDonald: I do not want to leave the impression that I think all rail passenger traffic is out. In talking with Mr. Corbin in that context all I said was that there were three passenger trains operating and now that we have air service two were sufficient, and possibly if we had better air service—that is, twice daily jet service—one passenger train would be sufficient.

But I certainly would be opposed to any federal government expenditure of millions of dollars for cost of infrastructure between Montreal and Halifax for such a Turbo train. I think it would be a waste of money. The distances in-between are too long—it is a thousand miles. Turbo trains may be fine between Osaka and Tokyo and between Montreal and Toronto, but I do not think they would work between Montreal and Halifax. The cost of them would be fantastic, the rail beds and this sort of thing.

Mr. Rock: I do not think you are aware of the possibilities of the Turbo jet train. They use the same bed. It is not the same thing as they have in Japan where it cost them billions of dollars just for the bed. This is a completely different thing. You use the same tracks as there are today. The only problem you have is electronics as far as crossings are concerned.

[*Interpretation*]

M. MacDonald: Sur la rive nord.

M. Breau: C'est tout.

Le président: Monsieur Rock.

M. Rock: Votre Honneur, vous avez dit, il y a un moment, qu'on devrait avoir recours aux services aériens plutôt qu'aux services ferroviaires, que le train est plus ou moins désuet pour le service-voyageurs. Du moins, voilà l'interprétation que j'ai donnée à vos observations. Ne savez-vous pas qu'il y a une poussée qui se fait aujourd'hui à la suite de l'invention du train turbo qui peut aller de 120 à 175 milles à l'heure.

Il se pose des difficultés en ce moment mais comme dans toute chose nouvelle cela se produit. Si c'est vraiment une poussée sur le marché, il y aura là une perspective complètement différente pour le service-voyageurs, plus de concurrence à l'égard du service aérien pour les courtes distances, et même une concurrence plus serrée avec l'industrie du camionnage, si jamais ce train rapide entre en production pour fournir le service-voyageurs et même le service marchandises à l'avenir.

M. MacDonald: Je ne veux pas créer l'impression que tout le service-voyageurs ferroviaire est désuet. En parlant avec M. Corbin à ce sujet, tout ce que j'ai dit, c'est qu'il y avait trois trains desservant actuellement les voyageurs et que, maintenant que nous avons le service aérien, deux seraient suffisants, et peut-être que si nous avions un meilleur service aérien, soit un service à réacté deux fois par jour, un seul train serait suffisant.

Mais je m'opposerais sûrement à ce que le gouvernement fédéral dépense des millions de dollars pour l'infrastructure à établir entre Montréal et Halifax, en vue d'un service de l'argent gaspillé. Les distances sont trop grandes, il s'agit de 1,000 milles, et les trains turbo sont peut-être bons entre Osaka et Tokyo, et entre Montréal et Toronto, mais je ne crois pas que cela puisse aller entre Montréal et Halifax. Le coût serait fantastique, les terres-pleins de la voie ferrée et tout le reste.

M. Rock: Je ne crois pas que vous soyez au courant des possibilités de ce train turbo. On utilise le même terre-plein. Ce n'est pas comme au Japon, où cela a coûté des milliards de dollars simplement pour le terre-plein. C'est entièrement différent. On utilise les mêmes voies que celles que nous avons. Le seul problème, c'est celui de l'électronique pour ce qui est des passages à niveau.

[*Texte*]

Mr. Chairman: Mr. Perrault.

Mr. Perrault: Your Worship, do you not feel that you vastly over-simplified the question of economic development when you said, and I quote from your brief:

> Our economic problem is our geographical transport problem. It is our firm conviction the Maritime Provinces have the talents and the resources to compete providing the geographical considerations of transport are eliminated...

I suggest to you that this is a considerable over-simplication. I say this because in Western Canada we are faced with the problem of transportation as well in getting our goods to the mass markets of Canada. I think we have come to a realization that it takes more than equality on transportation rates to compete. That is my first question.

Mr. MacDonald: Obviously, in writing the brief to the Standing Committee on Transportation and Communications I might have qualified this by saying that transportation is only one of the factors in industrial development—it is only infrastructure, after all—and it does not take into account such things as entrepreneurial skills and risk capital which are indigenous to the area.

Mr. Perrault: It seems to me that the problems of the Maritimes really began when the Maritimes began to be denied access to the populated markets of the Eastern States which were their natural markets. If we had access to the 20 million people of California we would be far more prosperous in British Columbia than perhaps we are at the present time.

Mr. MacDonald: Yes, I agree with you.

Mr. Perrault: I would like to know whether you support the idea of industry by industry free trade or some form of freer trade to give you access to your natural markets instead of this obsession—and I do not mean it in a critical way—whether or not you can sell in the Toronto market—because Toronto is not the centre of the world.

Mr. MacDonald: As a matter of fact, there are more people between Boston and New York than there are in all of Canada, and I feel that is our natural market. How we get

[*Interprétation*]

Le président: Monsieur Perrault.

M. Perrault: Votre Honneur, ne croyez-vous pas que vous vous trouvez à simplifier à l'extrême le problème de développement économique, lorsque vous dites, dans votre mémoire:

> «notre problème économique est la conséquence de nos difficultés de transport. Nous avons la conviction que les provinces maritimes ont les ressources et les qualités nécessaires pour soutenir la concurrence, à condition que les problèmes dus à notre situation géographique, soient résolus.»

Je crois que vous simplifiez à l'extrême. Je dis cela, parce que dans l'ouest du Canada, nous devons faire face aux problèmes de transports et à ceux d'acheminer nos produits vers les grands débouchés canadiens. Nous nous sommes rendu compte qu'il ne faut plus simplement de l'égalité des coûts de transport pour faire la concurrence. Voilà ma première question.

M. MacDonald: Oui, de toute évidence, en rédigeant le mémoire à l'intention du Comité permanent des transports et communications, j'aurais peut-être dû préciser et ajouter que le transport n'est qu'un des aspects du développement industriel, ce n'est que l'infrastructure, après tout. On ne tient pas compte des aptitudes des entrepreneurs et des capitaux de spéculation qui sont indigènes à la région.

M. Perrault: Il semble que le problème des Maritimes a commencé lorsque les Maritimes se sont vues refuser l'accès au marché très grand des états de l'est qui était leurs débouchés naturels. Si nous avions accès à la population de 20 millions de la Californie, nous serions beaucoup plus prospères en Colombie-Britannique que nous ne le sommes en ce moment.

M. MacDonald: Je suis tout à fait d'accord avec vous.

M. Perrault: Je voudrais savoir si vous êtes en faveur de cette idée de commerce libre d'industrie par industrie ou d'une forme de commerce plus libre pour avoir accès aux débouchés tout à fait naturels plutôt que de toujours poursuivre cette idée fixe, et je ne veux pas critiquer quoi que ce soit, de savoir si vous pouvez vendre sur le marché de Toronto, parce que Toronto n'est pas le centre du monde, après tout.

M. MacDonald: De fait, il y a plus de personnes entre Boston et New York qu'il y en a dans l'ensemble du Canada, et je trouve que c'est là notre débouché naturel. La façon dont

[*Text*]

into that market depends, first, on transport because I, as a businessman, shipped to that market and transportation costs are too high for us to compete with people from Ontario, northern New York and so on. Now I feel that lower transportation costs are a must to get our products to that market.

I am talking about rail, to say nothing of the highway system that is needed to get products there cheaper. In so far as a free trade area is concerned, very definitely, and I think that we in the Maritimes have to look at this very very carefully and make sure that we do give it its proper position in our approach.

Mr. Perrault: The auto pact is now reaping benefits for Canadians. Why should it not be possible to reap benefits for the Maritimes and other areas through forest products, for example?

Mr. MacDonald: Yes, I agree.

Mr. Perrault: Do you in your own mind have a time limit on the length of time subsidy should be paid to the Maritimes or any other part of the country—because subsidy should be a temporary support until such time as an area has economically viable industry. Is that not correct?

Mr. MacDonald: But it can only have economically viable industry if the floor of transportation subsidy remains—because if you pull that floor out then you in fact take away one of the very basis of economic viability. What we are saying is that long-term subsidization is a must.

Mr. Perrault: Do you think, for example, that one industry located on the northern tip of Vancouver Island and another on the northern tip of Newfoundland should have absolute equality with industries established between those two points as far as the Toronto market is concerned? Would you eliminate all geographical differences?

Mr. MacDonald: Postage stamp rates, you mean?

Mr. Perrault: Yes, the postage stamp concept—the way we distribute power in some of the provinces.

[*Interpretation*]

nous pouvons entrer sur ce marché dépend tout d'abord du transport, parce que moi-même, à titre d'homme d'affaires, j'ai fait des expéditions vers ces marchés et les coûts du transport sont trop élevés pour que nous puissions faire concurrence à la population du nord de New York et de l'Ontario, et le reste. Je crois que des coûts de transport moins élevés sont essentiels pour pouvoir acheminer nos produits vers ces marchés.

Mais je parle du service ferroviaire sans parler du réseau routier dont nous avons besoin pour y acheminer nos produits à meilleur compte. Pour ce qui est d'une région de libre échange, sûrement, je crois que nous, des Maritimes, devons étudier cette question très attentivement et nous assurer que nous lui accordons toute l'importance qu'elle mérite.

M. Perrault: Le pacte sur les automobiles procure maintenant des bénéfices aux Canadiens. Pourquoi ne serait-il pas possible de procurer des bénéfices aux Maritimes et à d'autres régions aux moyens des produits forestiers, par exemple?

M. MacDonald: Oui, j'en conviens.

M. Perrault: A votre avis, est-ce que vous avez établi une limite quant au temps pendant lequel les subventions devraient être payés aux Maritimes ou aux autres régions du pays, parce qu'une subvention devrait être simplement un appui provisoire jusqu'à ce qu'une possède une industrie viable sur le plan économique. Est-ce exact?

M. MacDonald: On ne peut avoir des industries viables sur le plan économique que si le minimum de subventions au transport demeure, parce que si vous faites disparaître ce minimum, vous enlevez alors le fond même de la viabilité économique. Nous disons que la subvention à long terme est une nécessité.

M. Perrault: Croyez-vous qu'une industrie qui se trouve au point nord de l'Île de Vancouver et une autre au point nord de Terre-Neuve devraient avoir égalité absolue avec les industries qui se trouvent entre ces deux points par rapport au marché de Toronto? Est-ce que vous feriez disparaître tout écart sur le plan géographique?

M. MacDonald: Comme on le fait pour le courrier.

M. Perrault: Oui, comme pour le courrier et la façon dont on répartit le pouvoir dans certaines provinces.

[*Texte*]

Mr. MacDonald: I think it depends on the area. I do not have too much sympathy for the people who live in Campbell River because they live very well compared to the people in my area.

Mr. Perrault: One quarter of our B.C. people live on less than $3,000 a year. So let there be no illusions.

Mr. MacDonald: Well, we have very serious poverty in our area. I feel that industrial development is obviously the only answer. I look upon it from that basis. The ramifications of a postage stamp freight set-up...

Mr. Perrault: The cost would be considerable as well. But you are advocating, in other words, a postage stamp rate approach to the Maritime provinces...

Mr. MacDonald: Yes.

Mr. Perrault: ...and the rest of Canada, or just the Maritimes?

Mr. MacDonald: No, I am not, because I feel that the problem is more acute here than it is in the rest of the country. I am not in favor of universal programs, you spend your money where it does more good, it seems to me.

Mr. Chairman: Mr. Horner.

Mr. Horner: I have just a few questions, Your Worship. I enjoyed listening to your brief and the philosophical approach to it.

Would you not say that in joining Confederation the Maritimes were guaranteed access to central Canada markets?

Mr. MacDonald: I guess I would say it, but I would not like to say it. I think the people in this area want to do something, provided we are given an opportunity to do it, and the hell with this talk about Confederation.

Mr. Horner: Would you also say then that the government should let the MFRA expire on March 22nd of this month?

Mr. MacDonald: Absolutely not. Take our position on the North shore. We do not have competitive means of transportation. We have no highways to put trucks on. So obviously our rates are going to go sky high. Whereas between Montreal and Toronto...

[*Interprétation*]

M. MacDonald: Tout dépend de la région. Je ne sympathise pas tellement avec les gens de Campbell River qui sont très bien comparativement aux nôtres.

M. Perrault: Le quart de la population de la Colombie-Britannique vit avec moins de $3,000 par année. Ne nous faisons donc pas d'illusions.

M. MacDonald: Nous avons beaucoup de pauvreté dans notre région. Je crois que le développement industriel est, de toute évidence, la seule réponse à notre problème. Voilà donc la façon d'y penser. Les ramifications d'un système de transport des marchandises analogue à celui du courrier.

M. Perrault: Le coût serait aussi élevé. Vous préconisez un principe analogue à celui du tarif postal pour les Maritimes.

M. MacDonald: Oui.

M. Perreault: Et le reste du Canada, ou seulement les Maritimes?

M. MacDonald: Non, parce que je crois que le problème est plus aigu ici qu'il ne l'est dans le reste du pays. Et je ne suis pas en faveur de programmes universels; vous dépensez l'argent là où il donnera le plus d'avantages, il me semble.

Le président: Monsieur Horner.

M. Horner: Simplement quelques questions. J'ai écouté avec un vif intérêt votre mémoire et la pensée philosophique qui l'inspire.

En se joignant à la Confédération, croyez-vous que les Maritimes se sont garanti l'accès aux marchés du Canada central?

M. MacDonald: Je n'aimerais pas le dire, mais je crois que oui. Je pense que les gens de cette région veulent faire quelque chose, pourvu qu'on leur en donne l'occasion, et qu'importe tout ce qu'on dit au sujet de la Confédération...

M. Horner: Est-ce que vous diriez aussi que vous pouvez ou plutôt que le gouvernement devait laisser tomber le 22 mars prochain, les dispositions de la Loi sur les taux de transport des marchandises dans les provinces Maritimes?

M. MacDonald: Pas du tout. Prenez notre situation sur la côte Nord. Nous n'avons pas de moyen concurrentiel de transport, nous n'avons pas de route pour les camions. Nos taux seront donc de beaucoup augmentés. Considérant qu'entre Montréal et Toronto...

[*Text*]

Mr. Horner: The whole purpose of the MFRA is to attempt to tie the Maritimes to the rest of Canada—to make it available to the Maritimes. I think you will agree that this is part of the reason for it.

Mr. MacDonald: Right.

Mr. Horner: Now if you accept that, do you believe that this principle should follow in all three means of transportation—roads, rail and air? In other words, under the MFRA there is a 20 per cent subsidy for freight on railroads out of the Maritimes region. Do you believe that there should be a 20 per cent subsidy for the establishment of a regional air policy or a regional air line within the Maritimes?

Mr. MacDonald: That is too technical a question.

Mr. Horner: Would you believe in that principle though? I do not care whether you say 25 or 30, 15 or 10.

Mr. MacDonald: Yes, if air service is critical for the development of an area then I say if it costs 100 per cent then you must do it, in the sense that there has to be some cost benefits in these things.

Mr. Horner: But you believe that the same principle should carry on?

Mr. MacDonald: Yes.

Mr. Horner: And the same should be true with roads?

Mr. MacDonald: Yes, very definitely so.

Mr. Horner: Then, from a taxpayers point of view, where does the equalization grant fit into this scheme, particularly in reference to roads? Roads fall particularly within the jurisdiction of the provincial government. We in the Province of Alberta are told that we are wealthy and therefore we get no payments under the equalization grant while the Maritimes, particularly New Brunswick I suppose, get their share. Would it not be logical to assume that part of the equalization grant should be used to build roads in this province?

Mr. MacDonald: Well, it is a provincial responsibility and if its program has a logical approach to the federal government's plan

[*Interpretation*]

M. Horner: Les dispositions de cette Loi ont pour but d'essayer de rattacher les Maritimes au reste du Canada pour que les taux soient convenables aux Maritimes. Je pense que vous conviendrez que c'est un peu pour cette raison.

M. MacDonald: Oui.

M. Horner: Maintenant, si vous acceptez cela, croyez-vous que ce principe devrait être valable pour les trois modes de transport, routier, ferroviaire et aérien? En d'autres termes, en vertu de cette Loi sur les taux de transport des marchandises dans les provinces Maritimes, il y a 20 p. 100 de subvention pour les marchandises transportées par chemin de fer à l'extérieur des Maritimes. Croyez-vous qu'il devrait y avoir une subvention de 20 p. 100 pour l'établissement d'une politique aérienne régionale ou d'un service aérien à l'intérieur des Maritimes?

M. MacDonald: Cette question est trop technique.

M. Horner: Croyez-vous en ce principe? Cela m'importe peu si vous dites 25 ou 30, 15 ou 10.

M. MacDonald: Oui, si le service aérien est essentiel pour le développement d'une région, alors s'il en coûte 100 p. 100, vous devez le faire en ce sens qu'il y aura sûrement des bénéfices dans ce genre de choses.

M. Horner: Mais vous dites que le même principe doit être maintenu.

M. MacDonald: Oui.

M. Horner: Et la même observation vaut pour les routes?

M. MacDonald: Oui, définitivement.

M. Horner: Pour ce qui est du contribuable, alors, où vient s'inscrire la péréquation ici, surtout en ce qui concerne les routes. Les routes incombent essentiellement aux gouvernements provinciaux. Nous, dans la province de l'Alberta, passons pour être riches, donc, nous ne recevons pas de paiement en vertu de la péréquation et les Maritimes, surtout le Nouveau-Brunswick, je présume qu'elles reçoivent leur part. Ne serait-il pas logique alors d'en conclure que cette partie de la péréquation devrait être utilisée pour la construction de routes dans cette province?

M. MacDonald: Si c'est du ressort provincial, et que le programme provincial se rapproche logiquement du plan fédéral pour un

[*Texte*]

for a road system, then it should be given the money to do it—provided you are satisfied.

Mr. Horner: Much of your brief dealt with road conditions and that is why I brought this up. Do you not agree that roads are different than air in that regional air policies fall fairly well within the federal government's jurisdiction.

Mr. MacDonald: I think you have to differentiate here between subsidies that are paid to carriers on an operating basis and money that is put into the infrastructure—that is, a capital expenditure and an operating expenditure. We say that the federal government is responsible to provide airport facilities...

Mr. Horner: Yes, I agree.

Mr. MacDonald: ... at least the runways, and that is a capital expenditure, and if necessary to pay a subsidy to the air carrier. The same thing is true on highways...

Mr. Horner: No. I think equalization grants should be used for the highways within the province.

Mr. MacDonald: I do not care how they come, but they should come.

Mr. Chairman: Gentlemen, this concludes the questioning.

[*Interprétation*]

réseau routier, alors, on devrait donner à la province l'argent pour le réseau routier, pourvu que vous soyez convaincus de la chose.

M. Horner: Mais vous avez parlé de l'état des routes. C'est la raison pour laquelle je vous en parle. Ne convenez-vous pas que les routes sont différentes du service aérien du fait que les politiques aériennes régionales relèvent en grande partie du gouvernement fédéral?

M. MacDonald: Il faut établir une distinction entre les subventions payées aux transporteurs et l'argent qui est mis dans l'infrastructure, c'est-à-dire entre les dépenses en infrastructure et les dépenses d'exploitation. Nous disons que le gouvrenement fédéral doit assurer les services d'aérogare...

M. Horner: Oui, j'en conviens.

M. MacDonald: ... au moins, les pistes, et ce sont là des dépenses en immobilisations, et il est nécessaire de verser des subventions aux transporteurs aériens. La même observation va pour les routes ...

M. Horner: Je pense que la péréquation devrait être utilisée pour les routes dans la province.

M. MacDonald: Cela m'importe peu comment les subventions sont versées, mais elles devraient l'être.

Le président: Voici la fin de la période de questions.

APPPENDIX "C"

SUPPLEMENTAL SUBMISSION TO THE STANDING COMMITTEE ON TRANSPORTATION AND COMMUNICATIONS BY THE SAINT JOHN BOARD OF TRADE

Mr. Chairman and Gentlemen:

In our presentation to you of February 13, 1968, the section on air transportation referred to the growing importance of air traffic and emphasized the need for the improved movement of passengers and cargo by air within the Atlantic Region, and for proper connections with outside points.

We stated; "With the increasing importance air traffic is playing in the development of our economy, and keeping in mind the improvement in air transport that will be necessary to facilitate the proper development of this growth centre, it is deemed advisable at this time to consider long-range planning to determine the best method of providing improved service.

We think it is clear that if Saint John is ever to become an important growth centre, it is essential that there be available in this area an all weather airport facility capable of taking its place on major international air routes."

Since the preparation of that presentation to you last year, our Board has given a considerable amount of further study to this subject which warranted the need for this supplemental brief.

Major changes are taking place in all modes of transportation. Air Transportation is now entering a new era and it is important that New Brunswick prepares itself for the new jet age.

Western New Brunswick, at the present time, does not have an airport to service the next generation of aircraft that will be brought into service within the next three years. New Brunswick needs a proper airport in a location to serve its major industrial centre, Saint John, as well as the Capital of the Province, Fredericton.

The purpose of this presentation is to urge that the Government of Canada initiate an immediate technical study to establish the

APPENDICE «C»

MÉMOIRE SUPPLÉMENTAIRE PRÉSENTÉ PAR LA CHAMBRE DE COMMERCE DE SAINT-JEAN AU COMITÉ PERMANENT DES TRANSPORTS ET DES COMMUNICATIONS

Monsieur le président, Messieurs,

Dans le mémoire que nous avons présenté le 13 février 1968, la partie concernant le transport aérien signalait l'importance croissante des déplacements par avion et mettait en relief le besoin d'améliorer le transport aérien des voyageurs et des marchandises dans la région atlantique, ainsi que la nécessité de liaisons aériennes convenables avec les points situés à l'extérieur de la région.

Nous déclarions dans ce mémoire que, vu l'importance croissante du rôle joué par le transport aérien en rapport avec notre expansion économique, et compte tenu de l'amélioration qui s'impose si l'on veut favoriser un développement convenant à notre centre d'expansion, il était recommandable de songer à une planification à long terme afin de définir la méthode la plus propice au perfectionnement du service.

Il est évident, croyons-nous, que si Saint-Jean doit devenir un important centre d'expansion, la région doit absolument avoir un aéroport susceptible de fonctionner par tous les temps et capable d'être inclus au nombre des escales des grandes lignes aériennes internationales.

Depuis la rédaction du rapport qui vous fut soumis l'an dernier, notre Chambre de commerce a accordé à la question un examen beaucoup plus approfondi; c'est pourquoi il est devenu nécessaire de vous fournir ce rapport supplémentaire.

Tous les modes de transport subissent présentement des modifications profondes. Le transport par air se trouve sur le seuil d'une ère nouvelle, et il importe que le Nouveau-Brunswick se prépare au transport par réactés.

L'Ouest du Nouveau-Brunswick ne possède pas actuellement d'aéroport pouvant s'adapter à la prochaine génération d'avions, qui sont censés être mis en service d'ici trois ans. Le Nouveau-Brunswick a besoin d'un bon aéroport, situé dans un endroit d'où il pourra desservir le principal centre industriel Saint-Jean, de même que la capitale, Fredericton.

Le but du présent mémoire est de prier instamment le gouvernement du Canada d'entreprendre sans délai une étude technique en

appropriate location, easily accessible from both Saint John and Fredericton, for a new airport of international standards to serve south western New Brunswick.

Changes in Regional Air Transportation

The new aircraft entering the service of Air Canada will require the Government to establish a new air transportation policy.

In the last twenty years, airlines were equipped to serve short-haul, point-to-point service. For example, a main line carrier like Air Canada would serve Montreal, Quebec, Fredericton, Saint John, Moncton, Halifax, Yarmouth, Sydney, Gander, Stephenville and St. John's. Aircraft of that day could be economically used on short-haul routes. However, with the advent of the jets, it is generally recognized a new policy will be is uneconomic for main line carriers to serve implemented by the Government because it these short-haul routes.

It is expected a new three level policy will be created.

A. Main line carriers will be used for international and long-haul routes using large jet aircraft serving fewer communities. Perhaps only two or three such areas would be served in the Atlantic Provinces.

B. Regional carriers would serve short-haul routes with small jets or turboprop aircraft and these would link the many other centres of population in the Maritime Provinces.

C. Flying Clubs, chartered aircraft and other feeder lines would provide services for the many smaller communities.

At the present time, the Saint John and Fredericton areas are served only by Air Canada which use Viscount and Vanguard aircraft. Within three years, these aircraft will be phased out of existence and will be replaced by the jets. These jets are designed principally for flights in the vicinity of 500 miles and it will be uneconomic for them to fly into both Saint John and Fredericton.

One of the fastest growing modes of transportation is air cargo. During the past few years, air cargo has been growing at the rate of 25% per year. It is important for Saint John and Fredericton to have proper facilities for the handling of air cargo.

vue de choisir un emplacement approprié, qui soit d'accès facile à partir tant de Saint-Jean que de Fredericton, et où l'on aménagera un nouvel aéroport international qui desservira le Sud-Ouest du Nouveau-Brunswick.

Évolution du Transport Aérien Régional

Les nouveaux modèles d'avions utilisés par Air Canada obligera le gouvernement à établir une nouvelle politique de transport aérien.

Au cours des vingt dernières années, les lignes aériennes étaient équipées pour fournir un service sur étapes courtes. Ainsi, un grand réseau aérien tel que celui d'Air Canada pouvait desservir Montréal, Québec, Fredericton, Saint-Jean, Moncton, Halifax, Yarmouth, Sydney, Gander, Stephenville et Saint-Jean, (Terre-Neuve). Les avions d'alors pouvaient être employés à bon compte sur de courts trajets. A cause de l'avénement de l'avion réacté, toutefois, on admet généralement que le gouvernement mettra en œuvre une politique nouvelle, car il est contraire à l'économie d'employer des appareils de long-courrier sur ces étapes courtes.

On prévoit la création d'une politique répartie sur trois échelons.

A. Les grandes lignes aériennes ne feront que le service international et les trajets à long cours et elles emploieront de gros réactés qui desserviront un plus petit nombre d'agglomérations. Il se peut que seulement deux ou trois régions de cette importance soient desservies dans les provinces atlantiques.

B. Les lignes aériennes régionales s'occuperaient des trajets courts en y utlisant des petits réactés ou des turbopropulseurs, lesquels relieraient entre eux les nombreuses autres agglomérations des provinces Maritimes.

C. Les aéro-clubs, les avions nolisés et autres lignes secondaires fourniraient les services requis par un grand nombre de collectivités plus petites.

A l'heure actuelle, les zones de Saint-Jean et Fredericton sont desservies uniquement par Air Canada au moyen d'avions Viscount ou Vanguard. D'ici trois ans, ces aéronefs seront remplacés par des réactés qui ont été conçus principalement par des vols d'environ 500 milles, et il ne sera pas économique de desservir Saint-Jean et Fredericton.

Le transport des marchandises par air croît à un rythme accéléré: depuis quelques années, le transport aérien des marchandises dotées des installations nécessaires à ce genre augmente à raison de 25 p. 100 par année. Il importe que Saint-Jean et Fredericton soient de transport.

Air Cargo and the Jets

Just as many changes are taking place in water transportation with the advent of the super cargo ships, similar changes are taking place in air cargo transportation with the introduction of the jet airliners. The cost factors of air cargo shipping are becoming more and more competitive with other forms of transportation. The new generation of cargo aircraft are being designed with capabilities to handle containers which will further reduce the cost. Containers will be loaded and unloaded, warehoused and distributed from airports by rail, road and water. These major airports will become important distributors of goods. A portion of the traffic using container ships will be required to be transported from coastal points to inland markets by air. It is important that such a major airport be closely integrated with other modes of transportation. Such an airport near Saint John would make use of the facilities, available at the Port of Saint John. It would enable the Saint John and Fredericton areas to accommodate all forms of traffic in the fast developing transportation system, and like Rotterdam, would enable this province to become the focal point for transporting goods on Canada's eastern seaboard.

Air traffic continues to grow, and it is estimated that by 1970 air freight volume on the continent would have increased by 240% from 1965, and a further 135% by 1975. A jet facility not now available in New Brunswick would benefit from these conditions.

The alternative is, unless the Atlantic Provinces have these facilities to accommodate the new type of traffic, the region will be cut off from the major part of world commerce and its satellite role to Central Canada will be reinforced.

Other Factors

Since it is an established fact that industries locate close to transportation facilities, an airport on international trade routes would inevitably attract business to New Brunswick. With transportation to principal markets less of a factor, producers would undoubtedly take advantage of lower production costs and the availability of labour to locate in the area. Such an airport would open new markets for New Brunswick products, notably, lobsters and shrimp, now originating near Saint John.

Le transport aérien des marchandises et les réactés

Tout comme l'avènement du super-cargo a grandement modifié le transport maritime, l'apparition des réactés a occasionné des changements au transport aérien. Le coût du transport des marchandises par air permet une concurrence de plus en plus poussée avec les autres modes de transport. Les avions les plus récents transporteurs de marchandises sont conçus en prevision des conteneurs, ce qui aidera à réduire les frais. Les conteneurs seront chargés et déchargés, entreposés et distribués à partir des aéroports par train, par camion ou par bateau. Ces grands aéroports deviendront d'importants centres de distribution des marchandises. Une partie des marchandises conteneurisées devra être transportée par avion, depuis la côte jusqu'aux marchés intérieurs. Tout aéroport de cette importance devrait être relié étroitement aux autres modes de transport. Ainsi, un aéroport situé près de Saint-Jean pourrait mettre à profit les services offerts par le port de cette ville. Ceci permettrait aux régions de Saint-Jean et de Fredericton de recevoir tous les genres de trafic qui forment un réseau de transport en pleine évolution et, à l'exemple de Rotterdam, la province pourrait devenir le pivot du transport des marchandises sur la côte est du Canada.

La circulation aérienne continue à s'accroître et l'on estime qu'en 1970, le volume du transport aérien sur notre continent aura augmenté de 240 p. 100, par rapport à 1965; d'ici 1975, il se sera accru d'encore 135 p. 100. Un service de réactés, dont le Nouveau-Brunswick est actuellement privé, pourrait bénéficier de telles conditions. Par contre, si les provinces atlantiques ne jouissent pas des services requis par ce nouveau genre de trafic, elles se trouveront isolées de la majorité du monde commercial et, plus que jamais, elle demeurera un satellite de la partie centrale du Canada.

Autres facteurs

Puisqu'il est reconnu que les industries s'installent tout près des moyens de transport, un aéroport international attirerait infailliblement des affaires au Nouveau-Brunswick. Comme le transport vers les grands marchés constituerait alors un facteur de moindre importance, il ne fait pas doute que les producteurs tireraient parti des frais de production réduits et de la disponibilité de la main-d'œuvre pour s'établir dans la région. Un tel aéroport ouvrirait de nouveaux débouchés aux produits du Nouveau-Brunswick, entre autres le homard et la crevette produits typiques de la région de Saint-Jean.

The jets require a long flat approach to an air field and because of noise and safety factors, must be well cleared of built up areas. The amount of land required is something in the vicinity of 2,000 acres. Length of runways—both primary and secondary—must be in the region of 12,000 feet with good approaches from each quadrant.

Location

Both Saint John, the industrial centre of New Brunswick, and Fredericton, the capital with C.F.B. Gagetown, require the services of a main line airport.

Saint John is the largest industrial city of the Province. It has an even greater industrial future with the proposed superport and the multi-industrial complex and will generate large volumes of air cargo. Saint John is now the largest population centre in New Brunswick and, as a major growth centre, has the greatest potential future. It is now well served by both railways, has a road network geared to serve Maritime, eastern Canadian and northeastern United States market areas. The market area for Saint John-Fredericton extends from Woodstock to Sussex and St. Stephen, which includes a population in excess of 250,000 people.

Fredericton, as the capital of the Province, should be served by an international airport. Visitors from across Canada and from international points come to the capital. In addition, the proximity of C.F.B. Gagetown, Canada's largest armed forces base, would lead to its use by the armed forces in their new mobile protective role. Fredericton serves a large farming area and certain commodities could reach world markets through air freight containerization.

The present airport facility at Saint John has reached its full potential. Geographic and weather conditions are such that expansion of this facility to international standards is not practical, but it will continue to serve an important role as a regional airport.

The airport at Fredericton can not be expanded to meet the conditions of an inter-

Les réactés ne peuvent atterrir sans une longue approche libre d'aspérités et à cause du bruit et pour motifs de sécurité, ils doivent descendre à bonne distance des zones habitées. Il faut environ 2,000 acres de terrain pour aménager un aéroport. La longueur des pistes d'atterrissage, tant primaires que secondaires, doit être d'environ 12,000 pieds et les pistes doivent être munies de toutes parts d'approches convenables.

Emplacement

La ville de Saint-Jean, centre industriel du Nouveau-Branswick, et la capitale, Fredericton, ainsi que le centre militaire de Gagetown, ont besoin des services d'un aéroport de premier ordre.

Saint-Jean est la plus importante ville industrielle de la province. L'avenir de ses industries sera encore plus prometteur lorsque seront réalisés le superport et l'ensemble industriel mixte que l'on projette. Saint-Jean pourra alors fournir de grosses cargaisons au transport par air. La ville compte en outre la plus forte population du Nouveau-Brunswick et, en sa qualité de principal centre d'expansion, sa prospérité éventuelle est la plus évidente de toutes. Bénéficiant des services des deux grands réseaux ferroviaires, elle possède également un ensemble de routes conçues dans le but de desservir les provinces maritimes, l'Est du Canada et le Nord-Est des États-Unis, avec les débouchés commerciaux qui s'y trouvent. La région de Saint-Jean et de Fredericton, aux fins du commerce, s'étend de Woodstock à Sussex et Saint-Stephen, et on y dénombre une population de plus de 250,000.

Fredericton, étant la capitale de la province, devrait être desservie par un aéroport international. Elle reçoit des visiteurs venus de toutes les parties du Canada et de pays étrangers. De plus, le voisinage du centre militaire de Gagetown, la base la plus considérable des Forces armées au pays, amènera ces dernières à utiliser l'aéroport dans l'exécution de leur nouveau système de protection mobile. Fredericton dessert une région agricole très étendue et certaines denrées pourraient être expédiées vers les marchés mondiaux grâce à la conteneurisation.

Les services de l'aéroport actuel de Saint-Jean servent à pleine capacité. Les conditions géographiques et climatiques, toutefois, sont telles qu'il ne serait pas pratique de remodeler cette installation suivant les normes internationales. Il n'en continuera pas moins à jouer un rôle important sur le plan régional.

L'aéroport de Fredericton ne peut être remodelé de façon à répondre aux exigences

national airport, but likewise, will continue to serve as an important regional airport.

In conclusion, we submit that an airport of international standards must be constructed in southwestern New Brunswick. Several suitable locations exist in close proximity to both the Saint John and Fredericton areas but our committee does not feel qualified, at this time, to recommend a specific site.

We, therefore, urge the Government of Canada to initiate an immediate technical study to establish the appropriate location for a new airport of international standards to serve southwestern New Brunswick.

Endorsed by: *Fredericton Board of Trade*

d'un aéroport international mais il continuera, lui aussi, à être un important aéroport régional.

Nous recommandons, pour terminer, la construction d'un nouvel aéroport répondant aux normes internationales dans le Sud-Ouest du Nouveau-Brunswick. Plusieurs emplacements situés tout près de Saint-Jean et de Fredericton conviendraient à cette fin, mais notre comité ne se croit pas en mesure d'en recommander un en particulier, pour le moment du moins.

Nous prions donc instamment le gouvernement du Canada d'entreprendre sans délai une étude technique en vue de désigner l'emplacement d'un nouvel aéroport international qui desservira tout le Sud-Ouest du Nouveau-Brunswick.

Appuyé par la Chambre de commerce de Fredericton.

APPENDIX "D"

Summary Brief Prepared for Submission to The Standing Committee on Transport and Communications of the House of Commons—April 26, 1968

SUMMARY

1. *Freight Rates*: The Atlantic Provinces are entitled to freight rates which will enable manufacturers to operate within the province and to reach the markets of Central Canada at a competitive price. Freight rate adjustments alone will not solve our economic problems. These problems are tied to federal transportation, monetary, and tariff policies.

2. *Railway Co-operation*: There should be much more co-operation between the two railways in the use of existing rail lines in New Brunswick.

3. *Unfair Competition*:

(a) While the railways may have to operate at a loss in order to serve some isolated areas, the C.N.R. should not be able to use the taxpayers' money to cut rates for the express purpose of forcing the railway's competition out of business. There is clear evidence the C.N.R. has done just that.

(b) When faced with competition from coastal shipping or river shipping, C.N.R. rates have been reduced to meet that competition and to eliminate it. I question whether attempts to eliminate coastal and river shipping is in the public interest, especially when Canadian taxpayers, including those in the Atlantic region, must finance the C.N.R.'s deficit operation.

4. *Harbour Development*: The development of Saint John Harbour must be undertaken to assure the future importance and growth of Saint John, New Brunswick's largest city. Consideration should be given to the study of new breakwaters with the aim of greatly expanding the area of the existing harbour and providing a protected anchorage area in what is now the outer harbour. The people of New Brunswick should be assured of the development of Saint John Harbour to its fullest potential.

APPENDICE «D»

Résumé du mémoire
rédigé à l'intention du
Comité permanent des transports et
des communications de la Chambre des communes—*le 26 avril 1968.*

RÉSUMÉ

1. *Tarifs-marchandises:* Les provinces atlantiques ont droit à des tarifs-marchandises qui permettent aux fabricants de faire affaires dans la province et d'atteindre les marchés du Canada central à des prix concurrentiels. Néanmoins, le rajustement des tarifs-marchandises ne résoudra pas à lui seul nos problèmes économiques. Ces problèmes sont liés aux politiques fédérales à l'égard des transports, des finances et des tarifs.

2. *Collaboration des chemins de fer:* Il devrait y avoir beaucoup plus de collaboration entre les deux chemins de fer dans l'usage des voies actuelles au Nouveau-Brunswick.

3. *Concurrence déloyale:*

a) Il se peut que les chemins de fer doivent exploiter à perte pour desservir certaines régions isolées, mais le Canadien-National ne devrait pas pouvoir utiliser l'argent des contribuables à couper les prix dans le but même d'acculer à la faillite les concurrents du chemin de fer. Les témoignages sont probants que ce'st précisément ce qu'a fait le Canadien-National.

b) Face à la concurrence des entreprises côtières ou fluviales de transport par eau, les taux du Canadien-National ont été réduits pour affronter cette concurrence et l'éliminer. Je doute que ces tentatives d'éliminer les transports côtiers et fluviaux soient dans l'intérêt public, surtout si l'on songe que ce sont les contribuables canadiens, y compris ceux de la région atlantique, qui doivent faire les frais des opérations déficitaires du Canadien-National.

4. *Expansion portuaire:* Il faut agrandir le port de Saint-Jean afin d'assurer l'importance et la croissance futures de la ville de Saint-Jean, la plus grande du Nouveau-Brunswick. On devrait envisager la possibilité de construire de nouveaux brise-lames afin d'accroître considérablement la superficie du port actuel et d'établir un mouillage abrité dans ce qui constitue présentement les approches du port. On devrait donner à la population du Nouveau-Brunswick l'assurance du développement optimum du port de Saint-Jean.

5. *Designated Areas*: The cities of Saint John and Fredericton are not included in the government's industrial incentive program for so-called designated areas. In the Atlantic Provinces, long recognized as a depressed area of Canada, the major cities should not be deprived of this growth incentive. The City of Saint John must quickly more than double in size if it is to attain a position that would enable it, on its own, to stimulate its own growth and development and, in so doing, enhance the economy of the province.

6. *Chignecto Canal*:

(a) The Chignecto Canal—the long promised canal through the Isthmus of Chignecto close to the New Brunswick—Nova Scotia border—must be built to link the Bay of Fundy area with the St. Lawrence Seaway, creating entirely new traffic and trading patterns involving the industrial centres of central Canada and the United States on the Great Lakes and the Atlantic Seaboard. Construction of the canal should be accorded top priority.

(b) If the Chignecto Canal had been built as promised at the time of Confederation, this section of Canada would still enjoy the thriving economy it then enjoyed. The competition provided by coastal shipping would have kept the rail freight rates in line and provided an alternative means of reaching the Central Canada markets at a reasonable cost.

(c) Profits: The profit factor cannot be ignored by the railways, but we must remember that billions of dollars have been spent in Canada to build a great system of rail lines and canals. Under these circumstances the Atlantic Provinces must not be told that, because of rail costs, we cannot have access to the markets of Central Canada.

(d) Economic Climate: The economic climate of New Brunswick must be changed to encourage new industry and a growth in population which, in turn, will create more traffic for the railways and other forms of transport. That is the foundation upon which elimination of the existing disparity with Central Canada must rest.

5. *Régions désignées:* Les villes de Saint-Jean et de Fredericton ne sont pas comprises dans le programme gouvernemental de stimulation industrielle à l'intention de ce qu'on appelle les régions désignées. Dans les provinces de l'Atlantique, région du Canada reconnue depuis longtemps comme économiquement faible, les grandes villes ne devraient pas être privées de cette stimulation économique. La ville de Saint-Jean doit rapidement plus que doubler le chiffre de sa population si elle entend être en mesure de stimuler elle-même sa propre croissance et, ce faisant, donner de l'élan à l'économie de la province.

6. *Le canal de Chignectou:*

a) Le canal de Chignectou—que l'on promet depuis longtemps de creuser à travers l'isthme de Chignectou près de la frontière du Nouveau-Brunswick et de la Nouvelle-Écosse—doit être construit pour relier la région de la baie de Fundy à la voie maritime du Saint-Laurent, créant ainsi un réseau commercial entièrement nouveau ayant comme pôles les centres industriels du Canada central et des États-Unis situés sur les Grands lacs et ceux de la côte atlantique. On doit accorder la plus haute priorité à la construction du canal.

b) Si le canal de Chignectou avait été construit, comme promis, à l'époque de la Confédération, l'Est du Canada jouirait encore de l'économie florissante qu'il connaissait alors. La concurrence des entreprises côtières de transport aurait empêché la hausse des tarifs-marchandises des chemins de fer et aurait fourni un deuxième moyen d'atteindre les marchés du Canada central à des prix raisonnables.

c) *Bénéfices:* Les chemins de fer ne sauraient mettre de côté le facteur bénéfices, mais il faut se rappeler que des milliards de dollars ont été dépensés au Canada pour construire un grand réseau de chemins de fer et de canaux. Il ne faut donc pas dire aux provinces de l'Atlantique qu'en raison du coût du transport ferroviaire, elles ne peuvent avoir accès aux marchés du Canada central.

d) *Climat économique:* Il faut modifier le climat économique du Nouveau-Brunswick de manière à encourager l'industrie nouvelle et la croissance de la population, facteurs qui à leur tour créeront de plus nombreux clients pour les chemins de fer et les autres moyens de transport. C'est sur cette base que doit reposer l'élimination de l'inégalité qui règne actuellement entre l'est et le centre du Canada.

APPENDIX "E"

SUBMISSION
TO THE
TRANSPORTATION AND
COMMUNICATIONS
COMMITTEE
BY
THE FREDERICTON BOARD OF TRADE

Mr. Chairman, we thank you and members of your Committee for the privilege of appearing before you today. Our group here represents more than three hundred and fifty members of the Fredericton Board of Trade. We are pleased to go on record in support of the Brief submitted by the Maritime Provinces Board of Trade—the voice of all Boards of Trade and Chambers of Commerce in the Atlantic Provinces—and, also, the Brief submitted by the City of Fredericton. We have studied these Briefs and we are in complete accord with their contents.

We would also wish to register our concern with recent changes in L.C.L. Freight Rate increases, which are mentioned in their Briefs, specifically that of the density rule so disastrous to those present shippers of bulky but light commodities. We feel it also gives any manufacturers pause who might be considering our area for the handling of this type of merchandise. Railway rates on valuable lightweight products were, originally, much higher than those on bulky low-valued goods—today, the opposite is true.

Worthy of mention in this Brief is the potential envisioned in the proposed "Corridor Road", which has been the subject of discussion in the Provinces of Quebec, Nova Scotia, Prince Edward Island, as well as our own Province of New Brunswick and the State of Maine.

Briefly, it is the consensus of opinion that linking the Atlantic Provinces with the Central Region of Canada by a short-cut across Maine would be beneficial to all those Provinces and the State of Maine. Such an artery cutting one hundred and forty miles off the shortest highway connection now existing between the two points, and many hours of travel between them, would break the great highway transportation bottle-neck of the

MÉMOIRE
DE LA CHAMBRE DE COMMERCE DE
FREDERICTON
AU COMITÉ
DES TRANSPORTS ET DES
COMMUNICATIONS

Monsieur le président, nous vous remercions, ainsi que les membres de votre Comité, du privilège qui nous est accordé de comparaître devant vous aujourd'hui. Notre groupe représente plus de 350 membres de la Chambre de commerce de Fredericton. C'est avec plaisir que nous consignons au compte rendu notre appui du mémoire soumis par la Chambre de commerce des provinces Maritimes—qui est la voix de toutes les Chambres de commerce des provinces atlantiques—de même que du mémoire présenté par la ville de Fredericton. Nous avons étudié ces mémoires et nous sommes en tous points d'accord avec leur contenu.

Nous désirons également exprimer l'inquiétude que nous causent les hausses récentes des tarifs-marchandises pour les quantités de moins d'une wagonnée, dont il est fait mention dans leurs mémoires, et en particulier la nouvelle règle de la densité, qui est si désastreuse pour les expéditeurs actuels de denrées volumineuses mais légères. Nous estimons qu'elle fait aussi réfléchir les fabricants qui pourraient songer à notre région pour la manutention de ce genre de marchandise. Le tarif ferroviaire des produits légers de grande valeur était autrefois beaucoup plus élevé que celui des marchandises volumineuses de peu de valeur; aujourd'hui, c'est le contraire qui est vrai.

Dignes de mention dans le présent mémoire sont les possibilités que laisse entrevoir le projet de la «route corridor», dont on a beaucoup parlé dans les provinces de Québec, de Nouvelle-Écosse et de l'Île du Prince-Édouard, de même que dans notre propre province du Nouveau-Brunswick et dans l'État du Maine.

En peu de mots, on est unanime à dire que relier les provinces de l'Atlantique au Canada central par un raccourci coupant le Maine serait à l'avantage de toutes ces provinces et de l'État du Maine. Une telle artère, plus courte de 140 milles que la plus courte route reliant les deux points à l'heure actuelle, et faisant épargner de nombreuses heures de voyage, éliminerait le grand embouteillage du transport routier des provinces atlantiques.

Atlantic Provinces. Besides assisting general transportation, such a highway would be a boon to the tourist trade. By studying the attached map "Appendix A", you can see construction of such a highway will provide a virtual straight line between Sydney, Nova Scotia and Montreal, Quebec.

It is not without some justification that, in the national picture, we often tend to think of ourselves as the forgotten area of Canada. Press reports of an event "to be televised nationally on C.T.V." are irritating for us to read since we have no C.T.V. in New Brunswick and we believe there is only one outlet in the Maritimes.

Apart from regional forecasts, the weather picture, described as "coast-to-coast", all too often starts in Vancouver and ends in Montreal.

Similarly, in the field of transportation, we get the impression of being on the outside looking in. Our Air Canada flights from Fredericton to other points are less than adequate and do not occur at hours convenient to businessmen. The connections by Air Canada to Eastern Provincial Airways are poor and Fredericton connections to New England are infrequent and require stopovers in Saint John of several hours.

We are the only provincial capital not served by direct passenger train service. For some years a "Toonerville Trolley" took passengers to Fredericton Junction (a misnomer as it is some thirty miles from Fredericton). Requests for equipment to allow passengers to board at Fredericton and remain on board with the cars connected at Fredericton Junction were ignored and, in fact, the "Trolley" was removed for lack of support, a condition which was natural in view of the indifferent service, the age of the equipment and the inconvenience involved. Now we are required to take a bus or a car thirty miles to catch the train to Montreal, it is hardly worth it. We believe improved direct service, properly promoted, would deserve and generate much greater patronage by the travelling public of the Fredericton Area.

We have one brief comment on the Maritime Freight Rates Act. Any move to curtail or remove the assistance afforded by the Act would be just one more step along the road to isolating the Maritime Provinces from the

En plus d'améliorer les transports en général, cette route favoriserait le commerce touristique. En étudiant la carte que nous donnons à l'appendice «A», on voit que la construction d'une telle route établira une ligne à peu près droite de communication entre Sydney (Nouvelle-Écosse,) et Montréal (Québec).

Ce n'est pas sans raison qu'au tableau national, nous tendons souvent à nous considérer comme la région oubliée du Canada. Les nouvelles de journaux annonçant qu'un événement sera «diffusé par tout le Canada sur le réseau CTV» nous irritent, car nous n'avons pas la CTV au Nouveau-Brunswick et le réseau ne compte, croyons-nous, qu'une seule station dans les Maritimes.

A part les prévisions régionales, la météo, que l'on dit «d'un océan à l'autre», commence trop souvent à Vancouver pour finir à Montréal.

De même, dans le domaine des transports, nous avons l'impression d'être le cousin éloigné. Nos envolées d'Air Canada de Fredericton vers d'autres points sont moins que suffisantes et n'ont pas lieu à des heures qui conviennent aux hommes d'affaires. Les correspondances d'Air Canada avec la société *Eastern Provincial Airways* sont piètres et les correspondances à Fredericton pour la Nouvelle-Angleterre sont peu fréquentes et exigent une escale de plusieurs heures à Saint-Jean.

Nous sommes la seule capitale provinciale qui ne soit pas desservie par un service direct de trains de voyageurs. Pendant un certain nombre d'années, un «petit train de banlieue» menait les voyageurs jusqu'à Fredericton Junction (l'endroit est mal nommé: quelque trente milles le séparent de Fredericton). On a fait la sourde oreille à la demande de matériel devant permettre aux voyageurs de monter à bord à Fredericton et d'y demeurer pendant que l'on relierait les voitures au train à Fredericton Junction et en fait, le «petit train» finit par être enlevé faute de voyageurs, chose assez naturelle si l'on songe au mauvais service fourni, au grand âge du matériel et à l'incommodité de l'affaire. Nous devons maintenant faire un trajet de trente milles en autobus ou en automobile pour attraper le train de Montréal: le jeu en vaut à peine la chandelle. Nous croyons qu'un service direct amélioré et convenablement lancé se ferait de nombreux clients parmi le public voyageur de la région de Fredericton.

Un bref commentaire à propos de la Loi sur les taux de transport des marchandises dans les provinces Maritimes. Toute mesure visant à réduire ou à éliminer l'aide accordée par la loi ne serait qu'un pas de plus vers l'isole-

rest of Canada and to push it further down the Economic Scale. We *must* attract industry, therefore we *have* to be attractive to industry. We do not have the markets of Quebec, Ontario and the West, therefore, we require some assistance to help us get to these markets. Subsidies in the national interest should not be tampered with.

The role of transportation in establishing Canada as a nation coast-to-coast is a matter of historical fact. Good transportation promotes not only commerce and social liaison between parts of Canada, but we believe has an important role to play in national unity *because* of the commerce and social liaison which results. We suggest the Committee would do well to consider these very important implications of improving transportation at a time when national unity is of vital concern to all citizens.

Signed on Behalf of the Fredericton Board of Trade.

David E. Cornish, President

F. G. Bidlake, Vice-President, Chairman, Transportation Committee

N. J. McKenzie, Secretary-Manager

ment des provinces Maritimes du reste du Canada, ce qui les ferait baisser d'un autre barreau dans l'échelle économique. Nous *devons* attirer l'industrie, nous *devons* donc présenter de l'attrait pour elle. Nous n'avons pas les marchés du Québec, de l'Ontario et de l'Ouest; nous avons donc besoin que l'on nous aide à atteindre ces marchés. Il ne faut pas toucher aux subventions accordées dans l'intérêt national.

On sait le rôle historique joué par les transports dans l'établissement du Canada comme nation d'un océan à l'autre. De bons moyens de transport favorisent non seulement le commerce et les liens humains entre les diverses régions du Canada, mais ils ont aussi, à notre avis, un rôle important à jouer sur le plan de l'unité nationale *du fait même* des rapports commerciaux et humains qui en résultent. Nous invitons donc le Comité à considérer ces très importantes répercussions de l'amélioration des transports, à un moment où l'unité nationale préoccupe si profondément tous les Canadiens.

Au nom de la Chambre de commerce de Fredericton:

Le président, David E. Cornish

Le vice-président, F.G. Bidlake, président du comité des transports

Le secrétaire-directeur, N.J. McKenzie

IX Appendice	640

We are five Business Administration students at the University of New Brunswick in Fredericton and would like to take this opportunity to explain our approach to this brief. We decided to take a general view of the problems connected with Atlantic transportation rather than assessing purely local problems. We felt that specific problems would be presented adequately in other briefs.

We also felt that a regional policy for transportation was essential and that once this was accomplished the region could build on it to solve the local difficulties. In our brief we tried to include all the broad aspects of transportation as it relates to the Atlantic Provinces. We have taken into account the conclusions and recommendations set forth in the Atlantic Provinces Transportation Study of January, 1967, prepared by the Economist Intelligence Unit Limited of London, England, as well as the recommendations of the McPherson Royal Commission on Transportation of 1961.

We begin with the Maritime Freight Rates Act, giving a brief history of its purpose and impact on the Maritime region, then move to our basic recommendations to improve its effect on transportation in the region. Next we move to a discussion of the new less-than-carload charges and their effect on the region.

Obviously any study of transportation in the Canadian nation must include an assessment of the rail facilities present in the area under discussion. Thus in the next section we have taken a look at various aspects of railways and railroads, such as operating costs, service, existing facilities. Our recommendations include suggestions for improving the railways' market position.

Highways are covered in the following section. We have discussed their financing, number, condition, and have made a few specific recommendations. From there the next logical topic seemed to be trucking. We have stressed the need for uniform regulations throughout the Atlantic Region.

With the main generalizations covered we then attempted to look at several more

Nous sommes cinq étudiants en administration des affaires à l'Université du Nouveau-Brunswick, située à Fredericton et nous aimerions profiter de cette occasion pour expliquer la façon dont nous envisageons ce mémoire. Nous avons opté pour une vue globale des problèmes se rapportant au transport dans les provinces de l'Atlantique, au lieu de nous borner à une évaluation des problèmes purement locaux. Nous avons pensé que des problèmes précis seraient exposés adéquatement dans d'autres mémoires.

En outre, nous avons cru qu'il est essentiel d'avoir une politique régionale pour le transport et, une fois cet objectif atteint, les responsables régionaux pourraient trouver les solutions aux problèmes locaux. Nous avons essayé d'inclure dans notre mémoire tous les aspects généraux du transport dans les provinces de l'Atlantique. Nous avons pris en considération les conclusions et les recommandations mises de l'avant par l'étude sur le transport dans les provinces de l'Atlantique de janvier 1967, préparée par la société *Economist Intelligence Unit Limited*, de Londres, ainsi que les recommandations de la Commission McPherson d'enquête sur le transport, de 1961.

Nous nous sommes d'abord arrêtés à la Loi sur les taux de transport des marchandises dans les provinces Maritimes, dont nous avons donné un bref historique des buts et des répercussions sur la région des provinces Maritimes, pour passer ensuite à nos principales recommandations destinées à en améliorer les effets sur le transport dans la région. Nous sommes passés ensuite à une étude des nouveaux frais relatifs aux wagonnées partielles et de leur répercussion sur la région.

Il est évident que toute étude du transport au Canada doit comprendre une évaluation des installations ferroviaires existantes dans la région sur laquelle porte l'étude. Dans la section suivante, nous nous sommes arrêtés à différents aspects des chemins de fer et des voies ferrées, comme les coûts d'exploitation, le service et les installations existantes. Nos recommandations contiennent des suggestions en vue d'améliorer la situation commerciale des chemins de fer.

Nous traiterons des routes dans la section suivante. Nous en avons étudié le financement, le nombre, l'état, et nous avons formulé quelques recommandations précises. De là, il nous a semblé que le camionnage était le sujet important qui devait suivre logiquement. Nous avons insisté sur la nécessité d'une réglementation uniforme dans toute la région de l'Atlantique.

Après avoir étudié les problèmes généraux, nous nous sommes ensuite efforcés de nous

specific problems which have plagued the Atlantic Provinces. We have made recommendations on the Corridor Road connecting the Atlantic Region to central Canada, the Prince Edward Island Causeway, ferry services, air facilities, sea ports, and lastly specific recommendations for Newfoundland. We feel that Newfoundland has transportation problems which are distinct from those of the rest of the Atlantic area.

With this short introduction we would like to start with an assessment of the Maritime Freight Rates Act.

Maritime Freight Rates Act

When discussing the Maritime Freight Rates Act one must keep in mind the fact that it was introduced as an element of National Transportation Policy to provide greater access by the Maritime Provinces to the central Canadian markets, or in the words of the Duncan Commission "to afford Maritime merchants, traders and manufacturers the larger market of the whole Canadian people instead of the restricted market of the Maritimes' themselves." A National Transportation Policy which fails to consider the regional aspects of the Maritimes is politically, socially, and economically inadequate and unacceptable. Because they lack the population (approximately two million now) and the industrial concentration (resulting in a reduced tax base) is no reason to ignore them or discriminate against them in national policy formulation.

The Maritime Freight Rates Act was passed in 1927 to combat the rise in freight rates within the Maritime Region in relation to the rest of Canada. As terms within the British North America Act sought to give the Maritimes a workable transportation system within the light of the union the then prevailing circumstances were contrary to that.

The original Act proposed a reduction in freight rates amounting to 20% which historians had interpreted, from studying the Act in

pencher sur un bon nombre des problèmes les plus précis auxquels les provinces de l'Atlantique ont dû faire face. Nous avons formulé des recommandations concernant la route-corridor reliant la région de l'Atlantique au centre du Canada, la chaussée de l'Île du-Prince-Édouard, les services de traversiers, les installations pour le transport aérien, les ports de mer et enfin les recommandations précises concernant Terre-Neuve. Nous croyons qu'il y a à Terre-Neuve des problèmes de transport différents de ceux que connaît le reste de la région de l'Atlantique.

Après cette brève introduction, nous aimerions débuter par une analyse de la Loi sur les taux de transport des marchandises dans les provinces Maritimes.

Loi sur les taux de transport des marchandises dans les provinces maritimes.

En étudiant la Loi sur les taux de transport des marchandises dans les provinces Maritimes, il faut se rappeler que cette loi a été présentée comme un élément de la politique nationale du transport, afin de fournir aux provinces Maritimes de meilleures voies d'accès au marché du Canada central, ou bien, selon les mots de la Commission Duncan «pour procurer aux commerçants, aux industriels et aux manufacturiers des Maritimes un meilleur débouché sur l'ensemble du marché canadien au lieu de les restreindre au marché des Maritimes comme tel». Une politique nationale du transport qui ne tient pas compte des conditions particulières aux provinces Maritimes est inadéquate et inacceptable aux points de vue politique, social et économique. La population peu nombreuse des provinces Maritimes, qui est d'environ deux millions actuellement, et la concentration industrielle qui entraînent une diminution des revenus provenant des taxes imposées par les gouvernements de cette région ne constituent pas des raisons pour ignorer cette partie du Canada ou pour la traiter injustement dans l'élaboration d'une politique nationale. La Loi sur les taux de transport des marchandises dans les provinces Maritimes a été adoptée en 1927 afin de pallier à l'augmentation des tarifs des marchandises dans la région de l'Atlantique par rapport au reste du Canada. Étant donné que des dispositions de l'Acte de l'Amérique du Nord Britannique visaient à doter les provinces Maritimes d'un réseau de transport adéquat dans l'esprit de l'union, les conditions qui prévalaient alors ne correspondaient pas à ce désir.

Le premier texte de la loi proposait une diminution de 20 p. 100 des tarifs des marchandises et, en étudiant cette disposition

the light of the Duncan Commission, to be a lasting and fixed subsidy. It left no provision for revision at a later date.

As changing circumstances took over the transportation field the Act has come under careful scrutiny and criticism. It has been criticized for its lack of applicability to other forms of transportation. The Act in general fails to provide the access to western markets as it had intended to do. It maintained rate differentials but they prove inadequate as the greater distances required by the Maritime shippers soon gobbled up this meager advantage. The Act has thus failed to establish and/or maintain the statutory rate advantage advocated by the Duncan Commission. We recommend that a more flexible rate be established, possibly within the structure of the Maritime Freight Rates Act, to enable the Maritime shippers wider and better access to western markets. This could hopefully be accomplished by establishing a flexible rate based on some ratio of national and/or regional transportation costs. Thus if certain economic conditions cause a fall in Ontario rates a pro rata reduction should automatically apply to the Maritimes.

The rate should not be based on an across the board reduction basis as it is now. We will attempt to show later in the brief that the relative increase in transportation costs for shippers in the Maritimes is more than in other sections of the country. This is due to the location of our markets and the horizontal percentage increases presently applied to rates. A new structure should realize this deficiency and attempt to remedy it.

As a result of the changes in the transportation systems and modes of transport since 1927 when the Maritime Freight Rates Act was introduced we recommend the extension of this Act to cover all modes of transportation. There are several reasons for this viewpoint, enumerated as follows:

dans l'esprit de la Commission Duncan, les historiens l'ont interprétée comme étant une subvention fixe et permanente. Aucune disposition ne prévoyait une revision à une date ultérieure.

Au fur et à mesure que les conditions ont évolué dans le domaine du transport, la loi a fait l'objet d'analyses attentives et de critiques. Elle a été critiquée à cause de son manque de souplesse qui empêchait de l'appliquer à d'autres modes de transport. De façon générale, la loi ne donnait pas accès aux marchés de l'Ouest, bien que ses auteurs en aient eu l'intention. Elle a maintenu des rapports constants entre les taux de transport, mais ses dispositions se sont avérées insuffisantes car les distances plus considérables que devaient parcourir les marchandises expédiées des Maritimes eurent tôt fait d'absorber ce léger avantage. La loi n'a donc pas réussi à établir ou à maintenir ou à établir et à maintenir l'avantage des tarifs préconisés par la Commission Duncan. Nous recommandons l'établissement de tarifs plus souples, peut-être dans le cadre de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, afin de permettre aux expéditeurs des Maritimes d'atteindre plus facilement et plus généralement le marché de l'Ouest. Nous avons bon espoir qu'on pourrait atteindre ce but en établissant des taux souples fondés sur un certain rapport entre les coûts nationaux et les coûts régionaux du transport. De cette façon, si certaines conditions économiques entraînent une baisse des taux en Ontario, il devrait y avoir automatiquement une diminution proportionnelle des taux dans les Maritimes.

On ne devrait pas être fondés sur une réduction générale comme c'est présentement le cas. Nous tenterons de démontrer plus loin dans notre mémoire que l'augmentation proportionnelle des coûts du transport est plus considérable pour les expéditeurs des Maritimes que pour ceux d'autres régions du pays. Ceci est dû à la situation géographique de nos marchés et aux augmentations horizontales du pourcentage qui s'appliquent actuellement aux taux. En élaborant une nouvelle structure, il faudrait tenir compte de cette déficience et tâcher d'y remédier.

Étant donné les changements qu'ont subi les services et les modes de transport depuis 1927, quand la Loi sur les taux de transport des marchandises dans les provinces Maritimes a été mise en vigueur, nous recommandons qu'on élargisse cette loi afin de l'appliquer à tous les modes de transport. Voici les nombreuses raisons qui justifient cette prise de position:

(1) The Federal Government is actually subsidizing a body (railways) to the detriment of private enterprise (trucking and air service). We note the fact that the competitive tariff type of goods (outlined in the report of the Economist Intelligence Unit) are shipped by railways and trucking institutions at closely similar rates, however, these goods are subsidized for the railways benefit as a result of the extra revenue gained under the Maritime Freight Rates Act, while the other classes of goods (commodity and class) are shipped at a higher rate because railways have a monopoly on their transport. We feel the subsidies should have been applied to the non-competitive rates to reduce their costs. As the Maritime Freight Rates Act now stands the railways, not the shipper, benefit. The Act in its present form is self-defeating as it subsidizes the railways, not the shipper, for it quotes an unwise, uneconomical rate to obtain the competitive advantage over other modes of transport and then quotes unreasonable rates to remote areas not supplied with other forms of transport. (Maritime Freight Rates Act, *Atlantic Provinces Transportation Study, E.I.U., Vol. V*).

(2) Railways have become inefficient as delays and abnormal breakages are readily seen by shippers on most runs (reported by E.I.U. Study). The railways were subsidized in their construction and have continued to develop with government assistance along highly uneconomical lines. They must not continue to be treated as favored children; the subsidy must be extended to other modes of transportation so that more complete access to central Canadian markets is obtained.

(3) As the shippers seem to benefit only slightly, if at all, from the subsidies the extension to all modes of transport would better ensure the shippers that they obtained the subsidy instead of the railways. Thus the revisions in the structure of the Act should be aimed at implementing it in such a way

(1) Le gouvernement fédéral subventionne présentement un mode de transport (les chemins de fer) au détriment d'entreprises privées (le camionnage et les services de transports aérien). Nous remarquons avec l'*Economist Intelligence Unit* que certaines catégories de marchandises auxquelles sont appliqués des tarifs concurrentiels sont transportées par des compagnies de chemins de fer à des prix correspondant à peu près à ceux exigés par les compagnies de camionnage; cependant, ces marchandises sont subventionnées au profit des chemins de fer par suite du revenu supplémentaire obtenu aux termes de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, alors que les autres catégories de marchandises sont transportées à un prix plus élevé, car les compagnies de chemins de fer jouissent d'un monopole pour le transport de ces dernières. Nous croyons qu'on devrait appliquer les subventions aux taux non concurrentiels afin d'en réduire les dépenses. De la façon dont elle est appliquée présentement, la Loi sur les taux de transport des marchandises dans les provinces Maritimes profite aux chemins de fer et non aux expéditeurs. De la façon dont elle est rédigée présentement, cette loi est sans effet car elle permet de subventionner les chemins de fer et non les expéditeurs, puisqu'elle établit des taux contraires au bon sens et à l'économie, afin d'obtenir l'avantage dans la concurrence avec les autres modes de transport et établit ensuite des taux déraisonnables pour les régions éloignées qui ne sont pas pourvues d'autres modes de transport. (Loi sur les taux de transport des marchandises dans les provinces Maritimes, *Étude du transport dans les provinces de l'Atlantique, E.I.U.*, vol. V.)

(2) Les chemins de fer ne sont plus efficaces si on considère les détériorations et les retards dont se plaignent fréquemment les expéditeurs sur la plupart des trajets (mentionnés dans l'étude du *E.I.U.*). Le gouvernement a subventionné la construction des chemins de fer qui ont pursuivi leur expansion suivant des principes non économiques. Il ne faut pas continuer à les traiter comme des enfants gâtés; on devrait appliquer les subventions aux autres modes de transport afin de donner un accès plus complet au marché du Canada central.

(3) Étant donné que les expéditeurs semblent ne profiter que très peu des subventions, en étendant l'application de cette loi à tous les modes de transport, on donnerait aux expéditeurs une meilleure garantie que ce serait eux et non les chemins de fer qui profiteraient des subventions. La revision de la

that the shipper benefits and not the transportation facility (in the sense that they gain extra revenue for similar service).

If one believes that regional retardation cannot be alleviated unless one has greater access to outside markets (we hold this opinion) then any integration of the Atlantic Provinces into a National Transportation Policy must hold this ideal to be of the utmost importance. We realize that the Maritime Freight Rates Act has not solved any regional disparities and we understand that its purpose was not stated in such terms, but if the Act had achieved its purpose of greater access to central Canadian markets regional disparities would hopefully have been less.

We recognize that transportation problems are not the sole or the most significant factor in the Atlantic Provinces uncompetitiveness with the central Canadian markets, but if a better structured and more suitable transportation policy can be obtained for the future possibly we can gain some insight into our many other perplexing difficulties. By establishing a flexible structure as a guidepost to future transportation facilities we can then readily adapt procedures to rapidly handle new developments as they come along.

This leads us to the proposal that raw materials originating outside of the 'select territory' destined for a Maritime manufacturing firm should come under the Maritime Freight Rates Act. For if the manufacturer has the disadvantage of having his source of raw materials outside the Maritimes, say in Ontario, and also his market he cannot compete in any reasonable form with other firms even though his manufactured goods are partially subsidized. We recognize that this statement may appear to be extreme at first glance, however, in our opinion it holds considerable weight. This fact can be seen when one realizes that the Maritimes are subsidizing the Central Canadian manufacturers on every car, every refrigerator, and every piece of machinery they buy through the existing tariff structure. Thus we do not consider that our statement lacks realism since any subsidy granted us will, in all probability, be

structure de la loi devrait donc avoir pour but de la mettre en application de façon à ce qu'elle profite aux expéditeurs et non aux transporteurs qui bénéficient de revenus supplémentaires pour un service semblable.

Si l'on croit qu'il est impossible d'améliorer la condition d'une région économiquement désavantagée à moins de lui fournir de meilleures voies d'accès aux marchés, et c'est là notre opinion, l'intégration des provinces de l'Atlantique dans une politique nationale du transport doit alors être considérée comme un but de toute première importance. Nous nous rendons compte que la Loi sur les taux de transport des marchandises dans les provinces Maritimes n'a éliminé aucune disparité régionale et nous comprenons que ce n'était pas là son but précis mais, si la loi avait atteint son but consistant à donner un meilleur accès au marché du Canada central, nous croyons que les disparités régionales auraient été moindres.

Nous admettons que les problèmes du transport ne constituent pas l'unique facteur ni le facteur le plus important de la situation d'impossibilité de concurrence dans laquelle se trouvent les provinces de l'Atlantique sur le marché du Canada central mais, si on élaborait une politique nationale du transport mieux structurée et mieux appropriée pour l'avenir, peut-être pourrions-nous entrevoir une certaine solution à nos nombreuses autres difficultés angoissantes. En cherchant à établir une structure souple pour les futurs moyens de transport, nous pourrons adapter rapidement les méthodes et tirer parti sur-le-champ des nouveaux aménagements au fur et à mesure qu'ils se présenteront.

Cela nous amène à la proposition selon laquelle les matières premières provenant de l'extérieur d'un «territoire déterminé» et destinées à une entreprise manufacturière établie dans les Maritimes devraient profiter de la Loi sur les taux de transport des marchandises dans les provinces Maritimes car, si le manufacturier se trouve dans la situation désavantageuse où sa source de matières premières est située à l'extérieur des Maritimes, en Ontario, supposons, de même que son marché, il ne peut pas raisonnablement concurrencer les autres entreprises même si les marchandises qu'il fabrique sont partiellement subventionnées. Nous convenons que cette déclaration peut sembler osée de prime abord; cependant, selon nous, elle est passablement juste. On peut se rendre compte de cela quand on considère que les provinces Maritimes subventionnent les manufacturiers établis dans le Canada central pour chaque

less than the additional cost of consumer and producer goods which the Maritimes are forced to pay.

Another aspect of the Maritime Freight Rates Act which we feel should be amended deals with exports to the United States. We feel that the subsidies should apply to those shipments as well as the ones to Central Canada. The shorter hauls involved would give the shippers the advantage originally proclaimed for the Act. Although the tariff walls erected by Washington will hinder the effects of the subsidy, it is—so to speak—better than nothing.

The Duncan Commission in the late 1920's emphasized the Confederation principle of affording the Maritime region greater access to the Central Canadian markets. This philosophy has carried through until even today many believe that the Maritimes must be offered adequate measures to gain this market. The fact that the regions are competitive and not complementary has been borne out by history; yet many officials and advocators of Maritime prosperity fail to realize this.

The members of the Commission and other policy formulators must reassess their basic assumptions concerning the Maritimes and accept the fact that their future economic prosperity does not lie in Central or Western Canada. As the recent Kennedy Round of Tariffs has or soon will open up the markets along the Eastern Seabord, we believe this is a step in the right direction. This is one further reason for applying the Maritime Freight Rates Act to exports to the United States.

The extension of the Maritime Freight Rates Act to apply to west-to-east shipping within the 'select territory' would eliminate the discriminatory aspects now present within the region, for the eastern-most points can ship products to the western-most points within the region under subsidy but the

automobile, chaque réfrigérateur ainsi que toute pièce d'outillage vendue dans ces provinces aux termes de la structure actuelle des tarifs. Nous estimons donc que notre affirmation tient compte des faits car toute subvention qui nous est accordée sera selon toute probabilité inférieure au coût additionnel que le consommateur et le producteur des Maritimes sont obligés de payer.

Un autre aspect de la Loi sur les taux de transport des marchandises dans les provinces Maritimes qui, selon nous, devrait être modifié concerne les exportations à destination des États-Unis. Nous croyons que les subventions devraient s'appliquer à ces envois tout aussi bien qu'à ceux destinés au centre du Canada. L'expéditeur obtiendrait pour les plus courtes distances de transport l'avantage qu'on a prétendu lui accorder par cette loi. Bien que les barrières tarifaires établies par Washington nuiront au but recherché par les subventions, c'est mieux que rien, somme toute.

A la fin des années 1920, la Commission Duncan a mis l'accent sur le principe de la Confédération consistant à donner à la région de l'Atlantique un meilleur accès aux marchés du Canada central. Cette idée a fait son chemin et persiste même aujourd'hui, alors que plusieurs estiment qu'il faut offrir aux provinces Maritimes les moyens adéquats pour atteindre ce marché. L'histoire nous apprend que les régions tendent à se faire concurrence et non à s'entr'aider; cependant, plusieurs hauts fonctionnaires et protagonistes de la prospérité des Maritimes ne parviennent pas à le comprendre.

Les membres de la Commission ainsi que les autres personnes qui élaborent des politiques devraient procéder à une nouvelle évaluation des premières notions qu'ils ont à l'égard des Maritimes et admettre que leur prospérité économique future ne viendra ni du centre ni de l'ouest du Canada. Comme les négociations du *Kennedy Round* sur les tarifs douaniers ont ouvert ou ouvriront sous peu les marchés le long de la côte de l'Atlantique, nous pensons que c'est là un pas dans la bonne voie. Cest une raison de plus d'appliquer la Loi sur les taux de transport des marchandises dans les provinces Maritimes aux exportations à destination des États-Unis.

L'extension de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, afin de l'appliquer aux envois de l'Ouest vers l'Est à l'intérieur du territoire déterminé, éliminerait l'injustice dont souffre présentement cette région, car on peut expédier des marchandises de la plupart des

reverse is not true, unless the eastward traffic is to an ocean port.

Another important aspect of the rate structure in the Maritimes is the fact that rates are applied across Canada on a horizontal percentage increase. This adversely affects long distance shippers and as the Maritimes have a considerable distance to go to gain access to the Central Canadian market such percentage increases cause great hardship on shippers in this region. As the Maritime Freight Rates Act is fixed at 30% no alleviation is obtained from this fact.

To illustrate the foregoing point we will use a hypothetical example. Let us assume that for a given commodity X shipped from Fredericton to Port Arthur the cost is $4.00 per unit and that if it originated in Montreal the shipping cost would be $2.00 per unit. Since the shipment from Fredericton comes under the Maritime Freight Rates Act its real cost will be 70% of $4.00, or $2.80. Now if we assume a 50% rate increase the shipping costs per unit will rise to $6.00 and $3.00 respectively. However, the Maritime Freight Rates Act will apply to the former thus reducing the cost to $4.20. The increase in cost to the Maritime shipper would be $1.40 as compared to the $1.00 increase for the Montreal shipper. As illustrated the Maritime shipper is paying forty cents more than the Central Canadian shipper even with the 30% reduction. The Maritime shipper's unit costs have thus increased further injuring his competitive position.

The following is a brief summary of our recommendations concerning the Maritime Freight Rates Act:

1. A flexible rate should be established.

2. The Maritime Freight Rates Act should be extended to all modes of transport.

3. The extension the Maritime Freight Rates Act should apply to exports to the United States.

points de l'Est à destination de la plupart des points de l'Ouest au sein de la région grâce à des subventions, mais le contraire ne vaudrait pas à moins que les marchandises acheminées vers l'Est le soient par des ports de mer.

Un autre aspect important de la structure tarifaire des provinces Maritimes vient de ce qu'elle est mise en application suivant l'augmentation proportionnelle égale d'un bout à l'autre du Canada. Une telle situation défavorise les expéditeurs de marchandises à des distances considérables et, comme c'est le cas des expéditeurs des Maritimes désireux de faire affaires sur le marché central du Canada, de telles augmentations sont à leur détriment. Comme la Loi sur les taux de transport des marchandises dans les provinces Maritimes autorise une diminution fixe de 30 p. 100, elle ne procure aucun allègement.

Pour démontrer cet énoncé, nous utiliserons un exemple hypothétique. Supposons que X envoie un produit donné de Frédéricton à Port Arthur, le coût est de $4 l'unité et si le même produit était envoyé de Montréal, le coût du transport serait de $2.00 l'unité. Étant donné que la marchandise envoyée de Frédéricton profite de la Loi sur les taux de transport des marchandises dans les provinces Maritimes le prix réel sera de 70 p. 100 de $4.00, soit $2.80. A présent, si nous supposons une augmentation de 50 p. 100, le coût du transport par unité s'élèvera à $6.00 et à $3.00 respectivement. Cependant, la Loi sur les taux de transport des marchandises dans les provinces Maritimes s'appliquera dans le premier cas en réduisant ainsi le prix à $4.20. L'augmentation du prix exigé de l'expéditeur des Maritimes serait de $1.40 par rapport à $1.00 pour l'expéditeur de Montréal. Cet exemple démontre que l'expéditeur des Maritimes paie $0.40 de plus que l'expéditeur du centre du Canada, même s'il bénéficie de la réduction de 30 p. 100. Les prix exigés des expéditeurs des Maritimes pour chaque unité ont donc augmenté davantage, aggravant sa situation au point de vue de la concurrence.

Voici un bref résumé de nos recommandations concernant la Loi sur les taux de transport des marchandises dans les provinces Maritimes:

1. Il faudrait établir un taux souple.

2. Il faudrait étendre la Loi sur les taux de transport des marchandises dans les provinces Maritimes à tous les modes de transport.

3. La Loi sur les taux de transport des marchandises dans les provinces Maritimes devrait s'appliquer aux exportations à destination des États-Unis.

4. The Maritime Freight Rates Act should be extended to apply to west-to-east shipments within the 'select territory'.

Less-than-Carload Lots

One of the most important problems of the freight rate structure in the Maritimes is the less-than-carload lot charges. The purpose of this was, from the railways point of view, to encourage shippers to ship full carloads and thus reduce the unit cost of handling. This, however, discriminates against the Atlantic Region due to its lack of population and its scattered nature. The buyers cannot afford to take a full carload due to financing, storage costs, as well as limited market size. The Atlantic Provinces ship more LCL freight per capita than does any other region, or more than the national average—the national average was 192 pounds per capita in the calendar year 1966 while the Atlantic Provinces' average was 396 pounds per capita. (D.B.S., analyzed by the Maritime Transportation Commission in "Tips & Topics", October, 1967.) Calculations for the first three quarters of 1967 seem to indicate a similar trend at 118 pounds per capita nationally and 238 pounds per capita for the Atlantic Provinces (see Table 1, p. 10).

4. Il faudrait modifier la Loi sur les taux de transport des marchandises dans les provinces Maritimes, afin de l'appliquer aux envois de l'Ouest à l'Est à l'intérieur du «territoire déterminé».

Charges de marchandises de détail

Un des problèmes les plus importants posés par la structure des tarifs des marchandises dans les Maritimes concerne les frais pour les charges partielles. Cette mesure, selon les autorités des chemins de fer, avait pour but d'encourager les expéditeurs à former des charges complètes et à réduire ainsi le coût de manutention par unité. Cette mesure s'est cependant avérée injuste à l'égard de la région de l'Atlantique, à cause de la faible densité et de la dispersion de la population. Les acheteurs ne peuvent pas se permettre d'acheter une charge complète à cause du financement, du coût d'entreposage et du marché limité. Les provinces de l'Atlantique envoient des marchandises par charges partielles dans une plus grande proportion *per capita* que toute autre région et la moyenne des Maritimes est supérieure à la moyenne nationale dans ce domaine—la moyenne nationale était de 192 livres par habitant pour l'année civile 1966, alors que la moyenne des provinces de l'Atlantique était de 396 livres (données du B.F.S. analysées par la Commission des transports des Maritimes dans «*Tips & Topics*», octobre 1967). Les calculs concernant les neuf premiers mois de 1967 semblent indiquer le maintien de cette tendance à 118 livres par habitant à l'échelle nationale et à 238 livres dans les provinces de l'Atlantique (voir le tableau I, page 10).

TABLE I

USAGE OF LCL PER PROVINCIAL POPULATION
FIRST THREE QUARTERS OF 1967

(Pour de plus amples détails, voir le tableau I en appendice)

The new LCL provision should be eliminated immediately in the Atlantic Region as the higher rates seriously injure the manufacturers and shippers in this area.

Along with the discriminatory LCL rates the new density rule of one cubic foot equalling ten pounds adversely affects many shippers and receivers. The density rule is exceedingly high as even the airlines use only six point nine pounds per cubic foot. This increases the cost to a ridiculously high amount for such industries as the potato chips, canoe building, footwear and paper products. As the products of the Maritimes tend to be of this nature—high bulk and low weight—the new rule causes tremendous increases in shipping costs for producers. For example see Table II, p. 11, concerning the increases in rates which amount from 200% to 557%. From these figures we can see that the low weight per cubic foot adversely affects the cost of shipment by the railways. In this particular industry there is no suitable alternative for carrying their products: the trucks either haven't the available equipment or they flatly refuse to quote a contract for any length of time.

Les nouvelles dispositions concernant les charges partielles devraient être éliminées immédiatement dans la région de l'Atlantique, parce que les taux plus élevés nuisent considérablement aux manufacturiers et aux expéditeurs de cette région.

En plus des taux concernant les charges partielles, le nouveau règlement de densité selon lequel un pied cube correspond à 10 livres défavorise plusieurs expéditeurs et destinataires de marchandises. Le règlement concernant la densité est extrêmement désavantageux car même les entreprises de transport aérien n'attribuent qu'un poids de 6.9 livres par pied cube. Cette mesure augmente le coût à un montant extrêmement élevé pour des industries comme les patates «chips», la fabrication des canoës, l'industrie de la chaussure et les produits du papier. Étant donné que les produits manufacturés dans les Maritimes ont tendance à être de cette nature—un volume considérable et un poids peu élevé—ce nouveau règlement entraîne une augmentation très appréciable des frais du transport pour les producteurs. (Voir, par exemple, le tableau II, p. 11, concernant les augmentations des taux qui varient de 200 à 557 p. 100) Ces chiffres démontrent qu'un poids peu élevé par pied cube influe défavorablement sur le coût du transport par chemins de fer. Les fabricants de canoës n'ont pas de choix convenable pour le transport de leurs produits: les entreprises de camionnages ne possèdent pas l'équipement approprié ou bien elles refusent de conclure un contrat pour une période déterminée.

The new non-carload rates which came into effect on September 5, 1967, have caused rates to skyrocket for companies unable to retain their old LCL rates (See Table III, p. 13). The minimum weight requirements have deterred many shippers from using the railways, but as the trucking industry is not highly developed this option is not open to all shippers.

As stated previously a canoe company's rate will rise 200-557% and the railways have offered 20% reductions to the new rates within the Atlantic Provinces due to public opinion. The figures speak for themselves.

The cancellation of pick-up and delivery service as well as the cancellation of competitive rate structure and the establishment of the density rule have placed shippers without alternative methods of transport in a detrimental position, especially if they hope to gain greater access to the Central Canadian markets. We would like to recommend the retention of the old LCL policy (prior to September 5, 1967) with downward adjustment of rates. As the express rates are generally lower under the new non-carload structure than under the old LCL rates comparatively few use this method of shipment over the regular freight rates which have increased under the new set-up. To clear the above point, the new rates have the effect of increasing most classes of shipping except possibly express rates which may decrease slightly. However, the express class is used by the better positioned (one who requires speed and has low bulk) shippers and due to the economic conditions and type of goods the regular rates are used in the provinces.

Once again the rates hurt the small shippers of which the Maritimes are composed.

Thus our major recommendation concerning less-than-carload shipments is as follows:

> The new LCL rate structure should be cancelled and a corresponding downward adjustment of the rates should be made.

Les nouveaux taux pour les charges partielles qui ont été mis en vigueur le 5 septembre 1967 ont entraîné des augmentations astronomiques pour les compagnies incapables de conserver leurs anciens taux pour les charges partielles (voir tableau III, p. 13). Les exigences minimum quant au poids ont empêché plusieurs expéditeurs d'utiliser les chemins de fer et, comme l'industrie du camionnage n'est pas très développée, les expéditeurs ne peuvent pas tous en profiter.

Comme on l'a mentionné plus tôt, les taux exigés d'un fabricant de canoës augmenteront de 200 à 557 p. 100 et les compagnies de chemins de fer ont offert de réduire de 20 p. 100 les nouveaux taux pour les provinces de l'Atlantique à cause de l'opinion publique. Les chiffres parlent par eux-mêmes.

L'abandon du service de cueillette et de livraison, l'abolition de la structure des taux concurrentiels et l'établissement du règlement concernant la densité ont placé les expéditeurs dans une situation où ils n'ont pas de choix quant aux modes de transport, spécialement s'ils désirent faire meilleure figure sur le marché du Canada central. Nous aimerions recommander le maintien de l'ancienne mesure concernant les charges partielles, de la même façon dont elle était appliquée avant le 5 septembre 1967, ainsi qu'un ajustement des taux de façon à les diminuer. Comme les taux d'express sont généralement moins élevés suivant la nouvelle structure des charges partielles que sous l'ancien régime des taux pour les charges partielles, il y a relativement peu d'expéditeurs qui recourent à cette méthode de transport plutôt qu'aux tarifs des marchandises réguliers, qui ont été accrus suivant les nouvelles dispositions. Pour préciser ce point, les nouveaux taux ont pour effet d'augmenter la plupart des catégories d'expédition sauf peut-être les taux d'express qui peuvent diminuer légèrement. Cependant, la catégorie express est utilisée par l'expéditeur le mieux placé (celui qui veut la rapidité et a un envoi de faible volume) et étant donné les conditions économiques et la nature des marchandises, on utilise les taux réguliers à l'intérieur des provinces.

Encore une fois, les taux lèsent les intérêts des petits expéditeurs qui sont la majorité dans les Maritimes.

En conséquence, nous recommandons le changement suivant en ce qui concerne les expéditions inférieures à un wagon complet:

> Le nouveau barème pour les charges partielles devrait être aboli et remplacé par des taux plus bas.

SOURCE: Commission de transport des Maritimes.

Railways

An overall development policy for the Maritime Provinces to satisfactorily meet the needs of the people and their economies is required. Transportation is only one of many fields that must be covered by such a policy. Until a program of development for Maritimes, which may or may not include Newfoundland, is set in play effectively, disadvantages in transportation rates or tariffs of any nature may have heavier results on an already weak economy and negatively affect an already worsening environment. It is in this respect that we make the following submission.

We strongly recommend the establishment of Maritime Railway Rates Board to function until that time when a development policy for the Maritime Provinces can be put into effect. There is a great deal of confusion, conflicting interests, and conflicting opinions concerning the economic needs of the Maritime region and, in the case of the railways, their role, influence and responsibility to the region. The Maritime Railway Rates Board should be made up of knowledgeable and competent Maritime economists and businessmen thoroughly familiar with the economic environment and its needs in the Maritimes. We recommend that it advise on the setting of rates within the Maritimes and to and from points outside of the Maritime region.

There may be several advantages to the implementation of this recommendation. Decisions of the Maritime Railway Rates Board would hopefully be more objective and more educated. The decisions would be based on an integrated knowledge of the Maritime economic environment, the need for competition and the needs of the people. A board established on a continuous basis is better able to make recommendations with respect to its observations of the changing economic considerations and conditions than are boards and committees whose reports are necessarily based on the observations made in a short period of time. Finally, the board could be dissolved once an overall plan for regional development, which will have to consider transportation problems and requirements, is put into effect.

In summary to this recommendation we express optimism that at some time in the future the Maritime region will be in a position of prosperity that will not necessitate

Chemins de Fer

Il importe de mettre en œuvre une politique de développement d'ensemble dans les provinces Maritimes, afin de répondre aux besoins de la population et de l'économie régionale. Les transports ne constituent qu'un élément parmi plusieurs autres qui doivent être visés par une telle politique. Aussi longtemps qu'un programme de développement des Maritimes, incluant ou non Terre-Neuve, n'aura pas été appliqué efficacement, les inconvénients des taux ou tarifs de transport de tout genre pourront avoir de mauvais résultats sur une économie déjà chancelante et influer négativement sur un environnement déjà compromis. C'est à cette fin que nous formulons les recommandations suivantes.

Nous recommandons fortement l'établissement d'un Office des taux de transport par chemin de fer dans les provinces Maritimes, en attendant la mise en vigueur d'une politique de développement pour la région. Il existe beaucoup de confusion, d'intérêts discordants et d'opinions contradictoires au sujet des besoins économiques de la région des Maritimes et, dans le cas des chemins de fer, au sujet de leur rôle, de leur influence et de leurs responsabilités envers la région. L'office des taux de transports par chemin de fer dans les provinces Maritimes devrait être formé d'économistes et d'hommes d'affaires intelligents et compétents des Maritimes, parfaitement au courant du milieu économique et des besoins des Maritimes. Nous recommandons que cet office soit habilité à établir des taux de transport à l'intérieur des Maritimes et entre des points situés dans les Maritimes et des points à l'extérieur.

Plusieurs avantages peuvent découler de la mise en vigueur de cette recommandation. Les décisions de l'office seraient plus objectives et rationnelles car elles seraient fondées sur une connaissance approfondie du milieu économique des Maritimes, sur la nécessité d'une saine concurrence et sur les besoins de la population. Un office fonctionnant de façon continue est plus en mesure de formuler des recommandations fondées sur sa propre observation des changements dans les préoccupations et les conditions économiques que ne sont les commissions et comités dont les rapports seraient nécessairements fondés sur des observations faites pendant un court laps de temps. Enfin, l'office pourrait être dissous une fois amorcé un plan d'ensemble de développement régional, qui devra prendre en considération les problèmes et besoins du transport de la région à l'étude.

Disons, pour conclure, que nous espérons sincèrement qu'un jour, la région des Maritimes connaîtra une prospérité telle qu'il ne sera plus nécessaire de subventionner le

subsidies or rate regulations to the railways. Until that time, however, the importance of the railway rate structure to the economy demands careful consideration.

Part of the difficulty rails are encountering in meeting their costs and realizing a profit may be overcome by taking a larger share of the market that is available to them. Their profit position and share of the market could conceivably improve with an increase in efficiency. Also, reductions in costs, due to an increase in efficiency or other considerations, are always a possibility in a business concern's operation. It is assumed here that an improvement in the financial state of the railways will permit the feasibility and occurrence of improvements in service that may benefit the Maritime region. In this respect we make the following recommendations.

First, we recommend a complete investigation into the cost analysis methods utilized by the railways. Poor cost analysis may be part of the reason for an apparent inability of rails to improve efficiency and service. If cost analysis computations are not indicating existing areas where a more efficient allocation of resources could reduce marginal or operating costs or improve service, then improved cost accounting methods are required.

Second, we recommend a thorough examination of how much business is presently being lost or how many customers have looked elsewhere for transportation as a result of their discontent with the record of the railways to service their needs. The Atlantic Provinces Transportation Study, January, 1967 submitted by the Economist Intelligence Unit Limited of London, England, dealt at length in part A of Volume III with dissatisfaction of railway customers on Prince Edward Island. This is meant as an example of customer dissatisfaction and the report illustrates cases of shippers preferring anything to rails due to the latter's inefficiency, poor handling procedures and other reasons. In this respect and with regard to the above examination there are many recommendations that could be made. It would be of benefit to railway revenues to investigate reports of dissatisfied customers, to minimize business lost in this way by positive measures, and to restore with customers a relationship of confidence. It would also be beneficial to the level of business to reduce

transport des marchandises par chemin de fer ni d'en réglementer les taux. En attendant, cependant, l'importance des taux de transport par chemin de fer pour l'économie de la région doit être l'objet de toute notre attention.

Les chemins de fer pourraient mettre fin à leurs difficultés à subvenir à leurs frais d'exploitation, tout en réalisant des bénéfices, s'ils prenaient une plus large part du marché qui s'offre à eux. Une amélioration de leurs services se traduirait vraisemblablement par une augmentation de leurs bénéfices et de leur part du marché. De même, la diminution des frais d'exploitation grâce à une amélioration des services et autres éléments de l'exploitation est toujours possible dans la conduite d'une entreprise commerciale. Nous prenons pour acquis, en l'occurrence, qu'une amélioration de la position financière des chemins de fer permettra d'améliorer le service pour le plus grand bien de la région des Maritimes. A cette fin, nous formulons les recommandations suivantes:

Premièrement, nous recommandons une enquête complète des méthodes d'analyses des frais qui sont en usage dans les chemins de fer. Des méthodes défectueuses d'analyse peuvent être l'une des causes de l'incapacité apparente des chemins de fer d'améliorer le rendement et le service. Si l'analyse des frais n'indique pas les secteurs où une meilleure utilisation des ressources pourrait réduire les frais marginaux ou d'exploitation ou améliorer le service, il faut introduire des méthodes améliorées de comptabilisation des frais d'exploitation.

Deuxièmement, nous recommandons un examen minutieux de la part du commerce qui est perdu pour les chemins de fer ou du nombre de clients qui ont utilisé d'autres moyens de transport parce qu'ils étaient mécontents du service que leur donnaient les chemins de fer. Le rapport intitulé «Étude de la situation des transports dans les provinces Maritimes,» déposé en janvier 1967 par la société *Economist Intelligence Unit Limited*, de Londres, (partie A, volume III) traite à fond du mécontentement des usagers des chemins de fer dans l'Île du Prince-Édouard. Nous avons voulu mentionner ce cas à titre d'exemple du mécontentement des clients des chemins de fer; le rapport signale des cas d'expéditeurs qui avaient préféré tous les autres moyens de transport aux chemins de fer, à cause de l'inefficacité de ces derniers, de la manutention négligente et pour d'autres motifs. Il y aurait beaucoup de recommandations à faire à ce sujet et à la suite de l'étude en question. Dans le but de sauvegarder ou d'augmenter les revenus des chemins de fer, il y aurait lieu de vérifier le bien-fondé des

the reportedly high rate of breakage and destruction enroute and to prevent the high rate of theft. We recommend also that handling facilities be improved and that handling procedures be studied for possible improvements in efficiency and reduced losses to the customer such that the customer may gain a greater satisfaction from the service. These are some of the factors that determine the overall quality of service and therefore the number of customers.

Finally we recommend investigation into two related areas that may result in improved revenues and a larger share of the market. First, the degree of customer or prospective customer knowledge of railway services and tariffs of the lack of information flow between parties may be a deterrent to increased revenues. Inquiries to the railways as to rates and services bring on unaggressive response, information is not sent to the inquisitor by mail and the absence of an overall sales effort is indicated by the relationship where the future customer must initiate contact or communications.

Second, we invision the public image of the railways, due to a variety of complex and historical reasons, as being less than satisfactory. We suspect that this situation affects the level of revenues. In this regard we recommend that the railways take a serious look at their relationship to the community. The impersonal nature of the railway operation, the lack of a definite and obvious interest and commitment in the individual town, city, or community, and the lack of an expressed mutual concern to the customer for the sale and transfer of goods produced are among the factors we would advise studying.

We submit that there are many ways to improve services and decrease inefficiencies in railway operations so as to increase revenues to cover costs. It is unfortunate that the approach taken by railways toward business has changed little over the years, that railway advantages have not been fully exploited, and that the evolution of an agressive customer oriented policy has not been apparent.

rapports et des plaintes des clients mécontents, en vue de réduire la perte de revenus subie de cette façon en prenant des mesures positives, et de regagner ainsi la confiance de la clientèle. Il y va aussi de l'intérêt du chiffre d'affaire des compagnies de chemins de fer de réduire le taux de casse, d'avarie et de destruction de marchandises en cours de route et de faire baisser les pertes attribuables au vol. Nous recommandons également que soient améliorés les appareils et méthodes de manutention et qu'une étude soit faite de ces méthodes, en vue d'améliorer leur efficacité et de réduire les pertes subies par le client et lui donner un meilleur service. Voilà autant de facteurs qui contribuent à l'excellence du service et, partant, à grossir la clientèle.

Enfin, nous recommandons qu'une étude soit entreprise dans deux secteurs apparentés qui sont susceptibles d'accroître les revenus et la clientèle. En premier lieu, il est probable que les revenus augmenteront ou baisseront dans la mesure où les clients actuels ou éventuels seront informés ou non des services et des taux des chemins de fer. Il ne saurait y avoir progrès si les compagnies de chemins de fer ne répondent pas de façon empressée et dynamique aux demandes de renseignements sur les services et les taux; si elles négligent d'envoyer promptement les renseignements demandés par la poste; si elles ne font pas tout leur possible pour vendre leurs services et si, enfin, le client éventuel est obligé d'établir lui-même le contact.

En deuxième lieu, nous sommes en présence d'une conception que le public s'est faite des chemins de fer, qui laisse à désirer pour des raisons à la fois complexes et historiques. A notre avis, cet état de choses influe sur les recettes. A ce sujet, nous recommandons que les chemins de fer s'interrogent sérieusement sur leurs rapports avec la communauté. Nous leur conseillons tout particulièrement de considérer divers facteurs importants, notamment la nature anonyme de l'entreprise ferroviaire, le manque d'intérêt et d'engagements précis et évidents dans un village, une ville ou une communauté, et l'absence du désir manifeste de plaire au client qui doit vendre et expédier les articles qu'il produit.

Nous prétendons qu'il existe de nombreux moyens d'améliorer les services tout en réduisant les insuffisances des opérations ferroviaires, afin d'augmenter les revenus et couvrir les frais. Malheureusement, l'attitude des chemins de fer envers l'industrie et le commerce a peu changé au cours des années, les avantages des chemins de fer n'ont pas été exploités à fond, et l'évolution d'une politique dynamique axée sur la clientèle n'a pas été à la fine pointe de l'actualité.

With respect to minimizing operating costs we suggest that the number of rural lines be reduced where there is little prospect of economic advantage accruing to either the railway or the community in the future. We suggest an investigation to seek out rail spurs within city limits that are largely out of use in order that taxes payable or other operating expenses be reduced. With the same regard to efficiency and cost reduction we suggest an investigation into the elimination of all duplications in service by two or more railway companies.

Unlike the other Maritime Provinces New Brunswick has a large number of instances of duplicated services and where they exist the reason has in the past been given that it is for the sake of competition. But the challenging competition to railways has become other modes of transportation. It may be the case that competing among themselves does not provide the public with a better service or lower charges but does create extra costs that could be reduced or eliminated. Also we recommend an investigation to include the expanded use and feasibility of shared cost programs between railway companies or, in other words, broader grounds of cooperation and pooling of resources.

It has been said that the objective of a transportation policy must complement the efforts of a region to develop its economy. It has been said that the development of policies and plans for the development of the Maritime region are not presently settled. Therefore, without knowing specifically what path development will follow we recommend that the general emphasis of any changes in the rail network be on efficient direct interurban lines to accommodate industrialization of the future rather than agricultural patterns of the past.

We accept the principle of the public's right to railway passenger service. As it is available to other communities in Canada so too it should be available to Maritime communities, especially the centres of growth and population. Additionally, this service should be available as an alternative to other modes such as bus service to provide competition. Therefore, we recommend a thorough investigation to determine the number of people moving daily between urban points

En ce qui concerne l'opportunité d'abaisser les frais d'exploitation, nous suggérons de réduire le nombre des lignes rurales lorsque, à l'avenir, on ne prévoit en tirer que peu de bienfaits économiques pour la compagnie ou la communauté. Nous recommandons qu'une enquête soit effectuée pour déterminer quels embranchements ferroviaires dans les limites d'une ville ne servent pas à plein temps, afin de réduire les impôts ou les autres frais d'exploitation. Toujours dans le but d'accroître l'efficacité du matériel roulant et de réduire les frais d'exploitation, nous recommandons qu'une étude soit entreprise en vue d'éliminer tous les cas de double emploi de service par deux ou plusieurs compagnies de chemin de fer.

A la différence des autres provinces Maritimes, le Nouveau-Brunswick présente un grand nombre de cas de services faisant double emploi et, là où cela se produit, la raison donnée dans le passé c'est qu'on voulait tenir tête à la concurrence. Mais, en fait, la concurrence vraiment dangereuse venait d'autres modes de transport. N'oublions pas que la concurrence des compagnies de chemins de fer entre elles n'assure pas un meilleur service au public ni des frais moins élevés mais, au contraire, elle occasionne des frais supplémentaires qui pourraient être réduits ou éliminés. Nous recommandons également une enquête qui portera sur l'élargissement et la praticabilité de programmes à frais partagés entre les compagnies de chemins de fer ou, en d'autres mots, dans des domaines plus vastes de coopération et de mise en commun des ressources.

On a dit qu'une politique de transport doit viser à seconder les efforts d'une région pour développer son économie. On ajoute que les politiques et plans de développement de la région des Maritimes ne sont pas encore au point. En conséquence, sans connaître l'orientation exacte que prendra le développement régional, nous recommandons que tout changement important qui se fera dans le réseau ferroviaire soit situé dans le secteur des lignes interurbaines et vise à faciliter l'industrialisation future de la région plutôt que de donner la préséance à l'industrie agricole traditionnelle.

Nous admettons le droit du public au service des voyageurs. Comme ce service ferroviaire est donné aux autres régions du Canada, il n'est que juste qu'on l'accorde aux agglomérations des Maritimes, surtout aux centres de croissance et de population. De plus, ce service devrait être offert à la population si elle le préfère aux autres modes de transport, comme l'autobus. Par conséquent, nous recommandons une étude approfondie en vue de déterminer le nombre de voyageurs

and who would consider using railway passenger service in lieu of some other service if it was available.

We emphasize the need of convenience for customers in travelling between points by railway; for example, from city centre to city centre. In the past passenger trains have not always operated to the utmost convenience of its prospective customers. For this reason it has lost customers when they were available. For example, bus lines operate profitably between Fredericton and Saint John (80 miles) from central locations in each city. The charge is $3.05. The ride by train to Saint John is much more comfortable and the charge is $3.40. However, Fredericton Junction is 26 miles from Fredericton. It costs $12.00 to get there by taxi. Without having to consider time and convenience we conclude that the prospective customer has never had an alternative but to go by bus or private automobile between these two centres and so the railways lost this source of revenue.

If in the end analysis regular rail passenger service for citizens in the Maritimes is not possible then we recommend an investigation into the feasibility of periodic passenger service. The flow of people between points is greater at different times of the week, season, and year. At present the rails make little use of this potential market while bus lines must reserve extra buses and Air Canada provide special flights. One example is the movement of people between points within the Maritimes at Christmas. Another example is the irregular flow of a large number of students within the Maritimes and to and from other parts of Canada.

In the following we set forth a new concept meant to increase railway revenues in the Maritime Provinces.

At present, procedures demand a much greater responsibility for decision making by the producer than the carrier when the former requires the service of the latter. The producer must (1) seek out a wholesaler, (2) set a price, (3) decide on the mode of transportation, and (4) arrange for transfer. It is significant that the railways act only on request and there is no sales effort.

We recommend an investigation by competent consultants into the feasibility of rail-

qui se rendent d'un endroit à un autre de la ville et qui préfèrent le service des voyageurs de la compagnie des chemins de fer à un autre mode de transport qu'ils pourraient utiliser.

Nous mettons l'accent sur la nécessité de commodité des voyageurs qui se rendent en train d'un endroit à un autre, par exemple du centre d'une ville au centre d'une autre. Dans le passé, les trains de voyageurs n'ont pas toujours donné le summum de commodité à leurs clients éventuels. C'est ce qui explique que les chemins de fer ont perdu leur clientèle à la concurrence. Par exemple, il y a des services d'autobus qui sont d'un bon rapport entre Fredericton et Saint-Jean (80 milles), à partir du cœur de la première jusqu'au cœur de la deuxième. Le prix du billet par train jusqu'à Saint-Jean est $3.40 et le trajet est beaucoup plus confortable. D'autre part, il en coûte $12 en taxi pour se rendre à Fredericton Junction, à 26 milles de Fredericton. Même en faisant abstraction du temps et de la commodité, nous concluons que le client éventuel n'a jamais eu le choix et qu'il devait voyager en autobus ou en auto pour aller d'un centre à l'autre, de sorte que les chemins de fer ont perdu cette source de revenu.

Si, en dépit de tous nos efforts, il est impossible de doter les Maritimes d'un service régulier de trains de voyageurs, nous recommandons qu'on examine la possibilité d'établir un service périodique de voyageurs. Il y a des périodes de pointe entre les divers points chaque semaine, chaque saison et chaque année. A l'heure actuelle, les chemins de fer profitent peu de ce marché possible tandis que les compagnies d'autobus doivent augmenter le nombre de leurs voitures en service et Air Canada doit faire des vols spéciaux. Un cas d'espèce est le trafic-voyageurs dans les Maritimes au temps des Fêtes. Un autre exemple est le déplacement intermittent d'étudiants au sein des Maritimes ainsi qu'en provenance et à destination d'autres parties du Canada.

Nous énonçons ci-après un nouveau moyen d'accroître les revenus des chemins de fer dans les provinces Maritimes.

A l'heure actuelle, la mise en marché d'un produit exige de la part du producteur une foule de détails et de formalités dont n'a pas à se soucier le transporteur, lorsque le producteur a besoin de ses services. Ainsi, le producteur doit (1) trouver un grossiste, (2) établir un prix, (3) choisir le mode de transport, et (4) voir au transbordement. Il y a lieu de s'étonner que les chemins de fer n'agissent que sur demande et qu'ils ne font aucune sollicitation.

Nous recommandons que des experts en la matière soient chargés d'examiner la possibi-

ways expanding their functions beyond that of carrier into other fields which might include sale of its services to producers. Another possibility would be to decrease the responsibilities outlined above that now must be assumed by the customer. Another possibility that might be investigated in particular is one where the producer and carrier coordinate their efforts and activities to sell the products that may be transported by rail.

With the continued aim in this section of making suggestions that may eventually lead to higher profits for the railways and better service to the customer we find that the role of the railways in Newfoundland demands particular attention and there are many problems related to it. As you will become aware from many briefs in this regard, the present railway from Port-aux-Basques to St. John's is inconvenient, inefficient, time consuming, difficult to maintain, and requires high operating costs. In part this is due to narrow guage tracks, rough irregular terrain, a poorly laid out rail bed, and long distances. In this respect we recommend a study into the feasibility of some other mode of transportation from the mainland directly to the Avalon Peninsula being more viable strictly on a cost basis and appropriate from the view of maintaining modern effective transportation to meet the economic needs of the province. We would point out that the Trans Canada Highway roughly parallels the railroad. Also, railway traffic may be further reduced since CN is presently considering replacing rail passenger service with buses.

In conclusion to this section we feel that there are many areas of operation that may not have been thoroughly investigated and in which improvements in services and reductions in costs can bring to the railways in the Maritime region more satisfactory profit figures and a greater number of customers. With this view we have recommended:

1. A Maritime Railway Rates Board to act in an advisory capacity should be established.

2. The railways should make a thorough assessment of their operating costs and of the services offered to the public with a view to improving their own revenue position and thus, possibly, lowering the need for subsidies.

3. Inefficient rail lines should be eliminated wherever possible.

lité d'élargir les attributions et les fonctions de simples transporteurs qu'ils exécutent présentement et de les amener à faire de la sollicitation auprès des producteurs. Un autre moyen d'accroître les revenus consisterait à simplifier les formalités imposées présentement à la clientèle. Une autre possibilité qui mérite d'être examinée consiste à amener le producteur et le transporteur à coordonner leurs efforts pour la vente des produits transportés par rail.

En poursuivant notre recherche de moyens d'augmenter les revenus des chemins de fer et d'améliorer leurs services à la clientèle, nous constatons qu'à Terre-Neuve, le rôle des chemins de fer exige une attention spéciale, car un grand nombre de problèmes s'y rattachent. Comme vous pourrez vous en rendre compte à la lecture des nombreux mémoires qui vous ont été soumis, le service actuel entre Port-aux-Basques et Saint-Jean est incommode, inefficace, trop lent, difficile à maintenir et peu rentable. Cela tient partiellement à l'étroitesse des voies, à la topographie accidentée, à la pose mal faite des rails, et aux longues distances. Dans ce cas, nous recommandons une étude de la rentabilité d'autres moyens de transport à partir de la partie nord de l'île directement jusqu'à la presqu'île Avalon, de façon à mieux répondre aux besoins économiques de la province. A ce propos, nous signalons que la route transcanadienne est à peu près parallèle au chemin de fer. De plus, il se peut que le trafic ferroviaire diminue encore davantage, étant donné que le CN songe présentement à remplacer son service de trains-voyageurs par un service d'autobus.

Disons pour conclure que nous estimons qu'il y a plusieurs secteurs de l'industrie ferroviaire qui n'ont pas été examinés en profondeur et où des améliorations des services et des réductions des frais d'exploitation pourraient se traduire pour les chemins de fer, dans la région des Maritimes, par des bénéfices plus substantiels et une clientèle plus nombreuse. A cette fin, nous avons fait les recommandations suivantes:

1. Création d'un office des taux de transport des chemins de fer dans les provinces Maritimes, faisant fonction de conseiller auprès de l'autorité compétente;

2. Les chemins de fer devraient déterminer avec précision leurs frais d'exploitation et l'utilité des services offerts au public, afin d'accroître la rentabilité de l'entreprise et de réduire, si possible, la nécessité des subventions;

3. Les lignes qui laissent à désirer devraient être abandonnées partout où la chose est possible;

4. Competent consultants should be appointed to look into the feasibility of expanding the railway functions beyond that of carrier. For instance, it may be possible for them to use modern sales techniques in getting customers to transport via train.

Highways

Much time, thought, and money has been spent on highway construction since the advent of the automobile and it is certain this will increase in the future. It is our understanding that the Provinces have admitted Briefs dealing with particular highway problems in their area and also that many figures have been prepared for your perusal so our submission will deal mainly with general issues which are of concern to all four Atlantic Provinces.

A. Finance—Finance is the major consideration in any highway undertaking as well as the main drawback. Cost sharing programs such as the Trans Canada Highway scheme and grants from the Atlantic Development Board have helped to ease the problem somewhat. However, from the standpoint of the Atlantic Provinces these schemes have not been entirely just or equitable.

Let us look at the Trans Canada Highway scheme for instance. While the Federal Government generously contributed to the main cost of the road it left the Provinces to raise ten percent of the total cost. This sum could be met more readily by the wealthier provinces such as Ontario than it could in the poorer regions such as the Atlantic Provinces. The discrepancies are magnified even more when one realizes that highway construction is generally more expensive in this region than in many other areas of Canada. This is the result of the geographical composition of the land. When setting up a national highway policy we feel that special consideration should be given to the less developed regions. The tax burden or per capita cost should be considered in each Province. If the cost-shared program had been determined on a per capita basis it would have been readily apparent that a larger grant should have been made to the Atlantic Region than to some wealther or more densely populated part of Canada. We recommend that in future cost-sharing agreements be worked out on a more equitable basis and that a

4. Des experts-conseils devraient être chargés d'examiner la possibilité d'élargir les attributions et fonctions des chemins de fer au-delà de celle de transporteur. Ainsi, il peut être possible de les amener à utiliser les techniques modernes de vente de leurs services et persuader aux clients d'expédier leurs produits par rail.

Les Routes

On a consacré beaucoup de temps, de réflexion et d'argent à la construction des grandes voies de communication depuis l'avènement de l'automobile et, à coup sûr, cette tendance va s'accentuer à l'avenir. Sauf erreur, les provinces ont présenté des mémoires exposant leurs divers problèmes de voirie, et des chiffres ont été préparés à votre intention. Dans ces circonstances, notre mémoire traitera surtout des questions générales qui intéressent les quatre provinces atlantiques.

A. Finance—Dans tout programme de construction de routes, le financement des travaux est la question la plus importante et le principal inconvénient. Des programmes à frais partagés comme la construction de la route transcanadienne et le régime de subventions accordées par l'Office d'expansion économique de la région atlantique ont contribué à atténuer un peu ce problème. Toutefois, du point de vue des provinces atlantiques, ces programmes n'ont pas été tout à fait justes et équitables.

Considérons, par exemple, la route transcanadienne. S'il est vrai que le gouvernement fédéral a assumé une partie importante du coût de la construction, les provinces ont dû payer dix pour cent du coût total. Les provinces riches comme l'Ontario ont pu facilement financer ce montant mais, pour des régions pauvres comme les provinces atlantiques, ce fut un véritable problème. L'injustice prend des proportions encore plus importantes lorsqu'on se rend compte que la construction des routes est généralement plus coûteuse dans cette région que dans plusieurs autres parties du pays. Cela tient à la topographie et à la géographique des lieux. Lorsqu'il s'agit d'élaborer une politique nationale des routes de grande communication, nous estimons qu'on devrait tenir spécialement compte des régions moins développées. Le fardeau des impôts ou du coût par tête devrait être considéré dans chaque province. Si le coût des programmes à frais partagés avait été établi au prorata de la population, on aurait vite compris que la région atlantique méritait une subvention plus élevée que les autres régions plus riches ou plus peuplées du Canada. Nous recomman-

scheme such as the foregoing should be considered.

B. Number of Roads—The members of this Brief feel that the number of miles of roads in the Atlantic Provinces, Nova Scotia and New Brunswick in particular, should be cut back. In Nova Scotia alone there are over 15,000 miles of roads only 3,738 of which are paved. In New Brunswick there are 4,435 miles of paved highway and 9,303 miles of unpaved rural highways.

Table IV, page 24, (latest figures available) clearly indicates the large sums of money which are spent annually for highway maintenance in the Atlantic Region. In 1965 Newfoundland spent $11,981,108; Prince Edward Island spent $2,789,077; Nova Scotia spent $13,957,711; and New Brunswick spent $13,496,310 on highway maintenance for a total of $42,224,206. Unfortunately we were unable to obtain separate figures for the cost of maintaining secondary roads in these Provinces. If it is assumed that one-half of this amount was used for secondary road maintenance, a very conservative estimate in view of the high proportion of secondary roads to

dons qu'à l'avenir, les programmes à frais partagés soient élaborés sur une base plus équitable et qu'on examine la possibilité d'adopter une politique du genre de celle qui est exposée ci-dessus.

B. Réseau routier—Les auteurs du présent mémoire estiment que le nombre de milles de route dans les provinces atlantiques, et tout particulièrement en Nouvelle-Écosse et au Nouveau-Brunswick, soit réduit. Dans la seule province de la Nouvelle-Écosse, il y a plus de 15,000 milles de routes, dont seulement 3,738 milles sont pavés. Le Nouveau-Brunswick compte 4,435 milles de routes nationales pavées tandis que 9,303 milles de routes rurales ne sont pas encore pavés.

Le tableau IV (les derniers chiffres publiés) indique les sommes énormes consacrées annuellement à l'entretien des grand-routes dans la seule région atlantique. En 1965, le coût d'entretien global pour l'ensemble de ces provinces s'élève à $42,224,206 réparti comme il suit: Terre-Neuve $11,981,108, Île du Prince-Édouard $2,789,077, Nouvelle-Écosse, $13,957,711, et Nouveau-Brunswick $13,496,310. Malheureusement, nous n'avons pu obtenir les chiffres relatifs aux frais d'entretien des routes secondaires dans ces provinces. En supposant que la moitié de ce montant ait été affectée à l'entretien des routes secondaires, ce qui constitue une évaluation très prudente

major trunk highways in these regions, a sum of $21 million would be involved annually and it must be noted that this is constantly increasing.

We will use New Brunswick for illustrative purposes. As indicated in 1965 almost $13.5 million was spent on highway maintenance in New Brunswick. If one-half of this was spent on secondary road maintenance it would involve $6.5 million, or approximately $725 for each mile of unpaved highway in the Province. If New Brunswick were able to eliminate 2,000 miles of these secondary roads it would in effect save almost $1.5 million annually in maintenance costs alone or $15 million plus interest in a ten ear period. The question which presents itself naturally is how would we go about eliminating superfluous roads. Anyone who has travelled widely on Atlantic Province roads knows that it is possible to drive anywhere from fifteen to forty miles and further on secondary roads without coming across a house. These roads are apparently used by private concerns, such as lumber companies, or else provide alternate routes from point A to point B. Yet the province or county must keep these roads plowed in winter and graded in summer. We recommend that where there are alternate routes available some roads be closed; in other cases where there are only a few subsistence farms or homes we recommend paying the owners generously to move to more populated areas. We feel that this is an area for close cooperation between the Department of Manpower and Provincial Highway Departments. Savings would accrue to the Provinces from lowered maintenance costs. Those people who are moved will be able to contribute to the labor pool which is so necessary in attracting secondary industry to the Provinces. Thus even larger benefits can be foreseen for the Provinces. There are numerous areas where this plan could be put into effect; but to pick only two specific regions we recommend that the Commission look at the Rusagonis area on the outskirts of Fredericton Junction, or the Lake Yoho vicinity of York County, N.B.

C. *Condition of Highways*—The major concern is that all main highways in the Atlantic Region be upgraded to an all-weather standard. The economy of the region can-

étant donné la forte proportion des routes secondaires, une somme de 21 millions de dollars serait consacrée à cette fin chaque année, et il ne faut pas oublier que ce montant augmente constamment.

Prenons le cas du Nouveau-Brunswick pour fins de démonstration. Cette province a dépensé en 1965, pour l'entretien des routes, près de 13.5 millions de dollars. Or, si la moitié de ce montant était affectée à l'entretien des routes secondaires, cette rubrique absorberait 6.5 millions, ou approximativement $725 par mille de route non revêtue dans la province. Si le Nouveau-Brunswick pouvait éliminer 2,000 milles de ces routes secondaires, il économiserait près de $1.5 million par année en frais d'entretien seulement, ou $15 millions plus l'intérêt au cours d'une décennie. Évidemment, la question qui se pose est de savoir comment on pourrait éliminer les routes superflues. Quiconque a parcouru les routes du Nouveau-Brunswick sait par expérience qu'il est possible de rouler n'importe où sur des routes secondaires, sur des distances variant de quinze à quarante milles, sans rencontrer une seule habitation. Ces routes servent apparemment aux entreprises industrielles, comme les compagnies d'exploitation des bois et forêts, ou encore elles servent de détour pour aller du point A au point B. Cependant, la province ou le comté doit assurer l'entretien de ces routes, à l'aide du chasse-neige l'hiver et de la niveleuse l'été. Dans les régions où il y a plus d'une route qui va d'un point à un autre, nous recommandons de fermer certaines de ces routes qui font double emploi; dans d'autres cas où des routes desservent seulement une poignée de petites fermes ou d'habitations, nous recommandons qu'on dédommage généreusement les propriétaires qui décident de s'installer dans des endroits plus peuplés. Nous estimons qu'il s'agit là d'un domaine qui exige une étroite collaboration entre le ministère de la Main-d'œuvre et les ministères provinciaux de la Voirie. La diminution des frais d'entretien signifierait une économie pour les provinces. Les gens qui sont ainsi déplacés viendront grossir l'effectif ouvrier si nécessaire pour attirer les industries secondaires dans ces provinces. On peut même prévoir des bénéfices encore plus importants pour les provinces. Il y a de nombreuses régions où ce plan pourrait être mis à exécution, mais nous nous bornerons à en désigner deux sur lesquelles la Commission pourrait se pencher, savoir: la région de Rusagonis, à la périphérie de Fredericton Junction, ou le voisinage du lac Yoho, dans le comté York (N.-B.).

C. *État des routes*—Ce qui importe le plus c'est que toutes les routes principales de la région atlantique soient maintenues ouvertes et en bon état par tous les temps. L'économie

not proceed very far unless goods can be transported readily at all times of the year. Unfortunately, due to present conditions trucking is severely hampered and yet this is one of the major modes of transportation. Included in our recommendation for all-weather roads is the request that they be of such a standard that spring closing of roads will no longer be a necessity. We do not wish to dwell on this recommendation as we feel that it has been treated very well in the Atlantic Provinces Transportation Study.

D. Specific Recommendations

1. The new Trans Canada Highway between Halifax-Truro, N.S. should be four lane and construction on additional lanes should be started immediately. This is in order to handle the volume of traffic using this road.

2. The Saint John-Fredericton highway should be upgraded immediately.

3. The Sunrise Trail between Amherst and New Glasgow, Nova Scotia, should be upgraded due to the fact that it is twenty miles shorter than the present Trans Canada Highway and will therefore continue to be used by many truckers.

The following is a brief summary of our recommendations regarding highways in the Atlantic Region:

1. In future shared-cost programs should be conducted on a more equitable basis; for example, on a per capita basis.

2. We recommend that the number of rural roads in the Atlantic Provinces be cut back.

3. We recommend that all main highways in this region be upgraded to an all weather standard.

Trucking

In order to put transportation on a stronger footing in the Atlantic Provinces we have recommended (1) eliminating as many spur lines (rural) of the railways as possible, (2) cutting down on the number of secondary roads, (3) applying the Maritime Freight Rates Act to all modes of transportation, (4) improving roads to an all-weather standard and, (5) termination of spring load restrictions on highways where possible. We have a

de la région ne peut être florissante que si les marchandises peuvent être expédiées promptement toute l'année durant. Malheureusement, à cause de l'état actuel des routes, le camionnage est devenu une opération laborieuse et, pourtant, le camion est l'un des principaux moyens de transport. Dans notre recommandation, nous insisterons pour que les routes «tous temps» soient construites de façon qu'il ne soit plus désormais nécessaire de les fermer pendant le dégel du printemps. Nous ne nous étendrons pas davantage sur ce sujet, car nous estimons que la question a été vidée dans l'Étude de la situation des transports dans les provinces atlantiques.

D. *Recommandations précises*

1. Le tronçon de la nouvelle route transcanadienne entre Halifax et Truro (N.-É.) devrait être à quatre voies et la construction des voies additionnelles devrait débuter immédiatement, afin que le trafic qui emprunte cette route ne cause pas d'embouteillages.

2. Le tronçon qui relie Saint-Jean à Fredericton devrait être amélioré immédiatement.

3. Le *Sunrise Trail,* entre Amherst et New Glasgow (N.-É.), devrait être amélioré parce qu'il a vingt milles de moins que la route transcanadienne actuelle et continuera donc d'être emprunté par plusieurs camionneurs.

Suit un résumé de nos recommandations visant les routes dans la région atlantique:

1. A l'avenir, les programmes à frais partagés devraient être exécutés de façon plus équitable, par exemple, au prorata de la population.

2. Nous recommandons que soit réduit le nombre de routes rurales dans les provinces atlantiques.

3. Nous recommandons que toutes les routes principales de grande communication soient améliorées pour être en état de servir par tous les temps.

CAMIONNAGE

Afin de permettre à l'industrie des transports de survivre dans les provinces atlantiques, nous avons recommandé (1) l'élimination d'un aussi grand nombre que possible d'embranchements ferroviaires dans les parties rurales, (2) la diminution du nombre de routes secondaires, (3) l'application de la Loi sur les taux de transport des marchandises dans les provinces Maritimes à tous les modes de transport, (4) l'amélioration des routes

few other recommendations regarding trucking which we would like to make at this point.

We strongly urge that uniform regulations regarding highways and trucking be adopted in the Atlantic Region. New Brunswick, due to its location and role as the corridor province, must play a major role in establishing uniform regulations. The first requirement is that uniform weight or axle restrictions for trucks be adopted throughout the entire region. We recommend that uniform axle weight restrictions be adopted. We consider axle weight to be the logical choice rather than overall weight restrictions as it is our understanding that it is the weight on an axle which can cause road damage. For instance, it is conceivable that a truck may be within an overall weight limit but still cause damage to a road because of the concentration of weight on a particular axle. As regulations presently stand Nova Scotian truckers, who are not permitted as large loads as their New Brunswick counterparts, sometimes unload when they cross the Nova Scotia-New Brunswick border and use New Brunswick trucks. This is a time consuming and wasteful practice. We recommend, therefore, that axle restrictions on Nova Scotia roads be brought up to the standard which would be permitted on New Brunswick roads if this suggestion is adopted.

While favoring axle weight restriction greater leeway should be permitted than the five percent overweight allowance which is permitted in Nova Scotia at present. This penalizes truckers who haul pulpwood. It is difficult to gauge the exact weight of a load of logs, due to water content, without weighing them; this would be impossible in forest conditions. The five percent overweight restriction for this type of load should be increased.

We also recommend that there be uniform licensing arrangements for all truckers in the Atlantic Region. Truckers in all four provinces should be able to license tractors and trailers under one license rather than say the separate licensing required in Nova Scotia.

pour les rendre carrossables en toute saison et, (5) la suppression de la limite de poids des camions au printemps sur les routes nationales, partout où la chose est possible. Nous formulons ci-dessous quelques autres recommandations concernant le camionnage.

Nous recommandons fortement l'adoption de règlements uniformes concernant la voirie et le camionnage dans la région atlantique. Le Nouveau-Brunswick, à cause de sa situation géographique et de sa qualité de province-couloir, doit jouer un premier rôle dans l'établissement de règlements uniformes. On devra tout d'abord adopter des restrictions uniformes concernant le poids porté par les essieux des camions dans toute la région. Nous recommandons que les restrictions visant la charge par essieu soient uniformes. Nous estimons que la charge par essieu, plutôt que le poids global du camion devrait être la norme logique pour la déterminations des limites de poids car, à notre avis, c'est la charge que porte l'essieu qui peut endommager la route. Par exemple, il peut arriver qu'un camion dont le poids global ne dépasse pas la limite permise, abîme quand même la chaussée à cause de la concentration de la charge sur un seul essieu. En raison des règlements actuellement en vigueur en Nouvelle-Écosse, certains camionneurs de cette province, à qui l'on ne permet pas de transporter des charges aussi lourdes que leurs homologues du Nouveau-Brunswick peuvent prendre, transbordent parfois leur cargaison dans des camions immatriculés au Nouveau-Brunswick lorsqu'ils arrivent à la frontière qui sépare les deux provinces. Cette pratique entraîne une perte de temps et d'argent. En conséquence, nous recommandons que les normes utilisées pour fixer la limite du poids des cargaisons en Nouvelle-Écosse soient modifiées de façon à les rendre conformes à celles qui ont cours au Nouveau-Brunswick, si notre suggestion est agréée.

Bien que nous recommandions que la charge portée par essieu serve de norme pour l'établissement des limites de charge, nous estimons que la tolérance de 5 p. 100 de surcharge devrait être augmentée en Nouvelle-Écosse. Ce règlement est injuste pour les camionneurs qui transportent du bois à pâte. Il est en effet difficile de déterminer le poids exact d'une charge de billes, à cause de leur teneur en eau, sans les peser; or, cela serait impossible en forêt. La tolérance de 5 p. 100 de surcharge pour ce genre de cargaison devrait être augmentée.

Nous recommandons aussi que les conditions exigées pour la délivrance d'un permis soient uniformisées partout dans la région atlantique. Les camionneurs des quatre provinces devraient pouvoir obtenir un seul permis pour le tracteur et la remorque plutôt

We feel that uniform licensing throughout the Atlantic Region would aid in a fuller development of the trucking industry.

It is our understanding that truckers in certain areas are charged gasoline tax even when they are using privately owned and maintained roads. This allegation has been made specifically in Nova Scotia by pulp interests. We recommend that this matter be investigated and if substantiated steps should be taken to remedy this situation by permitting the pulp interests a tax allowance for gasoline used on private roads.

Also it has been claimed that the funds of the Roads to Resources Program have been used solely to upgrade tourist roads. We feel that this matter should be investigated and steps taken to clearly define the objectives of this program.

Several of the recommendations we have made regarding highways and trucking are presently under the sole jurisdiction of each province. While we realize this we feel that one of the National Transportation Committee's roles should be to aid in the coordination of transportation facilities in the Atlantic Provinces. Our recommendations have, therefore, been made in the belief that you or an agency such as the Atlantic Development Board may be able to exert considerable influence in seeing that these suggestions are implemented. While we realize that the A.D.B. has done much that has been of value to this region we feel that it has not gone far enough. For instance their 1965-1966 Annual Report indicates that the Board granted funds to Nova Scotia for the improvement of highways such as Bedford to Upper Sackville, Hubbards to the Prospect Connector, and Enfield to Shubenacadie. We do not wish to deny the importance of these projects, however, we suggest that the funds if designated specifically for a project such as improving the standard of Nova Scotian roads to permit heavier weight allowances may have gone further in improving the economy of the Atlantic Region. Such a project may aid the development of a large Maritime based trucking firm, a recognized necessity.

que d'avoir un permis séparé pour chaque véhicule comme l'exige la Nouvelle-Écosse. Nous estimons qu'un mode uniforme d'immatriculation dans toute la région atlantique contribuerait davantage à l'expansion de l'industrie du camionnage.

Sauf erreur, les camionneurs de certaines régions doivent payer la taxe sur l'essence même s'ils circulent sur des routes qui leur appartiennent et qu'ils entretiennent eux-mêmes. Il paraît que cela se pratique notamment dans l'industrie du bois à pâte en Nouvelle-Écosse. Nous recommandons qu'une enquête soit effectuée sur cette affaire et, si nos renseignements sont exacts, on devrait remédier à cet état de choses en accordant à cette industrie une exemption de taxe sur l'essence consommée sur les routes appartenant aux particuliers.

On prétend aussi que les montants destinés à l'aménagement des routes d'accès aux ressources ont servi uniquement à l'amélioration des routes empruntées par les touristes. Or, nous estimons qu'une enquête devrait être instituée dans cette affaire et qu'on devrait définir clairement les objectifs de ce programme.

Plusieurs des recommandations qui précèdent concernant les routes et le camionnage visent des domaines qui sont du ressort exclusif de chaque province. Même s'il en est ainsi, nous estimons que le Comité national des transports devrait avoir pour mission d'aider à coordonner les moyens de transport dans les provinces atlantiques. Par conséquent, lorsque nous avons formulé nos recommandations, nous croyions que vous-mêmes ou un organisme comme l'Office d'expansion économique de la région atlantique pourriez faire peser tout le poids de votre influence pour qu'il soit donné suite à ces suggestions. Nous reconnaissons que l'Office a beaucoup fait pour le développement de cette région, mais nous croyons qu'il n'est pas allé assez loin. Par exemple, son rapport annuel pour 1965-1966 indique que l'Office a accordé des subventions à la Nouvelle-Écosse pour l'amélioration de routes comme celles de Bedford à Upper Sackville, de Hubbards à Prospect Connector, et de Enfield à Shubenacadie. Loin de nous la pensée de diminuer l'importance de ces travaux, mais nous prétendons que si ces fonds avaient été affectés à un projet comme l'amélioration de la qualité du réseau routier en Nouvelle-Écosse, afin de permettre la majoration de la tolérance de cinq pour cent de la surcharge des camions, cela aurait peut-être contribué à améliorer davantage la position économique de la région atlantique. Un tel projet serait de nature à faciliter l'expansion et le succès d'une entreprise locale de camionnage, dont les provinces atlantiques ont tellement besoin.

The Atlantic Development Board has stated that its objective is to aid regional development. This is laudable, but we suggest that its aim should be to "aid and *coordinate* the development of the *entire* Atlantic Region." Through the use of conditional grants the Board can take a giant step towards this objective. The Board has the authority at its disposal to see that uniform regulations are adopted in the Atlantic Provinces. We strongly urge that the Atlantic Development Board consider projects not by asking what will this do for Truro or Moncton, but what will this scheme do to aid overall development of the Atlantic Region. When the A.D.B. assumes its righful role perhaps then this region can begin to look towards a brighter future.

In this section on trucking we have recommended as follows:

1. Uniform weight restrictions should be adopted throughout the region.

2. Uniform licensing should be adopted for all truckers in the Atlantic Region.

3. The Atlantic Development Board or some other agency should oversee the coordination of the first two recommendations.

Corridor Road

There has been much mention of a possible Corridor Road from New Brunswick to Quebec passing through the State of Maine. Although the road would have some advantages we feel that the disadvantages far outweigh them. At the present time most goods going from the Atlantic Provinces to Central Canada and westward travel by rail. The construction of a Corridor Road would give the truckers an advantage over the railways. The road would reduce by about 125 miles the travelling distance between the Atlantic Provinces and points in Central Canada. Such a road could make up for some of the advantage which the railroads now enjoy under the Maritime Freight Rates Act. The presence of a Corridor Road would open up Central Canada for many of the trucking firms who now would be able to carry many goods cheaper than the railways.

We must also consider the fact that any increase in westbound traffic would be met by

L'Office d'expansion économique de la région atlantique a déclaré que son objectif est d'aider à la mise en valeur de la région. Voilà qui est tout à son honneur mais, à notre avis, son but devrait être de «stimuler et de *coordonner* l'expansion économique de *toute* la région atlantique». Grâce aux subventions conditionnelles, l'Office peut faire un grand pas vers la réalisation de cet objectif. Il a le pouvoir de s'assurer que les règlements sont uniformisés dans les provinces atlantiques. Nous insistons auprès de l'Office sur la nécessité des divers projets à réaliser non pas en se demandant ce qu'ils vont apporter à Truro ou Moncton, mais en songeant à ce que ce programme pourra faire pour contribuer à l'expansion économique de l'ensemble de la région atlantique. Une fois que l'Office aura assumé le rôle qui lui revient de droit, peut-être la région atlantique pourra-t-elle espérer des jours meilleurs.

Dans cette section traitant du camionnage, nous avons fait les recommandations suivantes:

1. Des restrictions uniformes visant le poids de la charge devraient être en vigueur dans toute la région.

2. Les permis devraient être délivrés aux mêmes conditions à tous les camionneurs dans la région atlantique.

3. L'Office d'expansion économique de la région atlantique ou un autre organisme semblable devrait surveiller la coordination des deux premières recommandations.

Route corridor

On a beaucoup parlé de l'aménagement possible d'une route corridor reliant le Nouveau-Brunswick et le Québec en passant par le Maine. En dépit des avantages de cette route, nous estimons qu'elle présenterait de nombreux inconvénients. A l'heure actuelle, le gros des marchandises expédiées des provinces atlantiques à destination du Canada central est acheminé par chemin de fer. La construction d'une route corridor favoriserait les camionneurs au détriment des chemins de fer, car elle réduirait d'environ 125 milles la distance qui sépare les provinces atlantiques du centre du Canada. Cette route annulerait certains des avantages dont bénéficient les chemins de fer en vertu de la Loi sur les taux de transport des marchandises dans les provinces Maritimes. Cette route corridor ouvrirait les portes du Canada central à un grand nombre de sociétés de camionnage qui pourraient alors transporter beaucoup de marchandises à un taux inférieur à celui des chemins de fer.

Nous devons aussi tenir compte du fait que toute augmentation dans le trafic-marchandi-

an equivalent amount of eastbound traffic, if not more. The Board of Transport Commissioners reported in 1965 that only 0.27 per cent of the traffic which originated in the Atlantic Provinces was intended for the Western Provinces, 23 per cent for Ontario and Quebec, and 76.6 per cent was for transportation within the Maritime region. We can readily see that at present most traffic remains within the region and it is open to speculation whether or not Corridor Road could increase the amount of traffic going west.

We must realize that any such road runs in two directions and that savings and gains will be made at both ends. If all the trucks which were to operate on this proposed road were owned in the Atlantic Provinces then we would be getting major benefits out of it, but this is not so. The lower costs of transportation to truckers might enable the Central Canadian businessman to undercut the Maritime prices and thus Maritime business would lose through decreased sales and hence profits. Any profits accrued by Central Canada's businessmen will in all likelihood return to Central Canada and will be of no benefit to us in Atlantic Canada.

It must further be pointed out that not all areas of the Atlantic Provinces would benefit by the existence of such a road. It would have little or no effect on Newfoundland since the costs of bringing trucks to the mainland by boat would eliminate any savings the road might produce. Nova Scotia has many problems with its trucking industry and few trucks from there go to Central Canada. Prince Edward Island must worry about getting their Causeway to the mainland before they can think of advantages of the Corridor Road. The northern part of New Brunswick would not be too concerned about it because of the fact that they are close to Central Canadian markets and roads at present. The only part of the Atlantic Provinces which would stand to gain at all would be southern New Brunswick. Thus we can see that the farther an industry is away from the road the smaller the benefits of such a road would be.

The Economist Intelligence Unit pointed out that in its survey no example of a market could be denied Maritime producers because of transportation costs. The principal limiting factors seemed to be production and total distributing costs. The size of Central Canadian

ses en direction ouest serait contrebalancée par une augmentation semblable dans le trafic acheminé vers l'Est. La Commission canadienne des transports signalait en 1965 que seulement 27% du trafic provenant des provinces atlantiques était destiné aux provinces de l'Ouest, 23% à l'Ontario et au Québec, et 76.6% à des endroits situés à l'intérieur des Maritimes. Nous voyons donc qu'à l'heure actuelle, le gros du trafic ne sort pas de la région atlantique et c'est à se demander si une route corridor pourrait accroître le trafic à destination de l'Ouest.

Il faut comprendre qu'une route de ce genre irait dans deux directions et qu'on réaliserait des bénéfices et des gains aux deux extrémités. Si tous les camions qui emprunteraient cette route appartenaient à des résidents des provinces atlantiques, alors nous en retirerions de gros bénéfices, mais il n'en est pas ainsi. Le coût moins élevé du transport pour les camionneurs pourrait permettre aux hommes d'affaires du Canada central de vendre leurs marchandises moins cher que dans les Maritimes, ce qui se traduirait par une baisse du chiffre d'affaires et des bénéfices des commerçants des Maritimes. Tout bénéfice réalisé par les marchands du Canada central demeurerait vraisemblablement dans le centre du Canada, ce qui signifie que la région atlantique n'en profiterait aucunement.

A noter, d'ailleurs, que les régions des provinces atlantiques ne profiteraient pas toutes de la présence d'une route corridor. Par exemple, elle n'aurait que peu ou point d'effet sur Terre-Neuve, car le coût du transport maritime des camions jusque sur le continent absorberait toute économie résultant du transport par cette route corridor. La Nouvelle-Écosse a beaucoup de problèmes avec son industrie du camionnage et rares sont les camions de cette région qui se rendent au Canada central. Quant à l'Île du Prince-Édouard, on devra construire une chaussée pour la relier à la terre ferme avant qu'elle puisse espérer bénéficier des avantages de la route corridor. La partie nord du Nouveau-Brunswick n'est pas trop inquiète à ce sujet, étant donné qu'elle est à proximité des marchés et des routes du Canada central. La seule région des provinces atlantiques qui y gagnerait vraiment est le sud du Nouveau-Brunswick. On voit donc par ce qui précède que plus une industrie est éloignée de la route, moins elle bénéficie des avantages de cette route.

L'*Economist Intelligence Unit* a signalé qu'au cours de son enquête, elle n'avait relevé aucun cas de producteur des Maritimes qui aurait été dans l'impossibilité de vendre ses produits à cause des taux élevés du transport. Les principaux facteurs limitatifs semblent

producers enable them to market their products at lower average cost levels than Maritime producers because they can work with economies of scale. We doubt that savings in transportation costs could increase the Atlantic Provinces share of the Canadian market. The presence of the Corridor Road would not reduce the transportation costs very much as the following example indicates:

> "Shoes produced in Fredericton and marketed in the Toronto region. Truck freight at $2.65 per 100 pounds between Fredericton and its Toronto warehouse works out at eight cents per pair of shoes whose average whole-value is $17.25. This means that the out-going freight is less than one-half of one percent of this commodity's value, clearly then, a freight reduction of even 25% would have a negligible effect upon this producer's competitive position in Central Canada, even if this saving were to be doubled to account for the cost savings a Corridor Road would induce on the incoming raw material from Central Canada."
>
> E.I.U. Study, Vol. X, p. 19.

This is the situation as it existed prior to September 5, 1967, before introduction of new LCL rates. Many other examples were given which showed the same thing. The reduction in cost to all the firms is almost negligible, in most cases, the transportation costs are only a small part of the products value and even a 15-20 percent reduction in transportation costs would be barely noticed.

The presence of a Corridor Road would bring all of New Brunswick and part of both Nova Scotia and Prince Edward Island within overnight trucking from Montreal. Trucks from Montreal could be within this area within twelve hours. To accomplish this though an interchange station would be required on the Corridor Road. One possible advantage here would be that stock-holding costs in the Maritimes might go down. But this over-night delivery from Montreal would mean an increase in competition in the Atlantic region by firms which cannot do this at present because of the long haul.

être la trop faible productivité et les frais globaux de distribution. Grâce à leur production massive, les producteurs du Canada central peuvent écouler leurs produits à des prix moyens inférieurs à ceux des producteurs des Maritimes, car ils peuvent produire sur une base rentable. Nous doutons que l'économie réalisée dans les coûts du transport puisse augmenter la part du marché canadien des provinces atlantiques. En fait, l'existence de la route corridor ne réduirait pas considérablement les frais de transport, ainsi que le montre l'exemple suivant:

> «Les chaussures fabriquées à Fredericton et vendues dans la région de Toronto. Le coût du transport par camion, au taux de $2.65 les 100 livres entre Fredericton et son entrepôt de Toronto, revient à huit cents par paire, dont la valeur moyenne est de $17.25. Il s'ensuit que le coût du transport est inférieur à un demi pour cent de la valeur de cet article et, évidemment, une réduction du coût du transport, même de 25 p. 100, aurait un effet négligeable sur la capacité de ce producteur de soutenir la concurrence dans le Canada central, même si cette économie était doublée grâce à la réduction du coût du transport des matières premières acheminées du Canada central vers les provinces atlantiques par la route corridor.»
>
> *Economist Intelligence Unit Study,* Vol. X, p. 19.

Telle était la situation avant le 5 septembre 1967, c.-à-d. avant l'introduction des nouveaux taux applicables aux charges partielles de wagon. On a donné beaucoup d'autres exemples de cet état de choses. La réduction du coût du transport pour toutes les compagnies est à peu près négligeable; dans la plupart des cas, ce coût ne représente qu'une petite fraction de la valeur des produits, et même une réduction de 15 à 20 p. 100 dans le coût du transport serait à peine perceptible.

L'existence de la route corridor mettrait tout le Nouveau-Brunswick et une partie de la Nouelle-Écosse et de l'Île du Prince-Édouard à une douzaine d'heures de trajet de Montréal. En effet, des camions partant de Montréal pourraient atteindre cette région en douze heures. Pour y réussir, il faudrait cependant une station de jonction quelque part sur la route corridor. Un avantage possible de cette solution serait la réduction des frais d'entreposage de la marchandise dans les Maritimes. Mais la livraison du jour au lendemain à partir de Montréal voudrait dire une concurrence plus forte de la part de compagnies qui ne peuvent le faire à l'heure actuelle à cause de la longueur du trajet.

The Economist Intelligence Unit gave a break down of the benefits likely to accrue to the Atlantic Provinces because of the Corridor Road in the Atlantic Provinces Transportation Study.

TABLE V

Benefit in 1970 when corridor road is built

1. Savings in truck operating costs	$2,520,000
2. Reduction in freight rates due to Corridor construction	702,000
3. Benefits to Intercommunity Traffic	389,500
4. Benefits to Tourist Traffic	143,000
Total	$3,754,500

E.I.U. Study, Vol. X, p. 39.

The study also states that the annual capital charges on the road would be $9 million to the Atlantic Provinces. Therefore, one can see that the benefits would amount to less than 43% of the annual capital charges on this road whose construction cost is $105 million. We can see that this road cannot be justified on economic grounds.

The Atlantic Provinces Transportation Study sums up our ideas on the Corridor Road in the following way:

> "...if the Canadian public are being asked either directly or indirectly to invest $105 million to benefit the Atlantic Provinces then there are large areas of the Atlantic Region's intrastructure in general and transportation system in particular where returns are far in excess of those to be expected from a Maine Corridor Highway can be achieved."
>
> E.I.U. Study, Vol. X, p. 40.

Thus we do not recommend the construction of a Corridor Road through Maine.

New Brunswick to Prince Edward Island Causeway

The Atlantic Provinces Transportation Study pointed out in Volume 3 that there was some question as to whether the trucking industry on Prince Edward Island could survive until 1971 which for a time was the completion date for construction of the Cause-

Le tableau V donne une projection, faite par l'*Economist Intelligence Unit*, des bénéfices résultant de la construction de la route corridor pour les provinces atlantiques.

TABLEAU V

BÉNÉFICE RÉALISÉ EN 1970 APRÈS LA CONSTRUCTION DE LA ROUTE CORRIDOR

1. Économie de frais d'exploitation des camions.....	$ 2,520,000
2. Réduction des taux de transport résultant de la construction de la route corridor..	702,000
3. Bénéfices pour le trafic interurbain.....	389,500
4. Bénéfices pour le trafic touristique.....	143,000
TOTAL.....	$ 3,754,500

E. I. U. Study, Vol. X, p. 39.

L'enquête révèle que le coût annuel en capital de cette route serait de 9 millions de dollars pour des provinces atlantiques. On voit donc que les bénéfices s'élèveraient à moins de 43% du coût en capital de la route, dont la construction est évaluée à 105 millions. En conséquence, la construction de cette route ne saurait être justifiée du point de vue économique.

L'Étude de la situation des transports dans les provinces atlantiques résume comme il suit notre opinion sur la route corridor:

> «...si l'on demande à la population canadienne d'assumer, directement ou indirectement, cette mise de fonds de 105 millions de dollars au profit des provinces atlantiques, alors il y a lieu de faire observer qu'il existe de larges secteurs de l'infrastructure en général et de l'industrie des transports en particulier, dans la région atlantique, où les bénéfices seraient beaucoup plus élevés que ceux que l'on pourrait tirer d'une route corridor passant par le Maine.»
>
> *E. I. U. Study*, Vol. X, p. 40.

Voilà pourquoi nous ne recommandons pas la construction d'une route corridor passant par le Maine.

Chaussée reliant le Nouveau-Brunswick à l'Île du Prince-Édouard

Dans le volume 3 de l'Étude de la situation des transports dans les provinces atlantiques, les auteurs se demandent si l'industrie du camionnage dans l'Île du Prince-Édouard pourra tenir jusqu'à 1971, année du parachèvement prévu de la chaussée reliant cette

way linking that Province with the mainland. This is one indication of the importance of the causeway to the people of the Island.

Construction of the causeway is a Term of Union established when Prince Edward Island joined with Canada in 1873. Therefore, construction is not only in response to a lagging economy but is to complete an agreement.

The causeway is a necessity if Prince Edward Island is to at least maintain its relative level of economic activity. The facilities now available for crossing the Northumberland Strait are inhibiting. The causeway will reduce the costs, delays, shipping wastage, spoilage and breakage, and the restrictions placed on the movements of products from the Island. Just as important is the saving in time that the causeway will mean in crossing the strait. Tourism, an important source of income is expected to see an influx. Agricultural production will benefit greatly due to its dependence on quick efficient transportation to markets. The shipment of frozen foods, for example, involves a high risk when carriers must go by ship and withstand delays in that service. Also trucks are forced to travel by day with obvious disadvantages, because the ships do not operate at night.

province à la terre ferme. Cette inquiétude reflète l'importance de cette chaussée pour les insulaires.

La construction de cette chaussée a été l'une des conditions posées par cette province pour son entrée dans la Confédération en 1873. Cela veut donc dire que la construction de cet ouvrage n'est pas seulement dans le but de ranimer une économie chancelante, mais elle est la réalisation d'une promesse.

La chaussée est indispensable si l'Île du Prince-Édouard doit au moins maintenir son niveau relatif actuel d'activité économique. Les traversiers actuels sont tout à fait insuffisants. La chaussée permettra de réduire le coût du transport, les retards, le gaspillage et les avaries, ainsi que les restrictions imposées à la sortie des produits de l'île. Cette chaussée permettra de gagner du temps pour la traversée du détroit. Le tourisme, qui représente une importante source de revenu, devrait augmenter considérablement. La production agricole bénéficiera grandement de la construction de la chaussée, car elle dépend de l'acheminement expéditif des produits vers les marchés. L'expédition d'aliments congelés, par exemple, comporte un gros risque lorsque les transporteurs doivent se rendre sur le continent par bateau et subir de longs retards en cours de route. De plus, les camions sont forcés de voyager le jour et d'en accepter tous les inconvénients, parce que les bateaux restent à quai la nuit.

Every day of delay means additional loss to the Island economy that would not be suffered were the causeway completed. It is unfortunate that in a period of relative decline the Maritime region, especially Prince Edward Island, is not able to take advantage of the increased expenditures on construction of the causeway by the Federal Government. It is illogical that this expenditure cutback could be attributed to inflation in the Maritimes. This is an anomaly in Government policy.

Chaque jour de retard augmente d'autant la perte économique subie par l'île, perte que l'on éviterait si la chaussée était construite. Il est regrettable qu'à une époque de déclin relatif, la région atlantique, l'Île du Prince-Édouard en particulier, ne puisse profiter des frais accrus de la construction de la chaussée par le gouvernement fédéral. Il est illogique que cette suppression de dépenses puisse être attribuée à l'inflation dans les provinces Maritimes. C'est une anomalie dans la politique du gouvernement.

We therefore strongly recommend that construction of the Northumberland Strait Causeway proceed without further delay.

Nous recommandons donc fortement que la construction de la chaussée du détroit de Northumberland soit reprise sans plus de délai.

Ferry Services

A review of the ferry services between Yarmouth, Nova Scotia, and Bar Harbour, Maine, and between Saint John, N.B., and Digby, Nova Scotia, has revealed that the present service is inadequate and that it is expected to worsen in the future. The C.P.R.'s "Princess Acadia", operating between Saint John and Digby, is closed to commercial vehicles and only has a capacity of 120 cars. The C.N.R. operated "M. V. Bluenose" which runs between Yarmouth and Bar Harbour has

Services de traversier

Une révision des services de traversier entre Yarmouth (Nouvelle-Écosse) et Bar-Harbour (Maine) et entre Saint-Jean (Nouveau-Brunswick) et Digby (Nouvelle-Écosse) a révélé que le service actuel est insuffisant et qu'il faut s'attendre à ce qu'il se détériore davantage. Le *Princess-Acadia* du Canadien-Pacifique, qui fait la navette entre Saint-Jean et Digby, ne transporte plus les véhicules commerciaux et n'a qu'une capacité de 120 voitures. Le *M. V. Bluenose* du Canadien-

a maximum capacity of 150 cars and 15 to 18 trucks (maximum size 48 feet long, 8 feet wide, and 12 feet high).

The number of commercial vehicles permitted to use the "M.V. Bluenose" during the tourist season is seriously curtailed. As the tourist season coincides with the busiest seasons for producers of fresh products; i.e., fish, vegetables, fruit, etc., the restrictions on commercial vehicles hamper logical development of markets for these products. The Atlantic Provinces Transportation Study noted that Central Canadian markets do not provide sufficient demand nor are they readily accessible to Maritime interests in the fresh produce area. The New England markets are, therefore, the logical focal points for Maritime interests, particularly for those of the Annapolis Valley, the southern shore of Nova Scotia, and the south eastern shore of New Brunswick. There are three main reasons for this: (1) the proximity of the New England States to the Maritimes; (2) the large demand for fresh fish in New England; and (3) the later growing seasons for fruit such as strawberries, blueberries, etc. and for vegetables in the Annapolis Valley which enables this region to compete in the New England markets under very favorable conditions.

Time is of the essence in transporting these goods to market—24 hours or less being the maximum allowable for some items. Ferry services, if available, would shorten the time required to reach the United States markets. While we realize that costs are likely to increase slightly if ferries are used it is generally noted that there is sufficient markup on fresh produce to enable the producer to meet these costs and still make a reasonable profit. In fact, sufficient ferry service becomes available producers can presumably increase their present share of the New England market and thus realize greater profit.

The members of this brief recommend that:

1. *Short run:*—More space be made available on the "M. V. Bluenose" for commercial vehicles in the summer months.

2. *Long run:*—A new ferry service should be instituted between Yarmouth,

National, qui fait le service entre Yarmouth et Bar-Harbour, a une capacité de 150 voitures et de 15 à 18 camions (dimensions maximales: 48 pieds de long, 8 pieds de large et 12 pieds de haut).

Le nombre de véhicules commerciaux autorisés à faire la traversée sur le *M. V. Bluenose* pendant la saison touristique est sérieusement diminué. Vu que la saison touristique coïncide avec les périodes de pointe des producteurs de denrées fraîches: poisson, légumes, fruits, etc., les restrictions imposées aux véhicules commerciaux empêchent le développement logique des marchés de ces produits. L'Étude des transports dans les provinces Maritimes signale que les marchés du Canada central ne fournissent pas une demande suffisante qu'ils ne sont pas facilement accessibles aux producteurs de denrées fraîches des Maritimes de sorte que les marchés de la Nouvelle-Angleterre sont les débouchés logiques pour les producteurs des Maritimes, ceux en particulier de la vallée d'Annapolis, de la côte méridionale de la Nouvelle-Écosse et du littoral sud-est du Nouveau-Brunswick. Il y a à cela trois raisons principales: (1) la proximité des États de la Nouvelle-Angleterre; (2) la forte demande de poisson frais de la Nouvelle-Angleterre, et (3) la durée plus longue des saisons de croissance des baies telles que framboises, myrtilles, etc. et de légumes dans la vallée d'Annapolis, ce qui permet à cette région de faire concurrence aux marchés de la Nouvelle-Angleterre dans des conditions très favorables.

Le temps est un facteur essentiel du transport de ces denrées au marché, 24 heures ou même moins étant le maximum permissible pour quelques-unes d'entre elles. Des services adéquats de traversier réduiraient le temps requis pour la livraison aux marchés américains. Bien que nous reconnaissions que les frais subiraient probablement une légère majoration du fait de l'utilisation des traversiers, on constate généralement un relèvement du prix des produits frais suffisant pour contrebalancer ces frais et même laisser une marge raisonnable de profit. De fait, si un service adéquat de traversier était établi, on pourrait présumer que les producteurs accroîtraient leur part actuelle du marché de la Nouvelle-Angleterre et réaliseraient ainsi des profits accrus.

Les auteurs du présent exposé recommandent que:

1. *Pour les courts trajets,* plus d'espace soit mis à la disposition des véhicules commerciaux sur le *M. V. Bluenose.*

2. *Pour les longs trajets,* un nouveau service de traversier soit établi entre

N.S. and Bar Harbour, Maine; that this ferry be designed to carry a larger number of commercial vehicles than the present "M.V. Bluenose"; that this ferry be designed to carry larger commercial vehicles than the present ferry; that regular sailings be scheduled which will enable Maritime producers to reach the New England markets in time for selling on Mondays and Fridays.

If implemented this recommendation will permit logical development and growth for producers of fresh products in the aforementioned communities. A second ferry would also relieve pressures on the "M.V. Bluenose" while at the same time permitting more tourists to come to the Atlantic Provinces via ferry.

We have also looked into the ferry service presently being operated by the C.P.R. between Saint John, N.B. and Digby, N.S. While we realize that there are inadequacies with the present system recommendations in other parts of this brief have led us to the conclusion that by upgrading the existing rail and road conditions the needs of shippers in these areas can be adequately serviced by existing modes of transportation.

Air

Air transportation, especially that of freight, has only really expanded in recent years. We take the position that the Federal Government in implementing any Federal Air Policy should seriously take into consideration the problems of this region. As the situation stands at present most planes carrying cargo into this region from Central Canada go back almost empty. This is caused by a lack of high value goods produced in this region which could economically be sent to Central Canada by air. In this brief we are going to limit ourselves to a few recommendations concerning the expansion and practicability of air transportation in the region. We feel that the various aspects of a regional air policy will be sufficiently dealt with in other submissions.

A. Gander Free-Port—We strongly recommend the establishment of a free port at Gander, Newfoundland. The problem that presently exists at Gander was caused by the introduction of jets on overseas flights. These planes no longer had to stop at Gander since they could fly directly to their mainland des-

Yarmouth (N.-É.) et Bar-Harbour (Maine); que ce traversier soit construit de façon à recevoir un plus grand nombre de véhicules commerciaux ainsi que des véhicules de plus grandes dimensions que n'en peut contenir le *M. V Bluenose,* et que des horaires de départs plus réguliers soient établis en vue de permettre aux producteurs des Maritimes d'atteindre les marchés de la Nouvelle-Angleterre à temps pour que les denrées puissent être vendues les lundis et vendredis.

L'adoption de cette recommandation permettra aux producteurs de denrées fraîches des localités susmentionnées de développer et d'accroître leur production. Un second traversier soulagerait aussi le service du *M.V. Bluenose,* tout en permettant à un plus grand nombre de touristes de venir par mer visiter les Provinces atlantiques.

Nous avons également fait enquête sur le service de traversier présentement exploité par le réseau du CP entre Saint-Jean (N.-B.) et Digby (N.-É.). Bien que nous ayons constaté des lacunes dans le système actuel, les recommandations formulées dans d'autres parties du présent mémoire nous ont permis de conclure qu'en augmentant les moyens existants de transport par rail et route, les besoins des expéditeurs de ces régions seront adéquatement servis par les modes actuels de transport.

Transport aérien

Le transport par air, des marchandises en particulier, n'a vraiment pris de l'expansion que dernièrement. Nous sommes d'avis que, dans l'application de toute politique de transport aérien, le gouvernement central devrait tenir sérieusement compte des problèmes de cette région. Dans la situation présente, la plupart des avions porteurs de fret venant du Canada central s'en retournent à peu près vides. Ceci est attribuable au fait que cette région ne produit pas de denrées de valeur pouvant être expédiées économiquement par air au Canada central. Nous nous limiterons, dans le présent mémoire, à quelques recommandations concernant l'expansion et la praticabilité du transport aérien dans la région. Nous croyons que les divers aspects de la politique aérienne régionale seront suffisamment traités dans d'autres mémoires.

A. Port franc de Gander—Nous recommandons fortement la création d'un port franc à Gander (Terre-Neuve). Le problème qui se pose actuellement à Gander est dû à l'introduction d'avions réactés dans les envolées transatlantiques. Ces avions n'avaient plus à faire escale à Gander puisqu'ils pouvaient

tination. If such a free port were established at Gander it would provide an impetus for economic growth as well as increasing the number of flights in and out of Gander.

At present we have a large international airport at Gander complete with facilities, which are not being used to the fullest extent. The Gander International Airport represents a large investment by the Canadian Government and people.

By the creation of a free port at Gander we would have the North American version of Shannon, Ireland. This would be possible because Gander is a national air gateway to North America. From Gander you are within easy reach of the major Canadian anf American markets as well as being in a good position relative to the west European market.

An airport such as Gander may almost become a necessity with the introduction of supersonic jets in the near future. It is quite possible that these aircraft may be prohibited from flying over mainland North America because of the effects created by their sonic booms. The boom effect on Gander would be very limited when compared to such airports as Montreal, Toronto and New York. A feeder service out of Gander by air to the major eastern North American points would be very feasible. It might also be pointed out that a feeder service would increase the revenue of the airport because of the great increase in flight landing fees.

We would recommend that a Federal or Provincial crown corporation be set up to administer the free port. They would attempt to create a type of industrial estate complex at the airport—through the construction of small factories of an all purpose nature designed for light industry—as well as creating sufficient warehouse facilities. There would be an area marked off and designated as a free customs duty zone. Manufactured goods and raw materials could be brought into this area without having to pay any Canadian custom duties on them. Goods not intended for Canadian markets could be flown out of Gander without incurring Canadian customs duties. To encourage industry settlement at Gander arrangements could be made with the Canadian Government to have incentives offered along the lines of the Irish Government's at Shannon.

We therefore strongly recommend the establishment of a free port at Gander.

atteindre tout d'une traite leur destination outre-mer. Si un tel port franc était établi à Gander, il pourrait donner une impulsion à l'expansion économique et accroître de ce fait le nombre d'envolées dans les deux sens.

Nous avons en ce moment à Gander un vaste aéroport international muni de toutes les installations, mais celles-ci ne sont pas utilisées à plein. L'aéroport international de Gander représente une énorme immobilisation faite par le gouvernement et le peuple canadiens.

La création d'un port franc à Gander doterait le Canada d'une version nord-américaine de Shannon, en Irlande. La chose serait possible, vu que Gander est un passage aérien national ouvert sur l'Amérique du Nord. De Gander il est facile d'atteindre les principaux marchés canadiens et américains, aussi bien que ceux de l'Europe occidentale.

Un aéroport comme celui de Gander peut devenir presque une nécessité avec l'avènement des avions supersoniques dans un avenir prochain. Il est fort possible qu'il soit interdit à ce genre d'avions de survoler le continent nord-américain à cause des effets qui résultent du bang sonique, lesquels seraient très limités sur Gander comparativement à ce qu'ils seraient à Montréal, à Toronto et à New York. Un service d'approvisionnement en essence par air, à partir de Gander, pour la desserte des principaux points de l'est de l'Amérique du Nord serait tout à fait réalisable. Il est bon de noter aussi que ce genre de service accroîtrait les recettes de l'aéroport par suite de la forte majoration des droits d'atterrissage.

Nous sommes d'avis qu'une société fédérale ou provinciale de la Couronne devrait être instituée en vue d'administrer le port franc. Elle s'efforcerait d'y organiser une sorte de complexe immobilier par la construction de petites fabriques toutes fins pour la petite industrie, ainsi que par l'aménagement de facilités suffisantes d'entreposage. Une certaine superficie serait réservée et désignée comme zone douanière franche. Les articles manufacturés et les matériaux bruts pourraient y entrer sans qu'ils soient frappés de droits douaniers canadiens. En vue d'encourager l'établissement d'industries à Gander, des ententes pourraient être conclues avec le Gouvernement canadien qui offrirait des encouragements du genre de ceux qu'a institués le gouvernement irlandais à Shannon.

Nous recommandons donc fortement la création d'un port franc à Gander.

B. Sussex Airport—There has been mention made of the possibility of having an international airport at Sussex, New Brunswick. If this were done it would become the fourth airport in southern New Brunswick and would be within 60 to 70 miles of the three other airports. These are located at Fredericton, Saint John and Moncton. We feel that there are only two ways an airport like this could be successful, both of which we feel are very unpractical. The first way would be to close down the existing airports at the other three centres. This is unfeasible. The populations of these three centres are much greater than that of Sussex and the termination of airport facilities at these centres would bring about much inconvenience and would increase shipping costs because of the longer distance required in land transportation.

The second way that a Sussex International Airport could be successful would be by having the existing facilities remain in operation, but hoping that transportation presently leaving by air from the three centres would now go to Sussex and leave from the International Airport. This we also see as being very unlikely because we cannot see Moncton, Saint John or Fredericton shippers passing up their own airports which are close by to transport their shipments 60 or 70 miles to Sussex.

Therefore, we do not recommend the establishment of an international airport at Sussex, New Brunswick.

Maritime Ports

Eastern ports can be used on a larger basis for the export of flour and grain. We feel that more use could be made of these ports for other types of commodities from Central Canada. In order to lessen the rivalry between the various ports in the Maritimes serious planning is required. A control board should be set up to plan and control the development of these ports. Due regard must be paid to technological improvements in port facilities and the trend towards larger ships. A policy without due regard for these factors would be useless. The development of these ports must be followed by the development of highway and railway systems (discussed in other sections of this Brief).

Therefore, we recommend:

1. Steps should be taken to encourage the use of Eastern ports for export of flour and grains on a larger basis.

B. *Aéroport à Sussex*—Il a été question de la possibilité d'établir un aéroport international à Sussex (Nouveau-Brunswick). Si l'idée était réalisée, ce serait le quatrième aéroport du Nouveau-Brunswick méridional, et il serait situé à moins de 60 ou 70 milles des trois autres aéroports sis respectivement à Fredericton, Saint-Jean et Moncton. Nous croyons qu'un aéroport comme celui-ci ne pourrait réussir que de deux façons, et nous sommes d'avis que les deux sont de réalisation très difficile. La première consisterait à fermer les aéroports des trois autres localités, ce qui est impossible. Les populations de ces trois centres sont plus nombreuses que celle de Sussex, et la suppression de leurs aéroports serait très incommodante et accroîtrait les frais de transport à cause des distances plus longues du transport par terre.

La seconde façon de faire réussir un aéroport international à Sussex consisterait à maintenir les facilités actuelles en exploitation, tout en espérant que le présent trafic aérien partant des trois centres serait maintenant dirigé sur Sussex et partirait du nouvel aéroport international. Cela nous paraît aussi fort peu probable, car nous croyons que les expéditeurs de Moncton, Saint-Jean et Fredericton verraient d'un mauvais œil le trafic aérien éviter leurs propres aéroports qui sont assez rapprochés pour transporter leurs marchandises à Sussex, localité distante seulement de 60 à 70 milles.

Par conséquent, nous ne recommandons pas la création d'un aéroport international à Sussex (Nouveau-Brunswick).

Ports des Maritimes

Les ports du littoral est peuvent être davantage utilisés pour l'exportation de farine et de céréales et davantage aussi pour d'autres marchandises du Canada central. Si l'on veut réduire la rivalité entre les divers ports des Maritimes, il est nécessaire de procéder à une sérieuse organisation. Une commission de contrôle devrait être créée pour prévoir et réglementer le développement de ces ports. Il faut tenir compte des perfectionnements techniques des facilités portuaires et de la tendance à construire de plus gros navires. Un programme qui négligerait ces facteurs ne serait d'aucune valeur. L'expansion de ces ports doit être suivie par celle des voies routières et ferroviaires (il en est question dans d'autres parties du présent mémoire).

Nous recommandons par conséquent:

1. Que des mesures soient prises en vue d'encourager l'utilisation accrue des ports de l'Est pour l'exportation de la farine et des grains.

2. A control board should be set up to plan and control the development of these ports.

A. Containership—The trend in port development is containership. This method of moving cargo requires more capital outlay than under the conventional method of handling cargo. Shippers and consignees of cargo stand to benefit from containership developments. Goods can be delivered in the least possible time, under the best possible conditions and in the least expensive manner. Pilferage would be reduced. Damage from weather, contamination, and other problems would be reduced.

However, this method has several problems. There will be customs and regulatory problems, the composition of trade routes, trucking, highway and rail problems abroad, and the length of the ocean haul. Will duty on the goods be assessed at port or destination? As regards foreign trade, so vital to the Canadian economy, there is a possibility that containers may be considered an integral part of the ship and therefore not be subject to duty.

The number of ports at which containerized ships will call must be limited to be effective. This will allow for quick turn-around, increase the carrying capacity of the ships and limit the dispersion of containers. The ports that have substantial cargo volumes immediately available for containership movements will benefit. This is the reason for the success of the New York port. In addition to having substantial cargo available there must be an adequate trucking system. Trucks would play a major role. In the United States difficulty was experienced in developing joint railway-water rates. Rail cars must be transported intact with undercarriage. The system must be completely integrated to eliminate the present haphazard coordination.

The Maritime ports may have a difficult time competing with ports in Central Canada. Ports in Central Canada also face competition from New York. As the Financial Post of February 10, 1968, pointed out: "The efficiency of container operations at the Port of New York has made it possible for that port to compete with Montreal and St. Lawrence Seaway ports for Canadian cargo." It can be seen from this statement that Canada lags behind the world in port development. Probably one of the major difficulties is the limited industrial development on seaboard areas. The problem of port development cannot be over-

2. Qu'une commission de contrôle soit créée en vue d'organiser et de réglementer le développement de ces ports.

A. *Conteneurisation*—La tendance en matière d'expansion portuaire est la conteneurisation. Ce mode de manutention des marchandises requiert de plus fortes mises de fonds que la manutention classique. Expéditeurs et consignataires bénéficieront de cette innovation. Les marchandises peuvent être livrées en moins de temps, dans les meilleures conditions possibles et à moins de frais. Il y aurait diminution de chapardage, de dégâts par mauvais temps, de contamination et d'autres inconvénients.

Ce mode a toutefois ses difficultés: dédouanement et réglementation, organisation des routes commerciales, camionnage, problèmes de la route et du rail à l'étranger, et longueur du transport océanique. Les droits sur les marchandises seront-ils établis au port d'expédition ou de destination? Quant au commerce étranger si essentiel à l'économie canadienne, il est possible que les conteneurs soient considérés comme partie intégrante du navire, donc non assujettis à des droits.

Le nombre de ports où les navires conteneurisés feront escale doit être limité pour que le service soit efficace. Cela permettra un rapide retour, augmentera la capacité de transport des navires et limitera la dispersion des conteneurs. Les ports qui ont d'importants volumes de fret immédiatement disponibles pour les mouvements de navires conteneurisés seront avantagés. C'est la raison du succès du port de New-York. A la disponibilité d'un volume important de fret doit s'ajouter un système adéquat de camionnage. Les camions joueraient un rôle de premier plan. Les États-Unis ont éprouvé des difficultés à élaborer des tarifs mixtes rail-eau. Les wagons doivent être transportés intacts avec leurs trains. Le système doit être complètement intégré afin d'éliminer l'actuelle coordination au petit bonheur.

Les ports des Maritimes peuvent difficilement concurrencer ceux du Canada central, et les ports du Canada central ont aussi à faire face à la concurrence de New-York. Ainsi que le *Financial Post* du 10 février 1968 le faisait observer: «L'efficacité de la manutention des conteneurs au port de New-York lui a permis de faire concurrence à Montréal et aux ports de la voie maritime du Saint-Laurent pour le fret canadien.» Cette assertion permet de constater que le Canada reste en arrière sous le rapport de l'expansion portuaire. L'une des principales difficultés est probablement le faible développement indus-

looked. Cargoes loaded and unloaded in Canadian ports were down 5% in 1967. This trend must be reversed.

> We recommend that containership facilities be provided, but we feel that they should be limited to a few ports.

B. *Deepwater Port*—Canada has the potential for the largest deepwater harbour on the Atlantic seaboard of North America. This will provide a counterpart to the Rotterdam Port. Two possibilities exist for such a port; that is, Canso, N.S. and L'Etang, N.B. Such a port would require approximately ten square miles of land space and at least 70 feet of water. This places the Maritimes at a distinct advantage over the United States' eastern seaboard. This port could be a free port to handle large ships up to 600,000 tons. For a port of this size to be successful American cooperation is imperative as the majority of goods to be handled would be destined for the United States markets. A port like this must be serviced by fast container trains. This seaport will bring certain ancillary benefits. New industries will be attracted to the area.

> We strongly urge that a deepwater port be established in the Atlantic Region, with construction to begin in the very near future.

Newfoundland

The transportation problem in Newfoundland is probably the worst in the Atlantic Region. The Gulf Ferry is unable to handle special cargoes treated as normal rail traffic elsewhere in Canada. Larger ferries are needed to meet present commitments. The frequency and quality of service must be improved if the economy of the region is to expand. The economic and geographical factors make for high transportation costs in Newfoundland. We agree with the McPherson Commission that low-cost transportation might best be achieved by limited competition, subsidies, or special treatment. This approach would be unacceptable in other parts of Canada.

Water and air traffic should be encouraged. A better system of roads and highways is needed throughout the island. This would facilitate the handling of containers arriving by ship, rail or air.

triel des régions côtières. La question de l'expansion des ports ne saurait être négligée. Les cargaisons chargées et déchargées dans les ports canadiens avaient diminué de 5 p. 100 en 1967. Cette tendance doit être renversée.

> Nous recommandons la conteneurisation mais nous sommes d'avis qu'elle soit limitée à quelques ports.

B. *Ports en eaux profondes*—Le Canada a tout ce qu'il faut pour l'aménagement de ports en eaux profondes sur le littoral atlantique. Cela servira de contrepartie au port de Rotterdam. Il existe deux endroits pour l'aménagement d'un tel port: Canso, en Nouvelle-Écosse, et l'Étang, au Nouveau-Brunswick. Il faudrait pour cela environ dix milles carrés de terrain et au moins 70 pieds de profondeur d'eau. Voilà qui donne aux Maritimes un avantage marqué sur le littoral est des États-Unis. Ce port pourrait être un port franc destiné à recevoir de grands navires jusqu'à concurrence de 600,000 tonnes. Pour que l'aménagement d'un port de cette ampleur soit avantageux, la coopération américaine est un impératif, vu que la majeure partie des marchandises manutentionnées serait destinée aux marchés des États-Unis. Un tel port doit être desservi par des trains rapides conteneurisés. Il procurera certains bénéfices accessoires. De nouvelles industries seront attirées dans la région.

> Nous recommandons instamment qu'un port en eaux profondes soit aménagé sur le littoral atlantique et que les travaux soient mis en marche dans un avenir très prochain.

Terre-Neuve

Le problème des transports de Terre-Neuve est probablement le pire de toute la région atlantique. Le traversier du Golfe est dans l'impossibilité de transporter certaines marchandises traitées partout ailleurs au Canada comme fret ferroviaire normal. De plus grands bateaux sont nécessaires pour remplir les présents engagements. La fréquence et la qualité du service doivent être améliorées pour que l'économie de la région puisse prendre de l'expansion. Les facteurs économiques et géographiques occasionnent des frais élevés à Terre-Neuve. Nous reconnaissons avec la Commission McPherson qu'une concurrence limitée, des subventions ou un traitement spécial sont les meilleurs moyens d'obtenir des transports à coût modéré. Cette façon d'aborder le problème serait inacceptable dans d'autres régions du Canada.

Les transports par eau et par air devraient être encouragés. Un meilleur réseau routier s'impose dans toute l'île; il faciliterait le transport de conteneurs arrivant par bateau, par train ou par avion.

Federal Government cooperation and assistance is needed if the island transportation is to improve toward a profitable level. Gulf shipping services already receive a subsidy. Subsidy payments for C.N. coastal services have been rising steadily and show no sign of leveling off. Subsidy payments were $3,707,654 in 1960 and $6,241,000 in 1966. There is no doubt that the system needs revising.

The weight of evidence points to the fact that the Gulf Ferry does not provide an effective continuous rail link between Newfoundland and the mainland. Privately owned steamship services experiences the same difficulties with port facilities. If an effective continuous link can be found between the mainland and Newfoundland many related problems would be solved, including such things as cargo losses and lost time.

There is also a lack of an interprovincial trucking industry. The Atlantic Provinces Transportation Study found that potential exists for such services. Efforts should be made to encourage such services.

There is a need for very heavy expenditure on roads to open up new areas. There is also a need for basic roads to improve communications and the transportation between centres of population and activity. The problem with Newfoundland is the dispersion of the population and the difficult terrain. A system of adequate road connections is hard to establish. Federal funds are needed if any major transportation system is to be set up.

The future of air cargo is uncertain. It is difficult to determine the economic trend of Newfoundland. As a result it is difficult to say whether westbound traffic will increase. In 1965, as noted by the Atlantic Provinces Transportation Study, eastbound cargo accounted for as much as 91 percent of the total load carried on these services. Shipments from Newfoundland consist of bulky and low value goods and are unsuited for air shipment. Unless the economy improves this trend will continue.

It is our opinion that with the complicated or diverse railway links and improved refrigeration service would not help Newfoundland. Fruit, vegetables and meat can be shipped by air and arrive in the market fresh. However, improved refrigeration services would be beneficial to other Maritime Provinces. The goods must be produced to make these services profitable.

La coopération et l'aide fédérales sont nécessaires pour faire monter les systèmes de transport à un niveau profitable. Les services maritimes du golfe sont déjà subventionnés. Les versements de subventions aux services côtiers du C.N. ont été constamment augmentés et rien n'indique qu'ils baisseront; ils étaient de $3,707,654 en 1960 et de $6,241,000 en 1966. Il n'y a pas de doute que le régime doit être revisé.

Les témoignages recueillis prouvent que le traversier du Golfe ne fournit pas un service ferroviaire continu et efficace entre Terre-Neuve et la terre ferme. Les services de navigation privés ont éprouvé les mêmes difficultés en ce qui concerne les aménagements portuaires. Si un service continu et efficace pouvait être établi entre le continent et Terre-Neuve bien des difficultés connexes seraient résolues, y compris des choses telles que les pertes de marchandises et de temps.

Il y a aussi un manque de services interprovinciaux de camionnage. Une enquête sur les transports dans les Provinces atlantiques a démontré que le potentiel existe pour de tels services. Des efforts devraient être faits pour en encourager l'établissement.

De très fortes dépenses sont nécessaires pour la construction de routes en vue d'ouvrir de nouvelles régions. Il est aussi besoin de routes de base pour améliorer les communications et les transports entre des centres de population et d'activité. Le problème de Terre-Neuve réside dans la dispersion de la population et la difficulté du terrain. Il est difficile d'établir un réseau routier adéquat. Tout système majeur de transport exigera des fonds de la part du gouvernement fédéral.

L'avenir du transport aérien est incertain. Il est difficile de déterminer la tendance économique de Terre-Neuve et, par conséquent, de dire si le trafic en direction ouest augmentera. En 1965, ainsi que le note l'Étude des transports dans les provinces atlantiques, le trafic-marchandises en direction est atteignait 91 p. 100 de la charge globale transportée par ces services. Les expéditions de Terre-Neuve consistent en marchandises volumineuses mais de valeur minime et ne conviennent pas au trafic aérien. Cette tendance se maintiendra à moins d'une amélioration de l'économie.

Nous sommes d'avis qu'étant donné la complexité ou diversité des communications ferroviaires, un service amélioré de réfrigération ne serait pas avantageux pour Terre-Neuve. Fruits, légumes et viandes peuvent être expédiés par avion et arriver frais sur le marché. Cependant, de meilleurs services de réfrigération seraient avantageux pour d'autres provinces maritimes, mais il faut que les denrées soient produites pour que ces services soient profitables.

Our recommendations are as follows:

1. Larger ferries should be provided.

2. Subsidies or special treatment should be given to Newfoundland.

3. The present system of subsidy payments should be revised.

4. Efforts should be made to provide a continuous transportation link between Newfoundland and the mainland.

Summary of Major Recommendations

Maritime Freight Rates Act

1. We recommend the establishment of a flexible rate structure.

2. We recommend the extension of the Maritime Freight Rates Act to all modes of transportation.

3. We recommend the extension of the subsidy under the Maritime Freight Rates Act be applied to shipments to the United States.

4. We recommend the extension of the Maritime Freight Rates Act to apply to west-to-east shipments within the 'select territory'.

Less-than-Carload Lost

We recommend the cancellation of the new LCL rate structure and a corresponding downward adjustment of rates.

Railways

1. We recommend the establishing of a Maritime Railway Rates Board to study and advise on the implementation of rate structures of railways until a regional development program is put into effect.

2. Improve efficiency and services of the railways by various suggestions

(i) to assist Maritime shippers,

(ii) to increase the number of shippers and customers using railway services,

(iii) to reduce costs and increase profit to the railways.

3. Investigate the feasibility of eliminating railway service in Newfoundland and replace it with a more viable mode of transportation.

Voici nos recommandations à cet égard:

1. Des traversiers plus grands sont nécessaires.

2. Des subventions ou un traitement spécial devraient être accordés à Terre-Neuve.

3. Il faudrait reviser le présent régime de versement de subventions.

4. Des efforts devraient être faits en vue de fournir un service continu de transport entre Terre-Neuve et la terre ferme.

Résumé des principales recommandations

Loi sur les taux de transport dans les Maritimes

1. Nous recommandons l'établissement d'une structure tarifaire souple.

2. Nous recommandons l'application de la Loi sur les taux de transport dans les Maritimes à tous les modes de transport.

3. Nous recommandons l'application de la subvention consentie sous le régime de la Loi sur les taux de transport dans les Maritimes aux expéditions destinées aux États-Unis.

4. Nous recommandons l'application de la Loi sur les taux de transport dans les Maritimes aux expéditions ouest-est faites dans les limites du «territoire choisi».

Chargements inférieurs à une wagonnée

Nous recommandons l'annulation du nouveau régime des taux pour les chargements inférieurs à une wagonnée et une baisse de ces taux.

Chemins de fer

1. Nous recommandons la création d'une commission des taux de chemins de fer des Maritimes, chargée de faire l'étude des régimes tarifaires des chemins de fer et de conseiller sur leur application jusqu'à ce que le programme de développement régional soit mis à exécution.

2. Amélioration du rendement et des services ferroviaires au moyen de diverses proportions tendant

i) à aider les expéditeurs des Maritimes,

ii) à accroître le nombre d'expéditeurs et de clients utilisant les services ferroviaires,

iii) à réduire les frais et à augmenter les profits des chemins de fer.

3. Étude de la possibilité d'éliminer le service ferroviaire de Terre-Neuve et de lui substituer un mode de transport plus viable.

Highways

1. In future shared-cost programs should be conducted on a more equitable basis; for example, on a per capita basis.

2. We recommend that the number of rural roads in the Atlantic Provinces be cut back.

3. We recommend that all main highways in this region be upgraded to an all-weather standard.

Trucking

1. Uniform weight restrictions should be adopted throughout the region.

2. Uniform licensing should be adopted for all truckers in the Atlantic Region.

3. The Atlantic Development Board or some other agency should oversee the coordination of the first two recommendations.

Corridor Road

We do not recommend the construction of a Corridor Road linking New Brunswick and Quebec through the state of Maine.

New Brunswick to Prince Edward Island Causeway

We strongly recommend that the construction of the Northumberland Strait Causeway proceed without further delay.

Ferry Services

1. *Short run:*—More space should be made available on the "M.V. Bluenose" for commercial vehicles in the summer months.

2. *Long run:*—A new ferry service should be instituted between Yarmouth, N.S. and Bar Harbour, Maine; this ferry should be designed to carry a larger number of commercial vehicles than the present "M.V. Bluenose"; this ferry should be designed to carry larger commercial vehicles than the present ferry; regular sailings should be scheduled which will enable Maritime producers to reach the New England markets in time for selling on Mondays and Fridays.

Air—A. Gander Freeport

We strongly recommand the establishment of a freeport at Gander, Newfound-

Routes

1. Les régimes de frais partagés devraient être appliqués plus équitablement à l'avenir, par exemple sur une base *per capita*.

2. Nous recommandons que soit réduit dans les provinces atlantiques le nombre de routes rurales.

3. Nous recommandons que la qualité de toutes les grandes routes de cette région soit portée à la norme toutes-saisons.

Camionnage

1. Des restrictions uniformes de poids devraient être adoptées pour toute la région.

2. Des permis uniformes devraient être délivrés à tous les camionneurs de la région atlantique.

3. La Commission de développement de la région atlantique, ou tout autre organisme, devrait veiller à la coordination des deux premières recommandations.

Route corridor

Nous ne recommandons pas l'aménagement d'une route corridor reliant le Nouveau-Brunswick et le Québec à travers l'État du Maine.

Chaussée reliant le Nouveau-Brunswick à l'Île du Prince-Édouard

Nous recommandons fortement que la construction de la chaussée du détroit de Northumberland soit mise en marche sans plus de délai.

Services de traversier

1. *Courts trajets:*—Il faudrait prévoir plus d'espace sur le *M. V. Bluenose* pour les véhicules commerciaux en été.

2. *Longs trajets:*—Un nouveau service de traversier devrait être établi entre Yarmouth (N.-É.) et Bar-Harbour (Maine); le traversier devrait être construit de façon à recevoir un plus grand nombre de véhicules commerciaux, ainsi que des véhicules de plus grandes dimensions que n'en peut accommoder l'actuel *M. V. Bluenose*, et des horaires de départs réguliers devraient être établis en vue de permettre aux producteurs des Maritimes d'atteindre les marchés de la Nouvelle-Angleterre à temps pour que les denrées puissent être vendues les lundis et vendredis.

Transport aérien

A. *Port franc à Gander*

Nous recommandons fortement la création d'un port franc à Gander (Terre-

land. Such a project would increase air traffic in and out of Gander and would be of major economic importance to Newfoundland.

B. Sussex International Airport

We do not recommend the establishment of an international airport at Sussex, New Brunswick.

Maritime Ports

1. Steps should be taken to encourage the use of Eastern ports for export of flour and grains on a larger basis.

2. A control board should be set up to plan and control the development of these ports.

A. Containership

We recommend that containership facilities be provided, but we feel that they should be limited to a few ports.

B. Deepwater Port

We stronly urge that a deepwater port be established in the Atlantic Region, with construction to begin in the very near future.

Newfoundland

1. Larger ferries should be provided.

2. Subsidies or special treatment should be given to Newfoundland.

3. The present system of subsidy payments should be revised.

4. Efforts should be made to provide a continuous transportation link between Newfoundland and the mainland.

We trust that the suggestions and recommendations brought out in this Brief will be of some value for you when considering the place of the Atlantic Region of Canada within the framework of Transportation and Regional Development policies.

All of which is respectfully submitted.

J. Paul Cassidy

William D. Foster

Earl Gardner

Terry C. Lloyd

Beverly L. MacDonald

Neuve). Une telle entreprise accroîtrait le trafic aérien dans les deux sens et aurait une grande importance économique pour Terre-Neuve.

B. *Aéroport international à Sussex*

Nous ne recommandons pas la création d'un aéroport international à Sussex (Nouveau-Brunswick).

Ports des Maritimes

1. Des mesures devraient être prises en vue d'encourager l'utilisation accrue des ports de l'Est pour l'exportation de la farine et des grains.

2. Une commission de contrôle devrait être créée en vue d'organiser et de réglementer le développement de ces ports.

A. *Conteneurisation*

Nous recommandons que des facilités de navires à conteneurs soient fournies, mais nous sommes d'avis qu'elles soient limitées à quelques ports.

B. *Ports en eau profonde*

Nous recommandons instamment qu'un port en eau profonde soit aménagé sur le littoral atlantique et que les travaux soient mis en marche dans un avenir très prochain.

Terre-Neuve

1. Des traversiers plus grands sont nécessaires.

2. Des subventions ou un traitement spécial devraient être accordés à Terre-Neuve.

3. Il faudrait reviser le présent régime de versements de subventions.

4. Des efforts devraient être faits en vue de fournir un service continu de transport entre Terre-Neuve et la terre ferme.

Nous espérons que les propositions et recommandations formulées dans le présent mémoire auront pour vous quelque utilité lorsque vous prendrez en considération la place que doit tenir la région atlantique du Canada dans le cadre des programmes de transport et de développement régional.

Le tout est respectueusement soumis.

APPENDIX

We feel that one point should be raised concerning transportation in the Atlantic Region. Although we agree that adequate transportation facilities are necessary in any economy, other things much more important should be considered first. We feel that what is really needed in the Atlantic Region is directly productive activity (D.P.A.) and not a variety of social overhead capital projects (S.O.C.).

For purposes of clarity we feel that an explanation of these terms are in order. They were first brought forward by A. O. Hirschman in his book—*The Strategy of Economic Development*. Social overhead capital (SOC) consists, in any economy, of the basic services which are necessary for the economy to function. Here we find such things as power services, water supplies, and transportation facilities. Directly productive activity (DPA) is concerned with the production of commodities, rather than just supplying services. In this category we get primary and secondary manufacturing, agriculture, and mining.

We only have to look to the case of Italy to see how much SOC can be wasted. When industry was finally attracted to Southern Italy it was found that much of the money poured into SOC projects throughout the region had been wasted. It also turned out that many more SOC projects had to be built to accommodate the industrial growth of the region.

We feel that much the same thing could happen here in the Atlantic Region if the Government is not careful. It appears to us that the Government is obsessed with various SOC projects such as the building of roads, bridges, and such, and that they do not really step back and consider the value of such projects.

We would strongly recommend that the Government step back and take a hard look at the economy of the Atlantic Region. The Government should try to project just what industrial expansion will occur in this region in the next twenty years and just where this industrial expansion will take place. Then the Government can be more certain that its money put into SOC projects will do some good.

We do not feel that this Committee can limit transportation to transportation itself but must look beyond this and consider economic growth. All the SOC projects in the world will not bring industry into an area.

APPENDICE

Nous sommes d'avis qu'une question doit être soulevée au sujet des transports dans la région atlantique. Bien que nous reconnaissions que des moyens adéquats de transport soient nécessaires dans toute économie, l'étude d'autres choses plus importantes doit passer au premier plan. Nous croyons que ce dont la région atlantique a vraiment besoin, c'est d'une activité directement productive et non une diversité de services économiques fondamentaux.

Il convient ici d'expliquer ces termes. Ils ont été employés pour la première fois dans l'ouvrage de A. O. Hirschman, *The Strategy of Economic Development*. Les services économiques fondamentaux sont ceux qui sont indispensables au bon fonctionnement de toute économie. En font partie les services de distribution d'énergie, d'approvisionnement en eau et de transport. L'activité directement productive a trait à la production de denrées plutôt qu'à la fourniture de services. Font partie de cette catégorie la fabrication primaire et secondaire, l'agriculture et l'exploitation minière.

Nous n'avons qu'à examiner le cas de l'Italie pour voir combien les services économiques fondamentaux peuvent être gaspillés. Quand l'industrie fut enfin attirée dans l'Italie méridionale, on constata qu'une bonne part des fonds placés dans des entreprises de services réparties sur toute la région avaient été gaspillés. Il arrive aussi que bien d'autres entreprises de cette catégorie devaient être réalisées pour se plier à l'expansion industrielle de la région.

Nous sommes d'avis que la même chose pourrait se produire dans notre région atlantique si le gouvernement manquait de prudence. Il nous semble que le gouvernement est obsédé par divers projets de services tels que la construction de routes, de ponts et autres semblables entreprises, et qu'il ne s'arrête pas à considérer la valeur de tels projets.

Nous recommandons instamment au gouvernement de prendre l'économie de la région atlantique en sérieuse considération. Il devrait s'efforcer d'envisager la tournure que prendra au juste l'expansion industrielle dans cette région au cours des vingt prochaines années et de savoir au juste où cette expansion se produira. Il aura alors plus de certitude que les fonds qu'il affectera aux services seront avantageusement utilisés.

Nous ne croyons pas que le Comité puisse se limiter aux transports eux-mêmes; mais il doit voir plus loin et tenir compte de l'expansion économique. Tous les projets de services au monde n'attireront pas l'industrie dans

Also when industry does come in the necessary SOC facilities will establish themselves around these projects and many SOC projects built in anticipation of industry will have been wasted.

Once you enter an SOC project you are committed to finish it. When a road or a bridge is started you are committed to finish the project at some point in time, even if it proves unfeasible. Once an SOC project is started the only way to get *ANY* value out of it is to finish it. There is no half-way.

When SOC projects are put up in anticipation of industry there is no way one can measure just what is needed and where it is needed. The best time to go into SOC is when you have some knowledge of what the benefits will be and not with just the hope that benefits will accrue.

We also feel that many of the SOC projects undertaken today are done so because of political and not economic reasons. They are used as vote getters just before election. The people behind these projects should have more than votes in mind; they should have the economic well-being and development of a region in mind.

We do not want it to seem as if we consider transportation facilities unimportant, because they are very essential to an area, just as are any other SOC projects. Without some sort of transportation facilities available there is little hope of growing economically. What we are saying though is that a serious look should be given to the future economic development of the region and have one major SOC project built around these areas where it will do them most good. This will bring the most benefit out of the Canadian taxpayers dollar as well as avoiding unnecessary waste.

cette région. En outre, lorsque l'industrie viendra, les services indispensables s'établiront d'eux-mêmes autour de ces projets et plusieurs d'entre eux, réalisés dans l'espoir de la venue de l'industrie, seront tombés en désuétude.

Une fois commencée la réalisation d'un projet de services, vous êtes tenu de l'achever. Lorsque la construction d'une route ou d'un pont est mise en marche, vous êtes tenu de terminer l'entreprise à un moment donné, même si elle se révèle irréalisable. Lorsqu'un tel projet est commencé, la seule façon d'en tirer *QUELQUES* avantage est de le terminer. Il n'y a pas de milieu.

Quand des projets de services sont réalisés dans l'espoir de voir l'industrie s'installer, il n'y a aucun moyen de prévoir ce qui est nécessaire et où la nécessité se fait sentir. La meilleure occasion de se lancer dans ce genre de projets, c'est lorsqu'on a quelque idée de ce que seront les profits, et non simplement l'espoir d'en retirer.

Nous sommes en outre d'avis que nombre de ces projets sont entrepris aujourd'hui pour des raisons d'ordre politique et non économique. Ils servent d'appâts juste avant une élection. Ceux qui en sont les promoteurs devraient songer à d'autres choses qu'à des votes; ils devraient avoir à l'esprit le bien-être et l'expansion économique d'une région.

Nous ne voulons pas donner à entendre par là que les moyens de transport sont sans importance, car ils sont indispensables à une région, tout comme le sont tous les autres projets de services. Sans l'existence de quelque moyen de transport, il y a peu d'espoir d'expansion économique. Nous affirmons toutefois qu'il faudrait prendre en sérieuse considération le développement futur de la région et doter celle-ci de services importants où ils présenteront le plus d'avantages. C'est ainsi que les fonds versés par les contribuables canadiens produiront le plus de fruit et que nous éviterons des dépenses inutiles.

APPENDIX "G"

BRIEF ON TRANSPORTATION
BY
MONCTION AND DISTRICT LABOUR COUNCIL

INTRODUCTION

The Moncton and District Labour Council is very pleased to have this opportunity of presenting to your Parliamentary Committee on Transportation, meeting in Moncton, N.B. their views and possible suggestions in relation to problems of TRANSPORTATION in the Maritimes.

Some might ask, why is Labour presenting a brief on such a complicated subject "TRANSPORTATION".

It is because we realize that TRANSPORTATION can either make or break the Atlantic Provinces.

Labour's basic purpose is to achieve a better life for its members.

If Labour fails in this purpose it has failed utterly

This is true to-day as at the time of Confederation.

Labour is keenly aware that it cannot make progress at the expense of the community, even if the rest of the community is standing still. What is good for labour is good for the community and Canada as a whole.

At this time it might be quite appropriate to quote—Sir Walter Scott.

The race of mankind would perish, did they cease to aid each other. From the time that the mother binds the child's head till the moment that some kind assistant wipes the death-damp from the brow of the dying, we cannot exist without mutual help. All, therefore, that need aid have a right to ask it from their fellow-mortals; no one who holds the power of granting can refuse it without guilt.

Where we have just finished celebrating our Centennial it might be a good time to take into consideration what we in the Atlantic Provinces were offered at Confederation, and how successful we were in obtaining it.

Canada and the Atlantic Provinces consist of people so lets take a look at them before Confederation and the present time.

APPENDICE «G»

Mémoire sur les transports
rédigé par le
Conseil du travail de
Moncton et du district

INTRODUCTION

Le Conseil du travail de Moncton et du district est heureux de cette occasion de faire connaître à votre Comité parlementaire des transports, qui s'est réuni à Moncton (N.-B.), ses vues et ses suggestions possibles en ce qui concerne les problèmes des *TRANSPORTS* dans les Maritimes.

D'aucuns se demanderont pourquoi le Travail présente un mémoire sur un sujet aussi compliqué que les *TRANSPORTS*.

C'est parce que nous avons la conviction que les *TRANSPORTS* peuvent assurer ou compromettre l'avenir des provinces atlantiques.

Le but essentiel du Travail est d'assurer à ses membres une vie meilleure.

Si le Travail échoue sur ce plan, il aura complètement failli.

Ceci est aussi vrai aujourd'hui que ce l'était à l'époque de la Confédération.

Le Travail se rend parfaitement compte qu'il ne peut réaliser de progrès aux dépens de la collectivité, même si le reste de la collectivité se fige dans l'immobilisme. Ce qui est bon pour le Travail est bon également pour la collectivité et pour le Canada dans son ensemble.

Peut-être ne serait-il pas déplacé ici de citer . . . Sir Walter Scott.

La race humaine périrait si les hommes cessaient de s'entraider. Depuis l'instant où la mère bande la tête du nouveau-né jusqu'à celui où une main pieuse essuie la sueur d'agonie au front du mourant, nous ne pouvons exister sans aide mutuelle. C'est pourquoi tous ceux qui ont besoin d'aide ont le droit de la demander à leurs frères mortels. Il n'est personne qui, détenant le pouvoir d'accorder, peut refuser sans commettre une faute.

Alors que nous venons tout juste de célébrer notre centenaire, le moment est peut-être indiqué pour considérer ce qui nous a été offert lors de la Confédération, à nous des provinces atlantiques, et jusqu'à quel point nous avons réussi à l'obtenir.

Le Canada et les provinces de l'Atlantique sont composées d'êtres humains; jetons leur donc un coup d'œil, avant la Confédération et à l'époque actuelle.

Men desire to be equal in all respects, but they also desire to be free.

Man's desire to be equal and their desire to be free must be kept in balance. Either carried to the extreme negate the other.

At the time of Confederation 1867 we had:

3.5 Million people in Canada—¾ lived in Ontario and Quebec. Montreal's population 100,000

285,000 people in New Brunswick

While at the time of our Centennial 1967 we had:

20,334,000 people in Canada
619,000 people in New Brunswick

The average increase in Canada was 1.8% per year.

This growth figure is not applicable to individual provinces or areas within provinces.

We must think of our population as in motion.

Flowing from long settled areas to new sections.

It appears, the development of the natural resources of Canada was responsible for the ebb and flow of our population.

As fishing, farming, lumbering and mining on the Atlantic Coast becomes more mechanized, the workers will leave for Central Canada or the United States. Where much of the industry is concentrated.

A good example of this was in Prince Edward Island in 1901 the population was 103,000 and by 1931 is decreased to 88,000.

We have a consistent direction of movement away from all the older Maritime Provinces. We lost by migration during the years:

1931-41, 5,000 persons; 1941-51, 93,000 persons; 1951-56, 40,000 persons; 1956-61, 50,000 persons; 1961-66, 104,00 persons.

If this rate keeps up we will loose about 207,000 in the period 1961-71, which is equivalent to over 10 percent of the population at the midpoint in the decade and which is more than twice the level of the 1951-61 decade.

At the time of Confederation the portion of the population that was urban was very small

Les hommes désirent être égaux à tous les égards, mais ils désirent également être libres.

Le désir d'égalité et le désir de liberté qui existent au cœur de tout homme doivent être maintenus en équilibre. Chacun d'eux, poussé à l'extrême, devient la négation de l'autre.

A l'époque de la Confédération, en 1867, nous avions:

3.5 millions d'habitants au Canada—3/4 vivant en Ontario et au Québec. Population de Montréal: 100,000

285,000 personnes au Nouveau-Brunswick.

Par contre, lors de notre centenaire, en 1967, nous avions:

20,334,000 habitants au Canada
619,000 habitants au Nouveau-Brunswick

L'accroissement démographique moyen au Canada a donc été de 1.8% par an.

Ce chiffre d'expansion n'est pas applicable aux provinces prises séparément, ni à des régions à l'intérieur de ces provinces.

Nous devons penser à notre population comme à un tout en mouvement.

Allant de régions peuplées de longue date vers des sections nouvelles.

Il apparaît que la mise en valeur des ressources naturelles au Canada a joué un rôle important dans le flux et le reflux de notre population.

A mesure que les activités de la pêche, de l'agriculture, de l'exploitation forestière et de l'exploitation minière sur la côte atlantique se mécanisent, les travailleurs émigreront vers le Canada central, ou vers les États-Unis, où se trouve concentrée une grande partie de l'industrie.

Un bon exemple de cet état de choses est l'Île du Prince-Édouard, qui comptait une population de 103,000 âmes en 1901 et qui n'en avait plus que 88,000 en 1931.

Il y a un mouvement constant d'éloignement à partir des provinces Maritimes, les plus anciennes. Nous avons perdu par migration au cours des années suivantes:

1931-1941, 5,000 personnes; 1941-1951, 93,000 personnes; 1951-1956, 40,000 personnes; 1956-1961, 50,000 personnes, 1961-1966, 104,000 personnes.

Si ce rythme se maintient, nous perdrons environ 27,000 habitants au cours de la période de 1961-1971, ce qui équivaut à plus de 10 p. 100 de la population au milieu de la décennie et à plus du double du niveau de migration de la décennie 1951-1961.

A l'époque de la Confédération, la portion urbaine de la population était très faible, de

in the vicinity of 20%, in 1956 it was 58%. If this pace continues until 1980 some ⅔ of the population will be urban. Spreading out over suburban fringes, with better and better health, deaths down to the point where nearly everyone lives to an age of seventy and families determined at between two and four children each.

We will have mass produced housing areas outside of the cities with a population of very young. With no experience of home ownership. They will have used all of their savings in buying the house and its furnishings. A kind of day to day existence.

Rapid urbanization confronts community and family life with serious difficulties.

We have traced the rapid transformation of Canadian society from the simpler form on the frontier, where interdependence compelled neighbours to co-operate for survival through direct intimate contacts, into the highly industrialized life of the modern city, where interdependence, not lessened, but heightened, takes forms that are much more specialized, standarized, bureaucratized and therefore depersonalized. Personal interests have come to rest increasingly upon broadly based, pyramidal power structures notably business, labour and state—by reason of their immense size, complexity and formalization have grown more unweildly and rigid, less sensitive to moral pressure for reform and more imbued with the ideology of their own progress. In this situation, the views and interests of "ordinary" men seem to count for little. There is a tendency towards unquestioning conformity to the behaviour pattern approved by the master group, and persons have less opportunity to exercise free and reasonable choice of importance.

The process by which the ancient empires were finally dissolved has been variously described as one of urbanization.

Pope John and others in our society who preach for the common good claim, an individual voice is a voice crying in the wilderness.

The ability of the private citizen to cope with broad economic problems has shrunk and his dependence upon the state to provide for the common good has increased enormously.

l'ordre de 20 p. 100, tandis qu'en 1956 elle était de 59 p. 100. Si ce rythme se maintient jusqu'en 1980, près des deux tiers de la population vivront dans des zones urbaines. S'étendant à l'extérieur des zones marginales suburbaines, avec des conditions sanitaires toujours meilleures un taux de mortalité réduit au point où presque tout le monde a des chances d'atteindre l'âge de soixante-dix ans, et avec des familles comptant de deux à quatre enfants chacune.

Nous aurons à l'extérieur des villes des zones domiciliaires produites par des moyens de production de masse, avec une population extêmement jeune, ne disposait d'aucune expérience en matière de propriété foncière, et qui aura utilisé la totalité de ses économies pour acheter la maison et les meubles. Une espèce d'existence au jour le jour.

L'urbanisation rapide pose à la collectivité et à la vie familiale de sérieuses difficultés.

Nous avons tracé la transformation rapide de la société canadienne depuis sa forme la plus simple, sur la frontière, où l'interdépendance contraignait les voisins à coopérer pour leur survie par des contacts intimes et directs, jusqu'à la vie hautement industrialisée des villes modernes, où l'interdépendance non pas amoindrie, mais située sur un niveau beaucoup plus élevé, prend des formes bien plus spécialisées, uniformisées, bureaucratisées, et, par conséquent, dépersonnalisées. Les intérêts personnels en sont venus à reposer de plus en plus sur des structures de pouvoir pyramidales à large base, notamment l'industrie, la main-d'œuvre de l'État—du fait de leurs dimensions immenses, de leur complexité et de leur formalisation sont devenus de plus en plus rigides et immuables, moins sensibles aux pressions morales pour une réforme, et plus imbues de l'idéologie de leur propre progrès. Dans cette situation, les opinions et les intérêts de l'«homme ordinaire» paraissent plus compter beaucoup. Il y a une tendance à à la conformité de plus en plus indiscutée avec le schéma de comportement approuvé par le groupe dominant, et les individus ont moins de possibilité de faire des choix libres et raisonnables dans les domaines importants.

Le processus qui a abouti à la dissolution finale des empires du passé a souvent été décrit comme un processus d'urbanisation.

Le Pape Jean XXIII et d'autres dans notre société qui prêchent en faveur du bien public affirment qu'une voix individuelle est une voix qui crie dans le désert.

La possibilité qu'a le citoyen privé de se mesurer avec de vastes problèmes économiques s'est amenuisée, tandis que s'accroissait énormément sa dépendance à l'égard de l'État pour tout ce qui concerne le bien public.

The power to attain the common good develops ultimately upon society as a whole, and is effected through the instrumentality of the state.

There are great forces, over which the individual has no control.

Man can improve his economic status by becoming individually efficient. But—this is alone not the solution to our Social Problems. It must be done by group action.

Among the factors promoting Maritime Unanimity of outlook are the economically shaped conditions of life. Compared to other Canadians, those in the Maritime are most likely to be engaged in primary industry, they have the highest unemployment rate a below average annual growth rate, and they are least likely to be urbanized.

96% were native born in 1961, compared to 84% for the whole of Canada.

NEW BRUNSWICK

The province still depends upon the primary products of the forests, soil and sea.

Timber and its by-products are still the greatest mainstay, the gradual conversion from long lumber to pulp and paper being the greatest transition in the province's history.

We now have pulp mills at Edmundston, Campbellton, Dalhousie, Bathurst, Newcastle, St. George and two in Saint John.

We have two areas of concentration of the fishing industry, Bay of Fundy and North East Shore.

We have mixed farming in New Brunswick, the seed potato in Carleton and Victoria are quite important.

The mineral deposits in North Eastern New Brunswick are now being developed.

In 1769 Prince Edward Island made a separate province.

In 1784 Nova Scotia and New Brunswick was divided into separate provinces.

The Constitutional Act of 1791 created the provinces of Upper and Lower Canada and gave them a constitution.

Le pouvoir de parvenir au bien public se répercute finalement sur la société dans son ensemble, et s'effectue par l'instrumentalité de l'État.

Il existe des grandes forces, sur lesquelles l'individu n'a aucune maîtrise.

L'homme peut améliorer sa position économique en devenant personnellement efficace. Mais ce sont là des cas individuels, qui n'apportent pas de solution à nos problèmes sociaux. Celle-ci ne peut se faire que par une action de groupe.

Parmi les facteurs qui parlent en faveur de l'unanimité de perspectives des provinces Maritimes, il y a les conditions de vie moulées par les conditions économiques. Comparés aux autres Canadiens, ceux des Maritimes travaillent plus probablement dans l'industrie primaire, connaissent le taux de chômage le plus élevé, ont un taux annuel d'expansion économique inférieur à la moyenne, et ont le moins de probabilité de s'urbaniser.

En 1961, 96 p. 100 d'entre eux étaient autochtones, contre 84 p. 100 pour l'ensemble du Canada.

NOUVEAU-BRUNSWICK

Cette province dépend toujours des produits primaires de ses forêts, de son sol, et de la mer.

Le bois et ses sous-produits sont toujours la grande ressource, la conversion annuelle de la production de billes à celle de pâte à papier et de papier étant la plus grande transition qu'ait connue l'histoire de la province.

Nous avons maintenant des fabriques de pâte à papier à Edmundston, Campbellton, Dalhousie, Bathurst, Newcastle, St. George et deux à Saint-Jean.

Nous avons deux zones de concentration pour l'industrie de la pêche, la baie de Fundy et le littoral nord-est.

Nous avons une exploitation agricole mixte au Nouveau-Brunswick; la culture de la pomme de terre à Carleton et Victoria sont assez importantes.

Les gisements minéraux du nord-est de la province sont maintenant en cours d'exploitation.

En 1769, l'Île du Prince-Édouard s'est constituée en province indépendante.

En 1784, la Nouvelle-Écosse et le Nouveau-Brunswick ont été divisées en deux provinces séparées.

La Loi constitutionnelle de 1791 a créé les provinces du Haut-Canada et du Bas-Canada, et leur a donné une constitution.

Upper and Lower Canada were united in 1841 to form the province of Canada.

The union to Upper and Lower Canada in 1841 made it possible—the improvement of transportation on the St. Lawrence.

Le Haut-Canada et le Bas-Canada furent réunis en 1841, pour former la province du Canada.

L'union du Haut-Canada et du Bas-Canada en 1841 a rendu possible l'amélioration des transports sur le Saint-Laurent.

TARIFF AND FREE TRADE

In 1848 Responsible government came to New Brunswick.

In 1849 Great Britain broke up the old Imperial system of protective tariff duties. This was especially in relation to timber. Some became so excited over this that they were advocating annexation to the United States.

The markets in Great Britain were held and new markets were opened up especially in the United States. They found that they could trade in the world markets.

Out of the search for new markets came the Reciprocity Treaty in 1854 with the United States. This was concluded by the British Government on behalf of all the North American Colonies.

New Brunswick's fish, wood and farm products entered the United States free of charge, and as a consequence the prosperity of the colony was greatly extended.

The Americans were permitted the use of the St. Lawrence River and the Canadian Canals.

It appeared that due to disagreement with Britain in relation to the American Civil War.

BARRIÈRES DOUANIÈRE ET LIBRE-ÉCHANGE

En 1848, un gouvernement responsable s'installa au Nouveau-Brunswick.

En 1849, la Grande-Bretagne brisa le système impérial des barrières douanières protectrices. Cela s'appliquait particulièrement au bois. D'aucuns s'en émurent tellement qu'ils prêchèrent l'annexion aux États-Unis.

On conserva les marchés de Grande-Bretagne, tandis que d'autres étaient ouverts, notamment aux États-Unis. On constata qu'il était possible de commercer sur les marchés mondiaux.

La recherche de nouveaux marchés aboutit en 1854 au Traité de réciprocité, signé avec les États-Unis. Ce Traité avait été conclu par le gouvernement britannique au nom de toutes les colonies d'Amérique du Nord.

Le poisson, le bois et les produits agricoles du Nouveau-Brunswick pouvaient entrer aux États-Unis en franchise de droits, ce qui eut pour conséquence d'augmenter grandement la prospérité de la colonie.

Les Américains se voyaient permettre l'utilisation du Saint-Laurent et des canaux canadiens.

Il apparut qu'en 1865, par suite d'un désaccord avec la Grande-Bretagne au sujet de la

In 1865 the American Congress decided that the Reciprocity Treaty of 1854 must come to an end.

The railways were inextricably linked with fiscal policy which turn was linked with industrialism. This was proved as far back in 1858 during the time Alexander Galt, the Minister of Finance of the Conservative Party, when he increased the tariff.

The tariff imposed by the Canadian government by Leonard Tilley, Minister of Finance in the Conservative Party when he increased the tariff in 1878.

The Canadian Trade Policy has traditionally been characterized by high tariff against imports of foreign goods. It was started after the election of 1878 and has been continued by successive governments.

This does not solve our problem. It causes us to misuse our resources on the production of goods, that could be purchased cheaper from abroad.

It provokes high tariff retaliation by the other countries.

Those countries are not able to obtain Canadian dollars to buy our exports.

We must have freer trade.

We almost had a tariff war between Canada and the United States in 1910 due to the tariff agreement between France and Canada. In the winter of 1910 the governments of Canada and the United States decided on a broad trade agreement. An agreement was reached on January 26, 1911, it provided for reciprocal trade in; grain, fish, fruits, vegetables, farm animals, and for lowered duties on food products, such as canned meats, canned goods, flour, biscuits, pickles, as well as agricultural implements, engines and a variety of other articles. The agreement, at the request of the Canadians was not to be embedded in a treaty, it was to be carried out by concurrent legislation in the two countries. Due to the fumbling and bungling of Prime Minister Laurier it was never passed by the Federal Government. (This helped to lead to Laurier's defeat, 21 September 1911)

The opposition to this treaty were given an opportunity to get organized, marshall its arguments and devise its emotional appeals.

guerre de Sécession, le Congrès américain décida qu'il fallait mettre fin au Traité de réciprocité de 1854.

Les chemins de fer étaient inextricablement liés à la politique fiscale, laquelle à son tour était liée à l'industrialisme. On peut en trouver les preuves à une époque aussi reculée que 1858, lorsque Alexander Galt, ministre des Finances du parti conservateur, releva les barrières douanières.

Le tarif douanier fut imposé par Léonard Tilley, ministre des Finances de l'Administration conservatrice, lorsqu'il releva les droits douaniers en 1878.

La politique commerciale canadienne a de tous temps été caractérisée par les barrières douanières élevées contre les importations de marchandises étrangères. Elle a débuté après les élections de 1878, et elle a été poursuivie par tous les gouvernements successifs.

Cela ne résout pas notre problème. Cela nous pousse à faire une mauvaise utilisation de nos ressources pour la production de certains produits que nous pourrions acheter moins cher à l'étranger.

Cela suscite, à titre de représailles, des barrières douanières élevées à notre égard dans les autres pays.

Ces pays ne sont pas en mesure de se procurer des dollars canadiens pour acheter nos exportations.

Nous devons avoir des échanges commerciaux plus libres.

En 1910, il y a presque eu une guerre douanière entre le Canada et les États-Unis par suite de l'accord douanier conclu entre la France et le Canada. Au cours de l'hiver 1910, les gouvernements du Canada et des États-Unis décidèrent de conclure un vaste accord commercial. Les pourparlers aboutirent le 26 janvier 1911, l'accord signé prévoyant des échanges commerciaux réciproques pour: les céréales, le poisson, les fruits, les légumes, les animaux de ferme; et il prévoyait également une diminution des droits douaniers sur les produits alimentaires tels que la viande en boîte, les conserves, la farine, les biscuits, les condiments ainsi que les engins agricoles, les moteurs et toute une gamme d'autres articles. A la demande des Canadiens, ces accords ne devaient pas être incorporés à un traité, mais faire l'objet d'une législation correspondante dans les deux pays. Par suite des hésitations et tergiversations du premier ministre Laurier, il ne fut jamais ratifié par le gouvernement fédéral. (Ce qui contribua à la défaite de Laurier, le 21 septembre 1911).

Les opposants à ce traité avaient eu l'occasion de s'organiser, d'ordonner leur argumentation, et de mettre au point leurs appels à l'émotivité.

This opposition came from manufacturers, bankers, railways, millers, meat packers, fruit growers, with all the power and influence that they could muster.

The Canadian Manufacturers Association did their utmost to rouse a protest against it.

It amounted to Laurier's Government continuing the economic nationalism of his predecessors.

The East-West Transport system was protected by Tariffs against the United States and concentrated on the export of staples to Great Britain.

Here again is the same old story—let's encourage capital at the public expense—let the people fend for themselves.

PRIOR TO CONFEDERATION

By 1850 the Maritime provinces had risen to fourth place in registered tonnage of shipping in the entire world.

The shipping of the Maritime Provinces had become a power in the commercial world.

All the timber New Brunswick could produce was readily sold. In 1860—$\frac{1}{5}$ of British Imports came from the province.

Markets constituted no problems.

The British North American provinces of:

Newfoundland, Prince Edward Island, Upper Canada, New Brunswick, Nova Scotia, Lower Canada.

Were not independent states but integral parts of the Empire.

They could not delegate their sovereign authority to a central government because they did not possess the sovereign authority to delegate.

The provinces of Canada proved their ability to maintain a political existence separate from the United States.

Canadian national life can almost be said to take it rise in the negative will to resist absorption in the American Republic.

They had wrestled from Britain the grant of a wide autonomy, which could be developed into complete self-government.

Cette opposition provenait des manufactures, des banques, des chemins de fer, des meuneries, des conserveries, des fruticulteurs, qui déployèrent toute la puissance et l'influence dont ils disposaient.

L'Association des manufactures canadiennes fit tout ce qui était en son pouvoir pour soulever une vague de protestation contre le projet.

Le résultat fut que le gouvernement Laurier poursuivit la politique de nationalisme économique de ses prédécesseurs.

Le système des transports d'est en ouest fut protégé contre les États-Unis dans des barrières douanières et se concentra sur l'exportation de marchandises de base vers la Grande-Bretagne.

Ici encore, nous retrouvons la même vieille histoire: favorisons le capital aux dépens du public—et que les gens se débrouillent comme ils peuvent.

AVANT LA CONFÉDÉRATION

En 1850, les provinces Maritimes s'étaient élevées à la quatrième place mondiale pour le tonnage maritime.

La flotte commerciale des provinces Maritimes était devenue une puissance dans le monde commercial.

Tout le bois que pouvait produire le Nouveau-Brunswick était vendu sans difficulté. En 1860, un cinquième des importations britanniques provenait de cette province.

La recherche des marchés ne posait pas de problème.

Les provinces britanniques d'Amérique du Nord suivantes; soit

Terre-Neuve, Île du Prince-Édouard, Haut-Canada, Nouveau-Brunswick, Nouvelle-Écosse, Bas-Canada.

n'étaient pas des états indépendants, mais des parties intégrantes de l'Empire.

Elles ne pouvaient déléguer leur autorité souveraine à un gouvernement central, parce qu'elles n'avaient pas d'autorité souveraine à déléguer.

Les provinces du Canada firent la preuve de leur aptitude à maintenir une existence politique séparée des États-Unis.

On pourrait presque dire que la vie nationale canadienne a pris naissance dans la volonté négative de résister à l'absorption par la république américaine.

Les Canadiens avaient obtenu de haute lutte, de la Grande-Bretagne, la reconnaissance d'une vaste autonomie, qui pouvoit être parachevée par une complète indépendance politique.

Canada at time of Confederation was an autonomous power in friendly relations with Great Britain.

The era prior to Confederation was known as the *Golden Age of New Brunswick.*

A balance was struck between lumbering, fishing and shipping.

The United States offered a growing market for Canada's products.

No vested interest of a commercial kind stood behind Maritime Union. Tilley and the intensely business-like members of the New Brunswick delegation were interested in political union primarily for the economic benefits it could bring.

There was painted at Charlottetown the picture of a market comparable to the United States, bound together by a federal union and extending from sea to sea, to which New Brunswick could be joined by the Intercolonial promised by the Canadians, and they claimed Maritime Union could offer nothing solid and tangible.

REASON FOR CONFEDERATION

The Canadian Government urged on by Alexander Galt, Minister of Finance in the Canadian Government that was founded in 1841, asked the Colonial Office of Great Britain for a conference on union without asking the other colonies, first.

There was fear from the colonies that there would be a union imposed upon them and dominated by the Canadian province.

Galt was merely attempting to create a new balance of power with Canadian Union by adding the lower provinces, to enlarge the area within, which the manufacturing industry of Canada would enjoy monopolistic privileges.

The Colonial Office was very anxious to be rid of the trouble of administering separate and quarrelsome men who wanted more security for Canadian investment, objected to any further delay in Union.

Business interests were a main element in bringing about Confederation.

The Act of Union of 1840 of Upper and Lower Canada into the province of Canada were each given equal representation in the provincial assembly, irrespective of population and the equality had tended to preserve their separateness and to prevent unity and stability in their government.

A l'époque de la Confédération, le Canada était une puissance autonome entretenant des rapports amicaux avec la Grande-Bretagne.

L'époque antérieure à la Confédération était connue sous le nom de l'*Âge d'or du Nouveau-Brunswick.*

Un équilibre avait été réalisé entre l'industrie forestière, la pêche et la navigation.

Les États-Unis offraient aux produits canadiens un marché en expansion.

Il n'y avait derrière l'union maritime aucun intérêt établi de type commercial. Tilley et les membres de la délégation du Nouveau-Brunswick, à orientation intensément commerciale, étaient partisans de l'union politique essentiellement pour les avantages économiques qui pourraient en découler. On a dépeint à Charlottetown l'image d'un marché comparable aux États-Unis, cimenté par une union fédérale, et s'étendant d'un océan à l'autre, auquel le Nouveau-Brunswick pourrait être réuni par l'Intercolonial promis par les Canadiens, et l'on affirmait que l'union maritime ne pourrait offrir rien de solide ni de tangible.

LES RAISONS DE LA CONFÉDÉRATION

Le gouvernement canadien, sur les instances d'Alexandre Galt, ministre des Finances du gouvernement canadien fondé en 1841, demanda au ministère des colonies de Grande-Bretagne d'instituer une conférence sur l'union sans prendre l'avis des autres colonies, pour commencer.

Les colonies craignaient la constitution d'une union qui leur serait imposée, et qui serait dominée par la présence canadienne.

Galt se bornait tout simplement à essayer de créer un nouvel équilibre de pouvoir avec l'union canadienne, en ajoutant les provinces inférieures, afin d'élargir la zone à l'intérieur de laquelle l'industrie manufacturière du Canada bénéficierait de privilèges de monopole.

Le ministère britannique des colonies était très désireux de se débarrasser des difficultés suscitées par l'administration de gens séparés et querelleurs qui souhaitaient plus de sécurité pour les investissements canadiens, et s'opposa par conséquent à tout nouveau retard pour l'Union.

Les intérêts commerciaux furent un des principaux éléments ayant contribué à la naissance de la Confédération.

La loi d'Union de 1840, qui réunissait le Haut-Canada et le Bas-Canada en la province du Canada, chacun d'entre eux se voyant accorder une représentation égale au sein de l'Assemblée provinciale, sans considération de population, avait contribué à maintenir leur caractère séparé et à empêcher toute unité et stabilité dans leur gouvernement.

Politically the province was a dualism in an uneasy state of balance. They had found that it was impossible for them to live economically apart, it was almost equally difficult for them to live politically together. Their union had never been organic.

The presence of Quebec in the Canadian Confederation represents a negative decision designed to counter the growth of liberal ideas. The ecclesiastics of Quebec, the dominant leaders of the French population after the British Conquest in 1763, did not seize the opportunity of the American Revolution to regain freedom from foreign rule, rather they feared the revolutionary Puritans of New England more than the Anglican Royalists. And after the French Revolution of 1789 resulted in the widespread dispersion of anticlerical and democratic doctrines in their mother country, the French Canadian church leadership sought to cut their people off from the twin sources of intellectual contamination, the United States and France. Participation in a union with English Canadian under a British monarchy was far more preferable.

The leaders of both English and French Canada found themselves in an independent large federal union after 1867, not because they wanted nationhood, but because they did not desire links with revolutionary countries, and Great Britain refused to continue various responsibilities for her autonomous North American Provinces.

The position of the Maritimes rather than their size or population that gave them their importance. They provided the Province of Canada with access to ice free Atlantic ports if they constructed the Intercolonial Railway, as an outlet for their goods and a route for troops in time of war.

American annexation was the inevitable alternative to confederation.

The new scheme at last offered the means of reconciling racial diversity and national unity.

CONFEDERATION

At the time of Confederation Montreal was closed about ½ year due to ice conditions (no ice breakers) and they needed a year round outlet to the seaboard. (This is why they were so anxious to build the Intercoloni-

Politiquement, cette province constituait un dualisme en état d'équilibre instable. On avait constaté qu'il leur était impossible de vivre économiquement séparés, mais il leur était également difficile de vivre politiquement réunis. Leur union n'avait jamais été organique.

La présence du Québec au sein de la Confédération canadienne représente une décision négative conçue pour porter un coup d'arrêt à l'expansion des idées libérales. Les ecclésiastiques du Québec, qui constituaient l'élément dirigeant de la population française après la conquête britannique en 1763, ne profitèrent pas de l'occation qu'offrait la guerre d'indépendance américaine pour se débarrasser d'un joug étranger, car ils craignaient davantage les puritains révolutionnaires de la Nouvelle-Angleterre que les royalistes anglicans. Et après que la révolution française de 1789 eut abouti à la diffusion intense de doctrines anticléricales et démocratiques dans la mère-patrie, le haut clergé franco-canadien s'efforça d'isoler ses ouailles de ces sources jumelles de contamination intellectuelle, les États-Unis et la France. La participation à une union avec les Canadiens anglais, dans le cadre de la monarchie britannique, leur paraissait de beaucoup préférable.

Les dirigeants du Canada anglais et du Canada français se trouvèrent donc réunis au sein d'une vaste union fédérale indépendante après 1867, non pas parce qu'ils désiraient constituer une seule nation, mais parce qu'ils désiraient éviter tout lien avec des pays révolutionnaires, et que la Grande-Bretagne se refusait à continuer d'assumer diverses responsabilités pour ses provinces autonomes de l'Amérique du Nord.

C'est la position des Maritimes plutôt que leurs dimensions ou leur population qui leur donnait leur importance. Elles donnaient à la province du Canada l'accès aux ports de l'Atlantique que ne bloquaient pas les glaces à condition de construire ce chemin de fer intercolonial, qui devait être une voie d'exportation pour les marchandises et une route militaire en cas de guerre.

Il n'y avait d'autre choix possible, à part la Confédération, que l'annexion américaine.

Cette nouvelle structure offrait enfin les moyens de concilier la diversité raciale avec l'unité nationale.

LA CONFÉDÉRATION

A l'époque de la Confédération, le port de Montréal était fermé à la navigation près de six mois par an par suite des glaces: il n'y avait pas de brise-glace) et il était nécessaire de disposer d'une voie d'accès vers la mer

al Railways and promoted Confederation, and to have more markets for their products, etc.)

The speeches of the founders of Confederation shows that there was at least equal indication the ports of Saint John and Halifax were to be guaranteed the winter import and export trade of Canada.

The Maritimes were losing in the old trade and markets of the Atlantic Seaboard. They were making few compensating gains in the vast continental area which was opened to them with Confederation.

Before 1867 they had fondly hoped that the Intercolonial Railway would pour accumulating traffic into the national ports of Saint John and Halifax; and that Maritime coal and iron would form the basis of a manufacturing industry which would supply the whole dominion.

It soon became a reality that ports of Halifax and Saint John were giving away to the Port of Montreal, which became the inlet and outlet port for the greatest part of goods for the Canadian trade.

Instead of transporting Canadian coal to the industries of Upper Canada. They should of brought the industries to the coal producing areas.

In considerable disunion and with some humility, New Brunswick entered Confederation.

In the 1880's the hope of industrial development in the Maritimes proved as vain as the hope for wider markets in the rest of Canada.

The industries of Ontario and Quebec with larger markets nearer at hand, were able to keep control in their own provinces and to compete successfully in the Maritimes.

The Maritimes felt that the balance of trade with the rest of the Dominion was distinctly to their disadvantage and that the National Policy imposed additional costs on them without compensating advantages.

The Maritimes were chronically aggrieved at their lack of progress under Confederation.

Confederation came about because the policies of MacDonald promised an expansion of

ouverte d'un bout à l'autre de l'année. (C'est pourquoi ils étaient si impatients de construire le chemin de fer intercolonial, et de mettre sur pied la Confédération, ainsi que d'avoir de nouveaux marchés pour leurs produits, etc.).

Les discours des Pères de la Confédération montrent qu'il y avait à peu près chance égale que les ports de Saint-Jean et d'Halifax se voient octroyer hiver comme été le commerce d'exportation du Canada.

Les provinces maritimes étaient en train de perdre les anciennes voies commerciales et les anciens marchés du littoral atlantique. En compensation, elles ne trouvaient que de faibles avantages dans la vaste zone continentale qui s'ouvrait à elles avec la Confédération.

Avant 1867, on avait fondé beaucoup d'espoirs sur le chemin de fer intercolonial, qui aurait assuré un traffic considérable vers les ports nationaux de Saint-Jean et d'Halifax; on espérait également que le charbon et le fer des Maritimes formeraient la base d'une industrie manufacturière qui fournirait tout le Dominion.

Mais il fallut bientôt se rendre à l'évidence: les ports de Halifax et de Saint-Jean étaient en train de perdre du terrain au profit du port de Montréal, qui devenait de plus en plus le port d'entrée et de sortie de la plupart des marchandises constituant les échanges commerciaux canadiens.

Au lieu de transporter le charbon canadien vers les industries du Haut-Canada, il aurait fallu rapprocher les industries des zones de production charbonnière.

C'est dans un état de profonde désunion, et avec une certaine humilité, que le Nouveau-Brunswick entra dans la Confédération.

Au cours des années 80, l'espoir d'un développement industriel des Maritimes s'avéra aussi vain que l'espoir de s'ouvrir des marchés plus étendus dans le reste du Canada.

Les industries de l'Ontario et du Québec, qui avaient à portée de la main des marchés plus vastes furent en mesure de garder la maîtrise de leurs propres provinces, et de concurrencer avec succès sur le marché des Maritimes.

Les Maritimes comprirent que l'équilibre commercial avec le reste du Dominion leur était nettement défavorable, et que la politique nationale leur imposait des charges supplémentaires, sans qu'elles y trouvent aucun avantage compensateur.

Les Maritimes vivaient dans un état chronique d'irritation du fait de l'absence de tout progrès au sein de la Confédération. La Confédération avait pu être réalisée parce que les

their markets and the great commercial impulse looked westward as well as eastward.

The progress of Canada came largely from the activities of great capitalists who were able to harness the energies of the country and dictate political policies.

The people in the Maritimes look on Central Canada as a region that exploited them for the benefit of concentrated financial and industrial interests.

In the 1870's the manufactures of Quebec and Ontario began to invade Nova Scotia, New Brunswick, and Prince Edward Island in force; and by the time of the general election of 1878 the Halifax Chronicle was raging that the only "slaughtering" (dumping of goods) that the Maritimes knew anything about came, not from foreign countries but from Ontario and Quebec.

From alleviating the difficulties of the economic transition which the Maritime Provinces had to face, the National Policy of the tariff probably intensified them.

"The people of Nova Scotia know the Ontario or Quebec man", declared the Halifax Chronicle bitterly in 1886, "but we knew him principally in the shape of the commercial traveller. He comes here to sell, but he buys nothing but his hotel fare." "He spreads himself periodically throughout this province, in number he equals the locust and his visit has about the same effect. He saps our resources, sucks our money and leaves a lot of shoddy behind him. He has been able—at least the people whose agent he is—to have laws passed that compel us to buy his wares or submit to a tremendrous fine if we purchase from John Bull or brother Jonathan."

Mr. E. J. Chamberlain, President of the Grand Trunk claimed (in evidence before the *Royal Commission on Transportation*—1917).

"That it was impossible to carry freight to Halifax at the same rate as to Portland or Boston, and that it had always been recognized as impossible".

The Royal Commission on Transportation (Duncan Commission) reported 23 September 1926.

"8 (11) To afford to Maritime merchants, traders and manufactures, a market to several million of people instead of their being restricted to the small and scattered population of the Maritimes themselves, particularly

politiques de MacDonald promettaient une expansion de leurs marchés et que la grande impulsion commerciale était tournée vers l'Ouest aussi bien que vers l'Est.

Les progrès du Canada furent essentiellement le fait des activités des grands capitalistes qui furent en mesure de domestiquer les ressources énergétiques du pays et d'imposer des lignes de conduite aux politiciens.

Les gens des Maritimes regardent le Canada central comme une région qui les a exploités au bénéfice d'intérêts financiers et industriels concentrés.

Au cours des années 70, les manufactures du Québec et de l'Ontario entreprirent l'invasion en force de la Nouvelle-Écosse, du Nouveau-Brunswick et de l'Île du Prince-Édouard; et à l'époque des élections générales de 1878, le *Halifax Chronicle* constatait avec fureur que le seul «matraquage» (dumping de marchandises) dont aient à souffrir les Maritimes provenait non pas de pays étrangers, mais de l'Ontario et du Québec.

Bien loin de soulager les difficultés de la transition économique que devaient affronter les provinces Maritimes, la politique nationale des barrières douanières n'a fait probablement que les intensifier.

«Les gens de la Nouvelle-Écosse connaissent l'Ontarien ou le Québecois», déclarait amèrement le *Halifax Chronicle* en 1886, «mais les connaissent principalement sous la forme des représentants de commerce. Ils viennent ici pour vendre, mais ils n'achètent rien si ce n'est une nuit d'hôtel et trois repas au restaurant.» «Ils s'abattent périodiquement sur toute la province, aussi nombreux que des essaims de sauterelles, et leurs incursions ont des effets presque similaires. Ils sapent nos ressources, épongent notre argent et laissent derrière eux de la pacotille. Ils ont même été en mesure—ou tout au moins les gens dont ils sont les représentants—de faire voter des lois qui nous obligent à acheter leurs marchandises ou à payer d'énormes amendes si nous achetons de l'Anglais ou de l'Américain».

M. E. J. Chamberlain, président du *Grand Trunk* affirmait (en témoignant devant la *Commission royale sur les transports*, en 1917)

«qu'il était impossible de transporter des marchandises vers Halifax au même tarif que vers Portland ou Boston, et que l'on avait toujours reconnu la chose comme impossible».

La Commission royale sur les transports (Commission Duncan) préconisait le 23 septembre 1926:

«8(11) de fournir aux marchands, négociants et fabricants des Maritimes un marché de plusieurs millions de consommateurs plutôt que de les confiner à la population peu nombreuse et dispersée des Maritimes elles-

in the light of the disturbance by which their trade was threatened as the result of the discontinuation by the United States of the reciprocal arrangements that had prevailed."

"(9) Intercolonial Railway was completed in 1875 and it would appear for the evidence we have received that from then until 1912 the interests of the Maritime Provinces were fairly well safeguarded.

Obligations made at Confederation to afford wider markets to the Maritime Provinces in 1867, had also provided a major consideration for the entry of Prince Edward Island in 1873.

(11) Recommendations on Freight Rates

"It is more material to notice that the President of the Canadian National Railways admitted in evidence, *that in administering the Atlantic Division (the greater portion of which is the Old Intercolonial System).*

The people were hollering for "Maritime Rights" that is the reason this commission was set-up, because the rates were too high to compete with the rest of Canada.

A Royal Commission on Transportation was set-up 29 December 1948. It reported in February 1951 with L. P. Duff as Chairman.

Page 27 of the report.

"At Confederation they were promised access to the Central Canadian market. Today, in view of the deterioration in foreign trade, particularly because of monetary and commercial restrictions, access to the Central Canadian market has become more important than ever. Isolation of the Maritime from Central Canadian area as result of distance and increased freight charges is one of the central themes put forward in this case."

Tariff prohibit North to South markets for Atlantic Province's manufactures, even by using lower cost ocean freight.

RAILWAYS

The railways supplied the first basis of industrialization, and brought manufacturing to British North America.

The intercolonial Railway, was opened in July 1876 and was constructed as one of the conditions of the Maritime provinces entering Confederation. The Atlantic provinces

mêmes, particulièrement eu égard aux perturbations qui menaçaient leurs activités à la suite de l'interruption par les États-Unis des accords de réciprocité qui avaient prévalu jusqu'ici».

«(9) Le chemin de fer intercolonial a été achevé en 1875, et il ressort des témoignages que nous avons recueillis que, depuis cette date et jusqu'en 1912, les intérêts des provinces maritimes avaient été raisonnablement sauvegardés.

L'obligation qui avait été faite à la Confédération de fournir des marchés plus vastes aux provinces maritimes en 1867 avait également été un argument majeur pour l'entrée dans la Confédération de l'Île du Prince-Édouard en 1873.

(11) Recommandations sur les tarifs de fret

«Il est plus pertinent de noter que le président du Canadien National a reconnu en témoignant que dans l'administration de la division Atlantique (dont la plus grande portion est l'ancien système intercolonial)...

Les gens réclamaient à cor et à cri les «droits maritimes» et c'est la raison pour laquelle cette Commission a été instaurée, parce que les tarifs sont trop élevés pour permettre la concurrence avec le reste du Canada.

Une Commission royale d'enquête sur les transports a été instaurée le 29 décembre 1948. Elle a soumis son rapport en février 1951, avec L. P. Duff comme président.

Page 27 du Rapport:

«Lors de la Confédération, on leur avait promis accès au marché central canadien. Aujourd'hui, du fait de la détérioration des échanges avec l'étranger, particulièrement à cause des restrictions monétaires et commerciales, l'accès au marché central canadien revêt plus d'importance que jamais. L'isolation des Maritimes à l'égard du Canada central par suite de la distance et de l'accroissement des tarifs de fret est l'un des principaux thèmes avancés dans cette affaire.»

Les tarifs interdisent aux manufactures des provinces de l'Atlantique l'accès aux marchés du nord et du sud, même si elles utilisent le transport par eau dont le coût est moins élevé.

LES CHEMINS DE FER

Les chemins de fer ont été le fondement de l'industrialisation et ont donné naissance à l'industrie de la fabrication en Amérique du Nord britannique.

Le chemin de fer intercolonial a été inauguré en juillet 1876 et sa construction constituait l'une des conditions à l'entrée des provinces Maritimes dans la Confédération. Les

demanded construction of a line to Central Canada for commercial reasons.

It was built on a round about route for military reasons which helped to make it uneconomical.

A through connection between Halifax and Montreal, was made in 1889 by acquiring additional lines.

Later the government began to acquire short branch lines connecting with the Intercolonial that had been built by private interests. The Prince Edward Island Railway also became a part of the Intercolonial System.

Some of our railways were never meant to be economic; they were built to meet national needs. For instance, the Intercolonial Railway built as part of the terms of Confederation to link the Maritimes to the rest of Canada.

The National Transcontinental Railway, which was a government line from Moncton to Winnipeg. It was completed in 1913 and became part of the C.N.R. in 1923.

The problem facing the new organization when the Canadian National Railways was formed in 1923 were almost insurmountable. Lines and rolling stock were badly in need of repair. Tremendous debts were carried over from the component companies to become a charge against the C.N.R. The average operating loss of the separate lines over the five years preceding amalgamation was 12 million annually.

Canadian railways began their transportation operations as a near monopoly because of this the Canadian Government was compelled to impose certain conditions on the railways to keep freight rates on basic commodities relatively low.

Much of Canada's economical activity centered on the production of relatively low valued, and consequently low priced, primary commodities and raw materials which had to be transported over great distances.

It was imperative then, if these basic and bulky commodities with a low selling price were to be developed at all, that the shipping rates levied on them be kept as low as possible.

In order to achieve this, it was necessary in some instances, to establish shipping rates below the full cost of transportation.

The railways recouped any such loss by charging shippers of high price commodities an excess of shipping costs.

provinces Maritimes exigeaient la construction d'une voie qui les relierait au Canada central pour des raisons commerciales.

La voie ferrée a été construite de façon à encercler le territoire pour des raisons d'ordre militaire, ce qui a contribué à réduire sa rentabilité.

Une liaison directe entre Halifax et Montréal a été obtenue en 1889 par l'acquisition de voies supplémentaires.

Par la suite, le gouvernement a entrepris l'acquisition de courtes voies secondaires reliées à l'Intercolonial et qui avaient été construites par des compagnies privées. Les Chemins de fer de l'Île du Prince-Édouard ont aussi été intégrés au système intercolonial.

Quelques-unes de nos voies ferrées n'ont pas été construites pour être rentables. On a tenu compte des besoins nationaux et l'Intercolonial qui a été construit pour relier les Maritimes au reste du Canada et comme condition au pacte fédératif en est un exemple.

Le Chemin de fer national transcontinental reliant Moncton à Winnipeg était une propriété de l'État. Il a été terminé en 1913 et, en 1923, il était intégré au réseau du C.N.

Lorsque le Canadien National a été créé en 1923, les difficultés qui se présentaient au nouvel organisme étaient presque insurmontables. Les voies et le matériel roulant avaient grandement besoin de réparation. Les dettes énormes des anciennes sociétés devaient être assumées par le C.N. La moyenne des pertes annuelles des sociétés pour les cinq années qui ont précédé leur réunion était de 12 millions de dollars.

Les Chemins de fer nationaux constituaient au début presque un monople et c'est pourquoi le gouvernement canadien a été forcé de leur imposer certaines conditions afin de maintenir relativement bas les tarifs concernant les marchandises de base.

La majeure partie de l'activité économique du pays reposait sur la production de matériaux bruts et primaires de faible valeur et de prix faibles, qui devaient être transportés sur de longues distances.

Il était donc nécessaire, pour donner de l'expansion à cette industrie de produits de base encombrants et de peu de valeur, que les tarifs d'expéditions fussent maintenus le plus bas possible.

A cette fin, il était nécessaire dans certains cas d'établir des tarifs d'expédition inférieurs au coût du transport.

Les chemins de fer compensaient ces pertes en imposant aux expéditeurs de marchandises de haute valeur des tarifs supérieurs au coût de l'expédition.

The three main groups of freight rates resulting from these conditions can be summarized as follows: In the case of low valued commodities with a low selling price, the shipping rates might be less than average shipping cost. In the case of the middle group of commodities, shipping rates would cover full costs. For a third group of commodities those with a high value and high selling price, the rates often exceeded the actual shipping cost.

The railways were satisfied since their total revenue in relation to costs appeared to be no less than if each shipping rate were directly related to cost.

But with the development of the trucking industry, however, the situation began to change. In spite of their substantially higher average operating costs, truckers found that they could compete successfully with the railways in transporting "high class commodities" especially over relatively short distances. Although average truck costs are about three times average rail costs, railways rates exceed those charged by trucks on high valued merchandise.

When the trucks take away this "high class traffic", the loss in rail revenue must be made up by increasing rates where the railway still continues to enjoy a monopoly position—long distance, low valued without the fear of having them undercut by motor or, for that matter it appears from any other form of transportation. The inevitable result is that primary producer suffer.

The trucking industry has certain major advantages which strengthen their competitive position.

The truckers have a free right of way, which constitute a considerable cost for the railways, which is no problem for the truckers.

Roadway costs for motor carriers are distributed on a "use basis" through gasoline taxes and license fees only, which means that all users of vehicles share the cost. Indeed, there is a paradoxical situation here in that operators of ordinary passenger cars pay substantially more than their share of the costs for the use of highways and in actual effect subsidize the operators of big trucks. For example, the operator of a passenger car pays approximately five or six times as much per gross ton mile for the use of the highway as does an operator of a tractor trailer (diesel). The explanation for this paradox is that gaso-

Les trois principaux groupes de tarifs de fret résultant de ces conditions peuvent être présentés de cette façon: dans le cas de marchandises de valeur inférieure, au prix de vente peu élevé, les tarifs d'expédition pouvaient être inférieurs à la moyenne du coût de transport; lorsqu'il s'agissait de marchandises de prix moyen, les tarifs d'expédition couvraient l'ensemble des frais; pour un troisième groupe de marchandises dont la valeur et le prix de vente étaient élevés, les tarifs souvent étaient supérieurs au coût réel du transport.

Les chemins de fer étaient satisfaits, puisque leur revenu total se maintenait comme si chaque tarif d'expédition s'appliquait directement aux frais.

Cependant, la situation a commencé à se modifier avec l'expansion de l'industrie du camionnage. En dépit de frais d'exploitation sensiblement plus élevés, cette industrie s'est rendu compte qu'elle pouvait avec succès faire concurrence aux chemins de fer pour le transport des marchandises de haute valeur, surtout lorsqu'il s'agissait de courtes distances. Quoique la moyenne des frais du transport routier soit trois fois supérieure à celle des frais du transport ferroviaire, les tarifs ferroviaires relatifs aux marchandises de grande valeur étaient supérieurs à ceux du transport routier.

Lorsque le transport routier s'est accaparé cette partie des marchandises, les pertes enregistrées par les chemins de fer ont dû être compensées par une augmentation des tarifs dans les domaines où ils jouissaient encore d'un monopole, comme le transport sur de longues distances, les marchandises de faible valeur, sans avoir à craindre d'être supplantés par le camionnage ou par toute autre forme de transport.

L'industrie du camionnage jouit de certains avantages qui renforcent sa position concurrentielle.

Les sociétés de transport routier n'ont pas à s'inquiéter des emprises qui occasionnent des frais considérables aux sociétés de chemins de fer.

Les frais relatifs aux routes qu'empruntent les camions sont répartis sur une «base d'utilisation» par suite des impôts sur l'essence et de la vente des plaques d'immatriculation, ce qui signifie que les frais sont partagés entre tous les propriétaires de véhicules. Il s'agit vraiment d'une situation paradoxale, puisque les propriétaires d'automobiles paient beaucoup plus que leur part des frais d'utilisation des routes et, de fait, ils subventionnent les propriétaires de gros camions. Ainsi le propriétaire d'une automobile, pour circuler sur la route, paie environ cinq ou six fois plus par tonne-mille brute que le propriétaire

line consumption does not increase in direct proportion to the increase in weight of the vehicle.

The result is, then the tax payment per gross ton mile become progressively lower as the vehicle weight increases. Consequently all light vehicles, without exception, are compelled to pay substantially more than heavy vehicle on the basis or relative use of highway facilities.

Neither are license or registration fees, the other main source of highway revenue, based on anything like an equitable tax structure. It is true that they are graduated in accordance with differences in vehicle weights. There is, however, no consideration given to highway utilization, since the very important matter of difference in annual operating mileage is entirely ignored. Thus there is a paradox here in that the greater use the truck makes of the highway the smaller is its license fee per vehicle ton mile.

There is no question but the trucking industry is heavily subsidized by the public as far as the important matter of right of way is concerned. In 1940 the governments of Canada spent $89,554,732 more than revenue received from highway users.

Here are a few pertinent facts.

A single railway track has the potential to move as much traffic as 10 to 20 lanes of express highway.

Highways have proven to be enormously expensive, and inadequate for future expected expansion in traffic.

The railways can handle vast increases in traffic with little extra capital costs.

The railways are the only form of transportation where every expenditure involved is charged against revenue.

Different capital requirements for the trucking industry as compared with the railways provide an important competitive advantage for the former. They have been well summed up by Dudley F. Pegrum, Professor of Economics at the University of California:

"The technical units (in trucking industry) are relatively small and may be very small. Operations may be started with a very small investment and expansion may be made with very small increments of investment in direct and almost immediate response to the growth in traffic."

d'un camion-remorque (diesel). L'explication de ce paradoxe repose sur le fait que la consommation d'essence ne croît pas en fonction directe de l'augmentation du poids du véhicule.

Il en résulte que l'impôt perçu par tonne-mille brute diminue à mesure que croît le poids du véhicule. En conséquence, tous les propriétaires de petits véhicules, sans exception, sont forcés de payer beaucoup plus que les propriétaires de véhicules lourds.

La vente des plaques d'immatriculation, qui constitue l'autre source principale de revenus pour les réseaux routiers, n'est pas non plus fondée sur quelque chose du genre d'une structure équitable d'imposition. Il est vrai que le tarif varie en fonction du poids du véhicule. On ne tient pas compte cependant de l'utilisation de la route puisque n'entre pas en ligne de compte le facteur très important que représente le nombre de milles parcourus en une année. Il y a donc un autre paradoxe ici. Plus souvent un camion circule sur la route, moins il en coûte en fonction du poids par mille.

Au domaine important des droits de passage il est évident que le public subventionne fortement l'industrie du transport routier. En 1940, les gouvernements canadiens ont dépensé $89,554,732 de plus qu'ils n'avaient reçu des utilisateurs de la route.

Voici quelques faits.

Une seule voie ferrée peut permettre de transporter autant de marchandises que 10 à 20 voies d'une grande route.

Il est démontré que les réseaux routiers coûtent très cher et ne pourront répondre à l'expansion prévue du trafic.

Les chemins de fer peuvent résoudre le problème de fortes augmentations du trafic tout en augmentant de très peu les immobilisations.

Les chemins de fer sont les seules formes de transport où toutes les dépenses peuvent être appliquées aux revenus.

L'industrie du transport routier, comparativement au transport ferroviaire, demande des immobilisations différentes et il en résulte un avantage concurrentiel important pour la première. Ces avantages ont été bien exposés par Dudley F. Pegrum, professeur d'économique à l'université de la Californie: «Les groupes techniques (dans l'industrie du camionnage) sont relativement petits et peuvent être très petits. L'exploitation peut débuter à l'aide de très faibles immobilisations et on peut lui donner de l'expansion par de minimes augmentations des immobilisations qui sont en réponse directe et presque immédiate à la croissance du trafic.»

(Land Economics, a quarterly journal of Planning, Housing and Public Utilities August 1952.)

What a different position railroads are in is commented upon by the same author:

"A railroad for example, has to make large initial outlays to build a single line and acquire the necessary terminal facilities to operate it. When the plant is utilized to capacity, double-tracking will require a large additional investment which cannot profitably be made unless there is prospect of a large increase in traffic. Expansion of the facilities will have to be built well in advance of market opportunities. In the meantime, the traffic which is available will have to bear the burden of keeping the railroad in operation until the new traffic has been built up...

Then there is the fact that much of the investment that has been made is specialized both as to functions and as to markets. Railroad tracks are only useful where they are laid and cannot readily be turned to other areas if the markets shift."

(Same reference as above)

The same author again contrasts the situation with the trucking industry:

"Most of the facilities (trucking) are not highly specialized or unalterably committed to a particular market for geographic area and they can readily be shifted to any other market. Physically, the highways or routes are available to all who wish to use them."

(Same reference as above)

Another very important factor which places the trucking industry in a favourable position in relation to the railways is in the matter of "turn over of capital". The turn over of capital is determined by comparing the ratio to gross revenue from operations to the total capital investment in industry.

The turn over of capital for railways in U.S.A. are about 1-3 annually, while the tricking industry is about 3 time annually.

Many truck would find it impossible to compete with the railways were it not for the heavy public subsidization in the form of a relatively free right of way. Their business has been made economic only by virtue of subsidization at the expense of tax payers.

(*Land Economics, a quarterly journal of Planning, Housing and Public Utilities*, août 1952)

Le même auteur expose la situation différente dans laquelle se trouvent les chemins de fer:

«Une société ferroviaire, par exemple, doit s'engager dans des dépenses initiales considérables pour construire une seule voie et acquérir les services nécessaires à son exploitation. Lorsque cette installation est utilisée à pleine capacité, il faut, pour doubler la voie, recourir à des immobilisations supplémentaires importantes qui ne peuvent être rentables que si l'on prévoit une forte augmentation du trafic. Il faudra que l'expansion des installations soit entreprise avant que les demandes se fassent sentir sur le marché. Entretemps, le trafic disponible devra supporter le poids de l'exploitation de la voie ferrée en attendant que le nouveau trafic s'amène...

Il y a ensuite le fait que la majeure partie des immobilisations est consacrée à des fonctions et à des marchés spécialisés. Les voies ferrées ne servent que là où elles ont été construites et ne peuvent pas facilement être dirigées vers d'autres régions si les marchés se déplacent».

(Même renvoi que ci-dessus)

Le même auteur de nouveau établit la comparaison avec l'industrie du camionnage:

> «La grande partie des installations de transport routier ne sont pas hautement spécialisées ni asservies à un marché particulier pour une région géographique donnée et elles peuvent rapidement desservir tout autre marché. Physiquement, les routes sont à la disposition de qui veut s'en servir».

(Même renvoi que ci-dessus)

Un autre facteur très important qui place l'industrie du transport routier dans une situation favorable est celui du «roulement du capital». Le roulement du capital est déterminé par la comparaison du rapport entre le revenu brut de l'exploitation et le total des immobilisations dans l'industrie.

Le roulement de capital pour les sociétés ferroviaires américaines est d'environ 1/3 par année tandis qu'il est de 3 pour l'industrie du transport routier.

Plusieurs sociétés de transport routier pourraient difficilement faire concurrence aux sociétés ferroviaires si ce n'était des fortes subventions publiques qui leur sont accordées sous forme de droits de passage à peu près gratuits. Leur commerce n'a été rendu rentable que par des subventions aux frais des contribuables.

Some claim the development of light manufacturing industry following World War II created a demand for transportation which trucks were ideally suited to provide.

In some cases trucks might be able to give faster service.

Another advantage might be their ability to adapt to the size of the shipment, enabling economically handling of less-than-car-load freight. Door to door service, less warehousing and handling, lower packing costs, are additional advantages of truck transport.

From Confederation to the end of Second World War 1945 rail and water carriers accounted for 97% of the intercity freight traffic.

Railway 72%
Water 25%

By 1953 they had dropped by 86%
Railway 57%—decreased by 15%
Water 29%—increase by 4%

By 1953 Trucks were doing:
100,000,000 Intercity Ton Miles
Air Lines 21,000,000 ton miles
Pipe Lines 6%

This was the beginning of real competition in transportation. By 1964
Railways had 42.4% Traffic
Water 27.0%
Road 9.0%

We had a study of Transportation in Canada by the MacPherson Royal Commission 1960.

And as a result of this study the government introduced the National Transportation Act 1967.

This was the first time that the railways were given the freedom to set rates to reflect costs of the services.

NEW FREIGHT RATE STRUCTURE 1967

It would appear that the C.N.R. took the second step before they took their first.

They should of held public meetings with shippers and others before they put their new rates into effect, so as to explain their system fully.

Confusion might of been cut down to a minimum.

It appears that due to this confusion a great deal of Railway traffic was grabbed by the trucking industry.

D'aucuns soutiennent que l'expansion qu'a connue après la Deuxième guerre mondiale l'industrie de la fabrication secondaire a créé une demande de transport que les camions pouvaient satisfaire de façon parfaite.

Dans certains cas, les camions pouvaient fournir un service plus rapide.

Un autre avantage pourrait être la faculté qu'ils ont de pouvoir être adaptés à l'importance de l'expédition permettant ainsi le transport rentable de quantités de marchandises inférieures à une wagonnée. Livraison à la porte, moins d'entreposage et de manutention, frais d'emballage inférieurs sont d'autres avantages du transport routier.

Depuis la Confédération jusqu'à la fin de la Deuxième guerre mondiale, en 1945, les transports par rail et par eau se partageaient 97 p. 100 du trafic interurbain.

Rail 72 p. 100
Eau 25 p. 100

En 1953 ce pourcentage avait baissé à 86
Rail 57 p. 100—fléchissement de 15 p. 100
Eau 29 p. 100—accroissement de 4 p. 100

En 1953 les camions se partageaient
100 millions de tonnes-milles, trafic interurbain, les lignes aériennes, 21 millions de tonnes-milles les pipe-lines, 6 p. 100

C'était le début de la véritable concurrence dans le secteur des transports.
En 1964 le trafic se répartissait ainsi:

Rail, 42.4 p. 100
Eau, 27 p. 100
Route, 9 p. 100

Une étude sur le transport au Canada a été entreprise en 1960 par la Commission McPherson.

A la suite de cette étude, le gouvernement a introduit en 1967 la Loi nationale sur les transports.

C'était la première fois que les sociétés ferroviaires avaient la liberté de fixer les tarifs en fonction des frais d'exploitation.

NOUVELLE STRUCTURE DES TARIFS DE FRET, 1967

Il semblerait que le C.N. a fait le deuxième pas avant de faire le premier.

Les représentants de la société auraient dû convoquer les expéditeurs à des audiences publiques avant de mettre en vigueur leurs nouveaux tarifs, afin d'expliquer leur système de façon complète.

On aurait pu réduire la confusion à un minimum.

Il semble qu'à la suite de cette confusion, une grande partie du trafic ferroviaire est allée à l'industrie du transport routier.

They found that they could not handle it as cheap as the railways formerly did and they had to increase their rates, which were just under the new C.N.R. rates.

Due to the high cost of the truckers rigs, they must be kept constantly on the move in order to pay their way. Those laying idle are a tremendous burden to the truckers.

The low wages and long hours that the drivers have to endure simply means that the workers are also subsidizing the trucking industry.

The people who use the trucking services are they adequately protected by suitable insurance to have their claims quickly and properly adjudicated.

ST. LAWRENCE SEAWAY

It was opened in 1959, it reaches from the Atlantic Ocean to the head of the Great Lakes a distance of 2,300 miles.

The power and resources development associated with the Seaway together with savings in transportation costs on grain from the Lakes to lower St. Lawrence ports, iron ore and coal.

The volume that is expected to use the seaway is estimated at:

20,000,000 tons Iron Ore.
10,000,000 tons Grain and Grain Products.
4,000,000 tons Coal.
1,500,000 tons Paper, pulpwood, Wood Pulp.
8,000,000 tons Miscellaneous Cargo.

An estimated 45 to 50 million dollars in transportation savings were expected annually by the avoidance of costly trans-shipment charges, it is supposed to be one of the cheapest methods of transportation in the world. Plow some of these savings into the Atlantic Provinces economy.

The tolls are to be sufficient to cover the cost of maintaining, operating, and of paying interest and amortizing the investment over a 50 year period, estimated at approximately $20,000,000 a year.

The St. Lawrence Seaway has been an economic benefit to Canada. It makes it possible for Canada to become a world leader in the export of grain, provided low cost transportation for the raw material needed for the industrialization of Central Canada. And to the detriment of Eastern Canada.

It appears that the Seaway from the year 1959 to the year 1964, the government subsi-

Cette dernière s'est rendu compte qu'elle ne pouvait pas effectuer ce transport à aussi bon marché que le faisaient antérieurement les sociétés ferroviaires, et elle a dû augmenter ses tarifs juste au-dessous des nouveaux tarifs du C.N.

A cause du coût élevé des flottes de camions il faut, pour être rentable, que leur utilisation soit constante. Les camions inactifs représentent un énorme fardeau pour leur propriétaire.

Les faibles salaires et les longues heures de travail qui sont le partage des chauffeurs signifient simplement que les ouvriers subventionnent eux aussi l'industrie du transport routier.

Les gens qui utilisent les services du transport routier sont bien protégés par des assurances pour que leurs réclamations puissent être réglées rapidement et correctement.

LA VOIE MARITIME DU SAINT-LAURENT

La voie a été ouverte à la navigation en 1959 et elle s'étend de l'Atlantique à la Tête des Lacs, soit une distance de 2,300 milles.

La voie maritime a permis d'économiser sur le transport des céréales des ports des Grands Lacs à ceux du bas Saint-Laurent, et aussi sur le transport du minerai de fer et du charbon, et son aménagement s'est accompagné de la mise en valeur des ressources énergétiques.

Le volume de marchandises qui devrait emprunter la voie maritime est évalué à 20 millions de tonnes de minerai de fer, 10 millions de tonnes de céréales et de leurs produits, 4 millions de tonnes de charbon, 1,500,000 tonnes de papier, de pâte et de bois à pâte, 8 millions de tonnes de cargaisons diverses.

On économiserait de 45 à 50 millions de dollars par année en frais de transbordement coûteux, ce qui en ferait un des moyens de transport les plus économique au monde. Il faudrait acheminer une partie de ces économies vers les provinces de l'Atlantique.

Les droits doivent être suffisants pour couvrir les frais d'entretien et d'exploitation, payer les intérêts et amortir le capital sur une période de 50 années, ce qui représente environ 20 millions de dollars par année.

La voie maritime du Saint-Laurent a été profitable au Canada. Elle a permis au pays de devenir l'un des principaux exportateurs mondiaux de céréales. Elle a permis aussi le transport à bon marché du matériel brut nécessaire à l'industrialisation du Canada central. Et cela au détriment de l'Est du Canada.

Il semble que de 1959 à 1964, le gouvernement ait accordé à ceux qui utilisaient la voie

dized those using the canal by $42,500,000. This is the difference between the tolls received and the annual cost of 20 million.

It is not too clear just how this 45 to 50 million dollars per year is saved. How much of this goes to foreign ships as a subsidy?

This could make a grand total of 342.5 million dollars that the people of Canada are subsidizing this monster.

LABOUR FORCE

In the early 1965 farming accounted for 7.4% of the Labour Force and is declining.

It is projected by the Atlantic Provinces Economic Council that it will be declining to:

4.2% in 1970
3.5% in 1975
3.0% in 1980

A farm in the Maritimes must gross in excess of $10,000 in order to provide the operator with a living. It would appear that we have less than 3,000 of such farms in the Maritimes that could come under this category.

It appears that the farmer in the $5,000 to $10,000 gross is in dire need of capital in the form of grants and other assistance so they will be able to increase their gross to over $10,000 mark so that they can make a living.

It appears that the Maritime farmer is not able to raise enough feed grain especially for the hog and poultry farmer, and the continuation of the freight rate assistance must be maintained and it should be increased if possible, so as to help the marginal farmer to survive.

These farmers are one of the assets of the Maritime economy and must be assisted so that he will be able to increase his returns in order to survive in our society.

maritime des subventions de l'ordre de $42,500,000, ce qui représente la différence entre les droits perçus et les frais annuels de 20 millions.

On ne sait pas trop comment sont réalisées ces économies annuelles de 45 à 50 millions de dollars. Quelle est la partie de ces économies qui vont aux navires étrangers sous forme de subsides?

Les subventions que le peuple canadien paye à ce monstre pourraient bien atteindre le grand total de $342,500,000.

MAIN-D'ŒUVRE

Au début de 1965, l'agriculture comptait 7.4 p. 100 de la main-d'œuvre, et ce pourcentage diminue.

Selon les prévisions du Conseil économique des provinces de l'Atlantique, le pourcentage fléchira à

4.2 en 1970
3.5 en 1975
3.0 en 1980

Une ferme, dans les provinces Maritimes, doit fournir un revenu brut de plus de $10,000 pour permettre à son propriétaire de vivre. Il semblerait que, dans les provinces Maritimes, moins de 3,000 fermes peuvent se classer dans cette catégorie.

Il semble que le cultivateur dont le revenu brut s'échelonne de $5,000 à $10,000 a grandement besoin de capital sous forme de subventions ou autres formes d'aide pour que son revenu brut puisse dépasser les $10,000 dont il a besoin pour vivre.

Il apparaît que le cultivateur des Maritimes ne peut pas récolter suffisamment de céréales de provende, surtout pour l'élevage des porcs et des volailles, et qu'il faut maintenir les subventions au transport et les augmenter si possible, afin de permettre à l'agriculteur marginal de survivre.

Ces agriculteurs représentent l'une des valeurs de l'économie des Maritimes et il faut les aider à accroître leurs revenus pour qu'ils puissent se maintenir dans notre société.

EMPLOYMENT

Since 1961 employment in manufacturing has risen 24 per cent in the Atlantic Provinces, the National gain was 25.9 per cent.

The net employment in Canadian Manufacturing accounted for a net increase of 30 per cent between 1961 and 1966, while 18 per cent accounted for the Atlantic Provinces.

Construction rose by 54 per cent between 1961 and 1966, National increase was 36 per cent.

Construction in Atlantic Provinces accounted for 16 per cent of the increase in employment 1961-1966.

The total labour force in the Atlantic Provinces averaged 626,000 in 1966 and 571,000 in 1961, an increase of 9.6 per cent as compared to 13.8 per cent increase in all Canada.

Employment in the four primary industries remained constant at about 104,000 between 1961-1966 but proportionally, primary employment fell in the Atlantic Provinces from 21 per cent to 18 per cent of total employment. The National rate was 15 per cent to 11 per cent.

Agriculture continued to release labour at a rapid rate 19 per cent Atlantic Provinces and 15 per cent National Rate.

Employment in mining increased by 27 per cent in the Atlantic Provinces.

EMPLOI

Depuis 1961, l'emploi dans le secteur de la fabrication s'est accru de 24 p. 100 dans les provinces de l'Atlantique. Au niveau national cet accroissement a été de 25.9 p. 100.

L'emploi net dans le secteur de la fabrication au niveau national a enregistré une augmentation nette de 30 p. 100 de 1961 à 1966, et de 18 p. 100 dans les provinces de l'Atlantique.

La construction s'est accrue de 54 p. 100 de 1961 à 1966. Au niveau national l'accroissement a été de 36 p. 100.

La construction dans les provinces de l'Atlantique est responsable dans une proportion de 16 p. 100 de l'accroissement de l'emploi de 1961 à 1966.

La main-d'œuvre des provinces de l'Atlantique se chiffrait à environ 626,000 en 1966, comparativement à 571,000 en 1961, soit une augmentation de 9.6 p. 100 comparativement à 13.8 p. 100 pour l'ensemble du Canada.

Le nombre d'employés dans les quatre industries primaires est demeuré constant à environ 104,000 entre 1961 et 1966, mais ce nombre est tombé dans les provinces de l'Atlantique de 21 p. 100 à 18 p. 100 proportionnellement à l'emploi total. Le taux national est passé de 15 à 11 p. 100.

L'agriculture a continué à perdre de la main-d'œuvre au taux rapide de 19 p. 100 dans les provinces de l'Atlantique et de 15 p. 100 dans l'ensemble du pays.

L'emploi dans les mines a augmenté de 27 p. 100 dans les provinces de l'Atlantique.

Service Industries, Atlantic Provinces rose by 11 per cent while Canadian gain was 21 per cent for the years 1961-1966.

During the period 1961-1966 the primary sector continued to shrink, very little expansion in service sector. But manufacturing and construction increased considerable and should be considered for future policy.

It is an established fact that during periods of very high national growth there is a tendency for large numbers of people to move from the Atlantic Provinces in search of better opportunities elsewhere.

The net migration from the Atlantic Provinces over the years has resulted in an age structure heavily weighted by those of dependent age in comparison with Canada as a whole.

The fundamental solution is a nagging income gap that has held personal income per capita in the Atlantic Provinces 30 per cent of the national average for four decades lies in a higher rate of economic growth.

Les industries de service se sont accrues de 11 p. 100 dans les provinces de l'Atlantique, alors que le gain national était de 21 p. 100 pour les années 1961-1966.

Entre 1961 et 1966, le secteur primaire a continué de se rétracter, puisqu'il n'y a eu que très peu d'expansion dans le domaine des services. Toutefois, les industries de la fabrication et de la construction ont considérablement augmenté et devraient être étudiées dans le cadre de la politique future.

C'est un fait établi que, durant les périodes de grande prospérité nationale, un grand nombre de gens ont tendance à quitter les provinces de l'Atlantique, en quête de meilleures occasions d'emploi ailleurs.

Si on établit une comparaison avec la situation au Canada en général, on constate que la migration nette des provinces de l'Atlantique depuis des années a résulté en une structure d'âge qui est grandement alourdie du fait du nombre des personnes à charge.

La solution fondamentale à cet écart défavorable de revenu, par lequel le revenu personnel par habitant dans les provinces de l'Atlantique est, depuis quarante ans, de 30 p. 100 inférieur à la moyenne nationale, est un taux plus élevé de croissance économique.

The number of Canadian Forest Workers rose by about 6 per cent while Atlantic Provinces there was a 11 per cent decline.

We must make it more enticing for our people to stay in the Atlantic Provinces.

We could do this by narrowing the income gap between Canada as a whole and the Atlantic Provinces.

If we developed our natural resources and processed them in this region.

Le nombre des travailleurs forestiers canadiens a augmenté d'environ 6 p. 100, alors que les provinces de l'Atlantique ont accusé un déclin de 11 p. 100.

Nous devons encourager les gens à rester dans les provinces de l'Atlantique.

Nous pouvons le faire en resserrant l'écart de revenu qui existe entre le Canada en général et les provinces de l'Atlantique.

Nous pourrions développer nos ressources naturelles et les transformer dans cette région-là.

And to assist them in the primary industries to be able to make a decent living.

To see that manufacturing is increased in this area.

To increase employment in the service producing industries by 30%.

This will not just happen it must be planned and there should be some kind of board given the task of seeing that this whole area is developed in a proper manner, and a proper transportation policy must be tied in with the program to make it work properly.

Nous pourrions aider les exploitants d'industries primaires à bien gagner leur vie.

Nous pourrions prendre des mesures afin que l'industrie de la fabrication s'accroisse dans la région.

Nous pourrions augmenter l'emploi dans les industries des services de 30 p. 100.

Cela ne se réalisera pas sans effort. Il faut de la planification. Il faut qu'on donne à une commission la tâche de voir à ce que toute cette région soit développée d'une façon appropriée et il faut que le programme comprenne une politique à l'égard du transport dans le but d'assurer son bon fonctionnement.

LABOUR COSTS IN CANADA

Research Dept.
Canadian Labour
Congress.

CONCLUSION

In recent years wages have not been inflationary factor in the canadian economy, and have not weakened Canada's competitive position in world markets. Rather, so far as labour costs is concerned, Canada's position relative to most of the industrialized nations has been strengthening for quite some time. Labour costs in Canada have been remarkably stable, problably too stable from the point of view of equity in income distribution. Indeed, given the need to expand and sustain effective demand so that the massive increase in the labour force expected in the near future may be absorbed in productive employment, and considering the stability of Canadian Labour costs over most of the last decade, the economic health of Canada may, to an appreciable extent, depend on a steady advance in wages in the years immediately ahead.

COÛT DE LA MAIN-D'ŒUVRE AU CANADA

Département de la recherche
Congrès du travail du
Canada

CONCLUSION

Ces dernières années, les traitements n'ont pas constitué le facteur inflationnaire dans l'économie canadienne et n'ont pas affaibli la position concurrentielle du Canada sur les marchés mondiaux. Au contraire, en ce qui a trait au coût de la main-d'œuvre, la position du Canada par rapport à la plupart des pays industrialisés s'est renforcée depuis assez longtemps. Le coût de la main-d'œuvre au Canada a été remarquablement stable, probablement trop stable du point de vue de l'équité dans la distribution du revenu. En effet, si l'on considère le besoin d'expansion et si l'on veut être en mesure de répondre à la demande afin que l'augmentation massive de l'effectif ouvrier à laquelle on s'attend prochainement soit absorbée dans des emplois productifs, et si l'on considère la stabilité du coût de la main-d'œuvre canadienne au cours de la dernière décennie, le progrès économique du Canada peut, dans une mesure appréciable, dépendre de l'augmentation régulière des traitements au cours des toutes prochaines années.

GOODS—SERVICES—EXPORTS

The value of all goods and services produced in the Atlantic Provinces increased by 8%, in CANADA by 9% and the U.S.A. by 7% in the years 1961-1966.

The value of new investment was up some 14% in the Atlantic Provinces and 13% in Canada for the period 1961-1966.

MARCHANDISES—SERVICES—EXPORTATIONS

Entre 1961 et 1966, la valeur de toutes les marchandises et services produits a augmenté de 8 p. 100 dans les provinces de l'Atlantique de 9 p. 100 au Canada de 7 p. 100 aux États-Unis.

La valeur des nouveaux placements s'est accrue de 14 p. 100 dans les provinces de l'Atlantique et de 13 p. 100 au Canada entre 1961 et 1966.

PASSENGER CAR SHOPS

Heavy repairs to Passenger Car shops were transferred to Montreal and Winnipeg in the year 1961. At January 1961—130 men were employed.

We were told March 13, 1961 that work would not be shipped away from Moncton to be done elsewhere.

But in May 1961, we were told the sad news that general heavy repairs to all classes of passenger car equipment would be discontinued in the Canadian National Railway Shops, Moncton.

Several of our members went to Winnipeg in September 1961, when the work was moved there from the Moncton Shops. They claimed that they liked to work there but due to family problems, which was the deciding factor. The family wanted to return to the Maritimes, and they returned in September

ATELIERS POUR VOITURES FERROVIAIRES

Les ateliers de lourdes réparations aux voitures ont été transférés à Montréal et à Winnipeg en 1961. Cent trente hommes étaient en emploi en janvier 1961.

On nous a dit le 13 mars 1961 que le travail ne serait pas envoyé de Moncton pour être effectué ailleurs.

Toutefois, en mai 1961, on nous a annoncé la triste nouvelle par laquelle les lourdes réparations générales à effectuer à toutes les classes d'équipement pour voitures seraient discontinuées dans les ateliers du Canadien-National à Moncton.

Plusieurs de nos membres se sont rendus à Winnipeg en septembre 1961, lorsque le travail y a été transféré des ateliers de Moncton. Ils ont déclaré qu'ils aimaient y travailler. Cependant, et ce fut là le facteur décisif, leurs familles voulaient retourner dans les Maritimes. Ils y sont revenus en septembre

1964, and they had to start as new men in the Moncton Shops. This is a national disgrace.

We contend that this work in the first place should not have been taken away, as it is contrary to the spirit of the terms of Confederation.

The promised construction of an Intercolonial Railway from Central Canada to the Maritimes formed an integral part of the terms of union and was written into the British North America Act of 1867.

Section 145. "Inasmuch as the Provinces of Canada, Nova Scotia, and New Brunswick have joined in a Declaration that the construction of the Intercolonial Railway is essential to the Consolidation of the Union of British North America, and to the Assent thereto of Nova Scotia and New Brunswick and have consequently agreed that Provision should be made for its immediate construction by the Government of Canada; Therefore, in order to give effect to that Agreement, it shall be the duty of the Government and Parliament of Canada to provide for the Commencement within Six Months after the Union, of a Railway connecting the River St. Lawrence with the City of Halifax in Nova Scotia and for the Construction thereof without Intermission, and the Completion thereof with all practicable speed."

Based on this promise, Nova Scotia and New Brunswick joined Confederation; however, Prince Edward Island delayed entry until 1873 when the Dominion Government agreed to absorb its railway debt and guarantee year round ferry service.

As was previously said on page 10, that the government acquired additional lines that connected with the I.C.R. and they became part of the Intercolonial Railway System. The Prince Edward Island Railway was also one of these.

A Railway Inquiry Commission in 1916 recommended that the Government absorb several of the bankrupt lines, together with certain government-owned lines, including the Grand Trunk and the Intercolonial. Thus the nucleus of the Canadian National Railway System was formed in 1923.

But the reason of taking over these railways by the C.N.R. did not nullify Section 145 of the BNA Act, it was only increased.

The Intercolonial Railway was part of the bargain for the Maritimes to enter Confederation as is reported in the Duncan Royal Com-

1964 et ils ont dû recommencer en tant que nouveaux employés dans les ateliers de Moncton. C'est une disgrâce nationale.

Nous prétendons que ce travail n'aurait pas dû être transféré, puisque cela est contraire à l'esprit de la Confédération.

La promesse de la construction d'un chemin de fer intercolonial allant du centre du Canada aux Maritimes forme une partie intégrante des conditions de l'union et fut inscrite dans l'Acte de l'Amérique du Nord britannique de 1867.

Article 145. «La province du Canada, la Nouvelle-Écosse et le Nouveau-Brunswick ayant déclaré collectivement qu'il est indispensable de construire le chemin de fer intercolonial pour raffermir l'union de l'Amérique du Nord britannique et assurer le concours de la Nouvelle-Écosse et du Nouveau-Brunswick, et étant, en conséquence, convenu que la construction immédiate de ce chemin de fer par le gouvernement du Canada devrait être décrétée, le gouvernement et le Parlement du Canada, pour donner suite à cette convention, seront tenus de prendre des mesures pour commencer, dans les six mois qui suivront l'union, les travaux de construction d'un chemin de fer reliant le fleuve Saint-Laurent à la cité d'Halifax, en Nouvelle-Écosse, pour les poursuivre sans interruption et les terminer avec toute la diligence possible.»

En se basant sur cette promesse, la Nouvelle-Écosse et le Nouveau-Brunswick sont entrés dans la Confédération. Toutefois, l'Île du Prince-Édouard a retardé son entrée jusqu'en 1873, lorsque le gouvernement du Dominion a convenu d'absorber sa dette relative aux chemins de fer et de garantir un service de traversier à l'année longue.

Comme on a déjà dit à la page 10, le gouvernement acquit de nouvelles compagnies ferroviaires qui se reliaient à l'I.C.R. et qui firent partie du réseau du chemin de fer intercolonial. Le chemin de fer de l'Île du Prince-Édouard était l'une de ces compagnies.

En 1916, une commission d'enquête sur les chemins de fer recommanda que le gouvernement absorbe plusieurs compagnies en faillite, ainsi que certaines compagnies lui appartenant, en particulier, le Grand Tronc et l'Intercolonial. Ainsi, le noyau du réseau du Canadien National fut formé en 1923.

Le fait que le Canadien National ait incorporé ces compagnies n'a pas annulé les dispositions de l'article 145 de l'Acte de l'Amérique du Nord britannique, mais a augmenté leur effet.

Le chemin de fer intercolonial a été mis en jeu dans l'entrée des Maritimes dans la Confédération, comme le mentionne la Com-

mission (11) "Recommendations on Freight Rates." It is more material to notice that the President of the Canadian National Railways admitted in evidence, *that in administering the Atlantic Division (the greater portion is the Old Colonial System).*

The people of the Maritimes accepted Section 145 of BNA act in the spirit that it was written and did not expect and will not accept any Indian Giving.

The Railways in the Maritimes must be made to work for the people of the Maritimes as was promised with the terms of Confederation.

Since Confederation statistics prove that due to the Transportation Policy, or the lack of one has not made the Railway function in the true spirit of Confederation, and if we are going to lose the work pertaining to the efficient operation of the railway (farming out of work etc.) to other provinces, and other people, it is pretty near time that we took stock of ouselves, and demand this practice cease.

We believe that it would be a very conservative estimate to say that in the vicinity of 700 employees were laid off in the Atlantic Provinces in the last 5 years, together with other people leaving the service and still others retiring from service. This total would amount to an enormous reduction in the work force. We believe that if we had a suitable Transportation Policy that many more people would be working on the railways.

THE CANADIAN NATIONAL RAILWAYS AND ITS EMPLOYEES

In 1950 the non-operating employees 115,000 in number demanded the 40 hour week.

President Donald Gordon bungled on negotiations at that time and on August 22, 1950 the railways ground to a stop.

Parliament was called into session and stopped the strike nine days after it paralyzed the system.

Again in negotiations in 1960 the government passed the Railway Operation Continuation Act in November 1960. This Act denied 170,000 Canadian Workers their democratic rights.

We again had a railway strike in 1966 in which the union went on strike August 1966. The Government passed the Bill C-230. An Act to provide for the resumption of operations of the railways and for the settlement of

mission Duncan (11) «Recommandations sur le tarif marchandises». Il est plus important de remarquer que le président du Canadien National a admis dans son témoignage que, *pour ce qui est de l'administration de la Division de l'Atlantique (la plus grande partie est le vieux système colonial).*

Les habitants des Maritimes ont accepté l'article 145 de l'Acte de l'Amérique du Nord britannique dans l'esprit dans lequel il a été écrit. Ils ne s'attendaient pas à ce qu'on donne pour ensuite enlever et n'accepteront pas ce fait.

Les chemins de fer dans les Maritimes doivent contribuer au bien-être des habitants des Maritimes, comme il a été promis lors de la Confédération.

Depuis la Confédération, les statistiques prouvent que, par suite de la politique de transport, ou du manque d'une telle politique, les chemins de fer ne fonctionnent pas d'après l'esprit de la Confédération. Si nous allons perdre du travail nécessaire à l'exploitation efficace des chemins de fer (octroyer des travaux, etc.) en faveur d'habitants d'autres provinces, il est temps que nous examinions la situation et que nous demandions que cette pratique cesse.

Nous croyons que nous pourrions dire sans crainte d'erreur qu'environ 700 employés ont été mis à pied dans les provinces de l'Atlantique au cours des cinq dernières années. Il faut ajouter à ce nombre les gens qui ont quitté le service et ceux qui ont pris leur retraite. Nous croyons qu'une politique convenable en matière de transport permettrait à beaucoup plus de gens de travailler pour le compte des chemins de fer.

LE CANADIEN-NATIONAL ET SES EMPLOYÉS

En 1950, les employés non-itinérants, au nombre de 115,000, ont exigé la semaine de 40 heures.

Le président Donald Gordon a raté les négociations et le 22 août 1959, les chemins de fer cessèrent de fonctionner.

Le Parlement fut convoqué et mit fin à la grève neuf jours après qu'elle eut paralysé le réseau.

De nouveau, au cours des négociations de 1960, le gouvernement adopta la Loi sur la continuation de l'exploitation des chemins de fer, en novembre 1960. Cette loi privait 170,000 travailleurs canadiens de leurs droits démocratiques.

Il y eut une autre grève du rail en 1966 alors que le syndicat fit la grève en août. Le gouvernement adopta le Bill C-230, loi qui prévoyait la reprise des opérations ferroviaires et le règlement des différends existants en

the existing dispute with respect to terms and conditions of employment between Railway Companies and their employees. And was passed by the House of Commons September 1, 1966.

This bill appears to be the biggest hoax in Canadian Labour Relations, because it appears that the government only wanted it to apply to the employees. It was later brought out by our M.P. for Westmorland Mrs. Margaret Rideout, and the Minister of Transport Paul Hellyer that the government was not able to interfer in terms and conditions of employment in relation to the Canadian National Railways.

We must have a suitable Transportation Policy so that we can have an honest to goodness negotiation between the railways and their employees in the future.

Every major strike brings cries that unions are endangering the public interest and the safety of the nation, and laws must be passed to curtail them, but these charges are not borne out by facts. Strikes account for less than 1% of total man days of employment lost.

The Railways were held down by fixed freight charges and their employees are forced by compulsory arbitration to accept wages and working conditions. While other forms of transportation are allowed to operate in a laissez-faire climate.

The manufactures of materials etc. necessary for the efficient operation of the railways are also given their freedom to set their prices. Why? ... do we have restrictions for some and not others?

Labour through either federal or provincial legislation has to justify wage increases while management has no restrictions. Why?

It would appear that those who decide how society is to be run, they then justify it by designing an appropriate set of morals. They then can attack anybody who challenges their way of life as being anti-social or even immoral—or gainst the public interest.

The so called moulders of our present society are trying to give us the false illusion that we are free and independent, not subject to any authority or principle of conscience—yet who are willing to be commanded, to do what is expected of them, to fit into the social machine without friction, who can be guided without force, led without leaders, prompted without aim.

Due to concentration of capital, giant enterprises were formed, we now have a powerful new force in our society, "Bureaucratic man-

ce qui concernait les conditions d'emploi entre les compagnies de chemin de fer et leurs employés. Cette loi fut adoptée par la Chambre des communes le 1er septembre 1966.

Ce bill semble être la plus grande supercherie des relations ouvrières du Canada, car il semble que le gouvernement voulait qu'il s'appliquât aux employés seulement. Plus tard, notre député de Westmorland, Mme Margaret Rideout, et le ministre des Transports, M. Paul Hellyer, signalèrent que le gouvernement ne pouvait pas intervenir dans les conditions d'emploi en ce qui concernait le Canadien National.

Nous avons un programme du transport approprié, de sorte que nous pourrons avoir de bonnes négociations entre les chemins de fer et leurs employés, à l'avenir.

De toutes les grèves importantes, il ressort que les syndicats mettent en danger l'intérêt public et la sécurité du pays et qu'il faut adopter des lois pour y mettre fin. Toutefois, ces accusations ne sont pas appuyées sur les faits. Les grèves sont responsables de moins de 1 p. 100 des journées de travail perdues.

Les chemins de fer sont tenus par des frais de transport fixes et leurs employés sont tenus par l'arbitrage obligatoire d'accepter certains salaires et certaines conditions de travail. Cependant, d'autres formes de transport peuvent fonctionner dans un climat de laissez-faire.

Les fabricants de matériel, etc., nécessaire au bon fonctionnement des chemins de fer ont aussi la faculté d'établir leurs prix. Pourquoi avons-nous des restrictions pour certains et non pas pour d'autres?

Les travailleurs, par l'intermédiaire de lois fédérales ou provinciales, doivent justifier leurs augmentations de traitement, tandis que la direction n'a pas de restrictions. Pourquoi?

Il semble que ceux qui décident comment la société doit se comporter justifient leurs actions par une morale appropriée. Ils peuvent alors attaquer quiconque prétend que leur façon d'agir est antisociale ou même immorale—ou à l'encontre de l'intérêt public.

Ceux qui, prétend-on, façonnent notre société actuelle essaient de nous leurrer en nous disant que nous sommes libres et indépendants, que nous ne sommes pas assujettis à une autorité ou à un principe de conscience—pourtant, nous devons consentir à recevoir des ordres, à faire ce qu'on attend de nous, à nous ajuster à la société sans heurts, à être guidés sans force, à être conduits sans chefs, à être dirigés sans buts.

A cause de la concentration des capitaux, des entreprises géantes ont été formées et nous avons maintenant une force nouvelle et

agers". They control the economic and to a large degree the political destiny of Canada. The democratic process has become a ritual.

The individual is forever blasted by a powerful suggestive apparatus to increase his appetite for new commodities and into the channels most profitable for industry. The individual worker had become a cog in the giant machine.

Our people are misinformed and indoctrinated rather than informed about political and social reality.

CONCLUSIONS AND POSSIBLE REMEDIES

Much in this brief has touched on what we were offered at Confederation and how Confederation failed to fulfill its function.

We discussed the problems of urbanization, the exodus of our people from the Maritimes, our high rate of unemployment, tariffs, wages, income gap, a suitable transportation policy and problems relating to the railway and their employees as they are effected by the result of a Transportation Policy.

The railways should be guided by a proper Transportation Policy so as to enable them to look outward instead of inward.

It appears, the less than car-load lot express freight cost of this railway service has created problems for the railways, shippers and others.

Would it not be possible for the railways to initiate a system in their freight handling similar to the Red-White-Blue Fares that were put into effect May 1, 1962. It has worked well with Passenger Business.

This might be worked in relation to Fast Freights, Extras etc., trains not handling full tonnage and taking into consideration the number of empty car at times carried.

It might be possible that some form of savings might be offered to the small shippers to make it worthwhile for him to take advantage of this service.

Tariffs have done nothing for the Maritimes in the past and it might be more feasible or expedient at this time to have freerer trade in the Atlantic Provinces.

Prior to Confederation—we had free trade and it was known as "The Golden Age", and due to facts that was pointed out in our brief

puissante dans notre société: «la direction bureaucratique». Celle-ci dirige la destinée économique et, dans une large mesure, la destinée politique du Canada. Le procédé démocratique est devenu un rite.

Les gens sont toujours poussés, par une publicité suggestive puissante, à satisfaire leurs désirs à l'égard de nouveaux produits et de la façon qui est la plus profitable pour l'industrie. Le travailleur est devenu un rouage dans une machine géante.

Nos gens sont mal informés et endoctrinés, au lieu d'être renseignés sur les réalités politiques et sociales.

CONCLUSIONS ET REMÈDES POSSIBLES

Une grande partie de ce mémoire a traité de ce qu'on nous a offert lors de la Confédération et mentionne comment la Confédération n'a pas rempli son but.

Nous avons souligné les problèmes relatifs à l'urbanisation, à l'exode de nos gens des Maritimes, à notre taux levé de chômage, aux tarifs, aux traitements, à l'écart dans le revenu, à une politique de transport convenable, aux chemins de fer et à leurs employés, en ce qu'ils sont touchés par les résultats d'une politique en matière de transport.

Les chemins de fer devraient être guidés par une politique de transport appropriée, afin qu'ils puissent être à même d'élargir leurs vues plutôt que de les circonscrire.

Il semble que le tarif-marchandises des chemins de fer pour des quantités inférieures à une wagonnée ait créé des problèmes aux chemins de fer, aux expéditeurs et à d'autres.

Ne serait-il pas possible que les chemins de fer établissent un système à l'égard du tarif-marchandises semblable aux taux rouge-blanc-bleu qui sont entrés en vigueur le 1er mai 1962 et qui ont donné de bons résultats en ce qui a trait aux voyageurs.

A ce sujet, on pourrait tenir compte du transport rapide des marchandises, des extras, etc., des trains qui ne transportent pas un plein tonnage, ainsi que du nombre des wagons vides.

Il serait peut-être possible d'offrir aux petits expéditeurs un plan économique afin qu'ils trouvent un avantage à profiter de ce service.

Les tarifs-marchandises n'ont rien fait pour les Maritimes dans le passé. Il serait peut-être plus pratique et opportun maintenant de commercer plus librement dans les provinces de l'Atlantique.

Antérieurement à la Confédération, nous poursuivions une politique de libre-échange et cette période fut connue comme étant «L'Âge

has shown without a shadow of doubt that the Tariff Barrier has negated our prosperity.

We should have a study made to see if it would not be more feasible to have the maximum utilization of our natural resources be fully processed in our area instead of seeing them being subsidized, as they move out of our area to be processed in another, and then returned to be purchased by our people, and at a rate much higher than is offered to the people in the province where they were processed.

THIS IS PURE AND SIMPLE DISCRIMINATION OF THE WORST KIND

We must have more secondary industries established in the Atlantic Provinces.

The Steel Crisis in Sydney has ably shown that the lack of a suitable Transportation Policy adds to Maritimes problems. Steel is not a dying industry it is a very viable industry.

Due to the stiff competition in Central Canada in transportation, the railways have to lower their rates much lower than authorized levels.

It would appear that we in the Maritimes are helping to subsidize these lower freight rates that apply in Central Canada.

It is shown that Confederation did not fulfill its promises to the people in the Atlantic Provinces.

This was ably shown by the different Railway Inquiries and Royal Commissions that was appointed over the years to study this problem. We are plagued by more unemployment, lower wages, our manufacturing is decreasing and out people are leaving the Atlantic Area in exceptionally large numbers.

Economic powers are loose in Canada whose aim is to concentrate their investment in Quebec and especially Ontario where a large portion of the population of Canada is located. They can make a larger profit by concentrating manufacturing and services in this area, it is reasonable close to raw material and the transportation costs are less.

They are after the bloody dollar, and the hell with the rest of Canada.

A former Minister of Finance in the Liberal Government advocated moving the people out of the Atlantic Provinces.

d'Or». Toutefois, les faits qui ont été signalés dans notre mémoire ont démontré sans l'ombre d'un doute que la barrière tarifaire a nui à notre prospérité.

Il faudrait qu'une étude soit faite afin de déterminer s'il ne serait pas plus pratique d'utiliser au maximum nos ressources naturelles en les faisant transformer dans notre région plutôt que de les voir bénéficier de subsides. En effet, elles partent de notre région pour être transformées dans une autre et elles nous sont ensuite retournées pour être achetées par nos gens à des prix bien plus élevés que ceux qui sont offerts aux gens des provinces où elles ont été transformées.

C'EST PUREMENT ET SIMPLEMENT UNE DISTINCTION INJUSTE DE LA PIRE ESPÈCE

Il faut qu'un plus grand nombre d'industries secondaires s'établissent dans les provinces de l'Atlantique.

La crise de l'acier à Sydney a bien démontré que le manque d'une politique convenable en matière de transport s'ajoute aux problèmes des Maritimes. L'acier n'est pas une industrie déclinante, c'est une industrie bien vivante.

Au Canada central, par suite d'une vive concurrence en matière de transport, les chemins de fer ont dû baisser leurs tarifs à des niveaux bien inférieurs à ceux qui sont autorisés.

Il semble que les Maritimes aident à subventionner les tarifs-marchandises qui s'appliquent au Canada central.

Il a été démontré que la Confédération n'a pas rempli ses promesses à l'égard des gens des provinces de l'Atlantique.

Ceci a été bien démontré par les diverses enquêtes sur les chemins de fer et par les Commissions royales nommées au cours des années pour étudier ces problèmes. Le chômage augmente, les salaires baissent, nos usines ferment leurs portes et nos gens quittent la région de l'Atlantique en très grand nombre.

La puissance économique fait faux jeu au Canada, car elle concentre ses placements au Québec et particulièrement dans l'Ontario où se trouve une grande partie de la population du Canada. Elle peut réaliser de plus grands bénéfices en concentrant les usines et les services dans cette région, où abondent les matières premières et où les frais de transport sont moindres.

On ne recherche que le dollar et au diable le reste du Canada.

Un ancien ministre des Finances libéral a préconisé de déplacer les gens des provinces de l'Atlantique.

The Department of Manpower has devised a program also along these lines. We have enough leaving on their own initiative without encouragement.

We must have a positive program to counteract this trend or we will have a population consisting of the very young and our older citizen. We will have very few people in the age limit (labour force) that would be in the position to plow something back into our economy. These people were raised, educated and moved out of the Atlantic Provinces.

This means we are subsidizing others with our brawn and our expensive educational investment.

If something is not done quickly, we will have a partial wilderness, and it will become a huge liability for the people to sustain.

At the time of Confederation 1867 we had people asking for Maritime Union. Again 100 years later 1967 we are still asking for the same thing, Maritime Union.

If there was an opportunity for some people to make great benefits by this union it would have been consummated 100 years ago. It is hard to get something done when it is only in the common good.

It appears to us, it is not the matter of the Maritimes opting out of Confederaion. It is a matter of when are we going to get in?

It now appears that the years 1867-1967 was only an exercise in futility as far as the Atlantic Provinces is concerned.

It is now imperative that we have a suitable Transportation Policy.

We therefore request that a Royal Commission be appointed immediately to inquire into all branches of TRANSPORTATION and to recommend a policy so that the Atlantic Provinces will be put in the position to grow and prosper at the rate compared to the rest of Canada.

THE EXPLOITATION OF THE MARITIMES MUST COME TO AN END.

Le ministre de la Main-d'œuvre a établi un programme en ce sens. Il y en a suffisamment qui quittent les Maritimes sans qu'on ne les encourage officiellement.

Il nous faut un programme positif pour contrecarrer cette tendance, sinon nous aurons une population composée de très jeunes et de très vieux citoyens. Nous aurons peu de gens formant la main-d'œuvre qui pourrait être en mesure de rétablir notre économie. Ces gens ont été élevés et éduqués dans les provinces de l'Atlantique, puis en ont été déplacés.

Cela veut dire que nous subventionnons les autres avec notre main-d'œuvre et notre système d'éducation dispendieux.

Si on n'agit pas vite, nous aurons une espèce de désert que les gens auront de la difficulté à soutenir.

Au temps de la Confédération, en 1867, les gens demandaient l'union des Maritimes. De nouveau en 1967, on la demande encore.

Si des gens avaient pu réaliser de gros bénéfices par cette union, celle-ci aurait été faite il y a 100 ans. Il est difficile d'accomplir quelque chose lorsque seul le bien commun est en cause.

A notre avis, il n'est pas question que les Maritimes sortent de la Confédération. Il s'agit de savoir quand nous allons y entrer.

Il semble que les années 1867-1967 aient été futiles en ce qui concerne les provinces de l'Atlantique.

Il importe maintenant que nous ayons un programme de transport approprié.

Nous demandons donc qu'une Commission royale soit nommée immédiatement pour enquêter sur tous les aspects du TRANSPORT et recommander un programme afin que les provinces de l'Atlantique soient en mesure de progresser et de prospérer au même rythme que le reste du Canada.

L'EXPLOITATION DES MARITIMES DOIT PRENDRE FIN.

APPENDIX "H"

CAMPBELLTON CITY COUNCIL BRIEF TO STANDING COMMITTEE ON TRANSPORTATION AND COMMUNICATIONS

The establishment of Canada as a Federal ssytem with a strong central government to overide and resolve geographical and economic disparate conditions, in order that the whole might become a nation made up of equal parts, has been less than successful in economic terms. It is apparent that the Maritime Provinces have lagged behind the rest of Canada in terms of personal incomes, standards of living and economic progress. We here in the northern-most part of the Maritimes, however, in many instances look upon the progress of some of the areas in the Maritimes with a great deal of envy. Indeed it may be stated that if there is to be found in the Maritimes a sense of frustration, then it is fair to say that in Northern New Brunswick that sense of frustration is compounded by the fact that we have here less industry, less educational facilities, less community services and lower standards of living than the rest of the Maritime Provinces themselves. And so it may be said that if Confederation in economic terms has seemed to be less than a success to the Maritimer, then it has seemed to us in the north to have been a complete failure.

Our problem quite simply is geography. We have three basic markets for our products: export to foreign countries by sea transport; export to Eastern United States markets by highway, sea and rail; and the Central Canadian market by highway, sea and rail. Our most successful industries are those which export to other nations by sea transport, notwithstanding the fact that our competitive position is eroded by a subsidized St. Lawrence Seaway, which allows central Canadian shippers to ship to our traditional export markets under equalized ocean transport rates. An example of the latter is the fact that ocean transport rates from Central Canada to Bermuda are the same as from Halifax to Bermuda. We do not complain too much about our transportation to our Eastern U.S. markets because, for a variety of rea-

APPENDICE «H»

MÉMOIRE DU CONSEIL MUNICIPAL DE CAMPBELLTON AU COMITÉ PERMANENT DES TRANSPORTS ET DES COMMUNICATIONS

La constitution du Canada en fédération, avec un gouvernement central fort pour surmonter les difficultés et résoudre les problèmes dus aux conditions géographiques et économiques disparates, afin que l'ensemble puisse devenir une nation composée de parties égales, n'a pas été très heureuse au point de vue économique. Il est évident que les provinces maritimes sont bien en retard sur le reste du Canada sur le plan du revenu des particuliers, du niveau de vie et du progrès économique. Toutefois, nous qui vivons dans la partie la plus septentrionale des Maritimes voyons souvent avec beaucoup d'envie les progrès réalisés dans certains autres secteurs de notre région. En effet, on peut affirmer que s'il existe dans les Maritimes un sentiment de frustration, dans le nord du Nouveau-Brunswick ce sentiment est en partie dû au fait que nous avons ici moins d'industrie, moins de possibilités d'éducation, moins de services communautaires et un niveau de vie plus bas que le reste des provinces maritimes elles-mêmes. On peut donc dire que si, pour l'habitant des provinces maritimes, la Confédération ne semble pas avoir été un succès du point de vue économique, pour nous, qui vivons dans le nord de la région, elle a été un échec complet.

Notre problème est simplement d'ordre géographique. Nous avons trois marchés principaux pour nos produits: nous exportons à l'étranger par voie maritime; vers l'est des États-Unis et vers le centre du Canada par route, par mer et par chemin de fer. Nos industries les plus prospères sont celles qui exportent vers d'autres nations par voie maritime, en dépit du fait que la voie maritime du Saint-Laurent, qui est subventionnée et permet aux affréteurs du centre du Canada d'expédier vers nos marchés d'exportation traditionnels à des tarifs maritimes compensés, nuit à notre position compétitive. Ainsi, les prix de transport par mer du centre du Canada aux Bermudes sont les mêmes que de Halifax aux Bermudes. Nous ne nous plaignons pas trop des expéditions que nous effectuons vers les marchés de l'est des États-Unis car,

sons, we are relatively competitive with Central Canada, notwithstanding the fact that our highway systems need to be greatly improved and notwithstanding the fact that Confederation requires us to buy from Central Canadian manufacturers as opposed to Eastern U.S. manufacturers. However, we do strongly submit that, in the context of Confederation and what it was meant to be and our role in it, we are unable to compete in our own country simply because of our geographical position in it. There are sound economic reasons for the development of industrialized centres in Central Canada which industrialization has led to the high standards of living and prosperity of those areas. It is our contention that we in the Maritimes, having been forced by tariff walls which exist between the U.S.A and Canada to buy from the Central Canadian market, have reinforced the growth potential of Central Canadian industry and at the same time we have been denied effective access to those central markets by a national transport policy that has not taken our geographical location into account.

If Confederation means anything and if the Federal Government is truly concerned about the establishment of economically viable industry in the Maritime Provinces with a resulting higher standard of living here, then it must take steps to alter national transport policy to overcome our geographical disadvantage. We have the human resources and the natural resources to set up economically viable industry in our Atlantic region, provided those industries are able to compete in Central Canadian markets through lower transportation costs. In other words, the business enterprise making Kleenex in Truro, N.S., should, through subsidized transportation, be in the same economic competitive position vis-à-vis transport as his competitor making the same product in Brockville, Ont., both shipping to the Toronto market. Without going into detail with regard to the Maritime Freight Rates Act of 1927, it is quite obvious that it has failed to carry out its intended role. It is our contention that it needs amending or indeed there needs to be a wholesale review of subsidies being paid to transport facilities servicing the Atlantic region.

Campbellton is the headquarters of the CNR Chaleur Area, and we are very proud of our rail facilities. This is not to say that there could not be improvements in the services which are rendered to us by the CNR. We naturally complain when the Ocean Limited

pour de nombreuses raisons, nous pouvons à peu près concurrencer le centre du Canada en dépit du fait que notre système routier a grandement besoin d'être amélioré et que la Confédération nous oblige à acheter aux fabricants du centre du Canada au lieu d'acheter à ceux de l'est américain. Toutefois, nous constatons que dans le contexte de la Confédération, de ce qu'elle devait être et du rôle que nous devions y jouer, il ne nous est pas possible de soutenir la concurrence dans notre propre pays, en raison de notre situation géographique. De solides raisons économiques ont conduit à l'industrialisation de certaines régions du centre du Canada, industrialisation qui a apporté avec elle la prospérté et un niveau de vie plus élevé. Nous estimons que nous, qui vivons dans les provinces maritimes, avons aidé à cette croissance de l'industrie du centre du Canada, ayant été forcés par les barrières tarifaires qui existent entre les États-Unis et le Canada, à acheter à ce marché; en même temps, nous nous sommes vu refuser l'accès à ces marchés centraux par une politique nationale des transports qui n'a pas tenu compte de notre situation géographique.

Si la Confédération a un sens et si le gouvernement fédéral se préoccupe vraiment de l'établissement d'une industrie économiquement viable dans les provinces maritimes, ce qui ferait monter notre niveau de vie, il doit prendre des mesures pour modifier la politique nationale des transports et nous permettre de surmonter nos difficultés géographiques. Nous avons dans notre région atlantique des ressources humaines et naturelles suffisantes pour établir une industrie rentable, à condition que cette industrie puisse faire concurrence aux marchés du centre du Canada, grâce à des coûts de transport moins élevés. En d'autres termes, l'entreprise qui fabrique les produits *Kleenex* à Truro (Nouvelle-Écosse) devrait, grâce à des subventions de transport, se trouver dans une position compétitive, au point de vue transport, par rapport à sa concurrente de Brockville (Ontario) sur le marché de Toronto. Sans entrer dans les détails de la loi de 1927 sur les taux de transport des marchandises dans les provinces maritimes, je dirai que, de toute évidence, elle n'a pas rempli le rôle qui lui était prévu. A notre avis, elle a besoin d'être modifiée ou alors il faudrait revoir l'ensemble des subventions payées aux transports desservant la région atlantique.

Campbellton est le siège du district des Chaleurs du Canadien-National et nous sommes très fiers de nos installations ferroviaires. Cela ne veut pas dire que les services du Canadien-National ne pourraient pas être améliorés. Nous nous plaignons bien entendu

is taken off its normal route through the northern part of New Brunswick because we are deprived of one of our traditional means of transport both West and East. We naturally feel there could be improvements in express and freight movement in our area. The CNR is certainly not without its problems, the same as any other corporation in our society. The difference is that it is a national public company, operating under a national transport policy. We therefore reserve our strongest criticisms for a national transport policy which has forced the CNR to restrict its services to our area; for example, which has forced the CNR to save money and reduce service by re-routing the Ocean Limited; which has forced the CNR to charge high freight rates to the detriment of the whole Atlantic region. The CNR is merely an instrument of national transport policy as it affects the Maritime region. I think it is true to say that the appointment of Donald Gordon as President of the CNR in the 1950's signalled a dramatic change in the CNR from a rather lethargic organization into one of the finest railroads on the North American Continent. From the President down to the ticket-taker, a new spirit was instilled for more efficiency, based on a single motivation—profit. This challenge to make a profit has in fact made the CNR much more efficient, but unfortunately it has also detracted from the CNR's own image of itself as a public corporation acting in the public interest. It has now become so bad that most executives of the CNR no longer have the public interest at heart, but rather the profit of their railroad. The profit motive has substantially detracted from the CNR's proper public role. We maintain that this is where national transport policy must come to bear insofar as it relates to rail facilities. It is our view that it would be dangerous to the efficiency of the railroad to destroy the motivations which have assisted in making our publicly owned corporation efficient and competitive. We do feel however, that it is important to find some form of governmental machinery that will maintain these motivations and yet allow the Atlantic Provinces to compete successfully in a central Canadian market. Whether subsidies are paid to the shipper or through some other system to the CNR is for you to decide. Our firm belief is that the CNR can indeed remain competitive and efficient and at the same time the Atlantic Provinces can also have economically viable industry, based on lower freight rates as a rational basis of national transport policy. Indeed we would even go so far as to suggest that a crash program to attract industry to the Atlantic Provinces include giving consideration to charging merely token

de ce que l'*Ocean Limited* doive modifier son itinéraire normal à travers la partie septentrionale du Nouveau-Brunswick, car nous sommes privés d'un de nos moyens de transport traditionnels tant dans l'est que dans l'ouest. Nous estimons, naturellement, que le mouvement des messageries et des marchandises pourrait être amélioré dans notre région. Le Canadien-National n'est certainement pas sans avoir ses problèmes de même que toute autre société. La différence est qu'il s'agit d'une entreprise publique nationale exploitée en application d'une politique nationale de transports qui a obligé le Canadien-critiques les plus vives à la politique nationale de transports qui a obligé le Canadien-National à réduire ses services dans notre région, qui, par exemple, a obligé le Canadien-National à économiser et à réduire son service en imposant un nouvel itinéraire à l'*Ocean Limited*; qui a obligé le Canadien-National à imposer des tarifs élevés pour le transport des marchandises, au détriment de toute la région atlantique. Le Canadien-National n'est qu'un instrument de la politique nationale des transports en ce qui concerne la région des provinces maritimes. Je pense qu'il est juste de dire que la nomination de Donald Gordon comme président du Canadien-National, dans les années 1950, a été le signal d'un changement radical; d'une organisation plutôt léthargique, le Canadien-National est devenu un des meilleurs chemins de fer du continent nord-américain. Depuis le président jusqu'au bas de la hiérarchie, tous font preuve d'une efficacité nouvelle fondée sur une motivation unique: le profit. Cette ambition—réaliser un profit—a certes rendu le Canadien-National plus efficace; malheureusement, il a aussi effacé l'image que l'on s'en faisait, soit celle d'une entreprise publique agissant dans l'intérêt public. La situation est telle qu'à l'heure actuelle, la plupart des dirigeants du Canadien-National n'ont plus à cœur l'intérêt du public, mais l'intérêt de leur chemin de fer. L'intérêt a éloigné le Canadien-National de son rôle vis-à-vis du public. Nous maintenons que c'est là que la politique nationale des transports doit intervenir en ce qui concerne les installations ferroviaires. A mon avis, il nuirait à l'efficacité du chemin de fer de détruire les motivations qui ont aidé à rendre cette entreprise efficace et compétitive. Toutefois, nous estimons qu'il est important que le gouvernement trouve un moyen de maintenir ces motivations, tout en permettant aux provinces atlantiques de soutenir la concurrence sur le marché du centre du Canada. C'est à vous de décider si les subventions doivent être payées à l'expéditeur ou au Canadien-National par quelque autre moyen. Nous croyons fermement que le Canadien-National

freight charges on goods moving into Central Canada.

We have dealt mainly with rail transport as the basis of our brief, as it is the most utilized means of transport in our region. It has this position mainly because of the fact that our highway systems are inferior and inadequate and we have no air transport facilities whatsoever. Our Chamber of Commerce Brief has indicated the importance which we attach to a Second Trunk Trans-Canada Highway, not only to improve our means of transporting our products to market and improve opportunities for our tourist industry, but also as a means of allowing for more effective urbanization. As an area of scattered population, it only makes good sense to make our investment in school, medical, commercial and cultural facilities more centralized in order to gain the most from that investment. However, in order to make this socially acceptable and indeed practical, then modern high-speed highways are a prerequisite.

Because of our remote geographical location both in relation to the rest of the Atlantic Provinces and in relation to Central Canada, our ability to grow industrially and commercially depends to a large extent on our accessibility to these other areas. It is very difficult for American or Canadian manufacturers to establish industry here even though they might like to, because of the absence of air transport facilities, both passenger and air express, to service their needs. This is to say nothing of the difficulties involved in getting to the major market places by our own business people from here. An adequate passenger and air express service linking this northern region to both Central Canada and the rest of the Maritimes is a fundamental necessity if we are to create a necessary economic activity to improve our standards of living. We are not suggesting here that Air Canada provide this service. We are suggesting, however, that our airport facilities are completely inadequate to allow for even secondary carriers to carry out this role. In this regard we feel that complete review should be made of Air Canada's policy in the Maritimes, giving full consideration to the allowance of local airlines to feed Air Canada pas-

peut demeurer efficace et compétitif et que les provinces maritimes peuvent, en même temps, avoir une industrie viable du point de vue économique, grâce à des tarifs de transport moins élevés, résultat d'une politique nationale des transports rationnelle. Nous irions même jusqu'à suggérer qu'un programme soit rapidement mis à exécution pour attirer l'industrie dans les provinces atlantiques et qu'il envisage la possibilité d'établir des prix de transport purement symboliques pour les marchandises expédiées vers le centre du Canada.

Le transport par chemin de fer a fait l'objet principal de notre mémoire, car c'est le moyen de transport le plus utilisé dans notre région. Cela est dû au fait que notre système routier est mauvais, insuffisant et que nous n'avons pas d'installations de transport aérien. Le mémoire de notre Chambre de commerce a souligné l'importance que nous attachons à une seconde route transcanadienne, non seulement pour faciliter le transport de nos marchandises vers les marchés et améliorer notre industrie touristique, mais aussi pour aider à l'urbanisation. Ayant une population très dispersée, il ne nous semble raisonnable d'investir que dans des installations scolaires, médicales, commerciales et culturelles plus centralisées, afin de retirer le plus possible de cet investissement. Mais, pour que cela puisse être acceptable du point de vue social et, en fait, possible, une route moderne à grande circulation est une condition préalable.

En raison de notre situation géographique éloignée tant du reste des provinces atlantiques que du centre du Canada, la possibilité que nous avons de nous développer au point de vue industriel et commercial dépend dans une large mesure de la commodité d'accès de ces autres régions. Il est très difficile aux fabricants américains ou canadiens de créer une industrie, dans notre région, même s'ils le désirent, étant donné l'absence de transports aériens tant pour les voyageurs que pour les marchandises. Sans parler des difficultés auxquelles doivent faire face nos hommes d'affaires lorsqu'ils veulent se rendre sur les marchés importants. Un service aérien de voyageurs et de marchandises adéquat, reliant notre région septentrionale au centre du Canada et au reste des provinces maritimes est vraiment essentiel si nous voulons créer une activité économique et améliorer notre niveau de vie. Nous ne disons pas qu'Air Canada doit rendre ce service. Mais nous disons que nos aéroports sont tout à fait insuffisants pour que des transporteurs même d'importance secondaire puissent jouer ce rôle. A cet égard, nous estimons que la politique d'Air Canada dans les provinces maritimes devrait être soigneusement examinée et

sengers from the north, at central places on Air Canada's through-route system.

In summation, we feel that national transport policy should be amended to take into consideration the difficult geographical position of the Atlantic Provinces. The economic disparity which exists here is caused by a lack of viable industry. The large volumes of Federal money which are spent on such things as designated area grants and subsidies to individual industries will never be successful until is realized that the basis of our economic problem is our geographical transport problems. It is our firm conviction that the Maritime Provinces have the talents and the resources to compete, providing the geographical considerations of transport are eliminated.

Respectfully submitted,

THE CAMPBELLTON CITY COUNCIL
CAMPBELLTON, N.B.

qu'il faudrait envisager la possibilité de permettre aux lignes aériennes locales de pourvoir Air Canada en passagers en provenance du nord, à des endroits centraux, sur le système de transit d'Air Canada.

En résumé, nous estimons que la politique nationale des transports devrait être revue pour tenir compte de la situation géographique difficile des provinces atlantiques. Les inégalités économiques existant ici sont dues à l'absence d'une industrie viable. Les sommes importantes dépensées par le gouvernement fédéral pour les subventions aux régions désignées et les subventions aux industries privées ne donneront jamais de bons résultats si l'on ne réalise pas que notre problème économique est la conséquence de nos difficultés de transport. Nous avons la ferme conviction que les provinces maritimes ont les ressources et les qualités nécessaires pour soutenir la concurrence, à condition que les problèmes de transport, dus à notre situation géographique, soient résolus.

Respectueusement,

Le Conseil Municipal de
Campbellton (Nouveau-Brunswick).

MINUTES OF PROCEEDINGS

WEDNESDAY, February 19, 1969.
(19)

The Standing Committee on Transport and Communications met this day at 9:30 a.m. in Halifax, Nova Scotia. The Chairman, Mr. H.-Pit Lessard, presiding.

Members present: Messrs. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), McGrath, Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*)—(20).

Also present: Mr. J. M. Forrestall, M.P., Mr. Louis Comeau, M.P.

In attendance: From Canadian Transport Commission: Mr. Joseph Hanley.

Witnesses: From the Yarmouth Board of Trade: Messrs. R. B. Killam, Past President and C. R. Hurst, Past President. *From the Provincial Government of Nova Scotia:* Dr. T. J. McKeough, Minister of Trade and Industry; Mr. J. O. Millard, Executive Assistant to the Minister of Highways. *From the Sydney Regional Harbour Development Board:* Messrs. Bruce MacDonald and James J. MacDonald. *From the Society of Atlantic Initiative:* Messrs. F. M. Waller; A. J. Unsworth and T. Boswick. *From the Cape Breton Regional Planning Commission:* Messrs. Frank Hickey, Chairman; W. B. Thomson, Director of Regional Planning. *From the Sydney Steel Corporation:* Messrs. Arnold Hicks. *From Moirs Limited:* Messrs. Clarence C. Ivey, Vice-President and Ronald N. Pugsley, Solicitor.

The Chairman invited Premier Smith of Nova Scotia to make an opening statement.

Following these remarks the Chairman introduced the witnesses and requested them to summarize their respective briefs before being questioned thereon.

(*See Appendix "I"*) for Sydney Steel brief.

PROCÈS-VERBAUX

Le MERCREDI 19 février 1969
(19)

Le Comité permanent des transports et des communications se réunit ce matin à 9 h. 30, à Halifax (N.-É.), sous la présidence de M. H.-Pit Lessard.

Présents: MM. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), McGrath, Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel et Turner (*London-Est*)—(20).

De même que: MM. J. M. Forrestall et Louis Comeau, députés.

Assistait à la réunion: de la Commission canadienne des Transports: M. Joseph Hanley.

Aussi présents: de la Chambre de commerce de Yarmouth: MM. R. B. Killam et C. R. Hurst, anciens présidents; *du gouvernement provincial de la Nouvelle-Écosse:* M. T. J. McKeough, ministre du Commerce et de l'Industrie, et M. J. O. Millard, directeur du cabinet du ministre de la Voirie; *du Sydney Regional Harbour Development Board:* MM. Bruce MacDonald et James J. MacDonald; *de la Society of Atlantic Initiative:* MM. F. M. Waller, A. J. Unsworth et T. Boswick; *de la Cape Breton Regional Planning Commission:* MM. Frank Hickey, président, et W. B. Thomson, directeur de la planification régionale; *de la Sydney Steel Corporation:* M. Arnold Hicks; *de la Moirs Limited:* MM. Clarence C. Ivey, vice-président, et Ronald N. Pugsley, avocat.

Le président invite le premier ministre de la Nouvelle-Écosse, M. Smith, à prononcer une déclaration liminaire.

Ensuite, le président présente les témoins et leur demande de résumer leurs mémoires respectifs avant d'être interrogés.

(*Voir l'appendice «I»*)—mémoire de la *Sydney Steel*

29691—1½

(*See Appendix "J"*) for Moirs Limited brief.

At 12:35 o'clock p.m. the Committee adjourned until 2:00 p.m. this day.

AFTERNOON SITTING
(20)

The Standing Committee on Transport and Communications met this afternoon at 2:05 p.m., in Halifax, Nova Scotia. The Chairman, Mr. H.-Pit Lessard, presided.

Members present: Messrs. Allmand, Breau, Carter, Corbin, Godin, Horner, Lessard (*LaSalle*), Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*)—(19).

Witnesses: From the Port of Halifax Commission: Messsr. Ray March, secretary; J. L. Grice, Traffic Analyst and Peter Dorrington, Assistant Executive Secretary. *From the Annapolis Valley Food Processors:* Messrs. A. E. Calkin; R. J. McGrath; L. Javorek; John Egan; and Vlad Fejtek. Mr. L. B. Sellick, *Private Citizen.*

The Chairman introduced the witnesses and asked them to summarize their respective briefs before being questioned thereon.

At 4:00 p.m. the Committee adjourned until 8:00 o'clock p.m. this evening.

EVENING SITTING
(21)

The Standing Committee on Transport and Communications met this day at 8:05 p.m. in Halifax, Nova Scotia. The Chairman, Mr. H.-Pit Lessard, presided.

Members present: Messrs. Allmand, Breau, Carter, Corbin, Godin, Lessard (*LaSalle*), Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg, Thomas (*Moncton*), Trudel, Turner (*London East*)—(18).

Also present: Mr. Louis Comeau, M.P.

Witnesses: From the Halifax Board of Trade: Mr. George B. Robertson, Vice-President. *From the City of Dartmouth:*

(*Voir l'appendice «J»*)—mémoire de la *Moirs Limited*

A midi et 35 minutes, la séance est levée jusqu'à 14 heures.

SÉANCE DE L'APRÈS-MIDI
(20)

Le Comité permanent des transports e des communications se réunit à 14 h. 05 à Halifax (N.-É.), sous la présidence d M. H.-Pit Lessard.

Présents: MM. Allmand, Breau, Carter Corbin, Godin, Horner, Lessard (*LaSalle*) Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg Thomas (*Moncton*), Trudel et Turner (*London-Est*)—(19).

Témoins: du Conseil du port de Halifax MM. Ray March, secrétaire, J. L. Grice analyste du trafic, et Peter Dorrington secrétaire exécutif adjoint; *de l'Annapolis Valley Food Processors:* MM. A. E. Calkin R. J. McGrath, L. Javorek, John Egan Vlad Fejtek; *à titre de simple citoyen:* M. L. B. Sellick.

Le président présente les témoins et leur demande de résumer leurs mémoires respectifs avant d'être interrogés.

A 16 heures, la séance est levée jusqu'à 20 heures.

SÉANCE DU SOIR
(21)

Le Comité permanent des transports et des communications se réunit ce soir à 8 h. 05 à Halifax (N.-É.), sous la présidence de M. H.-Pit Lessard.

Présents: MM. Allmand, Breau, Carter, Corbin, Godin, Lessard (*LaSalle*), Mahoney, Nesbitt, Nowlan, Perrault, Portelance, Pringle, Rock, Rose, Skoberg Thomas (*Moncton*), Trudel et Turner (*London-Est*)—(18).

De même que: M. Louis Comeau, député.

Aussi présents: de la Chambre de commerce de Halifax: M. George B. Robertson, vice-président; *de la ville de Dar*

Mayor Roland J. Thornhill and Messrs. M. E. Lloyd, Director of Planning, and Paul Morash, President of Dartmouth Chamber of Commerce. *From the Voluntary Planning Board of Nova Scotia:* Messrs. J. R. (*Voir l'appendice «P»*)—mémoire de la *Surrette Battery Company.*

Le président remercie les témoins et, à 15 h. 45, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Robert Normand,
Clerk of the Committee.

[*Texte*]

EVIDENCE

(*Recorded by Electronic Apparatus*)

The Chairman: Ladies and gentlemen, I welcome you all to this first sitting this morning in Nova Scotia of the Transport Committee. Before going any further I would like to call upon a man most of you know, the Premier of this province, the Hon. Mr. G. I. Smith, to come forward to say a few words to you.

Hon. G. I. Smith (Premier, Nova Scotia): Mr. Chairman, gentlemen, it is an honour to have this Committee with us and to be allowed a moment to say a word or two to you.

I want to offer you the very warmest welcome to Nova Scotia. We are very encouraged to have the House of Commons sufficiently concerned with the transportation problems in this region to arrange for your mission here, and we remember, of course, it is the second mission. We think it is particularly a mark of interest to renew the expedition which was not quite finished on another occasion. I want to say that we down here believe that transportation is one of the fundamental keys to our hope of making faster progress than heretofore has been our fortune. We are, therefore, particularly delighted that the House of Commons is taking it so seriously.

The Minister of Trade and Industry of the province, Dr. T. J. McKeough, will seek an opportunity to say just a word or two to you. All I want to say now is that we are glad to have you here. I am glad to see so many people from so many different parts of the province here and I expect many of them will have things they want to place before you. I want to assure you that if there is any way in which we can be helpful, whether in small matters or larger ones, you have but to let us know and what we can do we will do cheerfully and gladly. May your deliberations be very successful, and you have our warmest wishes. Thank you.

The Chairman: Thank you very much, Premier Smith for your kind words. I will have to repeat what I have said every day since we started this tour and I hate to do it because I must ask everybody who has a

[*Interprétation*]

TÉMOIGNAGES

(*Enregistrement électronique*)

Le président: Mesdames et messieurs, j'aimerais vous souhaiter à tous la bienvenue à la première réunion ici ce matin du Comité permanent des transports et des communications. Avant d'aller plus loin je demanderai à quelqu'un qui est connu de la plupart d'entre vous, en l'occurence le premier ministre de la province, l'honorable G. I. Smith, de venir vous dire quelques mots.

Hon. G. I. Smith (premier ministre de la Nouvelle-Écosse): Monsieur le président, messieurs. Je suis heureux de voir le Comité parmi nous et de pouvoir vous adresser quelques mots.

Je voudrais vous souhaiter la plus cordiale bienvenue ici en Nouvelle-Écosse. Nous sommes très encouragés de voir la Chambre des communes se préoccuper suffisamment du problème des transports dans notre région pour que vous veniez ici. Évidemment nous nous souvenons que c'est la deuxième mission qui vient ici. Nous considérons comme une preuve d'intérêt le fait que le Comité fasse un nouveau voyage pour terminer ce qui avait été interrompu à une autre occasion. J'aimerais dire que nous croyons ici que les problèmes du transport sont la clé vraiment essentielle si nous voulons pouvoir faire plus de progrès que nous n'en avons fait par le passé. En conséquence nous sommes tout particulièrement heureux du fait que la Chambre des communes étudie ce problème de façon aussi sérieuse.

Le ministre du Commerce et de l'Industrie de la province, M. T. J. McKeough, essaiera de vous dire quelques mots. Tout ce que je veux vous dire pour le moment c'est que nous sommes très heureux de vous accueillir. Je suis très heureux de voir tant de gens des diverses régions de la province ici ce matin, et j'imagine qu'on aura plusieurs problèmes à vous poser. Je veux vous assurer que s'il y a le moindrement moyen de vous être utile en de petits détails ou en d'autres choses, veuillez nous l'indiquer, et nous le ferons volontiers. Et j'espère que vos délibérations seront couronnées de succès et vous avez nos meilleurs vœux. Je vous remercie.

Le président: Je vous remercie, monsieur le premier ministre de ces paroles bienveillantes. J'aimerais répéter encore une fois ce que j'ai dit à tous les jours depuis que nous avons commencé la tournée. Je n'aime pas le faire,

[*Text*]

brief to present this morning to try to be as brief as they can, because we have about 40 briefs to hear between now and tomorrow at six o'clock. I would hate to leave Halifax not having heard some of the briefs.

Once again I ask those people who are going to present briefs to be as brief as you can on your presentation. As you know, we have had most of these briefs for about a year in Ottawa. Most of them were studied by the Committee and I believe this will give the members of the Committee the opportunity of putting more questions to you, and I believe this will be a great help to us in making our report.

Our first brief this morning is from The Yarmouth Board of Trade and I will call upon the gentlemen to come forward. Page 661 of the Minutes of Proceedings. Mr. Killam is going to give us a brief summary before you ask questions.

Mr. R. B. Killam (Past President, The Yarmouth Board of Trade): Mr. Chairman, ladies and gentlemen, on behalf of the Board of Trade I want to thank the Transportation Committee for the acceptance of our brief and for the arrangements for us to appear here this morning. I just propose to read the resolution which was presented, touch on one or two items in the brief and then I would be prepared to answer questions either at this meeting, or if any member of the staff that is here wishes to ask me any questions afterwards, I will be prepared to stay and do what I can.

WHEREAS the greatest potential for future development in Western Nova Scotia is associated with the fishing industry, the tourist industry, and the agricultural and industrial products industries;

AND WHEREAS the markets for the fishing and agricultural and industrial products industries are largely the United States and Central Canada;

AND WHEREAS the tourist potential is also largely in the United United States and Central Canada;

AND WHEREAS adequate water transportation is essential to the development of all these industries;

AND WHEREAS existing water transportation is grossly inadequate to service these needs;

[*Interpretation*]

mais c'est nécessaire. J'aimerais demander à tous ceux qui ont des mémoires à présenter ce matin, d'être aussi brefs que possible car nous avons environ quarante mémoires à entendre ici, de ce matin à demain soir six heures. Je n'aimerais pas devoir quitter Halifax sans avoir entendu certains mémoires.

Encore une fois je demanderais à tous ceux qui doivent présenter des mémoires d'être aussi rapides et aussi brefs que possible dans la présentation. Comme vous le savez, nous avons ces mémoires depuis un an environ, la plupart ont été étudiés par les membres du comité et j'ai l'impression que cela donnera l'occasion aux membres du comité qui sont ici, de vous poser encore plus de questions. C'est en fait en vous posant plus de questions que cela nous aidera beaucoup à faire notre rapport.

La première présentation de mémoires ce matin nous vient de la Chambre de commerce de Yarmouth. Et je demanderais donc aux messieurs de se présenter. Page 661 du procès verbal. M. Killam va nous donner un bref résumé avant la période de questions.

M. R. B. Killam (ex-président de la Chambre de commerce de Yarmouth): Monsieur le président, mesdames et messieurs. J'aimerais remercier, au nom de la Chambre de commerce, le Comité des transports d'avoir accepté notre mémoire et d'avoir pris les dispositions voulues pour que nous puissions comparaître devant vous ce matin. Je propose tout simplement de vous lire la résolution qui a été présentée et traiter d'une ou deux choses dans le mémoire et ensuite je pourrais répondre à des questions, soit à la présente réunion, ou s'il y a un autre membre du personnel qui est ici et désire me poser des questions, je serais prêt à faire tout ce que je peux.

ATTENDU que le développement futur de l'ouest de la Nouvelle-Écosse dépend principalement de la pêche, du tourisme et des produits de l'agriculture et de l'industrie;

ATTENDU que les États-Unis et le centre du Canada constituent pour une grande part les marchés de la pêche, de l'agriculture et de l'industrie;

ATTENDU que les touristes viennent aussi en grande partie des États-Unis et du centre du Canada;

ATTENDU qu'il faut des transports maritimes convenables pour que ces industries prennent de l'expansion;

ATTENDU que les transports maritimes actuels ne satisfont absolument pas aux exigences de ces industries;

[*Texte*]

BE IT RESOLVED that the Yarmouth Board of Trade earnestly petitions the House of Commons Standing Committee on Transport and Communications to consider and report on means of improvement of the water transportation

(1) between Yarmouth and New England

(2) between Digby, Nova Scotia and Saint John, New Brunswick

In the literature or information which accompanied this resolution, there are two points to which I want to refer. One is the question of the replacement of the motor vessel Bluenose. The last time, in the process of getting the Bluenose for Western Nova Scotia, which, as I think all of you know, runs between Bar Harbour, Maine, and Yarmouth, Nova Scotia, I think the various stages of discussion took some six to seven years to obtain the Bluenose. It is now 13 or 14 years old. I do not know what the life of a diesel-powered boat is, but in the foreseeable future we will have to think about replacing it.

The other item which we found in the process of gathering our information is that we asked the public travelling in cars coming off the Bluenose, where they were going up Route 1 through the Annapolis Valley, or Route 3 down the South shore. We did not ask them how far up Route 1, or how far down Route 3 they were going; we only asked them if they were going by Route 1 or Route 3.

We asked this question during the month of July until the middle of August and we found that it was of the order of fifty per cent of the people going by Route 1 and fifty per cent going down Route 3. As I said, I do not know how far down either road they were going.

The Board of Trade is also very much concerned with all transportation problems, such as the air facilities in and out of Yarmouth, the rail facilities, the cost of rail freight, and so on. So, we feel that our particular contribution to this Committee should be strongly concerned with times which very basically affect the Western Nova Scotia in particular, rather than the whole of the Maritimes. That is why we have concentrated our brief on water transportation problems between Yarmouth, or Western Nova Scotia as far as Digby is concerned, and we consider that a Western Nova Scotia problem.

If there is any member of the Committee who would like to ask a question, I will do

[*Interprétation*]

IL EST RÉSOLU que la Chambre de Commerce de Yarmouth prie instamment le Comité permanent de la Chambre des Communes sur les transports et les communications de mener une étude et de faire rapport sur les moyens d'améliorer les transports maritimes

(1) entre Yarmouth et la Nouvelle-Angleterre,

(2) entre Digby (Nouvelle-Écosse) et St-Jean (Nouveau-Brunswick).

Dans la documentation qui se trouvait avec la résolution il y a deux points auxquels je voudrais me reporter. Tout d'abord la question du remplacement du navire à moteur Bluenose. La dernière fois qu'on a parlé d'obtenir le Bluenose pour l'ouest de la Nouvelle-Écosse, dont le parcours va de Bar Harbour (Maine) et Yarmouth (Nouvelle-Écosse) je crois que cela a pris six ou sept ans pour l'obtenir. Il a maintenant 13 ou 14 ans. Je ne sais pas quelle est la vie ou la durée d'un navire à moteur, mais ce serait maintenant le moment de songer à son remplacement.

La deuxième chose que nous avons trouvée en réunissant notre documentation, c'est que nous avons demandé aux gens débarquant du Bluenose s'ils empruntaient la route numéro 1 à travers la vallée de l'Annapolis ou la route numéro 3 sur la rive sud. Nous n'avons pas demandé jusqu'où ils se rendaient sur la route numéro 1 ou 3, on leur demandait tout simplement quelle route ils devaient emprunter.

Nous avons posé la question à partir du mois de juillet jusqu'au milieu d'août, et quand nous avons terminé nous avons trouvé qu'il y en avait la moitié qui empruntait la route numéro 1, et l'autre qui empruntait la route numéro 3. Comme je vous dis je ne sais pas jusqu'à quel point ils se rendaient sur chacune des routes.

La Chambre de commerce se préoccupe aussi de tous les autres problèmes de transport, comme le service aérien à partir de Yarmouth, le service ferroviaire et le service de marchandises aussi. Mais nous croyons que notre contribution a votre comité devrait porter surtout sur les aspects qui touchent à l'ouest de la Nouvelle-Écosse en particulier plutôt que toutes les provinces des maritimes. La seule raison pour laquelle nous avons insisté surtout sur les problèmes de transport maritime entre Yarmouth, ou l'ouest de la Nouvelle-Écosse et Digby. Nous considérons cela comme un problème de l'ouest de la Nouvelle-Écosse.

S'il y a un membre du comité qui désire poser une question, je répondrai dans la

[*Text*]

my best to answer it. I have a great amount of material here. Whether I do it now or after the meeting, I will be glad to try.

The Chairman: Are there any questions? Mr. McGrath?

Mr. McGrath: Are you satisfied with the rates on the Bluenose? Do you think they should be changed or modified—decreased?

Mr. Killam: We hear a great deal about this question of whether the rates for trucks are too high. I believe in that rate structure it is generally down in the winter time and up in the summertime. In other words, they try to encourage the truck traffic when the number of cars available is at a reduced quantity. However, I hear quite a lot from the trucking industry that they wish the rates were consistent the year round, and I do not think that is the case.

Mr. McGrath: As the Board of Trade, do you think the rates are fair?

Mr. Killam: I do not know just how to answer that sir. So long as the water rates are such that the traffic is encouraged to use it, and our experience has been that at the low rate in the winter time, it is not a dead certainty that it pays. The rates are just at the limit: I would put it that way. If they were higher, I think that a lot of the traffic would go by road, if the roads were not a problem.

Mr. Corbin: What is the normal life expectancy of a ferry of the type of the Bluenose?

Mr. Killam: I have heard the figure 20 years, but I am not in the shipping business and I am afraid I could not give an adequate answer.

Mr. Corbin: You said the Bluenose so far has been 17 years in service?

Mr. Killam: I think that is high. I think it is 13 or 14.

Mr. Corbin: Thirteen, I believe.

Mr. Killam: I believe that is right.

Mr. Corbin: Is there much traffic on the Bluenose going on from Bar Harbour to Central Canada, to Montreal or Toronto, through the American States?

Mr. Killam: I have no figures with me at the present time showing the number of Canadian cars coming across in the Bluenose. I am sure it is available. I could say this, I think without fear of being wrong, that there

[*Interpretation*]

mesure du possible. J'ai beaucoup de documentation ici, et si je puis faire soit maintenant ou soit après la réunion, je serai heureux de le faire.

Le président: Y a-t-il des questions à poser? M. McGrath?

M. McGrath: Êtes-vous satisfait des taux pour le Bluenose? Croyez-vous qu'on devrait les diminuer ou les changer?

M. Killam: Nous entendons parler beaucoup de la question de savoir si les taux pour les camions sont trop élevés. J'ai l'impression que les taux varient, qu'ils sont plus bas en hiver et plus élevés en été. Par conséquent on essaie d'obtenir plus de camions quand le nombre d'automobiles est réduit. Mais, d'après ce que l'industrie du camionnage nous dit, on voudrait que les taux soient uniformes à longueur d'année et je ne crois pas que ce soit le cas.

M. McGrath: Tout comme la Chambre de commerce assumez-vous que les taux soient justes?

M. Killam: Je ne sais pas exactement comment répondre, monsieur. Aussi longtemps que les taux de transport par eau sont tels qu'on encourage les gens à emprunter ce moyen de transport—et surtout en hiver, ce n'est pas surement rentable. Les taux sont presque rendus à la limite. Mais s'ils étaient plus élevés, je crois que plusieurs emprunteraient les routes à condition évidemment que les routes ne posent pas de problèmes.

M. Corbin: Quelle serait la durée normale d'un transporteur du genre du Bluenose?

M. Killam: J'ai entendu parler de 20 ans, mais je ne connais pas le transport maritime. Alors, je ne suis pas en mesure de vous donner de réponse exacte.

M. Corbin: Le Bluenose est en service depuis 17 ans?

M. Killam: Je crois que c'est 13 ou 14 ans.

M. Corbin: Treize, je crois.

M. Killam: Je crois que c'est exact.

M. Corbin: Y a-t-il beaucoup de voyageurs ou de traffic qui débarquent du Bluenose et poursuivent leur route jusqu'au centre du Canada, à travers les États-Unis?

M. Killam: Je n'ai pas les chiffres en main qui vous indiqueraient le nombre d'automobiles qui pourront traverser sur le Bluenose Je crois toutefois que je pourrais vous dire sans me tromper qu'il y a un certain nombre

[*Texte*]

is a substantial number of Quebec and Ontario cars using the Bluenose.

Mr. Corbin: Besides cars what percentage of vehicles using the ferry would be heavy transports.

Mr. Killam: You mean trucks? I am afraid I could not answer that question at all sir.

Mr. Corbin: Thank you.

Mr. Thomas (Moncton): Mr. Chairman, I want to ask the witness two questions. I noticed in your original brief you made reference to the Digby-Saint John run, but you did not say too much about it this morning. Is that because you are satisfied now with the announcement of the new ferry service that is to come on; this is a twice daily run, is it not?

Mr. Killam: I was speaking to Mr. Benoit of the CPR yesterday, just to thank him for his announcement regarding the new ferry. Our Board is in what you might almost call the unfortunate position of having their two main requests almost assured from the time the brief was written until today.

As you know, the CPR announced this new ferry a couple of weeks ago, which we are very pleased to see and it is one of our strong recommendations. We had two: Yarmouth or Digby to Saint John, Yarmouth to New England. The Digby one has been assured and we are very pleased about that, and there is reasonable indication we can look forward to one between Yarmouth and New England.

Mr. Thomas (Moncton): With this increased service on the Digby run and also the fact that this boat will carry large transports, I believe, are you satisfied that your highway network, that is from Digby to Yarmouth and from Yarmouth to, say, the South shore, will be able to carry the increased traffic, or will your road transportation have to be improved?

Mr. Killam: There is no doubt about that. The provincial government is in the process of upgrading the value of the road—Route 1 and Route 3. They have done the biggest improvement from the Halifax end on both of them and they are in the process of continuing that improvement. The sooner it is done, of course, the more value this increased water transportation will have. Right now the roads are not adequate for that particular service.

Mr. Thomas (Moncton): I have one further short question. Have you, or are you contemplating making representations to the CPR regarding rates on the ferries so that trans-

[*Interprétation*]

de Québécois et d'Ontariens qui empruntent le Bluenose.

M. Corbin: A part les automobiles, quel serait le pourcentage de transport lourd.

M. Killam: Si vous parlez des camions je regrette je ne peux pas vous répondre.

M. Corbin: Merci.

M. Thomas (Moncton): J'aimerais demander au témoin juste deux questions. J'ai remarqué que dans votre présentation originale vous avez mentionné la route de Digby à Saint-Jean. Mais, vous n'en avez pas parlé ce matin. Est-ce parce que vous êtes satisfait maintenant que nous avons annoncé les nouveaux services de transporteurs qui auront lieu deux fois par jour, n'est-ce pas?

M. Killam: Je parlais à M. Benoit du CPR hier, pour le remercier de cette annonce d'un nouveau transporteur. Les deux demandes principales de notre Chambre de commerce ont été acceptées presque dès le début.

Comme vous le savez le CPR a annoncé il y a quelques semaines de nouveaux services du traversier. Nous en aurons deux: Yarmouth ou Digby à Saint-Jean, et Yarmouth vers la Nouvelle-Angleterre. Celui de Digby nous est maintenant assuré, et nous en sommes très heureux; nous espérons avoir bientôt celui de Yarmouth à la Nouvelle-Angleterre.

M. Thomas (Moncton): Vu l'augmentation du service sur le parcours de Digby et compte tenu du fait que le traversier doit aussi pouvoir prendre les gros camions, croyez-vous que votre réseau routier c'est-à-dire de Digby à Yarmouth et de Yarmouth vers la rive sud, pourra absorber l'augmentation de la circulation, ou est-ce que vous aurez à améliorer les services routiers?

M. Killam: Il n'y a aucun doute à ce sujet. Le gouvernement provincial à l'heure actuelle améliore la route numéro 1 et la route numéro 3. On a déjà effectué la plus grande amélioration à partir d'Halifax dans les deux sens et on continue les améliorations. Évidemment, le plus tôt on en finira, plus grande sera la valeur du transport par eau. A l'heure actuelle les routes ne suffisent pas.

M. Thomas (Moncton): Une dernière question très brève. Est-ce que vous songez à faire des représentations auprès du CPR à l'égard des taux du traversier afin que les camion-

[*Text*]

port will be able to use it economically? Is there some representation from the Board?

Mr. Killam: The Board has made quite a study on trying to assess the Margison Report. We have not given information to the CPR to show them that the route from Digby to Saint John become very competitive if rates are proportional to mileage based on the present Yarmouth-Bar Harbour mileage. If you could do that rate schedule, you would really have a good competitive service, but we have not conveyed that to the CPR as yet because they only made the announcement, of course, last week.

Mr. Thomas (Moncton): Thank you.

Mr. Comeau: Mr. Chairman, may I ask the witness if he feels that air transport, or the schedule of the flights as it is now, could be improved, and if this is a handicap to the area? I say this because one flight comes in at 12 o'clock in the morning, but the other leaves an hour before, so it is not possible to make a connection.

Do you feel this is a handicap to the shipment of fresh fish, to Upper Canada and so on?

Mr. Killam: Mr. Chairman, I do not think the schedule at the present time is a great handicap regarding transportation of merchandise. What may affect merchandise is the number of flights, rather than the schedule. I would like to suggest that the schedule now used does not meet the needs of people who want to make round trips per day anywhere, and get back within a reasonable length of time. It is not set really for people the way it might otherwise be. It would be a much greater help if it were arranged so that you could go somewhere and get back in a shorter time. The way it is right now you cannot go to Montreal and back without taking three days. You cannot even go to Halifax and back unless you take two days. I think you can get here in the afternoon if you are lucky; you can do a little work and then you have to leave in the morning. So you are almost three days Yarmouth to Halifax, not timewise but schedulewise.

The Chairman: Mr. Skoberg, do you have a question?

Mr. Skoberg: Mr. Chairman, which railroad do you have in your city?

The Chairman: We have a terminus for both of them.

Mr. Skoberg: Do you have any containerization traffic in Yarmouth?

[*Interpretation*]

neurs puissent l'utiliser de façon rentable?

M. Killam: La Chambre a effectué toute une étude lorsqu'elle a voulu évaluer le rapport Margison. Nous n'avons pas encore remis ce rapport au CPR pour indiquer que la route de Digby à Saint-Jean deviendra très concurrentielle si les taux sont en proportions du nombre de milles qui séparent Yarmouth et Bar Harbour. Si vous pouviez établir un tel tarif vous auriez vraiment un service concurrentiel, mais nous n'avons pas encore communiqué ces renseignements au CPR, car évidemment ce n'est que la semaine dernière qu'on a fait l'annonce.

M. Thomas (Moncton): Merci.

M. Comeau: Monsieur le président, est-ce que je pourrais demander au témoin s'il croit que le transport aérien, ou l'horaire des vols à l'heure actuelle, pourrait être amélioré, si c'est là un handicap pour la région? Et je le dis parce que, à l'heure actuelle, il y a un vol qui arrive à minuit, et un autre qui part une heure avant.

Par conséquent, il est impossible d'assurer la liaison et le transport du poisson frais pour le centre du Canada.

M. Killam: Je ne crois pas que l'horaire, monsieur le président, soit un gros handicap pour le transport des marchandises. Ce qui pourrait nuire à ce transport serait plutôt le nombre de vols plutôt que l'horaire, toutefois pour ceux qui veulent faire un voyage aller et retour dans une seule journée l'horaire ne suffit pas à l'heure actuelle. Ce n'est vraiment pas organisé de façon à pouvoir assurer ce genre de transport, cela aiderait beaucoup plus si vous étiez capables de revenir chez vous dans un court délai. A l'heure actuelle, il est impossible d'aller à Montréal et revenir sans prendre trois jours. C'est ce genre de chose dont je parlais. Même à Halifax, il est impossible d'aller à Halifax à moins de prendre deux jours. En fait, vous pouvez vous y rendre dans l'après-midi et faire un peu de travail mais il vous faut partir le lendemain matin, non pas en ce qui concerne le temps mais en ce qui concerne l'horaire.

Le président: Monsieur Skoberg, avez-vous une question à poser?

M. Skoberg: Oui, monsieur le président. Quel chemin de fer dessert votre ville?

M. Killam: Nous avons un terminus de deux.

M. Skoberg: Est-ce que vous avez du transport par cadres?

[*Texte*]

Mr. Killam: There is no containerization traffic that originates there. The CPR have started a piggyback service in which they can put the whole truck on. I do not think there is any facility in Yarmouth to put a container on such as there is in Saint John where the truck drives up and the container goes on. However, you can put a piggyback on the CP.

Mr. Skoberg: There is no demand for it, then?

Mr. Killam: I would not know that sir, but there has not been any great demand so far.

Mr. Skoberg: Are you quite satisfied with the rail traffic into your city?

Mr. Killam: We have adequate transportation to bring all the freight in. The passenger service is lacking. Down the south shore there is a train one day and none the next, but of course there are not many people who use it. Whether they do not use it because the service is bad, or whether they do not use it because they would not use it anyway, I would not know. The CPR coming up the valley has a dayliner service that is quite adequate. It is not patronized as well, of course, as they would like it to be.

The Chairman: I would like to thank you two gentlemen.

Gentlemen if you will allow me to go off the schedule this morning I would like to call on the Province of Nova Scotia. I have on my right Dr. McKeough, who, I believe, has a short brief.

Dr. T. J. McKeough (Minister of Trade and Industry, Provincial Government of Nova Scotia): Mr. Chairman, it is a pleasure for us from the Department of Trade and Industry representing the province to welcome you and your Committee here in Halifax and to Nova Scotia. We realize that you have a very busy schedule in Ottawa and this certainly must have caused you a great deal of difficulty in reorganization to be able to take this time away from your duties in Ottawa.

As you are aware and were likely informed in New Brunswick yesterday and the day before, the four Atlantic Provinces have for the past year been working with a task force to formulate some common policy for the four Atlantic Provinces. We had a meeting as late as last week in Ottawa with the Atlantic Premiers and at that time the task force representative of the four Atlantic Provinces presented their progress up to date.

[*Interprétation*]

M. Killam: Non, il n'y en a pas. A l'origine le CPR a commencé un service rail-route où on peut évidemment mettre tout le camion sur le wagon. Mais je ne crois pas qu'on ait les dispositions voulues pour un conteneur tout comme on en trouve à Saint-Jean. Il n'y a pas de cela à l'heure actuelle, mais c'est possible d'avoir un service rail-route du CP.

M. Skoberg: Il n'y a pas de demande?

M. Killam: Je ne sais pas, monsieur, mais pas une très grande demande jusqu'ici.

M. Skoberg: Êtes-vous satisfait du service ferroviaire pour votre ville à l'heure actuelle?

M. Killam: Nous avons suffisamment de transport pour assurer le service de marchandise. Évidemment, en ce qui concerne les voyageurs, il y a un train une journée et il n'y en a pas le lendemain, mais il n'y a pas tellement de passagers. Est-ce que c'est parce que le service est mauvais ou parce qu'ils n'auraient pas l'intention de l'employer de toute façon, je ne le sais pas. Pour ce qui est du CPR qui remonte la vallée, il y a évidemment un autorail qui vient à tous les jours, mais il n'y a pas tellement de clientèle.

Le président: Je voudrais vous remercier tous les deux, messieurs.

Messieurs, si vous voulez me permettre maintenant de vous faire part de l'horaire prévu, je voudrais demander maintenant aux représentants de la Nouvelle-Écosse de présenter leur mémoire. A ma droite, j'ai M. McKeough et il a un court mémoire, je crois.

M. T. J. McKeough (ministre du Commerce et de l'Industrie de la Nouvelle-Écosse): Monsieur le président, c'est un plaisir pour nous du ministère du Commerce et de l'Industrie de vous souhaiter la bienvenue ici à Halifax et en Nouvelle-Écosse. Nous comprenons que vous avez beaucoup d'affaires à Ottawa et nous vous savons gré d'avoir pris le temps de vous éloigner d'Ottawa pour venir ici.

On vous a appris au Nouveau-Brunswick hier et avant-hier que depuis un an les quatre provinces de l'Atlantique travaillent en collaboration avec un groupe de travailleurs pour essayer d'établir une ligne de conduite uniforme pour les quatre provinces de l'Atlantique. Nous avons eu une réunion la semaine dernière à Ottawa avec les premiers ministres des provinces de l'Atlantique, à ce moment-là le groupe de travailleurs qui représentaient les provinces de l'Atlantique nous ont fait rapport du progrès accompli jusqu'à date.

[*Text*]

We have almost completed our findings and we are supposed to have them completed within a period of another two weeks. At that time we will be prepared to present to the federal government our recommendations, our thoughts on transportation, and we hope this will be a unified report representative of the four Atlantic areas.

We trust this report will be available to your Committee when it is ready and because of it we will not be making any specific representations on behalf of the Province of Nova Scotia, other than to say that our highway requirements of Nova Scotia are very vital to growth and to development of those parts of the province which are away from the main centres.

As you are well aware the Trans-Canada Highway does not touch the western end of our province at all and because of this we have a large expenditure of funds to try to upgrade the highway system and have all-weather roads into the Yarmouth and Digby areas. These roads become much more vital with two ferries, one into Yarmouth and one into Digby. If people are going to ship their goods during the winter months, they certainly need roads which will carry traffic similar to that carried in the summer months. This transport has to be rapid, it has to be fast and it has to be economical.

I wish to emphasize, however, that an adequate and efficient transportation system is essential to development anywhere in Canada and it is absolutely vital here in Nova Scotia. If we are to overcome the problems of distance from the markets in central Canada and if we are to take advantage of our coastal location for international trade, large scale investment in transportation facilities is required. This should be the first priority for a regional development policy.

The chairman of the Maritime transportation Commission has advised you that a report on transportation policy for the Atlantic region is being prepared, as mentioned to you previously. We propose to make a joint presentation to the Hon. Paul Hellyer, because he was the one who requested this report of the Atlantic Premiers a little over a year ago.

One thing we would urge upon you is that the present freeze in noncompetitive freight rates be continued until such time as we have had an opportunity to present this report to the federal government. The freeze is due to be removed on March 23 this year, a little more than one month from now. If this freeze is removed, we feel that there will be a great

[*Interpretation*]

Nous avons presque terminé nos conclusions et nous nous proposons de les terminer d'ici deux semaines. A ce moment-là, nous serons prêts à présenter au gouvernement fédéral nos recommandations, nos idées sur les transports et nous espérons que cela fera un rapport unifié qui sera représentatif de la région de l'Atlantique.

Nous espérons que le rapport sera mis à la disposition de votre Comité quand il sera prêt. En raison de ceci, nous n'avons pas l'intention de formuler des représentations spéciales au nom de la province de la Nouvelle-Écosse, sauf que nous avons des nécessités vitales en matière de transport routier, pour la croissance et le développement de ces régions de la province qui sont éloignées des grands centres.

Comme vous le savez très bien, la route transcanadienne ne touche aucunement à la partie ouest de la province et en raison de cela nous avons dû dépenser beaucoup de fonds pour essayer d'améliorer les routes dans la région de Yarmouth et de Digby. Avec les deux traversiers, l'un à Digby l'autre à Yarmouth, les routes sont d'autant plus essentielles car si les gens veulent expédier leurs produits au cours des mois d'hiver ils doivent nécessairement avoir des routes qui pourront permettre le trafic comme pendant les mois d'été. Ce genre de transport doit être rapide et économique.

Je voudrais insister toutefois sur le fait qu'un réseau de transport adéquat et efficace est essentiel n'importe où au Canada et c'est vraiment vital ici en Nouvelle-Écosse. Si nous voulons éliminer les problèmes de la distance à nos débouchés au centre du Canada et si nous voulons profiter justement de l'avantage de notre emplacement pour obtenir des marchés ailleurs, il nous faut absolument des moyens de transport. Voilà la première priorité pour une politique de développement régional.

Le président de la Commission des transports des Maritimes vous a indiqué qu'on prépare un rapport sur une politique des transports pour la région de l'Atlantique. Nous nous proposons de faire une présentation conjointe à l'honorable Paul Hellyer, car c'est lui qui avait demandé ce rapport de la part des premiers ministres des provinces de l'Atlantique il y a un an.

Nous vous prions de voir à ce que le gel actuel des taux non concurrentiels du transport des marchandises soient maintenus jusqu'au moment où nous aurons eu l'occasion de présenter ce rapport au gouvernement fédéral. Le gel doit être suprimé le 23 mars de cette année, dans un peu plus d'un mois. Si on l'enlève, nous estimons qu'il y aura une

[*Texte*]

increase in freight charges as occurred with the competitive rates in September 1957 when we know that the LCL rates increased quite remarkably.

I am sure that the individual businesses who are appearing before you today can make their case more effectively than any general statement that I could make. However, I would point out that these increases in noncarload rates bear heavily on secondary industries in this province and these industries must be developed if we are to narrow the income gap between ourselves and other parts of Canada.

You will be hearing today from the Voluntary Planning Board which, while appointed by the Government of Nova Scotia, is an autonomous group reflecting the views of the various sectors of the economy and of the general public. As such its submission will be, I am sure, of great interest to this Committee.

Finally, sir, may I repeat that we welcome your visit most warmly. We trust that you will obtain a good understanding of the particular problems that we face and that we shall be afforded a further opportunity to contribute to your deliberations at a later date. I might say, Mr. Chairman, that if there is anything the Department of Trade and Industry could do to facilitate your Committee today please do not hesitate to call upon us.

The Chairman: Thank you very much. You will find the brief on page 571. Mr. Nowlan.

Mr. Nowlan: Thank you very much, Mr. Chairman. The brief at page 571 is exclusively on roads. Is this because your recommendations on general transportation policy are in that task force that is making this report?

Dr. McKeough: The task force, as Mr. Higgins likely told you yesterday, is dealing specifically in detail with railways. We have not done too much on shipment by water. We felt that the four Atlantic provinces had made their submission in relation to roads quite in detail without any cost factors to it and that we should not interfere with it.

Mr. Nowlan: I was glad to hear that you obviously wanted to extend the freeze on

[*Interprétation*]

grande augmentation dans les taux du transport des marchandises comme cela se produit avec les taux concurrentiels depuis septembre 1957 alors que les taux pour les marchandises à chargement incomplet ont augmenté considérablement.

Je suis sûr que les industries individuelles qui comparaissent devant vous aujourd'hui pourront vous présenter de plus forts arguments que je ne saurais le faire. Toutefois, j'aimerais bien dire que ces augmentations dans les taux de transport à chargement incomplet ont influencé de beaucoup les industries secondaires de nore province. Il faut absolument que nous développions ces industries si nous voulons éliminer l'écart qui existe entre nous et les autres parties du Canada.

Vous aurez un mémoire aujourd'hui de l'Office indépendant de planification de Nouvelle-Écosse. Bien que nommé par le gouvernement de la Nouvelle-Écosse, c'est un groupe autonome qui reflète les opinions des divers secteurs de l'économie et du grand public. Cette soumission sera d'autant plus intéressante pour les membres de votre Comité.

En fin de compte, permettez-moi de vous dire que nous vous souhaitons la bienvenue ici. Nous osons croire que vous pourrez comprendre les problèmes particuliers que nous avons ici et que nous aurons une meilleure occasion de contribuer aux délibérations un peu plus tard. S'il y a quoi que ce soit que le ministère de l'Industrie et du Commerce puisse faire pour faciliter votre tâche aujourd'hui, veuillez ne pas hésiter à faire appel à nous.

Le président: Je vous remercie monsieur. Vous trouverez le mémoire en question à la page 571. Monsieur Nowlan.

M. Nowlan: Merci, monsieur le président. Le mémoire qui se trouve à la page 571 traite exclusivement des routes. Est-ce parce que les recommandations sur la politique générale en matière de transport se trouvent devant le groupe de travail qui doit faire rapport?

M. McKeough: Comme M. Higgins vous l'a probablement dit hier, le groupe travaille particulièrement et en détail sur les chemins de fer. Nous n'avons pas fait grand-chose en ce qui concerne le transport par eau, mais nous croyons que les quatre provinces de l'Atlantique avaient déjà fait leur présentation en ce qui concerne les routes en détail et sans frais et nous n'avions pas l'intention de nous ingérer dans ce domaine.

M. Nowlan: Je suis heureux de savoir que vous voulez étendre ou prolonger le gel sur

[*Text*]

LCL rates. Has there been a formal request from the province to Mr. Hellyer to maintain the freeze that is going to expire on March 23?

Dr. McKeough: There was a formal request over the signature of Premier Robichaud which was concurred in by Premier Smith, by Premier Campbell and a representative of Premier Smallwood. The four of them agreed at one time to send this request and they did. They have had no formal response, other than a press release, but it is our understanding that it has been received.

Mr. Nowlan: Dealing with your submission, I have one question on roads which are basically a provincial responsibility. In your experience, has the federal government participated more generously in a road to resources program, or in a road building program under the ADB? In other words, for the Atlantic area does it help more to be a participant in a national program in the sense of roads to resources, or does it actually receive more beneficial treatment if it is in a specific program like the ADB joint road project?

Dr. McKeough: Mr. Millard, who is the Executive Assistant to the Minister of Highways is here and he could likely answer that more effectively than I could. However, I will say that the roads to resources policy was a policy designed to open roads to certain areas, and in Nova Scotia this resource was considered to be the tourist industry as well.

Mr. Nowlan: Or the fish in Digby Neck.

Dr. McKeough: The fish in Digby Neck and extending to tourists. This served a very good basis, because we were dealing with roads that we could never begin to undertake with the resources we have in the province.

The ADB policy was a different policy. There were three different agreements. The first agreement built roads somewhat of the calibre of roads to resources. Then there was a second agreement which increased the quality of the road and the third agreement as well. We are now in the position in Nova Scotia where we have no assistance forthcoming this year, other than to use up the remainder of the three agreements.

Mr. Nowlan: I have only two other questions, Mr. Chairman, because there are a lot of briefs. As the Minister responsible for development of the economy, you mentioned

[*Interpretation*]

les taux de transport par chargement incomplet. Est-ce qu'il y a eu une demande officielle de la province auprès de M. Hellyer pour prolonger ce gel qui doit expirer le 23 mars?

M. McKeough: Il y a une demande officielle qui a été faite par M. Robichaud, le premier ministre du Nouveau-Brunswick, agréée par le premier ministre Smith, le premier ministre Campbell et le représentant du premier ministre Smallwood, mais ils n'ont pas eu de réponse officielle, sauf un communiqué de presse, mais la demande a été reçue.

M. Nowlan: Pour ce qui a trait à la présentation, étant donné que cela traite des routes qui relèvent surtout du domaine provincial ou de la compétence provinciale, d'après votre expérience est-ce que le gouvernement fédéral a participé de façon plus généreuse aux routes vers les ressources ou pour la construction des routes pour l'Office d'expansion économique de la région de l'Atlantique? En d'autres termes, pour la région de l'Atlantique est-ce que cela aide plus de participer à un programme national dans le sens des routes vers les ressources, ou est-ce qu'il est plus avantageux de participer à un programme particulier comme le programme conjoint de routes de l'OEERA?

M. McKeough: M. Millard est ici, mais je pourrais peut-être ajouter que la politique des routes vers les ressources visait la construction de routes vers certaines régions et, en Nouvelle-Écosse, cela visait aussi l'industrie du tourisme.

M. Nowlan: Et la pêche dans la baie de Digby aussi.

M. McKeough: Oui et toute autre industrie aussi. Ce qui est une base essentielle, car il s'agit de routes que l'on ne pourrait jamais entreprendre grâce aux ressources que nous avons ici dans la province.

Mais la politique de l'OEERA était tout à fait différente. Il y a eu trois accords. Le premier concernait les routes comme celle d'accès aux ressources, le deuxième, la qualité des routes, ainsi que le troisième accord. Maintenant, en Nouvelle-Écosse, nous n'avons pas aucune aide cette année sauf ce qui reste des fonds accordés en vertu des trois accords.

M. Nowlan: Deux autres questions, monsieur le président, car il y a beaucoup de mémoires. A titre de ministre responsable du développement de l'économie, vous avez men

Texte]

n your brief about utilizing our geographic osition. This brings to mind the following uestion. Has there been any pressure from ne Atlantic provinces, particularly Nova cotia, to try to get some beneficial rate treatent for the port of Halifax. Now, it does not natter where you land Halifax or Montreal, ne rates are just about the same under the nternational cartel. I wonder if there has een any submission or pressure from the overnment of Nova Scotia to try to take dvantage of the position of Halifax as the harf of the Atlantic?

Dr. McKeough: Well today you will be earing a submission from the port of Halifax eople who recently, with the province of ova Scotia formed a Crown corporation into hich we have put about $800,000. I think ey will be able to answer that question.

Mr. Nowlan: You, as the Minister responsie for the department, might be able to swer my next question then. Has there en any consideration given at all to having free port in Nova Scotia, be it Halifax, armouth or some other one, a free port like otterdam?

Dr. McKeough: That has been discussed for good many years. I think the port of Halix submission will bring you up to date on at.

The Chairman: Mr. Thomas.

Mr. Thomas (Moncton): Mr. Chairman, Mr. wlan has already asked most of the quesns I had in mind. There is just one thing t I would like to ask the witness. Your ef is obviously orientated mainly towards all highway improvement program which a long-range program and may take a few rs to develop an alternative method of nsportation, which is something we need in Maritimes to provide competitive rates l encourage secondary industry.

As this will take some years, in the meanie—I was glad to hear you mention the eze on the car lot rates and that the freeze uld be extended—how do you feel about porary assistance under either the MFRA some other form of subsidy to shippers? In er words, a long-range program is fine, what do we do about the immediate gram.

Dr. McKeough: I think it will be coming ward from the joint Atlantic presentation

[*Interprétation*]

tionné dans votre mémoire que nous devrions profiter de notre situation géographique. C'est ce qui me fait poser cette question. Est-ce qu'il y a eu des pressions de la part des provinces de l'Atlantique et surtout de la Nouvelle-Écosse pour essayer d'obtenir un meilleur traitement du point de vue des taux pour le port d'Halifax. Que l'on arrive n'importe où, Halifax ou Montréal, les taux sont à peu près les mêmes, vu le monopole international. Je me demande s'il y a eu des représentations ou des pressions exercées par le gouvernement de la Nouvelle-Écosse pour essayer de profiter de la situation géographique d'Halifax comme port de l'Atlantique?

M. McKeough: Vous aurez aujourd'hui des présentations des représentants du port d'Halifax qui, tout récemment, ont créé une société de la Couronne ayant des fonds de $800,000. Ils pourront peut-être vous répondre à ce sujet.

M. Nowlan: A titre de ministre responsable, vous pourrez peut-être répondre à la question suivante: y a-t-il eu des représentations pour essayer d'obtenir un port libre, que ce soit à Halifax, Yarmouth ou ailleurs, un port libre comme à Rotterdam?

M. McKeough: On en parle depuis un certain nombre d'années, mais je crois que les commissaires du port d'Halifax pourront vous répondre et vous mettre à jour à ce sujet.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Monsieur le président, M. Nowlan a déjà posé les questions que j'avais en vue. Mais il y a une seule chose: votre mémoire est essentiellement et évidemment orienté vers un programme d'amélioration de toutes les routes, ce qui se trouve à être un programme à long terme et il faudra du temps pour trouver une solution de rechange aux problèmes des transports, ce dont nous avons besoin ici pour obtenir des taux concurrentiels et encourager l'industrie secondaire.

Mais comme cela va prendre plusieurs années—j'ai été heureux de vous entendre parler du gel sur les taux des marchandises, quel est votre point de vue en ce qui concerne une assistance temporaire, soit en vertu de la Loi sur les taux de transport des marchandises dans les provinces Maritimes ou sous forme de subventions aux expéditeurs? En d'autres termes, un programme à long terme est très bien, mais qu'est-ce qu'on fait pour l'avenir immédiat?

M. McKeough: Je crois qu'il ressortira de la présentation conjointe de l'Atlantique qu'on a

[*Text*]

that perhaps your assistance is required within the Atlantic area itself—the infrastructure—and also for transportation outside (inaudible).

Mr. Thomas (Moncton): That is all; thank you.

Mr. Mahoney: Mr. McKeough, were you the member of the Nova Scotia Cabinet involved in the task force along with the Maritimes Transportation Commission?

Dr. McKeough: Yes, for the past six months. Prior to that it was the Minister of Finance.

Mr. Mahoney: We heard some rather pointed criticisms from a couple of municipalities in New Brunswick over the last two days on the fact that they were not called upon to appear before that task force to make representations to it or anything else. I wonder if perhaps you could take this opportunity to explain the approach and philosophy of the task force and why municipal governments were not consulted while it was conducting its study.

Dr. McKeough: The task force basically—number one—was to get facts, details and suggestions in chronological fashion that would give the over-all picture for the Atlantic Provinces. They were to project and estimate what type of assistance was, in fact, required for the movement of various goods into our area, within our area and out of our area.

We, in Nova Scotia, did not—our members of the task force from Nova Scotia—work on the basis that we should be contacting the various municipal units, not that we did not want to, but we had between us—between the four Atlantic Provinces—employed the Maritimes Transportation Commission to undertake to do this job for us. We felt that they were the body who had experience over the years to undertake this type of work. We have worked with them and we have received the report, but they were the ones who were doing the interrogating and looking around.

They contacted a tremendous number of businesses in each of the Atlantic Provinces and questioned them on the implications of tariff rates and on what type of assistance that was required to enable these businesses to be competitive. They have tabulated a good deal of this information and presented it to the Minister.

[*Interpretation*]

besoin de votre aide au sein de la région de l'Atlantique, en matière d'infrastructure et de transport vers l'extérieur.

M. Thomas: Merci.

M. Mahoney: Monsieur McKeough, étiez-vous le membre du cabinet de la Nouvelle-Écosse qui a fait partie du groupe de travail de la Commission des transports des Maritimes?

M. McKeough: Oui, depuis six mois. C'était le ministre des Finances avant.

M. Mahoney: Nous avons entendu quelques critiques acerbes de la part de certaines municipalités du Nouveau-Brunswick depuis deux jours en raison du fait que le groupe de travail ne les a pas convoquées pour formuler leurs recommandations. Je me demande si vous ne pourriez peut-être pas profiter de cette occasion pour nous expliquer la philosophie et l'attitude du groupe de travail et nous dire peut-être pourquoi les administrations municipales n'ont pas été consultées alors que le groupe faisait son travail.

M. McKeough: Le groupe du travail, au fond, devait obtenir les faits, les détails, les propositions par ordre chronologique, de façon d'avoir une vue d'ensemble pour toutes les provinces de l'Atlantique. Ils devaient faire l'interpolation et une estimation du genre d'aide nécessaire pour le transport et le mouvement des marchandises vers notre région, dans notre région et de notre région.

Les membres du groupe de travail qui venaient de la Nouvelle-Écosse ne sont pas partis du principe qu'ils devaient se mettre en contact avec les diverses municipalités, non pas qu'ils ne voulaient pas le faire, mais les quatre provinces atlantiques avaient chargé la Commission des transports Maritimes de le faire pour nous. Nous estimions qu'il s'agissait de l'organisme ayant le plus d'expérience pour entreprendre ce genre de travail. Nous avons travaillé avec eux et nous avons reçu leur rapport, mais ce sont eux qui ont interrogé les gens et examiné la situation.

En fait, la commission s'est mise en communication avec un très grand nombre d'industries ou de commerces dans chacune des provinces de l'Atlantique. Ils leur ont posé des questions sur les conséquences des tarifs et le genre d'assistance qui permettait à ces industries d'être concurrentielles. Ils ont compilé tous ces renseignements pour les présenter au ministre.

[*Texte*]

Mr. Mahoney: Thank you. I have one final more of a request than a question. I wonder, sir, if it would be possible for you or someone in your government through the Chairman within the next two or three weeks to indicate on this long schedule of highway improvement programs that you visualize for your province, the priorities you might set on those from the point of view of regional development as opposed to local improvement programs?

Dr. McKeough: Yes, I think the Department of Highways will be prepared to do that for you.

Mr. Forrestall: Mr. Chairman, I have a few supplementary questions. The first one is going back to roads again and it might more properly be answered by someone from the Department of Highways. In the liquidation of the Atlantic Development Board, in what position does the province now finds itself with regard to financial aid that it has been receiving from year to year? It was my understanding that it was to continue during this construction year. Has that imposed a hardship on you?

Mr. McKeough: The only money that will be available from the ADB sources this construction year will be those moneys which have not been used up in Votes 1, 2 and 3, which will not be very large. It certainly will mean that the people of Nova Scotia will have to dig a little deeper into their pockets if we are going to keep the impetus going—the momentum going—for our road construction. It is almost vital to our economy that those roads into Yarmouth and Digby are improved as the CPR has announced a new ferry. They are going to use large trucks—roll on, roll off. It is going to be a tremendous job to get those trucks from the docks in Digby down to this end of the province before they start to hit new roads. It is going to be a very difficult problem.

Mr. Forrestall: Our program in recent years has been split pretty generally between what we have been able to sustain ourselves and what has been made possible through ADB's co-operation.

Mr. McKeough: That ends this year.

Mr. Forrestall: Thank you, Mr. McKeough. My second question, again a supplementary, is further to Mr. Nowlan's question. You indicated that a formal request had gone for-

[*Interprétation*]

M. Mahoney: Merci beaucoup. Une dernière question qui est plutôt une demande. Est-ce qu'il serait possible, monsieur, pour vous ou pour quelqu'un de votre gouvernement, par l'entremise du président de nous indiquer d'ici deux ou trois semaines, en ce qui concerne le programme à long terme d'amélioration des grandes routes que vous envisagez pour votre province, quelles sont les priorités que vous pourriez établir du point de vue du développement régional par opposition au programme de développement local.

M. McKeough: Je crois que le ministère des Voieries pourrait le faire pour vous.

M. Forrestall: J'aimerais poser quelques questions supplémentaires si je le puis. La première concerne de nouveau les routes et le ministère de la Voierie pourrait peut-être nous donner une meilleure réponse. Vue la liquidation de l'Office d'expansion économique de la région Atlantique, quelle est la situation de la province à l'heure actuelle quant à l'aide financière qu'elle recevait chaque année? Si j'ai bien compris l'aide devait être maintenue durant cette année de construction. Est-ce qu'il s'en est suivi des temps difficiles?

M. McKeough: Les seuls fonds dont l'Office disposera cette année sont ceux des crédits 1, 2 et 3 qui n'ont pas été dépensés, et ils ne seront pas considérables. Ce qui veut dire que les gens de la Nouvelle-Écosse devront trouver l'argent dans leurs propres poches si nous voulons continuer le programme de construction des routes au même rythme. Il est presque vital pour notre économie que ces routes à Yarmouth et Digby, soient améliorées, étant donné que le Pacifique-Canadien annonce un nouveau transbordeur. Ils se serviront de gros camions. Il sera très difficile de faire passer les camions des quais de Dibgy jusqu'à cette partie de la province avant d'atteindre les nouvelles routes. C'est un problème très difficile.

M. Forrestall: Depuis quelques années le programme a été divisé entre ce que nous pouvions défrayer nous-mêmes et ce qui a été rendu possible grâce à la collaboration de l'Office.

M. McKeough: Elle qui prend fin cette année.

M. Forrestall: Merci. Une autre question qui fait suite à celle de M. Nowlan. Vous avez indiqué qu'une demande officielle a été faite auprès du gouvernement, à M. Hellyer, pour

[*Text*]

ward to the government—to Mr. Hellyer—for an extension of the freight rates freeze. Has that been acknowledged?

Mr. McKeough: There has been a press release, but our Premier, as late as this morning, has had no formal communication. However, as I pointed out, the request went forward under the signature of Mr. Robichaud and it could be that Mr. Robichaud has received the official communication.

Mr. Forrestall: But it has not come to your attention as the Minister of Transport?

Mr. McKeough: No.

Mr. McGrath: Mr. Chairman, Mr. McKeough, I note striking similarities between your brief and a written brief submitted by the Government of Newfoundland in that they both deal specifically with trunk roads. They differ only in the amounts. The Government of Newfoundland, in their submission, are looking for $400 million and you seek $583 million. They also differ in one other respect. The Newfoundland submission requests that the federal government pick up 75 per cent of the tab, but you do not state what kind of cost sharing arrangement you would like. Would you answer that for me?

Mr. McKeough: I do not think that I am capable of answering that, Mr. McGrath.

Mr. Nesbitt: Mr. McKeough, I notice in your brief—I mean your comments—that you place a great deal of emphasis—the most emphasis perhaps—on freight rates and on further development of highways in the Province of Nova Scotia, but there is no particular mention of increasing air services to regional carriers, in addition to services provided, of course, by Air Canada, which is a main line carrier, and Eastern Provincial Airways. Are you aware of any other regional airlines either in existence at the present time or contemplated?

Mr. McKeough: Are there any other airlines contemplated?

Mr. Nesbitt: Regional carriers?

Mr. McKeough: But there are discussions going on at the moment on a quiet basis, not on a formal basis, on the logic of increasing the strength of local carriers such as Eastern Provincial Airways to have them do the small flying within our province and throughout the other Atlantic Provinces and let Air Canada and Canadian Pacific Airlines do the long hauls. It would appear to some of us that this would be a much more logical approach than to have Air Canada jumping

[*Interpretation*]

prolonger le gel du tarif-marchandises. Est-ce qu'on en a accusé réception?

M. McKeough: Il y a eu un communiqué de presse, mais jusqu'à ce matin notre premier ministre n'avait eu aucune communication officielle. Toutefois, comme je l'ai dit, la demande a été envoyée et signée par M. Robichaud, et peut donc que ce soit M Robichaud qui ait reçu la communication officielle.

M. Forrestall: Mais vous n'êtes pas au courant en tant que ministre du Transport.

M. McKeough: Non.

M. McGrath: Monsieur le président, monsieur McKeough je remarque des similarités étonnantes entre votre mémoire et celui qui a été présenté par le gouvernement de Terre-Neuve, en ce sens qu'ils traitent tous les deux des routes principales. Ils diffèrent tout simplement dans les montants: Terre-Neuve demande $400 millions alors que vous cherchez $583 millions. Il y a une autre différence aussi. Dans le mémoire de Terre-Neuve, on demande que le gouvernement fédéral en paye 75 p. 100 alors que vous ne le précisez pas. Pourriez-vous me répondre à ce sujet?

M. McKeough: Je ne crois pas être en mesure de vous répondre, monsieur McGrath.

M. Nesbitt: Dans votre mémoire ou plutôt dans votre exposé, vous avez insisté peut-être le plus sur le tarif-marchandises et le développement des routes dans la province de la Nouvelle-Écosse, mais on n'y parle pas d'augmenter le transport aérien grâce aux transporteurs régionaux, en plus des services offerts, à l'heure actuelle, par Air Canada qui est le transporteur principal et par la *Eastern Provincial Airways*. Est-ce que vous connaissez d'autres sociétés aériennes régionales qui existent à l'heure actuelle ou qui sont envisagées?

M. McKeough: D'autres transporteurs aériens envisagés?

M. Nesbitt: Des transporteurs régionaux?

M. McKeough: Non, mais on discute à l'heure actuelle non pas de façon officielle, mais des discussions officieuses, quant à la logique qu'il y aurait à augmenter la capacité de nos transporteurs locaux, comme la *Eastern Provincial* pour qu'ils puissent desservir la province et les autres provinces de l'Atlantique et permettre à Air Canada et CPA de desservir les trajets plus longs. Il semble pour certains d'entre nous qu'il serait beaucoup logique de demander à Air Canada de s'arrê

[*Texte*]

into each little port as it comes along. We feel if we have a regional carrier it could service us more effectively both in cargo and in air transport.

Mr. Nesbitt: Yes, I very much agree with you, Mr. McKeough. I wonder if there are any other regional carriers contemplated at the present time that you know of other than Eastern Provincial.

The Chairman: Would you repeat your question please, Mr. Nesbitt?

Mr. Nesbitt: Yes. Are there any other regional air carriers either in the process of formation or contemplated other than Eastern Provincial Airways?

Mr. McKeough: Not that I know of, sir.

Mr. Nesbitt: Are there any practical difficulties in the Province of Nova Scotia, chiefly because of weather, that would make extensive regional air carrier work a practical impossibility in some cases?

Mr. McKeough: I could not hear you, sir.

Mr. Nesbitt: Are there any practical difficulties such as weather in many parts of the province that might cause some difficulties for the expansion of regional air service particularly for freight.

Mr. McKeough: I do not think any more so than in other parts of the country. I think that flying over the Atlantic Provinces, other than some coastal fog, is a relatively easier flight with less bump and what-not.

Mr. Nesbitt: Coastal fog is quite formidable sometimes, though, as I recall.

Mr. McKeough: Sometimes, but they do have a bit of fog in Montreal and Ottawa as I have noticed when I have tried to fly in there.

Mr. Rock: Mr. McKeough, in your brief—

The Chairman: Will you talk a little louder, Mr. Rock, please?

Mr. Rock: In your brief you have set out the amount of money needed for the next so many years. Would you be able to tell the members of this Committee the amount of federal contributions toward highways from the federal government in the past 10 or 15 years.

[*Interprétation*]

ter à chaque petite ville sur son trajet. Si nous avions un transporteur régional, le service serait bien meilleur pour nous, tant pour les voyageurs que pour les marchandises.

M. Nesbitt: Oui, je suis tout à fait d'accord, mais je me demandais si on envisageait de créer d'autres transporteurs régionaux à l'heure actuelle, à part le *Eastern Provincial.*

Le président: Pourriez-vous répéter votre question s'il vous plaît, monsieur Nesbitt.

M. Nesbitt: Oui, est-ce que vous envisagez de créer d'autres transporteurs régionaux ou qui sont en voie de formation, autre que *Eastern Provincial Airlines*?

M. McKeough: Pas à ma connaissance, monsieur.

M. Nesbitt: Est-ce qu'il y a des difficultés pratiques dans la province de la Nouvelle-Écosse, surtout à cause du temps, qui rendrait le transport aérien régional moins pratique en certains cas?

M. McKeough: Je m'excuse, je n'ai pas compris cette question.

M. Nesbitt: Y a-t-il des difficultés pratiques, surtout du point de vue du climat, dans certaines parties de la province qui pourraient causer des difficultés pour l'expansion du service aérien régional, surtout pour ce qui est des marchandises?

M. McKeough: Je ne crois pas, pas plus que dans les autres parties du pays. Je crois que les vols au-dessus des provinces de l'Atlantique, sauf pour un peu de brume le long de la côte, sont plus faciles et calmes.

M. Nesbitt: Parfois, la brume côtière est assez épaisse, si je me souviens bien.

M. McKeough: Oui, mais de temps à autre il y a aussi de la brume à Montréal et à Ottawa, comme je l'ai constaté quand j'ai essayé de m'y rendre.

M. Rock: Monsieur McKeough, dans votre mémoire ...

Le président: Un peu plus fort, s'il vous plaît.

M. Rock: Vous avez indiqué la somme qui serait requise d'ici quelques années. Pourriez-vous dire au Comité quelle a été la contribution fédérale pour les routes depuis dix ou quinze ans?

[*Text*]

Mr. McKeough: What has been the proportion?

Mr. Rock: Yes.

Mr. McKeough: It has been anywhere from 50 per cent to 90 per cent.

Mr. Rock: Could you tell me in figures. Was that actually in millions of dollars?

Mr. McKeough: Mr. Millard is here; he would have the figures. Do you have the figures in millions of dollars, Mr. Millard, over the last several years?

The Chairman: Will you repeat your question, please?

Mr. Rock: Yes, Mr. Millard, I would like to know the amount of federal contributions toward your highways in dollars over the past 10 or 15 years.

Mr. Millard: In dollars?

Mr. Rock: Yes.

Mr. Millard: No, I cannot answer that sort of question, Mr. Rock.

Mr. Rock: Do you mean you do not know the amount of money the federal government contributed toward the building of your highways in the past 10 years?

Mr. Millard: No, I can get the information for you or you can obtain it in Ottawa, but nobody has that information in their mind as readily as that.

Mr. Rock: Can you tell us how much it was last year or the year before?

Mr. Millard: No, Mr. Chairman, I do not think it is fair to be asked to answer a question like that. It is not that I object, it is just the detail...

The Chairman: I think this answer could be supplied later on.

Mr. Rock: Mr. Chairman, the reason I asked is because we know the amount they would like to have for the future, after 1969, and I would like to know what they had in the past. If they do not have these figures then that is all right.

Mr. Millard: Mr. Chairman, I could provide this information later on in the day.

The Chairman: That will be fine, thank you.

[*Interpretation*]

M. McKeough: La proportion?

M. Rock: Oui.

M. McKeough: Entre 50 p. 100 et 90 p. 100.

M. Rock: Pourriez-vous me donner les chiffres? Est-ce que vous parliez de millions de dollars?

M. McKeough: M. Millard pourrait peut-être vous donner les chiffres. Connaissez-vous les chiffres pour les dernières années?

Le président: Est-ce que vous pourriez répéter votre question?

M. Rock: Monsieur Millard, je voudrais savoir quelle est la somme des contributions fédérales à votre programme de grandes routes depuis dix ou quinze ans.

M. Millard: En dollars?

M. Rock: Oui.

M. Millard: Non, je ne saurais vous répondre, monsieur Rock.

M. Rock: En d'autres termes, vous ne connaissez pas la somme que le gouvernement fédéral a contribuée à la construction de vos grandes routes depuis dix ans?

M. Millard: Non. Je pourrais vous obtenir ces renseignements ou vous pourrez les obtenir à Ottawa, mais personne n'a ces renseignements à portée de la main.

M. Rock: Est-ce que vous pourriez nous dire quelles étaient les contributions l'an dernier ou l'année précédente?

M. Millard: Non. Monsieur le président, je ne crois pas que ce soit juste de nous demander de répondre à une telle question. Ce n'est pas que je m'y oppose, mais il s'agit de détails.

Le président: Vous pourriez peut-être nous fournir les renseignements plus tard.

M. Rock: La raison pour laquelle je pose la question, c'est que nous savons quel montant ils voudraient obtenir à l'avenir, après 1969, et je voudrais savoir combien ils ont reçu dans le passé. S'ils n'ont pas les chiffres en main, c'est très bien.

M. Millard: Monsieur le président, je pourrais vous fournir les chiffres plus tard dans la journée.

Le président: Oui. Très bien. Merci.

[*Texte*]

Mr. Corbin: Mr. Chairman, I wonder if either of these gentlemen could state the Province of Nova Scotia's position in relation to the development of (a) the Fundy Trail and (b) of the Maine Corridor Road for easy access into Central Canada?

Dr. McKeough: The Fundy Trail, I think, in our justification, must be thought of in conjunction with the Fleur de Lys Trail in Cape Breton. I do not think we could divide the two. I think if we are going to do something on them we have to do them at the same time. I think they are both important to Nova Scotia. In relation to the Corridor Road, we have had several meetings with people from the State of Maine and from the Province of Quebec in relation to the feasibility of this road and in relation to the possible type of financing of this road. Nova Scotia's position is that we endorse very highly this Corridor road and we are prepared to sit down and do very serious negotiations.

Mr. Corbin: I have a supplementary, Mr. Chairman. Have you also studied the other alternative for getting into Central Canada by cutting across New Brunswick through a route which is commonly known as the Plaster Rock—Renous Highway, but which, at this time, has not been upgraded to Trans-Canada standards? However, I understand the Province of New Brunswick is working on it and the saving in mileage when compared with the Maine Corridor route is not more than 15 miles.

Mr. McKeough: Yes, we have been looking into this possibility as well.

Mr. Corbin: Would not that proposition be just as acceptable to Nova Scotia as the Maine Corridor route?

Mr. McKeough: It certainly would, but it would put a lot of financial responsibility on the Province of New Brunswick.

Mr. Corbin: Do you feel that the people in the State of Maine are willing to spend millions of dollars to give easy access into Central Canada to Maritimers. They seem to be showing some indication, but to what degree? Up to now I have only known of opposition from the government.

Dr. McKeough: We have had representatives from the State of Maine here to speak with us and there has been an indication that we should adopt the financing.

[*Interprétation*]

M. Corbin: Monsieur le président, je me demande si l'un ou l'autre de ces messieurs pourrait nous indiquer l'attitude de la province de la Nouvelle-Écosse en ce qui a trait au développement tout d'abord de la route de Fundy et de la route corridor via l'État du Maine qui constitueraient un accès plus facile au centre du Canada.

M. McKeough: Je crois que, en ce qui concerne le *Fundy Trail*, pour justifier il faut absolument tenir compte du *Fleur de Lys Trail* dans l'île du Cap-Breton. Je ne crois pas qu'on puisse séparer les deux. Il faudrait que les deux se fassent en même temps. Les deux sont importantes pour la Nouvelle-Écosse. En ce qui a trait à la route corridor, nous avons eu plusieurs rencontres avec les gens de l'état du Maine et de la province de Québec quant aux possibilités de construire la route ainsi que les possibilités de financement. L'attitude de la Nouvelle-Écosse est que nous appuyons le principe de cette route. Nous serions prêts à négocier de façon très sérieuse en ce sens.

M. Corbin: Une question supplémentaire, monsieur le président. Avez-vous aussi étudié l'autre possibilité qui existe pour atteindre la partie centrale du Canada en traversant le Nouveau-Brunswick par la route Plaster Rock-Renous, qui n'a pas encore été améliorée aux normes de la route transcanadienne? Mais la province du Nouveau-Brunswick y travaille, mais au point de vue distance, on n'épargnerait pas plus de quinze milles effectivement par rapport à la route corridor via le Maine.

M. McKeough: Oui, nous avons examiné cette possibilité.

M. Corbin: Est-ce que cette proposition ne serait pas aussi acceptable à la Nouvelle-Écosse que le corridor du Maine?

M. McKeough: Certainement, mais cette solution entraîne beaucoup de responsabilités financières pour le Nouveau-Brunswick.

M. Corbin: Croyez-vous que les gens du Maine sont prêts à dépenser des millions de dollars pour donner, aux provinces Maritimes un meilleur accès au centre du Canada? Il semble qu'il y a un indice en ce sens jusqu'à quel point? Je n'y connais que des objections de la part du gouvernement.

M. McKeough: Nous avons eu des représentants de l'État du Maine qui sont venus s'entretenir avec nous de ce problème. Il y a eu des indices tout de même que nous devrions endosser le financement.

[*Text*]

Mr. Corbin: In one word, the whole scheme is conditional on the participation of the State of Maine and we have nothing to say until they decide to do something. Is that not right?

Dr. McKeough: Absolutely.

The Chairman: Mr. Nesbitt, do you have a supplementary question?

Mr. Nesbitt: Just a brief supplementary to the Minister. Other than the big international airport at Halifax and airports at Sydney and Yarmouth, are there any other airports in the province that would have suitable facilities at the present time to accommodate small aircraft for passenger and freight service on a commercial basis?

Dr. McKeough: What are you referring to, sir, as "small"?

Mr. Nesbitt: I was referring to airports that could accommodate aircraft that would carry up to perhaps 20 passengers. They would accommodate aircraft of the type of the old DC-3.

Dr. McKeough: If we are talking about DC-3's, there are quite a few airports in the province that could accommodate them. They need servicing, but we have some local airports and we are encouraging the development of small airports for rapid communication with these isolated areas.

Mr. Nesbitt: Could you give us some idea how many of these airports are now in existence and where they are located?

Dr. McKeough: I cannot give you the figures, sir, but they are pretty well oriented throughout the province. There is one in Digby—you have already mentioned Yarmouth—there is one outside of Truro, there is one in the Margaree Valley, Shelburne and Liverpool. We can get these figures. We had them because we have been doing a fair amount of work on this.

Mr. Nesbitt: If you could get them for me I would certainly appreciate it.

The Chairman: Mr. Minister, I think we have completed our inquiry and I would like to thank you very, very much.

Returning to the agenda once more, I will now call upon the Sydney Harbour Regional Development Board.

We have with us this morning two Mr. MacDonalds, Mr. Bruce MacDonald and Mr. James J. MacDonald. They look like brothers. I will ask Mr. Bruce MacDonald to give us a

[*Interpretation*]

M. Corbin: En un mot, le projet est conditionné par la participation de l'État du Maine et nous ne pouvons rien faire sans leur décision.

M. McKeough: C'est exact.

Le président: Monsieur Nesbitt, avez-vous une question à poser?

M. Nesbitt: Une brève question supplémentaire au Ministre. Outre le grand aéroport international d'Halifax, et les aéroports à Sydney et à Yarmouth, y a-t-il d'autres aéroports dans la province qui auraient des installations adéquates à l'heure actuelle pour les petits avions commerciaux pour les services de passagers et de fret?

M. McKeough: Qu'est-ce que vous voulez dire par petits?

M. Nesbitt: Des aéroports qui pourraient accommoder des avions de capacité allant, mettons jusqu'à vingt passagers, un avion du genre de l'ancien DC-3.

M. McKeough: S'il s'agit des DC-3, il y a plusieurs aéroports dans la province qui peuvent les recevoir. Nous avons des aéroports locaux. Nous encourageons le développement des petits aéroports pour le développement de communication rapides avec les régions isolées.

M. Nesbitt: Pourriez-vous me donner une idée du nombre de ces aéroports et de leur emplacement?

M. McKeough: Je ne saurais vous donner les chiffres, monsieur, mais il sont disséminés partout dans la province. Il y en a un à Digby. Vous avez déjà mentionné Yarmouth. Il y en a un dans la banlieue de Truro, il y en a un dans la vallée de *Margaree*, à Shelbourne et à Liverpool. Nous pourrions obtenir ces chiffres. Nous les avons parce que nous avons travaillé abondamment dans ce sens.

M. Nesbitt: Oui, si vous pouvez me les donner plus tard, très bien.

Le président: Monsieur le ministre, je crois que cela termine notre enquête. Nous vous remercions beaucoup, monsieur le ministre. Si vous me permettez de revenir à l'ordre du jour, je demanderais maintenant à la Chambre du commerce de Sydney de se présenter.

Nous avons ici avec moi, M. Bruce MacDonald et M. James J. MacDonald. Ils se ressemblent comme deux frères. Je demanderai à M. Bruce MacDonald de nous donner u

[*Texte*]

short briefing and then I will allow the members to ask questions.

Mr. B. MacDonald (Sydney Harbour Regional Development Board): Thank you very much, Mr. Chairman. It is a great pleasure to be here this morning and to have a chance to address the Parliamentary Committee on Transport and Communications. I would certainly like to reiterate what Dr. McKeough has said. We are very pleased that you have seen fit to come to Nova Scotia to investigate this matter because transportation is a particularly important factor in our development.

Mr. Chairman, with your permission and as it is a full year since our original brief was prepared and things have changed since then in some ways, and a few other matters have come forward since that submission, I ask your indulgence in allowing us to present a short supplementary submission to our previous brief.

Mr. Chairman, we wish to thank your Committee for giving us this opportunity of presenting a supplementary brief to that already submitted by the Containerization Committee of the Sydney Board of Trade. Since this time last year when the Committee was originally scheduled to hear our submission, the Containerization Committee has expanded its scope and now is known as the Sydney Harbor Regional Development Board, which comprises representation from the three communities surrounding Sydney Harbor, namely, the City of Sydney, Town of North Sydney and the County of Cape Breton. This is an example of co-operation among these communities for the common good since it is felt that Sydney Harbor should be developed as a unit, with each section having something to contribute which is unique and complementary to the others. The object of the board is to carry on the promotion and development of Sydney Harbor to the status of a major Atlantic port and the members of the Board comprise representation from the shipping industry, the business community and municipal government.

In most countries of the world that portion of the nation which borders a major ocean is considered to be one of the most valuable assets that the country has. We have evidence in many countries where the importance of an outlet to the sea is very jealously guarded.

[*Interprétation*]

bref résumé, et je permettrais ensuite aux membres du Comité de poser leurs questions.

M. B. MacDonald (Sydney Regional Harbour Development Board): Merci beaucoup, monsieur le président. C'est un véritable plaisir d'être ici avec vous ce matin, et d'avoir l'occasion de prendre la parole devant le comité des Transports de la Chambre des communes. Une fois de plus, je voudrais reprendre la parole de M. McKeough pour vous dire que nous sommes très heureux de voir que vous ayez jugé bon de venir en Nouvelle-Écosse pour étudier cette question parce que les transports sont tout particulièrement importants comme facteur de développement.

Monsieur le président, il y a un an que notre mémoire a été préparé, et depuis, la situation a évolué. Je vous saurais gré d'écouter quelques remarques supplémentaires.

Monsieur le président, nous aimerions vous remercier pour nous donner cette opportunité de présenter un mémoire supplémentaire à celui déjà soumis au Comité par le Comité sur les transports par cadre de la Chambre de commerce de Sydney. Depuis l'année dernière, lorsque le Comité devait à l'époque recevoir nos mémoires, le Comité sur les transports par cadre a élargi ses objectifs et il est connu actuellement sous le nom de l'Office régional de développement du port de Sydney, qui comprend des représentants de trois municipalités entourant le port de Sydney, soit la ville de Sydney, la ville de Nord Sydney et le comté du Cap-Breton. C'est ici un exemple de la coopération entre ces municipalités pour le bien commun depuis que l'on ressent que le port de Sydney devrait se développer comme une entité propre, dont chaque section peut contribuer d'une façon unique et complémentaire dans l'ensemble. L'objectif de l'Office est de prendre en charge la promotion et le développement du port de Sydney afin d'en faire un port majeur de l'Atlantique et les membres de cet Office comptent parmi eux des représentants de l'industrie du transport maritime, du milieu des affaires et du gouvernement municipal.

Dans plusieurs pays du monde la partie d'un pays qui borde un océan d'importance majeure est considérée comme l'un des actifs les plus intéressants que cette contrée possède. Nous avons l'exemple dans plusieurs pays où l'importance d'un débouché sur la mer est très jalousement conservée.

[*Text*]

In Canada, however, we find a very different approach to the value of our coastal area, particulary the East Coast area. The development of the shipping facilities in the coastal areas has been minimal and the development of the transportation links between the Canadian Atlantic ports and the centre of the continent have been far behind developments in other parts of the country in both facilities and competitive rate structure. An example of this is the supposed inability of the railway to provide twenty-four hour service from Nova Scotia to Montreal over many, many years.

It was not until the passenger train Cabot, which was specially put on for the Expo traffic, showed that it could be done, that changes have been made in the transportation time factor, which in the past was rated as a very significant factor in development of the Atlantic Provinces. We are pleased to see that the Canadian National Railways has this past week announced a new train which will ensure twenty-four hour freight service between Cape Breton and Montreal.

This announcement has virtually eliminated the time element as a detrimental factor and leaves only the rate structure to be modernized in order to provide the type of transportation facility that is required.

Our board sees the Canadian National Railways as a very important development tool as far as the proper use of our natural transportation facilities is concerned. From personal experience I can tell you that the greatest control factor in reducing freight rates or in keeping freight rates from rising is competition. In other areas of Canada, because of shorter distances and greater concentration of population, there is great competition between railways and other forms of transportation for the traffic that is offering. This tends to keep rates competitive and works to the advantage of those persons doing business in these particular areas. In the Atlantic Provinces we have no such heavy concentration of population, nor short distances, and consequently the natural forces of commerce are not here to exert these modifying pressures on the rate structure. This means that other measures must be adopted if we are to have equal status with shippers in other parts of the country, which as Canadians we have a right to expect.

[*Interpretation*]

Au Canada, cependant, on se trouve aux prises avec une évaluation très différente de notre région côtière particulièrement en ce qui concerne la Côte Est. Les développements des installations portuaires dans les régions côtières ont été minimes et les développements des liaisons de transport entre les ports de la Côte de l'Atlantique du Canada et le centre du pays ont été bien en dessous du développement des autres régions du pays tant en installations qu'au point de vue concurrentiel. Un exemple de ces faits est la supposée impossibilité des chemins de fer de pourvoir un service de 24 heures de la Nouvelle-Écosse jusqu'à Montréal, pendant plusieurs années.

Il a fallu attendre le train de passagers Cabot, qui incidemment avait été mis en vigueur pour le trafic destiné à l'Expo, pour démontrer que cela pouvait se faire, et que des changements avaient été enfin effectués dans le facteur temps du transport. Ce qui dans le passé était considéré comme un facteur très très important dans le développement des provinces de l'Atlantique. Nous sommes heureux de voir que le National-Canadien a annoncé la semaine passée un nouveau train qui assurera un trafic en 24 heures pour les marchandises entre le Cap-Breton et Montréal.

Cette annonce a virtuellement éliminé le facteur temps en tant que facteur négatif et ne laisse uniquement à la structure des taux la dernière étape à être modernisée afin de pourvoir un type de transport qui répondrait aux besoins actuels.

L'Office considère le CN comme un très important outil de développement en tant que notre transport habituel est concerné. Selon mon expérience personnelle je peux vous dire que le plus grand facteur de contrôle en ce qui concerne l'abaissement des taux de transport ou la conservation des taux de transport actuels est la concurrence. Dans d'autres régions du Canada, à cause des distances plus courtes et de la concentration démographique plus importante, il y a une grande compétition entre les chemins de fer et les autres systèmes de transport qui sont offerts au public. Ceci tend à conserver les taux concurrentiels et travaille pour l'avantage des personnes qui ont recours à ces moyens dans ces régions particulières. Dans les provinces atlantiques, nous n'avons pas une aussi grande concentration de population et non plus de distances relativement courtes. Conséquemment, les forces naturelles du commerce n'exercent pas ici une pression modificatrice de l'échelle des taux. Ceci veut dire que d'autres mesures doivent être prises si nous devons arriver à un statut égal avec les expé-

[*Texte*]

This also means that until the traffic builds to the type of volume which we feel it can if we use our seaports as they should be used, special transportation policies must be adopted to provide a rate structure which will encourage a high volume of traffic over the Atlantic Provinces rail lines as a result of greatly expanded activity at our seaports.

This must be a matter of government policy and the railway system in the Atlantic Provinces must be operated and its rates set, as if it were operating in the most highly competitive atmosphere possible, such as between Toronto and Montreal. In saying this I am proposing logical business practices in suggesting that high volume rates be implemented immediately in order to attract the traffic which would very shortly build to the volumes on which the rates are predicated, since we know the traffic is there.

There is no question that previous government policies and policies of shipping companies have operated against the Atlantic ports, as witness the conference rates which make little or no difference in the ocean freight charges to Atlantic ports and Quebec and Montreal, in spite of the fact that there is a minimum of a day and a half sailing time as between these ports. Add to this the high cost of rail transportation between the Atlantic ports and Montreal and its is no wonder that our seacoast has not developed as it should.

This fact was further aggravated by the construction, at Canadian public expense, of the St. Lawrence Seaway. Records of its volume of traffic in specific categories will document that it is really a private transportation link between the iron ore resources in Quebec and Labrador and the steel companies of Ontario and the United States, plus an additional competitive factor and transportation system between Toronto and Montreal and an additional means of shipping grain in seagoing ships. Compared to these categories, regular international overseas shipping, for which it was supposedly built, is a very small percentage.

[*Interprétation*]

diteurs des autres parties du pays, ce à quoi nous avons droit en tant que Canadiens.

Ceci veut aussi dire que tant que le trafic n'atteint pas le genre de volume auquel nous pensons qu'il peut arriver, si nous utilisons nos ports de mer de la façon dont ils devraient l'être, des politiques spéciales concernant le transport devraient être adoptées afin de pourvoir à une échelle de taux qui pourrait encourager un haut volume de trafic à destination des provinces atlantiques ce qui correspondrait à une activité accrue de nos ports de mer.

Ceci devrait être du ressort d'une politique du gouvernement que le système de chemins de fer dans les provinces atlantiques devrait être exploité et ses taux fixés comme s'il était exploité dans une atmosphère la plus compétitive possible telle que celle entre Toronto et Montréal. En disant ceci je propose des pratiques de commerce logiques en suggérant qu'un taux adapté au haut volume soit mis en vigueur immédiatement afin d'attirer le trafic qui pourrait être rapidement atteint avec les taux dont j'ai parlé, vu que nous sommes persuadés que ce trafic existe.

Il est hors de doute que les précédentes politiques du gouvernement et les politiques des compagnies maritimes ont agi contre l'intérêt des ports de l'Atlantique, ainsi qu'on le voit dans les taux unifiés qui ne font qu'une petite et même aucune différence entre les taux du transport à destination des ports de l'Atlantique ou des ports de Québec et de Montréal, en dépit du fait qu'il y a un minimum d'un jour et demi de navigation entre ces ports. Il faut ajouter à cela le coût élevé du transport par rail entre les ports de l'Atlantique et Montréal et vous découvrirez pourquoi les ports de la Côte de l'Atlantique ne se sont pas développés tel qu'ils auraient dû.

Ces faits ont été aggravés plus tard par la construction, avec les deniers publics, de la Voie maritime du Saint-Laurent. Les données concernant son volume de transport dans les différentes catégories indiqueront que cette Voie maritime est réellement un moyen de transport privé entre les ressources minières du Québec et du Labrador et les compagnies et les aciéries de l'Ontario et des États-Unis, plus un facteur concurrentiel additionnel et un système de transport supplémentaire entre Toronto et Montréal ainsi qu'un autre moyen d'expédition du grain par le moyen de navires océaniques. Vis-à-vis de ces catégories de transport international à destination de l'outre-mer pour lesquelles normalement la Voie maritime avait été construite est un pourcentage très faible.

[*Text*]

We are not asking for special treatment for the Atlantic coastal area, we are asking for equal treatment as far as government policy is concerned. There is no question that the operation of the Seaway at a substantial loss artificially provides a reduction in transportation costs for all who use it.

There is no question then that there is existing government policy regarding the setting of rates in order to attract business, regardless of the profitability of such rates, and with the development of the resources of the country as one of the primary motivations. We feel that in a country as large as Canada this type of thing is justified, but should be equally applied in all sections.

We are confident that containerization has opened up as revolutionary a concept in transportation as air travel did in the 1930s. At that time the government had sufficient forethought to set up the government operated transportation system which is now known as Air Canada, at a time when there was no question that it could not pay its way. Added to this, they embarked on a system of airfields at public expense, which today provides a very fine transportation network across the country. In the new transportation concept brought on by containerization we are in the same position in regard to the development of facilities. The present situation calls for bold new policies on the part of government in providing the type of facilities required in order to have Canada develop its full potential under this new system.

We urgently request that immediate steps be taken to adopt policies on the rail transportation facilities in the Atlantic Provinces which will encourage the development of the Atlantic Coast of Canada as the major North American transportation terminal for international traffic.

We would urge that immediate action be taken to build proper wharf facilities to handle this type of traffic through the excellent natural harbors on the Atlantic coast, of which Sydney is one, when these proposals are received during the next few weeks.

Implementation of these policies will tend to assist the federal government's regional

[*Interpretation*]

Nous ne demandons pas pas un traitement de faveur pour la région côtière de l'Atlantique, nous demandons simplement un traitement égal en ce qui concerne la politique du gouvernement. Sans doute les opérations de la voie maritime qui sont faites avec une perte substantielle provoquent artificiellement une réduction des coûts de transport pour tous ceux qui en ont l'utilité.

Et sans doute, aussi, lorsqu'il existe dans les politiques du gouvernement visant la fixation de taux afin d'attirer l'expansion du commerce, sans tenir compte de la rentabilité de tels taux, et avec le développement des ressources d'un pays comme motivation première. Nous pensons que dans un pays aussi grand que le Canada ce genre de chose est justifié mais devrait être appliqué également dans tous les secteurs.

Nous sommes confiants que le transport par cadre a ouvert un concept révolutionnaire dans le domaine du transport comme l'avait fait le transport aérien en 1930. A cette époque le gouvernement avait prévu suffisamment à l'avance l'organisation d'un système de transport aérien exploité par le gouvernement qui est maintenant connu comme la Société Air Canada, et à l'époque il ne s'agissait pas du tout que cette opération soit rentable. De plus, à l'époque le gouvernement s'était engagé à la construction d'aérodromes aux frais du contribuable, qui aujourd'hui pourvoient à un réseau de transport très complet à travers tout le pays. Dans ce nouveau concept du transport ouvert par le transport par cadre, nous sommes dans la même position en ce qui concerne le développement des installations. La situation actuelle appelle des politiques nouvelles, hardies de la part du gouvernement afin de pourvoir au genre d'installations qui sont requises afin que le Canada puisse développer son plein potentiel en vertu de ce système.

Nous demandons instamment que des mesures soient prises afin d'adopter une politique concernant le transport par chemin de fer dans les provinces de l'Atlantique qui encouragerai le développement de la région côtière de l'Atlantique du Canada comme point majeur du transport nord américain pour le trafic international.

Nous demandons qu'une action immédiate soit prise pour construire les installations portuaires adéquates afin de pouvoir prendre en charge ce genre de trafic au moyen des ports naturels excellents de la Côte atlantique dont Sydney en est un, lorsque ces recommandations seront reçues au cours des prochaines semaines.

La mise en vigueur de telles politiques tendera à aider le Plan de développement régio-

[*Texte*]

development plan which was announced just this week to be carried out under the direction of the Hon. John Marchand and his new department. One of the best development tools that could be used would be to have the Atlantic Provinces as the intake for a major volume of commercial traffic. This would provide excellent facilities which industries established in this area could use as a means of getting their goods to market, whether it be on the North American continent or in international trade.

Sydney Harbor has all of the natural qualifications to become a major world port and proved this point as a major convoy collection harbor during the Second World War.

Your favorable consideration to accelerating its development to major port status is urgently requested.

Mr. Chairman, in connection with our original brief, there is one paragraph which I would like to mention. I do not know how it is printed in your book, gentlemen, but it is on page 6 of our brief. It reads:

> Mr. Chairman and gentlemen, your concern and responsibility as members of the Parliament of Canada is to initiate and implement those policies and developments which operate in the best interests of the citizens in the country as a whole. We submit that the successful implementation of a Trans-Canada Transportation System embodying east coast and west coast major containerization port facilities in Canada, with a Trans-Continental Railway Land Bridge System joining them at a reasonable transportation rate per container mile would be the most constructive project which could be recommended to Parliament to promote the proper development of industry and resources in our country. We urge you to use every effort to bring together the parties concerned immediately to begin to have this plan implemented, and we offer our services in whatever way they may be used to bring this about.

Thank you very much, Mr. Chairman.

The Chairman: Thank you very much. I do not have enough briefs for everyone. Would you have them delivered, please. Mr. McGrath.

[*Interprétation*]

nal du gouvernement fédéral qui a été annoncé cette semaine et qui sera entrepris sous la direction de l'honorable Jean Marchand et de son nouveau ministère. L'un des meilleurs outils de développement qui pourrait être utilisé serait que les provinces atlantiques soient considérées comme le port d'entrée d'un volume considérable de trafic commercial. Ceci permettrait de procurer des installations excellentes avec lesquelles les industries établies dans cette région pourraient compter en tant que moyen de mettre en marché leurs produits sur les marchés du continent nord américain ou internationaux.

Le port de Sydney a toutes les qualifications naturelles pour devenir un port mondial important et a prouvé ce point au cours de la dernière guerre mondiale où le port de Sydney a servi comme point majeur de ralliement des convois.

Nous vous demandons instamment que votre étude visant à l'accélération du développement du statut de ce port nous soit accordée.

Monsieur le président, pour ce qui est du premier mémoire que nous avions présenté, il y a un alinéa que je voudrais vous citer et je ne sais pas comment il est imprimé dans votre compte rendu. Messieurs, c'est à la page 6 de notre mémoire. Il se lit comme suit:

> Monsieur le président et messieurs, à titre de membres du Parlement canadien, il vous incombe de mettre en œuvre les politiques et les initiatives qui tendent à sauvegarder les intérêts des citoyens de l'ensemble du pays. Nous estimons que l'implantation d'un réseau de transport transcanadien englobant sur les côtes est et ouest des installations portuaires pour «*containers*», reliées par un réseau transcontinental fer-terre-pont, selon un taux raisonnable le mille-container, constituerait le projet le plus constructif qui pourrait être recommandé au Parlement en vue de promouvoir l'expansion de l'industrie et des ressources de notre pays. Nous vous incitons à ne pas ménager vos efforts en vue de réunir immédiatement les parties intéressées pour mettre ce plan en œuvre, et nous vous offrons notre collaboration entière à cet égard.

Merci beaucoup, monsieur le président.

Le président: Merci beaucoup. Je n'ai pas suffisamment de copies de votre mémoire. Pouvez-vous les distribuer? Merci. M. McGrath.

[*Text*]

Mr. McGrath: May I ask one question, Mr. Chairman. I wish to compliment the Sydney Board of Trade on its submission, but I am rather intrigued about the rather interesting way in which you ignore the Province of Newfoundland and its strategic location with regard to world trade.

Mr. B. MacDonald: Mr. Chairman, I think that can be answered simply by stating the fact that by a man-made structure, the causeway across the Strait of Canso, Canada was joined to the island of Cape Breton and consequently we are one entity across the nation, but unfortunately Newfoundland is not joined directly.

Mr. McGrath: Just one supplementary, Mr. Chairman, because this is a rather important line of questioning. Does the bridge concept not envisage large bottoms being transhipping to be picked up by smaller bottoms?

Mr. B. MacDonald: Are you speaking about the land bridge concept?

Mr. McGrath: The concept of transhipment in regard. . .

Mr. B. MacDonald: Basically our brief and the supplementary is speaking really of the land-bridge concept which envisages Canada as the link between the developed countries on either side, the Far East and the West Coast of Europe, that sort of concept. Newfoundland in that context, naturally, being an island, is not tied into the trans-Canada rail system.

The Chairman: Present your question, sir, to Mr. MacDonald.

Mr. Carter: Has the harbour of Sydney, the port, been declared a national harbour under the National Harbours Board?

Mr. B. MacDonald: No, Sydney Harbour is presently operated as, I believe the term is, just a federal Department of Transport harbour under a harbour master, and so on. But it is not a national harbour. Halifax, Saint John, and St. John's are the three Atlantic National Harbours.

Mr. Carter: Has representation been made to the government, or the National Harbours Board to have Sydney Harbour declared under its jurisdiction as a national harbour?

Mr. B. MacDonald: This matter has been discussed with both the Chairman of the Na-

[*Interpretation*]

M. McGrath: J'aurais une question à poser, monsieur le président. Je félicite la Chambre de Commerce de Sydney mais je suis quelque peu intrigué de la façon fort intéressante dont vous ne tenez pas compte de la province de Terre-Neuve et de son emplacement vraiment stratégique pour ce qui est de ce commerce international.

M. B. MacDonald: Je pense, monsieur le président, que nous pouvons y répondre très facilement du fait qu'à la suite de la chaussée de Canso, le Canada a fait corps avec l'Île du Cap Breton et en conséquence nous sommes une entité à travers le pays mais malheureusement Terre-Neuve n'est pas rattachée directement au continent.

M. McGrath: Une seule question. Est-ce que le concept ne prévoit pas l'expédition transcontinentale, est-ce qu'on ne prévoit pas les transbordements de gros navires, disons dans des navires moins grands.

M. B. MacDonald: Vous parlez du concept du réseau transcontinental mer-rail-mer?

M. McGrath: Le concept de transbordement à l'égard...

M. B. MacDonald: Dans notre mémoire et ce que nous y avons ajouté, nous parlons de ce concept de transbordement transcontinental qui relierait l'Est à l'Ouest du pays. Et dans ce contexte naturellement Terre-Neuve étant une île n'est pas comprise dans le réseau ferroviaire transcanadien.

Le président: Posez votre question à M. MacDonald.

M. Carter: Le port de Sydney a-t-il été déclaré un port national d'après le Conseil des ports nationaux. . .?

M. B. MacDonald: Non, le port de Sydney est exploité actuellement comme, et je crois qu'on le nomme ainsi simplement d'un port du gouvernement fédéral relevant du ministère des transports, sous le commandement d'un capitaine de port. Mais ce n'est pas un port national, Halifax, Saint-Jean et St-Jean (Terre-Neuve) sont les trois ports du Conseil des ports nationaux de l'Atlantique.

M. Carter: A-t-on présenté des instances au gouvernement fédéral ou au Conseil des ports nationaux pour que le port de Sydney soit reconnu comme relevant de la compétence de ce dernier comme port national.

M. B. MacDonald: Nous avons parlé de cette question de temps à autre avec le pré-

[*Texte*]

tional Harbours Board and other bodies from time to time, and it was felt that, for various reasons, it might be better if Sydney at the moment were not developed as a National Harbours Board port. There are advantages and disadvantages. For instance, there are as many Commission harbours in Canada as there are National Harbours Board harbours. Toronto, for instance, is a Commission harbour under the National Harbours Board.

The Chairman: Does that answer your question, Mr. Carter? Mr. Pringle.

Mr. Pringle: Mr. Chairman, first of all I would like to declare myself as a Western member. I would like to compliment you on your brief, but especially I would like to compliment you on the apparent success that we read about in connection with your steel company which has progressed and shown a great deal of strength as related to what we were led to believe prior to this particular arrangement that you are operating under now. We have been told in the last few days that transportation is the main deterrent to the expansion of industry in the Maritimes, and I am wondering if there are also problems regarding consistent supervisory and operating staff in the Maritimes.

One of my constituents, with whom I am somewhat associated, has endeavoured to expand an industry in Prince Edward Island with apparent lower operating costs, but unit costs are still a serious problem and, of course, transportation also is a problem. I am wondering if you would be able to suggest how we might be able to, say, inspire the people of the Maritimes to become involved in the expansion of industry in this area, as you have in Sydney with such great success.

Mr. B. MacDonald: Well, I did not expect to be asked a question like this. Nevertheless, I think that the secret in the Sydney steel plant is the fact that the people feel part of the industry. They feel that they are now part of the industry, and the determination at the time of the proposed closure of the plant—the attitude was not panic but determination to succeed. They felt that it did have merit, it could be done, and they proceeded to do it. Now certainly the direction, the management direction, and so on, was a tremendous factor. The participation of the Province of Nova Scotia and the attitude of the Province was a tremendous factor. And the combination of everyone co-operating was really the answer to the turn-around at the

[*Interprétation*]

dent du Conseil des ports nationaux et d'autres organismes, et on a cru, pour diverses raisons qu'il serait peut-être préférable que Sydney ne soit pas exploité actuellement en tant que port relevant du Conseil des ports nationaux. Il y a des avantages et des désavantages. Ainsi, il y a autant de ports administrés par des Commissions au Canada que de ports administrés par le Conseil des ports nationaux. Ainsi, Toronto est un port administré par une Commission relevant du Conseil des ports nationaux.

Le président: Cela répond-il à votre question, M. Carter?

M. Pringle: Monsieur le président, tout d'abord je désire vous dire que je viens de l'ouest. Je désire vous féliciter de votre exposé et plus particulièrement de votre succès dont nous entendons parler en ce qui a trait à votre compagnie d'acier qui a fait beaucoup de progrès, et qui s'est montrée très vigoureuse en dépit de ce qu'on nous a fait croire avant cet arrangement particulier sous lequel vous êtes maintenant en exploitation. Au cours des derniers jours on nous a dit que le transport était la principale menace à l'expansion de l'industrie dans les Maritimes, et je me demande s'il y a aussi des problèmes du côté stabilité du personnel de surveillance et d'exploitation dans les Maritimes.

Un de mes commettants, avec qui je suis quelque peu associé, a essayé de donner de l'expansion à une industrie à l'Île-du-Prince-Édouard, avec des frais d'exploitation apparemment moins élevés, mais les coûts par unité sont toujours un sérieux problème à résoudre, de même que le problème des transports. Je me demande alors si vous seriez en mesure de vous dire comment nous pourrions inspirer les gens des Maritimes et les entraîner à participer à l'expansion des industries dans cette région, comme vous l'avez fait à Sydney avec beaucoup de succès.

M. B. MacDonald: Je ne m'attendais pas à ce qu'on me pose une question de ce genre. Néanmoins, je pense que le secret de l'aciérie de Sydney vient du fait que les gens ont l'impression qu'ils font partie de l'industrie. Ils sentent qu'ils sont maintenant une partie intégrante de l'industrie et leur détermination au moment où l'on projetait fermer cette usine, était une attitude de détermination à réussir, non pas de la panique. Ils ont senti qu'il avait quelque mérite, que cela pouvait être fait et c'est alors qu'ils ont décidé d'aller de l'avant. Certainement, la direction, l'administration et le reste ont joué un grand rôle. La participation de la province de la Nouvelle-Écosse de même que l'attitude de la province fut un facteur important. Et, la col-

[*Text*]

Sydney steel plant, the change of policies, progressive policies, aggressive sales, co-operative production policies, and so on.

There is one interesting point in connection with the steel industry that, I think, perhaps should be mentioned to this particular body, and that is the fact that it is not accidental that the Sydney steel plant is a basic steel plant, whereas the other steel plants in the country are highly diversified and specialized. This is a matter of transportation policy, and we are remiss in not mentioning it in our brief.

The big problem of the Sydney steel plant operation is that it has been operating at a great disadvantage with regard to finished products, in view of the fact that the minute you finish any type of production on steel products going out of Sydney, you immediately jump your transportation rates tremendously. This has operated actually as a tariff, preventing finished products from the Sydney steel plant going in any quantity into the central Canadian markets, and it means that the raw steel, the billets or that sort of thing, go in at regular rates. The minute you put in any finished product, the rate goes up to a point where it is not practical.

Mr. Pringle: Are you contemplating the further processing of steel into the secondary position so as to get into these other markets? If so, should this not be a factor with regard to our deliberations, that we should give some consideration in this regard to the tariff, tight tariff, out of your area, because is this not a vital part of your business?

Mr. B. MacDonald: I would think it is something that definitely should be considered by your Committee, because the main reason that this type of facility has not been put into the Sydney area is because of the very high costs of shipping finished products out of our area into the central Canadian markets.

Mr. Pringle: Just as a final remark I would like to say that I was very happy to hear you use the word determination, because I think it is a big factor in the expansion of industry, maybe a little more so than subsidies and transportation costs. Thank you very much.

Mr. B. MacDonald: I think you will find, Mr. Chairman, that the attitude in our area at the moment is that as a place to establish industry we can stand on our own feet, pro-

[*Interpretation*]

laboration de tous fut la véritable raison du retour de l'aciérie de Sydney, du changement de politiques des politiques progressives, des ventes agressives, des politiques de production concurrentes, et ainsi de suite.

Mais il y a un point intéressant qu'il faudrait, peut-être mentionner à cet organisme particulier et qui a trait à l'industrie de l'acier, c'est que ce n'est pas tout à fait par accident que l'aciérie de Sydney est une aciérie de base alors que les autres aciéries dans le pays sont très spécialisées, et variées. C'est là une question de politique de transport et nous sommes négligents de ne pas le mentionner dans notre mémoire.

Le grand problème de l'exploitation de l'aciérie de Sydney c'est qu'elle a fonctionné à son désavantage pour ce qui est des produits finis, dû au fait que dès que vous apportez un fini à une production quelconque dans les produits de l'acier qui sont acheminés en dehors de Sydney, immédiatement vos taux de transport augmentent beaucoup. Cela a donc joué comme tarif, empêchant que les produits finis de l'aciérie de Sydney soient acheminés vers les marchés centraux canadiens, et cela signifie que l'acier brut, les billettes ou ce genre de choses se vendent à des taux réguliers. Mais dès que c'est un produit fini le taux monte à un niveau tel que ce n'est pas pratique.

M. Pringle: Est-ce que vous envisagez une autre transformation de l'acier dans un état secondaire pour avoir accès à ces autres marchés? Si oui, cela ne devrait-il pas être un facteur dans nos délibérations, que nous devrions étudier pour ce qui est du tarif, du tarif trop juste, hors de votre secteur, car n'est-ce pas une partie essentielle de votre entreprise?

M. B. MacDonald: Oui, votre Comité devrait étudier la question, à mon avis, parce que la principale raison pour laquelle ce genre de service n'a pas été donné dans la région de Sydney est dû aux coûts très élevés d'expédition des produits finis hors de notre région vers les marchés centraux canadiens.

M. Pringle: Une dernière observation. J'étais des plus heureux de vous entendre utiliser le mot détermination, parce qu'à mon avis c'est un facteur important pour l'expansion de l'industrie, et peut-être un peu plus que les subsides et les coûts de transport. Je vous remercie.

M. B. MacDonald: Je pense que vous verrez, monsieur le président, que l'attitude dans notre région actuellement est que, en tant que place pour l'aménagement d'industries, nous

Texte]

ided that the same policies which are adopted in other parts of Canada are applied to his part.

The Chairman: Mr. Skoberg.

Mr. Skoberg: Mr. MacDonald, did you suggest that you do have facilities now to handle ontainerization traffic at the harbour?

Mr. B. MacDonald: What I am saying, Mr. hairman, is that we are presently in the rocess of developing the plan for these acilities. Within a matter of a very few eeks we hope that a full-scale plan will be resented. You notice from my supplementary brief that the Sydney Harbour Development Board was formed since our brief was resented last year, so that we are in the ormative stages in getting proper full-scale evelopment in Sydney Harbour.

Mr. Skoberg: In your opinion, Mr. Maconald, do you consider that the facilities for ontainerization traffic should be supplied by he federal government at these ports, or do ou think that this is the responsibility of the hipper or the particular port authority?

Mr. B. MacDonald: Well, Mr. Chairman, I an only say that if they are not developed as matter of public investment, it is one of the w, let us say, capital parts of the transportion system that did not develop from the ublic purse. We heard submissions on roads moment ago. This is certainly a public roposition through the arrangements with he provinces. Certainly airfields are governent developments. Certainly the railway nes, at least in this area, in the main are ublic capital expenditures. So we feel that rtainly the workage facilities which are ermanent transportation links should also be that category. The amortization of the cost y payment by private companies is the eans by which we feel that it could be done. therwise, I do not think that they would get ere because private interests, I do not ink, would make that type of capital investent on the long term.

Mr. Skoberg: Are you a strong advocate of taining the MFRA rate?

The Chairman: Mr. Skoberg, would you low Mr. Nesbitt a supplementary question?

[*Interprétation*]

pouvons tenir bon pourvu que les mêmes politiques adoptées dans d'autres parties du Canada soient appliquées à notre partie.

Le président: Monsieur Skoberg?

M. Skoberg: Monsieur MacDonald, est-ce que vous suggérez que vous avez maintenant les services voulus pour vous occuper du trafic de «containers» au port de Sydney?

M. B. MacDonald: En ce moment, Monsieur le président nous sommes en train de mettre au point un plan pour ces services. D'ici quelques semaines, nous espérons que nous aurons tous les détails. Vous remarquerez dans mon mémoire additionnel que l'Office d'expansion économique du port de Sydney a été formé depuis la présentation de notre mémoire l'année dernière; donc, nous sommes dans les premiers stages du développement du port de Sydney.

M. Skoberg: Croyez-vous que le service pour le trafic des «containers» devrait être fourni par le gouvernement fédéral dans ces ports, ou croyez-vous que la responsabilité revient à l'expéditeur ou aux autorités portuaires?

M. B. MacDonald: Monsieur le président, tout ce que je puis vous dire c'est que s'ils ne sont pas mis au point et aménagés comme faisant partie d'un investissement du secteur public, il s'agit là d'une des rares immobilisations du réseau de transport qui ne s'est pas fait à partir des deniers publics. Nous avons entendu des propositions sur les routes il y a un moment. C'est là une proposition du secteur public, certainement, suite à des dispositions prises avec les provinces. Certainement, les champs d'aviation sont des œuvres du gouvernement. Certainement les chemins de fer, du moins dans cette région, sont des dépenses d'immobilisation à partir des deniers publics. C'est pourquoi nous sommes d'avis que sûrement le service et le lien de transport devraient aussi être dans la même catégorie. L'amortissement des frais d'aménagement, en vertu d'un paiement par les sociétés privées, est le moyen qui, à notre avis, pourrait être utilisé. Autrement, je ne crois pas qu'on y parviendra, parce que les intérêts privés, à mon avis, ne pourraient faire de tels investissements à long terme.

M. Skoberg: Est-ce que vous voulez maintenir les taux de la Loi du Transport des marchandises dans les provinces Maritimes.

Le président: Monsieur Skoberg, permettez-vous à M. Nesbitt de poser une question supplémentaire?

[*Text*]

Mr. Nesbitt: Just a brief supplementary to Mr. MacDonald. It has been mentioned that the government should supply, as it did years ago for the air services of Canada, certain port facilities to facilitate container traffic and the like. Could you give the members of the Committee some specific examples of what sort of facilities you think the federal government should provide in the various ports such as Sydney?

Mr. B. MacDonald: Well, Mr. Chairman, the basic facility, of course, is the wharfage facility. This is a major expenditure and, as I said, a long-term physical asset which goes on for a long time.

Mr. Nesbitt: Excuse me, just a moment. You say wharfage facilities. Do you mean a dock? Do you mean loading cranes?

Mr. B. MacDonald: Dock facilities, it means basically, and the cranes in connection with the loading facilities. We feel that in Sydney Harbour we can justify, on a commercial basis, the initial installation, and with traffic which is presently in the Harbour and using antiquated facilities which must be replaced in the near future. We also feel that there is traffic which could be attracted. We had traffic in there last year that, we think, would be attracted in larger volume if we had the facilities.

Mr. Nesbitt: After you have had perhaps a bit of time to consider the question, I was wondering if perhaps you could forward to the Clerk of this Committee a list of the things that you feel would be helpful for the federal government to provide as wharfage facilities in Sydney Harbour.

Mr. B. MacDonald: I would be very pleased to, sir.

The Chairman: Mr. Skoberg.

Mr. Skoberg: This is the last question, Mr. Chairman. Mr. MacDonald, are you a strong advocate of the retention of the MFRA rates?

Mr. B. MacDonald: Well, Mr. Chairman, the retention of the MFRA rates as they are at the moment I do not think is really what we are advocating. What we are advocating is a whole new concept of rail transportation rates in the Maritime area, say, from the seacoast inward. And I think there is some-

[*Interpretation*]

M. Nesbitt: Une question supplémentaire très brève à l'adresse de M. MacDonald. On a dit que le gouvernement devrait donner comme il l'a fait il y a quelques années pour les services aériens certains aménagements portuaires pour faciliter le transport des containers. Pourriez-vous donner aux membres du Comité des exemples précis du genre de service qui à votre avis devrait être assuré par le gouvernement fédéral dans les différents ports, tel celui de Sydney?

M. B. MacDonald: Les services essentiels, bien entendu, monsieur le président sont les services de quais. C'est là une dépense importante et, comme je l'ai dit, c'est là un actif matériel à long terme qui durera bon nombre d'années.

M. Nesbitt: Un instant, s'il vous plaît. Vous dites services de quais. Voulez-vous parler de dock? Voulez-vous parler des grues de chargement.

M. B. MacDonald: Les services de dock, essentiellement et les grues pour ce qui est de services de chargement. Nous sommes d'avis que dans le port de Sydney nous pouvons vraiment justifier sur le plan commercial une première installation, avec le trafic que nous avons actuellement dans le port de Sydney, et les services désuets qui doivent être remplacés très bientôt. Nous sommes aussi d'avis qu'il y a un trafic qui pourrait être encouragé à venir chez-nous. Nous en avions l'année dernière et nous croyons qu'il pourrait être plus grand si nous avions les services adéquats.

M. Nesbitt: Après avoir peut-être eu le temps de considérer la question, je me demandais si vous ne pourriez pas faire parvenir au greffier de ce Comité la liste des éléments qui, à votre avis, pourraient être fournis par le gouvernement fédéral au service de quais du port de Sydney.

M. B. MacDonald: J'en serais très heureux, monsieur.

Le président: Monsieur Skoberg?

M. Skoberg: Une dernière question, s'il vous plaît. Monsieur MacDonald, est-ce que vous êtes en faveur du maintien des taux de la Loi du transport des marchandises dans les Maritimes?

M. B. MacDonald: Monsieur le président, quant au maintien de ces taux tels qu'ils présentent maintenant, je ne crois pas que ce soit vraiment ce que nous proposons. Ce que nous proposons en réalité, c'est un tout nouveau concept de la structure des taux pour le transport dans les régions des Maritimes,

[*Texte*]

ning which some of you gentlemen may now but some of you may not know, and nat is that the payments, let us say the contribution, from the federal government under ne MFRA per ton mile were considerably less or many years than the per-ton mile payments that were made under the so-called ridge subsidy over the Northern Ontario rea of the railway.

We hear a great deal about what a marvelous thing the MFRA has been across the ears, and there is no question that it has een of assistance. But, once again, we are alking about equal treatment across the ountry, and it is not the only case where the ederal government has assisted a transportaon facility, and in the Northern Ontario case was a greater contribution than the contriution to the Maritimes.

The Chairman: Mr. Allmand.

Mr. Allmand: Mr. MacDonald, how many hips used Sydney Harbour last year, cargo hips?

Mr. B. MacDonald: I am afraid I could not ve this to you offhand, but Sydney Harbour as consistently, across the years, been heavi- on the domestic side in tonnage than has alifax Harbour. On the international side, of ourse, Halifax Harbour is away ahead. But ere is a substantial tonnage handled in Sydey Harbour at the moment, through coal, eel shipments, inland traffic, and general rgo operations.

Mr. Allmand: I was going to ask you a rther question which you have already parally answered. I wanted to know what the estinations of the ships in and out of Sydney arbour would be, and you seem to say that is domestic. Would that mean that the ships ainly go up the St. Lawrence towards Montal and also to Newfoundland?

Mr. B. MacDonald: There is considerable affic to other countries, Newfoundland affic of course, and we have recently had ipping, in connection with some of the new dustries in the area, from Australia. These st few weeks we have had ships in from pan doing, as was mentioned, a transshipent operation from one ship to the other. ne ship was going back to Japan and offaded its cargo to another Japanese ship oing in another direction, and this is an area here we feel we have great potential.

[*Interprétation*]

disons, du littoral Atlantique, vers l'intérieur. Et, je pense que peut-être certains d'entre vous le savez, d'autres ne le savent peut-être pas, mais les paiements, les contributions venant du gouvernement fédéral en vertu de la Loi sur le transport des marchandises dans les Maritimes, par tonne-mille, étaient beaucoup moins pour un bon nombre d'années que les paiements par tonne-mille qui furent effectués en vertu des prétendus subsides pour combler les lacunes du chemin de fer dans la région du nord de l'Ontario.

Nous avons beaucoup entendu parler des éléments merveilleux de cette Loi pour le transport des marchandises dans les Maritimes et cela fut vraiment une aide précieuse. Une fois de plus, nous parlons de traitement égal à travers le pays et ce n'est pas le seul cas où le gouvernement fédéral a vraiment aidé au service des transports et dans le nord de l'Ontario, la contribution était plus importante que la contribution aux Maritimes.

Le président: Monsieur Allmand?

M. Allmand : Monsieur MacDonald, combien de navires sont allés au port de Sydney l'année dernière?

M. B. MacDonald: Je ne pourrais vous le dire, sur le champ mais le port de Sydney a toujours eu au cours des années passées un tonnage plus élevé en tonnage domestique que le port de Halifax. Sur le plan international,le port de Halifax est loin devant, mais il y a un tonnage frot élevé qui passe par Sydney en ce moment, des expéditions de charbon, d'acier et les opérations de cargos habituels.

M. Allmand: Je voulais vous poser une autre question sur laquelle vous avez en partie répondu. Je voulais savoir quelles étaient les destinations des navires du port de Sydney, vous semblez dire qu'elles sont domestiques. Est-ce que cela veut dire que les navires se dirigent principalement vers le Saint-Laurent, jusqu'à Montréal et aussi Terre-Neuve?

M. B. MacDonald: Il y a beaucoup de trafic vers les autres pays, vers Terre-Neuve évidemment et nous avons eu récemment des expéditions, en regard des nouvelles industries de la région, venant de l'Australie. Il y a à peine quelques semaines, nous avons eu des navires qui venaient du Japon, effectuant comme on l'a dit ici, des opérations de transfert d'un navire à un autre, un navire qui allait au Japon et qui a donné sa cargaison à un autre navire qui s'en allait dans une autre direction, et voilà un secteur où les possibilités sont très grandes.

[*Text*]

One of the things mentioned particularly was the fact that they would like to investigate shipping into Sydney Harbour during the approximate three-month period when Montreal is frozen up, and this is an area where they felt that Sydney Harbour could be of use to them as well.

Mr. Allmand: Are the basic products that are shipped in and out of Sydney steel and coal? Are these the two main products or do you have other freights that go out of that harbour as well?

Mr. B. MacDonald: These are the two main products at the moment. There is an industry which is now located in Sydney Harbour which brings in bauxite from Australia's process, but basically at the moment the major traffic is in steel and coal. Of course, involved in steel are all the raw materials for steel, which may come from various parts of the world.

Mr. Allmand: You suggest in your brief that Sydney be made a major containerization port and a major port on the East Coast. I know you speak from the Sydney point of view, but do you feel that Nova Scotia could afford two major containerized ports if the federal government were to assist in the development of increased containerization facilities? As you know, that is the attitude of the Nova Scotia government.

Mr. B. MacDonald: I am afraid I cannot answer for the Nova Scotia government, Mr. Chairman, but with regard to Sydney being a major containerization port, if you first of all look at containerization operations in Canada, by process of elimination it would appear that the major port should be in Nova Scotia because it is the closest landfall and it does not have any of the, let us say, natural difficulties that some of the New Brunswick ports have. The major harbours in Nova Scotia are at Halifax, Port Hawkesbury and Sydney. If we look at major containerization facilities we find there are certain natural requirements, one of which is availability of land. Once you mention availability of land, you have to have availability of suitable land.

Looking at Halifax, in spite of the fact that there is a containerization operation going in here—and there will always be a containerization operation in Halifax Harbour, otherwise it will not be a harbour—the extent of

[*Interpretation*]

Une chose dont je voudrais parler tout particulièrement, c'est le fait qu'on aimerait savoir ce qu'il en est pour les expéditions vers le port de Sydney pendant cette période de trois mois où le port de Montréal est fermé par les glaces. C'est là un secteur où l'on croyait que le port de Sydney pourrait leur être utile.

M. Allmand: Est-ce que les produits de base qui sont expédiés en passant par Sydney, l'acier et le charbon? Sont-ce les deux principaux produits ou est-ce qu'il y a d'autres cargos qui partent aussi de ce port?

M. B. MacDonald: Ce sont les deux produits principaux en ce moment. Il y a une industrie qui se trouve dans le port de Sydney et qui importe de la bauxite de l'Australie. En ce moment, il y a surtout de l'acier et du charbon. Bien entendu, il y a d'autres matières premières pour l'acier qui peuvent nous venir de différentes régions du monde.

M. Allmand: Dans votre mémoire, vous proposez que Sydney devienne un port principal pour le service des «containers» et un port essentiel sur la côte est. Je sais que vous parlez du point de vue de Sydney, mais êtes-vous d'avis que la Nouvelle-Écosse peut se permettre deux ports importants pour le service des «containers» si le gouvernement fédéral aidait au développement et à l'augmentation des aménagements pour «containers»? Comme vous le savez, telle est l'attitude du gouvernement de la Nouvelle-Écosse.

M. B. MacDonald: Je crains fort que je ne saurais répondre au nom du gouvernement de la Nouvelle-Écosse, monsieur le président, mais pour ce qui est de la transformation de Sydney en un port important pour le service des «containers», si vous examinez tout d'abord les opérations des «containers» au Canada, et par processus d'élimination, il me semble que le principal port devrait se trouver en Nouvelle-Écosse parce que c'est là la terre la plus rapprochée, et n'a pas de difficultés naturelles que connaissent certains ports du Nouveau-Brunswick. Les principaux ports de la Nouvelle-Écosse sont à Halifax, Port Hawkesbury et Sydney. Si nous voyons le service des «containers» nous voyons qu'il y a certaines exigences naturelles, dont la disponibilité de terrains. Une fois que vous parlez de disponibilité de terrains, il faut avoir disponibilité de terrains adéquats.

Pour ce qui concerne Halifax, malgré le fait qu'il y a des opérations «containers» en cours, et il y en aura toujours dans le port de Halifax, autrement ce ne serait plus un port, l'ampleur des aménagements est une questi

[*Texte*]

the facility is a matter of policy. Port Hawkesbury has a lot of things which are very good, such as very deep water, but there are difficulties in the topography of the adjoining land as far as a containerization port is concerned. This means that you come down to Sydney.

Mr. Allmand: You know that only certain types of freight are suitable for containerization, and neither steel nor coal is the type of freight that is suitable for a container.

Mr. B. MacDonald: Yes, but we are not looking at Sydney Harbour as a point of origin for freight, we are looking at Sydney Harbour as a terminal between ocean and land transportation. In other words, we are the junction point, we are not the originating point for traffic.

Mr. Allmand: Has there been a clamour for shipping companies to, let us say, use Sydney as opposed to Halifax? As you know, the shipper is the one that will eventually determine this—the shipping companies, the steamship lines, and so forth. If we were to put a development into Sydney Harbour and the shipping companies continued to show a preference for Halifax, we would not be spending our money too well.

Mr. B. MacDonald: Mr. Chairman, I think we would have to answer this by saying that at the moment we do not have the type of facility to offer the shipping companies that would even be the nucleus of an operation. Our proposal will be to propose the nucleus of the operation and if we can get the shipping companies—as we know we can, we have had indications of this from some of the shipping companies—and if we can have the facilities there to bring in the traffic, we know we can attract it, and we have enough traffic in the harbour at the moment to justify the initial installation.

The Chairman: Mr. Rose.

Mr. Rose: Thank you. A number of my questions have been answered, at least in part, by the line of questioning that Mr. Allmand pursued. I would first like to say that I was very interested in the brief presented by Messrs. McDonald. It seems to me that every second person in the Maritimes is named McDonald. This may not be so. I would like to comment that this is the last place I expected to hear anyone singing the praises of public ownership of a large industry, and I was wondering if the gentleman thought—I was going to pose a question but I will not—

[*Interprétation*]

de politique. Port Hawkesbury a de nombreux avantages, tels l'eau très profonde, mais la topographie des terrains avoisinants crée des problèmes quant à l'aménagement d'un port pour «containers». Donc vous en arrivez à Sydney.

M. Allmand: Vous savez que le service des «containers» ne peut convenir qu'à certains types de fret dont ne font pas partie le charbon et l'acier.

M. B. MacDonald: Oui, mais on ne considère pas le port de Sydney comme le point de départ du fret mais plutôt comme un terminus entre les services océaniques et continentaux. Autrement dit, nous sommes un point de jonction, nous ne sommes pas le point d'origine pour le traffic.

M. Allmand: Est-ce qu'on a demandé que les armateurs utilisent Sydney plutôt que Halifax? Comme vous le savez, les expéditeurs sont ceux qui éventuellement le détermineront, les sociétés d'expéditions, les compagnies maritimes et ainsi de suite. Si on développait le port de Sydney, et que les sociétés d'expédition préfèrent toujours Halifax ce ne serait pas une bonne façon de dépenser notre argent.

M. B. MacDonald: Monsieur le président, je pense qu'il nous faut y répondre en disant qu'en ce moment, nous ne pouvons pas offrir aux sociétés d'expédition le genre de services qui serait même le noyau des opérations. Nous proposons un noyau d'activité et si nous pouvons avoir les sociétés, nous savons que nous pouvons le faire parce que certaines sociétés nous l'ont indiqué déjà, et si nous pouvons avoir ces aménagements pour y amener le traffic, nous savons que nous pouvons l'attirer, et nous avons suffisamment de traffic dans le port maintenant pour justifier ces premières installations.

Le président: Monsieur Rose.

M. Rose: J'aurais un certain nombre de questions à poser, mais on y a répondu en partie, à la suite de l'ensemble des questions posées par M. Allmand. D'abord je voudrais vous dire, que je suis fort intéressé au mémoire présenté par M. MacDonald. Il me semble que presque tout le monde s'appelle MacDonald ici dans les Maritimes, peut-être pas. Je voudrais vous dire que c'est le dernier endroit où je m'attendais à entendre quiconque faire les louanges de la propriété publique d'une industrie importante, et je me demandais si vous aviez pensé, enfin j'allais

[*Text*]
that the solution to further Maritime problems might be solved in a similar manner.

Nevertheless, I would like to pursue the concept of the land bridge with the witness. It seems to me that the land bridge concept follows this line of reasoning somewhat, that it is cheaper or just as cheap to transship by rail from the East Coast to the West Coast for transshipment to the Orient as it is to go into the harbour of Montreal, for instance, where I am told you have a great deal of congestion, and this sort of thing. I do not know whether that is true or not. You would agree with that?

Mr. B. MacDonald: Yes.

Mr. Rose: We are in the infancy of this land bridge concept, are we not, sir?

Mr. B. MacDonald: Yes, that is right.

Mr. Rose: My question is very similar to Mr. Allmand's. How do you feel about the idea of duplication? We are only beginning the industry now so why do we need two types of containerization ports at Halifax and Sydney, for instance? I realize you represent that particular part of the country and you are naturally anxious to have these things, but it is somewhat similar to the situation we ran into in New Brunswick in the last two days where every community wanted a major international airport. Why do you feel that Sydney has anything particular to offer in this regard?

Mr. B. MacDonald: Mr. Chairman, people may not agree with it, but this is our concept in any event. I detailed the three Nova Scotia ports a moment ago but I did not quite finish the part about Sydney being a suitable major containerization port. It is because we have vacant available land which is government-owned and which is immediately adjacent to 40-foot water, and this depth is consistent throughout the harbour. As I understand it, the present containerization facility which has been set up in Halifax is approximately 55 acres. This is a very good stopgap operation but Halifax Harbour as the site for a major containerization facility—if we are talking about major North American international trade—presents great problems. I think this was pointed out in a study which was done of Halifax Harbour by ADB. It just does not have the backup waterfront land for a major facility. There is one section on the Dartmouth side which the study showed—I am

[*Interpretation*]
poser une question mais je ne le ferai pas, que la solution à d'autres problèmes des Maritimes pourraient être réglés de la même façon.

Néanmoins, je voudrais reprendre ce concept «fer-terre-pont» avec le témoin. Il me semble que ce concept suit cette ligne de pensée qu'il est moins coûteux ou tout aussi peu coûteux de faire ces expéditions par rail de l'est à l'ouest vers l'Orient plutôt que d'aller dans le port de Montréal, par exemple, où vous avez beaucoup de congestion, me dit-on. Je ne sais pas si c'est vrai ou pas. Êtes-vous d'accord à ce sujet?

M. B. MacDonald: Oui.

M. Rose: Nous en sommes au début de ce concept «fer-terre-pont», n'est-ce pas?

M. B. MacDonald: Oui, c'est juste.

M. Rose: Ma question est bien semblable à celle de M. Allmand. Quels sont vos sentiments quant à cette idée de duplication? Nous débutons seulement l'industrie, donc pourquoi faut-il deux genres de port pour containers, soit Halifax et Sydney? Je me rends compte que vous représentez cette partie du pays et que vous désirez avoir ces choses mais c'est tout comme ce que nous avons connu au Nouveau-Brunswick, au cours des deux derniers jours où chaque collectivité veut un aéroport international. A votre avis, est-ce que Sydney a quelque chose de particulier à offrir à cet égard?

M. B. MacDonald: Monsieur le président, les gens ne seront peut-être pas d'accord, mais de toute façon voilà notre concept. J'ai décrit il y a un instant, les trois ports de la Nouvelle-Écosse, mais je n'avais pas tout à fait terminé ce qu'il en était de Sydney comme un port principal pour les «containers». C'est parce que nous avons les terrains vacants en disponibilité qui sont la propriété du gouvernement, et avoisinant une eau de 40 pieds de profondeur, et cette profondeur est constante dans tout le port. Comme je l'entends, les aménagements actuels pour «containers» établis à Halifax couvrent une superficie de quelques 55 acres. C'est une excellente opération bouche-trou, mais le port de Halifax comme l'emplacement d'importantes installations pour «containers», si nous parlons du commerce international nord-américain présente de très grands problèmes. Le problème fut signalé par une étude faite par l'Office d'expansion économique de la région atlantique sur le port de Halifax. Ce port n'a pa

[*Texte*]

talking about suitable topographical sites and . . .

[*Interprétation*]

tous les éléments voulus d'eau et de terre pour ces services. Il y a une partie du côté de Dartmouth que l'étude a démontré, je parle d'emplacement topographique convenable, et. . .

Mr. Rose: Sir, would you compare the potential of Port Hawkesbury in the Bedford Basin with the potential facilities that Sydney has to offer?

M. Rose: Alors, est-ce que vous compareriez les possibilités de Port Hawkesbury dans le bassin de Bedford avec les services éventuels que peut offrir Sydney?

Mr. B. MacDonald: Once again we are into a topographical problem. I think if you look around Halifax Harbour and the Bedford Basin you will see what I mean. The backup land is just not available and the study pointed this out. On the opposite side there is one section which I believe is called Navy Island. Is that correct? There is one area there, but except for that area there just is not any. Even the present facility—well, that is a matter of opinion.

M. B. MacDonald: Une fois de plus, nous sommes aux prises avec le problème d'ordre topographique. Si vous regardez le port de Halifax et le bassin de Bedford, vous verrez ce que je veux dire. Le terrain d'appui n'est pas disponible et c'est l'étude qui nous l'a démontré. De l'autre côté, il y a une partie qui s'appelle l'île *Navy*, je crois. Est-ce correct? Je pense qu'il y a là une région, mais sauf celle-là, il n'y en a pas. Même pour les services actuels, c'est une question d'opinion.

Mr. Rose: This is my final question, Mr. Chairman, of the witness. You mentioned the difficulty of exporting finished steel products to Central Canada because the Maritimes Freight Rates Act has a kind of tariff. Am I paraphrasing you correctly?

M. Rose: Ma dernière question. Vous parlez des difficultés d'exporter vers le Canada central des produits finis de l'acier parce que la Loi sur les taux de transport des marchandises dans les provinces maritimes prévoit un genre de tarif. Est-ce que je résume bien votre pensée?

Mr. B. MacDonald: Right.

M. B. MacDonald: Oui.

Mr. Rose: In this area there seems to be a preoccupation with sales to Central Canada. I believe it is historic, it has something to do with the terms of the union, and this sort of thing. Have there been explorations concerning the export of finished steel to countries other than Canada, which many other countries in the world do?

M. Rose: Il semblait y avoir une certaine préoccupation pour ce qui est des ventes vers le Canada central. Je pense que c'est sur le plan historique, que cela a quelque chose à voir avec les conditions du syndicat, et autres choses du genre. Est-ce qu'on a examiné la possibilité d'exporter les produits finis de l'acier, ce que bon nombre d'autres pays font déjà dans le monde.

Mr. B. MacDonald: Mr. Chairman, I think the answer to that is that to put in finished steel facilities any steel plant must have a fair sized domestic market which it can count on for its base of operations in this field. If that is absent, then it is a very dangerous business practice to go into the export field and set up facilities to go into the finished product market and the export field primarily. The major steel companies in Canada certainly could not and would not have their finished steel—

M. B. MacDonald: Je pense que la réponse, est que toute aciérie qui veut faire des aménagements pour une production d'acier fini doit avoir un marché domestique sur lequel elle puisse compter comme base d'opération dans ce domaine. Si on n'a pas cet élément, alors c'est une pratique commerciale très dangereuse que de se lancer dans le secteur des exportations, et d'établir les aménagements pour se lancer surtout sur le marché des produits finis et les exportations. Les principales aciéries du Canada, certainement ne pourraient pas et ne voudraient pas que leur acier fini. . .

Mr. Rose: Do you have a precise recommendation to put on the record as far as the rates on finished steel products from Sydney are concerned?

M. Rose: Est-ce que vous avez une recommandation précise que vous pourriez consigner aux comptes rendus pour ce qui est des taux pour les produits finis de l'acier de Sydney?

[*Text*]

Mr. B. MacDonald: Yes, Mr. Chairman. I would say that it would be the rare case that a carload of finished products destined for a Central Canadian market would go in less that carload lots. It may happen, but I would think it would be a rare case. If this is the case, then what is the difference between hauling a carload of raw or semifinished steel and a carload of finished steel? Why not apply the same yardstick to both? That would mean that the transportation tariff would not operate against the finished products of a steel company.

The Chairman: Thank you. The next questioner is Mr. Thomas.

Mr. Thomas (Moncton): Mr. Chairman, in the interests of time—and I also see there are two other briefs from the Cape Breton area coming up—I will save my questions for the next witness from the Cape Breton area. Perhaps you would put me on the list then.

The Chairman: Thank you, Mr. Thomas. Do you have one last question, Mr. Rock?

Mr. Rock: Yes. Is there any shipment of coal from Sydney to any coal-driven electric generators in your province? Is there any coal movement from Sydney to places where there are coal-driven electric generators?

Mr. B. MacDonald: Yes, very definitely.

Mr. Rock: Do you have any coal-driven generators in Sydney?

Mr. B. MacDonald: Oh yes, it is entirely thermal.

Mr. Rock: At the coal mines or close to them?

Mr. B. MacDonald: Close to them, yes. The main electric power source for the Isle of Cape Breton is a matter of a few miles from the coal mines.

Mr. Rock: Thank you.

The Chairman: This completes the questioning, Mr. MacDonald.

Our next brief will be from the Society of Atlantic Initiative of Halifax, and I will call on Messrs. Waller, Unsworth and Boswick. Mr. Waller is sitting on my right. You will find the brief on page 636.

Mr. F. M. Waller (Society of Atlantic Initiative): Mr. Chairman, members, ladies and

[*Interpretation*]

M. B. MacDonald: Oui, monsieur le président, je dirais qu'il serait exceptionnel d'expédier le produit fini vers les marchés centraux si la wagonnée n'est pas complète. La chose est possible mais rare. S'il en est ainsi, alors quelle différence y a-t-il entre le transport d'une wagonnée d'acier brut ou semi-fini et une wagonnée d'acier fini? Alors, pourquoi ne pas appliquer les mêmes normes dans les deux cas? Cela signifierait que le tarif des transports n'irait pas à l'encontre des produits finis de l'acier.

Le président: Merci. La prochaine question, M. Thomas.

M. Thomas (Moncton): Monsieur le président, par égard au temps, car je vois qu'il y a deux autres mémoires qui nous viennent de l'Île du Cap Breton, donc j'attendrai que l'on soit saisi de la présentation de l'Île du Cap Breton. Pourriez-vous m'inscrire sur la liste alors?

Le président: Merci, monsieur Thomas. Une dernière question, monsieur Rock?

M. Rock: Est-ce qu'on fait des expéditions de charbon à partir de Sydney vers des centres de production d'électricité où l'on utilise le charbon? Est-ce qu'on fait des expéditions de charbon à partir de Sydney vers des centres de production d'électricité par le charbon?

M. B. MacDonald: Oui.

M. Rock: Est-ce que vous en avez à Sydney?

M. B. MacDonald: Oui, il s'agit seulement de centrales thermiques.

M. Rock: A la mine ou tout près?

M. B. MacDonald: Oui, tout près. La principale source d'énergie pour l'Île du Cap Breton se trouve à peine à quelques milles des mines de charbon.

M. Rock: Merci.

Le président: Ceci met fin à la période de questions, monsieur MacDonald.

Nous entendrons maintenant le mémoire de la *Society of Atlantic Initiative* de Halifax. J'demande donc à MM. Waller, Unsworth et Boswick de prendre la parole.

M. Waller est assis ici à ma droite. Vous trouverez le mémoire ici à la page 636.

M. F. M. Waller (Society of Atlantic Initiative): Monsieur le président, messieu

[*Texte*]

gentlemen, as we have been requested to be brief I will do my best to be just that. The members of the Society for Atlantic Initiative do not have research capability so they are relying on current studies which were made by others as well as logic and reason as a basis for their conclusions and recommendations.

In the case of the Atlantic Provinces transportation situation the study used was that of the Economist Intelligence Unit, which was published in 1967. As individuals and as a group, we also have our own opinions of Maritime attitudes of the significance of the transportation problem in the total spectrum of problems and of the results that have been achieved so far.

We cannot accept the justification for an economy, or part of an economy, that relies on continuing subsidy in order to exist. A transportation subsidy has apparently been paid in one form or another since about 1875. We also recognize that the Maritime Freight Rates Act subsidy may not be an Atlantic subsidy at all but, in fact, just part of the total railway subsidy. We deplore the attitudes that apparent hand-outs may generate. The frequent demands for subsidies, capital grants and tax concessions indicate our reliance on government help. There is even a proposal that because the railways are subsidised the trucking industry should be subsidised. To us this would be a disastrous direction to follow and one that would probably deny forever the removal of subsidies.

We recognize that we are trying to compete with other parts of Canada. We believe that the money which is being spent in Upper Canada on improved port facilities and through traffic is wasted because the trend in the shipment of goods has established itself in the opposite direction; that is, massive volume via water to the ports that can handle superships, modern disbursal facilities and high-speed railway systems.

The money being spent to refurbish an outdated system, instead of building a totally integrated system, prolongs regional disparities in Canada and does not allow each sector of Canada to fulfil its role in a proper and economically viable manner. Similarly, it would seem reasonable to encourage the development of north-south trade by improv-

[*Interprétation*]

les membres, mesdames et messieurs, comme on nous a demandé d'être brefs, je ferai de mon mieux. Les membres de la *Society of Atlantic Intiative* n'ont pas les services de recherches; ils doivent donc compter sur les études faites par d'autres de même que sur la logique et le raisonnement comme base de leurs conclusions et de leurs recommandations que nous énonçons.

Dans le cas de la situation du transport dans les provinces de l'Atlantique, on a employé l'étude de l'*Economist Intelligence Unit*, publiée en 1967. Nous avons aussi, en tant que groupe et que personnes, nos opinions de l'attitude des Maritimes quant à l'importance du problème du transport dans l'ensemble des problèmes et les résultats qui ont été obtenus jusqu'ici.

On ne peut accepter la justification d'une économie, ou d'une partie d'une économie, qui doit compter toujours sur les subventions pour se maintenir. Les subventions pour le transport, apparemment, ont été payées sous une forme ou sous une autre, depuis 1875. Nous reconnaissons aussi que les subventions en vertu de la Loi sur les taux de transport des marchandises dans les provinces maritimes ne sont peut-être une subvention pour la région de l'Atlantique, mais, en fait, ne sont qu'une partie de l'ensemble des subventions ferroviaires. Nous déplorons l'attitude que ces dons peuvent créer. Les demandes fréquentes de subsides, de dégrèvements fiscaux et de subventions montrent notre dépendance de l'aide du gouvernement. Il a été proposé que puisque les chemins de fer sont subventionnés, le camionnage devrait l'être. Pour nous, ce serait vraiment une orientation vraiment désastreuse à suivre qui nous refuserait peut-être pour toujours une disparition des subventions.

Nous nous rendons compte que nous essayons de concurrencer avec d'autres régions du Canada. Nous croyons que l'argent dépensé dans le Haut-Canada pour les aménagements portuaires et le transit est un gaspillage vu que les tendances dans l'expédition des denrées se sont établies dans une direction opposée; c'est-à-dire le transport par eau de grands volumes vers les ports qui peuvent recevoir les navires géants, les installations modernes de déchargement et les systèmes de transport ferroviaire très rapide.

L'argent dépensé pour moderniser un système désuet plutôt que d'établir un système entièrement intégré permet le maintien des disparités régionales au Canada et ne permet pas à chacune des régions du Canada, d'assumer son rôle d'une façon économique, viable et appropriée. De même, il semblerait raisonnable d'encourager le développement du com-

[*Text*]

ing the links between U.S. highway No. 95 in Maine and the main arterial highways of New Brunswick and Nova Scotia.

It does not seem illogical to say that the Maritimes relative to other parts of North America can be compared to under privileged and uneducated countries who have the opportunity to profit by the technological advances of other countries without the burden of the capital expenditures or the personnel to develop them. We must recognize that a giant leap forward is necessary to place the Maritimes on line again with the use of these technological advancements.

With that much preamble, let me offer you a summary of our brief which has been filed with you. It deals only with policy and subsidies, not with recent rate changes, and its principal points are:

1. The remedy for the many economic ills besetting the Atlantic Region requires action by the Atlantic Provinces as well as the Federal Government. Transportation is but one of those ills, even though one of vital importance.

2. The Atlantic Provinces cannot continue to demand the perpetuation of Confederation promises, when the environment of today is completely different from that of 1867, 1927 or, but to a lesser degree, 1949.

3. Transportation subsidies which may have helped the shipper at one time, today cannot be proven as being much more than revenue to the carriers, with very little real benefit accruing to the Atlantic shipper.

4. The accomplishment of the objective of National Transportation Policy can best be achieved by creating conditions which will assist the maximum development of non-subsidized competitive modes of transport in the Atlantic Region.

5. Provincial and Federal Governments should work together in such fields as all-weather highways, uniform trucking regulations and rates to develop truck competition.

6. Should abolition of subsidies result in a demand by subsidized carriers for increased rates, consideration should be given to provi-

[*Interpretation*]

merce nord-sud en améliorant les liens routiers entre la route 95 dans le Maine et les grandes routes du Nouveau-Brunswick et de la Nouvelle-Écosse.

Il ne semble pas du tout logique de dire que les Maritimes, par rapport aux autres régions de l'Amérique du Nord, peuvent être comparées aux pays sous-évolués qui ont pu bénéficier du progrès technologique des autres pays, sans faire de dépenses en immobilisation du personnel pour le développement. On doit reconnaître qu'il faudra un immense progrès pour que les Maritimes puissent combler leur retard dans l'utilisation de ces avances technologiques.

Permettez-moi maintenant de vous donner un résumé de notre mémoire que nous avons déposé. On y parle de politiques et de subventions, non pas de modifications récentes des tarifs. Voici un résumé des principaux points soulevés:

1. Les solutions à apporter aux problèmes d'ordre économique auxquels fait face la région de l'Atlantique exigent l'intervention des gouvernements des provinces Maritimes ainsi que celle du gouvernement fédéral. La situation des transports n'est que l'un de ces problèmes, encore qu'il aît une importance capitale.

2. Les provinces de l'Atlantique ne peuvent continuer d'exiger que soient respectées pour toujours les promesses faites à l'époque de la Confédération, alors que la conjoncture actuelle est entièrement différente de celles de 1867, de 1927, et, à un moindre degré, de celle de 1949.

3. Les subventions aux transports qui, à un moment donné, a eu pour effet d'aider l'expéditeur, n'est plus guère qu'une source de revenus pour les transporteurs et, de fait, ne bénéficie que très peu à l'expéditeur.

4. Le moyen le plus sûr de réaliser les objectifs de la politique nationale des transports est de créer un climat qui favorise au maximum le développement de moyens de transport compétitifs subventionnés dans la région de l'Atlantique.

5. Les gouvernements fédéral et provinciaux doivent unir leurs efforts dans des domaines tels que l'aménagement de grandes routes ouvertes en toute saison et l'établissement d'une réglementation et de taux uniformes en vue de stimuler la concurrence au sein de l'industrie du camionnage.

6. Si la suppression des subventions devait entraîner une demande d'augmentation des taux de la part des transporteurs subven-

[*Texte*]

sion of temporary assistance to shippers who would be genuinely injured.

7. While distance from the major markets causes a transportation problem, it cannot be shortened. The penalty it creates can be overcome by transportation improvements, competitive modes of transport, and improvements in productivity, management techniques, efficiency, development of industry and local markets. Continued reliance on subsidies, particularly those of doubtful benefit, will not inspire maximum effort in these other equally critical areas.

8. Finally, these recommendations should be considered in total. It is not recommended that the subsidy be abolished unless simultaneous action is taken in the other fields.

That, gentlemen, is a summary of our brief. Thank you very much.

The Chairman: Thank you very much. Mr. Nowlan?

Mr. Nowlan: Mr. Chairman, I have a few questions, but in any of the questions I certainly do not want to be considered to be against any initiative in the Atlantic area, and the fact that we need some new looks at some old problems to help perhaps pave a way for a new future.

But I was disappointed, Mr. Chairman, in this brief and the misrepresentation in certainly one or two of your recommendations in relying on the Economist Intelligence Unit report and suggesting that that Report came out against subsidies or special treatment for the Atlantic area.

I am all for initiative, but I feel that your brief from young, energetic, and responsible individuals could create a misrepresentation to this Committee because already there are many members of this Committee who feel that this is just another trip to find out if we are going to have another handout to the East, and why the handout?

I am going to come back to your misrepresentation, but the question I am going to ask you, to put this thing in proper focus, you say you do not relay on pre-Confederation promises. I challenge that statement categorically. This country was founded on some con-

[*Interprétation*]

tionnés, il y aurait lieu alors de songer à aider les expéditeurs qui seraient vraiment lésés.

7. L'éloignement des grands marchés constitue un problème majeur, mais il est impossible de réduire les distances. Les contraintes que cet éloignement impose pourraient être surmontées par l'amélioration des transports, la mise en place de moyens de transport compétitifs, l'augmentation de la productivité, des techniques de gestion, de l'efficacité et par le développement d'industries et de marchés locaux. Le maintien de subventions, surtout compte tenu du fait que les avantages en sont incertains, n'est pas de nature à susciter le maximum d'effort dans d'autres domaines qui en sont au même point critique.

8. Ces recommandations, enfin doivent être considérés globalement. La suppression des subventions n'est pas recommandée à moins que des mesures soient prises en même temps dans les autres domaines.

Voilà donc, messieurs, le résumé de notre mémoire.

Le président: Merci beaucoup. Monsieur Nowlan?

M. Nowlan: Monsieur le président, j'aurais quelques questions à poser. Tout d'abord, je ne voudrais pas qu'on croit que je m'oppose à toute initiative dans la région de l'Atlantique. Nous avons vraiment besoin de nouvelles perspectives, de nouvelles études des anciens problèmes qui nous permettraient d'entrevoir un avenir meilleur.

Je suis quelque peu déçu, monsieur le président, par ce mémoire et par la mauvaise présentation d'au moins une ou deux de vos recommandations qui reposent sur le rapport du *Economist Intelligence Unit Report* et prétendent que ce rapport s'est prononcé contre les subventions ou un traitement particulier pour la région de l'Atlantique.

Je suis tout en faveur des initiatives, mais je pense que votre mémoire venant de personnes jeunes, responsables et énergiques, pourrait créer une fausse représentation à ce comité. Un bon nombre des membres de ce comité pensent déjà qu'il s'agit tout simplement d'une autre étude pour voir si l'on va faire un autre don à l'Est. Mais pourquoi de telles charités?

Je reviendrai à votre fausse représentation. Je vous demanderais de mettre le tout au point. Vous dites qu'on ne peut pas toujours compter sur les promesses du temps de la Confédération. Je m'oppose catégoriquement à cette déclaration. Ce pays fut fondé en vertu

[*Text*]

ditions. Now, you have mentioned transport. I am going to ask you if Canada today should rely on any pre-Confederation promises about bilingual rights? What do you think? Canada today in 1969 is a heck of a lot different than in 1867.

There are six million new Canadians who have no relation to either the English or French-speaking groups. Now, my first question is, if you are not relying on pre-Confederation promises, where do they begin? What is your feeling, to put this thing in proper prospective, about the bilingual claim based on 1867 and before, of the French-speaking Canadians in this country?

Mr. Waller: Well, Mr. Nowlan and Mr. Chairman, I think that...

Mr. Nowlan: I apologize for my voice. It is not because I have been talking a lot; I have laryngitis.

Mr. Waller: Do not apologize for your voice. Maybe I can ask you to apologize later for what you said.

What you are attempting to do is to draw an analogy between promises made at Confederation on a linguistic or cultural basis, and promises made for an access to a market. I do not think that there is a true analogy there. Certainly Confederation promises on linguistic and cultural rights are beyond the scope of this inquiry, and my opinion on that is not really relevant.

Mr. Nowlan: No, it is only relevant because your spokesman mentioned do not rely on pre-Confederation promises.

Mr. Waller: Correct, in the field of transportation.

Mr. Nowlan: So that is the only reason I put the question.

Mr. Waller: Mr. Chairman, the statement of the Society is to not rely on pre-Confederation promises in the field of transportation. We say this because it is just not realistic to do so. We recognize that we are in competition with Upper Canada, if you want to call it that, for business. Now, if we have to rely on the charity of our competitors to ensure our own prosperity, it is very obvious that we will be kept in a subservient position. We want to see built up here an economy that functions by itself without having to rely on these promises.

If we consider these promises to be binding—there is no way we can enforce them.

[*Interpretation*]

de certaines conditions. Maintenant vous parlez des transports. Je vous demande si le Canada, aujourd'hui, devrait compter sur les promesses pré-confédératives au sujet des droits du bilinguisme? Croyez-vous que le Canada d'aujourd'hui, en 1969, soit bien différent du Canada de 1867?

Il y a six millions de nouveaux Canadiens qui n'ont pas de rapport avec les groupes francophones ou anglophones. Voici ma première question. Si vous ne devez pas vous reporter aux promesses pré-confédératives, alors dans quelle perspective pourriez-vous placer les réclamations en matière de bilinguisme que les francophones du Canada font en se basant sur 1867 et avant?

M. Waller: M. Nowlan et M. le président, je pense que...

M. Nowlan: Je m'excuse de ma voix. Ce n'est pas que j'ai beaucoup parlé, mais je souffre de laryngite.

M. Waller: Ne vous excusez pas de voix mais de vos paroles.

Tout ce que vous essayez de faire, c'est d'établir une comparaison entre les promesses faites avant la Confédération, sur le plan linguistique, et les promesses garantissant l'accès à un marché. Je ne crois pas que la comparaison soit valable ici. Sûrement les promesses de la Confédération sur les droits culturels et linguistiques dépassent le cadre de cette enquête, et mon avis là-dessus n'est pas vraiment pertinent.

M. Nowlan: Ce n'est vraiment pertinent que parce que votre porte-parole s'appuie sur les promesses pré-confédératives.

M. Waller: C'est exact dans le domaine des transports.

M. Nowlan: C'est la seule raison pour laquelle je pose la question.

M. Waller: La société déclare qu'elle ne veut pas s'appuyer sur les promesses pré-confédératives dans le domaine des transports parce qu'il n'est pas réaliste de le faire. Nous sommes en concurrence avec le Haut-Canada, si vous voulez utiliser cette expression, pour le monde des affaires. Si nous devons compter sur la charité de nos concurrents pour assurer notre propre prospérité, il est bien évident que nous nous trouverons toujours dans une position d'esclavage. Nous voulons établir ici une économie qui fonctionne d'elle-même, sans avoir à compter sur ces promesses.

Même si nous considérons que ces promesses doivent être respectées, nous ne pouvons

[*Texte*]

We rely strictly on persuasion. We have got to go to Upper Canada and say, "Look, you promised, now deliver". But if they do not deliver, so what. If we can take some part of the prosperity away from Upper Canada, and if it is going to injure them, where are we?

Mr. Nowlan: Mr. Chairman, would this committee advocate the closing of the St. Lawrence Seaway because it is being subsidized by the Canadian taxpayer?

Mr. Waller: Well, we feel, as we said, that if you want to spend money on the St. Lawrence Seaway, go ahead, spend it, but you are really fighting against an inevitable fact. The St. Lawrence Seaway is not suitable for the transportation needs of tomorrow; it never will be. Any money you put into it is lost. The trade routes on an international basis will not require the use of the St. Lawrence Seaway.

We have our markets in Europe, South America, the United States. The land-bridge concept is a realistic approach to the problem and will eventually make the St. Lawrence Seaway suitable for nothing more than domestic traffic. Now, it may have a great value there, I do not know. I just say it does not really apply here.

Mr. McGrath: I would like to supplement that.

The Chairman: Mr. McGrath?

Mr. McGrath: The witness referred, in his reply, to the Society and they sign their brief "The Society for Atlantic Initiative". Could you tell us what this Society is, what they represent, what provinces you have representatives in, and just exactly who you are?

An hon. Member: That is a new question.

Mr. McGrath: Actually, he keeps referring to the Society and he makes some pretty wild...

Mr. Nowlan: Mr. Chairman, I still have the floor, so I will put a positive question to the gentleman. You would obviously be in favour of an Atlantic Union, and an Atlantic free trade area, north-south rather than east-west, is that correct?

Mr. Waller: Yes.

Mr. Nowlan: You are expressing the viewpoint, I know, of a number of Nova Scotians, but would you follow further with an assumption that the whole Confederation of

[*Interprétation*]

forcer leur mise en vigueur. Nous comptons strictement sur la persuasion. Nous devons nous rendre au Haut-Canada et dire: «Donnez-nous ce que vous nous avez promis.» Mais s'ils ne le font pas, que pouvons-nous faire? Et si pour avoir une certaine prospérité, nous devions nuire au Haut-Canada, qu'arrivera-t-il?

M. Nowlan: Est-ce que ce comité proposerait la fermeture de la Voie maritime parce qu'elle est subventionnée par le contribuable canadien?

M. Waller: Nous vous disons: Si vous voulez dépenser de l'argent pour la Voie maritime, faites-le, mais seulement vous luttez contre des faits inévitables. La Voie maritime n'est pas adéquate pour le transport et les besoins de demain. Elle ne le sera jamais. Tout argent qui y est investi est une perte. Les réseaux commerciaux sur le plan international n'exigeront pas l'utilisation de la Voie maritime.

Nos débouchés sont en Europe, en Amérique du Sud, et aux États-Unis. Le concept fer-terre-pont est l'approche souhaitable au problème et éventuellement, la Voie maritime ne servira plus qu'au trafic domestique. Elle a peut-être une grande valeur à cette fin, je n'en sais rien, mais je crois que cette question ne s'applique pas ici.

M. McGrath: Je voudrais poser une question complémentaire.

Le président: Monsieur McGrath?

M. McGrath: Le témoin, dans sa réponse, a parlé de la Société. Son mémoire est signé «Société d'initiative de l'Atlantique.» Pourriez-vous nous dire ce qu'est votre société, ce que vous représentez, quelles sont les provinces qui y sont représentées et qui vous êtes.

Une voix: C'est une nouvelle question.

M. McGrath: De fait, il continue à parler de la Société et il fait des. . .

M. Nowlan: Monsieur le président, j'ai toujours la parole. Je vais poser une question positive au témoin. Vous êtes en faveur d'une union de l'Atlantique, une zone de libre échange nord-sud plutôt qu'est-ouest pour l'Atlantique. C'est juste?

M. Waller: Oui.

M. Nowlan: Vous formulez là le point de vue, je sais, d'un certain nombre de gens de la Nouvelle-Écosse. Mais iriez-vous jusqu'à dire que toute la Confédération du Canada a

[*Text*]

Canada has been a great big mistake as far as the Atlantic area is concerned?

Mr. Waller: No, absolutely not.

The Chairman: I would withdraw that question, Mr. Nowlan. I think we should stick to transport.

Mr. Nowlan: I will come to the misrepresentation. Where, gentlemen, in the EIU Report, can you point to a suggestion that there should not be the continuance of some type of subsidies for the Atlantic area?

Mr. Waller: In the brief we were not against subsidies in that sense. It is hard to know what a subsidy is. When is a subsidy a transport payment? When is it a handout, and what have you? We are talking here specifically of the Maritime Freight Rates Act subsidy, and we feel along with the Economist Intelligence Unit that the Maritime Freight Rates Act subsidy looks like a subsidy to the Atlantic Provinces, but in effect it is not at least 100 per cent effective.

Mr. Nowlan: That is a different—I quite agree with that as far as the EIU suggestion, but that is far different from what you set out in your brief. On page 67 of the document we have, in following the EIU you say that one recommendation of the Society:

> ... the abandonment of any further attempts to maintain a statutory rate advantage for Maritime shippers ...

Now, I would suggest—and I have the copy of the EIU Report, but no summary of it—I suggest that the conclusions about the Maritime Freight Rates Act and the subsidy situation say that it may not be achieving what it was initially intended to do, and it should perhaps be reviewed. But it certainly does not say that the original concept of Confederation and the promise as supported by all the commissions that have ever investigated transportation since 1867, including the Duncan Royal Commission which I imagine you are aware of, the Turgeon Royal Commission, the MacPherson Royal Commission—it says there should be some help for access to the central Canadian market as a condition of Confederation.

And the only reason I am so rather strong, and do not apologize for my language, is that I am afraid this brief, while it is done with the best of purposes, and provokes thought and I am all in favour of initiative, can distort the views of several members of this

[*Interpretation*]

été une grande erreur pour la région de l'Atlantique.

M. Waller: Non, certainement pas.

Le président: Je ne reconnais pas cette question, monsieur Nowlan. Nous devons nous en tenir aux transports.

M. Nowlan: J'en viens à la fausse interprétation. Messieurs, pouvez-vous me signaler dans le rapport de EIU, un passage suggérant qu'on ne devrait pas maintenir certains subsides pour la région de l'Atlantique.

M. Waller: Dans le mémoire, nous n'étions pas opposés aux subventions dans ce sens. Il serait difficile de savoir ce qu'est un subside. Quand est-ce un transfert de paiement? Quand est-ce de la charité ou quoi? Nous parlons des subventions de la loi des tarifs-marchandises pour les Maritimes. Nous sommes d'avis, de concert avec les économistes du EIU, que les subventions données en vertu de cette loi, sont vraiment une subvention pour les provinces de l'Atlantique, mais elle n'est pas vraiment efficace.

M. Nowlan: C'est différent. Je suis d'accord pour ce qui est de la suggestion du EIU, mais c'est bien différent de ce que vous avez dit dans votre mémoire. A la page 67 du document, vous dites qu'une des recommandations de la Société, c'est

> .. l'abandon de toute tentative visant à maintenir un tarif statutaire à l'avantage des expéditeurs des Maritimes ...

J'ai une copie du rapport EIU mais je n'en ai pas le sommaire. Les conclusions concernant la Loi sur les taux de transport des marchandises dans les provinces Maritimes et la situation des subventions démontrent qu'elle ne réalise pas le but visé et qu'elle devrait être revisée. Seulement le rapport ne dit pas que le concept original de la Confédération et les promesses qui nous furent faites à ce moment-là et qui furent appuyées par toutes les commissions qui ont étudié le transports depuis 1867, y compris la Commission royale Duncan, que vous connaissez sans doute, la Commission royale Turgeon, et la Commission McPherson sont périmées. Elles ont dit qu'on devrait subventionner l'accès au marché du centre du Canada comme condition à la Confédération.

La seule raison pour laquelle j'insiste, et je n'ai pas à m'excuser pour les paroles que j'ai utilisées, c'est que je crains que ce mémoire même s'il est bien intentionné, donne une mauvaise perspective aux membres du comité qui croient déjà qu'il n'y a eu aucune pro-

[*Texte*]

Committee who already feel there is no pre-Confederation promise here and no initiative.

So this is the only reason why I think it is a harmful brief.

Mr. Waller: I think we would have to agree with you on lack of initiative. Insofar as the Confederation promise is concerned, Mr. Nowlan, as far as we can find out, Canada promised the Maritime Provinces—and I hesitate to draw that distinction because the Maritime Provinces became a part of the Canada that made the promises—but all it promised was access to the wider Canadian markets.

That access was provided by the building of the Intercolonial Railway finished in 1867 between Quebec and Halifax. And as nearly as we can determine the only reason that a statutory rate advantage was provided was because that railway was required to take the area as far away from the unfriendly American border as it could, and the additional distance created greater cost. Hence the ICR was subsidized, presumably to the extent of those greater costs. And to us, that became the root of the statutory rate advantage. It was interpreted by the Duncan Royal Commission that a statutory rate advantage was a part of providing access to the markets, a slightly different interpretation from what we conceived of the Confederation promise.

Mr. Nowlan: And the preamble of the Maritime Freight Rates Act sets out that there is a right to access to the central Canadian markets.

Mr. Waller: Yes, but I would point out, sir, that this does not have to necessarily be accomplished by a statutory rate advantage which creates a nasty impression, for use of a quick word. This can be accomplished with railway rate schedules, perhaps along the methods suggested by the Sydney Board of Trade. But certainly Confederation was intended to make the whole country grow, not a part of it. And the transportation policy, and hence the rate objectives of the national railroad at least should have that as its purpose in rate-making.

The Chairman: Mr. Perrault?

Mr. Perrault: Mr. Chairman, I think this is one of the most challenging and refreshing briefs we have heard so far on this tour. That is what I think. And I think the brief is a very courageous one, and I think it has the courage to utter a few home truths which are not only applicable to the Maritimes, but to just about every other section of this country.

[*Interprétation*]

messe pré-confédérative et qu'il n'y a aucune initiative.

C'est la seule raison pour laquelle je dis que ce mémoire peut être nuisible.

M. Waller: Je pense que nous pouvons être d'accord avec vous pour ce qui est du manque d'initiative. Pour ce qui est des promesses pré-confédératives, monsieur Nowlan, tout ce que nous pouvons constater, c'est que le Canada a promis aux provinces Maritimes—mais j'hésite à faire cette distinction parce que les provinces Maritimes sont devenues partie du Canada qui a fait ces promesses—le Canada, dis-je, a promis accès au marché du Canada central.

Cet accès a été assuré en vertu de l'aménagement du chemin de fer intercolonial terminé en 1867 entre Québec et Halifax. En autant qu'on puisse voir, la seule raison pour laquelle il y a l'avantage du tarif statutaire, c'est que ce chemin de fer était requis pour s'éloigner de la frontière peu amicale des États-Unis le plus possible. Comme le parcours était plus long, ce qui entraînait des coûts plus élevés, on l'a subventionné. C'est ainsi qu'on a créé le tarif statutaire. La Commission Duncan a décrété que cet avantage fait partie de l'accessibilité aux marchés, une interprétation quelque peu différente de ce que nous considérons comme promesse de la Confédération.

M. Nowlan: Et le préambule de la loi sur le transport dans les Maritimes définit bien clairement dans le préambule qu'il y a un droit à l'accessibilité du marché du Canada central.

M. Waller: Je vous signalerai que cela ne doit pas être nécessairement réalisé par un avantage des tarifs statutaires qui créent une mauvaise impression. Cela peut être fait avec un tarif ferroviaire suivant la méthode proposée par le *Board of Trade* de Sydney. Mais sûrement la Confédération a été conçue pour que tout le pays puisse connaître la croissance, et non pas simplement une région. La politique des transports et les objectifs des chemins de fer nationaux devraient toujours viser cet objectif en établissant les tarifs.

Le président: Monsieur Perrault.

M. Perrault: Monsieur le président, je pense que c'est un des mémoires des plus intéressants et des plus stimulants parmi ceux que nous avons entendus depuis le début de notre tournée. Il a le courage d'énoncer certaines vérités qui ne s'appliquent pas seulement dans les Maritimes, mais aussi à tout le reste du pays. Il ne propose pas essentielle-

[*Text*]

Now, this brief does not suggest the utter abolition of subsidies, am I correct?

Mr. Waller: This is true.

Mr. Perrault: It merely suggests...

Mr. Nowlan: On a point of order.

Mr. Perrault: Let me ask the questions.

The Chairman: Order, please.

Mr. Perrault: Mr. Chairman, I have the floor now. I would like to finish with my questions.

Mr. Nowlan: I asked for a point of order. Mr. Perrault, I am only asking, have you read the brief, and can you tell me right now what page it is on?

Mr. Perrault: That is not a point of order. I am asking a series of questions of the witness and we can discuss this later, perhaps even on the floor of the House of Commons, but I do not like the way an attempt has been made to attack this witness and suggest that this is a worthless damaging brief, because it is a breath of fresh air in the hearings we have had so far. Now, Mr. Chairman, there is not a member of this Committee uninterested in advancing the interest of the Maritime Provinces and providing economic prosperity.

It is not a question so much of subsidies or not, or whether or not they are going to be cancelled—and this brief does not suggest they be cancelled—but whether M.F.R.A. subsidies should not be replaced by subsidies that would be productive to economic growth in this area. This is the question. I am suggesting that the Committee members not dismiss this brief but give it some serious consideration. The question of asking this witness, Mr. Chairman, about his attitude towards bilingual rights and saying, "Is it not a fact...

The Chairman: Order please.

Mr. Perrault: I think this is a valid point I am raising because it was raised spuriously by this other member of the Committee.

The Chairman: Would you ask your question, Mr. Perrault? We are not here to make politics or anything like that.

Mr. Perrault: Mr. Chairman, I am not attempting to make politics but I suggest this

[*Interpretation*]

ment l'abolition des subsides; il en démontre simplement le bien fondé.

M. Waller: C'est vrai.

M. Perrault: Il suggère simplement...

M. Nowlan: Je fais appel au Règlement.

M. Perrault: Est-ce que je peux poser des questions?

Le président: A l'ordre.

M. Perrault: Monsieur le président, j'ai la parole maintenant et j'aimerais compléter mes questions.

M. Nowlan: Un rappel au Règlement, M. Perrault, avez-vous lu le mémoire et pouvez-vous me dire à quelle page il se trouve?

M. Perrault: Ceci n'est pas un rappel au Règlement. Je pose un ensemble de questions pour que nous puissions y revenir plus tard même à la Chambre des communes, mais je n'aime pas la façon dont on a essayé de s'en prendre à ce témoin, de laisser entendre que c'est un mémoire nuisible, sans valeur, car c'est vraiment un peu d'air frais dans les audiences jusqu'ici. Monsieur le président, il n'y a aucun membre de ce Comité qui ne s'intéresse pas au progrès, aux intérêts des provinces Maritimes et à leur prospérité économique.

Ce n'est pas tellement une question de subventions ou pas, ou de voir si elles vont être maintenues ou annulées,—et le présent mémoire ne propose pas de les annuler,—mais il s'agit de voir si les subventions prévues par la Loi sur les taux de transport de marchandises dans les Maritimes ne devraient pas être remplacées par des subventions qui pourraient engendrer la croissance économique de cette région. Voilà la question. Je dis que les membres du Comité devraient étudier sérieusement la question. Demander à ce témoin quelle est son attitude à l'égard des droits du bilinguisme et dire «n'est-ce pas un fait...

Le président: A l'ordre, s'il vous plaît.

M. Perrault: Je pense que c'est valable ce que je dis, parce que cela a été soulevé par cet autre membre du Comité.

Le président: Veuillez poser votre question monsieur Perrault. Nous ne sommes pas ici pour faire de la politique.

M. Perrault: Monsieur le président, ce n'est pas ce que j'essaie de faire, mais je vous dis

Texte]

ther witness was unfair to the people we ave at this Committee.

An hon. Member: Mr. Chairman, may I nterject a comment here. Who has the point f order?

The Chairman: I do not think there is a oint of order. I am going to ask the mem- ers to ask questions, not to make speeches. Ve are not here to argue.

Mr. Perrault: Mr. Chairman, I am asking hat these witnesses not be browbeaten by ny member of this Committee. That is what am asking.

Mr. Nowlan: On a point of privilege. No. 1, was not a spurious attack. No. 2, it was not rowbeating. I know two of these men very ell and any suggestion from that member ver there from Burnaby-Seymour about rowbeating is erroneous. He better read the ecord. I want to state categorically what the rief says. He has not even read it. The brief ays:

> ...one recommendation of the SAI is the abandonment of any further attempts to maintain a statutory rate advantage for Maritime shippers and the total abolition of the subsidy paid to the Railways pursuant to the Maritime Freight Rates Act, both on movements within the select territory and from the select territory west.

ow if that is not abandonment...

The Chairman: Order.

Mr. Perrault: Mr. Chairman, I want to ask ie witness, is it not a fact that you have not alled for immediate abolition of subsidies ntil such time as action is taken in a number f other areas such as education, productivi- , management, and encouragement for econdary manufacturing? This is my ques- on to you, and I think we should explore is for a while.

The Chairman: I will let the witness an- ver your question.

Mr. Waller: To repeat the final point in the mmary that we gave:

> Finally, these recommendations should be considered in total. It is not recommended that the subsidy be abolished unless simultaneous action is taken in the other fields.

[*Interprétation*]

que cet autre témoin a été injuste auprès de nos témoins.

Une voix: Monsieur le président, je voudrais vous dire, nous voulions voir ce qu'il en est quant au rappel au Règlement.

Le président: Je ne crois pas qu'il y ait de rappel au Règlement, mais je vais demander aux députés de poser des questions, non pas de faire des discours. Nous ne sommes pas ici pour discuter.

M. Perrault: Monsieur le président, je demande que ces témoins ne soient pas ainsi bousculés par des membres du Comité. Voilà ce que je demande.

M. Nowlan: Une question de privilège. Tout d'abord, ce n'était pas une attaque que je voulais faire. Puis, je ne veux bousculer personne. Je connais très bien deux de ces témoins et tout ce que j'ai entendu de cet honorable député de Burnaby-Seymour quant à cette façon de procéder est faux. Il devrait lire le compte rendu. Je veux vraiment voir ce qui se trouve dans le mémoire. Il ne l'a même pas lu. Le mémoire dit:

> ...une recommandation de la *Society for Atlantic Initiative* est d'abandonner tout autre essai pour maintenir un avantage de tarif statutaire pour les expéditeurs des Maritimes, et l'abolition des subventions payées aux chemins de fer en vertu de la Loi sur les taux de transport des marchandises dans les Maritimes, pour les mouvements au sein du territoire choisi, et du territoire à l'Ouest.

Alors, si cela n'est pas un abandon ..

Le président: A l'ordre.

M. Perrault: Monsieur le président, je veux demander au témoin: n'est-il pas vrai que vous n'avez pas demandé l'abolition immédiate des subventions, jusqu'à ce que des dispositions soient prises dans d'autres secteurs, tels que l'éducation, la productivité, l'administration et l'encouragement pour les industries secondaires? Voilà la question que je vous pose, et c'est la ligne de pensée que nous devrions étudier maintenant.

Le président: Je laisse le témoin répondre à votre question.

M. Waller: Pour reprendre le dernier point du résumé que nous avons donné:

> Ces recommandations, enfin, doivent être considérées globalement. La suppression des subventions n'est pas recommandée, à moins que des mesures soient prises en même temps dans les autres domaines.

[*Text*]

We believe that simultaneous action taken in the other fields—effective action—will eliminate the need for statutory rate advantages, subsidies or what you have, because it will put the Atlantic Provinces in a properly competitive position with the rest of Canada so that we can grow along with the rest of Canada.

Mr. Perrault: Mr. Chairman, I suggest that is precisely what the brief says and it does not call for absolute utter abandonment of subsidies without some alternative program to stimulate economic growth in this area. This is the reason I suggest there has been a measure of distortion here and I think these witnesses should be given a chance to be heard.

Mr. Chairman: Are you through, Mr. Perrault?

Mr. Perrault: I am through for the time being but I am going to ask more questions later on.

Mr. Breau: Mr. Chairman, I would like to refer to the point in the brief where they say that assistance should be given in the fields of education, productivity and management instead of by transportation subsidies. It says that in the summary here and it said that in the brief.

I would like to ask the witness how he thinks he is going to have sufficient productivity without education and how he expects that to put the Atlantic Provinces in a more competitive position? Is he advocating higher productivity and better management in the Maritimes than exists in Toronto, Montreal or in Central Canada—because it seems to me no matter how good productivity is in the Atlantic Provinces you would have to bring your material to Central Canada to sell it. Now if you are not going to have a transportation subsidy then you must be saying that better productivity and better management can exist in the Atlantic Provinces. Is that what you are suggesting?

Mr. Waller: Excuse me, Mr. Chairman, for the delay but that is a rather deep question. If I might be facetious just for a moment, I do not think it would be hard for us to better the managements in the other parts of Canada because a great many of them have emigrated from the Maritimes up there anyway.

[*Interpretation*]

Nous croyons que des dispositions prises conjointement, des dispositions efficaces, feront disparaître la nécessité des avantages du tarif statutaire parce qu'ainsi les provinces de l'Atlantique se trouveront dans une situation vraiment concurrentielle avec le reste du Canada, pour que nous puissions croître de concert avec le reste du Canada.

M. Perrault: Monsieur le président, je dirais que c'est évidemment ce qu'on trouve dans le mémoire, et donc on ne demande pas l'abolition et l'abandon des subventions sans d'autre programme de rechange pour stimuler et encourager la croissance économique de cette région. Et c'est la raison pour laquelle j'ai dit qu'on a quelque peu mal présenté les faits, et c'est la raison pour laquelle j'ai demandé que l'on puisse entendre ces témoins.

Le président: Avez-vous terminé, monsieur Perrault?

M. Perrault: J'ai terminé pour l'instant mais je vais poser d'autres questions plus tard.

M. Breau: Monsieur le président, je voudrais revenir sur ce point du mémoire où on dit qu'on devrait fournir de l'aide dans le domaine de l'éducation, de la productivité et de l'administration, plutôt que des subventions en matière de transport. C'est ce qu'on dit dans le résumé et aussi dans le mémoire.

Donc, je voudrais demander au témoin comment exactement croit-il avoir une productivité suffisante avec, disons, l'éducation comment s'attend-il à ce que les provinces de l'Atlantique se trouvent dans une situation beaucoup plus concurrentielle; est-ce qu'il propose alors que vous puissiez avoir une productivité accrue et une meilleure administration dans les Maritimes que ce qu'on peut avoir à Toronto, à Montréal ou au Canada central, parce qu'il me semble qu'avec une productivité aussi bonne que celle que vous avez dans les provinces de l'Atlantique, ce qu'il faut faire c'est apporter les produits au Canada central pour les vendre. S'il n'y avait pas de subventions au transport, aussi bien dire que vous pouvez avoir une meilleure productivité, une meilleure administration dans les provinces de l'Atlantique que dans le Canada central. Est-ce cela votre proposition?

M. Waller: Je m'excuse, monsieur le président, du retard, mais il s'agit là d'une question assez importante. Il nous serait assez facile d'améliorer l'administration dans le reste du Canada, car plusieurs ont émigré des Maritimes vers ces régions. Enfin peut-être devrions-nous leur envoyer des billets de

[Texte]

erhaps we should send them return tickets—at might help us. I am going to turn this er to Mr. Unsworth because he has an djustment assistance board and so on.

Mr. Breau: Mr. Chairman, would you ease ask the witness to speak louder. We ve a hard time hearing him.

Mr. Boswick: Can you hear me all right ow?

Mr. Breau: Yes.

Mr. Boswick: We view subsidies and statury rate advantages almost in the same category as I think a nation would view a tariff. is an equalizing device—a protective or fensive device. We looked therefore at the tion that the federal government has taken, en it recently concluded negotiations in the nnedy Round tariff arrangement, and we t the establishment of a board similar to an justment assistant board would be of nefit to the Atlantic Provinces.

Perhaps this board would have a term of ice of five years, for example, it would ve a certain stated sum of money, and its nctions would be to assist industries in the lantic Provinces injured, if any actually re injured, as the subsidy is phased out. eir assistance could take the form of couraging the development of pooling rangements for freight movement, a forrding agency, co-operative arrangements ch as that between manufacturers and oducers. It could also take the form I believe of providing guidance in the development of north-south trade.

To be frank, Mr. Chairman, we see the velopment of the Atlantic Provinces more the north-south direction than in an eastst direction. The market in New England, th 18 million people, is just too big to be erlooked any longer by the Atlantic Provnces and we have been fighting natural stacles in trying to trade east-west. I am saying we just discontinue trading eastst, I am saying that we could put better phasis on north-south trade. We need a ghway link to the U.S. 95 in Maine. We nk it would be surprising just how many nues would be opened.

Mr. Breau: Then you are saying you would need any transportation assistance to mpete with industry in the New England or United States?

Mr. Boswick: No.

[*Interprétation*]

retour, cela pourrait nous aider. Je laisse cela à M. Unsworth, car il a un Conseil d'aide de transition, etc.

M. Breau: Monsieur le président, pourrions-nous demander au témoin de parler plus fort, on l'entend mal.

M. Boswick: Pouvez-vous m'entendre maintenant?

M. Breau: Oui.

M. Boswick: Nous trouvons que ces subventions et ces avantages du tarif statutaire sont de la même catégorie, disons, que ce que sont habituellement les tarifs. C'est une mesure protectrice, défensive et, par conséquent, nous avons tenu compte des dispositions prises par le gouvernement fédéral, lorsqu'il a terminé les négociations du *Kennedy Round*, et nous sommes d'avis que l'établissement d'une commission semblable au Conseil d'aide de transition serait à l'avantage des provinces de l'Atlantique.

Cette commission aurait peut-être un mandat de cinq ans, par exemple. Elle aurait un certain budget, et elle aurait pour rôle d'aider les industries de la région de l'Atlantique qui se trouvent dans une situation désavantageuse à la suite du fait qu'une subvention disparaît. Cette aide pourrait se présenter sous forme d'encouragement pour le développement des dispositions mises en commun pour les expéditions des agences, les dispositions coopératives ou de collaboration entre le fabricant et le producteur. Elle pourrait se présenter aussi sous forme de principe directeur pour l'expansion du commerce nord-sud.

Je serai sincère, monsieur le président, et je dirai que nous voyons le développement des provinces de l'Atlantique plus dans une voie nord-sud que est-ouest. Le marché de la Nouvelle-Angleterre, avec ses 18 millions de personnes, est trop grand pour que les provinces de l'Atlantique n'en tiennent pas compte. Et nous devons lutter contre des obstacles naturels pour essayer d'établir un commerce est-ouest. Nous ne disons pas que nous discontinuons le commerce est-ouest, mais nous pouvons apporter beaucoup d'importance au commerce nord-sud. Nous avons besoin d'un lien routier avec la route U.S. 95 du Maine, et il serait étonnant de voir les nouveaux débouchés que nous aurions alors.

M. Breau: Alors, vous dites que vous n'auriez pas besoin d'aide en matière de transport pour concurrencer les industries de la Nouvelle-Angleterre ou des États-Unis?

M. Boswick: Non.

[*Text*]

Mr. Breau: You are saying that you can produce in the Atlantic Provinces and compete with, say, the State of New York.

Mr. Boswick: We do not think we need any statutory rate advantages or any subsidies of that nature. We might need some assistance in building the highways and roads.

Mr. Breau: This would be a transportation subsidy, I would suggest.

Mr. Boswick: There have already been a substantial number of capital grants to ADB and there is a regional development board.

Mr. Breau: If you are advocating assistance for construction of roads for transportation then it is in fact a transportation subsidy?

Mr. Boswick: I am not so sure that we are asking the federal government to do this. At this stage certainly the construction of roads seems to be a matter of negotiation between the provinces and the federal government, as it is now. I would not want to interfere in that or intervene in what they are doing, but I would like to see the Atlantic Provinces themselves lay greater emphasis on north-south trade and work towards it. I think we need faster and more efficient movement via train to hook up with our ports for our east-west flow of traffic. That is a matter of technology and involves a very great expense, and certainly we would need federal government assistance. Even if we have to buy the land and build our own tracks, we have to have a fast moving train.

Mr. Breau: You have not answered my question. Can you compete with the New England states without transportation subsidies—without any transportation assistance?

Mr. Boswick: Would you define what you mean by "subsidy". If you mean assistance, no we cannot, we need assistance.

Mr. Breau: You differentiate between assistance and subsidy.

Mr. Boswick: Certainly.

Mr. Breau: Would you make that clear? What is the difference?

Mr. Boswick: I tried to when I explained the adjustment assistance board set up under the trade and industry department in Ottawa.

[*Interpretation*]

M. Breau: Vous dites que vous pouvez produire dans les provinces de l'Atlantique e concurrencer avec, disons, l'État de New York.

M. Boswick: Nous ne croyons pas avoi besoin d'avantages de tarif statutaire, o autres subventions de ce genre. Nous avon peut-être besoin d'aide pour la construction de routes.

M. Breau: C'est une subvention en matièr de transport, d'après moi.

M. Boswick: Il y a déjà eu un bon nombr de subventions d'équipement accordées a Conseil d'aide de transition, et il y a un Conseil d'expansion régionale.

M. Breau: Mais si vous demandez de l'aid pour la construction d'une route pour fins d transport, alors c'est une subvention e matière de transport.

M. Boswick: Nous ne le demandons pa nécessairement au gouvernement fédéral. A cette étape-ci sûrement, la construction de routes semble être une question de négocia tions entre les provinces et le gouvernemer fédéral et nous ne voudrions pas interveni dans ce qu'ils font. Mais je voudrais que le provinces de l'Atlantique elles-mêmes accor dent assez d'importance au commerce nord sud et travaillent à cette fin. Il nous font don un mouvement par train assez rapide pou relier nos ports à ce trafic est-ouest. C'est un question de technologie très coûteuse, et nous faut de l'aide du gouvernement fédéra Même s'il nous faut acheter les terres et ame nager nos voies, il nous faut des trains trè rapides.

M. Breau: Mais vous n'avez pas encor répondu à ma question. Est-ce que vous pou vez encore faire concurrence aux États de l Nouvelle-Angleterre sans avoir des subven tions ou une aide pour le transport.

M. Boswick: Définissez-moi ce que vou entendez par «subvention». Si vous avez d aide, non évidemment pas, nous avons besoi d'aide.

M. Breau: Alors, vous distinguez entre aid et subvention.

M. Boswick: Certainement.

M. Breau: Pouvez-vous nous éclairer l dessus? Quelle est la différence?

M. Boswick: J'ai essayé, quant j'ai parlé d Conseil d'aide de transition établi par ministère du Commerce, à Ottawa. Je r

[*Texte*]

I would not call it a subsidy—I suppose it is, they are very much alike. But one is set up and designed to firm up your infrastructure and the basic manufacturer so that he can compete efficiently eventually and the other is the continuing thing which perpetuates. The subsidy is the continuing goal which perpetuates the very arrangement that it is set up to aid.

Mr. Breau: In other words, you are saying that the assistance that is needed is not financial. Would it be technical?

Mr. Boswick: Money buys everything. If you are going to need advice, you have to buy it.

Mr. Breau: Well, if you have financial assistance it is a subsidy.

Mr. Mahoney: I think it would be very helpful to the Committee in evaluating both the brief and the answers we are getting if Mr. McGrath would be permitted to put his question so we can find out just who these people really are.

The Chairman: Is it agreed that Mr. McGrath be allowed to put his question?

Mr. McGrath: I know there is a brief explanation at the beginning of your brief as to who you are, but you purport to speak for the Atlantic Provinces. You say that you have two dozen men. Are these two dozen members from the City of Halifax?

Mr. Boswick: Yes, they are.

Mr. McGrath: What experience have you had with problems of the region? Have your members had any dealings with the Province of Newfoundland, for example? You make some pretty sweeping statements.

Mr. Boswick: We did not look at the Province of Newfoundland in the same context as we looked at the other three provinces. We did not look at Newfoundland.

Mr. McGrath: Why then did you not refer to the Maritime Provinces? As a matter of fact, I find it difficult to understand how you could purport to speak for the Maritime Provinces on a matter as serious as this because, with great respect, I think that this is a very irresponsible presentation. I say this with respect, Mr. Chairman.

Are there any industrialists amongst you? Are there any shippers amongst you? Just who are you?

Mr. Boswick: I am not going to read off the names of the members. We have representa-

[*Interprétation*]

dirais pas que c'est une subvention. J'imagine que c'est pratiquement la même chose qu'une subvention, mais il y en a une qui est destinée à aider à raffermir l'infrastructure, et l'industrie de base, afin qu'on puisse concurrencer d'une façon efficace; et une autre chose, c'est que la subvention est un don continuel ou continu, si vous le voulez, qui perpétue justement les moyens d'assistance.

M. Breau: En d'autres termes, l'assistance dont on a besoin n'est pas une assistance financière, mais plutôt technique?

M. Boswick: L'argent achète tout. Si vous avez besoin de conseils, vous devez les acheter.

M. Breau: Mais, si vous avez une assistance financière, il s'agit d'une subvention alors.

M. Mahoney: Monsieur le président, je crois que ce serait très utile pour le Comité, afin d'évaluer le mémoire et les réponses, si l'on pouvait laisser à M. McGrath le soin de poser sa question, afin de savoir exactement de qui il s'agit.

Le président: Est-on d'accord pour que M. McGrath pose sa question?

M. McGrath: Je sais qu'il y a une brève explication au début du mémoire quant à savoir qui vous êtes, mais vous semblez parler au nom des provinces de l'Atlantique. Vous dites que vous êtes deux douzaines en nombre. Est-ce que ces deux douzaines viennent de la ville d'Halifax?

M. Boswick: Oui, monsieur.

M. McGrath: Quelle est votre expérience pour ce qui est des problèmes de la région? Est-ce que vos membres ont eu à traiter avec la province de Terre-Neuve, par exemple? Vous faites des déclarations assez générales.

M. Boswick: Nous n'avons pas examiné la province de Terre-Neuve dans le même contexte que les trois autres provinces. Nous n'avons pas examiné Terre-Neuve.

M. McGrath: Pourquoi alors ne parlez-vous pas des provinces Maritimes. En fait, je me demande pourquoi vous pouvez parler au nom des provinces Maritimes sur une question aussi sérieuse, car, sauf votre respect, je crois que le mémoire dénote un manque de responsabilité. Et je le dis en toute déférence, monsieur le président.

Est-ce qu'il y a des industriels parmi vous? Y a-t-il des expéditeurs parmi vous? Qui êtes-vous au juste?

M. Boswick: Je n'ai pas l'intention de vous donner la liste des membres. Je peux vous

[*Text*]

tion from the business world—from various types of businesses, we have a number of people from the academic and the professional field. These people have had a wide variety of experience. We have taken advice and interviewed specialists in the field. We have had consultations with the Maritimes Transportation Commission and have talked and had discussion with others.

I can appreciate the fact that you might not agree with what we said but to say that we are irresponsible is perhaps an act of irresponsibility on your part.

The Chairman: Order.

Mr. McGrath: Mr. Chairman, I was just about to substantiate what I said. You have no representatives from outside the City of Halifax, yet you present yourself as speaking for the Atlantic region and I contend that that is irresponsible.

The Chairman: Order.

Mr. Skoberg: Further to that, I presume from your brief that you are not purporting to speak for the majority of the people in this area. This is the individual brief from your Society.

Mr. Boswick: That is right.

Mr. Skoberg: Would you look at your brief —and I realize this is March 7, 1968 that we are looking at. You said here that your society takes the view that the Atlantic area needs a strong, efficient, reliable and effective alternative mode of transport. Are you referring there to the inclusion of the present facilities —air, sea and rail, or do you have an alternative mode of transport in mind?

Mr. Boswick: A competitive mode of transport which currently at the moment is primarily trucking. Now I cannot speak in any great depth, but our trucking people will say that they operate under great difficulties due to differing regulations which require changing tractors at borders, different weight limitations and this sort of thing. I may say that I understand the Atlantic Provinces are moving towards the elimination of these differences. The faster they move the better we will be. But, for instance, the economist Intelligence Unit states that as of 1964, 47 per cent of traffic handled by the railways in the Atlantic region moved at competitive rates as compared with 69 per cent moving at competitive rates in the Eastern region. This in itself creates a downward pressure to a great-

[*Interpretation*]

dire que nous avons des représentants du monde des affaires, de divers genres de commerces. Nous avons un certain nombre de représentants du domaine de l'éducation, des professions libérales. Ces gens possèdent une vaste expérience. Nous avons pris conseil et nous avons rencontré des experts dans ce domaine. Nous avons eu des consultations avec la Commission des transports des Maritimes, et avec d'autres organismes.

Évidemment, vous n'êtes peut-être pas d'accord avec ce que nous disons, mais dire que nous ne sommes pas responsables, c'est un geste d'irresponsabilité que vous venez de poser vous-mêmes.

Le président: A l'ordre, s'il vous plaît.

M. McGrath: Monsieur le président, justement pour prouver ce que je viens de dire, vous n'avez aucun représentant de l'extérieur de la ville d'Halifax, mais vous prétendez parler au nom de la région de l'Atlantique et je prétends que c'est irresponsable de votre part.

Le président: A l'ordre.

M. Skoberg: Pour faire suite à cela, vous ne prétendez pas parler au nom de la majorité de la population de cette région n'est-ce pas? Il s'agit du mémoire de votre Société.

M. Boswick: En effet.

M. Skoberg: Évidemment, votre mémoire date du 7 mars 1968. Vous dites que votre Société croit que les provinces de l'Atlantique auraient besoin d'un autre mode efficace de transport. Est-ce que vous parlez là de l'amélioration des services existants, par air, par mer, ou par chemin de fer, ou avez-vous un autre moyen à suggérer?

M. Boswick: Un moyen concurrentiel de transport qui, pour le moment, est avant tout le camionnage. Évidemment, je ne peux pas parler avec une connaissance profonde, mais nos camionneurs nous diront qu'ils ont beaucoup de difficultés à cause des différences de règlements qui les forcent à changer de remorque aux frontières des limites de poids, etc. Je peux dire que je crois comprendre que les provinces de l'Atlantique veulent éliminer ces disparités, et plus rapidement elles le feront, mieux ce sera. Mais, par exemple, l'*Economist Intelligence Unit* a déclaré qu'en 1964, 47 p. 100 du trafic des chemins de fer de la région de l'Atlantique étaient aux taux concurrentiels, comparativement à 69 p. 100 aux taux concurrentiels dans la région de l'Est. Par conséquent, cela cause une pression

[*Texte*]

r extent on rates in the Eastern region than t does in the Atlantic region.

Mr. Skoberg: In your society you have epresentatives of the trucking and rail ndustry. Are they participants in the society hat you now have formed?

Mr. Waller: We have representation from ndustries that do use a lot of transportation.

Mr. Skoberg: Just one other question, Mr. hairman, and gentlemen. You suggested a hile ago that we may have to buy the land nd build our own track. When you said we", did you mean the people of the coun-y, the people of the maritimes, or...

Mr. Waller: It was principally a statement f enthusiasm, but I will pass it over to him.

Mr. Unsworth: I would like to pass it back.

Mr. Skoberg: You were referring to the ople of the maritimes were you, when you id "We may have to buy the land to build r own tracks"?

Mr. Waller: Yes. For instance, in the sense at the province of Nova Scotia took an tive financial interest in the remedy of the dney Steel Company's ills. There is no ason, perhaps, why similar action could not taken in the other areas that are affected.

Mr. Skoberg: In other words, you would ve a nationalized transportation system in at particular case?

Mr. Waller: We have it now.

Mr. Skoberg: Thank you.

Mr. Boswick: We feel that you will proba- find when you hear all these briefs that in final analysis that it will come out we are petuating our own existence. I think a re sweeping change is necessary in terms finding our place in Canada. Certainly the t of Canada is playing an integral part it instead of saying we need this to keep selves going.

When we talk about a transportation sys- in today's world we do not talk about ail system or a port system or an airways tem; we speak about the whole ball of wax it has to click right through the piece, so t when you talk about world economy n Chicago to Rotterdam you speak about a sportation system that fills the need and n one of these has to tie in. Unless we

[*Interprétation*]

vers la baisse dans la région de l'Est, plus que dans la région de l'Atlantique.

M. Skoberg: Vous avez dans votre Société des représentants de l'industrie des chemins de fer, et du transport routier. Est-ce qu'ils sont membres de la société que vous avez formée?

M. Waller: Nous avons des représentants d'industries qui utilisent beaucoup les transports.

M. Skoberg: Une dernière question. Vous avez suggéré tout à l'heure qu'il faudrait peut-être acheter le terrain et mettre en place nos propres rails. Quand vous dites «nous» est-ce que vous parlez des Canadiens ou des gens des Maritimes?

M. Waller: C'était surtout une déclaration enthousiaste, mais je vais laisser la parole à M. Unsworth.

M. Unsworth: Je vous la remet.

M. Skoberg: Est-ce que vous parliez des gens des Maritimes quand vous avez dit «nous devrons peut-être acheter le terrain et mettre en place nos rails»?

M. Waller: Oui, eeffctivement, en ce sens que la province de la Nouvelle-Écosse a pris un intérêt financier actif dans les problèmes de la sidérurgie de Sydney. Il n'y a aucune raison pour ne pas le faire dans d'autres domaines qui nous intéressent.

M. Skoberg: En d'autres termes, vous auriez un chemin de fer étatisé dans ce cas-là?

M. Waller: Nous l'avons à l'heure actuelle.

M. Skoberg: Merci.

M. Boswick: Nous croyons que vous trouverez probablement dans ces mémoires, qu'en fin de compte que les choses s'arrangeront et qu'on perpétue notre propre existence. Je crois qu'on n'aurait besoin de grands changements si nous voulons trouver notre place au Canada. Il est évident que le reste du pays y joue une rôle intégral au lieu de dire qu'il nous faut telle chose pour continuer.

Quand nous parlons d'un réseau de transport de nos jours, nous ne parlons pas nécessairement d'un réseau de rail ou de ports, ou un réseau aérien, mais d'un tout intégré. Il faut absolument que tout marche ensemble, de sorte que si vous parlez d'une économie mondiale de Chicago à Rotterdam vous parlez d'un réseau de transport qui répond aux besoins et chaque mode de transport doit

[*Text*]

have that, the maritimes is not fulfilling the role that it can fulfill in Canada.

Mr. Skoberg: They are not changing the whole transportation. . .

Mr. Boswick: We are changing the speed of the transportation network. We are changing the efficiency. We are changing the dispersal units and we are changing our ability to compete in the world market and I think that unless we take an entirely fresh viewpoint on this we will just wind up making a very, very small change to pacify the people in the Maritimes and perpetuate our own problems.

Mr. Thomas (Moncton): I have only one comment to make, Mr. Chairman. It appears to me that this brief represents a very long-range plan. I feel that we, in this Committee, must hear some suggestions for a short-range plan. I would just like to ask the witness what proposals you have to ease our immediate problem? For example, do you agree that the freeze on carload rates should be extended? Do you feel that there should be some change made in the upward revision in the ETA-100, the tariff on the LCL rates?

It is fine to dream dreams and grand plans, but what about the immediate future? What are your suggestions for that?

Mr. Waller: First, sir, we would say, I think, that a short-range plan should be such that it moves us toward the objectives of the long-range plan rather than away from those objectives. Specifically, we do not believe that the freight rate freeze which is currently in existence should be changed until something definite, something constructive is available in a direction in which we can move. Then perhaps it will not be a case of cancelling the freight rate freeze but rather a case of tempering it, modifying it, changing it to something else. We agree with you that it is going to take a while. We hope it will take as short a time as possible to achieve those plans which are for the maximum good of this area in Canada as a whole.

Mr. Thomas (Moncton): What about some of the opinions expressed in the many briefs? For example, in the anomalies in freight rates, higher freight rates for shipments going from the Maritimes to the west as compared from west to east, and also anomalies brought out by the Cape Breton Bottlers of Soft Drinks that they can ship cases of full bottles of beverages from Montreal to the Maritimes at a much less rate than they can ship empty

[*Interpretation*]

apporter sa contribution. Sans cela, les provinces maritimes ne remplissent pas le rôle qu'elles pourraient remplir au Canada.

M. Skoberg: Vous ne changez pas tout le système de transport . .

M. Boswick: Nous changeons la rapidité du réseau de transport, nous changeons l'efficacité, les unités de dispersion des réseaux de transport, notre capacité pour concurrencer sur les marchés mondiaux. Je crois que, à moins de prendre une attitude complètement nouvelle à ce sujet, nous allons tout simplement effectuer ce petit changement pour pacifier les gens des Maritimes et perpétuer nos propres problèmes.

M. Thomas (Moncton): Je n'ai qu'un seul commentaire à faire, monsieur le président. Il me semble que le mémoire représente un programme à très longue échéance. Et, j'ai l'impression que le Comité devrait entendre des propositions relatives à un programme à court terme. J'aimerais donc demander au témoin ce qu'il proposerait pour soulager nos problèmes immédiats. Par exemple, est-ce que à votre avis, il faut maintenir le gel sur le tarif-marchandises? Est-ce qu'il devrait y avoir une agumentation du tarif 100 et le tarif des chargements incomplets?

C'est très beau de rêver, mais qu'est-ce qui en est pour l'avenir immédiat? Quelles sont vos suggestions à cet égard?

M. Waller: Tout d'abord, monsieur, nous dirions qu'un programme à court terme devrait nous acheminer vers l'objectif du programme à long terme plutôt que de nous en éloigner. De façon plus précise, nous ne croyons pas que le gel actuel du tarif-marchandises soit levé à moins de le remplacer par quelque chose de définitif ou de concret dans un sens acceptable. Ce ne serait pas une question de lever le gel mais plutôt une question de le modifier et de changer pour autre chose. Évidemment, cela va prendre du temps. Nous espérons que cela prendra le moins de temps possible pour mettre en vigueur les projets qui sont dans les meilleurs intérêts de l'ensemble du Canada.

M. Thomas (Moncton): Et qu'est-ce qui en est des opinions soumises dans plusieurs mémoires? Par exemple, les anomalies dans le tarif-marchandises, les tarifs de transport plus élevé pour les expéditions des Maritimes vers l'Ouest par rapport aux expéditions de l'ouest vers l'est, et aussi des anomalies signalées par la *Cape Breton Bottlers of Soft Drink* en vertu desquelles il leur est possible d'expédier des caises de bouteilles pleines de Mo

[*Texte*]

bottles down. How do you feel about these? These are things that have to be straightened out immediately.

Mr. Waller: I think the greatest frustration that we experience in this particular area of our operation is a complete inability to gain knowledge of and to understand the objectives and the practices of railway rate-making. Now, I guess we are not alone in that. I understand that there are very few people who really do understand railway rate-making. However, to us, one of the primary objectives of railway rate-making should be such that it will encourage the movement of traffic in all parts of Canada and will also, because this is a reasonable objective, particularly for the national railroad, encourage the development of all of Canada rather than parts.

Mr. Thomas (Moncton): And you would also agree that some form of subsidy is necessary until we can fulfil your dream which may take years?

Mr. Waller: I do not think a railway rate practice, for instance, which on the basis of cost separations would indicate that the revenues earned in the Atlantic Provinces are not carrying the cost allocated to the Atlantic Provinces necessarily means that this is a subsidy to the Atlantic Provinces. I think we have to recognize that the traffic generated in the Atlantic Provinces which perhaps flows beyond the select area which is roughly Levis, Quebec, contributes to the volume traffic on routes in Upper Canada which thereby decreases the unit cost of handling Upper Canada traffic. All of these things become involved in it and the railway operation must be treated as a national unit rather than separate geographical units.

Mr. Thomas (Moncton): In other words, is it fair to say you advocate a national transportation policy along with a national policy?

Mr. Waller: Yes.

Mr. Nesbitt: Mr. Chairman, I have one or two very specific questions I would like to ask the witness and one or two brief comments I would like to make which will lead to a question.

First of all, I think what you have said certainly is a very interesting and different approach and whether one agrees or not is, of course, a matter of opinion.

Has your group any specific recommendations on how to make the railways, and this

[*Interprétation*]

tréal aux Maritimes à un taux bien moins élevé—que le retour des bouteilles vides. Voilà des problèmes qu'il faut régler immédiatement.

M. Waller: Je crois que la plus grande frustration dans ce domaine a été l'impossibilité de connaître et de comprendre les objectifs et la pratique suivie pour établir les taux de chemin de fer. Et je crois que nous ne sommes pas les seuls. Il y en a très peu qui comprennent les méthodes utilisées pour établir les tarifs des chemins de fer, mais, d'après nous, ils devraient encourager le transport partout au Canada et aussi, comme c'est un objectif raisonnable, surtout pour le chemin de fer national, il devrait encourager le développement de tout le Canada et non pas de certaines parties.

M. Thomas (Moncton): Vous seriez donc d'accord sur la nécessité d'une subvention quelconque en attendant que nous puissions réaliser votre rêve, ce qui pourra prendre plusieurs années.

M. Waller: Je ne crois pas qu'une pratique de tarif ferroviaire qui, dans une comptabilité de coûts séparés, indiquerait que les recettes tirées des provinces de l'Atlantique, ne couvre pas les frais encourus veut nécessairement dire qu'il s'agit d'une subvention aux provinces de l'Atlantique. Je crois qu'il faut reconnaître que les marchandises et les passagers provenant des Provinces de l'Atlantique débordent peut-être la région désignée qui serait, en gros Lévis (Québec) et contribue au volume du trafic au Haut-Canada, ce qui contribue à diminuer les frais unitaires du transport des marchandises. Tout ses aspects doivent entrer en lignes de compte et il faut considérer l'exploitation ferroviaire comme un tout national plutôt que par réseaux géographiques distincts.

M. Thomas (Moncton): En d'autres termes, vous êtes en faveur d'une politique nationale en matière de transport?

M. Waller: Oui.

M. Nesbitt: Monsieur le président, j'aurais une ou deux questions très précises à poser au témoin, et un ou deux commentaires très brefs qui mèneront à une question.

Tout d'abord, ce que vous avez dit était très intéressant; votre attitude est très différente que l'on soit d'accord ou non, c'est une question d'opinion.

Est-ce que votre groupe aurait des propositions précises à faire aux chemins de fer pour

[*Text*]

applies to railways only, increase their efficiency in the Atlantic area?

Mr. Waller: Well, we are stick-handling questions here. I think it would be safe to say that we would not have specific recommendations. We believe this is up to the experts in the transportation field and admittedly we are not experts.

Mr. Nesbitt: Secondly, I gather the heart of your report is that really you are intending to substitute one variety of subsidy, if I may use the term in a broad sense, for another, and that you are suggesting that by getting rid of the freight rates assistance some sort of adjustment should be made to industries that are injured or perhaps need assistance as a result. Then the second thing I notice you have in your brief, is that uniform and more appropriate trucking regulations and rates should be made. In that regard, first of all I see a slight inconsistency here, if I may say so, because you refer to the trucking rates. Do you feel that railway rate advantages should be removed but the trucking rate advantages should be added to, perhaps?

Mr. Boswick: No, we do not feel that there should be any subsidy paid to truckers. I think that is your question.

Mr. Nesbitt: Have you given consideration to, perhaps, constitutional difficulties at the present time, thinking of Canada as a whole, in having uniform trucking regulations across the country?

Mr. Boswick: We have only looked at Part III of the National Transportation Act. I am not even sure whether that is proclaimed yet. I do not know that it is necessary. I think in the Atlantic Provinces, the two that are concerned most, New Brunswick and Nova Scotia, could well do this themselves through co-operative effort. The public utility boards have basically control on regulation and weight restrictions. The Departments of Highways and the public utility boards could easily arrange some form of uniformity, or at least work toward it. We have talked to the public utility boards about this.

Mr. Nesbitt: I see. Perhaps by this brief observation all of us would agree that all parts of Canada at one time or another have benefited from some form of subsidy, and, being a wicked upper Canadian, I know that Upper Canada, so-called, has benefited from tariffs very much to the detriment of other parts of Canada in the past. While

[*Interpretation*]

que les compagnies puissent augmenter leur efficacité dans la région de l'Atlantique?

M. Waller: Eh bien, nous nous passons la balle ici. Je pense qu'il serait juste de dire que nous ne ferions pas de propositions précises. Nous croyons que cela relève des experts dans le domaine des transports et nous n'en sommes pas.

M. Nesbitt: Deuxièmement, si j'ai bien compris, le nœud de votre rapport c'est que vous voulez substituer un genre de subvention, dans son sens le plus large, pour un autre et que vous suggérez plutôt que si nous éliminons l'aide consentie au tarif-marchandises on devrait accorder une certaines assistance aux industries qui en seraient lésées ou qui auraient besoin d'aide. La deuxième chose que je constate dans votre mémoire, c'est qu'on devrait mettre en vigueur une réglementation ou un tarif plus uniforme du camionnage. A cet égard, je vois une certaine inconséquence ici, car vous parlez du tarif du camionnage. Est-ce que, selon vous, on devrait éliminer les avantages consentis aux chemins de fer et consentir des avantages au taux du camionnage?

M. Boswick: Non, nous ne croyons pas qu'il faille verser une subvention aux camionneurs. Est-ce que c'est là votre question?

M. Nesbitt: Alors, avez-vous songé aux difficultés constitutionnelles possibles à l'heure actuelle de parler de l'ensemble du Canada pour uniformiser les règlements du camionnage pour tout le Canada?

M. Boswick: Nous n'avons étudié que la Partie trois de la Loi nationale sur les transports et je ne suis même pas sûr qu'elle soit en vigueur à l'heure actuelle. Je ne sais pas si c'est nécessaire. Les deux provinces de l'Atlantique qui sont les plus en cause, le Nouveau-Brunswick et la Nouvelle-Écosse, pourraient fort bien le faire elles mêmes, grâce à un effort de collaboration. Les offices des services d'utilité publique sont chargés de contrôler les règlements et les limites de poids. Les ministères de la Voierie et les Offices des services d'utilité publique pourraient assurer une certaine uniformité ou du moins travailler en ce sens. Nous en avons parlé aux Offices des services d'utilité publique.

M. Nesbitt: Je vois. Je crois que nous sommes tous d'accord pour dire que toutes les parties du Canada, à un moment ou l'autre, ont profité des subventions. Comme je suis du Haut-Canada, je sais que cette région a bénéficié des avantages tarifaires au grand détriment d'autres régions du Canada. Bien que les marchés et les concentrations de popula-

[*Texte*]

markets and populations have greatly changed in Canada since Confederation, for instance in Ontario and Quebec, there are two things that have remained constant vis-à-vis the Atlantic Provinces: one is the population of the Atlantic Provinces, which means markets, which has not changed that much relative to the rest of Canada; and secondly, the distance still remains the same. Distance, regardless of the mode of transportation, that has changed over the years, is still a cost factor. Is it your suggestion or is it your intention that the Atlantic Provinces region should still be able to sell goods at competitive prices in the major population markets of Canada, namely Ontario, Quebec and, no doubt, the West in the near future?

Mr. Boswick: Yes. I guess to sum it up in a very short sentence, we believe the primary objective of a subsidy should be to eliminate itself in time.

Some hon. Members: Hear, hear.

Mr. Nesbitt: How can you eliminate automatically the distance which is a constant factor between the Atlantic regions and western Canada or central Canada where the markets principally are for products?

Mr. Waller: Mr. Chairman, when you speak of elimination of distance as a cost factor I would state that the best way to do that is the very efficient system which uses volume and high speed in order to get the goods that are going to be transported to what you call the market, and we agree with that no matter what part of Canada you are talking about. If British Columbia finds that the market is in Upper Canada and they can get the goods there at high speed and in high volume they drastically cut their costs.

Mr. Nesbitt: But do you cut those costs relative to the manufacturing industries in Ontario, let us say, which are 100 miles from the Toronto area, or even 500 miles whereas it is still 1,500 miles from Nova Scotia, because the same rapid, volume transport is going to take place everywhere.

Mr. Waller: Many of our comments made here are in respect of the port of Halifax and we are talking about it acting as a terminal for both import and export between other markets in the world and the great market of the interior of North America. We think, with a proper integrated system, we can get this. I find it very interesting that, British Columbia, being by far the most advanced

[*Interprétation*]

tions aient changé beaucoup au Canada depuis la Confédération, par exemple dans l'Ontario et au Québec, il y a deux choses qui sont demeurées inchangées, par rapport aux provinces de l'Atlantique, soit la population des provinces de l'Atlantique, ce qui veut dire que les débouchés n'ont pas tellement changé par rapport au reste du Canada; et deuxièmement, la distance demeure toujours la même. Peu importe les moyens de transport, qui ont changé au cours des années, la distance demeure toute de même un élément du coût. Est-ce que vous proposez ou vous souhaitez que les provinces de l'Atlantique soient toujours capables de vendre leurs produits à des prix concurrentiels dans les principaux marchés du Canada, soit l'Ontario et le Québec, et sans doute dans l'Ouest d'ici peu?

M. Boswick: Oui, je crois que, pour résumer très brièvement, il nous semble que le principal objectif d'une subvention devrait être de s'éliminer par elle-même, à la longue.

Des voix: Bravo.

M. Nesbitt: Comment voulez-vous éliminer automatiquement la distance qui est un facteur constant entre les régions de l'Atlantique, l'ouest et la partie centrale du Canada, où se trouvent les principaux débouchés?

M. Waller: Monsieur le président, quand vous parlez d'éliminer la distance comme élément du coût, je dirais que la meilleure façon de le faire serait de trouver un moyen très efficace qui par le volume et la rapidité transporte les marchandises à ce que vous appelez le débouché, et nous sommes d'accord, peu importe la partie du Canada à laquelle vous vous référez. Si la Colombie-Britannique constate que son marché se trouve au Haut-Canada et qu'ils puissent transporter les produits rapidement et en grand volume, leurs frais seront réduits énormément.

M. Nesbitt: Mais est-ce que vous réduisez ces frais pour les industries manufacturières de l'Ontario qui se trouvent à 100 ou à 500 milles de Toronto, Bien qu'elles soient toujours à 1500 milles de la Nouvelle-Écosse, parce que le transport rapide et volumineux se fera partout?

M. Waller: Plusieurs de nos commentaires ont trait au port d'Halifax et nous voudrions que ce soit un terminus pour les importations et les exportations entre les autres marchés du monde et le grand marché du centre de l'Amérique du Nord. Nous croyons qu'avec un système intégré nous pourrions le réaliser. Il est très intéressant de noter que la Colombie-Britannique qui est la partie la plus dynami-

[*Text*]

and dynamic part of Canada, the member from Burnaby, B.C., if that is where he is from, is the only person who really understands what we are saying.

The Chairman: Order please. Mr. Horner.

Mr. Horner: Yes, Mr. Chairman. I find the brief quite thought-provoking, but it makes no firm or concrete recommendations. Therefore, I suggest to you that we get on and hear other briefs, that this brief should be considered whenever we are drafting our report to the government, but because it makes no firm or concrete recommendations and because we have many more briefs to hear, we should get on with it and I will forego any questions to the witnesses if we are prepared to get on with other briefs.

The Chairman: I agree, Mr. Horner. Mr. Rock, the last question.

Mr. Rock: Do you believe that your proposals, and I believe that they are good proposals, would halt to a great extent the migration of the youth of the Atlantic Provinces to central Canada?

Mr. Waller: You are asking if we believe that if our proposals and our thinking in the brief were brought to reality, would it stop the immigration of younger people to the upper Canadian provinces?

Mr. Rock: That is right.

Mr. Waller: We most assuredly believe it will because it will remedy the disparity that now exists in per capita income. It will not be a 100 per cent remedy, because I do not think we will ever completely eliminate regional disparity in income. I will say however, and I am not being entirely facetious, that if a young fellow can live here and make as much money and attain the same standard of living as he can anywhere else he would be crazy to leave—if you will forgive this.

The Chairman: I think that completes the questioning, and I want to thank the three gentlemen for their brief.

The briefs of the Federal Products Limited, and Steel Furnishing Company of New Glasgow will stand.

Cape Breton Regional Planning Commission. I will ask Mr. Hickey of the Sydney Regional Harbour Development Board to give us a short briefing. It is not quite the same brief as the Sydney Steel Corporation.

[*Interpretation*]

que et la plus progressive du Canada, le député de Burnaby, je crois, est le seul qui comprenne ce que nous essayons de dire.

Le président: A l'ordre, s'il vous plaît. Monsieur Horner.

M. Horner: Oui, monsieur le président. Je trouve le mémoire très stimulant, mais il ne formule pas de recommandations concrètes et fermes. Alors, je propose que nous étudions d'autres mémoires, et que nous tenions compte de ce mémoire en formulant notre rapport. Mais, étant donné qu'on n'y trouve pas de recommandations fermes et que nous avons beaucoup d'autres mémoires à entendre, je serais prêt, par conséquent, à m'abstenir de poser des questions, à condition de pouvoir passer à d'autres mémoires.

Le président: Je suis de votre avis, monsieur Horner. Monsieur Rock, une dernière question.

M. Rock: Croyez-vous que vos propositions, et j'estime que ce sont de bonnes propositions, élimineraient en grande partie la migration des jeunes des provinces de l'Atlantique vers le centre du Canada?

M. Waller: Vous nous demandez si on éliminerait la migration de nos jeunes vers les provinces du Haut-Canada si notre proposition et notre ligne de pensée étaient mises en vigueur.

M. Rock: C'est exact.

M. Waller: Nous le croyons, car on remédierait ainsi à la disparité qui existe à l'heure actuelle entre le revenu par habitant. On n'y remédiera pas complètement, car nous n'éliminerons jamais totalement la disparité régionale qui existe dans les revenus. Mais, pour parler sérieusement, si un jeune homme peut faire autant d'argent et avoir le même niveau de vie ici, il serait fou de partir.

Le président: Je crois que nous allons mettre fin aux questions. Je veux remercier les trois messieurs qui nous ont présenté leur mémoire.

Nos prochains mémoires sont ceux de la *Federal Products Limited* et de la *Steel Furnishing Company of New Glasgow*, qui sont réservé.

Cape Breton Regional Planning Commission.

Je demanderais à M. Hickey de l'Office d'expansion économique régional du port de Sydney de nous donner un résumé de leur mémoire. Ce n'est pas tout à fait le même

[*Texte*]

Mr. Frank Hickey (Chairman, Cape Breton Regional Planning Commission): The brief I am going to submit to you at the present time has been set up by the Cape Breton Regional Planning Commission and the brief was designed to consolidate the concern of individuals, commerce and regional officials over what appeared to be a steady erosion of transportation facilities in the Cape Breton industrial region. This erosion appeared to directly oppose strenuous endeavours presently being made to improve industrial capacity and the environment of the region and to work against the provision of adequate and suitable modes of conveyance between the Sydney area and other parts of Canada.

The representatives present will endeavour to answer questions to the best of their knowledge and ability. However, we would ask the Committee to bear in mind the fact that this is a regional brief and the planning representatives supporting this regional presentation may not always be able to reply in detail to questions concerning the specific issues.

During 1968 the Cape Breton Regional Planning Commission which represents the towns of Glace Bay, New Waterford, Dominion, Sydney Mines, North Sydney, Louisbourg, the City of Sydney and County of Cape Breton, all within the area known as the Industrial Region, became concerned at the apparent steady erosion of the transportation facilities in the area.

Their concern was directed at changes in passenger train schedules, condition of railbeds and highways, the tourist industry, delays in shipments from the area, delays in arrivals and departures of passenger trains, and ultimately to some extent the carload Freight Rate Structure recently established by the Canadian National Railways. Their concern was not so much with the fact that the changes caused inconvenience to local residents, but also with the fact that at this particular time in the life of the Cape Breton Industrial Area such changes were obviously not to the general advantage of the region in that communication apparently became more difficult, and the accumulation of changes in the region were such that at this time of constant endeavour to improve facilities and the environment, and to promote industry, they would be working against the very positive endeavours being made by the many agencies.

[*Interprétation*]

mémoire qui a été présenté par la *Sydney Steel Corporation.*

M. Frank Hickey (président, Cape Breton Regional Planning Commission): Le mémoire que je vais vous présenter a été rédigé par la Commission régionale de planification du Cap-Breton pour consolider l'intérêt des individus, du commerce, des autorités régionales pour ce qui semblait une érosion totale des facilités de transport dans la région industrielle du Cap-Breton. Cette érosion semblait contrecarrer les efforts considérables que l'on fait à l'heure actuelle pour améliorer la capacité industrielle et le milieu et œuvrait contre l'amélioration des moyens de transport entre la région de Sydney et le reste du Canada.

Nous allons essayer de répondre à vos questions du meilleur de nos connaissances, mais nous vous demandons de bien tenir compte du fait qu'il s'agit d'un mémoire régional et que les représentants du service de planification ne seront peut-être pas en mesure de répondre en détail aux questions portant sur des problèmes particuliers.

Au cours de l'année 1968, la Commission de la planification régionale du Cap-Breton qui représente les villes de Glace Bay, New Waterford, Dominion, Sydney Mines, North Sydney, Louisbourg, la Cité de Sydney et le comté de Cap-Breton, lesquelles font toutes partie de la région connue sous le nom de Région Industrielle, a commencé à s'inquiéter de la dégradation apparemment régulière des moyens de transport dans cette région.

Sa préoccupation visait les changements d'horaires des trains de voyageurs, l'état des voies et des grandes routes, l'industrie du tourisme, les retards subis par les expéditions en provenance de la région, les retards des trains de voyageurs tant au départ qu'à l'arrivée et enfin les nouveaux barèmes de transports récemment publiés à l'égard des expéditions en wagonnée partielle et, du moins dans une certaine mesure, des expéditions par wagons complets récemment inaugurés par le National-Canadien. Elle ne se préoccupait pas tant des inconvénients occasionnés par ces changements aux résidents locaux mais surtout du fait qu'à ce tournant particulier de la vie de la Région Industrielle du Cap-Breton, de tels changements ne sont évidemment pas dans l'intérêt général de la région, en ce sens que les communications sont apparemment devenues plus difficiles et les changements tellement nombreux qu'en un temps où l'on s'efforce tant d'améliorer les conditions et l'environnement et de stimuler

[*Text*]

On September 29, 1967, therefore, the Regional Planning Commission instructed its staff to investigate the situation and to prepare a Draft Resolution which would emphasize the need for another look at the transportation picture in Industrial Cape Breton, and set out the deficiencies in the facilities being offered to the general public, existing industries, and to potential industries. The Resolution was discussed by the Regional Planning Commission on October 20, 1967, prepared in its final form, and copies were sent to all Federal, Provincial, Regional and Local politicians and agencies concerned with the upgrading of the Cape Breton Industrial Region.

On January 31st. the Cape Breton Regional Planning Commission, working in conjunction with the President of the Associated Boards of Trade called a meeting in the Court House, Sydney, N.S. for the purpose of discussion and preparation of Briefs. As a result of that meeting, the Director of Regional Planning, Mr. W. B. Thomson, was instructed to prepare a Regional Brief consisting of copies of individual briefs submitted by individuals, firms or agencies. It was intended that this Regioal Brief would attempt to consolidate all Briefs, but at the same time each individual, firm or agency would be free to present a separate submission to the Committee.

Now, we have in this brief a number of submissions from different firms, different people. I will not attempt to read them to you at the present time. They are in the brief and when you are looking over the brief you will be able to see them for yourselves.

A summary of the deal is that the endeavours being made by the Cape Breton Regional Planning Commission to coordinate the discussions and briefs submitted and discussed during the past few weeks are all directed at the need to create an atmosphere and facilities necessary to induce industry to locate in the Cape Breton Industrial Area. The Commission members feel that it is completely illogical for one arm of government to take steps which work against the measures taken by other arms and agencies to create atmospheres and facilities necessary for industrial activity in the region. To achieve this they ask that much more co-ordination and co-operation be achieved. In addition, of course, this submission wishes, particularly to underline the need for improved transportation and

[*Interpretation*]

l'industrie, ces changements vont à l'encontre des efforts mêmes entrepris par ces divers organismes.

En conséquence, le 27 septembre 1967, la Commission de la planification régionale a ordonné à son état-major de faire une enquête sur la situation et de rédiger un projet de résolution qui insisterait sur la nécessité de considérer d'un œil nouveau l'ensemble des transports dans la Région Industrielle et de mettre le doigt sur les insuffisances des services offerts à l'ensemble du public, aux industries existantes et aux industries à venir. La Commission discuta de la résolution le 20 octobre 1967, en prépara la rédaction définitive et des exemplaires en furent envoyés à tous les représentants politiques provinciaux, régionaux et locaux et aux organismes chargés de l'amélioration de la région.

Le 31 janvier, la Commission, d'accord avec le président de l'Association des Chambres de Commerce convoqua une réunion au Palais de justice du comté, à Sydney, N.-É., dans le but de discuter et de préparer les Mémoires sur les transports régionaux. A la suite de cette réunion, le directeur au Plan régional, M. W. B. Thomson, fut chargé de préparer un mémoire régional qui réunirait les exemplaires de mémoires individuels soumis ou à soumettre par des particuliers, des firmes ou les organismes de la région.

Il était entendu que ce rapport régional tenterait de faire la synthèse de tous les rapports mais qu'en même temps, toute firme ou tout organisme régional serait libre de présenter au Comité un rapport séparé.

Maintenant, on trouve dans notre mémoire, plusieurs recommandations provenant de différentes personnes, différentes industries. Je ne veux pas vous le lire au long, vous pourrez les trouver par vous-même dans le mémoire.

Toutefois, on pourrait les résumer en disant que la tentative de la Commission de planification régionale de Cap-Breton de coordonner les discussions et les rapports présentés et commentés au cours des dernières semaines a été déterminée par le besoin de créer une atmosphère et des conditions propres à inciter l'industrie à se concentrer dans la zone industrielle du Cap-Breton. Les membres de la Commission estiment qu'il est totalement illogique qu'un élément du gouvernement prenne des mesures qui iraient à l'encontre de celles qu'ont prises d'autres ministères et organismes pour créer l'atmosphère et les conditions nécessaires à l'établissement d'activités industrielles dans la région. Pour réaliser ce but, ils font appel à plus de coopération et de coordination. Ce rapport souligne la nécessité

[*Texte*]

communication between the major Maritime centres and the major populated centres.

With reference to the submission by the Cape Breton Bottlers, the argument has been used that by suggesting the increased rate for all products the regional consumer is obliged to pay more for the product.

It should be stated quite clearly that this submission does not suggest that the rate ex Montreal be increased, but rather that the rate ex Montreal for *empty* containers should be *less* than the rate being charged for *full* containers.

I have here a resolution which will wind it up. It will only take me a minute. As a result of representations made to the Commission, and of personal experiences of Commission members, and also as a result of subsequent inquiries made by Commission staff, and the Transportation Committee of the Commission, it is evident that there is a need for an effective Passenger Rail link between the two major Urban Centres of Nova Scotia, and:

WHEREAS:

(1) Industrial Cape Breton area and the Halifax-Dartmouth area each comprises a major urban area within the Province of Nova Scotia; and,

(2) Passengers wishing to travel between these two Major Urban Centres rather than by Air or Bus are unable to do so in the most comfortable and convenient manner, i.e., by Overnight Train Service; and,

(3) Frequent delays are incurred at Truro by the return rail-liner service from Halifax and frequently passengers are deposited in Sydney in the small hours of the morning and unable to obtain onward transportation to other communities; and,

(4) Coal, steel and other shipments have experienced delays due to lack of locomotives.

The Cape Breton Regional Planning Commission has given consideration to these factors and has discussed the problem with local officials of the CNR and the Board of Transport Commissioners, and now,

Resolves that:

(1) The Board of Transport Commissioners be requested to consider the replacement of overnight sleeper service by CNR between the Cape Breton Industrial Area and the City of Halifax so that

[*Interprétation*]

d'une amélioration des transports et des communications entre les principaux centres des Maritimes et les centres les plus populeux.

En ce qui concerne le rapport des metteurs en bouteilles du Cap-Breton, on a prétendu qu'en proposant un relèvement des tarifs appliqués au transport des produits finis, le consommateur régional est obligé de payer davantage pour le produit.

Il faudrait établir clairement que ce rapport ne suggère pas que le tarif des expéditions de Montréal soit augmenté; on voudrait plutôt voir diminuer le tarif des expéditions de Montréal des cadres *vides* plutôt que d'appliquer le plein tarif sur les cadres *remplis*.

J'ai ici une résolution et je vais vous la lire en conclusion.

A la suite des représentations faites à la Commission et l'expérience personnelle de ses membres, ainsi que les enquêtes ultérieures poursuivies par le personnel de la Commission et par son Comité des transports, révèlent le besoin d'un service efficace de transport des voyageurs entre les deux principaux centres urbains de la Nouvelle-Écosse, et

ATTENDU:

(1) que la région industrielle du Cap-Breton et la région d'Halifax-Dartmouth, en Nouvelle-Écosse, comprennent toutes deux une agglomération urbaine importante; et

(2) que les voyageurs qui désirent se rendre d'une de ces agglomérations urbaines à l'autre par d'autres moyens que l'avion ou l'autobus sont incapables de le faire par le train de nuit qui est le mode de locomotion le plus confortable et le plus commode; et

(3) que le rapide en provenance d'Halifax est souvent retardé à Truro et que les voyageurs sont souvent déposés à Sydney au petit matin alors qu'il leur est impossible de se rendre dans d'autres localités; et

(4) que le transport du charbon, de l'acier et d'autres produits a été retardé faute de locomotives.

La Commission de planification régionale du Cap-Breton a étudié ces facteurs et en a discuté avec les autorités locales CN et la Commission canadienne des transports et a maintenant résolu:

(1) que la Commission des transports du Canada soit priée d'étudier la possibilité de remplacer le service de wagons-lits du National-Canadien, entre la région industrielle du Cap-Breton et la ville

[*Text*]

a comfortable and convenient service is available, and so that members of the public who are reluctant to travel by Air or by Road are able to travel as they wish. It is suggested that this service be reinstated on a twice weekly basis, even although it may not be economically justified. It is the Commission's opinion that the public has a right to the most convenient mode of travel without regard to economics at this stage in the development of the Cape Breton Industrial Area.

(2) the attention of the Cape Breton Development Corporation be drawn to this resolution and the support of the Corporation requested to ensure that a full and satisfactory service is maintained for the benefit of the residents and industrialists of the area who may wish to travel by surface transportation to the Capital of the Province from the Industrial Area.

(3) the attention of the Cape Breton Development Corporation be drawn to the new freight structure for the LCL Shipments recently established by the Canadian National Railways and emphasize that the Commission is of the opinion that increased transportation costs caused by the recent tariff structure changes are not in the best interests of the development of the Cape Breton Industrial Area, even with the support given to the area by existing legislation e.g., Maritimes Freight Rate Act, etc.

(4) action must be taken by the Canadian National Railway and other railways concerned to remove the delays incurred through lack of adequate power in the area, and to ensure that deliveries to and from this area are made punctually and without delay.

(5) The Regional Planning Commission expresses this concern to all persons and agencies involved in any way in the stabilization and improvement of the economy of Industrial Cape Breton, and emphasizes the effect of recent changes and delays in the field of surface transportation in the region and in the Maritimes, and that copies of this Resolution expressing the Commission's concern, be forwarded to those responsible. The Commission members wish to emphasize that while they subscribe to the principal of economic justification, they do feel—Industrial Cape Breton—that this cannot be the only criteria at this time in the life

[*Interpretation*]

d'Halifax, par un service confortable e commode, afin que les personnes qui n veulent pas voyager par avion ou autobu aient un autre choix. Il est proposé qu ce service soit rétabli deux fois l semaine, même s'il n'est pas rentable. L Commission est d'avis que le public droit au mode de transport le plus com mode, indépendamment du facteur de l'é conomie, au stade actuel de développe ment de la région industrielle d Cap-Breton;

(2) que cette résolution soit portée l'attention de la Société de développe ment du Cap-Breton et qu'on obtienn son appui afin d'assurer un service com plet et satisfaisant aux résidents et indus triels de la région qui désireraient utilise un mode de transport terrestre entre l capitale de la province et la régio industrielle;

(3) que le nouveau tarif-marchandise établi récemment par le National-Cana dien pour le trafic de détail soit porté l'attention de la Société de développe ment du Cap-Breton, et que la Commi sion lui fasse savoir qu'à son avis l'aug mentation du coût de transport consécu tive à ce changement du tarif est préjud ciable au développement de la régio industrielle du Cap-Breton, même s'il e tenu compte de l'aide apportée à l région par les lois actuelles, notammer la Loi sur les taux de transport des ma chandises dans les provinces Maritime etc.;

(4) que le National-Canadien et l autres chemins de fer en cause éliminer les retards dus à l'insuffisance de locom tives dans la région, et assurent la livra son ponctuelle, et sans retards dus à d manques de locomotives, des marchand ses destinées à la région ou en provenant

(5) la Commission de planificatio régionale exprime son inquiétude à tout les personnes et tous les organismes q sont intéressés de quelque façon à la st bilisation et au relèvement de l'économ de la région industrielle du Cap-Breto et elle souligne les effets des changemen récents et des retards dans le domain des transports terrestres de la région des Maritimes; elle décide d'adresser d copies de la présente résolution expr mant son inquiétude aux personnes organismes responsables et intéressés q œuvrent en ce moment pour assurer stabilité économique à la région. L membres de la Commission désirent so

[Texte]

of Industrial Cape Breton and that a service which is not economically justified should be considered provided it adds to the potential and attractiveness of the area.

What they are getting at is that in a distance of 100 miles, a passenger train takes two and one-half to three hours and a freight train, from Havre Boucher into Sydney, takes five and one-half to seven hours. These are just some of the things that we are concerned about, the length of time it takes to bring freight back and forth and the shortage of power, the hours that the passenger service trains arrive in Sydney at one, two and three o'clock in the morning for people that live in the outer areas. There is no public transportation and they have to try to get taxi service, and so on.

This has been changed lately and people that are ill that have to come to the major hospital, the Victoria General Hospital here in Halifax, have to sit up in a railliner or in the morning train, *The Cabot*. There are no facilities for them to be made comfortable on their way up or they have to get an ambulance, so we feel then in the whole area that over the last short period of time our service has deteriorated to the point where we are back years and years from what we were lately. This is what we are asking to have looked into so that we can be brought up to date as the other parts of our area are.

You all know there are a lot of people who still do not like to fly. We have a lot of new people coming into the area, industrialists and their families and so on, and when you leave—take my own case. A year ago I left here and I was supposed to leave at 11 o'clock. The train did not leave the main depot until 12 o'clock. When we got to Truro we waited two and one-half hours in Truro before we left there and we did not get into Sydney until some time late that night after nine o'clock.

A fellow could pretty nearly walk home in that time if he was in good health. So this is what we are facing you with, gentlemen, and we are putting it before you and asking you to look into it for us.

The Chairman: Thank you. Gentlemen I have on my right Mr. Frank Hickey and Mr. Thomson. Mr. Horner?

[*Interprétation*]

ligner que tout en souscrivant au principe de la justification économique, ils ne pensent pas que ce soit le seul critère valable en ce moment pour le développement industriel du Cap-Breton et ils sont d'avis qu'il y a lieu de fournir un service sans justification économique s'il ajoute au potentiel et à l'attrait de la région.

Et maintenant, je pourrais peut-être vous dire que sur une distance de 100 milles un train de voyageurs met de deux à trois heures alors qu'un train de marchandises sur le parcours Hâvre Boucher-Sydney prend de 5 heures et demie à 7 heures. Voilà quelques-unes de nos préoccupations tout comme le temps nécessaire pour l'aller et retour d'un train de marchandises, les retards encourus par l'insuffsance de locomoties, le fait que les trains arrivent à Sydney à une, deux ou trois heures du matin alors que les gens qui demeurent en dehors de la ville n'ont plus de transport public à leur disposition, et doivent prendre un taxi pour se rendre à la maison...

Tout cela a été changé récemment, les malades qui doivent se rendre à l'hôpital général Victoria à Halifax doivent rester assis dans un autorail ou le «Cabot» du matin, il n'y a pas moyen pour eux d'être installés confortablement, ou bien il faut qu'ils louent les services d'une ambulance. Nous croyons donc que dans toute cette région depuis un certain temps, le service s'est détérioré à un tel point que nous sommes maintenant retournés à la situation des années passées. Nous vous demandons donc d'étudier la question afin de pouvoir mettre les services à jour tout comme les autres régions des Maritimes sont desservies.

Il y a beaucoup de personnes qui n'aiment pas voyager par avion. Nous avons beaucoup de nouveaux présidents qui s'installent dans la région, des industriels et leurs familles. Prenez mon cas, il y a un an, par exemple, j'étais censé partir par le train à 11 heures, le train n'a pas quitté la gare principale avant midi et nous avons attendu à Truro pendant deux heures et demie avant de quitter Truro et nous sommes arrivés à Sydney seulement tard le soir, après 9 heures. Il serait presque possible de marcher pour se rendre chez soi dans ces conditions-là. Voilà le problème, messieurs, et nous vous demandons de l'examiner.

Le président: Messieurs, à ma droite, j'ai M. Frank Hickey et M. W. B. Thomson. M. Horner?

[*Text*]

Mr. Horner: Mr. Hickey, generally speaking, your brief is a complaint against the railroads and the service that you have been receiving in your region?

Mr. Hickey: That is correct, sir.

Mr. Horner: You also suggest that the Maritime Freight Rates Act be made applicable to the trucking industry as well, do you not?

Mr. Hickey: Yes.

Mr. Horner: It has been estimated that making the Maritime Freight Rates Act available to the trucking industry would cost in the neighbourhood of $4 million. Let us suppose that if you are now getting poor service from the railroads you give the truckers a shot in the arm and they step up their competition to meet the railroads. Perhaps the net result would be poorer service yet to the railroads. Have you thought of it in that light?

Mr. Hickey: Mr. Thomson might answer that question.

Mr. W. B. Thomson (Director of Regional Planning, Cape Breton Regional Planning Commission): I go back to what the other representative from the Cape Breton area said in his presentation regarding the harbour development proposal. This is that the general feeling is that competition would improve the service and would, we hope, cut the rates or provide competitive rates. I am not an expert on rates.

Mr. Horner: In other words, you are suggesting that the railroads are just lazy and because there is no competition they have not been giving you good service in your region.

Mr. W. B. Thomson: Your words, sir, but it might be a good suggestion.

Mr. Horner: I hope that the railroad officials and the CTC representative here are made fully aware of your brief. Have you complained to the CTC at all in any of your regions?

Mr. Thomson: Yes, we have.

Mr. Horner: You are still having trouble getting cars, I understand, from your brief?

Mr. Hickey: I could read you a submission here from Mr. Martin Merner who is President of the Steelworkers Union in Sydney and I think it will explain...

[*Interpretation*]

M. Horner: Monsieur Hickey, de façon générale, vous vous plaignez des services reçus dans votre région de la part des chemins de fer.

M. Hickey: Oui, c'est exact, monsieur.

M. Horner: Vous dites aussi que la Loi sur les taux de transport des marchandises dans les provinces Maritimes devrait être applicable au camionnage aussi n'est-ce pas?

M. Hickey: Oui, monsieur.

M. Horner: On estime que si la Loi sur le taux de transport des marchandises dans le provinces Maritimes devait s'appliquer aux camions, que le coût serait de 4 millions d dollars. Mais supposons maintenant que vou avez un très piètre service des chemins d fer, que vous donnez aux camions un pe d'aide et que par conséquent ils augmenten leur concurrence aux chemins de fer, le résul tat net pourrait peut-être finir par être encor un pire service de la part des chemins de fe Avez-vous songé à cela?

M. Hickey: M. W. B. Thomson pourra peut-être répondre à la question.

M. W. B. Thomson (Directeur du dévelo pement régional, Commission du développe ment régional du Cap Breton): Revenons à que l'autre représentant du Cap Breton a d plus tôt, en ce qui concerne cette propositic visant à développer le port. Nous somm d'avis que la concurrence améliorerait le se vice et couperait les tarifs, nous donnerait d tarifs concurrentiels. Je ne suis pas un spéci liste des tarifs.

M. Horner: En d'autres mots vous voul dire que les chemins de fer sont simpleme paresseux parce qu'il n'y a pas de concu rence et ils ne vous ont pas donné de bo services.

M. W. B. Thomson: C'est vous qui le dit mais c'est peut-être là la situation.

M. Horner: Les représentants de la C.C. spécialistes en question ferroviaires ici pr sents, sont vraiment conscients de votre so mission. Est-ce que vous vous êtes plaints C.C.T. dans l'une ou l'autre de vos régions?

M. Thomson: Oui, nous l'avons fait.

M. Horner: Vous éprouvez toujours d difficultés à obtenir des wagons si j'en cr votre mémoire?

M. Hickey: Je pourrais vous lire la soum sion de M. Martin Merner, le représentant Syndicat des ouvriers de l'aciérie de Sydr et cela pourrait vous éclairer.

[*Texte*]

The Chairman: If you do not mind this etter will be appended to our report and I ink we could save a lot of time on that.

Mr. Horner: The box car problems are one f your problems?

Mr. Hickey: That is right.

Mr. Horner: I hope that the CTC is made ware of this.

The Chairman: Order, please. Mr. Carter?

Mr. Carter: Mr. Chairman, in the brief ere is a great deal of emphasis on the fact at the railway passenger service seems to ave deteriorated or at least is not up to andard. I wonder if the witness can tell me hen this started to happen? Do you consider is to be a deliberate attempt on the part of e CNR to discourage people from using ur rail passenger service, perhaps to place it eventually with buses?

Mr. Hickey: Up until about two years ago e had a night train that left Sydney around :45 o'clock, arriving in Halifax here, in the orning, probably around 8:30 or 8:45 clock. Now we have *The Cab* which leaves dney at 7 o'clock in the morning. You ansfer at Truro and come through to Hali-x and you leave Halifax on the rail liner. I o not know the exact time it leaves now but year ago when I left it was supposed to ave at 11 o'clock. Then you wait in Truro r *The Ocean Limited* coming from Montreal. The night train out of Sydney is the sleeper rvice and this meant an awful lot to sick ople that had to come up here to the Vic-ria General Hospital, and we have quite a rge number from that area, war veterans d so on, coming to Camp Hill and this has eated quite a hardship. We are not asking have this service back every night in the eek, but two or three times a week so peo-le that have to have this service can use it.

Mr. Carter: All right. Has your group ade representations to the CN or to the TC?

Mr. Hickey: That has been done, I think.

Mr. Carter: What reply do you get to your quest for better service?

Mr. Hickey: The reply that we got is that it not feasible, that it is uneconomic, and so .

[*Interprétation*]

Le président: Si cela ne vous fait rien nous ferons figurer cette lettre en annexe.

M. Horner: Le problème est un problème de wagons-marchandises, n'est-ce pas?

M. Hickey: C'est juste.

M. Horner: J'espère ue la C.C.T se rendra compte du problème.

Le président: A l'ordre s'il vous plaît. Monsieur Carter.

M. Carter: Dans le mémoire, on insiste sur le fait que le service de voyageurs n'est plus suffisant, il semble s'être encore détérioré. Pourriez-vous nous dire quand cela a commencé à se produire. Trouvez-vous qu'il s'agit d'une action délibérée du National-Canadien pour décourager les voyageurs d'avoir recours à ses services ferroviaires pour éventuellement les faire remplacer par des autobus ou un autre mode de transport?

M. Hickey: Jusqu'à environ deux ans, nous avions un train de nuit qui quittait Sydney vers 10h45 et qui arrivait à Halifax le matin vers 8 h 30 ou 8 h 45. Maintenant nous avons le «*Cabot*» qui quitte Sydney à 7 heures du matin, vous prenez une correspondance à Truro, et vous arrivez à Halifax et pour le retour, vous quittez Halifax par l'autorail qui quitte, je ne sais pas au juste à quelle heure—mais il y a un an c'était censé être à 11 heures et vous attendez à Truro l'*Océan Limité* en provenance de Montréal.

Le train de nuit de Sydney était très important pour les gens malades qui venaient ici à l'Hôpital Victoria et nous en avons un certain nombre qui viennent de cette région, des anciens combattants qui viennent à Camp Hill et l'abandon de ce service a créé certaines difficultés. Nous demandons, non pas de reprendre ce service chaque soir de la semaine mais au moins deux ou trois fois par semaine pour que les gens puissent l'utiliser au besoin.

M. Carter: Est-ce que votre groupe a fait des instances au National-Canadien ou à la C.C.T.?

M. Hickey: Cela a été fait, je crois.

M. Carter: Quelle réponse avez-vous obtenue à la suite d'une demande d'amélioration du service.

M. Hickey: On nous a dit que cela n'était pas réalisable et non rentable.

[*Text*]

Mr. Carter: So they are basing it purely on a matter of economics; is that right?

Mr. Thomson: From what they have told us, yes.

Mr. Carter: Then I would suggest you should prepare yourselves for buses pretty soon—39-passenger, perhaps.

Le président: Monsieur Corbin.

M. Corbin: Ma question a été posée, monsieur le président.

Le président: Monsieur Godin, si vous voulez attendre une minute.

Allez-y, monsieur Godin.

M. Godin: De quel endroit de la région vous parviennent les wagons vides, c'est-à-dire à combien de milles est située la base centrale, si on peut dire, d'où l'on vous envoie les wagons vides, lorsque vous en faites la demande?

Mr. Hickey: I think the general assembly point is the City of Moncton. Generally the boxcars come to our area from Moncton. Probably I am wrong; I should say the Town of Truro. They come from Moncton down to Truro and that is where we get them from.

M. Godin: Maintenant, croyez-vous vraiment à une rareté réelle ou si elle n'est qu'artificielle? Si je pose la question, c'est parce que présentement le National-Canadien a une nouvelle façon de contrôler ses wagons et ceux-ci, lorsqu'ils sont déchargés, ne sont signalés nulle part, par aucun chef de gare. Alors, à la dimension du pays, il se produit ceci: on nous affirme que le nombre des wagons est restreint, qu'il en manque, mais en réalité, s'ils étaient signalés à différents endroits, on verrait qu'ils sont en nombre suffisant. La même chose pourrait-elle se produire ici? Est-ce que c'est un manque de contrôle découlant de nouveaux règlements de la part du National-Canadien établis depuis un an ou si la situation, qui prévaut présentement, a toujours été la vôtre?

Mr. Hickey: Probably Mr. Thomson can answer that.

Mr. Thomson: Mr. Chairman, I am sorry that the steel company representative is not here. If you had had the privilege of coming to Sydney, we would have had them all lined up for you. I am sorry; we are not really in a position to give an adequate answer to your question. All I can do is refer you to the brief which was submitted by the steel and coal company representatives which states quite clearly that they have experienced shortages.

[*Interpretation*]

M. Carter: C'est donc une question de rentabilité?

M. Thomson: D'après ce qu'ils nous ont dit oui.

M. Carter: Alors aussi bien vous préparer à accepter les autobus d'ici peu. Peut-être 39 passagers.

The Chairman: Mr. Corbin.

Mr. Corbin: My question has been asked Mr. Chairman.

The Chairman: Mr. Godin, would you please wait a minute. Go ahead, Mr. Godin.

Mr. Godin: From what part of the area come from, i.e. what is the distance in miles to the central base, if I may call it that, from where empty boxcars are sent to you when you request them?

M. Hickey: Je crois que le point de rassemblement se fait à Moncton. C'est de là que nous parviennent les wagons vides. Peut-être ai-je tort. Je devrais peut-être dire de Truro Les wagons viennent de Moncton à Truro e nous les obtenons de Truro.

Mr. Godin: Now, do you really believe that there is a real scarcity or is it an artificial scarcity? The reason I am asking that, is that at the present time the C.N. has a new way o controlling its boxcars, and when they ar unloaded and are not referred to anywhere by any stationmaster. Therefore, this is what happens on a nation wide scale: we are told that there is a shortage of boxcars, but in fact, if all of them were on file, we would see that there is a sufficient number of them. Could the same thing happen here? Is it lack of control as a result of new regulations by the C.N. which have been established in the past year, or is the present situation the one that has always existed here for your?

M. Hickey: M. Thomson pourrait peut-être répondre.

M. Thomson: Monsieur le président, je regrette que les représentants de l'aciérie ne soient pas ici. Si vous aviez le privilège de venir à Sydney, ils seraient tous là pour vous rencontrer. Nous ne sommes pas vraiment en mesure de vous répondre de façon satisfaisante à votre question. Tout ce que je puis faire, c'est vous référer au mémoire qui nous fut présenté par la *Steel and Coal Company* et ses représentants qui déclare bien claire

[*Texte*]

cannot give you details of the reasons. I am orry.

The Chairman: Gentlemen, this is the end ur our question period and I want to thank he two gentlemen, Mr. Hickey and Mr. Thomson.

Mr. Thomson: It was a pleasure, sir.

The Chairman: I would like to call upon he Sydney Steel Corporation. I will ask the entleman to summarize his brief.

Mr. Hicks (Sydney Steel Corporation): Mr. hairman, thank you for the opportunity to ppear before your Committee. We want to resent our case as briefly as possible, and I ave a very short summation here which I ink touches the highlights. I would like to ead it. It is as follows:

Because of the limited product range and ne preponderance of this being sold in the ontrecœur, Montreal, area, the Sydney Steel orporation asked that rate-parity with amilton be granted on shipments to Conecœur. This can be accomplished by djusting the upward level of assistance vailable under the Maritime Freight Rates ct, as detailed in our submission.

It is felt that this is necessary to retain our nare of the market in this area in the face of nport competition as well as that of our entral Canadian suppliers of the same roducts.

Because of the methods by which our rails e sold, we must absorb geographical sabilities in freight allowances applicable on ders sold to the Canadian National and the anadian Pacific railways. It is suggested that e benefits of the Maritime Freight Rates ct be made applicable to cover this situation ithout disturbing the present method of sellg rails.

If I may digress on that for a moment, in e text of the brief it is stated that the rails e moved on what is called OCS—our own mpany service—which is a cost basis borne the railways, and not being a regular

[*Interprétation*]

ment qu'ils ont eu l'expérience d'une insuffisance de wagons-marchandises. Pourquoi, quand, comment, et quelles en sont les raisons, je ne saurais vous les donner. Je m'excuse.

Le président: Messieurs, voici la fin de la priode de questions. Je désire remercier les deux témoins, MM. Hickey et Thomson.

M. Thomson: Merci beaucoup.

Le président: Maintenant je cède la parole à *la Sydney Steel Corporation.* Monsieur Arnold Hicks. Je demande donc au représentant de nous donner un résumé de leur mémoire.

M. Hicks (Sydney Steel Corporation): Monsieur le président, merci beaucoup de nous fournir l'occasion de comparaître ici. Nous désirons présenter notre soumission le plus brièvement possible. J'ai un résumé très bref ici qui peut vous donner les principales caractéristiques de ce mémoire, et je veux vous en donner lecture.

Étant donné l'assortiment limité des produits ainsi que le fait que ces produits sont vendus en grande partie dans la région de Contrecœur et Montréal, la *Sydney Steel Corporation* a demandé que la parité des taux avec Hamilton soit accordé aux expéditions vers Contrecœur. Ceci peut être fait en ajustant le niveau supérieur de l'aide disponible en vertu de la Loi sur les taux de transport des marchandises dans les provinces maritimes, tel que vous le trouverez en détail dans notre présentation.

Nous sommes d'avis que cela est essentiel pour maintenir notre part du marché dans cette région, face à la concurrence des importations ainsi qu'à celle des fournisseurs du même produit dans le Canada central.

Étant donné les méthodes utilisées pour vendre nos rails, il nous faut absorber le désavantage géographique pour ce qui est des allocations en tarif qui s'appliquent sur les commandes passées par le National-Canadien et le Pacifique-Canadien. Nous croyons que les avantages offerts par la Loi sur les taux de transport des marchandises dans les Maritimes devraient comprendre cette situation sans nuire aux méthodes actuelles de vente de rails.

Je voudrais m'éloigner un instant pour dire que, d'après le texte du mémoire, les rails sont acheminés en vertu du service OCS, notre propre service, dont le coût est à la charge de la compagnie de chemin de fer, et

[*Text*]

freight rate it is not reduced under the Maritime Freight Rates Act.

The Sydney Steel Corporation suggests that the trucking industry within the Maritimes be granted assistance under the Maritime Freight Rates Act to provide a greater degree of economic strength and service.

The Sydney Steel Corporation suggests that the MFRA be held a viable instrument which will be able to adjust swiftly to the needs of the community rather than become rigid in its application.

The Sydney Steel Corporation suggests that these points can be granted as part of the national transportation policy which calls for making the best possible use of all available modes of transportation to protect the interests of the users of transportation and to maintain the economic well-being and growth of Canada. This, in our own selfish interest, must be interpreted as being the Maritimes, or the Atlantic Provinces, as this is the portion of Canada in which we exist.

That is a very brief summary of our submission.

The Chairman: Mr. Horner?

Mr. Horner: In your submission you make no mention of tariff rates, or if there are any, in moving your goods south in the United States.

Mr. Hicks: We have not done that for the reason that we have dealt with the larger segment of our business which has been to central Canada.

Mr. Horner: The majority of your business has been to central Canada?

Mr. Hicks: That is right.

Mr. Horner: For the benefit of the Committee could you give us some idea of why that is? Why has there not been a greater movement in the United States?

Mr. Hicks: Why was there not?

Mr. Horner: Yes.

Mr. Hicks: There are many reasons. One of them of course is transportation. Assuming all transportation facilities were available and ready, we must meet the regulations of the

[*Interpretation*]

ces frais n'étant pas un tarif régulier pour le transport des marchandises, n'est pas diminué en vertu de la Loi sur les taux de transport des marchandises dans les Maritimes.

La *Sydney Steel Corporation* propose que l'industrie du camionnage dans les Maritimes bénéficie d'une aide en vertu de la Loi sur les taux de transport des marchandises dans les Maritimes, afin de lui donner une plus grande vigueur économique et pour qu'elle puisse offrir un meilleur service.

La *Sydney Steel Corporation* propose que la Loi sur les taux de transport des marchandises dans les Maritimes devienne un instrument viable qui pourra s'ajuster rapidement aux besoins de la collectivité plutôt que d'être rigide dans son application.

La *Sydney Steel Corporation* propose que les points que nous venons de mentionner soient considérés comme faisant partie de la politique nationale de transport qui exige la meilleure utilisation possible de tous les moyens de transport pour protéger les intérêts des utilisateurs et maintenir le bien-être économique et la croissance du Canada.

Ceci, dans notre intérêt, doit être interprété comme signifiant les Maritimes et les provinces de l'Atlantique, étant donné qu'elles constituent la partie du Canada où nous nous trouvons.

Voilà donc un bref résumé de notre présentation.

Le président: Monsieur Horner?

M. Horner: Dans votre présentation vous ne parlez pas du prix de tarifs ou s'il y en a pour ce qui est du transport de vos produits vers les États-Unis, au Sud?

M. Hicks: Nous ne l'avons pas fait. C'est pour la simple raison que nous avons plutôt traité des secteurs plus importants dans notre entreprise soit vers le centre du Canada.

M. Horner: La plus grande portion de votre commerce se fait-elle avec le centre du Canada?

M. Hicks: Oui.

M. Horner: Pourriez-vous nous donner une idée pourquoi il en est ainsi? Pourquoi n'y a-t-il pas eu un plus grand mouvement vers les États-Unis?

M. Hicks: Pourquoi?

M. Horner: Oui.

M. Hicks: Il y a plusieurs raisons. Évidemment une en est le transport. En supposant que tous les services de transport étaient disponibles et prêts, il nous fallait répondre aux

[*Texte*]

Interstate Commerce Commission, which are very, very rigid in their application. Within the last year we have had quite a bit of dealing with the United States carriers in endeavoring to get into that market and have faced problems from the Interstate Commerce Commission.

As recently as the first of this year we were successful in negotiating a rate with the Canadian and American carriers on a piece of business which we were able to develop, only to have it contested by a major steel supplier in the United States. We were called before the supension board and, fortunately for us, we were able to have our rate upheld. Nevertheless, it is a continual fight to get even the most modest concession on transportation into the United States. This is not so much from the Canadian sources as because of the regulations laid down by the Interstate Commerce Commission.

Mr. Horner: Does the Canadian Transport Commission give you, or do you think it could give you, any assistance in your battle with the Interstate Commerce Commission?

Mr. Hicks: I cannot honestly answer you on that. I know that our competitors, the central Canada steel industries, have been faced with this same problem, as well.

Mr. Horner: Actually it is not so much a tariff as just a border restriction on the type, ...

Mr. Hicks: It is not a customs restriction, but it amounts to the same thing.

Mr. Horner: It amounts to the same thing?

Mr. Hicks: It does.

Mr. Horner: I do not quite understand your suggestion in the brief that you are, in fact, paying the freight on the railway track you take and you therefore get no MFRA on it. Could you explain that a little further?

Mr. Hicks: I will try to, as best I can. Our rails are sold technically on a f.o.b. Sydney basis.

Mr. Horner: But you deliver them?

Mr. Hicks: We do not deliver them; but we are assessed a penalty in relationship to our competitor, based on the final destination of the rails. If we are at a disadvantage of a

[*Interprétation*]

exigences de la Commission du Commerce inter-état, (*Interstate Commerce Commission* qui sont très rigoureuses dans leur application. Nous avons eu au cours de la dernière année beaucoup à faire avec les transporteurs américains pour essayer de nous introduire dans ce marché, et nous avons dû faire face à des problèmes qui ont été soulevés par la Commission du Commerce inter-état.

Dès le début de cette année, nous avons réussi à nous mettre d'accord sur un tarif avec des transporteurs américains et canadiens pour une affaire que notre entreprise a pu mettre au point, et qui fut contestée par des grands producteurs de l'acier aux États-Unis. Nous avons été appelés devant le *Suspension Board* et heureusement nous avons pu faire maintenir nos taux. En tout cas, c'est une lutte continuelle, même pour obtenir la moindre concession sur le transport pour entrer aux États-Unis. Non pas tellement des sources canadiennes qu'à cause des règlements établis par la Commission du Commerce inter-état.

M. Horner: Est-ce que la Commission canadienne des transports vous donne ou pourrait vous offrir de l'aide dans votre lutte avec la Commission du Commerce inter-état?

M. Hicks: Je ne saurais vraiment répondre à cette question. Je sais que nos concurrents du Canada central de cette industrie ont dû faire face à ce même problème.

M. Horner: Ce n'est pas tellement une question de tarif, mais simplement des restrictions de frontières quant au genre...

M. Hicks: Il ne s'agit pas de restrictions tarifaires, mais cela revient au même.

M. Horner: Cela revient au même?

M. Hicks: Oui.

M. Horner: Je ne comprends pas tout à fait dans votre mémoire, lorsque vous dites que vous vous trouvez à payer le tarif pour l'expédition de vos rails, que vous fabriquez, et que par conséquent, vous ne bénéficiez pas des dispositions de la Loi sur les taux de transport des marchandises dans les Maritimes. Pourriez-vous nous expliquer cela?

M. Hicks: Je ferai de mon mieux. Nos rails sont vendus essentiellement sur une base f.a.b. Sydney.

M. Horner: Mais vous en faites la livraison?

M. Hicks: Non, on n'en fait pas la livraison, mais nous devons payer une amende pour ce qui est de notre situation par rapport à nos concurrents suivant la destination des rails.

[*Text*]

1,000 miles compared to our competitor, we are forced, to be competitive with our competitor on the railway purchase book, to adjust our price to take into account this geographical disability. As I said, this is not a freight rate, as such, and it therefore cannot be reduced under the MFRA.

Mr. Horner: About how many 100 miles would that amount to in most cases? Could you give us some idea relative to the mileage at which you have to pick up with no MFRA assistance?

Mr. Hicks: Could I perhaps avoid your question by just asking you to refer to Appendix II? That shows the average disability that we absorb.

Mr. Horner: That is fine. You also suggest that you ought to be given a rate similar to the Hamilton plant?

Mr. Hicks: That is right. What we say here is that as the bulk of the market availability for the product which we sell is in the area, aside and apart from rails, and as the price is controlled to an extremely large degree by the level of the import competition at that point, we must, as a result, price it on a delivered basis and absorb 100 per cent of the freight to Contrecoeur in Montreal.

Mr. Horner: I have one further question. Since taking over the plant, have you given any thought to making a different variety of product, such as flat steel which could, or might, be used to quite a large extent here in the Maritimes?

Mr. Hicks: I cannot answer that. All I can say is that the management have, I believe, some immediate improvements in mind, but I do not think they quite fall into the area from which you are making your approach.

Mr. Horner: Why do you think that a railroad should charge more for the movement of finished steel than, say, of the raw steel itself?

Mr. Hicks: This goes back to the basis of rate making, which takes into account amongst other things, the value of the product.

Mr. Horner: Yes.

Mr. Hicks: They assume if it is worth $100 compared to an item worth $50, that it should pay a higher proportion of the freight than the lower-valued item.

[*Interpretation*]

Nous nous trouvons dans une situation défavorable du fait qu'il y a 1000 milles qui nous séparent de nos concurrents, donc, pour être compétitifs, il nous faut rajuster nos prix pour tenir compte de ce désavantage géographique. Comme je l'ai dit, ce n'est pas un tarif-marchandise comme tel et par conséquent on ne peut le diminuer en vertu des dispositions de la Loi.

M. Horner: Combien de centaines de milles environ cela représente-t-il dans la plupart des cas? Pourriez-vous nous donner une idée du nombre de milles qu'il vous faut faire sans l'aide de la Loi.

M. Hicks: Peut-être me permettrait-on de vous demander de vous reporter à l'appendice II, qui est la moyenne du désavantage que nous supportons.

M. Horner: C'est très bien. Vous proposez aussi que vous devriez avoir des tarifs analogues à ceux qui sont accordés à l'usine de Hamilton?

M. Hicks: Oui. Comme le gros de la disponibilité des marchés pour le produit que nous vendons se trouve dans cette région, les rails mis à part et comme le prix est contrôlé dans une grande mesure par la concurrence des importations à ce point-là il nous faut donc calculer le tarif de façon à ce qu'il comprenne la livraison et absorber le 100 p. 100 des frais de transport jusqu'à Contrecœur à Montréal.

M. Horner: Avez-vous songé à diversifier vos produits, et fabriquer par exemple de l'acier laminé ou autre chose qui pourraient être utilisés dans une grande mesure ici-même dans les Maritimes?

M. Hicks: Je ne saurais répondre. Tout ce que je peux vous dire, c'est que l'administration a certaines améliorations en vue, mais je ne crois pas que cela relève du secteur dont vous parlez maintenant.

M. Horner: Pourquoi croyez-vous qu'une compagnie de chemins de fer devrait exiger plus pour le déplacement de l'acier fini, que pour de l'acier brut?

M. Hicks: Ceci remonte à l'établissement des taux qui tient compte, entre autres, de la valeur du produit.

M. Horner: Oui.

M. Hicks: Ils en concluent que si cela vaut $100 comparativement à $50 d'un autre produit, on devrait payer une plus forte proportion du tarif.

[*Texte*]

Mr. Horner: Do you think that system of rate making is out of date?

Mr. Hicks: To some degree it is out of date, and I think there is a slow evolution to change. The degree of this, perhaps, is not as bad as it was, but there is still a disparity. It is difficult to make an exact comparision in every instance, because the volume for individual shipments will vary.

A typical illustration is that a carload of basic steel to Contrecoeur, or, say, Montreal, is at present $5.60 a ton, and a shipment of 100,000 lbs. of nails is $10 a ton.

Mr. Horner: Relative to this principle of the greater the value of the product the greater the freight rate charged on it, have you considered appearing before the CTC and perhaps getting some revision of this general principle of rate setting?

Mr. Hicks: No, not in that respect. Again, if you will go back to our submission, you will find that as of the present what we could call our finished product, in the truest sense, is perhaps our rails, which, in effect, pay a freight allowance but not a freight rate. The only other item that could perhaps be called a finished item would be reinforcing steel and nails. However, as I say, those represent such a minute percentage of our total business that, of course, priorities have priority and you must approach the big problem first.

Mr. Horner: Thank you.

The Chairman: Mr. Rock?

Mr. Rock: Why have you not suggested in your brief that more secondary industry to use your steel be established in the Atlantic region?

Mr. Hicks: We have not suggested anything of that type because of this being perhaps a short-term and immediate problem that we are faced with.

Basically your question would require an answer from our management on what type of industry needs to be drawn in. I am afraid I cannot answer you.

Mr. Rock: Have you ever made a survey of that type and submitted it to the provincial governments here, or to other bodies informing them of what kind of industry would be needed to keep you people in operation?

[*Interprétation*]

M. Horner: Croyez-vous que cette façon d'établir les taux est désuète?

M. Hicks: Dans une certaine mesure, elle est désuète mais il y a à mon avis une lente évolution vers un changement. La situation n'est pas aussi mauvaise qu'elle ne l'était, mais il y a toujours une disparité. Il est difficile de faire une comparaison fidèle dans chacun des cas, parce que le volume des expéditions individuelles varie.

Par exemple, une wagonnée d'acier de base, expédiée à Contrecœur ou disons à Montréal, coûte présentement $5.60 la tonne alors qu'une livraison de 100,000 livres de clous, coûte $10.00 la tonne.

M. Horner: Pour ce qui est du principe voulant que plus le produit a de la valeur plus le tarif-marchandise est élevé. Avez-vous songé à comparaître devant la Commission canadienne des transports et essayer d'obtenir peut-être la révision du principe général d'établissement des tarifs?

M. Hicks: Non, pas à cet égard. Une fois de plus, si vous revenez à notre présentation, vous vous rendrez compte que ce que nous appelons produit fini, dans le vrai sens du mot sont les rails qui en fait bénéficient d'une allocation de transport mais non d'un tarif marchandises. Les seuls autres produits que l'on pourrait appeler finis sont l'acier renforcé et les clous. Cependant, ces deux articles représentent une si faible proportion de l'ensemble de notre commerce, que les priorités sont toujours là, et il nous faut attaquer tout d'abord les grands problèmes.

M. Horner: Merci.

Le président: Monsieur Rock?

M. Rock: Pourquoi n'avez-vous pas proposé dans votre soumission qu'un plus grand nombre d'industries secondaires utilisant votre acier soient établies dans la région de l'Atlantique?

M. Hicks: Nous n'avons rien dit de ce genre du fait qu'il s'agit là peut-être, d'un problème à court terme. Essentiellement, votre question exigerait une réponse de la part de notre administration pour nous dire quels genres d'industries doivent être encouragées à venir s'établir dans cette région. Je ne saurais vous répondre.

M. Rock: Avez-vous déjà entrepris une enquête de ce genre, et présenté aux gouvernements provinciaux ou à quelque autre organisme pour leur faire savoir quels genres d'industries seraient requises pour vous maintenir en exloitation?

[*Text*]

Mr. Hicks: I cannot answer you on that, but I believe the Voluntary Planning Board of Nova Scotia made some approach on what would be required in the Atlantic area to meet the total output of our mill at Sydney. I think it would be quite phenomenal.

The Chairman: Mr. Nesbitt?

Mr. Nesbitt: I have no questions.

The Chairman: Mr. Perrault?

Mr. Perrault: In a sense, Mr. Chairman this is supplementary to a question asked earlier.

We heard the submission from The Enterprise Foundry Company Limited in New Brunswick the other day. They complained about the high cost of bringing in from central Canada the metal necessary for the construction of their products and the high costs involved in many other components with a steel base. As I recall, the question was asked at that time whether or not it had a source of supply in the Maritimes, and they said that none of the Maritimes steel corporations and companies manufacture the type of metal required by them.

In view of the fact that the range manufacturing industry is experiencing competitive difficulties in the Maritime provinces, would it not be an idea to diversify into that particular area? Perhaps there is a reason for this diversification not taking place. If it is not, does it somehow relate to the cost of transporting this material even within the Maritime region?

Mr. Hicks: That particular question, I think, is perhaps a larger one than transportation itself. May I answer it with a question? Would the Enterprise Foundry Company be prepared to buy all of the steel that could be produced on a mill capable of producing flat steel?

Mr. Perrault: In other words, it is a matter of operating to capacity?

Mr. Hicks: You cannot invest a fantastic amount of money for a very infinitesimal amount of production.

Mr. Perrault: This also relates to a question previously asked, Mr. Chairman. If a more favorable rate were made available to Sydney Steel for this type of metal perhaps it could be sold to the range manufacturing companies in the Maritimes, as well as to a wider mar-

[*Interpretation*]

M. Hicks: Je ne saurais vous répondre, mais je crois que le *Voluntary Planning Board of Nova Scotia* a étudié la question afin de voir ce qu'il faudrait faire dans la région de l'Atlantique pour répondre à l'ensemble de la production dans notre usine de Sydney. Ce serait vraiment formidable, à mon point de vue.

Le président: Monsieur Nesbitt?

M. Nesbitt: Pas de question.

Le président: Monsieur Perrault?

M. Perrault: Ma question est complémentaire à une autre question déjà posée plus tôt.

Nous avons entendu, l'autre jour, la présentation de *Enterprise Foundry Range Company Limited* du Nouveau-Brunswick. Ils se sont plaints au sujet du coût trop élevé du transport à partir du Canada central, du métal nécessaire à la fabrication de leurs produits, ainsi que le coût trop élevé des autres éléments faits à base d'acier.

Si je me souviens bien, la question posée alors, était de savoir si cette firme disposait ou pas d'une source d'approvisionnement dans les Maritimes, et ils ont dit qu'aucune des acieries ne produisait le genre de métal dont elle avait besoin.

Étant donné les difficultés dans le domaine de la concurrence qu'éprouve l'industrie manufacturière des cuisinières dans les provinces Maritimes, ne serait-il pas une bonne idée de diversifier la production dans ce secteur? Il y a peut-être une raison pour laquelle vous ne faites pas une telle diversification; si c'est le cas, cela est peut-être en rapport aux coûts de transport de ces matériaux même dans la région des Maritimes?

M. Hicks: Ce n'est pas simplement une question de transport. Je pourrais peut-être y répondre en posant une autre question. L'*Enterprise Foundry Company Limited* serait-elle prête à acheter tout l'acier laminé, que pourrait produire une aciérie?

M. Perrault: En d'autres termes, l'usine est censée fonctionner à pleine capacité?

M. Hicks: On ne peut investir beaucoup d'argent simplement pour une faible production.

M. Perrault: Ceci se rattache également à une autre question déjà posée, monsieur le président. Si la *Sydney Steel* disposait de taux plus favorables pour ce genre d'acier, peut-être pourrait-on le vendre aux fabricants de cuisinières dans les Maritimes ainsi qu'aux

[*Texte*]

ket in central Canada? Would that bring it into the realm of economics?

Mr. Hicks: You are getting into the field of economics. I would just as soon not answer, but I think that...

Mr. Perrault: Then we come right back to the basic steel premise, as submitted here, that we have flat steel producers in Montreal who will compel the price.

Mr. Hicks: There would be no advantage, on the face of it, in terms of recovering freight from the customer on selling it.

Mr. Perrault: Your thought, then, is that your main advantage is in not diversifying too much but staying with main lines...

Mr. Hicks: I am not prepared to say that. That is for senior management. I certainly am not in a position to answer.

The Chairman: Mr. Rose?

Mr. Rose: Thank you, Mr. Chairman.

We have heard a number of briefs that support the concept that the truck transportation operators should come under MFRA regulations, Clause III, I believe. What concerns me, and has concerned me throughout all these hearings, is that apparently many of these truck operators, from what I can gather, are making a profit now. I believe that including them would increase their potential by approximately 20 per cent.

It seems to me that this would not necessarily be competitive, or lower the price—it might with the rates on the railway; I follow that line of argument—but the thing that disturbs me most, and perhaps you are not in a position to answer this. Maybe it is a technical question for the Committee, but I am not really assured that the extra 20 per cent granted would actually trickle down to the people who need it the most. I think that what we would be doing would be subsidizing higher rates for truckers.

Mr. Hicks: There is a possibility of this. However, I think if an industry were using a trucker who we know has some assistance we would feel we had every right to demand a higher degree of service because of it.

Mr. Rose: Do you pay lower wages at your plant than they do in Hamilton?

[*Interprétation*]

autres marchés plus vastes du Canada central? Cela deviendrait-il rentable?

M. Hicks: Vous passez là dans le domaine de l'économique. Par conséquent, je préfère ne pas répondre, mais je pense...

M. Perrault: Nous revenons donc vers la question de l'acier de base tel que mentionné dans le mémoire, et qui dit qu'il y aurait à Montréal des producteurs d'acier laminé qui imposeront les prix.

M. Hicks: Ce ne serait pas avantageux pour nous de le faire, du moins en apparence, pour ce qui est de récupérer des frais de tarif.

M. Perrault: Donc, vous vous en tenez essentiellement aux principaux produits?

M. Hicks: C'est à la haute administration d'en décider. Ce n'est pas à moi de répondre à une telle question.

Le président: Monsieur Rose?

M. Rose: Merci beaucoup, monsieur le président.

Nous avons entendu un certain nombre de mémoires qui appuient le concept selon lequel les entreprises de camionnage devraient relever de l'article III, je pense, de la Loi sur le transport des marchandises dans les Maritimes. Et, ce qui m'inquiète, et ce qui m'a inquiété pendant toutes ces audiences, c'est que apparemment un bon nombre de ces entreprises accusent présentement un profit. Je pense que si on les incluait, cela augmenterait leurs possibilités dans une proportion d'environ 20 p. 100.

Il me semble donc que cela ne serait pas nécessairement compétitif; cela se peut, pour ce qui est des tarifs ferroviaires, mais ce qui m'inquiète le plus, et peut-être n'êtes-vous pas en mesure de répondre à ma question? C'est peut-être une question purement technique pour le Comité, mais je ne suis pas tout à fait sûr que le 20 p. 100 en plus viendrait à subventionner des taux plus élevés pour les camionneurs.

M. Hicks: Il y a une telle possibilité. Toutefois, je crois, que si une industrie utilisait les services d'un camionneur qui reçoit de l'aide, nous serions d'avis que nous aurions le droit d'exiger un meilleur service vu cette subvention.

M. Rose: Est-ce que vous payez des salaires inférieurs aux salaires de Hamilton, chez-vous?

[*Text*]

Mr. Hicks: We may do here. Do not consider me as being factual here. I think up till the situation which came into being we are on the same wage scale, but with a time differential. By that I mean perhaps a time lag between contract dates. I cannot answer you categorically as of today.

Mr. Rose: Therefore, you would not believe, for instance, that your workers are actually subsidizing your industry by lower wages?

Mr. Hicks: I could not answer you on that on today's basis.

Mr. Rose: I think it is a very pertinent point.

Mr. Hicks: It may very well be, but I am not competent to answer that question.

Mr. Rose: Would you say that perhaps your lower wages might offset your higher transportation costs?

Mr. Hicks: Never.

Mr. Rose: They never would in your industry.

Mr. Hicks: When I say "our industry" I am talking about Sydney Steel Corporation.

Mr. Rose: Yes.

Mr. Hicks: Right.

Mr. Rose: Right. Therefore you are all in favour of increased subsidies for...

Mr. Hicks: It is almost a necessity as far as the Sydney Steel Corporation is concerned.

Mr. Rose: Would you consider subsidies as social welfare to industries?

The Chairman: That is a pretty hard question.

Mr. Hicks: Who is going to answer that?

Mr. Rose: This is now a publicly owned corporation.

Mr. Hicks: This is a Crown corporation of the Province of Nova Scotia.

Mr. Rose: And you see no other alternative, either through diversification or some other method, to continuing with the transportation subsidies?

[*Interpretation*]

M. Hicks: Il se peut que cela arrive ici. Enfin, je ne peux vous donner des faits. Je crois que jusqu'à ce que la situation dans laquelle nous nous sommes retrouvés, nous avons la même échelle de salaires, mais avec un différentiel de temps. Je veux dire un délai dans la date des contrats. Je ne saurais vous répondre de façon catégorique pour ce qui en est d'aujourd'hui.

M. Rose: Donc, vous ne croyez-pas que vos travailleurs subventionnent votre industrie en vertu de salaires inférieurs?

M. Hicks: Je ne saurais vous répondre à ce sujet en me basant sur aujourd'hui.

M. Rose: Je crois que c'est tout à fait pertinent.

M. Hicks: Peut-être, mais je ne suis pas qualifié pour répondre à cette question.

M. Rose: Diriez-vous que vos salaires inférieurs pourraient contrebalancer ces frais plus élevés de transport?

M. Hicks: Jamais.

M. Rose: Jamais dans votre industrie?

M. Hicks: Je parle de la *Sydney Steel Corporation.*

M. Rose: Oui.

M. Hicks: C'est juste.

M. Rose: Donc vous êtes tous en faveur d'une augmentation de subventions pour...

M. Hicks: C'est à peu près une nécessité pour ce qui est de la *Sydney Steel Corporation.*

M. Rose: Est-ce que vous considéreriez des subventions pour une industrie comme du bien-être social?

Le président: C'est une question assez difficile.

M. Hicks: Qui va y répondre?

M. Rose: Elle appartient au gouvernement.

M. Hicks: C'est maintenant une corporation de la Couronne de la province de la Nouvelle-Écosse.

M. Rose: Et vous ne voyez pas d'autres possibilités, soit par la diversification ou quelque autre méthode, que de maintenir les subventions aux transports?

Texte]

Mr. Hicks: This is only one part of a whole omplex. You cannot take transportation and ay that is the cardinal and only sin in the usiness. I defy you to do that in any ıdustry.

Mr. Rose: We are sitting here, sir, as a ransportation Committee and that is why we re very concerned...

Mr. Hicks: Right; I will say that this is one roblem and a big problem, but not the only oblem.

Mr. Rose: Do you care to elucidate the hers?

Mr. Hicks: No, my area is in transportation.

The Chairman: Mr. Portelance?

M. Portelance: Monsieur le président, je udrais demander aux témoins si, dans leur maine, il y a beaucoup de compétition au nada? Quels sont leurs principaux compéti- urs et un de leurs problèmes n'est-il pas stement celui de l'importation concurrentiel- de la part d'autres pays?

Mr. Hicks: I am sorry; I did not get the st part of your question.

M. Portelance: Combien avez-vous de mpétiteurs au Canada?

Mr. Hicks: In basic steel we have two in amilton, basically one you might say, and e other one for certain surpluses that they ght have, and Sault Ste. Marie, Ontario.

M. Portelance: Ce qui veut dire que vous s trois compagnies au Canada intéressées ns ce domaine?

Mr. Hicks: Three main companies, yes.

Mr. Portelance: That is all.

The Chairman: Mr. Godin?

M. Godin: Question complémentaire à celle M. Portelance. Est-ce que les importations us font du tort?

Maintenant, je pose la question, parce que ndant plusieurs années j'ai été dans le com- rce; je vendais de la broche qui venait llemagne et d'Angleterre; je vendais du u qui venait d'un autre pays d'Europe. Je n accuse et m'en excuse. Mais, est-ce que n ose faire la même chose dans la région étant donné que les clients sont à oximité de votre production?

[*Interprétation*]

M. Hicks: Cela n'est qu'une partie de tout un ensemble. On ne peut prendre les transports et dire que c'est tout simplement le seul péché mortel dans les affaires. Je vous défie de le faire à n'importe quelle industrie.

M. Rose: Nous sommes ici en tant que Comité des transports. C'est la raison pour laquelle nous sommes inquiets ...

M. Hicks: Très bien; je dirai que c'est un des problèmes et un gros problème, mais ce n'est pas le seul.

M. Rose: Vous voudriez nous énoncer les autres?

M. Hicks: Non, je ne suis responsable que de la question des transports.

Le président: Monsieur Portelance?

Mr. Portelance: Mr. Chairman, I would like to ask the witnesses whether in their field there is a great deal of competition in Canada. What are their main competitors and whether or not one of their problems is not precisely the competitive imports from other countries?

M. Hicks: Je regrette, mais je n'ai pas saisi la première partie de votre question.

Mr. Portelance: How many competitors do you have in Canada?

M. Hicks: Pour l'acier de base, nous en avons deux à Hamilton, disons un de base et l'autre pour certains surplus qu'on pourrait avoir, et Sault-Ste-Marie, Ontario.

Mr. Portelance: In other words, there are three companies in Canada that are interested in this field?

M. Hicks: Trois principales compagnies, oui.

M. Portelance: C'est tout.

Le président: Monsieur Godin?

Mr. Godin: A supplementary question to the one just put by Mr. Portelance. Do imports hurt you?

I am asking the question because for several years I was in business, I sold wire which came from England and Germany. I sold nails that came from elsewhere in Europe. I accuse myself of this and I apologize. But should we do the same thing here in the region in view of the fact that customers are close to your production centre?

[*Text*]

Mr. Hicks: You say clients are close to our production centre?

M. Godin: Est-ce que les produits importés d'Europe, soit de l'Angleterre ou de l'Allemagne, nuisent à votre marché? Quel est, dans la région le pourcentage des achats de produits importés?

Mr. Hicks: In the Atlantic region I do not know exactly what the percentage of imports is. However, I have to go back and say that the preponderance of the domestic market is not here. It is in the Montreal Contrecœur area and in this area we stand to suffer a great deal if we were forced out of the market because of imported prices.

The Chairman: We have reached the end of our questioning period and I want to thank you very much, Mr. Hicks.

We have one more brief this morning and then we could remain half an hour later this afternoon because these people have been here all morning. It is up to the Committee to decide whether we are going to hear them this morning or this afternoon.

I invite Moirs Limited to come forward. It smells like chocolate already. Mr. Clarence C. Ivey and Mr. Ronald N. Pugsley from Moirs Limited. Are you going to give us a short briefing of your memoirs?

Mr. Clarence C. Ivey (Vice-President Moirs Limited): Very short, Mr. Chairman.

Mr. Rock: Do we have a copy of their brief?

The Chairman: We have copies in either French or English.

Mr. Ivey: Mr. Chairman, we thank you for the opportunity of appearing before you and explaining our position.

The Chairman: May I have order, please.

Mr. Ivey: Approximately two-thirds of the volume of sales of Moirs Limited are shipped out of the Atlantic region. The sales of our products have always been keenly supported by the public in the Maritimes and it is therefore only outside the Atlantic region that one can reasonably expect an increase in sales. The present freight rate costs are quite high and the recent increase in carload rates and

[*Interpretation*]

M. Hicks: Vous dites que les clients sont situés à proximité de notre centre de production?

Mr. Godin: Do the products which come from Europe, whether from Britain or Germany, hurt your market? What is the percentage of purchases in the region of imported products?

M. Hicks: Dans la région de l'Atlantique, je ne sais pas exactement quel est le pourcentage des importations. Toutefois, il faut que je revienne ici pour vous dire que la plus grande partie du marché domestique ne se trouve pas ici. C'est dans la région de Montréal et de Contrecœur et dans cette région-là nous pourrions beaucoup perdre si nous étions forcés hors du marché en raison du prix des importations.

Le président: Voilà la fin de notre période des questions et je veux vous remercier beaucoup, monsieur Hicks.

Nous avons un autre mémoire ce matin, et ensuite nous pourrions peut-être demeurer une demi-heure plus tard cet après-midi, car ces gens ont été ici toute la matinée. Évidemment, c'est au Comité de décider si nous allons les entendre ce matin ou cet après-midi.

J'invite les représentants de *Moirs Limited* à se présented. Ça sent déjà le chocolat! M. Clarence C. Ivey et M. Ronald N. Pugsley qui représentent *Moirs Limited*. Allez-vous donner un résumé très bref de votre mémoire?

M. Clarence C. Ivey (vice-président—Moirs Limited): Très bref, monsieur le président.

M. Rock: Avons-nous un exemplaire de leur mémoire?

Le président: Nous en avons soit en français, soit en anglais.

M. Ivey: Monsieur le président, nous vous remercions de cette occasion de comparaître devant vous pour vous expliquer notre situation.

Le président: Un peu d'ordre, s'il vous plaît.

M. Ivey: Environ les deux-tiers de la production de Moirs Limitée sont expédiés en dehors de la région de l'Atlantique. Le public des Maritimes a toujours grandement appuyé nos produits et c'est donc en dehors seulement de notre région qu'on pouvait s'attendre à une augmentation du volume de nos ventes. Le tarif-marchandises coûte très cher et la récente augmentation du tarif-marchandises

'exte]

'L rates in 1967 was an additional item of sts.

It is virtually impossible to expect the cus- ner in Central Canada to absorb these creases. To remain competitive the cost of a x of Moirs chocolates to the store on Ste. therine Street or on Yonge Street cannot significantly higher than the prices of com- itive products. Thus any increase in ight rates is extremely difficult to pass ng to the customer and so reduce the portunity to conduct a viable operation.

This increase in freight rates is not only of eat concern to the company but also of ncern to about 700 employees.

f the freeze on noncompetitive carload rail es is not extended beyond March 23, it is e to predict these rates will increase thwith and might well have an influence competitive rates as well. The three year ay was to afford a reasonable time to ena- the government to consider the effects of act in this region and to take steps to plement a new regional transportation poli- Such steps as far as we know have not yet n taken and until they are we would ommend an extension of the March 23 dline on noncompetitive carload rates. ank you, Mr. Chairman.

The Chairman: Mr. Trudel?

Mr. Trudel: We had a brief submitted to us one of your competitors. I was quite con- ned with the problem you mention in your ef. What I would like to find out is, what tem do you adopt in your deliveries? Do u have wholesalers making the distribution various areas in Canada or do you ship on irect door to door basis to your customers?

Mr. Pugsley (Solicitor, Moirs Ltd): I will Mr. Ivey to answer that question.

Mr. Ivey: We use both systems. We deliver ough wholesalers and in the western area were delivering through agents, but we l now that to increase volume of sales in ne areas we are having to go direct. This, course, does increase our costs, but it is essary to increase our business also, so we both systems.

Mr. Trudel: If I understand correctly, roximately 70 per cent of your business is ng shipped out of the area?

[Interprétation]

des chargements incomplets augmente de beaucoup nos frais d'exploitation.

Il est pratiquement impossible de s'attendre à ce que le client du Canada central absorbe ces augmentations. Pour demeured concurrentiel, le coût d'une boîte de chocolats Moirs sur la rue Yonge ou la rue Ste-Catherine ne peut pas être beaucoup plus élevé que celui de leurs concurrents. Par conséquent, il est difficile de passer toute augmentation du tarif-marchandises aux clients et de réduire ainsi la possibilité d'avoir une exploitation viable.

Cette question du tarif-marchandises est non seulement d'une grande préoccupation pour la compagnie, mais elle l'est aussi pour les 700 employés de la compagnie.

Si le gel sur le tarif-marchandises non concurrentiel n'est pas prolongé au-delà du 23 mars, cela pourrait même influencer même les taux concurrentiels.

Le retard de trois ans devait donner au gouvernement l'occasion d'évaluer les influences de la Loi sur la région et de prendre les mesures nécessaires pour élaborer une nouvelle politique de transport régional. Pour autant que nous sachions, ces mesures n'ont pas encore été prises et jusqu'à ce qu'elles le soient, nous recommandons donc le prolongement de la date limite du 23 mars sur les taux non concurrentiels. Je vous remercie, monsieur le président.

Le président: Monsieur Trudel?

M. Trudel: Nous avons reçu un mémoire de la part d'un de nos concurrents. Je me préoccupais du même problème que vous mentionnez dans votre mémoire. Ce que j'aimerais savoir c'est quel est votre système de livraison? Avez-vous des grossistes qui en assurent la distribution dans les diverses régions du Canada ou est-ce que vous expédiez directement de porte en porte à vos clients?

M. Pugsley (Avocat, Moirs Limited): Je demanderais à M. Ivey de répondre à la question.

M. Ivey: Nous employons les deux systèmes. Nous livrons par l'entremise de grossistes et dans l'Ouest, nous avons des agents, mais nous trouvons maintenant que pour augmenter le volume de nos ventes dans certaines régions, il faut absolument que nous allions directement nous-mêmes. Ce qui augmente nos frais. Mais c'est nécessaire pour augmenter notre commerce. Alors, nous employons les deux systèmes.

M. Trudel: Et alors, si j'ai bien compris, environ 70 p. 100 de votre commerce ou de votre production est expédié en dehors de la région?

[*Text*]

Mr. Ivey: That is correct.

Mr. Trudel: We have had a submission regarding a penalty on each carton that is being shipped. Have you considered grouping your shipments on a direct basis, either to a wholesale or door to door delivery? I am thinking of smaller cartons being grouped, for instance, in one larger bundle either on a strapped basis or otherwise.

Mr. Ivey: In terms of delivering to the wholesalers, at the moment we have not considered that. What we have looked at, however, is increasing the number of boxes per carton and reducing the number of cartons that way. It is a question; in some cases some of the jobbers will look on this as trying to sell them too much and they will object to putting too much in the carton, but we are taking that approach to reducing costs.

Mr. Trudel: Would this be possible for you to answer? What percentage of the 70 per cent being shipped to other markets is in carload lots? Would you have any idea of the percentages of carload and LCL shipments?

Mr. Ivey: In terms of shipping out of the province to the rest of Canada it is all by carload to branches in Montreal, Toronto, Winnipeg and Vancouver.

Mr. Trudel: This would all be carload?

Mr. Ivey: Yes.

Mr. Trudel: Therefore, the LCL would be more or less in the immediate area.

Mr. Ivey: Just in the Maritimes, and on the carload we do have agreed rates that we have been able to work with the railroad and these are quite acceptable at the moment. The only thing that we are concerned about is the probability that if certain rates are increased these ultimately will increase also. I think our concern is that they do not increase out of reasonable proportion.

Mr. Trudel: I have one more question Mr. Chairman. Do you use road transportation?

Mr. Ivey: In the Maritimes and for local deliveries in the other provinces from our branches we use it, but that is it. To get our goods to the branches we use full cars.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Nowlan.

Mr. Nowlan: Could you tell us what the average transportation cost is to get your product across the land. I am referring directly

[*Interpretation*]

M. Ivey: C'est exact.

M. Trudel: Nous avons eu un mémoire au sujet d'une punition qui serait imposée pour chaque carton expédié. Est-ce que vous avez considéré le groupement de vos expéditions sur une base directe, soit pour la livraison en gros ou de porte-en-porte? Je songe par exemple aux livraisons ou aux colis qui pourraient être groupés dans un seul «container».

M. Ivey: Pour ce qui est des grossistes, nous n'avons pas étudié cette possibilité. Mais nous avons augmenté le nombre de boîtes dans notre carton et par conséquent, nous pouvons épargner quelques cartons de cette façon. Certains de nos agents estiment que nous essayons de leur en imposer trop, mais nous avons essayé cela pour réduire nos frais.

M. Trudel: Serait-il possible de me dire quel est le pourcentage en wagonnées du 70 p. 100 qui va aux autres marchés? Auriez-vous une idée du pourcentage des chargements complets et incomplets?

M. Ivey: En ce qui concerne les expéditions hors de la province vers le reste du Canada, tout se fait par wagonnées aux filiales de Toronto, Montréal, Winnipeg et Vancouver.

M. Trudel: Toute une wagonnée?

M. Ivey: Oui.

M. Trudel: Donc, les chargements incomplets sont dans les Maritimes?

M. Ivey: Oui, et nous avons des taux convenus dans les Maritimes qu'on a pu obtenir des chemins de fer et qui sont très acceptables pour le moment. La seule chose qui nous préoccupe c'est la probabilité que si on augmente certains taux, en fin de compte ceux-là augmenteront aussi. Maintenant, nous ne voudrions pas qu'ils soient augmentés dans une trop grande mesure.

M. Trudel: Une dernière question, monsieur le président. Est-ce que vous expédiez par camions?

M. Ivey: Dans les Maritimes et pour la livraison locale dans les autres provinces, à partir de nos filiales. Pour livrer nos produits jusqu'à nos filiales, nous expédions toute une wagonnée.

M. Trudel: Merci, monsieur le président.

Le président: Monsieur Nowlan.

M. Nowlan: Quel serait le prix moyen de frais de transport pour transporter vos produits à travers le Canada. Je me réfère direc

Texte]

) the economists intelligence unit study which suggests that 5 per cent is really only a ansportation cost and it separates transportion from distribution costs. I just wondered ther on a distribution or transport basis hat the average cost is if it is possible to ll.

Mr. Ivey: It is something in this neighbourood, but what you will find, Mr. Chairman, that you get into different product categoes. If you are shipping packages that have a rtain margin that is one thing, but if you e into sugar confectionery that retails in nits of 10 cents a bag then the margin on at is lower, and your weight in terms of ollar sales is much higher and so it gets up as high as 8 per cent and higher.

Mr. Nowlan: It is somewhere within the 5 r cent to 8 per cent range?

Mr. Ivey: Right.

The Chairman: Mr. Godin.

M. Godin: Merci, monsieur le président. s réponses données à M. Trudel répondient à mes questions, seulement je voudrais ofiter de l'occasion pour remercier les présentants de la compagnie de m'avoir fait nsmettre leur mémoire en français.

Le président: Merci beaucoup.

The Chairman: Are there any more questns, gentlemen? Mr. Perrault?

Mr. Perrault: Mr. Chairman, I would just e to ask whether world cocoa prices are ducing your margin these days in addition your transportation problems. I understand ere is a bit of a crisis in that area.

Mr. Ivey: They are reducing them considerly at the present time.

The Chairman: Gentlemen, are there any re questions?

Mr. McGrath: I think we should compliint the company on an outstanding brief.

The Chairman: Thank you, very much. We ll adjourn until two o'clock this afternoon.

AFTERNOON SITTING

The Chairman: Gentlemen, I see a quorum. e next brief is from the Port of Halifax

[*Interprétation*]

tement à l'étude de l'«*Economics Intelligent Unit*» qui estime que 5 p. 100 représente les frais de transport seulement et ils font la distinction entre les frais de transport et les frais de distribution. Et alors, quel serait la moyenne du coût si c'était possible de me le dire?

M. Ivey: Ce serait «oui». Environ ce chiffre. Mais, monsieur le président, ce que vous trouverez c'est qu'il y a différentes catégories de produits. Si vous envoyez des colis qui ont une certaine marge, très bien, mais si par exemple, il a des confiseries qui se vendent au détail à 10 cents le sac, la marge de profit est beaucoup moins élevée, et votre présenteur en terme de ventes en dollars est beaucoup plus élevée, et par conséquent, elle monte jusqu'à 8 p. 100 et plus.

M. Nowlan: Et alors, entre 5 et 8 p. 100?

M. Ivey: Oui.

Le président: Monsieur Godin.

Mr. Godin: Thank you, Mr. Chairman. The answers given to Mr. Trudel answered my questions, however, I would like to take this opportunity to thank the representatives of the company for having given me their brief in French.

The Chairman: Thank you very much.

Le président: Y aurait-il d'autres questions, monsieur Perrault?

M. Perrault: Monsieur le président, je voudrais simplement demander si les prix mondiaux du cacao réduisent votre marge, en ce moment, en plus des problèmes de transport? J'ai cru comprendre qu'il y avait une crise dans ce domaine.

M. Ivey: Ils sont réduits à l'heure actuelle, et de beaucoup.

Le président: Messieurs, d'autres questions?

M. McGrath: Je crois que nous devrions féliciter la compagnie d'un mémoire fort intéressant.

Le président: Merci beaucoup, nous allons ajourner jusqu'à deux heures cet après-midi.

SÉANCE DE L'APRÈS-MIDI

Le président: Messieurs, il y a quorum. Le mémoire que nous allons maintenant étudier

[*Text*]

Commission. On my right is Mr. Ray March who is going to make an opening statement.

Mr. R. March (Executive Secretary, Port of Halifax Commission): Mr. Chairman, my opening statement will be quite brief. The Port of Halifax Commission is extremely grateful for this opportunity of presenting its thoughts to the Committee.

As you probably have noticed, our brief is signed by our Chairman, Mr. J. W. E. Mingo. Normally, Mr. Mingo would present it but unfortunately, he is overseas and has asked me to present his apologies to the Committee and to make the presentation myself.

I thought that rather than make a summary of our brief—and incidentally, when I say "our brief" I am referring to a document we put in about 10 or 14 days ago and not the document that is printed in the Minutes of the Proceedings of the Committee of about a year ago—I would simply emphasize one or two of the points that we are trying to make. Really, our brief is a plea to reduce by whatever means is possible rail costs in the Maritimes or in the Atlantic region.

From a strictly commercial point of view, it seems to us that our best chance and maybe our only chance, of attracting the industry that will keep our brains here and provide the economic base to support a growing regional population lies in creating a great flow of port traffic with all its tremendous ancillary ramifications and supporting services and its attractions to industry.

If I might just be permitted for a second to commit a logical aberration, if Nova Scotia had nothing at all except a port, something along the lines of the Port of New York, think what a tremendous asset that would be not only to Nova Scotia but to the whole of the Atlantic region. Perhaps it is an absurd sort of an aberration but certainly our port can be boosted and its traffic can be increased tremendously. The terms of trade are changing in its favour now almost daily. But port traffic will thrive only if costs or rates through the Port of Halifax are less or are at least no more than the rates of competing ports. I am thinking chiefly of the Port of New York and U.S.A. east coast ports.

It is the rail cost or the cost of overland transportation—as far as Halifax is concerned, overland transportation is 95 per cent rail cost—that is the vital element in making the Port of Halifax competitive. We are

[*Interpretation*]

est celui de la *Port of Halifax Commission*. Monsieur Ray March, qui est à ma droite, fera d'abord quelques observations.

M. R. March (Secrétaire exécutif, Port of Halifax Commission): Monsieur le président, mes remarques seront brèves. La *Port of Halifax Commission* est très heureuse de pouvoir exposer son point de vue devant les membres de votre Comité.

Comme vous l'avez sans doute remarqué, notre mémoire porte la signature du président, M. J. W. E. Mingo. Normalement il devrait être ici lui-même pour exposer notre point de vue. Toutefois, il se trouve présentement outre-mer. Il m'a demandé de vous présenter ses excuses et de venir le remplacer.

Plutôt que de résumer notre mémoire, et lorsque je parle de notre mémoire je parle du document que nous vous avons soumis il y a 10 ou 15 jours et non celui qui est imprimé en appendice aux témoignages et procès-verbaux des délibérations de votre Comité, j'ai pensé qu'il serait préférable de souligner un ou deux points différents. En résumé, notre mémoire demande la réduction des tarifs de transport ferroviaire dans les Maritimes ou la région de l'Atlantique.

Du simple point de vue commercial, il nous semble que la meilleure possibilité et peut-être même la seule que nous ayions d'attirer l'industrie qui nous permettra de conserver nos cerveaux ici et de fournir cette base dont nous avons besoin pour subvenir aux besoins d'une population régionale plus importante, réside dans l'augmentation du trafic portuaire et de tous les services connexes.

Permettez-moi une digression. Si la Nouvelle-Écosse ne possédait d'autre atout qu'un port, disons à peu près semblable à celui de New-York, vous verriez déjà les possibilités immenses que cela représenterait non seulement pour cette province mais pour l'ensemble des Maritimes. Peut-être s'agit-il ici d'une suggestion absurde, mais je suis convaincu que notre port peut être amélioré et le trafic accrû de façon substantielle. La situation change presque quotidiennement actuellement en faveur du port. Mais cette situation ne continuera à s'améliorer qu'à la condition que les tarifs, dans le port de Halifax, soient inférieurs ou tout au moins identiques à ce qu'ils sont dans les autres ports auxuels il doit faire concurrence. Je songe principalement ici au port de New York et aux ports américains de la côte atlantique.

Ce sont les tarifs ferroviaires ou les tarifs de transport terrestre, dans le cas du port de Halifax les coûts du transport sur terre sont dans une proportion de 95 p. 100 reliés au domaine du transport ferroviaire, qui sont l'é-

Texte]

lready, extremely competitive on the ocean ector of the whole for the simple reason that ve have, topographically speaking, an excel- ent port which is geographically the closest nternational port to the vast markets of urope.

We do not ask that the railways provide ates that are below cost and we are not nyhow in this brief, asking for a subsidy, lthough there may be mention there of hort-term subsidies, merely motivational— ubsidies that get things started—certainly ot long range. We do ask, however, that the otential of the new transportation technology reduce rail costs in this region be exhaus- vely examined by experts—and they have ot yet been exhaustively examined by ex- erts. The EIU study completely ignored this uestion of reducing rail or transportation costs y means of technological improvements. such a study should be done we ask that e findings and conclusions be made public, at reasonable recommendations towards ducing regional rail costs be implemented d that pending such implementation the nited suspension of the National Transpor- tion Act in the Atlantic region provided by ection 335 of the Act be continued.

Now you may find, if you have been lucky, ntlemen, a very short supplementary brief hich we have just distributed. The object of at brief is simply and solely this: In our ain brief we mentioned technological nprovements; we mentioned unit trains; we entioned integral trains—we mentioned all e new things that are happening. Perhaps me of you may wonder what exactly we ean by unit trains, new technologies and so , and this small supplementary brief which u now have before you is simply three ges from a study called *Highballing to arket in Unit Trains* done by a very famous d very competent firm called A. T. Kearney d Company Inc. I believe their head office in New York. Their study was actually on oving food products from California to the st coast of the U.S.A., which is of no terest to this Committee. However, in the st three pages of their study they give a neral over-view of unit trains, how they erate, the sort of terminals they have, and re the cost savings come from. I thought is might be of interest to the Committee cause this is specifically what we wish to sh. We feel that the solution to the trans- rtation costs problem in the Atlantic

[*Interprétation*]

lement principal qui permettra au port de Halifax de soutenir la concurrence. Nous pouvons très facilement soutenir cette concurrence dans le domaine des tarifs maritimes parce que du point de vue topographique notre port est excellent et qu'il est le port international le plus rapproché des vastes marchés européens.

Nous ne demandons pas que les chemins de fer nous réclament moins que ce qu'il leur en coûte pour nous offrir le service et nous ne demandons pas que les tarifs soient subventionnés, même si nous faisons allusion à certaines subventions à court terme qui pourraient nous permettre de faire le premier pas. Nous demandons toutefois que les nouvelles possibilités techniques soient étudiées à fond par les experts en vue de la réduction éventuelle des tarifs parce que nous ne croyons pas que ces possibilités aient encore été étudiées à fond. L'étude EIU qui a été entreprise a complètement ignoré cet aspect. Si une étude était faite relative aux nouvelles possibilités techniques nous aimerions que les détails de l'étude et ses conclusions soient rendus publiques, que les suggestions raisonnables de réduction des tarifs ferroviaires régionaux soient mises en œuvre et que d'ici la mise en œuvre de ces recommandations, soit maintenue la suspension temporaire de la *Loi nationale sur les Transports* dans la région de l'Atlantique comme le prévoit l'article 335 de la loi.

Si vous êtes quelque peu chanceux, messieurs, vous pourrez retrouver un bref mémoire supplémentaire que nous venons de distribuer. Voici le seul objectif de ce mémoire: dans notre mémoire principal nous parlons de nouvelles techniques, de tout ce qui se produit de nouveau. Certains d'entre vous se demandent peut-être ce que nous voulons dire exactement. Ce mémoire supplémentaire ne comporte que trois pages et est en effet tiré d'une étude intitulée *Highballing to Market to Unit trains* et préparée par la *A. T. Kearney and Company Inc.* Je crois que le siège social de cette entreprise est à New York. L'étude portait sur le transport d'aliments depuis la Californie jusqu'à la côte est des États-Unis, ce qui n'intéresse pas le Comité. Toutefois, les trois premières pages de l'étude établissent ce que sont ces trains, comment ils fonctionnent et d'où proviennent les économies qui en découlent. J'ai pensé que cet aspect pourrait intéresser les membres du Comité car nous désirons appuyer sur cet aspect. Nous croyons que la solution au problème du coût de transport dans les Maritimes, même si l'octroi de subventions devenait nécessaire, réside peut-être dans l'examen qu'on pourrait faire de ces nouvelles métho-

[*Text*]

region, while it may require subsidies—we are not against subsidies—can be solved by examining new ways of doing things—cheaper ways, better ways, employing capital whereas before we employed labour, and things like that.

I do not think I have anything more to say, Mr. Chairman. I will be glad to answer any questions.

The Chairman: Mr. Pringle.

Mr. Pringle: Thank you, Mr. Chairman.

To start with, we have the existing rail route that is here at the present time.

Mr. March: Yes, sir.

Mr. Pringle: Is it your opinion that we may be able to increase the efficiency without too much increase in capital costs over this route which could be adjusted by some type of decrease in railroad routes as a short-term policy, thereby rendering immediate assistance to this area?

Mr. March: It just depends on what you mean, sir, by "without too much capital costs." The philosophy in all these things is that you become capital intensive instead of labour intensive and this provides some of your theory. It is true that you can operate unit trains with conventional equipment and thus obtain some saving. It would be much better though if you had specialized equipment, but specialized equipment costs money. The answer to your question is yes, sir, that we can obtain a lot of cost savings without any large expenditure of capital.

Mr. Pringle: Would this require a change in the existing rail routes or would we have to put in some new lines? Are there any shortcuts that we would have to take in order to bring about the necessary savings that you feel are essential?

Mr. March: No, sir, my remarks are not predicated on any change in the existing rail route—although it is quite possible that further efficiencies could be obtained. One of the questions that the study I have asked for might answer is this: Is it possible to obtain savings by re-routing the rail lines.

Mr. Pringle: So you are really basing your suggestion on the unit train concept?

Mr. March: Yes, sir.

Mr. Pringle: This is a concept that we are now adopting, as you know, in the West

[*Interpretation*]

des, méthodes qui pourraient permettr d'effectuer le travail à meilleur marché e ayant recours aux capitaux plutôt qu'au tra vail ou à la main-d'œuvre comme auparavant

Je ne crois pas avoir quoique ce soit d'autr à ajouter, monsieur le président; je me fera un plaisir de répondre à vos questions.

Le président: M. Pringle.

M. Pringle: Merci, monsieur le présiden Tout d'abord, nous avons le service ferro viaire qui existe présentement.

M. March: Oui, monsieur.

M. Pringle: Êtes-vous d'avis que nous s rons peut-être en mesure d'augmenter l'eff cacité et le rendement sans trop augmenti les investissements, en diminuant le nomb de lignes ferroviaires, et, ainsi, en apporta une aide immédiate à cette région?

M. March: Tout dépend de ce que vo voulez dire lorsque vous dites «sans trop au menter les investissements». Cette philosoph repose sur l'augmentation des capitaux et n la main-d'œuvre. Ces trains peuvent être u lisés avec l'équipement conventionnel et pe mettre certaines épargnes. Mais il serait pr férable d'utiliser un équipement spéciali mais cet équipement coûte de l'argent. votre question, je répondrai oui; je dirais q nous pouvons réaliser des économies sa trop investir.

M. Pringle: Est-ce qu'il faudrait modifi les routes ferroviaires actuelles ou est qu'il faudrait en aménager de nouvelle Comment pourrions-nous en arriver à prov quer ces économies que vous jug essentielles?

M. March: Non, mes remarques signifient pas que nous réclamons la modifi tion des routes actuelles bien qu'il soit pos ble que de telles modifications entraînent avantages supplémentaires. L'étude que réclamée devrait pouvoir répondre à ce question: la modification des lignes ferrovi res entraînerait-elle des économies?

M. Pringle: Donc, votre suggestion se for essentiellement sur ce concept d'unité trains.

M. March: Oui, monsieur.

M. Pringle: C'est le concept que nous ut sons maintenant dans l'Ouest, comme vous

Texte]

vhere we will have unit coal trains running rom...

Mr. March: Yes, sir.

Mr. Pringle: ...the Crowsnest Pass.

Mr. March: But I am talking, of course, in erms of general cargo now and general merhandise, not coal or steel.

Mr. Pringle: Thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: What representations have ou made to the Canadian National or to the ailroads in regard to unit train operation and hat response have you received to date?

Mr. March: My commission has had pwards of seven or eight meetings with top anadian National executives within the last ve or six months. We have found them xtremely willing within their own natural onstraints, to co-operate with us to the maxnum of their ability.

Mr. Skoberg: In the fifth paragraph of your ubmission that we have just received you uggest that

> ...these costs depend very largely on the rates the railway is able and willing to quote...

o you feel that it is very necessary to have a irect quote on the cost of transportation in rder to fulfill your part of the bargain as ich?

Mr. March: I do not understand you, sir.

Mr. Skoberg: I am reading page 2, the fifth aragraph.

Mr. March: Of our main brief?

Mr. Skoberg: This is the one we received day; it is dated February 17, 1969.

Mr. March: On page 2?

Mr. Skoberg: Yes, paragraph 5. You suggest ere that the costs depend very largely on the tes the railway is able and willing to quote.

Mr. March: There is no question about at—this is true. But I personally would not pect to have any control over the rates that ey might quote. Is that your point?

Mr. Skoberg: You are saying that you must ave these quotes. Is this correct?

[*Interprétation*]

savez sans doute, pour le transport du charbon depuis...

M. March: Oui.

M. Pringle: ...Crowsnest Pass.

M. March: Je parle de marchandises en général et non pas de l'acier et du charbon.

M. Pringle: Merci beaucoup.

Le président: M. Skoberg?

M. Skoberg: Quelles représentations avez-vous faites au National-Canadien ou aux compagnies ferroviaires à ce sujet, et quelle a été leur réaction?.

M. March: Nous avons eu sept ou huit réunions avec les membres de la haute administration du National-Canadien au cours des cinq ou six derniers mois. Nous trouvons qu'ils sont vraiment prêts, suivant les circonstances, à collaborer dans la mesure du possible...

M. Skoberg: Vous déclarez, au cinquième paragraphe du mémoire que nous venons de recevoir que

> ...les coûts dépendent en grande partie des tarifs que les chemins de fer peuvent vous offrir...

Croyez-vous qu'il est vraiment nécessaire qu'on vous cite un prix précis pour ce qu'il vous en coûtera?

M. March: Je ne comprends pas ce que vous voulez dire, monsieur.

M. Skoberg: Je viens de citer une partie du cinquième paragraphe de la page 2.

M. March: De notre mémoire principal?

M. Skoberg: De celui que nous avons reçu aujourd'hui et qui porte la date du 17 février 1969.

M. March: A la page 2?

M. Skoberg: Oui, le cinquième paragraphe. Vous y affirmez que vos coûts dépendent en grande partie des tarifs que les compagnies ferroviaires peuvent vous consentir.

M. March: C'est bien cela et c'est très exact. Je ne crois pas que nous puissions nous attendre à obtenir quelque contrôle que ce soit sur les tarifs qu'ils peuvent nous consentir. Est-ce là que vous voulez en venir?

M. Skoberg: Vous dites qu'il vous faut ces chiffres?

[*Text*]

Mr. March: We must have rates which are competitive with the rail costs out of other ports. You know, we have to be competitive with other ports.

Mr. Skoberg: The only point here is that it would suggest that maybe they are not willing to quote.

Mr. March: No, I did not intend to say that. You see, the railways are constrained by their costs and they cannot quote under costs. My suggestion is that we examine together with the railway a means of reducing their costs so that they can quote lower rates to us.

Mr. Skoberg: Mr. March, you state in paragraph 7 of that particular brief at page 2,

> ...that a study be done to establish the significance of the relative level of freight rates...

You suggest that this be done by experts. Sometimes I have many questions about experts, and I am wondering whether or not you mean by that experts with the practical knowledge of the operation of your particular industry.

Mr. March: Well, I most definitely mean that, yes.

Mr. Skoberg: Where would you draw these experts from?

Mr. March: There are numerous ones. There is the MacKenzie Company that has just completed such a study for the British transport docks board; it is an international company. There is the A.T. Kearney & Company, Inc., that wrote "Highballing to Market in Unit Trains" that I gave you as our supplementary brief. There is the person who did our own unit train study. There are quite a number of these fellows in the market now—some good and some bad.

Mr. Skoberg: And they have some practical knowledge of the situation.

Mr. March: Oh, most definitely. They all have railway fellows on their staffs plus all the slide rule Harvard training that turns out these effective briefs.

Mr. Horner: Mr. March, I am going to refer to your major brief submitted a little over a

[*Interpretation*]

M. March: Il nous faut des taux qui soien concurrentiels avec ceux qui ont cours dan d'auters ports. Il nous faut pouvoir mainteni la concurrence avec les autres ports.

M. Skoberg: Vous semblez laisser entendr que les compagnies ferroviaires ne sont pa prêtes à fournir ces chiffres.

M. March: Ce n'est pas ce que je voula dire. Les compagnies de chemins de fer n peuvent nous offrir des tarifs qui ne leu permettraient pas de faire leurs frais. Ce qu nous désirons c'est examiner la situation ave les chemins de fer dans l'espoir de trouver u moyen de réduire leurs coûts et, par le fa même, les tarifs qu'ils nous réclament.

M. Skoberg: Vous déclarez, monsieu March, au septième paragraphe de vot mémoire à la page 2:

> ...qu'une étude devrait être entrepri afin d'établir la signification du nivea relatif des tarifs ferroviaires...

Vous suggérez que cette étude soit entrepri par des spécialistes. Je me pose parfois d questions sur ces spécialistes c'est pourqu je me demande si vous faites allusion ici des spécialistes qui connaîtraient le fonctio nement de votre industrie.

M. March: Exactement c'est ce que je veu dire.

M. Skoberg: Où irez-vous chercher c spécialistes?

M. March: Ils sont nombreux. La comp gnie MacKenzie vient tout juste de termin une étude de ce genre pour le compte de *British Transport Docks Board;* il s'agit d'u entreprise internationale. Il y a la compagn A. T. Kearney qui a préparé l'étude intitul *Highballing to market in Unit Trains* et do je vous ai remis un exemplaire. Il y a personne qui a effectué l'étude que no avons réclamée nous-mêmes. Ces personn sont nombreuses à l'heure actuelle même s faut admettre que certaines sont bonnes d'autres pas.

M. Skoberg: Et ces personnes sont au co rant de la situation.

M. March: Certainement. Ces compagn comptent des employés d'entreprises fer viaires au sein de leur personnel et sont courant de toutes les méthodes utiles qui le permettent de préparer adéquatement leu rapports.

M. Horner: Je me rapporte maintena monsieur March, au mémoire principal q

[*Texte*]

year ago which deals with some specific recommendations regarding Bill C-231. I agree with your statement in regard to Sections 334 and 336, but I would like to ask your opinion of Section 16. Are you knowledgeable of this section, in which a shipper has to plead before the Canadian Transport Commission that it is in the public interest that his rates be lowered.

It says in that statute—and it is pretty hard to explain my case unless you have the Act before you, but I want to get your opinion—that a shipper or a carrier can go before the Commission if the tolls and the conditions:

> ..established are such as to create (i) an unfair disadvantage beyond. .

And I want you to pay particular attention to the word "beyond":

> ...any disadvantage that may be deemed to be inherent in the location or volume of the traffic, the scale of operation connected therewith or the type of traffic or service involved,...

I think this section here may well deal with the Maritimes because you have a particular location, in many cases you have a particular volume and in many cases, particularly in the harbours in the Maritimes, you may well be dealing with a type of traffic which is not found anywhere else. I was wondering if you had looked at this section and considered leaving out the word "beyond". You see, with the word "beyond" in there your location, your volume of traffic and your scale of operation is taken fully into consideration and you cannot apply, but if the word "beyond" were out you could then apply to the Canadian Transport Commission and perhaps get a hearing. Whether they would solve your problem or bring about the solution you want would be up to them but with the word "beyond" in there it would seem very difficult to get a fair hearing before the Canadian Transport Commission. Do you understand the point I am attempting to make?

Mr. March: Yes, I understand it very well indeed. May I just have 20 seconds to confer with my colleague.

I think the answer to your question, sir, is that it might be a good idea to leave the word "beyond" out. What we are really talking about, as Mr. Grice just pointed out to me, is the lack of volume. Would you agree on that?

[*Interprétation*]

vous avez soumis il y a environ un an et qui contient des recommandations bien précises au sujet du bill C-231. Je suis d'accord avec vous au sujet des articles 334 et 336 mais j'aimerais connaître votre opinion au sujet de l'article 16. Connaissez-vous cet article qui oblige l'expéditeur à se présenter devant la Commission canadienne des transports pour prouver que dans l'intérêt du public ce tarif doit être réduit.

A cet article, il est assez difficile de vous expliquer ce qu'il en est à moins d'avoir la Loi en main, mais je veux votre avis; on y dit qu'un transporteur peut se présenter à la Commission si le tarif et les conditions:

> ...établis sont tels qu'ils créent un désavantage injuste au-delà...

Je voudrais que vous partiez une attention toute spéciale au mot «au-delà»:

> ...désavantage qui pourrait être jugé partie inhérente de la location ou du volume de trafic, l'envergure des opérations qui y sont liées, ou encore, le genre de services ou de trafic en cause...

Cet article, à mon avis, peut très bien s'appliquer dans le cas des Maritimes parce que vous avez une situation géographique particulière, vous avez un volume donné dans bien des cas et surtout pour ce qui est des ports des Maritimes, il est possible qu'on ait affaire à un genre de trafic qui ne se trouve pas ailleurs. Donc je me demande si vous avez bien étudié cet article et songé à éliminer l'expression «au-delà». Si on conserve ce mot, votre situation géographique, votre volume et l'envergure de vos opérations sont pris en considération et vous ne pouvez pas faire de demande. Mais en éliminant ce mot vous pouvez l'appliquer, vous présenter à la Commission canadienne des transports et peut-être obtenir une audience. Vous devrez vous en remettre à eux pour trouver une solution à votre problème ou d'adopter la solution que vous souhaitez, en conservant cette expression dans la Loi il est très difficile d'obtenir une audience auprès de la Commission canadienne des transports. Comprenez-vous ce à quoi je veux en venir?

M. March: Oui, je comprends très bien. Mais permettez-moi ici de consulter mon collègue un instant.

Oui, pour répondre à votre question, je crois qu'il serait peut-être bon d'éliminer l'expression «au-delà», mais ce dont nous parlons vraiment, comme M. Grice vient de me le signaler, c'est le manque de volume. N'en convenez-vous pas?

[*Text*]

Mr. Horner: Yes. The volume of traffic is taken into consideration.

Mr. March: We are hoping by means of unit trains, containers attaching extra cargo, and so on, that we can increase the volume quite considerably through the Port of Halifax.

Mr. Horner: I realize this is a very technical point, but I thought perhaps you might like to take a look at that word "beyond". From my own study of this section I think the Maritimes will at least be able to apply to the Canadian Transport Commission and get a far better hearing if the word "beyond" were out of that section, because you have a particular location, a particular amount of volume and a particular type of traffic.

Mr. March: Off the top of my head, sir, I am inclined to agree with you. I think we would like a little time to consider that and we might well make—I thank you for bringing this to our attention—representations to . . .

Mr. Horner: Would you drop the Committee Chairman a reply with respect to that particular study?

Mr. March: Definitely; we will be glad to do that.

Mr. Horner: I realize it is a very technical point. I have no further questions.

Mr. March: It requires a lot of consideration.

Mr. Allmand: Sir, in your brief you put a lot of stress on unit trains, but in my experience unit trains have mainly been used for one commodity, they have been used between one point of origin and one point of destination, and it really only becomes economic if it is done in this way. For example, in British Columbia they are going to use them for coal. The whole train will be taken from one mine right through to the port and back. As you say, the train will never be uncoupled, and so forth and so on. However, in your remarks you seemed to indicate they can be used for general cargo. I do not know how they could be used for general cargo unless you had one major loading point—let us say Montreal—and they all came from one factory because you cannot shut the cars, you have to completely load the whole train at one point and completely unload it at another point, and

[*Interpretation*]

M. Horner: Oui, on tient compte du volume de trafic.

M. March: Nous espérons augmenter le volume de façon considérable vers le port d'Halifax grâce aux trains homonèges, aux cadres et ainsi de suite.

M. Horner: Je me rends compte que c'est là un point technique, mais j'ai pensé que vous voudriez peut-être examiner cette expression «au-delà». D'après mon étude de cet article, je pense que les provinces Maritimes seraient au moins en mesure de se présenter à la Commission canadienne des transports et avoir de meilleures chances de se faire entendre si cette expression est éliminée de l'article, vu la situation géographique, le volume et le genre de trafic.

M. March: A première vue, je suis porté à tomber d'accord avec vous. Je pense que nous aimerions avoir un peu de temps pour étudier la question. Je vous remercie de nous l'avoir signalé. Il se peut que nous fassions des recommandations à . . .

M. Horner: Pourriez-vous communiquer votre réponse au président du Comité à ce égard?

M. March: Bien sûr, nous serons heureux de le faire.

M. Horner: Je me rends compte que c'est une question d'ordre technique. C'est tout ce que j'avais à dire pour l'instant.

M. March: Cette question exige une étude minutieuse.

M. Allmand: Dans votre mémoire, monsieur, vous insistez beaucoup sur les trains homogènes, mais d'après mon expérience, les trains homogènes servent surtout pour une seule marchandise entre un point d'origine et une seule destination, et, en fait, ils ne sont rentables que si on procède de cette façon. Par exemple, en Colombie-Britannique on les utilisera pour le charbon. L'ensemble du train ira de la mine au port directement et les wagons n'en seront jamais détachés.

Dans vos remarques, vous semblez indiquer qu'on peut les utiliser pour les marchandises en général. Je ne vois pas comment vous pourriez vous en servir pour les marchandises en générale à moins d'avoir un seul point principal de chargement, comme Montréal où que les marchandises viennent toutes d'une même usine car il est impossible de mettre les wagons sur une voie d'évitement, il faut les

[*Texte*]

usually there are no stops in between. How can it be used in your context?

Mr. March: It may appear complex but it is really awfully simple. When you say it should be a homogeneous cargo such as coal, grain, iron ore, or whatever it is, all you are saying is that it has to have the same physical properties in order to be handled by a machine.

Mr. Allmand: It also means it is all loaded at the one point.

Mr. March: Exactly. We homogenize the general cargo but we deliver it boxed. It goes in containers and they are all identical. It does not matter whether they are mattresses, TVs, shaving kits or woollen goods, it is all in one big box.

Mr. Allmand: You are suggesting a unit train to carry containers.

Mr. March: I perhaps should have made it clear. A unit train would have to be a container train.

Mr. Allmand: I see.

Mr. March: As they have in Britain.

Mr. Allmand: Both a unit train and a container train, with the containers all being loaded, let us say, at some major point.

Mr. March: At the Halifax terminal and discharged at Montreal, Toronto and Chicago, these railway points.

Mr. Allmand: In order to be economical the complete train has to be unloaded at the same point as well?

Mr. March: Unloaded at the point of destination.

Mr. Allmand: Yes, but at one point of destination, they cannot take the cars off . .

Mr. March: Absolutely. You have to have a container terminal in Chicago where everything is discharged and trucks then take it out and deliver it.

Mr. Allmand: Yes.

Mr. March: This is going to happen, in fact, this year. In July a container shipping outfit is going to bring containers in here, and it is purely a matter of organizing the correct kind

[*Interprétation*]

charger au complet à un endroit et les décharger à un autre sans arrêt entre les deux points. Alors comment pourriez-vous vous en servir dans votre contexte?

M. March: La question paraît peut-être un peu complexe mais au fond elle est très simple. Quand vous dites que la marchandise doit être homogène comme le charbon, les céréales, le minerai de fer, et ainsi de suite tout ce que vous voulez dire effectivement, c'est qu'elle doit avoir les mêmes propriétés physiques de façon à ce qu'une machine puisse la charger ou la décharger.

M. Allmand: Cela signifie aussi que le chargement doit être complété au même endroit.

M. March: Oui, et nous assurons l'homogénéité de la cargaison en la mettant dans des cadres. Les cadres sont tous identiques. Peu importe si vous avez des matelas, des postes de télévision, de lainages, ou autres, la marchandise est mise dans un seul cadre immense.

M. Allmand: En d'autres termes, vous proposez un train homogène pour transporter des cadres.

M. March: Je devrais peut-être élaborer. Le train homogène serait nécessairement un train à cadres.

M. Allmand: Je vois.

M. March: Comme en Grande-Bretagne.

M. Allmand: A la fois un train homogène et un train à cadres, les cadres étant tous chargés au même endroit.

M. March: Oui, au terminus d'Halifax, pour être déchargé à Montréal, Toronto et Chicago.

M. Allmand: Oui, mais pour que ce soit rentable, il faut que le train soit déchargé à un seul point aussi.

M. March: Oui, à la destination.

M. Allmand: Oui, mais à un seul endroit, on ne peut pas détacher les wagons. . .

M. March: C'est exact. Il faudra un terminus pour cadres à Chicago, où on décharge le tout pour les mettre sur des camions qui effectuent la livraison.

M. Allmand: Oui.

M. March: C'est ce qui va se produire effectivement. A compter de juillet, une entreprise de transport apportera des cadres ici, et il s'agira ensuite d'organiser les trains voulus

[*Text*]

of train to carry the stuff to Montreal, Toronto and, we hope, Chicago. It is exactly as you say, sir.

Mr. Allmand: Yes, but I had the impression that the containers that will eventually be brought to Halifax will be on cars, some of which will be picked up in Montreal, some in Toronto, some in...

Mr. March: This is true. They will be discharged at the container terminal. There is nothing to stop you from having a fixed schedule train operating from Halifax to Montreal, Halifax to Montreal, Halifax to Montreal, Halifax to Toronto, Halifax to Toronto, Halifax to Toronto. It is still a unit train.

Mr. Allmand: You have to operate on a fixed schedule?

Mr. March: Yes, a fixed schedule three times a week, let us say.

Mr. Allmand: Does most of the freight out of the Port of Halifax come through Montreal?

Mr. March: Yes, but mind you, what has happened in the past is no indication of what is going to happen in the future. The cards on the table have all been suddenly changed. This is going to be a year-round operation. Our present operations really fall off in the winter.

Mr. Allmand: Are you sort of speculating here or do you have...

Mr. March: No, this is fact, sir.

Mr. Allmand: You already have indications...

Mr. March: It is organized by at least one shipping consortium.

Mr. Allmand: What are the names of the two shipping companies that are now going to use containers? Clarke is one.

Mr. March: It is one consortium, sir, consisting of La Compagnie Maritime Belge, and Bristol-Finney Steamships, which is an English outfit, and Clarke Traffic Services Ltd., of Montreal is the Canadian partner.

Mr. Allmand: Thank you.

Mr. Trudel: Mr. Chairman, in his brief the witness certainly places a great deal of emphasis on the importance of this unit train and rail transportation in general. I would like to ask, getting away from that for a second, what sort of facilities—providing you

[*Interpretation*]

pour pouvoir les transporter à Montréal Toronto, et, nous l'espérons, Chicago. C'est e fait comme vous le dites, monsieur.

M. Allmand: Oui, mais j'avais l'impressio que les cadres qui seront apportés à Halifa seraient à bord de wagons que l'on prendrai en route, certains à Toronto, d'autres à Mon tréal, etc ..

M. March: C'est exact. On les décharger au terminus des cadres. Il n'y a rien qu empêche d'avoir un train qui assure le servic entre Halifax et Montréal, et d'Halifax Toronto. Il s'agit toujours d'un trai homogène.

M. Allmand: Est-ce qu'il faut que ce soit u train prévu à l'horaire?

M. March: Oui, un train à horaire fix mettons trois fois par semaine.

M. Allmand: Est-ce que la plus grande pa tie des marchandises qui partent du po d'Halifax passent par Montréal?

M. March: Oui, mais remarquez bien qu ce qui est arrivé dans le passé n'est aucun ment un indice de ce qui va se produire l'avenir, car tout est remis en cause tout d'u coup. Il s'agira d'une opération à l'année lo gue à l'heure actuelle, le travail dimin énormément en hiver.

M. Allmand: Est-ce que vous faites des pr jections pour l'avenir; ou est-ce que...

M. March: Non, ce sont des faits.

M. Allmand: Vous avez déjà d indications?

M. March: Le service est organisé par moins un consortium de transport.

M. Allmand: Quelles sont les deux entrep ses qui vont se servir de cadres, à part société *Clarke*?

M. March: Il s'agit d'un consortium. Compagnie Maritime Belge, et ensuite *Bristol-Finney Steamships* une entrepr anglaise, et son associé canadien de Montr *Clarke Traffic Services Ltd.*

M. Allmand: Je vous remercie.

M. Trudel: Monsieur le président, dans s mémoire, le témoin insiste beaucoup sur l'i portance du train homogène et du transp ferroviaire en général. Pour nous éloigner peu de ce sujet pour le moment, de quel installations portuaires, à condition d'obte

[*Texte*]

get all the requirements you are asking for as far as port facilities are concerned—do you have to offer at the present time? Are they tailored to that type of operation or will you need to make alterations?

Mr. March: We have here, sir, an artist's impression of our container terminal as it will be when it is completed. This is the view from the south end. It will be ready in June or July of 1970. It cost us $200 to get this artist's impression painted, so we might as well show it to you. This is down in the south end of Halifax. The terminal will take up 55 acres and in here there is a marshalling yard for containers. These are two gantry cranes, each of which can move a 20-ton container in three minutes from vessel to wharf, or vice versa, and in some cases it does the dual operation in six minutes. Here you have a looped unit train. One of the things about unit trains is that you do not cut them up, or do not shunt them around, the train comes in a loop with a stopper out here, the containers will be discharged in the yard and the train will carry on around here, and the import containers will be loaded back to Montreal, Toronto or Chicago. It is a very simple and a very fast operation. Those are the facilities we will have.

Mr. Trudel: If I understand you correctly, this is being built?

Mr. March: It is being built at the present time.

Mr. Trudel: We have heard some representations this morning by people to the effect that they could offer facilities. Naturally they are searching for other ports. I would like to change the line of questioning for a moment. You seem to infer in your presentation, sir, that you are looking for additional traffic by getting concessions from the railroad.

Mr. March: Not concessions from the railroad, no. We are not asking for concessions, we are suggesting that by reason of the new technology and containerization of cargo, and one thing and another, that the railroad will have reduced costs—and the railroad does not argue with us, they agree with us—and therefore on a system of that nature the railroad will be able to quote lower rail rates. However, it is still profitable, it will still make a contribution to variable costs, and by virtue of the fact that they are lower they will attract more volume to the Port of Halifax. Also, by virtue of the fact that there is more volume, the costs will come down again and

[*Interprétation*]

toutes les exigences désirées en ce qui concerne les installations portuaires disposez-vous à l'heure actuelle? Est-ce qu'elles sont déjà aménagées de façon à servir à ce genre d'opération ou est-ce qu'il vous faudra apporter des améliorations?

M. March: Nous avons ici la conception d'un artiste de ce que sera notre terminus de cadres lorsqu'il sera terminé. Voici les installations vues du sud. Elles seront terminées en juin ou juillet 1970. Cette conception d'un artiste nous a coûté $200, alors aussi bien vous la montrer. Voici la partie sud d'Halifax. Le terminus s'étendra sur 55 acres; on y trouve une gare de triage pour les cadres. Il y a deux grues à portique qui peuvent transporter un cadre de 30 tonnes du navire au quai, ou vice-versa, en 3 minutes. Et dans certains cas, elles font les deux manœuvres en 6 minutes. Vous avez ici un train homogène qui fait le tour. Un des avantages des trains homogènes c'est qu'on n'en détache pas les wagons, il n'y a pas de triage à faire. Le train fait le tour, avec un arrêt ici où l'on décharge les cadres et le train continue de faire le tour jusqu'à l'endroit où on chargera les cadres des importations vers Toronto, Montréal ou Chicago. C'est une opération très simple et très rapide. Voilà les aménagements que nous aurons.

M. Trudel: Si je vous ai bien compris, on les construit à l'heure actuelle.

M. March: Oui, on les construit à l'heure actuelle.

M. Trudel: Nous avons entendu des représentations ce matin de la part de gens qui nous ont dit qu'ils pouvaient disposer d'installations. Évidemment, ils réclament d'autres ports. Je voudrais passer à un autre domaine pour un moment. Vous avez semblé dire dans votre présentation que vous cherchiez à augmenter le volume du trafic en obtenant des concessions des chemins de fer.

M. March: Non, pas des concessions des chemins de fer. Nous ne demandons pas de concessions, nous suggérons que, vu la nouvelle technique de transport en cadres, et ainsi de suite, les frais des compagnies de chemins de fer seront réduits, et la compagnie de chemins de fer le reconnaît. Alors avec un système de ce genre, les chemins de fer pourraient offrir des tarifs plus bas, tout en continuant d'être rentables, tout en continuant de contribuer aux coûts variables, et par le fait même que leurs tarifs sont inférieurs, attirer un volume de trafic plus considérable à Halifax. Le volume accrû entraînera une autre

[*Text*]

there will be further economies. It all depends on volume.

Mr. Trudel: Using the same line of reasoning, Mr. March, how much do you estimate your water rates will decrease.

Mr. March: The water rates? This is an almost impossible question to answer, and for this reason. From here on in the shipping company is in the driver's seat. They have a terminal in Antwerp or Rotterdam, there is a terminal at Halifax in some form and, even further, they will control the inland terminals at Chicago, Detroit and Montreal. It is a shipping line salesman who will sell the contract. He will not sell an ocean haul; he will sell from Dusseldorf, Germany, to Oshawa, Canada. Who knows what the...

Mr. Trudel: This is the reason I posed the question. This will be a package deal all the way through. This could be an inland terminal. The rates will be pretty well set but the Port of Halifax, which we are talking about here, will certainly have to have something which is an attraction to possibly be ahead of Montreal or some other ports which we have heard about in other presentations this morning. This will have to enter into it. It is not only the railroad. Your facilities will definitely have to be analyzed.

Mr. March: It is simply a question that by different world routes, whichever system is adopted, there are different costs, and we maintain that because of our geographic position we would have the lowest costs of any port in Canada.

Mr. Trudel: Unless I am wrong, there has been no resistance from the railway people with respect to this unit train because I believe they are looking for this.

Mr. March: None at all, sir. They are extremely helpful and enthusiastic. I would say they are just about as enthusiastic as we are.

Mr. Trudel: You are not saying that they are fighting this?

Mr. March: Not at all; anything but that, sir. We would like to publicly compliment the railway for the help we have had from them.

[*Interpretation*]

réduction des frais et encore d'autres économies. Tout cela dépend du volume.

M. Trudel: En employant le même raisonnement, monsieur March, quelle serait, selon vous, la réduction du tarif de transport par eau?

M. March: Le tarif de transport par eau? Il est presque impossible de vous répondre, monsieur, parce que, à l'avenir, ce seront les entreprises de transport qui prendront les décisions. Elles ont un terminus à Antwerp ou à Rotterdam, et il y a un terminus à Halifax, sous une forme ou une autre, et elles contrôleraient même les terminus de l'intérieur, à Chicago, Détroit et Montréal. C'est le représentant de l'entreprise de transport qui vendra effectivement le contrat. Il ne vendra pas seulement le contrat pour la traversée de l'océan, mais partir de Düsseldorf, en Allemagne, jusqu'à Oshawa au Canada. Qui sait ce que...

M. Trudel: C'est la raison pour laquelle j'ai posé la question. Il s'agira de contrats globaux. Il s'agirait peut-être d'un terminus à l'intérieur du continent. Les tarifs seront à peu près fixes, et le port d'Halifax dont nous parlons devra nécessairement offrir une attraction pour l'emporter sur Montréal ou sur les autres parts dont nous avons entendu parler ce matin. Tout doit entrer en ligne de compte, non seulement les chemins de fer. Il faudra nécessairement analyser vos aménagements portuaires.

M. March: C'est tout simplement que les différentes routes qui existent dans le monde, peu importe le système, entraînent des coûts différents, et nous soutenons qu'en raison de notre situation géographique, nos frais seront les plus bas de tous les ports du Canada.

M. Trudel: Il n'y a pas eu d'objections de la part des chemins de fer pour ce qui est des trains homogènes, car, si je ne me trompe, ils recherchent ce genre de trains.

M. March: Aucune objection. Je dirai même qu'ils sont très serviables et enthousiastes, aussi enthousiastes que nous.

M. Trudel: Ils ne s'y opposent pas?

M. March: Aucunement. Tout au contraire. Nous voulons justement féliciter les chemins de fer pour tout l'apport qu'ils nous ont donné.

[*Texte*]

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Skoberg, do you have a supplementary?

Mr. Skoberg: Mr. March, how many cars a day do you expect will be on that unit train, with your present volume of business at this particular time?

Mr. March: The rates are worked out on a specific volume and if I recall correctly—but do not hold me to this—I think it is 200 containers per train. There are four containers to a flat car, which means 50 cars. Fifty cars per train with four 30-foot boxes or equivalent.

Mr. Skoberg: In what period, Mr. March?

Mr. March: I think it is 40 round trips of the train per year.

Mr. Skoberg: I have a question with respect to the diagram you showed us, which was very excellent. Who in your opinion, and in your port's opinion, do you think should supply the facilities for unloading the containers? Who should supply the trains?

Mr. March: Unloading them?

Mr. Skoberg: Who should supply the trains?

Mr. March: From the point of view of costs it does not really matter who provides the facilities. Somebody has to, and it is all going to end up in the pocket of the shipper anyway. It is a question of who has the capital to put out. These trains cost $1 million apiece. The Port of Halifax Commission certainly does not have that kind of money, and it is doubtful if the shipping lines, that are only going to use part of the train's capacity, will want to finance them. So, I would think the logical entity would be the National Harbours Board, they provide the harbours anyway, but they should provide them on a user cost that would amortize the payment over 20 years, or something like...

Mr. Skoberg: Up to this date, Mr. March, have you had any indication from the National Harbours Board that they would install those trains?

Mr. March: It has been discussed. I am not quite certain if there is an actual undertaking or not, sir. I am honestly not certain, sir, so I cannot give an honest answer to that, but I know it has been discussed.

[*Interprétation*]

M. Trudel: Merci, monsieur le président.

Le président: Monsieur Skoberg, vous avez une question supplémentaire?

M. Skoberg: Monsieur March, combien de wagons se trouveraient à faire partie du train homogène par jour au volume actuel des affaires?

M. March: Les tarifs sont établis d'après le volume, et si je me souviens bien, mais ne m'en tenez pas trop rigueur, je crois qu'il s'agit de 200 cadres par train, soit quatre cadres par wagon plat, et par conséquent, 50 wagons plats par train. 50 wagons par train partant quatre colis de 30 pieds ou leur équivalent.

M. Skoberg: Dans quelle période?

M. March: Je dirais 40 voyages aller et retour par année.

M. Skoberg: Encore une fois, le diagramme que vous nous avez montré tout à l'heure était excellent. A votre avis, et de l'avis de votre port, qui devrait assurer les aménagements pour le déchargement des cadres? Qui devrait assurer le service ferroviaire?

M. March: Pour le déchargement?

M. Skoberg: Qui devrait assurer le service ferroviaire?

M. March: Du point de vue des frais, peu importe qui assure les aménagements. Quelqu'un doit le faire, et, en dernière analyse, c'est l'entrepreneur de transport qui en profitera de toute façon. Tout dépend qui dispose du capital. Les trains coûtent $1 million chacun.

Il est certain que la Commission du port d'Halifax n'a pas ces fonds, il y a lieu de douter que les entreprises de transport qui n'utiliseront qu'une partie de la capacité du train seront prêtes à le financer. Et en fin de compte, j'estime que le choix logique serait le Conseil des Ports nationaux qui assure les installations portuaires de toute façon, mais il devrait réclamer des frais aux utilisateurs de façon à amortir les immobilisations sur une période de 20 ans.

M. Skoberg: Jusqu'à présent, avez-vous eu des indications de la part du Conseil des Ports nationaux à l'effet qu'il assurerait le service ferroviaire?

M. March: Nous en avons discuté mais je ne sais pas s'il y a eu un engagement à cet effet, monsieur. En toute honnêteté, je n'en suis pas sûr. Je ne saurais vous donner une réponse définitive, mais je sais que nous en avons discuté.

[*Text*]

Mr. Skoberg: Could you possibly give that information to the Chairman after you have had an opportunity to discuss it?

Mr. March: Yes, definitely, we would be glad to find out. The question is who is going to provide the trains at our terminals?

Mr. Skoberg: That is right, and whether or not the National Harbours Board has suggested to you that they would be prepared to supply the trains at the port.

Mr. March: Yes, sir.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, I think that Mr. March and his associates are to be commended for their aggressive and vigorous promotion of unit trains and containerization. We are similarly concerned with the situation on the West Coast. I like the way he has developed the idea that we can, in effect, make Canada a land bridge. Perhaps we can even—and I would like his comments on this—compete successfully with the United States and win the battle with the United States. I wonder if Mr. March has read the last annual report of the National Research Council?

Mr. March: Yes, I have.

Mr. Perrault: It states that in the next few years the battle with the United States is either going to be won or lost in competition for the land bridge traffic in North America. I think we should give every support to Halifax in the development of containerization and this unit train concept because it will be of benefit to the entire country. If he has any comments about U.S. competition I would be glad to hear from Mr. March about this, Mr. Chairman.

Mr. March: This is just pure promotion, there is nothing true. Canada has a number of advantages. First of all, the very fact—as far as we are concerned—that we only have one railway line to deal with here. This is an advantage. This is illustrated by the fact that the Penn Central Railway tried to publish a container rate in conjunction with the run from New York to Chicago, I think it was, and this was a very low container rate for a trainload of containers. This is the sort of thing that happens and will always happen in the U.S.A. while they have the present set up.

Four or five other railway lines immediately protested to the Interstate Commerce Commission and therefore the Interstate Commerce Commission had little option but to

[*Interpretation*]

M. Skoberg: Pourriez-vous communiquer c renseignement au président lorsque vous l saurez?

M. March: Oui, certainement. Il nous fer plaisir d'obtenir ce renseignement pour vous La question est de savoir qui va aménager le trains au terminus.

M. Skoberg: Oui, et de savoir si le Consei des ports nationaux nous a laissé entendr qu'il serait prêt à aménager les trains qu désserviront le port.

M. March: Oui, monsieur.

Le président: Monsieur Perrault.

M. Perrault: Je crois qu'il faudrait félicite M. March et ses associés de leur agressivité de leur enthousiasme à l'égard des trair homogènes et des cadres. Mais nous somme aussi préoccupés de la situation sur la cô ouest. J'aime bien la façon dont il a élabo son idée de faire du Canada un pont terrestr Il est possible, et j'aimerais bien avoir s commentaires à ce sujet, que nous puissio concurrencer avec les États-Unis et remport le gros morceau. Je me demande si M. Mar a lu le dernier rapport du Conseil national recherches.

M. March: Oui, monsieur, je l'ai lu.

M. Perrault: On y dit que d'ici quelqu années, la bataille avec les États-Unis en qui concerne le pont terrestre en Amériq du Nord sera gagnée ou perdue.

Je crois que nous devrions appuyer Halif quant à la mise au point du train homogè et du système des cadres car c'est tout le pa qui en bénéficiera. Si vous avez des comme taires au sujet de la concurrence américai j'aimerais bien les connaître, monsieur Mar

M. March: C'est de la promotion pure, sans aucun fondement. Le Canada a bon no bre d'avantages. Tout d'abord, en ce qui nc concerne, le fait que nous n'avons qu'un s chemin de fer est un avantage. La preu c'est que le *Penn Central Railway* aessayé publier un tarif pour cadres à l'égard de s service New York—Chicago, je crois, un ta très bas pour tout un train de cadres. C'est genre de chose qui se produit déjà aux Éta Unis et qui se produira toujours dans le c texte actuel.

Quatre ou cinq lignes de chemins de fer immédiatement protesté auprès de la *Int state Commerce Commission* et la Commiss n'avait pas le choix de retirer ce tarif

[*Texte*]

ithdraw the rate pending investigation. Of ourse, these investigations can go on for two ears, but in the meantime you have bought our unit trains, you have bought your con- iners and everything else and you are going ankrupt. Until the U.S.A. changes this situa- on we have a tremendous advantage. We ave the shortest route in terms of miles. nother enormous advantage we have is that n the CN line from Halifax we can double- ack the containers. This just doubles the oductivity of your rail vehicle right away. his cannot be done on all railway lines. I am most certain it cannot be done on the U.S. nes. We really have a lot more advantages nd I could keep on for some time, but these e the main ones.

Mr. Perrault: Do you think there is any dditional support that the Government of nada should give Halifax to develop this ncept on the east coast?

Mr. March: A unit train is one level of onomy. If you start making specialized ains you call them integral trains and there e further economies there, but this requires te expenditure of millions of dollars in search and development. We feel that if the vernment would get into this by eiher couraging the railways or agencies such as rselves to do it that this would take us on the next level of economy.

Mr. Perrault: With the developing markets Asia, as well, Canada could be just a mag- ficent land. I think your concept is very citing.

The Chairman: Mr. Forrestall.

Mr. Forrestall: I do not think there is much int in pursuing the area that I wanted to t into that evolved around the last question ving to do with what follows this. Mr. arch has explain that quite well. There is ly one other area that I would like to ques- n on. How far into the foreseeable future you believe the facility in the south end of port will sustain the growth that will low the initial operation?

Mr. March: This is anybody's guess. It pends on the number of shipping lines that l. We think that terminal will be enough two shipping lines. We have one and we ve one which is possible. It will handle 00 containers a week in a pinch, which is enormous volume of traffic. Before you uld interest a second terminal I think you uld have to have a substantial share of the S. market. This may have to wait on ICC

[*Interprétation*]

attendant son enquête. Évidemment, les enquêtes peuvent durer deux ans, mais pendant ce temps, vous avez acheté les trains homogènes, vous avez acheté les cadres, et tout le reste, et vous faites faillite. Et jusqu'à ce que les États-Unis changent cette situation, le Canada jouit d'un avantage énorme. Notre route est la plus court en termes de milles. Un autre avantage dont nous jouissons sur les lignes du CN, de Halifax, nous pouvons empiler deux cadres de haut sur les wagons, ce qui double immédiatement la productivité de votre wagon. On ne peut pas le faire sur toutes les lignes. Je suis presque certain qu'on ne peut pas le faire sur les lignes des États-Unis. Nous avons vraiment beaucoup d'avantages. Je pourrais continuer, mais ce sont-là les principaux.

M. Perrault: Croyez-vous que le gouvernement du Canada devrait aider davantage le port de Halifax afin de mettre au point ce système sur la côte est?

M. March: Les trains homogènes sont déjà une économie. Si vous commencez à introduire des trains spéciaux que vous appelez des trains intégraux qui présentent d'autres économies, mais il faudrait d'abord dépenser des millions de dollars pour les recherches et la mise au point. Il nous semble que si le gouvernement fédéral pourrait encourager les chemins de fer ou les organismes comme le nôtre à le faire, nous pourrions atteindre cet autre niveau d'économies.

M. Perrault: Avec les marchés en expansion de l'Asie aussi, le Canada serait un pays magnifique. Je trouve votre idée très stimulante.

Le président: Monsieur Forrestall.

M. Forrestall: Je crois qu'il est inutile d'aborder la question que j'avais à l'esprit et qui touchait ce dont on vient de parler. M. March l'a déjà très bien expliqué. Il n'y a qu'un autre domaine au sujet duquel je voudrais poser des questions. Jusqu'à quel point dans l'avenir croyez-vous que les aménagements de la partie sud-est du port pourront soutenir l'expansion qu'entraînera l'opération initiale?

M. March: Impossible de le deviner. Tout dépend du nombre d'entreprises de transport qui participeront. Nous croyons que le terminus suffira pour deux sociétés de navigation. Nous en avons une d'assurée et une autre qui est une poss.bilité. On peut charger ou décharger six mille cadres par semaine, si on est obligé de le faire, ce qui est un volume de trafic énorme. Mais avant d'ouvrir un deuxième terminus, je crois qu'il faudrait s'assu-

[*Text*]

negotiations, on better equipment, the second level of economy and various other things. I would say that terminal is safe for two years anyway. After that I would not guarantee anything.

Mr. Forrestall: Just one further brief question. This is our glory, it seems to me, in a little more mundane manner. What other shortcomings do you see in your day-to-day work, Mr. March, in connection with the port? For example, you spoke about the gantry cranes. Are there other areas where the port needs some revamping?

Mr. March: I am quite sure there are. I did not come prepared for this sort of question, but there is no doubt we are going to want more facilities and more terminals. We have a need, as Mr. Grice said, for an interim operation until the big terminal is ready. This is a real problem because if we cannot operate the interim things properly we will not get the final service.

Mr. Forrestall: What about cold storage, for example?

Mr. March: I would like to take that question under advisement and perhaps send the Chairman an answer to it.

The Chairman: Mr. Corbin.

Mr. Corbin: Mr. March, you are no doubt aware that the people and the port officials in Saint John have a great number of complaints to make over the fact that the Port of Halifax—this was implied by their line of questioning at the hearing we had in Fredericton—was somewhat favoured by the federal agencies involved and they were, perhaps, particularly directing this to the National Harbours Board about your obtaining the container terminal facilities here in Halifax. Do you have any feelings of unfairness on the part of the National Harbours Board in favouring Halifax over Saint John in this case?

Mr. March: No. It is quite the reverse, sir. I have read Mayor MacDonald's remarks and I put the following two points to you to show why the consortium chose Halifax rather than Saint John. If you are going to New York on a great circle route and you want to drop off at a port and pick up the Canadian trade, there is only one place to do it. That is Halifax. Any other port would be a longer diversion of your route.

[*Interpretation*]

rer une bonne part du marché américain. faudra peut-être attendre pour cela les nég ciations de l'ICC, un meilleur matériel, le de xième niveau d'économies et diverses autr choses. Mais je dirais que ce terminus est b pour encore deux ans. Après cela, je garantie rien.

M. Forrestall: Une autre brève question. me semble que cela fait notre gloire, dans sens un peu plus mondain. Mais quelles s les autres lacunes que vous constatez en qui a trait aux ports? Vous avez parlé, p exemple, des grues à portique, est-ce qu'il aurait d'autres secteurs où on pourrait am liorer le port?

M. March: Je suis sûr qu'il y en a. n'étais pas tout à fait prêt pour répondre une question de ce genre, mais il est certa que nous aurons besoin de plus de termin et de plus d'aménagements portuaires. F exemple, comme l'a dit M. Grice, nous av besoin justement d'une opération intérima jusqu'à ce que le grand terminus soit pr C'est un problème car si nous ne pouvons assurer l'opération intérimaire, nous n'obti drons certainement pas le service final.

M. Forrestall: Qu'en est-il de l'entrepos frigorifique?

M. March: J'aimerais bien pouvoir pren note de votre question et communiquer réponse plus tard au président.

Le président: Monsieur Corbin.

M. Corbin: Monsieur March, vous sa probablement que la population et les aut tés du port de Saint-Jean, se plaignent be coup du fait que le port d'Halifax, du mo c'est ce qui est ressorti des questions posée Fredericton, que le port d'Halifax était pl favorisé par les organismes fédéraux cause, et on pensait peut-être tout particu rement au Conseil des ports nationaux s'est efforcé d'obtenir que les aménageme de terminus pour les cadres soient ici à H fax. Avez-vous des doutes quant à l'impar lité du Conseil des ports nationaux qu favorisé Halifax plutôt que Saint-Jean d ce cas?

M. March: Bien au contraire. J'ai lu remarques du maire MacDonald, et v deux points qui expliquent pourquoi le c sortium a choisi Halifax au dépend de Sa Jean. Si vous allez à New York en empr tant la route polaire et que vous voulez f escale dans un port pour s'aboucher au n ché canadien, il n'y a qu'un seul endroit p arrêter, c'est Halifax. Tout autre port re senterait un détour du trajet.

[Texte]

Secondly—you will have to work this out
ut our consultants have worked it out for
—Halifax is the port in Canada, indeed it is
e port on the East Coast of this continent
here you will get more vessels, round trips
the course of a year and therefore a great-
contribution to net revenue. And so far as
know, these two reasons are why the con-
rtium chose Halifax, and no others.

Mr. Corbin: A supplementary question, Mr.
hairman. In your opinion, would it be good
r Saint John to get some containerizer
cilities, just for the sake of competition?
ould it help or would it hurt?

Mr. March: I am all for competition. It is
e great leveller. The only resource of the
nsumer is competition, and if Saint John
n knock off one or two container services, I
ould be delighted.

Mr. Nesbitt: What other ports in Canada at
e moment, that you know of on the East
ast, and that includes Montreal, Quebec
y, and so on—are there any other ports
th an establishment for container service
unit trains?

Mr. March: Montreal has a container ser-
e operating now.

Mr. Nesbitt: With the new terminal, of
ich we saw the artist's conception a few
ments ago, how will this reduce—I pre-
ne it will reduce—the labour factor in
ding and unloading?

Mr. March: Well, I do not know what you
an, sir, by reducing the labour factor.
ere is no labour factor at all now, because
s is cargo that is not moving at the
ment. This is entirely new cargo. If you
hrase your question to say, if that cargo
ves by the old methods, what will be the
erence in labour content? This system is
ut 20 times more productive. In other
ds, for the same number of men, you will
about 20 times the tonnage.

Mr. Nesbitt: That is what I am getting at.
l the last brief question. This new contain-
method of shipping will, I presume, cut
n damage and theft factors considerably.

Mr. March: Very much so, sir.

[*Interprétation*]

Deuxièmement, vous devrez le calculer vous-même, mais nos conseillers l'ont calculé pour nous. Halifax est le port de la région, en fait, le port de la côte est du continent où l'on trouve plus de navires faisant de longs parcours au cours d'une année et qui par conséquent contribue le plus au revenu net. Autant que je sache, c'est la raison pour laquelle le consortium a choisi Halifax, et pour aucune autre raison.

M. Corbin: Une autre question monsieur le président. A votre avis, est-ce qu'il serait avantageux pour Saint-Jean d'obtenir quelques installations pour la mise en cadre tout simplement pour faire concurrence? Est-ce que cela aiderait ou nuirait?

M. March: Je suis tout à fait en faveur de la concurrence. C'est le grand égalisateur. La seule arme du consommateur est la concurrence et si St-Jean peut obtenir une ou deux installations de mise en cadre, j'en serais très heureux.

M. Nesbitt: Quels autres ports au Canada, en ce moment, que vous connaissez sur la côte est, y compris Montréal, Québec, etc... Québec, etc. . . y en a-t-il d'autres qui soient équipés d'installations de mise en cadre sur les trains homogènes?

M. March: Montréal en a.

M. Nesbitt: Avec le nouveau terminus dont la conception de l'artiste nous a été expliquée il y a peu de temps, comment cela réduirait-il—et je présume qu'il y aurait réduction—la main-d'œuvre réservée au chargement et au déchargement?

M. March: Je ne sais pas ce que vous voulez dire par une réduction de la main-d'œuvre. Il n'en est pas question à l'heure actuelle parce que cette cargaison ne bouge pas et qu'il s'agit d'une cargaison entièrement nouvelle. Si vous voulez reprendre votre question et dire si la cargaison devait bouger d'après les anciennes méthodes, quelle serait la différence sur le plan de la main-d'œuvre? Je dirais que ce système donne un rendement d'environ 20 fois plus grand. Autrement dit, pour le même nombre d'hommes vous aurez un tonnage vingt fois plus grand.

M. Nesbitt: C'est là où je voulais en venir. Ma dernière question sera brève. Ce nouveau moyen d'expédition par cadres, je présume, réduira considérablement les dommages et les vols?

M. March: De beaucoup, en effet.

[*Text*]

Mr. Nowlan: Would it eliminate it, Mr. March?

Mr. March: Oh, it would be a brave man who would say it would eliminate it. I saw some containers in Amsterdam that had an oxyacetylene flame taken to them. Pilferage you always have in every port. Some are worse than others, that is all.

Mr. Nowlan: Looking to the future, Mr. March, has there been any thought given to Halifax being a free port and thus attracting perhaps even more traffic to shoot across the continent?

Mr. March: This was examined about six or seven years ago by the provincial government. It was examined, and the conclusion was that the present federal bonding facilities are so economical, and so flexible, and so good, that a free port would not really provide very much extra, and certainly the advantages would not balance the capital costs necessary. This was the finding, and I would not be surprised if it was right.

Mr. Nowlan: We could not have another Rotterdam on this side.

Mr. March: Well, we could have another Rotterdam. You do not have to acquire a free port to have a Rotterdam. A free port, I think, is a gimmick. We have other gimmicks.

Mr. Nowlan: In Saint John they suggested that there should be a Maritime harbours board. Is that only so that they can...

Mr. March: Well, no, we have always maintained as a matter of policy that there should be a local advisory committee to the Harbours Board down here. The Harbours Board, with all due respect to it, and I have much respect for it, does a wonderful job. But they are up in Ottawa, and they are miles away from our problems. And if somebody responsible to them or in close contact with them lived down here—of course they have their port managers, but it is not quite the same. Certain banks have local advisory committees to the board of directors, and we feel this would be a very good thing to institute.

Mr. Nowlan: And from your description of this unit train—the organization of the shipping lines and because we are the wharf of the Atlantic, this will be the first time we are really going to be the wharf of the Atlantic, is it not?

[*Interpretation*]

M. Nowlan: Est-ce que cela les éliminera?

M. March: Il faudrait être courageux po dire que cela l'éliminerait. J'ai vu à Amste dam quelques cadres qu'on avait ouvert av une torche oxyacétylénique. Il y a des larci dans tous les ports. Quelques-uns sont pir que d'autres, voilà toute la différence.

M. Nowlan: En essayant de prévoir un p monsieur March, est-ce qu'on a songé à Ha fax en tant que port franc et qui attirer peut-être encore plus de trafic à travers continent?

M. March: Cela a été étudié il y a six sept ans par le gouvernement provincial et en est arrivé à la conclusion que les entrep du gouvernement fédéral sont à l'heu actuelle si économiques et si flexibles si efficaces que vraiment un port franc donnerait certainement pas beaucoup p d'avantages, et les avantages n'équivaudrai pas aux frais d'immobilisation nécessair Voici les conclusions et je serais surpris c'était vrai.

M. Nowlan: Nous ne pourrions pas avoir autre Rotterdam de ce côté-ci de l'océan.

M. March: Nous pourrions avoir un au Rotterdam. Il n'est pas nécessaire d'avoir port franc pour créer un autre Rotterdam. fait, le port franc se trouve à être juste truc publicitaire. Il y en aura d'aut d'ailleurs.

M. Nowlan: On nous dit à Saint-Jean q devrait y avoir un Conseil des ports des p vinces Maritimes. Est-ce seulement pour

M. March: Non, nous avons toujours qu'il devrait y avoir un comité du Conseil ports nationaux. Le Conseil des ports na naux pour lequel j'ai beaucoup d'admirat et beaucoup de respect, qui fait un tra merveilleux, mais qui se trouve à Ottawa une distance éloignée de nos problèmes. M si quelqu'un qui relèverait d'eux ou aurait des rapports étroits avec eux, vi ici,—évidemment, ils ont leurs gérants port, mais ce n'est pas tout à fait la m chose. Certaines banques ont des comités-c seil régionaux qui relèvent du conseil d'ad nistration et nous croyons qu'il serait bon dopter ce système.

M. Nowlan: Et d'après votre description train uniforme, l'organisation des lignes navigation et en raison du fait que avons le quai de l'Atlantique. C'est la mière fois que nous serons effectivemen quai de l'Atlantiue, n'est-ce pas?

[*Texte*]

Mr. March: This is the first time the port of Halifax will come into its own as a year-round port. We have always been open the year round, but we have never been a year-round port. Now we are going to be a year-round port with all the advantages that brings, like attracting industry and serving year-round traffic, container stuffing, destuffing, distribution, everything.

Mr. Nowlan: Well, what I was getting at, of course, was the fact of the international shipping companies having the same rates in Montreal and Halifax, and while we always talk about a wharf of the Atlantic, we are not a wharf at all except that the way you describe how this is going to work, perhaps we are going to be able to take advantage of our geography, and that would be for the first time.

Mr. March: No question here. We can do it mathematically. It is now cheaper via Halifax on the new technology than it is via Montreal.

Mr. Nowlan: Has there been any work done by Harbours Board or the federal government or anyone that you know of to try to eliminate the similarity in rates between Montreal and Halifax in other traffic areas?

Mr. March: No. No work has been done on it, no, because it is not really amenable —you would make representations, but these rates are made in London and Antwerp and Rotterdam. They are not amenable to Canadian..

Mr. Nowlan: The situation, you feel, cannot be changed.

Mr. March: In any case I do not think we need to worry about it too much now because the ocean component of the container through rate is going to have to be lower than the rate to Montreal, but I can prove that in figures to.

Mr. Nowlan: You do not think your Manchester and Montreal will start to have the same rate as your shipping in Halifax?

Mr. March: Well, it may end up to be the same thing at Montreal, but that means that the ocean rate to Halifax would have to be less, to take care of the rail hauls.

The Chairman: Well, gentlemen, that completes our enquiries, and I would like to thank you very much.

Mr. March: Thank you.

[*Interprétation*]

M. March: C'est la première fois que le port d'Halifax se trouvera à être ouvert toute l'année. Nous avons toujours été ouvert toute l'année, mais il n'y avait pas de trafic toute l'année. Or, cette année, il pourra y avoir un trafic toute l'année avec tous les avantages que cela comporte, par exemple, pour attirer l'industrie, avoir un trafic à l'année longue, le chargement et le déchargement, etc.

M. Nowlan: Là où je voulais en venir c'est que les compagnies de navigation internationales ont les mêmes taux à Montréal et à Halifax, et alors que nous parlons d'un quai de l'Atlantique, effectivement nous n'avons pas de quai du tout sauf de la façon dont vous en avez décrit le foncitionnement, c'est la première fois que nous pourrons profiter de notre position géographique.

M. March: En fait, nous pouvons le prouver maintenant. Cela coûte moins cher en passant par Halifax avec la technique moderne qu'en passant par Montréal.

M. Nowlan: Est-ce que le Conseil des Ports Nationaux ou un autre organisme fédéral ou quelqu'un que vous connaissez aurait fait une étude pour essayer d'éliminer la similitude des taux entre Halifax, Montréal dans d'autres domaines de transport?

M. March: Aucun travail n'a été fait à ce sujet, non, car—il y aurait toujours moyen de faire des recommandations mais ces taux sont établis à Londres et Antwerp et Rotterdam et non pas en fonction du Canada.

M. Nowlan: C'est une situation qui ne peut être changée?

M. March: De toute façon, je ne crois pas que nous devrions nous en inquiéter à l'heure actuelle car c'est évident que le taux applicable aux containers devra nécessairement y être moins élevé que le taux qui s'applique à Montréal et je puis le prouver avec des chiffres à l'appui.

M. Nowlan: Vous ne croyez pas que Manchester et Montréal auront le même taux qu'à Halifax.

M. March: Et alors, si on fixe les mêmes taux à Montréal, cela signifie que le tarif d'Halifax devra nécessairement être plus bas en raison du transport ferroviaire.

Le président: Cela met fin à nos enquêtes et j'aimerais vous remercier pour votre participation.

M. March: Merci.

[*Text*]

The Chairman: Our next group will be the Town of Mulgrave. Stand. The next one will be the Nova Scotia Textiles Limited. Stand. Garika Limited. Stand.

The next one will be M. W. Graves & Co., Annapolis Valley Canners, Scotian Gold Co-Operative Ltd., and Canada Foods Ltd.

I will introduce Mr. A. E. Calkin, and also Mr. John Egan, Mr. R. J. McGrath, Mr. L. Javorek, and Mr. Vlad Frejtek.

Mr. A. E. Calkin (Annapolis Valley Food Processors): Mr. Chairman, and Gentlemen. On my right is Mr. McGrath, Annapolis Valley Canners, and Mr. Javorek from Canada Foods Ltd. in Kentville. We also have Mr. Fejtek, a manager of another division of Canada Foods, and Mr. Egan of M. W. Graves & Co.

We have a very brief summary of our original submission which, of course, we have not changed, although there have been one or two interim changes, and if I may, sir, I will read this one-and-a-half page summation.

Our brief submits that the food processors of the Annapolis Valley are handicapped because of two basic factors. Number one, the high cost of transportation to markets generally, and in particular the combined production of Valley processors present and potential, far exceeds the requirements of the Atlantic Provinces. Number two, the freight content of the wholesale price of our products is approximately double the national average, which is seven per cent. Our freight content at wholesale level is 14 per cent. Number three, this basic handicap of transportation tends to be offset by a necessity on the part of all of us to pay lower wages and salaries as well as for raw materials which we use. This basic handicap also results in a lower return per dollar of investment in our facilities.

The high cost of transportation to market also results in our comparative freight-cost position with central Canadian processors, and we suggest this has deteriorated in the last 20 years. The food processors of the Valley are also handicapped because of generally inadequate transportation or transport services. Road transport, especially to central Canadian markets, from a standpoint of frequency and flexibility, cannot be compared to that offered in other parts of Canada and afforded to our competition.

[*Interpretation*]

Le président: Le prochain groupe maint nant vient de la ville de Mulgrave. mémoire est réservé. Le prochain nous vie de la *Nova Scotia Textiles Limited.* mémoire est réservé. *Garika Limited,* mémoire est réservé.

Le prochain mémoire, *M. W. Graves & C Annapolis Valley Canners, Scotian Gold C Operative, Ltd.* et *Canada Foods Ltd.*

Je vous présente monsieur A. E. Calk ainsi que messieurs John Egan, R. McGrath, L. Javorek et Vlad Fejtek.

M. A. E. Calkin (Annapolis Valley Fo Processors): Monsieur le président, messieu à ma droite se trouvent monsieur McGra *Annapolis Valley Canners* ainsi que monsie Javorek de *Canada Foods Ltd,* de Kentvil monsieur Fejtek, gérant d'une autre divisi de *Canada Foods,* et monsieur Egan de *M. Graves & Co.* Nous avons un bref résumé notre soumission originale que nous n'avc pas changé, sauf une ou deux modificati provisoires, qui ont pu être apportées et vous le voulez bien, je vais donner lecture ce résumé d'une page et demie.

Notre mémoire souligne que les industr de traitement des denrées alimentaires de vallée d'Annapolis sont handicapés essentiel ment par deux facteurs. Premièrement, coût très élevé du transport vers les déb chés commerciaux et en particulier, la p duction combinée des industries de transf mation de la vallée, actuelle et éventue dépasse de beaucoup la demande des prov ces de l'Atlantique. Deuxièmement, le volu du transport du prix de gros de nos prod est d'environ le double de la moyenne pays qui est de 7 p. 100. Notre volume transport au niveau du gros est de 14 p. 1 Troisièmement, ces difficultés fondamenta en matière de transport sont rétablies pa que nous devons payer des salaires et tra ments inférieurs et payer moins cher matières premières que nous utilisons. handicap entraîne un rendement moins él par dollar investi dans nos installations.

Les frais très élevés du transport vers marchés créent le rapport actuel transp coût avec les industries de transformation centre du Canada et nous croyons que situation a dégénéré depuis les vingt der res années. Les industries de transformat de la vallée sont toutes handicapées en rai des services de transport ou de moyens ina quats en général. Le transport routier, surt celui qui est destiné aux marchés du Can central, ne peut pas, sur le plan de la f quence et de la souplesse, être comparé à qui est offert dans les autres régions Canada et avec lesquels nous concurrençon

Texte]

It is also true that central Canadian food rocessors, due to a much greater concentra- on of population, enjoy to a much greater egree a choice of transportation, resulting in dded competition.

We suggest that ocean service from Halifax world-wide markets is restricted to such a egree that we are consistently handicapped attempting to serve existing customers or exploit new markets. Halifax and Saint ohn—we suggest that even the St. Lawrence osing, so-called—appears to give priority to ntral Canadian freight. In other words, ese two ports are an extension, even though ey close the St. Lawrence, they are to a rge degree only temporary extensions of ntral Canadian ports.

We suggest, finally, in this summation, sir, at while primarily a local problem, it is vertheless true that the lack of all other ads to valley points is a severe handicap for wards of two months during the so-called ad closing. That, sir, is a brief summation our brief.

The Chairman: Thank you very much, sir. r. Nowlan.

Mr. Nowlan: Mr. Chairman, Mr. Calkin, in ur summary and in your brief filed about a ar ago there is no mention at all of the FRA or these LCL rates. Are you affected, ther good or bad, by the working of the aritime Freight Rates Act and the LCL tes?

Mr. Calkin: With respect, Mr. Nowlan, to ur latter point, there is no inclusion of ese LCL rates—they were recently anged—possibly because it does not gener- y affect us to any particular degree. But ther Mr. McGrath or Mr. Javorek I am sure y have something to add to that latter int that you have made, or Mr. Fejtek or r. Egan.

The Chairman: If you have anything to d, would you please come forward?

A Witness: Mr. Nowlan, Mr. Chairman, ese latest increases of LCL rates have fected us to some degree. In fact, it has actically stopped us from shipping LCL thin the Maritimes. Looking to truck alter- tives, but this has also had the effect of

[*Interprétation*]

Il est vrai aussi qu'en raison d'une plus grande concentration démographique les industries de transformation du Canada central bénéficient d'un plus grand choix dans les modes de transports à cause d'une concurrence accrue.

Et nous disons que le service océanographique de Halifax aux marchés mondiaux se trouvent restreints dans une certaine mesure de sorte que nous sommes handicapés lorsque nous essayons de desservir nos clients actuels ou lorsque nous essayons d'exploiter de nouveaux débouchés. Halifax et Saint-Jean, disons-nous, même au cours de la fermeture du Saint-Laurent, de la soi-disant fermeture du Saint-Laurent, semblent donner priorité au transport vers le centre du Canada. En d'autres mots, ces deux ports constituent un prolongement même si le Saint-Laurent est fermé, ils ne sont, dans une grande mesure, que des extensions provisoires des ports du centre du Canada.

Enfin, nous proposons dans ce résumé, monsieur le président, que lorsqu'au départ il s'agissait d'un problème local, il est vrai, néanmoins, que la carence de toutes les autres routes vers les points de la vallée présente un handicap très grand pour une période allant jusqu'à deux mois pendant la fermeture des routes. C'était un bref résumé de votre mémoire.

Le président: Merci beaucoup. Monsieur Nowlan.

M. Nowlan: Monsieur Calkin, dans votre résumé et dans votre mémoire présenté, il y a environ un an, on ne parle pas du tout de la Loi sur le taux de transport dans les provinces Maritimes ou le tarif des chargements incomplets. Est-ce que vous êtes touché en bonne part ou en mauvaise part, par l'application de cette loi ou par ces taux?

M. Calkin: Pour répondre à votre dernière observation, monsieur Nowlan, on n'inclut pas ces taux de moins d'une wagonnée—qui ont été modifiés récemment—probablement parce que cela ne nous touche pas vraiment. Mais monsieur McGrath ou monsieur Javorek pourront y ajouter leurs observations.

Le président: Si vous désirez y ajouter quelques commentaires, je vous en prie.

Un témoin: Monsieur Nowlan, monsieur le président, les dernières augmentations du tarif de chargements incomplets nous ont touchés dans une certaine mesure. En fait, cela nous a presque empêchés d'expédier des marchandises en chargements incomplets dans les

[*Text*]

increasing rates because the ceiling was not there to hold the truckers down. Our costs have gone up, not probably to the full extent of the increase in the LCL rate, because we excluded the shipping by rail altogether, but it has had an effect in our costs, and we feel that we are not getting the benefit from the Maritime Freight Rates Act that we were getting when it was first inaugurated.

Mr. Nowlan: Well, this was part of a two-headed question as to how the Maritime Freight Rates Act—do you get the benefit, what little there is of it?

A Witness: That is right. It is less than 60 or 70 miles to Halifax, but it costs within the range of 15 cents a case additional at least to get to Saint John by truck. And that is the only way to get there now.

The Chairman: Mr. Trudel.

Mr. Trudel: Mr. Chairman, we were led to believe that the port facilities were ample and that they were actually looking for more volume and your brief is certainly indicating the contrary. It is actually a shortage of port facilities or ships that you are concerned with?

Mr. Calkin: Mr. Chairman, it is a shortage of service, not facilities, as far as we are concerned.

The Chairman: Mr. Perrault.

Mr. Perrault: Just a short query, Mr. Chairman. I have noticed over the past year in British Columbia that your products are on sale in the grocery stores out there at very competitive prices indeed. You seem to be competing successfully. I just wonder about the economics of shipping that distance. Apparently you have been successful in doing so. I am talking about the British Columbia market.

Mr. Calkin: Right, sir. I think I know what you are referring to. It is quite true, of course, that our product is being sold in British Columbia but the economics, of course, are quite another thing. It is a matter of need, of surplus production and the obvious necessity of finding markets for it.

Mr. Perrault: In other words, this is a form of internal dumping, is it?

[*Interpretation*]

Maritimes. Cela a aussi augmenté le tarif parce qu'un maximum n'avait pas été fixé et on ne pouvait pas maintenir les camionneurs. Nos frais ont augmenté, peut-être pas autant que l'augmentation du tarif de chargement incomplet parce que nous avons supprimé le transport ferroviaire mais cela a eu des répercussions sur les frais et je suis d'avis que nous ne bénéficions pas vraiment de la Loi sur les taux du transport des marchandises dans les provinces Maritimes, comme lors de sa mise en vigueur.

M. Nowlan: Cela faisait partie d'une double question relative aux avantages que vous retirez de cette Loi.

Un témoin: C'est vrai. Dans l'ensemble c'est à moins de 60 à 70 milles pour Halifax mais il en coûte environ 15 autres cents la boîte pour Saint-Jean en camion. Et c'est le seul moyen pour y aller maintenant, le seu moyen pratique avant que l'on installe le nou veau chemin de fer Pacifique-Canadien, l'an prochain. Merci.

Le président: Monsieur Trudel.

M. Trudel: Monsieur le président, nou avons été porté à croire que les installation portuaires étaient suffisantes et que vou recherchiez un plus grand volume, mais l mémoire nous indique le contraire. Est-ce qu c'est l'insuffisance des installations portuaire ou des navires qui vous préoccupe?

M. Calkin: Monsieur le président, c'est ur insuffisance de services et non pa d'installations.

Le président: Monsieur Perrault.

M. Perrault: Une brève question, monsieu le président, j'ai pu voir au cours de l'a dernier en Colombie-Britannique que vos pr duits sont en vente dans les épiceries à d prix vraiment concurrentiels. Vous sembl réussir à faire la concurrence et je n demande ce qu'il en est de la rentabili d'expédier à une telle distance. Apparem ment, vous semblez réussir, enfin sur le ma ché de la Colombie-Britannique.

M. Calkin: Oui, je sais ce dont vous parl maintenant. Il est vrai, bien entendu, que n produits sont vendus en Colombie-Britan que mais la rentabilité est une tout au question. Il s'agit d'une question de nécess de production excédentaire et la nécess évidente d'y trouver des débouchés.

M. Perrault: En d'autres mots, c'est plus moins un dumping interne.

[*Texte*]

Mr. Calkin: No, sir. It is not below competition.

Mr. Perrault: But the margins are slim on the product. It is a good product, you know. But I just wondered about it as a British Columbian. It is like taking coals to Newcastle. Nothing wrong in that. I think trade is excellent.

I am not criticizing that but I think you have outlined a very valid case, especially with respect to Europe. Are you advocating the construction of a Canadian merchant marine or something along that line to assist you with your problem?

Mr. Calkin: No, sir, we are not advocating federal participation in that sense. We are simply attempting to satisfy this group that we have a complete inadequacy of service generally, and in particular with respect to ocean services to those ports which we could serve. We are not interested in specifics but Mr. Javorek mentioned one or two. This is a real thing. These are not hypothetical cases. Every company represented in this room, all the major food processors of the province have indeed, in a desperate attempt to exploit markets in Scandinavia or on the continent of Europe, virtually trucked them backwards to Montreal at a cost of $1.15-$1.25, before we even get started. So this, of course, is a completely abortive undertaking financially, so we give it up.

Mr. Rock: Could you tell the members of the Committee what are the products shipped out of this area in preference to yours where you have to ship to Montreal? In other words, you said that there are many ships here that you could have put your shipments on and you were denied this. So I would like to know what other products are put on these ships in this harbour. Where are these products coming from?

Mr. Calkin: I could not give a factual answer to this, Mr. Chairman, but presumably the bulk of the cargo contained in the ships we see in the harbour today—and it is filled—are from Central Canadian points. That is not a categorical statement of fact; it is a reasonable presumption. My only contention on behalf of this group is that there is no

[*Interprétation*]

M. Calkin: Non, ce n'est pas une concurrence déloyale.

M. Perrault: Mais les marges de bénéfices sont minces. C'est un excellent produit, vous savez. Je voulais savoir ce qu'il en était en tant que représentant de la Colombie-Britannique. C'est comme le fait d'apporter du charbon à Newcastle. Il n'y a rien de mal à cela. A mon avis, le commerce est une excellente chose.

Je ne critique pas cela, mais je crois que vous avez signalé un cas tout à fait valable pour ce qui est de l'Europe, plus particulièrement. Est-ce que vous proposez la construction d'une marine marchande canadienne ou quelque chose du genre pour vous aider à résoudre votre problème.

M. Calkin: Non, nous ne proposons pas une participation fédérale en ce sens. Nous essayons tout simplement de vous démontrer que nous avons des services insuffisants en général, et en particulier pour ce qui a trait aux services océaniques vers les pors que nous pourrions desservir. Nous ne nous intéressons pas à des cas particuliers mais M. Javored en a mentionné un ou deux. Ces faits sont pris à même la réalité. Ce ne sont pas des cas hypothétiques. Chaque compagnie représentée dans cette enceinte, toutes les principales industries de transformation des aliments de la province, en tentant désespérément d'entrer sur les marchés scandinaves ou de l'Europe continentale devaient transporter ces produits par camions à Montréal au coût de $1.15 à $1.25 avant même de pouvoir commencer. C'est donc une entreprise vouée à l'échec sur le plan financier. Nous y avons donc renoncé.

M. Rock: Pourriez-vous dire aux membres du Comité quels sont les produits qui sont expédiés à partir de cette région de préférence aux vôtres que vous devez expédier à Montréal? Autrement dit, vous avez déclaré qu'il y avait plusieurs navires sur lesquels vous auriez pu déposer vos marchandises, mais on vous a refusé ce service. Alors j'aimerais savoir quel genre de produits constituent la cargaison de ces navires qui se trouvent au port. D'où nous viennent ces produits?

M. Calkin: Je ne pourrais vous donner une réponse exacte, mais j'imagine que l'ensemble de ces cargaisons qui se trouvent dans les navires que nous voyons dans le port viennent du centre du Canada. Ce n'est pas un énoncé catégorique de faits, mais c'est là une conclusion tout à fait logique. La seule conclusion à laquelle j'ai pu en arriver c'est qu'il

[*Text*]

room for Nova Scotia food products on this multitude of ships in this harbour today.

Mr. Rock: I hope, Mr. Chairman, that the representative from the CTC over here is going to take a good note of that and find out the reasons for this.

Mr. Calkin: Could I be more specific? I think it is a fair statement to make, gentlemen, that even if an attempt were made the inquiry would be immediately referred to Montreal for the answer.

The Chairman: Mr. Skoberg, a short question?

Mr. Skoberg: Thank you, Mr. Chairman. Sir, have you any of your own truck lines? Do you own trucks to transport your own produce?

Mr. Calkin: No, sir. As a general statement of fact, the valley processors do not own their own trucks other than for local shipping.

Mr. Skoberg: You have your own trucks just for local shipment. But to transport into Montreal, you do not have your own trucks.

Mr. Calkin: We have to use those lines available that are licensed to truck through the intervening provinces.

Mr. Skoberg: Are you able to find enough refrigerated trucks for that purpose

Mr. Calkin: I may not be the best one qualified to answer that. I would ask Mr. Egan, please.

Mr. Egan (Annapolis Valley Food Processors): We are fairly new in frozen food processing—I think about six years—and we find that we are entirely dependent on turnaround traffic for refrigerated trucks into Montreal and Toronto. There is no terminal here, no trucks sitting here. We have about three lines available to us. We phone for a truck and we may have one in from Toronto unloading tomorrow; if it gets unloaded in time we will get it. It usually takes us from two to five days to get a truck after we request it and there are times when we have had some problems in holding the customer, such as Dominion Stores, to get the product to them in time. So there are not, I would say, sufficient trucks at times. At other times I will not say that the truck companies have not called us to say they had a truck but we might not be able to give them a load. There

[*Interpretation*]

n'y avait pas de place pour les produits alimentaires de la Nouvelle-Écosse sur tous ces navires dans ce port aujourd'hui.

M. Rock: J'espère que le représentant de la CCT pourra tenir compte et essaiera d'en trouver les raisons.

M. Calkin: Est-ce que je pourrais apporter une autre précision? Je pense qu'il est juste de dire, messieurs, que même si on essayait de résoudre le problème, l'enquête serait reportée immédiatement à Montréal pour y trouver une réponse.

Le président: Monsieur Skoberg, une question brève?

M. Skoberg: Merci, monsieur le président. Est-ce que vous avez des camions pour transporter vos produits?

M. Calkin: Non. Les industriels ne sont pas les propriétaires des camions, sauf les camions utilisés pour le transport local.

M. Skoberg: Vous avez vos propres camions pour les livraisons locales mais pas pour le transport vers Montréal.

M. Calkin: Nous devons utiliser les camions qui ont un permis qui les autorise à faire le transport dans les provinces en cause.

M. Skoberg: Est-ce que vous pouvez trouver suffisamment de camions réfrigérés à cette fin?

M. Calkin: Je ne suis pas le mieux qualifié pour répondre à votre question. Je demanderais à monsieur Egan de le faire.

M. Egan (Annapolis Valley Food Processors): Nous sommes de nouveaux arrivés dans le domaine du traitement des produits alimentaires réfrigérés soit depuis environ six ans, et nous comptons essentiellement sur les voyages aller-retour de camions frigorifiques entre Toronto et Montréal. Il n'y a pas de terminus ni de camions. Il y a environ trois lignes qui sont mises à notre disposition. Nous demandons un camion, il y en a peut-être un qui vient de Toronto et qui sera déchargé demain, et s'il est desservi à temps nous pourrons l'avoir. Habituellement, il nous faut entre 2 et 5 jours pour avoir un camion. Et à certains moments, il arrive que nous éprouvions des problèmes avec des clients, tels que Dominion Stores, pour leur apporter les produits à temps. De temps en temps, il n'y a pas suffisamment de camions; parfois aussi, je

[*Texte*]

are other times when we have requested trucks and have not been able to get them.

Mr. Skoberg: Am I correct in saying that you use these carload lots for shipments to the West? Do you use the trucks more for your Maritime Provinces?

Mr. Egan: Yes, on canned products. Speaking for our own company, we use carload rail pretty well for canned goods outside the Maritimes, but trucks within the Maritimes. But for refrigerated products we use trucks entirely.

Mr. Skoberg: You do not ask for any refrigerated rail cars?

Mr. Egan: No, for one basic reason—our plant is not on a rail siding. And number two, we find that to get the equivalent rate by rail carriers they want 100,000 pounds, where the equivalent rate by truck requires about 40,000 pounds.

Mr. Vlad Fejtek: The railroad cars are available only for Canada. If you were to have a shipment of any frozen merchandise you would not be able to get a Canadian railroad car. A refrigerated mechanical reefer is not allowed to cross the Canadian border.

M. Godin: J'ai une question au sujet du commerce; j'espère qu'elle sera recevable. Le témoin nous a déclaré que lorsqu'il expédie en Colombie-Britannique, la marge des profits était plutôt réduite. Est-ce que la même situation se répète en ce qui concerne les expéditions en Angleterre et en Europe ou bien le marché européen rapporte-t-il un peu?

M. Calkin: I am very sorry sir, mine did not come in loud and clear. I did not hear it. I am very sorry.

Le président: Voulez-vous répéter votre question, monsieur Godin?

M. Godin: Oui. Vous avez déclaré que lorsque vous expédiez en Colombie-Britannique, votre marge des profits était plutôt réduite. Est-ce la même situation lorsque vous expédiez soit en Angleterre ou soit en Europe ou bien ce marché européen est-il assez avantageux?

Mr. Calkin: I am sorry. Again I did not get it quite clear but the gentlemen referred to when we ship to British Columbia and made some comparison with respect to... Well,

[*Interprétation*]

dirais pas que les compagnies de camions ne nous ont pas appelés mais il est possible que nous ne puissions pas leur donner de chargement. En d'autres moments, nous avons demandé des camions sans pouvoir en obtenir.

M. Skoberg: Est-il vrai que vous employez les wagonnets pour l'ouest? Utilisez-vous plus les camions dans les provinces Maritimes?

M. Egan: Oui, pour les produits en conserve. En parlant pour notre propre compagnie, nous employons le transport ferroviaire à l'extérieur des Maritimes pour les produits en conserve, mais les camions, dans les provinces maritimes. Mais pour les produits congelés, nous nous servons seulement des camions.

M. Skoberg: Vous ne demandez pas de wagons frigorifiques?

M. Egan: Non, pour une raison. Notre usine n'est pas située près d'une voie ferrée et en fin de compte, quand pour un tarif équivalent, ils exigent 100,000 livres par chemins de fer alors que par camion, on peut jouir du même tarif avec environ 40,000 livres.

M. Vlad Fejtek: On ne trouve des chemins de fer disponibles qu'au Canada. Si vous voulez transporter des produits congelés, vous ne pourriez pas obtenir un wagon frigorifique canadien parce que ces wagons ne peuvent traverser la frontière canadienne.

Mr. Godin: Just a question with regard to commerce. I hope I will not be out of order. The witness stated that when he ships to British Columbia the margin of profit was rather low. Would the same situation repeat itself with regard to shipments to England and to Europe or would the European market be fairly profitable?

M. Calkin: Je m'excuse, monsieur, mais je n'ai pas entendu bien clairement. Je regrette beaucoup.

The Chairman: Would you please repeat your question, Mr. Godin?

Mr. Godin: Yes. You stated that when you were shipping to British Columbia your margin of profit was rather low and reduced. Is the same situation true when you ship either to Britain or to Europe, or is this European market fairly profitable to you?

M. Calkin: Je m'excuse, encore une fois mais je n'avais pas tout à fait saisi, mais des personnes ont parlé du transport vers la Colombie-Britannique et ont fait quelques

[*Text*]

it is very hard to give a simple answer to that. Basically, of course, it is true that both these markets are multi-thousands of miles away and it would be difficult to give a straight answer. The only answer I could give is the fact going back to the basics, that we are utterly dependent upon markets outside the Atlantic Provinces. That is clearly stated in our brief. The only answer I could perhaps give without going into specifics would be that if of necessity we ship to British Columbia or to Liverpool, England, or to Sheffield, England, or to Glasgow, of course the percentage of freight represented in the sales dollar is obviously very high, specifically in the U.K. where we have had three hikes in three consecutive years through the conference line. At the moment I think it is $26-$28 per long ton. Maybe that is not a clear answer.

Mr. Chairman: Mr. Pringle.

Mr. Pringle: Is it correct, then, that if Halifax were able to pursue an expanded containerization program and containerization port this would alleviate your problems in the Annapolis Valley?

Mr. Calkin: Well, sir, we briefly covered this before. There is concern on our part and maybe it is not justified, as to just where we fit into this great scheme of trains zipping back and forth between here and Chicago and Montreal and what have you. Where do we fit? These export markets are just as important to us as they are to Montreal, or to Chicago, or to Detroit, or the Head of the Lakes, and for this reason we hope that when this thing shakes down we will be given reasonable and comparable consideration in relation to our needs. Obviously the news that we heard is good news because one of the many ports we consider of vital importance outward, of course, is London. This is supposed to serve Southampton, which operators and importers in and around London say is just about as good for reasons of less congestion and less port charges. But we want to get into Antwerp and we want to get stuff back. We are just simply suggesting and submitting that we hope we will be given reasonable, comparable consideration with others who may reap the benefit of containerized ports. That is all we ask.

[*Interpretation*]

comparaisons relatives à ... C'est quand même très difficile de vous en donner un exemple. Au fond il est vrai que ces deux marchés sont à des milliers de milles l'un de l'autre et il serait très difficile de vous donner une réponse directe. La seule réponse que je peux vous donner, c'est que si l'on se reporte aux faits de base, nous dépendons absolument des marchés à l'extérieur des provinces de l'Atlantique. Nous l'exprimons clairement dans notre mémoire. La seule réponse que je pourrais vous donner, sans fournir des détails précis, c'est que si de toute nécessité, nous expédions vers la Colombie-Britannique ou vers Liverpool, en Angleterre ou vers Sheffield ou à Glasgow, évidemment le pourcentage du transport représenté par le dollar de vente est naturellement élevé. Au Royaume-Uni, nous avons connu trois augmentations au cours des trois années consécutives en raison de la conférence. Je crois que c'est $26 ou $28 dollars la tonne forte. Ce n'est peut-être pas tout à fait la réponse exacte à votre question.

Le président: Monsieur Pringle.

M. Pringle: Aurais-je raison de dire que si Halifax était capable de poursuivre dans son programme de mise en cadres et que de port de transport par cadres cela allégerait les problèmes que vous rencontrez dans la vallée de l'Annapolis?

M. Calkin: Nous en avons parlé un peu avant. Nous sommes quelque peu préoccupés et peut-être ce n'est pas justifié de savoir exactement où nous sommes situés dans ce vaste réseau des trains qui circulent entre ici et Chicago et Montréal et ce que vous avez. Où sommes-nous placés? Les marchés d'exportation sont aussi importants pour nous qu'ils le sont pour Montréal, Chicago, Détroit ou la tête des Grands Lacs. Pour cette raison nous espérons que lorsque les choses seront organisées, on nous accordera une attention en rapport avec nos besoins. Évidemment la nouvelle que nous avons entendue est une bonne nouvelle car un des ports que nous considérons comme important à l'extérieur c'est Londres. Cela est sensé desservir Southampton dont les exploitants, les importateurs de Londres et de ses environs disent qu'il est aussi bon pour des raisons de déduction des frais d'exportation. Mais nous voulons entrer à Antwerp et nous désirons avoir quelque chose en retour. Nous ne faisons que proposer et souligner que nous espérons recevoir une attention juste comparable à celle que les autres qui pourraient profiter des ports pour le transport par cadres. C'est tout ce que nous demandons.

[*Texte*]

The Chairman: Thank you very much, gentlemen.

Our next presentation will be by the Eastern Job Service. Mr. Sellick?

Mr. L. B. Sellick: Mr. Chairman, I wish to thank you very much for the privilege of appearing here as a private citizen interested in regional planning and transportation. I think it comes at a very good time when we are talking about regional disparity, regional development, growth centres, urban transportation, part development.

Now I am going to present both these maps. The boys are here to hold up various maps to tie in with Brief A-40, I believe it is, in the booklet.

I trust the Committee will take a look at this, realizing that one third of Nova Scotia's population lives within a 15-mile radius of where we are sitting. I realize that relief from high freight rates is the immediate pressing problem but these maps, I am sure, will show you that within the Halifax area there is ample room for improvement in the railway situation that has developed over the years. Will the boys put up map No. 1 now, please, and hold it up high. The conference in Toronto on transportation, I understand, has developed into a regional planning conference; regional planning and transportation are inseparable.

An hon. Member: May I interrupt you for a moment? Would you please tell the Committee what your position is.

Mr. Sellick: I am appearing as a private citizen.

An hon. Member: I know, but what does that mean?

Mr. Sellick: I am a guidance counsellor at the school and here are some of my boys who have been studying industrial development in Dartmouth. I was Secretary of the Rockingham Ratepayers Association for 10 years, but with amalgamation that organization has folded up.

Now, this map shows an all-over picture of the Halifax-Dartmouth area and possibly the first thing that strikes you is that though these two cities are only 500 yards apart by nature, they are 28 miles apart by train. Go around here, Windsor Junction, back through Dartmouth is about 28 miles, so it is a rather unnatural situation. I am going to have to point to the map. The boys have a long pointer there. If I could have that perhaps it would be better.

[*Interprétation*]

Le président: Je vous remercie beaucoup, messieurs. Le prochain mémoire nous sera présenté par la *Eastern Job Survey*. Monsieur Sellick.

M. L. B. Sellick: Monsieur le président, je voudrais vous remercier beaucoup du privilège que vous m'accordez de témoigner devant vous à titre de simple citoyen qui s'intéresse à la planification régionale et au transport. Je crois que ça vient à un excellent moment où nous parlons de la disparité régionale, de l'expansion régionale, de la croissance des centres du transport urbain, de l'aménagement portuaire. Je vais vous présenter des cartes. Les garçons tiendront différentes cartes qui se rattachent à l'Annexe A-40 dans votre mémoire.

Je suis certain que le Comité y jettera un coup d'œil et qu'il se rendra compte que le tiers de la population de la Nouvelle-Écosse demeure dans un rayon de quinze milles de l'endroit où nous sommes. J'imagine qu'on veut éliminer évidemment les frais des transports. Mais dans la région d'Halifax il y a moyen justement d'améliorer la situation du transport ferroviaire qui s'est développée au cours des années. A Toronto, j'ai l'impression que la conférence sur le transport s'est transformée en une conférence de planification régionale.

Une voix: Pourriez-vous nous dire, s'il vous plaît, quelle est votre position?

M. Sellick: Je participe en tant que citoyen.

Une voix: Je sais, mais pouvez-vous préciser?

M. Sellick: Je suis conseiller en orientation et les garçons et filles qui sont ici, sont mes élèves; j'ai été secrétaire de l'Association des contribuables de Rockingham pendant 10 ans, mais je suis ici à titre privé.

Voici la carte qui nous indique la région d'Halifax et Dartmouth dans son ensemble. La première chose qui vous frappe est que même si ces deux villes sont à cinq cents verges l'une de l'autre du point de vue géographique, en fait elles sont à vingt-huit milles l'une de l'autre par train. Pour partir d'ici en passant par Windsor Junction et retourner à Dartmouth, c'est environ vingt-huit milles. La situation n'est donc pas naturelle. Nous avons un très long bâton ici. Si on voulait me le passer, ce serait peut-être préférable. La carte ici vous indique la situation ferroviaire.

[*Text*]

This map shows the railway picture. Here on the Halifax side the terminal is down at the south end. The large marshalling yards are here in Rockingham. There is a total of 85 miles of railroad in the Halifax area. The point out here is Windsor Junction. The single rail line here was built in 1896 to carry mostly freight from this area after the former Narrows bridges washed out with the tide. Those were the days when the Indian chief put his curse on the Narrows Bridge.

The thing that strikes you possibly as you look at the map is the sporadic, unplanned manner in which these lines have grown up, beginning in 1852 when the first line was put through here. Then again in the First World War these tracks were put in and finally we have here a great mass of railroad but it is not efficient. The main yards are there. A businessman in Dartmouth, for example, can look over with his binoculars and see the goods on the track here but he cannot get them until they are hauled about 28 miles around Windsor Junction. The brief is requesting that consideration be given to bridging this 500-yard gap so that the area can plan on a regional basis.

We will have a map No. 2 now, please. This will show what has happened on the Dartmouth side in the last few years. Here we have the new Narrows road bridge coming across from Halifax with a clover-leaf intersection and a whole new system of roads. Here is the greatest development, the industrial part at Burnside; 300 acres here alone ready to be developed; 1,000 acres, the Commodore commercial estates and an almost unlimited amount of land there for industrial expansion.

Of course, this coloured portion here shows what will happen possibly when this land is developed. There will have to be some kind of wharfage developed here, possibly containerization eventually. The Murray Jones report has recommended this as being the best location for eventual containerization.

The third map shows Bedford Basin and this is the Dartmouth side, Bedford Basin with a housing development here for tri-service personnel.

In the last few years this area has grown very rapidly; the population is 60,000 here now. By 1980 it is forecast there will be 100,000 people, all of whom have to come over to south-end Halifax to catch a train involving very expensive taxi fares, traffic problems and parking problems. The question naturally arises, why should we not have a look at least at the railway picture and try to see if we can

[*Interpretation*]

Du côté d'Halifax, le terminus se trouve à l'extrémité sud. Les parcs de triage sont ici à Rockingham. Il y a 85 milles de ligne de chemin de fer dans la région d'Halifax. Ici se trouve *Windsor Junction* à l'extrémité. Une voie unique a été construite en 1896 pour le transport de marchandises de cette région après que l'ancien pont *Narrows* eut été emporté par la marée. C'était lorsque les indiens nous en voulaient.

La façon sporadique où tout cela a été édifié commençant en 1852 lorsqu'on a installé la première ligne de chemin de fer, et ensuite à la première guerre mondiale quand on en a installé une nouvelle. Ensuite, nous avons fini par avoir tout un tas de voies ferrées qui ne sont pas efficaces. Les cours de triage sont là. Un homme d'affaires à Dartmouth peut, avec des longues vues, voir sa marchandise sur la voie ferrée, mais il ne peut pas les avoir avant que le parcours de vingt-huit milles en passant par *Windsor Junction* se fasse. Le mémoire demande qu'on étudie la possibilité d'établir un pont long de cinq cents verges afin que la région puisse dresser des plans régionaux.

Est-ce que je pourrais avoir la carte numéro 2, maintenant? La carte numéro 2 va vous montrer ce qui se produit du côté de Dartmouth depuis un certain nombre d'années. Nous avons maintenant le nouveau pont routier qui traverse de Halifax à Dartmouth avec tout un nouveau réseau de routes ici, un nouvel aménagement résidentiel ici et ensuite un nouveau parc industriel à Burnside, trois cents acres ici, prêtes à être développées *Commodore Estates* et presqu'une région illimitée pour l'expansion industrielle.

Évidemment, cette partie en couleur vous indique ce qui se produira problablement si le développement a lieu. Il sera nécessaire d'aménager des quais dans ce coin-ci, pour les futures installations de transport par cadres. Le rapport *Murray Jones* a recommandé ce emplacement comme étant le meilleur pour les installations de transport par cadres. La troisième carte montre le bassin Bedford et voici l'extérieur du bassin Bedford avec un développement résidentiel pour le personnel des forces armées.

Depuis quelques années cette région a cr très rapidement, la population est de 60,00 âmes à l'heure actuelle; en 1980 on prévoit 100,000 personnes. Toutes doivent se rendre au sud de Halifax afin de prendre le train Cela coûte très cher en taxi, et crée des problèmes de stationnement et de circulation Évidemment, on se pose alors une question pourquoi ne pas examiner cette situation fe

[*Texte*]

vork, in conjunction with regional planning, o develop a more sensible picture.

Map No. 3 will show what happened on the vestern slope of Bedford Basin. There has een a great growth here of residential areas vith very little industry except out here at he industrial part at Lakeside. This is Rock-ngham, Clearview, Armdale—all this area hat has recently been annexed by the City of Halifax. This area here is one I know very vell. The population has grown and the peo-le are used to the Basin we formerly had, nd great sums of money are being expended or over-passes, under-passes and sewage ights. You cannot use Prince's Lodge, for xample. There is a possible tourist develop-ent there because of the railway.

This orange coloured portion shows a tem-orary solution without even building a rail ridge at the Narrows. If Fairview Cove were lled in here, Harbour Drive could possibly ome along here and rejoin the Bedford ighway around here at the Yacht Club. That ight be a temporary solution. But this area growing rapidly from a residential stand-oint, whereas the Dartmouth side is building p rapidly from the industrial standpoint.

Now, we will go back to map No. 1 again.

You may wonder why I am talking regional atters at a Committee of this kind, but nless there is a good look taken at the rail-ay situation our whole road pattern suffers nd the man-hours cost per day for a small ty like Halifax are simply staggering. The arking problem is becoming acute. I have een studying for years now the *Financial ost* surveys of what is happening in our rban centres. It looks as if we are going to ave 18 urban centres in Canada, many of hich will use rail transport as part of the fort to reduce the number of automobiles at are downtown. I think every city realizes at there is a tremendous problem coming o with transport.

This shows the over-all picture on the maps nd, as the brief suggests, this 500-yard gap re be bridged by a rail bridge with, of urse, a lift stand to allow ships to go rough. I have charts here showing the pth of water. This navy island you are ask-g about is right here on this map. The pth out here is very great. The key point in is whole submission is this point here, the arrows Bridge. A bridge there would make possible, also in the future when the popu-ion grows, for some kind of commuter rail

[*Interprétation*]

roviaire pour essayer de déterminer s'il est possible de travailler ensemble avec l'administration régionale afin que ça ait plus de bon sens.

La carte numéro 3 vous indique ce qui s'est produit sur le côté ouest du bassin Bedford. Les quartiers résidentiels se sont beaucoup étendus sans grande industrie, sauf pour la partie industrielle de Lakeside. Voici Rockingham, Clearview, Armdale; toute cette région a été annexée récemment par la ville d'Halifax. Cette région-ci, je la connais très bien. Au fur et à mesure de la croissance de la population, on essaie d'employer le bassin, on dépense de fortes sommes d'argent pour toutes sortes d'aménagements routiers. Par exemple, on ne peut pas utiliser Prince's Lodge, il y a possibilité de tourisme dans ce coin-là en raison de la ligne de chemin de fer.

La partie orange, ici, vous montre une solution temporaire sans même construire un pont de chemin de fer aux *Narrows*. Si *Fairview Cove* était comblé, *Harbour Drive* pourrait peut-être rejoindre la grand-route de Bedford près du *Yacht Club*. Ce serait peut-être une solution temporaire. Mais la région se développe rapidement au point de vue résidentiel alors que du côté de Dartmouth, la croissance est surtout industrielle. Revenons maintenant à la carte numéro 1.

Vous vous demandez peut-être pourquoi je parle de questions régionales durant votre comité. Mais à moins qu'on examine la situation des chemins de fer, tout le programme des routes en souffre actuellement et les heures-hommes perdues au cours d'une journée pour une petite ville comme Halifax est effroyable. Le problème de stationnement est aigu. Depuis des années, j'étudie les études du *Financial Post* en ce qui concerne nos centres urbains. Il semble que nous aurons 18 centres urbains au Canada dont plusieurs emploieront le transport par chemins de fer aux fins de réduire le nombre d'automobiles qui se trouvent au cœur de la ville. Je crois que toutes les villes comprennent qu'il existe un très grand problème en ce qui a trait au transport et au transport urbain aussi.

Voici la carte dans son ensemble. Cet écart de 500 verges devrait donc être éliminé par un pont ferroviaire, un pont levant évidemment, pour permettre aux navires de passer. J'ai des cartes ici qui indiquent la profondeur d'eau. L'Île *Navy* dont vous parlez se trouve justement ici. C'est là le point clé de tout mon mémoire, c'est celui-ci: le pont au-dessus des *Narrows* qui nous permettrait à l'avenir, lorsque la population augmentera, d'avoir une forme de transport urbain entre les deux villes, des parcs industriels ici à Burnside, ici à

[*Text*]

transport between the two cities. The industrial park at Burnside, at Woodside and at Lakeside would all be within reach of this rail.

As a matter of fact, right now the military establishments, the colleges and the shopping centres on both sides of the harbour are very, very close to the real line, and here we are driving big cars with one or two people to a car when we have this possibility. Also on both sides of the harbour the railway goes past the best beaches we have in Nova Scotia, right down to Liverpool on the eastern shore also. We had over a million tourists last year in Nova Scotia but they cannot get to the water here because there are so many railroads in the way.

I sometimes think we should advertise "Nova Scotia by the railroads" rather than "Nova Scotia by the sea" because we do have an excess of misplaced railroads in this area.

For example, the explosion at 1916 blew up the railway station here and following that, during that time, Halifax was carved up like a turkey. Prime residential land was developed here, and the main terminus is down here now, but that is becoming congested and here are 30 miles of virtually unused rail tracks because there is no station there any more. Even less than carload freight no longer uses this route. So we have about 30 miles of track here virtually unused and in the meantime our population, industrial and residential, has grown so that man-hours lost each day are staggering.

The land where I am pointing is largely DND land, federally owned. There is the Bedford magazine, for example. What the brief suggests is that consideration be given to closing this gap and rejoining the main line here by the most efficient route. You will notice here at this point that the single line and the double line are only two miles apart. The scheme would reduce the number of tracks from three to two. We have two tracks here and one here. There will be an economy of distance; it is much shorter from this point to Windsor Junction than appears from this point.

Following the lead of Ottawa and other cities across Canada, is it not the tendency to move railway terminals and marshalling yards outside of the city where they can be given room to expand? We are hoping that the Committee will take a look at this. As a private citizen I cannot expect to ask you to lend very much weight to what I say, but it follows many years of study on this matter in

[*Interpretation*]

Woodside et là-bas à Lakeside qui seraient tous desservis par chemin de fer.

A l'heure actuelle, évidemment, les établissements militaires et collèges, les centres d'achats des deux côtés du port sont tous très proches de la ligne de chemin de fer. Et maintenant, nous conduisons de gros ses automobiles, avec, en moyenne, une ou deux personnes dans chaque automobile alors que nous avons ces possibilités. Les chemins de fer longent les meilleurs plages que nous avons, jusqu'à Liverpool, le long de la côte est. L'an dernier, nous avons eu plus de 1 million de touristes et ils ne sont pas capables de se rendre jusqu'à la mer à cause du nombre de lignes de chemins de fer. Je crois parfois que nous devrions peut-être annoncer la Nouvelle-Écosse sur les chemins de fer au lieu de dire la Nouvelle-Écosse sur mer. Nous avons beaucoup de lignes de chemins de fer en effet, dans cette région.

Par exemple, l'explosion de 1916 a fait sauter la gare ici. Ensuite, pendant ce temps, on a sectionné Halifax tout comme on coupe une dinde et voici maintenant le terminus principal à l'heure actuelle; mais il devient congestionné. Ici, vous avez 30 milles de lignes ferroviaires pratiquement inutilisées car il n'y a plus de gare à cet endroit et même les marchandises de moins d'un wagonnée n'emploient plus ce parcours. Par conséquent, nous avons environ 30 milles de voies ferrées qui sont inutilisées. Entre temps notre population industrielle et résidentielle s'est tellement accrue que le nombre de heures-hommes perdus par jour est effroyable.

Voici un terrain qui appartient en grande partie au ministère de la Défense nationale propriété du gouvernement fédéral. Ce que suggère le mémoire, c'est que nous étudions la possibilité de combler ce vide et que nous rejoignions la ligne principale par la route la plus efficace. Et maintenant, cette voie unique et cette ligne à double voies ne sont qu'à trois milles de distance l'une de l'autre. Nous réduirions les voies de 3 à 2 et par conséquent, il y aurait une épargne de distance à cet endroit-ci à *Windsor Junction*.

Suivant l'exemple d'Ottawa et d'autres villes à travers le Canada, n'est-ce pas la tendance de déplacer les cours de triage et les gares à l'extérieur de la ville où elles peuvent prendre de l'expansion. Nous espérons donc que le comité examinera ce problème et je ne m'attends pas, évidemment, à titre de citoyen que vous accordiez beaucoup de considération à ce que je vous dis, mais c'est après

[*Texte*]

conunction with various groups and it looks s if a solution might be to shorten the routes nd with containerization coming it does not lter the picture here at all.

The trains would simply come through ere, around the shore, putting Dartmouth on he main line. A railway sub-station would be n this area so passengers could go on the rain there and pick up the Dartmouth pasengers here—or all north-end Halifax; all his area. People living in this area would refer to catch a train there across the new arrows road bridge which opens this fall—a our-lane bridge—to avoid the congestion owntown. So it does things; it puts Dartouth on the main line, making accessible to ll these people a railway station, including he federal naval, and air force people and it aves the way for eventual rail commuter ervice in the Halifax Metro area.

I am not asking that this be done all at nce; the plan lends itself to a series of tages. But at least, gentlemen, I am asking ow that you give some thought to setting side the land while the land is still available. hank you very much, Mr. Chairman.

The Chairman: Thank you, very much.

Mr. Rose: Mr. Chairman I would like to ongratulate Mr. Sellick and his students for heir excellent presentation and also for takng the time to come down here. I think it is ery encouraging to see a teacher and a roup of students who are public spirited nough to take the time to prepare all this aterial and to present it to a parliamentary ody in this way. I especially appreciated the se of visual aids, because most people feel at verbal communication is perhaps the ost effective way and I do not agree with em, in spite of the fact that I do considera-le talking at these meetings.

I was going to ask you, sir, if there is any ter-urban public transportation at the oment. You mentioned the congestion over e bridge with auto traffic and one or two eople in the cars. Do you have any public ansportation at the moment?

Mr. Sellick: Bus only. The Halifax trolleys o go over to Dartmouth just across the idge and pick up passengers there, but they e at the mercy of the automobile. It is a vo-lane bridge and one flat tire on one car ums the works.

Mr. Rose: I see. These are trolley buses are ey?

Mr. Sellick: Trolley buses, yes.

[*Interprétation*]

nombreuses années d'étude que ce mémoire vous est présenté. Il me semble donc que ce serait une solution. Une autre route plus courte, surtout en vue du transport par cadres.

Le train ferait le tour du rivage ici et la gare serait de l'autre côté. Les passagers prendraient le train à l'autre bout d'Halifax ou même ici, tout le long de cette région d'Halifax, les gens préféreraient prendre le train de l'autre côté du nouveau pont des *Narrows* qui ouvre cet automne. Ce qui reviendrait à deux choses: mettre Dartmouth sur la ligne principale qui donnerait accès à tous ces gens, le personnel des forces armées, dans la même situation, et cela nous donne la possibilité à la longue d'avoir un système de transport urbain pour toute la région d'Halifax et Dartmouth. Je ne dis pas que tout cela devrait se faire immédiatement, on pourrait mettre ce projet en marche par étape. Mais, au moins, messieurs, je vous demanderais de songer à réserver le terrain alors qu'il est encore disponible. Je vous remercie beaucoup, monsieur le président.

Le président: Merci monsieur Sellick.

M. Rose: Monsieur le président, j'aimerais féliciter monsieur Sellick et ses étudiants pour leur excellente présentation et aussi d'avoir pris le temps de venir nous voir. Je crois que c'est très encourageant de voir un enseignant et un groupe d'étudiants qui témoignent assez d'intérêt pour venir présenter un mémoire à une commission parlementaire. J'ai apprécié surtout l'emploi de cartes car la plupart des gens trouvent évidemment que la parole est plus efficace mais je ne suis pas du même avis. Même si je parle beaucoup lors d'une réunion, monsieur le président.

J'allais vous demander s'il y avait un service de transport interurbain à l'heure actuelle. Vous avez mentionné la congestion qui existe sur le pont etc.; avez-vous un réseau de transport public?

M. Sellick: Par autobus seulement. Les *trolleys* d'Halifax vont à Dartmouth juste l'autre côté du pont pour cueillir les passagers mais il sont à la merci de l'automobie. Il y a deux ponts principaux mais s'il y a une crevaison, tout est bloqué.

M. Rose: Il s'agit de trolley bus?

M. Sellick: Oui, de trolley bus.

[*Text*]

Mr. Rose: We find in some areas that although buses are greatly needed they are not being used. Is that the case here in Halifax?

Mr. Sellick: They are used but both cities, as you know, have very hilly terrain. They do not lend themselves very well to bus traffic that must follow the same route as the cars. Long before the magic number of a half million is reached, these two areas could profit by some form of rail transport, particularly in winter time, because of the facts that I have mentioned—the hilly terrain and the high cost of motoring here. The cost of owning a car and operating it is very great here because of the corrosion and the deterioration.

A survey shows that families in this area spend a higher percentage on the family car than any other ten cities in Canada studied.

It is mostly a matter of competing with the private car. Buses run from this area but not very frequently, perhaps every hour or every half hour, and cannot be relied upon because of the heavy traffic route. For example, yesterday morning on my way around I passed the last car here, almost at Bedford. There is a tremendous clogging up at Arundale and the bridge. Halifax is a tight little island virtually at the mercy of about three outlets.

Mr. Rose: You are suggesting it is a tight little island in the sense that it is congested, rather than that perhaps it consumes a great quantity of spirituous beverages, or something.

Mr. Sellick: Right.

Mr. Rose: It has been said, sir, the factor that determines whether people will use public transportation or their private cars is not necessarily so much population, but how unsatisfactory it is to drive a car; how frustrating and fatiguing. Would you say this is so in this city?

Mr. Sellick: It is very bad for the size of the icty, and the parking problem is becoming very acute. Halifax has raised its meter rates now to 25 cents and hopes to avoid congestion, but every year the situation becomes worse and worse because of the fact that a good deal of traffic is down at the south end. The north end is developing but the rail lines, as you can see, are in the way unless they are used efficiently. Parking areas could be set aside for cars as they have been in the Toronto-Burlington area.

Mr. Rose: Sir, you made a statement that I will paraphrase and I would like you to

[*Interpretation*]

M. Rose: Même si on avait besoin d'auto bus, nous trouvons qu'à certains endroits, o ne les emploie pas, est-ce le cas ici aussi Halifax?

M. Sellick: Oui, mais comme vous le savez les deux villes ont beaucoup de côtes et pa conséquent, les autobus doivent suivre le mêmes routes que les automobiles. Bien avan que l'on atteigne le chiffre magique d'un dem million d'habitants les deux villes pourraien certainement profiter d'une forme de trans port par rails, surtout en hiver en raison de facteurs que j'ai mentionnés. Le coût de l'en tretien et de l'usage des automobiles, est trè élevé à cause de la corrosion.

On a trouvé justement, grâce à une étud que les familles de Halifax dépensent beau coup plus pour une automobile que n'import où au Canada. Par conséquent, il s'agit d'un concurrence, entre les autos et les transport publics. Les autobus partent d'ici mais il n' en a pas tellement. Le service n'est pas telle ment rapide en raison de la circulation. E faisant tout le tour hier matin et j'ai passé l dernier bus à Bedford. Halifax se trouve êtr une petite ville très resserrée et pratiquemen à la merci de trois débouchés.

M. Rose: Vous voulez dire que c'est conge tionné c'est la raison pour laquelle vous dite c'est une petite ville resserrée plutôt que pa suite d'autres facteurs.

M. Sellick: Oui, c'est juste.

M. Rose: Le facteur décisif est de savoir les gens emploieront le transport public. Cel dépend non seulement de la population ma aussi jusqu'à quel point c'est frustrant c conduire sa propre voiture; est-ce le cas i dans cette ville?

M. Sellick: La situation est terrible. Le pr blème du stationnement est aigu. Halifa maintenant a porté le prix de ses compteurs 25 cents en parlant d'éviter la congestio chaque année, la situation empire par sui du fait qu'une bonne part du trafic se trou dans la partie sud. On développe le nord ma en fait, les voies ferrées, comme vous voyez, coupent les débouchés à moins de l employer de façon efficace. Des parcs de st tionnement pourraient être réservés pour l automobiles comme on l'a fait sur la lig Toronto-Burlington.

M. Rose: Vous avez fait une déclaration j'aimerais bien que vous me donniez d'autr

[Texte]

xpand on it if you will. You said rail lines e an inhibitor towards regional planning. e have had a similar situation in the Fraser alley where I come from with the new unit ain lines. What have you got to say about at situation here. You are calling for the moval of rail lines, are you not?

Mr. Sellick: I am calling for the relocation rail lines that grew up like Topsy through e ages. Here are the yards and lines that e in a residential area. Here is an area with s of room to expand for industrial growth, nty of space to locate the rail lines proper- a much shorter route, a more efficient ute that would fit in with future planning. would be economical for the railway to sider it and to convert this roadbed to a hway. This is badly needed for a highway. is Bicentennial Drive has not proven ccessful. It is used to only one-third of its pacity.

Mr. Rose: Perhaps as the region grows it ght have more use because there might be idences out there. I do not want to pursue t because I do not want to take up too ch time.

Mr. Sellick: But I would mention, sir, that loes enter Halifax at the wrong place. That d was put in because of reluctance to tack- the railway on this question. A great deal money was spent and it is used to only -third capacity.

Mr. Rose: Sir, I will not pursue it beyond s point. Are these rail lines all one road?

Mr. Sellick: All one?

Mr. Rose: Yes. Or is it CPR plus CNR?

Mr. Sellick: No. They are all CNR lines hough CPR coming up from the valley s—they are CNR lines.

Mr. Rose: There is no particular advantage rationalizing the rail lines here because y are all served by the one trackage any-y?

Mr. Sellick: Right.

Mr. Rose: Thank you very much.

The Chairman: Mr. Horner.

Mr. Horner: Have you talked it over with city council at all? What is their opinion his planning?

[Interprétation]

détails si vous le voulez bien, à l'effet que les voies ferroviaires empêchent la planification régionale. Nous avons eu une situation analogue dans la vallée de Fraser d'où je viens, moi, avec les lignes de chemins de fer uniques. Qu'est-ce que vous avez à dire à ce sujet ici? Demandez-vous qu'on enlève les voies ferrées?

M. Sellick: Je demande qu'on déplace les voies ferrées qui ont poussé comme des champignons au cours des années. Voici les cours de triage et les voies ferrées qui se trouvent dans une section résidentielle. Voici un autre endroit où il y a beaucoup de place libre où l'on pourrait déplacer les voies ferroviaires qui donnerait une route plus efficace et plus courte grâce à cette planification. Ce serait très économique pour le chemin de fer d'étudier cette possibilité et nous pourrions alors prendre le sommier de la ligne ferroviaire pour en faire une grande route. L'autre grande route la *Bicentennial Drive* n'est pas tellement réussie. On s'en sert à peine au tiers de sa capacité.

M. Rose: Peut-être qu'au fur et à mesure de l'expansion, on s'en servira de plus en plus mais je ne veux pas prendre plus de temps.

M. Sellick: Je pourrais dire, par exemple, que nous entrons à Halifax par le mauvais bout, si vous le voulez. Cette route avait justement été construite, de façon à ne pas chatouiller les principes des compagnies de chemin de fer. Elle a coûté très cher et ce n'est que le tiers de sa capacité qui est employé.

M. Rose: Je ne poursuivrai pas la question plus loin. Est-ce que ces lignes appartiennent à une ou à plusieurs compagnies?

M. Sellick: Une seule compagnie?

M. Rose: Oui. Ou est-ce qu'il s'agit du CP et du CN?

M. Sellick: Non, ce sont toutes des lignes du CN. Le CP qui vient de la vallée s'en sert, mais les lignes appartiennent au CN.

M. Rose: Il n'y a donc aucun avantage à rationaliser, car les deux se servent des mêmes voies ferrées.

M. Sellick: En effet.

M. Rose: Merci beaucoup.

Le président: Monsieur Horner.

M. Horner: Avez-vous discuté de ces questions avec le conseil municipal? Que pense-t-il de cette planification?

[*Text*]

Mr. Sellick: Yes, I am a sort of a metropolitan citizen: I work with Dartmouth, Halifax, and the county and the consensus is, of course, that we have a serious problem on our hands. City council members I have talked to agree there is a serious technical problem if it can not be put in without interfering with the containerized shipping. The depth there is anywhere from 60 to 80 feet and the width of the channel is 300 feet or more and some dredging could be done.

Mr. Horner: It would be a pretty costly bridge, would it?

Mr. Sellick: No, it is only 500 yards long. It has to be a low level bridge because it will handle only about one per cent grade whereas the present road bridge is 160 feet high like the Angus L. MacDonald Bridge. This bridge, by the way, when it opens, is going to alter the picture. This part of the area is going to develop much faster after that bridge is opened in December.

Mr. Horner: What bridge is going to open in December?

Mr. Sellick: A road bridge.

Mr. Horner: A road bridge.

Mr. Sellick: A road bridge here.

Mr. Horner: What do the railroads think of your plan of shuffling their track around? Do they approve of it?

Mr. Sellick: The last word I have on it—when Mr. Regan was member of Parliament he put the question to Mr. Gordon at a Railway Committee meeting and the answer was that when the land was needed for other purposes, certainly the railway would consider it.

Mr. Horner: In many places in western Canada, Saskatoon, Calgary, Edmonton, the railways have moved out of the city. Ottawa is another example, to some extent. They are thinking of moving in Calgary. They could not get along with the city council; that is the big problem there.

Mr. Sellick: Yes.

Mr. Horner: There has been no real getting together of the three bodies concerned here on this bridge?

Mr. Sellick: No. I am sorry to say there has not been very good co-operation among the three local governments concerned.

[*Interpretation*]

M. Sellick: Oui, je suis en quelque sort citoyen de la métropole, car je travaille Dartmouth, Halifax, et dans le comté même Selon l'opinion générale, nous avons un grav problème de circulation. Les membres d conseil municipal auxquels j'ai parlé recon naissent qu'il y a vraiment un problème tech nique sérieux si on ne peut faire escale san nuire au transport par cadres. La profondeu à cet endroit est de 60 à 80 pieds et le chena est large de 300 pieds ou plus, et on pourra y faire du dragage.

M. Horner: Le pont coûterait assez che n'est-ce pas?

M. Sellick: Non, il n'a que 500 verges d longueur. Il faudrait que ce soit un pont à ba niveau, alors que le pont de la route, l'heure actuelle, est haut de 160 pieds, comm le pont Angus L. MacDonald. Lorsqu'o ouvrira le pont en décembre, toute cette pa tie de la région se développera plu rapidement.

M. Horner: Quel pont doit ouvrir e décembre?

M. Sellick: Un viaduc.

M. Horner: Un viaduc?

M. Sellick: Oui.

M. Horner: Qu'est-ce que les chemins d fer pensent du déplacement de leurs lignes d chemin de fer? Est-ce qu'ils l'approuvent?

M. Sellick: M. Regan, lorsqu'il était dépu avait posé la question à M. Gordon, lors d'u séance du comité des chemins de fer, et d avait répondu qu'évidemment, lorsque la ci culation le justifierait, on envisagerait cet possibilité de déplacer les lignes.

M. Horner: A plusieurs endroits, da l'Ouest du Canada, Saskatoon, Calgar Edmonton, on a déplacé les chemins de fer l'extérieur de la ville. Ottawa est un aut exemple, jusqu'à un certain point. On y son à Calgary. C'est le conseil municipal qui n'y pas consenti jusque là. Voilà le problèr là-bas.

M. Sellick: Oui.

M. Horner: Mais, ici, en fait, il n'y a pas vraiment de collaboration entre les trois org nismes intéressés?

M. Sellick: Non, je dois reconnaître qu'il a eu très peu de collaboration entre les tr gouvernements locaux en cause.

[*Texte*]

Mr. Horner: Do you think the federal government should take a little initiative through the C.T.C. in rail line rationalization?

Mr. Sellick: I would like to have a closer look at it. It seems to me that there is an excessive rail line here. There is a much shorter route here and a future location—the time may come when this station may have to be moved out and by planning now and setting aside the land now, this would make a more suitable site for the station. But the commuter idea is something for the future and the area lends itself very well to the possibility.

Mr. Horner: I commend you for the work you have done on it and wish you every success.

Some hon. Members: Hear, hear.

The Chairman: Mr. Carter.

Mr. Carter: Mr. Chairman, my questions were asked by Mr. Horner. Like the other members I would want to congratulate Mr. Sellick on his presentation but as all these areas fall within the municipalities, Halifax, Dartmouth and, I presume, Bedford, my question was, what is the reaction from the various councils involved, but you have already answered that question.

Mr. Sellick: It is such a big problem. Being a Maritimer, I will have to admit that we have developed a little psychology down here called the psychology of being powerless. Individuals do not feel that anything is going to happen. I think we have taken a pessimistic view and it does look like a big proposition,but if this were looked into fully with the shorter distance and the greater planning that could take place I am sure the picture would be altered. At the moment it just staggers the imagination of most people. It seems to be a staggering proposition.

Mr. Carter: Has the problem been discussed with the city planners of these two cities, Dartmouth and Halifax?

Mr. Sellick: Yes, at the present time a transportation study is being undertaken by the regional planning commission. The consultants were very interested in the idea and are including it in their report. So, it will be included there.

Mr. Carter: They share your concern pretty well as to the future use of land in that area and so on?

[*Interprétation*]

M. Horner: Croyez-vous que le gouvernement fédéral devrait prendre une certaine initiative grâce à la Commission canadienne des transports, en matière de rationalisation des lignes de chemins de fer?

M. Sellick: Je voudrais étudier la question de plus près. J'ai l'impression qu'il y a trop de voies ferrées ici. La route de ce côté-ci serait beaucoup plus courte et le moment viendra peut-être où il faudra déplacer la gare. Alors, en réservant le terrain, à l'heure actuelle, l'emplacement serait plus propice pour la gare. Mais l'idée, c'est de prévoir pour l'avenir, et la région se prête très bien à cela.

M. Horner: Je vous félicite du travail que vous avez fait, et je vous souhaite plein succès.

Des voix: Bien dit!

Le président: Monsieur Carter.

M. Carter: Monsieur le président, mes questions ont été posées par M. Horner. Tout comme les autres membres, je voudrais féliciter M. Sellick pour son mémoire. Mais comme toutes ces régions se trouvent à être dans des municipalités, Halifax, Dartmouth et, je présume, Bedford, je voulais savoir quelle est la réaction des divers conseils municipaux en cause, mais vous avez déjà répondu à cette question.

M. Sellick: Le problème est tellement formidable. Dans les Maritimes, je dois avouer que nous avons réussi à développer une psychologie, celle que nous appelons la psychologie des impuissants. On ne croit pas que quelque chose puisse se produire. Je crois que nous avons probablement adopté une attitude pessimiste. En fait, on dirait qu'il s'agit d'un programme d'envergure, mais si on examinait la question de plus près, la question de la réduction du parcours et la question de la planification pour l'avenir, ce serait très sensé, mais à l'heure actuelle, on semble croire que le projet est fantastique, est trop énorme.

M. Carter: Est-ce qu'on a discuté du problème avec les urbanistes de ces deux villes, Dartmouth et Halifax?

M. Sellick: Oui. A l'heure actuelle, il y a une étude qui a été entreprise par la commission régionale d'urbanisme. Les conseillers en urbanisme sont très intéressés par cette idée et ils vont l'inclure dans leur rapport. Alors, on la trouvera là.

M. Carter: Comme vous, ils se préoccupent surtout de l'emploi futur du terrain dans cette région, et ainsi de suite?

[*Text*]

Mr. Sellick: They do.

The Chairman: Mr. Portelance.

Mr. Portelance: I would like to ask Mr. Sellick if this problem was ever brought up with Mr. Stanfield, the representative of this riding?

Mr. Sellick: I have had correspondence with Mr. Stanfield when he was Premier here and since he went to Ottawa. He is very sympathetic toward it although he will not commit himself. He did, however, make a decision on the Narrows road bridge. From a traffic standpoint, purely traffic standpoint, the south end road bridge was preferable but from a planning standpoint, the north end crossing was preferable. The answer is simply this, that the area for development in Halifax-Dartmouth is here. This land is unlimited, right to Canso if necessary, and it is a vast area of land and there is where the growth is going to be.

The Chairman: That completes the questioning, thank you.

The briefs of the Atlantic Bridge Company Limited, Nova Headwear Limited, and Eastern Drug Services will stand.

Gentlemen, this completes our work for this afternoon.

Mr. Skoberg: Mr. Marsh of the Port of Halifax Commission has suggested that he would pick those of us up who would like to see the port facility and the proposed port in the morning at 8:45 o'clock for 45 minutes.

The Chairman: I am sorry, we cannot do it unless we do it now.

Mr. Skoberg: What is wrong with 8:45 o'clock in the morning. We are back here at 9:30 o'clock?

The Chairman: We will be out of our scheduled time again tomorrow morning.

Mr. Skoberg: I thought we were starting at 9:30 o'clock are we not? Forty-five minutes.

Mr. Horner: We will be back.

The Chairman: We have to make it 8:30 o'clock.

Mr. Skoberg: We are going to be back here at 9:30 o'clock. For those that want to go he said he will have a bus up there at the Lord Nelson Hotel and down at the other hotel in the morning.

[*Interpretation*]

M. Sellick: En effet.

Le président: Monsieur Portelance.

M. Portelance: J'aimerais demander à Sellick si le problème a été discuté avec Stanfield, qui représente cette circonscri tion-ci.

M. Sellick: J'ai déjà eu un échange de co respondance avec M. Stanfield quand il ét premier ministre ici, et depuis qu'il est ren à Ottawa. Il est très sympathique à l'id même s'il ne veut pas se compromettre s'engager. Il a toutefois pris une décision ce qui concerne le pont Narrows. Du point vue de la circulation, évidemment, le po aurait été préférable à l'extrémité sud, m du point de vue de la planification, c' mieux à l'extrémité nord. La réponse, c' que la région la mieux située pour le dével pement d'Halifax-Dartmouth se trouve ici. terrain est illimité, d'ici jusqu'à Canso, besoin. C'est un vaste terrain qui serait dis nible, et c'est là que la croissance va produire.

Le président: C'est la fin de notre péric de questions. Je vous remercie.

Nous allons réserver les mémoires de l'*lantic Bridge Company Limited*, de la *No Headwear Limited* et de la *Eastern D Services*.

Alors, Messieurs, ceci met fin à notre t vail pour l'après-midi.

M. Skoberg: M. March, de la Commiss du port d'Halifax, a laissé entendre q prendra avec lui ceux d'entre nous qui d rent visiter le port et le projet du port, heures moins le quart, pendant 45 minutes.

Le président: On ne peut le faire à mo de le faire maintenant.

M. Skoberg: Pourquoi ne pas le faire heures moins le quart, le matin; on serait de retour ici à 9 heures trente?

Le président: Il faut tenir compte du vail que nous avons à faire demain.

M. Skoberg: Je croyais que nous alli commencer à 9 heures trente. Quarante-c minutes.

M. Horner: Nous serons de retour.

Le président: Nous devons nous réunir heures trente.

M. Skoberg: Nous serons de retour à 9 h res trente. Pour ceux qui veulent y aller, aura un autobus au Lord Nelson, qui se dra à l'autre hôtel.

Texte]

The Chairman: Does the Committee agree o that? It is agreed.

Do not forget that we meet here tonight at :00 o'clock. There will be a reception onight at the Lord Nelson Hotel from 6:00 clock to 7:00 o'clock by the hon. T. J. [cKeough, Minister of Trade and Industry. We are sitting tonight at 8:00 o'clock. greed?

Some hon. Members: Agreed.

EVENING SITTING

The Chairman: Ladies and gentlemen, our ext briefing tonight will be by the Halifax oard of Trade, page 621. I have here Mr. eorge Robertson.

Mr. George Robertson (Vice-President, alifax Board of Trade): Mr. Chairman, embers of the Committee, it was very acious of you to permit us to be with you is evening. Our brief was submitted last ar and is in a general form, not dealing too uch with detailed specifics.

The brief primarily sets forth the point that e Halifax Board of Trade is deeply volved in matters of the Maritime Trans- rtation Commission and has accordingly en in support of its representations. The ard in its brief has set forth the serious sparity of income of the population of the aritime Provinces and the effect, because of at, of transportation costs into and out of ese provinces.

Our Board was involved in the organization a shippers' association from Toronto and ontreal into Halifax but our local distribu- n of goods just is not large enough to sup- rt local grouping of the same type. Our nufacturers are supplying a very small pulation very widely scattered, and many our people are not able to be reached by ese manufacturers on terms that are really vourable to the local manufacturers vis-à- those who are shipping from more central nts in Ontario and Quebec.

Despite the fact that we are on the ocean board here in Halifax, we are not in a very vourable position because of that due to the t that the overseas shipping rates to Hali- are basically the same as to Montreal and get no added advantage, in ordinary tances, for cargos in or out of this port for local manufacturing or shipping purposes. would suggest to you that the Port of lifax is one of the most important national

[*Interprétation*]

Le président: Le Comité est-il d'accord? Convenu.

Noubliez pas que nous nous réunissons ce soir à 8 heures. Ce soir, il y aura une réception au Lord Nelson, de 6 à 7. C'est M. T. J. McKeough, ministre du Commerce et de l'Industrie qui nous reçoit.

Nous siégeons ce soir, à 8 heures. D'accord?

Des voix: D'accord.

SÉANCE DU SOIR

Le président: Mesdames, messieurs, nous allons maintenant entendre la présentation du mémoire de la Chambre de commerce d'Halifax, qui se trouve à la page 621. Nous avons ce soir avec nous M. George Robertson.

M. George Robertson (vice-président de la Chambre de commerce d'Halifax): Monsieur le président, messieurs les membres du Comité, nous sommes heureux d'être accueillis par vous ici ce soir. Nous avons présenté notre mémoire l'année dernière. Il traite de la situation d'ensemble, sans s'attacher au détail.

Le mémoire établit essentiellement le fait que la Chambre de commerce d'Halifax a appuyé les instances présentées par la Commission des transports des Maritimes, avec laquelle elle est en rapport étroit. Dans son mémoire, la Chambre de commerce a signalé la disparité grave des revenus de la population des provinces Maritimes, et les effets qu'ont, en conséquence, les coûts du transport vers ces provinces et en provenance de ces provinces.

Notre Chambre de commerce s'est occupée de l'organisation d'une association d'expéditeurs de Toronto et de Montréal vers Halifax, mais la distribution locale de nos denrées n'est pas suffisante pour soutenir des associations locales du même genre. Nos fabricants approvisionnent une très petite population, très éparpillée, et bon nombre de nos gens ne peuvent être atteints par ces fabricants à des conditions qui avantagent vraiment nos fabricants locaux par rapport à ceux qui expédient leurs produits de points plus centraux, soit de l'Ontario et du Québec.

Bien que nous nous trouvions sur le littoral de l'Atlantique, ici, à Halifax, nous ne sommes pas dans une situation très favorable pour autant, car les tarifs d'expédition d'outre-mer, que ce soit vers Halifax ou vers Montréal, sont essentiellement les mêmes. Et nous n'avons pas d'avantage supplémentaire, la plupart du temps, pour les cargaisons qui arrivent dans notre port ou en sortent, aux fins de notre fabrication ou de notre expédi-

[*Text*]

assets of this country but the port of New York probably carries far more Canadian goods in and out than are ever shipped in the course of a year through Halifax.

We are very much concerned about the continuation of the concept of the Maritime Freight Rates Act of 1927. We feel it should be updated and the concept should be developed and enhanced to support transportation problems in this area. The governments of the four provinces have already made detailed representations and we support them.

We suggest primarily that the favourable establishment of freight rates that are geared to these provinces will benefit the other parts of Canada, particularly the Quebec and Ontario manufacturers, in keeping up the purchasing power of this area, and the shipment of our goods to the central Canadian market will do the same. We stress that our producers, both the primary and secondary, work on a smaller volume and longer distances to consumers, a widely scattered local market and, most important, I suggest, the slim profit possibilities because of the lower volume of business available to them.

And when transportation rates alter seriously, our producers just cannot keep up with the variations and survive. So it is very important to us that the preferential freight rate system be maintained. The changes in less-than-carload-lot rates last year greatly increased the cost of goods throughout this province and elsewhere in the Maritime and Atlantic area.

Something has happened too since we put in the brief last year. The development of containerization through the port of Halifax is now becoming a real possibility and the shipment of large cargos through trains specially designed to carry bulk cargos and connecting with world shipping facilities can be developed through Halifax if this opportunity is seized, but we need a great deal of support in transportation to make this possible.

The railways I suggest are not geared to this at the moment. They need a great deal of improvement in roadbeds and facilities. We have only single tracks through a great part of the Maritimes and unless there is a lot done to improve the railway system, we will

[*Interpretation*]

tion régionales. Je dirais que le port d'Halifa est l'un des avantages nationaux les pl importants de ce pays. Malgré tout, le port New-York reçoit et expédie beaucoup plus marchandises canadiennes au cours d'u année qu'on n'en voit ici, à Halifax.

Nous tenons énormément au maintien d principes de la Loi de 1927 sur le transpo des marchandises dans les Maritimes. E devrait être mise à jour, et les principes q l'inspirent devraient être étendus et renfor afin d'aider à résoudre le problème des tra ports dans cette région. Les gouvernemer des quatre provinces ont déjà présenté instances détaillées, et nous les appuyons.

Nous estimons, avant tout, que l'établis ment d'un tarif-marchandises conçu en fo tion de ces provinces servira aussi les intér du reste du Canada, et en particulier fabricants du Québec et de l'Ontario, maintenant le pouvoir d'achat de cette régi et il en est de même de l'expédition de produits vers les marchés du centre Canada. Nous signalons que nos producte aussi bien primaires que secondaires, trav lent en fonction d'un volume plus fai d'une plus longue distance à parcourir p atteindre le consommateur, d'un marché l très éparpillé, et, ce qui est à mon avis, plus important, d'une marge de profits be coup plus mince, vu le volume assez réduit leurs affaires.

Lorsque le tarif du transport se modifie façon sensible, nos producteurs ne peuv faire face à ces variations et survivre. Il donc très important, pour nous, que le rég du tarif préférentiel pour le transport marchandises soit maintenu. La modifica apportée l'an dernier au tarif de transport marchandises par chargement incomplet a monter considérablement le prix des den dans toute la province et ailleurs dans régions Maritimes et Atlantiques.

Quelque chose d'autre s'est produit de que nous avions présenté ce mémoire dernier. L'emploi du transport par cadres le port d'Halifax devient maintenant une sibilité réelle, et l'on pourrait développer moyen d'Halifax, l'expédition de grosses gaisons par trains conçus spécialement le transport des grosses cargaisons et r aux voies d'expédition du monde, si l'on fitait de cette occasion, mais il nous fau appui considérable, dans le domaine transports, pour y parvenir.

Les chemins de fer ne sont pas adaptés situation nouvelle, pour le moment. Il faut améliorer considérablement la su structure ferroviaire, ainsi que notre ser Nous n'avons que des chemins de fer à unique dans une bonne partie des Mariti

[*Texte*]

not be able to seize the opportunity to develop containerization and these large bulk shipment procedures which are now coming into being.

The Chairman: Thank you very much for your presentation. Mr. Thomas.

Mr. Thomas (Moncton): Mr. Chairman, Mr. Robertson, one thing I have noticed—it has been a pattern over the years but it becomes very evident when there is labour trouble, for example, in the port of New York, that a great deal of overseas traffic is then diverted to Halifax. There is export traffic from Canadian exporters going overseas which had been going through the port of New York, and a lot of it is import traffic coming into the country—Canadian importers bringing their goods in through New York. Halifax does not seem to get the benefit of this unless there is trouble in New York and the ships are diverted to Halifax.

What is the reason that these importers and exporters are using the port of New York instead of the Port of Halifax?

Mr. Robertson: I suppose the brutal truth is that the ocean shipping rates across the Atlantic are basically the same to Halifax, New York or Montreal. There is a much shorter freight route from New York to Toronto or Montreal and cost is therefore going to be considerably less.

Mr. Thomas (Moncton): I suppose it may be a redundant question, but has the Port of Halifax made representation—I suppose they have over the years—to the shipping companies? Is there any possibility of having these rates altered? Obviously if Halifax can be used when New York is in trouble, if Halifax could get these shipments on a regular basis it would add a great deal to your revenues and your income here.

Mr. Robertson: I do not think the Port of Halifax as a small entity is capable of breaking the world freight rate system of the shipping companies.

Mr. Thomas (Moncton): The reason I bring this up is that it is just another one of the problems you have here. The fact is that this is what is taking trade away from the Port of Halifax that could very well come here.

Mr. Robertson: In fairness, the handling of the cargos in and out of vessels is almost as

[*Interprétation*]

et, à moins que l'on n'améliore beaucoup notre réseau ferroviaire, nous ne serons pas en mesure de profiter de cette occasion de mettre au point le transport par cadres et les méthodes d'expédition de grosses cargaisons qui deviennent maintenant possibles.

Le président: Merci beaucoup de votre exposé. Monsieur Thomas?

M. Thomas (Moncton): Monsieur le président, monsieur Robertson, j'ai remarqué une chose: cela est courant depuis des années, mais devient très évident lorsqu'il y a des difficultés sur le plan ouvrier, par exemple, dans le port de New York; une bonne partie du trafic d'outre-mer est alors dirigé sur Halifax. Il y a les exportations outre-mer des exportateurs canadiens qui passent ordinairement par le port de New York, ainsi que le traffic d'importation des importateurs canadiens qui font venir leurs marchandises par New York. Halifax semble ne bénéficier de tout ce trafic que lorsqu'il y a des difficultés à New York, et que l'on dirige alors les navires sur Halifax.

Pour quelle raison ces importateurs et exportateurs utilisent-ils le port de New York de préférence à celui d'Halifax?

M. Robertson: La vérité, c'est que les tarifs d'expédition sur l'Atlantique sont essentiellement les mêmes, qu'il s'agisse d'Halifax, de New York ou de Montréal. La route de transport des marchandises est beaucoup plus directe de New York à Montréal ou Toronto, et le coût est donc beaucoup moins élevé.

M. Thomas (Moncton): Ma question est peut-être inutile, mais est-ce que le port d'Halifax a présenté des instances,—je suppose que oui, au cours des années,—aux compagnies d'expédition. Ne serait-il pas possible de modifier ces tarifs? De toute évidence, si l'on peut avoir recours aux services d'Halifax, lorsqu'il y a des difficultés à New York, si Halifax pouvait obtenir ces expéditions de façon régulière, cela augmenterait considérablement vos recettes et vos revenus.

M. Robertson: Je ne pense pas que le port d'Halifax, qui n'est pas très important, puisse faire modifier le tarif de transport international des marchandises qu'appliquent les compagnies d'expédition.

M. Thomas (Moncton): Si je mentionne cette question, c'est qu'elle constitue l'un des nombreux problèmes qui se posent ici. A vrai dire, cela enlève au port d'Halifax une partie du commerce qui pourrait fort bien venir ici.

M. Robertson: A vrai dire, le chargement et le déchargement des cargaisons sont presque

[*Text*]

expensive as the transportation factor. A few hundred miles or a thousand miles additional on ocean routing may not add very materially to the cost of the actual ship use, particularly in broken cargo handling.

Mr. Thomas (Moncton): Is there anything then that the Port of Halifax could do that they have not already done to attract some of this export-import business to the port?

Mr. Robertson: I think that the great possibility for Halifax now is the development of these large bulk cargo movements such as ore concentrates out of the various parts of Canada to the European market and similar types of heavy shipments into, say, the central Canadian and central American market as well, such as ores and steel and things of this sort going into Detroit. What is happening is that the change in the cost of shipment by rail using very long trains and large bulk shipments of one commodity can drop the actual rail cost to a level that is competitive with the sea costs. And when this happens then Halifax can get into this stream and it can move shipments so much faster by rail if they are organized on this unit train basis.

Mr. Thomas (Moncton): That is all.

The Chairman: Mr. Nowlan.

Mr. Nowlan: Mr. Thomas covered pretty well the question I was going to ask. I quite agree that Halifax by itself could not exert too much influence on the international shipping cartel, but what about a government and the part of a government policy? Is the thing completely hopeless of using the wharf situation that we have and yet do not get benefit from?

Mr. Robertson: We have quite substantial facilities here. In the last week or two they have been used to their maximum.

Mr. Nowlan: That is because of the trouble down below.

Mr. Robertson: That is only partly so.

Mr. Nowlan: But my question is, if a government took as a matter of policy that this in effect is an international cartel and as far as transportation is concerned, there should be some benefit because we stick out in the Atlantic—New York and Halifax, yes—I can see why there is no difference there but I really wonder if there is a difference between

[*Interpretation*]

aussi coûteux que le transport. Quelques centaines de milliers de milles de plus sur l'océan n'ajoutent pas tellement au coût de l'utilisation du navire même, surtout pour les cargaisons incomplètes.

M. Thomas (Moncton): Y a-t-il quelque chose que le port d'Halifax pourrait faire, et qu'il n'ait par encore fait, pour attirer une partie du commerce d'importation et d'exportation.

M. Robertson: Je pense que la grande possibilité pour Halifax, à l'heure actuelle, réside dans la mise au point de ce transport de grosses cargaisons, comme les concentrés de minerai, des différentes régions du Canada vers le marché européen, ou d'autres expéditions lourdes de ce genre vers les marchés du centre du Canada ou du centre des États Unis, comme les minerais, l'acier, etc., qu'on l'on expédie à Détroit. Ce qui se produit, c'est le changement des coûts d'expédition ferroviaire par trains très longs et par grosses expéditions en vrac d'une même denrée peut faire baisser beaucoup le coût réel du transport ferroviaire jusqu'à un niveau qui puisse faire concurrence au coût du transport maritime. Si cela se produit, Halifax pourra entrer en jeu, et acheminer les expéditions beaucoup plus rapidement par chemin de fer, si l'on adopte ce système de train-unité.

M. Thomas (Moncton): C'est tout.

Le président: Monsieur Nowlan.

M. Nowlan: M. Thomas a posé à peu près la question que je voulais poser. Je conviens qu'Halifax seul ne pourrait exercer une influence réelle sur le cartel international d'expédition. Mais que dire d'un gouvernement, et du rôle que peut jouer sa politique? N'y a-t-il aucun espoir d'utiliser les quais que nous avons à notre disposition, et dont nous ne bénéficions pas?

M. Robertson: Nous avons des installations assez considérables. Ces deux dernières semaines, on les a utilisées au maximum.

M. Nowlan: C'est parce qu'il y a des difficultés aux États-Unis.

M. Robertson: Ce n'est là que l'une des raisons.

M. Nowlan: Mais je me demande, si le gouvernement adoptait comme politique qu'il s'agit en effet d'un cartel international, et qu'en matière de transports, nous devrions en retirer des bénéfices, car nous sommes sur l'Atlantique—New York et Halifax, oui, je peux comprendre qu'il n'y ait pas là de différence—mais y en a-t-il une entre Halifax

[*Texte*]

Halifax and Montreal. Is the thing completely hopeless as far as you are concerned and from the experience you have had in this field?

Mr. Robertson: I do not think it is hopeless but we would have to have a very favourable freight rate movement cost from Halifax to Montreal to really make up for the fact that the shipment into Montreal except for the time factor is costing the same.

Mr. Nowlan: So then, coming to the containerization, why do you think Halifax is going to develop as a containerization port when the preference is gone, as a matter of fact, to Montreal for the whole general cargo situation? Because they got together in London and agreed that Montreal and Halifax are the same as far as rates are concerned. It is not that I am against containerization but from your experience and point of view, why do you think the situation is not going to just revert to the way it has always been and that the containerization will be more economical to develop in Montreal?

Mr. Robertson: Perhaps it will. But the one favourable aspect about it and the one favourable possibility is that large bulk shipments which have small handling costs at dockside and the use of large trains—much larger than we now have—would reduce the unit handling costs and speed up the movement so much that it would take days off the shipping time. That would really make Halifax one of the most important links in a worldwide connection across the continent, right out to Vancouver and again out to Japan, for example.

Mr. Nowlan: Well, I am all for it. I just wanted an answer to relieve the problem in my mind that it has not worked so far and that we are not going to fall in the same dilemma.

Mr. Robertson: Mr. Nowlan, it is my view that if we can seize the opportunity in Halifax today and take advantage of this new possibility—and it is going to require a great deal of help from government at all levels—Halifax will become one of the most important world ports.

Mr. Nowlan: With help from government at all levels leads me to my last question. What can a transportation committee like this recommend as government policy? Does this mean the roadbed between here and Montreal

[*Interprétation*]

Montréal? Est-ce que la situation est vraiment désespérée, en ce qui vous concerne, et d'après l'expérience que vous en avez?

M. Robertson: Je ne pense pas que la situation soit désespérée, mais il nous faudrait avoir un tarif de transport des marchandises très avantageux d'Halifax à Montréal pour compenser réellement le fait que les expéditions vers Montréal, sauf pour ce qui est du facteur temps, coûtent la même chose.

M. Nowlan: Dans ce cas, si l'on en vient au transport par cadres, pourquoi pensez-vous qu'Halifax va devenir un port spécialisé dans ce type de transport, alors que la préférence est allée à Montréal, en fait, pour la situation d'ensemble relative aux cargaisons? Car, à Londres, on est convenu qu'il n'y a aucune différence entre Montréal et Halifax en ce qui concerne les tarifs. Ce n'est pas que je m'oppose au transport par cadres, mais, d'après votre expérience, pourquoi croyez-vous que la situation ne reviendra pas à ce qu'elle a toujours été, c'est-à-dire qu'il sera plus économique d'équiper Montréal pour le transport par cadres?

M. Robertson: Ce le sera peut-être. Mais l'aspect favorable pour nous, et la seule possibilité vraiment favorable pour nous, c'est que les grosses expéditions en vrac, qui entraînent des frais de manutention peu élevés, et qui permettent d'utiliser de longs trains—beaucoup plus longs que ceux que l'on utilise en ce moment—diminueraient les frais de manutention par unité et accéléreraient tellement l'expédition que cela permettrait de gagner des jours et des jours. Halifax deviendrait alors l'un des maillons les plus importants d'une chaîne internationale de transport à travers le continent: on irait directement à Vancouver, et, de là, au Japon, par exemple.

M. Nowlan: Je suis tout à fait en faveur de cela. Je voulais simplement m'assurer que, bien que cela n'ait pas marché jusqu'ici, nous n'allons pas nous retrouver dans le même dilemme.

M. Robertson: Monsieur Nowlan, je suis d'avis que si nous pouvons vraiment saisir l'occasion aujourd'hui, à Halifax, et profiter de cette nouvelle possibilité et il nous faudra pour cela beaucoup d'aide du gouvernement à tous les niveaux. Halifax deviendra l'un des ports les plus importants du monde.

M. Nowlan: L'aide du gouvernement à tous les niveaux, c'est là ce qui m'amène à ma dernière question. Qu'est-ce qu'un Comité des transports comme celui-ci peut recommander comme politique au gouvernement? Cela

[*Text*]

should be double-track or revitalized or have cranes down here at the National Harbours Board? What specifically can we recommend to implement this type of policy?

Mr. Robertson: First of all, to be fair, the National Harbours Board is now building containerization facilities. It is small scale, and if it works it will have to be expanded tremendously, but then the railway system has got to be completely altered because it could not cope with very long trains, with its present facilities and road bed. Here we are talking of trains of two and three to five miles in length.

Mr. Nowlan: While there is a pause, may I say that one of the fundamental factors in making this policy work would be the reconstruction of, in effect, all the road beds right across the country.

Mr. Robertson: It may well be.

Mr. Nowlan: That is all for me, Mr. Chairman.

The Chairman: Are there any further questions, gentlemen? Mr. Portelance?

Mr. Portelance: Mr. Chairman, I would like to ask this gentleman how long it takes now for a train to go from Halifax to Montreal and how long it takes to go by boat from Halifax to Montreal?

Mr. Robertson: It takes us several days by boat. If the freight system were geared up the train could, of course, get there in a relatively short time—under 24 hours—though, it does not at the present time under normal freight movement. Still, there are trains that go through in a relatively short time, as well. It is just simply a matter of routing.

At the present time, with basically one line, of course, the trains have to wait and pass one another, and so on. With very long trains this is going to present quite a problem because the movements both ways would call for really double tracking eventually.

Mr. Portelance: Would you say that a train now takes a couple of days and a boat six or seven?

Mr. Robertson: It will not take six or seven days. After all, the real question is not the boat from Halifax to Montreal; it is the fact that the boats coming across the Atlantic can reach Halifax—let us say they can move at least a day quicker, depending on where they are going and what great circle route they

[*Interpretation*]

veut-il dire que l'on devrait renouveler la superstructure entre ici et Montréal, ou aménager des doubles voies, ou faire construire des grues ici par le Conseil des ports nationaux? Quelles recommandations précises peut-on faire pour l'application d'une telle politique?

M. Robertson: Tout d'abord, pour être juste, le Conseil des ports nationaux est en train d'aménager des installations pour le transport par cadre. C'est sur une petit échelle et si cela donne des résultats il faudra prévoir une expansion et les services ferroviaires doivent être modifiés parce qu'ils ne peuvent avoir de longs trains avec l'aménagement actuel. On parle des trains de trois cinq milles de long.

M. Nowlan: Maintenant qu'il y a une pause puis-je me permettre de dire que l'un de facteurs fondamentaux de cette politique pour qu'elle marche serait la reconstruction de l'assiette de toutes les routes du pays.

M. Robertson: Ça se pourrait.

M. Nowlan: C'est tout pour moi, monsieur le président.

Le président: Avez-vous d'autres questions à poser? Monsieur Portelance?

M. Portelance: Monsieur le président, je voudrais demander au témoin, combien de temps il faut pour aller d'Halifax à Montréal par train et par bateau?

M. Robertson: Il faut plusieurs jours par bateau; si le réseau de messageries était en liaison avec les chemins de fer l'achemin ment se ferait en moins de 24 heures, mais n'est malheureusement pas le cas. Il y a tou jours des trains qui font ce parcours en rel tivement peu de temps. Actuellement, l trains doivent s'attendre les uns les autr puisqu'il n'y a qu'une seule ligne. Il faut l mettre sur les voies d'évitement et avec longs trains, cela présentera un problème, faudrait deux voies.

M. Portelance: Diriez-vous qu'un tra prend environ deux jours et un navire six sept?

M. Robertson: Pas tant que cela. Mais véritable question n'est pas le navire d'Ha fax à Montréal, c'est le fait que les navi qui franchissent l'Atlantique peuvent veni Halifax en un jour de moins. Cela dépend l'endroit où ils se rendent et de la route qu emploient. S'ils prennent le détroit de Bel

[*Texte*]

take. If it goes in through the Strait of Belle Isle it will take approximately a day longer to reach Montreal than it would to reach Halifax.

But the shipping world is changing. We are talking now of ships with a dead weight of 200,000 tons. These ships could not possibly go up the St. Lawrence River.

The Chairman: Mr. Rose?

Mr. Rose: Mr. Chairman, through you to Mr. Robertson, I notice in your brief that you make quite a point of the lower wages in this part of the country. What is your Board doing to increase those wages locally so as to increase the purchasing power and, therefore, the business, in your local markets? In other words, what are you doing to create a larger internal market and so increase the purchasing power of the people who live here?

Mr. Robertson: Statistically, of course, the cities of Sydney and Halifax are considerably above the average, in the sense of our local average. I think you would have first to accept the fact that these two major population groupings are not as depressed as the rest of the province of Nova Scotia, generally speaking, nor of course the other three provinces.

In Halifax I would say that although wage levels are below the Toronto and Windsor levels you will find a good many people earning reasonably comparable incomes.

Mr. Rose: Would that not be because a great number of the people here are civil servants and perhaps their income is more or less based upon what is the national norm?

Mr. Robertson: I do not think that is entirely true. It is true, in part, but there are differences in various aspects of civil servants; and, of course, many are municipal and provincial civil servants who are not affected by national norms, as such.

Mr. Rose: Would you say that most of the businesses represented on your Board of trade are making satisfactory profits?

Mr. Robertson: I think the general economic conditions in Halifax, and particularly the Halifax—Dartmouth metropolitan area, are reasonably sound. But most of the industries and businesses here are of the service type; they are not large manufacturing complexes.

Mr. Rose: I am surprised at the price of homes and real estate in this particular area. I was told today that within 15 miles of Halifax you have, I believe it was mentioned, one-third or one-half of the population of the whole of Nova Scotia.

[*Interpretation*]

Isle, il leur faut au moins un jour de plus pour aller à Montréal plutôt qu'à Halifax. Mais les transports maritimes évoluent, on parle maintenant de navires de 200,000 tonnes. Ces navires ne pourront pas emprunter le Saint-Laurent.

Le président: Monsieur Rose.

M. Rose: Je vois dans votre mémoire que vous parlez des salaires inférieurs payés dans cette région du pays. Je voudrais vous demander ce que fait votre conseil pour augmenter ces salaires et donc le pouvoir d'achat? En d'autres mots, que faites-vous pour créer un marché interne plus vaste en vertu d'un pouvoir d'achat accru des personnes qui habitent ici?

M. Robertson: Sur le plan statistique, les villes de Sydney et Halifax, sont très au-dessus de la moyenne locale. Il faut tout d'abord accepter le fait que ces deux centres ne sont pas aussi sous-développés que le reste de la Nouvelle-Écosse ou des trois autres provinces. A Halifax, je dirais que bien que les niveaux de salaires soient inférieurs à ceux de Toronto ou de Windsor, vous trouverez beaucoup de personnes ayant des niveaux de salaires à peu près comparables.

M. Rose: N'est-ce pas dû au fait qu'un bon nombre de personnes, ici, sont des fonctionnaires et que leur revenu est plus ou moins en fonction des normes nationales?

M. Robertson: C'est vrai, mais en partie seulement parce qu'il y a différents aspects dans le fonctionnarisme et beaucoup sont municipaux ou provinciaux et ne sont pas affectés par les normes nationales en tant que telles.

M. Rose: Diriez-vous que la plupart des sociétés qui sont représentées à votre conseil ont des bénéfices satisfaisants?

M. Robertson: Je pense que les conditions économiques à Halifax surtout, la région métropolitaine de Halifax-Dartmouth, sont assez bonnes. Mais, la plupart des industries et des entreprises sont des services. Ce ne sont pas des sociétés de fabrication.

M. Rose: J'ai été assez étonné, lorsque j'ai entendu parler du prix des habitations dans cette région. On me disait, aujourd'hui, que dans un rayon de 15 milles, de Halifax, vivait un tiers ou la moitié de la population de la Nouvelle-Écosse.

[*Text*]

Mr. Robertson: This is approximately correct.

Mr. Rose: The briefs that we have heard—and this is natural because this is the Transport Committee—seem to concentrate on the transportation aspects and the subsidies thereon as a means of becoming more competitive. Have you any other ideas of how you might become more competitive, as a possible alternative—productivity, free trade areas and that sort of thing?

Mr. Robertson: Of course, the minute you get into free trade areas you are creating a customs barrier problem between ourselves and the rest of the country, and that is a deep problem, is it not? I do not think that there is any easy solution.

The majority of the businesses in this area are still operating on much smaller volumes than are similar businesses in say, the Ontario or the Montreal areas. This is a very serious problem.

The Chairman: Thank you, Mr. Rose. Mr. Perrault?

Mr. Perrault: Mr. Chairman, I would like to ask Mr. Robertson whether he would agree that the end object of subsidies should be an economic situation whereby the need for subsidies is eliminated. In your brief you urge prompt restoration of LCL rates to the former levels and sugest that you would like to see a continuation of transport subsidies in the Maritimes.

Do you foresee a time when this policy will eliminate the need for subsidies, or will subsidies have to be continued in perpetuity.

Mr. Robertson: A lot depends, Mr. Perrault, on our economic development and whether we can create a large enough local market to satisfy many of our own needs. Most of our local manufacturers of 60 to 80 years ago have disappeared—shoe manufacturers, clothing manufacturers and the like—because they could not compete with the large-scale manufacturing of the central Canadian area.

The real problem is that the market costs, for example, in the Toronto area are going to be away below ours with the productivity and big market available, and we just cannot land goods from Toronto in Halifax at the same cost at which the people in Toronto are doing it.

Mr. Perrault: Could programs of aid be initiated by the federal government which

[*Interpretation*]

M. Robertson: C'est à peu près juste.

M. Rose: Les mémoires qu'on nous a soumis, et c'est naturel, vu que ce comité est celui des Transports, semblent se concentrer sur les aspects du transport et ces subventions semblent être un moyen de devenir plus concurrentiel. Est-ce que vous avez une autre idée sur la façon dont vous pourriez assurer cette plus grande concurrence? Comme par exemple des régions de libre échange ou des choses de ce genre?

M. Robertson: Évidemment, à partir du moment où vous créez des régions de libre échange, vous créez des obstacles tarifaires entre nous et le reste du pays qui pourraient être un problème. Un problème important ne croyez-vous pas? Je ne crois pas qu'il y ait de solutions faciles. La plupart des entreprises dans cette région, opèrent toujours sur un beaucoup plus petit volume que leurs homologues dans la région de Toronto ou de Montréal. C'est un très grave problème.

Le président: Merci beaucoup, monsieur Rose. Monsieur Perrault?

M. Perrault: Monsieur le président, j'aimerais demander à M. Robertson, s'il serait d'accord que la fin des subventions devrait être la situation économique normale dans laquelle le besoin de subventions n'existe plus. Dans votre mémoire vous demandez qu'on rétablisse les taux des chargements partiels aux niveaux antérieurs, et que les subventions aux transports soient continuées pour les Maritimes.

Prévoyez-vous le moment où cette politique éliminera le besoin de subventions? Ou, est-ce qu'il faudra continuer les subventions à tout jamais?

M. Robertson: Beaucoup dépend, monsieur Perrault, sur notre développement économique, et si nous pouvons trouver un marché local suffisant pour nos propres besoins. La plupart des fabricants d'il y a 60 ou 80 ans ont disparu. Par exemple, ceux qui fabriquaient les vêtements et les chaussures, parce qu'ils ne pouvaient pas soutenir la concurrence de la grande industrie de la partie centrale du Canada. Le vrai problème réside dans le fait que le coût de commercialisation dans la région de Toronto sera de beaucoup inférieur au nôtre du fait de la productivité et du large marché disponible là-bas. Nous ne pouvons tout simplement pas, aux mêmes frais, avoir les mêmes produits à Halifax qu'à Toronto.

M. Perrault: Est-ce que des programmes d'aide du gouvernement fédéral pourraient

Texte]

ight be of more value to the economic de-elopment of the Maritimes than merely ansportation subsidies? Has sufficient ima-ination been employed thus far in attempt-g to build the economy of the Maritimes?

Mr. Robertson: I think many of the ideas p until now have been piece-meal and per-aps have not been as co-ordinated as they ight have been. That is a fair comment.

Mr. Perrault: Earlier reference was made free trade. Does the Board support the idea perhaps industry by industry free trade? r example, in the Maritimes there is a eat potential in forest products and fine apers.

Mr. Robertson: Yes.

Mr. Perrault: If we eliminated tariff barri-s in that area, negotiated in somewhat the me way as we achieved the automotive reement for central Canada, would that be value to the Maritimes?

Mr. Robertson: Most of our forest products, rticularly in the pulp area, are shipped m Nova Scotia into the American market w.

Mr. Perrault: Some of them, of course, go without tariffs at the present time.

Mr. Robertson: That is correct.

Mr. Perrault: Do you think completely free de in this particular sector of the economy uld help?

Mr. Robertson: I suspect that it is more a estion of the American tariffs than our n.

Mr. Perrault: It was possible to negotiate mething in the area of automobile produc-n, so it is not completely out of the estion?

Mr. Robertson: Except that we do not buy ck in the same proportion.

Mr. Perrault: Mr. Chairman, I think that ny of us would agree with the "land idge" concept enunciated by Mr. Robertson his brief. It certainly has the support of ny of us. That is all I have.

The Chairman: Thank you, Mr. Perrault, d you, Mr. Robertson, for presenting your ef.

Mr. Robertson: Thank you.

The Chairman: I will now call upon the rporation of the City of Dartmouth, and

[*Interprétation*]

être d'une plus grande utilité pour les provinces Maritimes que des subventions pures et simples? Croyez-vous qu'on ait cherché suffisamment à essayer d'édifier l'économie des Maritimes?

M. Robertson: Jusque là, j'ai l'impression que tout s'est fait par pièces ou par morceaux, qu'il n'y a pas eu suffisamment de coordination. Et je suis large.

M. Perrault: Auparavant on a mentionné le libre échange. Est-ce que la Commission serait d'accord avec une libéralisation industrie par industrie. Par exemple, dans les Maritimes il y a un grand potentiel pour les produits forestiers et le papier?

M. Robertson: Oui.

M. Perrault: Si nous éliminions les barrières tarifaires dans ce domaine, comme nous avons réussi à le faire plus ou moins par l'accord sur les automobiles au centre du Canada, est-ce que cela aiderait les Maritimes?

M. Robertson: La plupart de nos produits forestiers, surtout dans le domaine de la pâte, sont expédiés de Nouvelle-Écosse vers le marché américain.

M. Perrault: Et plusieurs sans barrière tarifaire.

M. Robertson: C'est exact.

M. Perrault: Pensez-vous qu'une libération complète dans ce domaine aiderait?

M. Robertson: J'ai l'impression qu'il s'agit plutôt de tarifs américains que des nôtres.

M. Perrault: Il a été possible tout de même de négocier quelque chose dans le domaine de la production automobile, ce n'est donc pas entièrement hors de question?

M. Robertson: Oui, sauf que nous n'achetons pas dans la même proportion.

M. Perrault: Monsieur le président, je crois que beaucoup parmi nous, serions en faveur de cette idée «pont terrestre» énoncée par M. Robertson dans son mémoire. Ce concept est appuyé par plusieurs d'entre nous.

Le président: Monsieur Robertson, monsieur Perrault, merci beaucoup de la présentation de votre mémoire.

M. Robertson: Merci.

Le président: Je demanderais maintenant à la Corporation de la ville de Dartmouth et à

[*Text*]

upon His Worship the Mayor, Mr. Roland J. Thornhill. Also present are Alderman John Hanson and the Director of Planning of the City of Dartmouth, Mr. M.E. Lloyd.

You will find the brief on page 624. I will ask Mr. Thornhill to comment on the brief.

Mr. R. J. Thornhill (Mayor, Corporation of the City of Dartmouth): Thank you, Mr. Chairman and gentlemen. We have been asked to make a short summary of the City of Dartmouth and the Dartmouth Chamber of Commerce brief submitted to you on February 13, 1968. We do so as follows.

We in Nova Scotia, or in fact in the Maritimes, are paying higher costs for manfuactured goods so that industry can exist in central Canada. The reason for this is the good of the country as a whole, but economically speaking our natural ties run north and south, which means economic union with the United States.

Ever since Confederation an attempt has been made to tie Canada together by east-west economic interchange, through railway construction, tariffs and general transportation policies. We feel that this policy still has validity today, and the obvious conclusion is that transportation costs between the Maritimes and central Canada should be kept low enough for east-west trade to continue. We note that the grain subsidy on transportation to the west coast clearly supports this point of view.

The policy which has been expressed that freight rates should be determined by the open market has no application in the Maritimes because there is no open market. There is no such thing as real competition between the Canadian National Railways and private trucking companies on long distance hauls from the Maritimes.

The third point made in our brief is that the establishment of minimum charges for carload lots has had a very detrimental effect on industry established in the city of Dartmouth. Since writing this brief in 1968 one company has gone out of business. One of the reasons for that was the added costs of operating by the establishment of a minimum charge for carload lots. Prior to the establishment of this minimum charge freight rates were based on weight.

Because of the volume of incoming freight there must be occasions when freight cars are

[*Interpretation*]

Son Honneur le maire, M. Roland J. Thornhill, de venir ici à la tribune. Il y a également présents, le conseiller John Hanson et le directeur de la planification pour la ville de Dartmouth, M. Lloyd.

Vous trouverez le mémoire à la page 624. Je vais demander à Monsieur Thornhill de présenter son mémoire.

M. R. J. Thornhill (Maire, Corporation de la ville de Dartmouth): Merci monsieur le président, messieurs. On nous a demandés de faire un court résumé du mémoire de la Corporation de la ville de Dartmouth et de la Chambre de Commerce de Dartmouth présenté le 13 février 1968. Nous le résumerons de la façon suivante.

Nous, en Nouvelle-Écosse, ou en fait, dans les provinces Maritimes, payons des frais plus élevés pour les produits manufacturés pour que les industries puissent exister au centre du Canada. Cela est pour le bien du pays dans son ensemble. Mais du point de vue économique, nos liens vont du nord au sud ce qui veut dire que nous avons des liens économiques naturels avec les États-Unis Depuis le début de la Confédération, on a essayé de lier le Canada grâce à des échanges est-ouest, grâce à la construction des chemins de fer, grâce à une politique générale de tarifs en matière de transport.

Nous croyons que cette politique est toujours valable aujourd'hui. Et, la conclusion évidente c'est que les frais de transports entre les Maritimes et le centre du Canada devraient être suffisamment bas pour que ce commerce est-ouest se continue. Nous notons que la subvention sur les grains de l'Ouest appuie cette thèse.

La politique énoncée suivant laquelle la concurrence devrait se faire sur un marché ouvert, n'est pas valable pour les Maritimes car il n'y a pas de marché ouvert. Il n'y a pas de concurrence réelle entre les chemins de fer nationaux et les compagnies de camionnage sur les longs parcours à partir des Maritimes.

Le troisième point de notre mémoire c'est que l'établissement de montants minimum pour les wagonnées, a nettement nuit aux industries établies dans la ville de Dartmouth. Depuis que nous avons rédigé ce mémoire en 1968, une compagnie a fait faillite. Une des raisons principales, c'est les frais additionnels dus au tarif minimum pour les wagonnées. Avant l'établissement de ce minimum, on calculait les tarifs au poids. En raison du volume des marchandises entrant ici, certains wagons doivent retourner vers le centre du Canada à vide. Du point de vue économique, il vaudrait

[Texte]

oing back to central Canada empty. From an conomic point of view it would appear that would be better to have these cars handle me freight at a reduced cost.

The loss of pick up and delivery service to ustomers in the city of Dartmouth and the dditional cost of picking up this freight in eds at Halifax have added additional costs local commercial and industrial operations. e feel in the city, that this service should e reinstituted.

The two most important points in our brief e Canadian unity, that is tariffs, grain tes, and natural trade north and south, and ie fact that there is no such thing as compe- tion because CNR has a monopoly.

The Chairman: Thank you, Mr. Mayor. Mr. homas?

Mr. Thomas (Moncton): Mr. Mayor I sume that the company that has gone out of siness in the plant that was manufacturing ns.

Mr. Thornhill: That is correct, sir.

Mr. Thomas (Moncton): Do you feel that e final blow that forced this plant out of siness was the increase in freight rates?

Mr. Thornhill: I really do not know if that the case. I can well imagine that there ere other contributing circumstances that fected the company. Certainly at the time of e preparation of this brief, which was in- ired by the fact that some of the industries ithin the Chamber of Commerce had come the city and felt that we should make a esentation to you, one of the most vocal eople at that time was the management of at local group which claimed that the less an carload rates were having an extremely trimental effect upon their business.

Mr. Thomas (Moncton): In other words, ey were manufacturing cans for the Mari- me market?

Mr. Thornhill: Yes. They were also selling Quebec, I understand. And, according to m, if anything less than a carload came in was then no longer economic to sell their ns in the Quebec market.

Mr. Thomas (Moncton): This appears to be e case of a maritime industry being recent- established but, because of transportation sts, they found they could not survive.

Mr. Thornhill: Well, as I said before, and complete the answer to your question, I ould not like to say this is the only reason

[Interprétation]

mieux que ces wagons prennent des marchandises à un prix réduit.

La perte du service de ramassage et de livraison aux clients de la ville de Darmouth ainsi que le coût additionnel résultant de la nécessité d'aller chercher le frêt à Halifax ont augmenté les frais d'exploitation des entreprises locales. Nous estimons que ce service devarit être réinstitué.

Les deux points les plus importants de notre mémoire sont donc, l'unité nationale c'est-à-dire tarifs, taux des grains et commerce naturel nord-sud, et le fait qu'il n'y ait pas de concurrence réelle du fait du monopole du CN.

Le président: Merci, monsieur le maire. Monsieur Thomas?

M. Thomas (Moncton): J'imagine, monsieur le maire, que la compagnie qui a fait faillite était la fabrique de boîtes de conserves, n'est-ce pas?

M. Thornhill: C'est exact.

M. Thomas (Moncton): Croyez-vous vraiment que c'est l'augmentation du tarif des marchandises qui a contribué à cette faillite?

M. Thornhill: Honnêtement, je ne le sais pas. J'imagine qu'il y avait d'autres circonstances qui y ont contribué.

Au moment de la présentation du mémoire, qui fut inspiré par le fait que certaines industries s'étaient adressées à nous pour nous demander de le faire, un des groupes les plus pressants était justement la direction de ce groupe local qui estimait que les tarifs pour chargements incomplets étaient détrimentaux pour leurs industries.

M. Thomas (Moncton): En d'autres termes, ils fabriquaient des boîtes à conserve pour les Maritimes?

M. Thornhill: Oui. Et je crois qu'ils vendaient également au Québec. Selon lui, si la vente représentait moins d'un wagon, il n'était plus économique de vendre au Québec.

M. Thomas (Moncton): C'est ce qui semble s'être produit pour une industrie, qui ne s'est établie que très récemment, mais qui en raison des frais de transport a réalisé qu'elle ne pouvait pas survivre.

M. Thornhill: Comme je l'ai dit auparavant, et pour répondre complètement à votre question, je n'affirmerais pas que c'est la seule

[*Text*]

that the company went out of business. I would feel quite certain in saying that it is not, but it was one of the contributing factors.

Mr. Thomas (Moncton): Do you have other light manufacturing industries in Dartmouth?

Mr. Thornhill: Yes, we do.

Mr. Thomas (Moncton): So they would also be feeling the impact.

Mr. Thornhill: Yes, that is correct. As a matter of fact, one of them is here tonight to present a brief.

Mr. Thomas (Moncton): Do you have any industries that are shipping carload lots? How do you feel, for example, about the two year freeze on carload freight rates, do you feel that that should be continued?

Mr. Thornhill: I think probably it should be continued and for probably longer than two years.

Mr. Thomas (Moncton): It is due to expire on March 23 but you feel it should be continued?

Mr. Thornhill: I do.

Mr. Thomas (Moncton): Thank you.

Mr. Trudel: I gathered from the questioning that that industry went out of business because of transport costs. I am following the line that Mr. Thomas was following.

Mr. Thornhill: Yes.

Mr. Trudel: Are you aware of what percentage of its business was cans compared to glass?

Mr. Thornhill: No, I could not answer that question, Mr. Trudel.

Mr. Trudel: I would just like to suggest that this represents about 7 per cent of that industry. Even in Montreal they have to bring them in. Therefore, the main factor was not costs, but volume. I would say to you that they have had the same problem here and that is why they look to the Quebec market. Do you feel that this is fair? They had to look to other than the actual Maritime market to sustain the plant. They could not find the volume and this, rather than direct transport, was a factor in their closing.

Mr. Thornhill: Well, as I say, the management of that particular company at the time they came to City Hall to request that we be instrumental in preparing this brief indicated to us quite vigorously that this was one of

[*Interpretation*]

raison pour laquelle la compagnie a fait faillite, même si ce fut un de ces facteurs.

M. Thomas (Moncton): Y a-t-il d'autres industries légères, à Dartmouth?

M. Thornhill: Oui.

M. Thomas (Moncton): Elles s'en ressentiraient également.

M. Thornhill: Oui. En fait, il y en a une qui est ici pour vous présenter un mémoire.

M. Thomas (Moncton): Y a-t-il des industries dont les expéditions se font au wagon? Que pensez-vous du gel de deux ans sur le taux de livraison d'une wagonnée? Croyez-vous que cela devrait se continuer?

M. Thornhill: Je crois que ce régime devrait exister, et pour plus de deux ans.

M. Thomas (Moncton): Au lieu de laisser tomber le gel le 23 mars, on devrait le continuer?

M. Thornhill: Je le crois.

M. Thomas (Moncton): Merci.

M. Trudel: J'ai cru comprendre d'après les questions posées, que l'industrie a fait faillite en raison des frais de transport. Je suis raisonnement suivi par M. Thomas.

M. Thornhill: Oui.

M. Trudel: Savez-vous quel pourcentage du volume de travail de cette entreprise était représenté par les boîtes par opposition à la vitre?

M. Thornhill: Je ne saurais répondre.

M. Trudel: Il s'agit d'environ 7 p. 100. Donc le facteur principal n'était pas une question de frais de transport, mais plutôt de volume. C'est pourquoi ils se sont tournés vers le marché québécois. Croyez-vous qu'il soit juste que cette industrie ait eu à se fier au marché de l'extérieur des Maritimes pour assurer la survivance de son usine.

M. Thornhill: Comme je l'ai dit, la direction de cette industrie, lorsqu'elle s'est adressée à l'Hôtel de ville pour nous demander de l'aider dans la préparation du mémoire, nous a dit avec insistance que c'était l'un des p

[*exte*]

e main contributing factors to the very seri-s problems they were having. As far as I ow the Company has claimed this is one of main reasons for its going out of business.

Mr. Trudel: I grant you that it could be one the reasons for going out of business. . .

Mayor Thornhill: Yes.

Mr. Trudel: ...because I find now that n in larger centres where there are two or ee millions population they bring them m elsewhere as well, because this market not reached the point where they can nufacture locally.

Mr. Thornhill: Yes.

Mr. Trudel: In your brief you mention that re is no truck or highway competition for railroads, yet some local manufacturers using trucks 100 per cent for their entire put.

Mr. Thornhill: Yes.

Mr. Trudel: So I would like to make the nt that there is some competition.

Mr. Thornhill: For example, the transport mpany that goes from here to Sydney, the ith Company, is a wholly owned subsidi- of the CNR.

Mr. Trudel: Yes.

Mr. Thornhill: And I understand, it is the y trucking firm that operates between here Sydney.

Mr. Trudel: Yes. But I am thinking now, instance, in terms of the rate being set side the Maritimes. There are, I believe, people directly involved in road transpor-on and some companies are using road nsport 100 per cent and finding it satisfac-y. Therefore, there must be some competi-in at the various levels.
hat is all, Mr. Chairman.

The Chairman: Thank you, Mr. Mayor.

The Vice-Chairman: The Canadian Associa-n of Purchasing Agents have advised that y would not be here. The Voluntary Plan-g Board of Nova Scotia is next.

The Chairman: I have on my immediate t Mr. Mills and Mr. Ford. I would ask Mr. lls to summarize his brief.

Mr. J. R. Mills (Director, Voluntary Plan-g Board of Nova Scotia): Mr. Chairman

[*Interprétation*]

blèmes principaux auxquels elle avait à faire face. A ma connaissance, la compagnie a dit que c'était là l'une des principales raisons qui ont entraîné sa mise en faillite.

M. Trudel: Ca pourrait être une des raisons de sa faillite, oui, je le concède . . .

M. Thornhill: Oui.

M. Trudel: . . parce que même dans les centres plus considérables, qui ont 2 ou 3 millions de population, le marché n'a pas encore atteint le point où la production peut se faire localement.

M. Thornhill: Oui.

M. Trudel: Dans votre mémoire, vous avez mentionné qu'il n'y a pas de concurrence pour les chemins de fer de la part d'entrepri-ses de camionnage, pourtant certains fabri-cants confient à des camions le transport de tous leurs produits.

M. Thornhill: Oui.

M. Trudel: Donc, il y a concurrence.

M. Thornhill: La compagnie qui s'occupe du transport entre cette ville-ci et Sydney, la *Smith Company*, est une filiale du CN.

M. Trudel: C'est vrai.

M. Thornhill: Et je crois que c'est la seule société de camionnage qui exploite un service entre cette ville-ci et Sydney.

M. Trudel: Oui. Mais je songeais au taux établi à l'extérieur des Maritimes. Je crois qu'il y a 700 personnes qui sont directement impliquées dans le transport routier. Certai-nes compagnies ont recours au transport rou-tier à 100 p. 100 et trouvent cela satisfaisant. Par conséquent, il doit y avoir une certaine concurrence à divers niveaux.
C'est tout, monsieur le président.

Le président: Merci beaucoup monsieur Thornhill.

Le vice-président: La *Canadian Association of Purchasing Agents* nous a indiqué qu'elle ne serait pas présente. Nous passons donc au mémoire de l'Office indépendant de planifica-tion de Nouvelle-Écosse.

Le président: A ma droite, j'ai M. Mills et M. Ford. Je demanderais donc à M. Mills de nous résumer le mémoire.

M. J. R. Mills (directeur, Office indépendant de planification de la Nouvelle-Écosse): Mon-

[*Text*]

and gentlemen, our brief was submitted about a year ago. We have not changed it but I do have a summary of that brief which has been brought up to date.

Early in our brief we describe the Voluntary Planning Board and I think at this time I will just read the two paragraphs concerning that:

> The Voluntary Planning Board of Nova Scotia is a voluntary organization established some years ago to review and promote the economic development of Nova Scotia. Its chief function is to advise both the public and private sectors of the economy on matters relating to improving the rate of economic growth. The membership of this organization is composed of senior representatives drawn from all phases of provincial economic activity.
>
> The Planning Board is assisted in its work by volunteer segment and sector committees. The sector committees are representative of each of the ten major sectors of the economy, and report to the Planning Board. One of these sectors advises on transportation and communication matters. The sectors are in turn subdivided into common interest groups or segments within each of the sectors and these segments report to the parent sector committee.
>
> Within this organizational structure, ideas and proposals filter upward, being rationalized in the process, until they reach the Planning Board. The Board resolves remaining conflicts, evaluates proposals and, as it sees fit, advances recommendations to the appropriate body either public or private, for their implementation.

> In this manner the material presented in this brief has been approved and adopted by the Voluntary Planning Board for submission to the Government of Canada through the Standing Committee on Transportation and Communication. The Government of Nova Scotia has also received a copy of this brief through the normal channels.

In this brief we have outlined the "land bridge" concept, the relationship of the Kauffeld and McKinsey Reports to the unit train philosophy and the existance of deep draught ice-free harbours in Nova Scotia which are located closer to Europe than any other North American port.

[*Interpretation*]

sieur le président, messieurs. Notre mémoi vous a été soumis il y a environ un an et no ne l'avons pas changé. J'ai tout de même u résumé de ce mémoire qui a été mis à jour.

Au tout début de notre mémoire nous avo décrit ce qu'est l'Office et je veux tout sim plement vous donner lecture des deux pr miers paragraphes:

> L'Office indépendant de planification la Nouvelle-Écosse est un organisn bénévole créé il y a quelques années po étudier et promouvoir le développeme économique de cette province. Sa fonctic principale consiste à fournir des conse au secteur public et privé de l'économ Les membres de cet organisme sont d cadres supérieurs appartenant à tous l domaines de l'activité économique de province.
>
> L'office de planification est soute dans son travail par des comités de se teur et des sous-comités également bér voles. Les comités de secteur représente chacun des dix principaux secteurs l'économie et relèvent de l'Office de p nification. Un de ces comités de secte est chargé des transports et communi tions. Les comités de secteur sont divi en groupe d'intérêts communs, c'est dire en sous-comités, dont chacun rel du comité de secteur qui l'a créé.
>
> Telle est l'organisation interne l'Office où idées et suggestions font l chemin vers le haut, subissant tout processus de rationalisation avant d'ar ver au sommet. L'Office de planificat arbitre les derniers conflits, évalue projets et, lorsqu'il le juge bon, adre des recommandations aux corps admir tratifs intéressés, aussi bien privés publics, pour la mise en œuvre projets...
>
> C'est de cette façon que l'étude prés tée dans ce mémoire a reçu l'approbat de l'Office indépendant de planificat qui l'a fait sienne et la soumet au gouv nement du Canada par l'intermédiaire Comité permanent des transports et c munications. Le gouvernement de la N velle-Écosse a déjà reçu un exempl de ce mémoire par les voies ordina utilisées pour lui faire connaître les j jets de ce genre.

Nous avons aussi examiné la relation e les rapports Kauffeld et McKinsey et la losophie inhérente au concept des unités trains, de même que l'existence des ports mer dégagés de glace, en Nouvelle-Écosse situés plus près de l'Europe que n'imp quel autre port en Amérique du Nord.

[Texte]

We have briefly outlined the inequities that ave developed in the application of the aritime Freight Rates Act. We have men-oned and endorsed the efforts of the task rce of the Maritime Transportation ommission.

In the section on highways suggestions ave been made. Within the brief we have so set out certain recommendations which ay also be found together on the last page the brief.

It is the opinion of the Voluntary Planning oard that transportation costs and service eficiencies are major factors which are seri-sly inhibiting the more rapid development this province and, indeed, the entire Atlan-region.

We therefore offer our support to the work your Committee and will do our utmost to cure whatever additional information per-ining to our proposals that may be desired.

Our brief was submitted one year ago. nce then the commencement of the con-ruction of a container pier here is very eartening and we hope that it will be devel-ped along with its other facilities in time to ave traffic going through this facility at the rt of Halifax very soon.

We thank you for the opportunity of laying ese matters before you and we trust at they will receive your sympathetic nsideration.

The Chairman: Thank you very much.

Mr. Skoberg: I believe earlier this after-on there was some discussion about sociations such as yourselves and exactly ho composed them. I believe it is only fair w to ask, if the membership of your organ-ation is composed of senior representatives awn from all phases of provincial economic tivities. Also, would you introduce your-lves and give your occupation as at this rticular time.

Mr. Mills: I am the paid director of the luntary Planning Board's small staff. Mr. rd is on our staff as the Secretary of our ansportation and communications sector.

Mr. Skoberg: You suggest you are a paid rector?

Mr. Mills: Yes. Our board is made up of 35 paid members representing labour, educa-n, service industries, manufacturing indus-ies—a cross section of all of the industries the province. I mentioned in the summary the brief that we have 10 sectors and a airman of each of these sectors. Each chair-an of a sector is a member of our Board.

[*Interprétation*]

Nous soulignons également les inégalités qui se sont produites dans la mise en application de la *Loi sur les taux de transport des marchandises dans les provinces Maritimes.* Nous mentionnons les efforts de la *Maritime Transportation Commission* et nous les appuyons.

Quant à l'aspect grand-routes, nous avons formulé des suggestions. Nous avons aussi élaboré certaines recommandations que l'on trouvera réunies à la dernière page de notre mémoire.

L'Office est d'avis que les frais des transports ainsi que les déficiences du service sont des facteurs importants qui nuisent sérieusement au développement plus rapide de cette province, et en fait, de toutes les régions de l'Atlantique.

Par conséquent, nous offrons notre appui et collaboration à votre Comité et nous ferons tout en notre pouvoir pour obtenir tous les renseignements supplémentaires, au sujet de notre mémoire, que vous pourriez désirer.

Notre mémoire a été présenté il y a un an. Le début des travaux d'aménagements de quais pour recevoir les conteneurs nous a fortement encouragés. Nous espérons que cela pourra se développer en même temps que les autres aménagements et que le tout pourra être bientôt mis en service.

Nous vous remercions de l'occasion que vous nous avez fournie de vous soumettre ces faits et nous espérons que le tout recevra une considération sympathique de votre part.

Le président: Merci.

M. Skoberg: Monsieur, je crois que plus tôt, cet après-midi, il y a eu une certaine discussion au sujet d'associations comme la vôtre et des personnes qui en font partie. Je crois qu'il serait juste de vous demander si vos membres se recrutent dans tous les secteurs de l'économie de cette province. Pourriez-vous nous dire qui vous êtes, exactement?

M. Mills: Oui. Je suis le directeur payé de l'Office et M. Ford est le secrétaire du secteur des transports et des communications.

M. Skoberg: Vous nous dites que vous êtes le directeur? Rémunéré?

M. Mills: Oui. Notre Office se compose de 35 bénévoles, qui représentent la main-d'œuvre, l'éducation, et l'industrie. J'ai mentionné dans le résumé du mémoire qu'il y avait 10 secteurs et que chacun a un président. Le président de chaque secteur est membre du conseil d'administration.

[*Text*]

Mr. Skoberg: Do you, sir, co-ordinate your activities with the Board of Trade or with government agencies, and has any member of your Voluntary Planning Board any credentials in community planning and things of that kind?

Mr. Mills: We do not work in isolation because our Board is composed of people of all skills and from all professions—institutions, businesses and so on. We have the academic side on our Board. We do not have doctors but we have lawyers, engineers, businessmen, educators, labour union representatives—a complete range of the economy of Nova Scotia.

Mr. Skoberg: I appreciate that answer, sir, because I believe a little earlier we ran into a problem where the member for Burnaby-Seymour wanted to get on a soap box and make an issue out of this.

The Chairman: Order, order. We are not going over that again, Mr. Skoberg. Would you please relate your question to the subject of transport?

Mr. Skoberg: Well, Mr. Chairman, I would suggest that my questions are more in order than what we had this afternoon.

Mr. Comeau: Has your Board studied the economic problems of the southwestern part of the province. I ask this because that part of the province seems to be at the lower economic level. What do you recommend? Do you feel that transportation is one of the key issues at that end of the province?

Mr. Mills: Our Board has not considered any particular part of the province as a region. Our work is broken down into sectors. These are not geographic sectors but industrial sectors. For instance, if we are considering agriculture as a sector of our economy, which it certainly is—fishing is another one—we consider this in the over-all scope. Mind you, from the over-all point of view we must look at the smaller parts, naturally, but our whole work is on a province-wide scope.

Mr. Comeau: In the southwestern part of the province we will be getting improved transportation facilities because the CPR announced a new ferry, and another ferry will be coming into Yarmouth. But do you feel that transportation is the key to the development of that section of the province?

Mr. Mills: I do not believe it is the main key to the development of that section of the province but it is certainly an important one.

[*Interpretation*]

M. Skoberg: Est-ce que vous coordonnez votre activité avec celle du *Board of Trade* ou avec une agence du gouvernement? Est-ce qu'il y a un membre de votre Office qui soit compétent dans le domaine de la planification communautaire, par exemple?

M. Mills: Nous ne travaillons pas indépendemment car notre Office est composé de gens qui viennent de toutes les professions, de tous les métiers, de toutes les spécialités. L'aspect académique y est représenté. Il n'y a pas de médecins mais il y a des avocats, des ingénieurs, des hommes d'affaire, des éducateurs, des syndicalistes, toute l'économie de la Nouvelle-Écosse est représentée.

M. Skoberg: J'apprécie beaucoup votre réponse car plus tôt, nous nous sommes heurtés à un problème lorsque le député de Burnaby-Seymour a tenté de monter le tout en épingle.

Le président: A l'ordre. J'espère que vous n'allez pas recommencer, M. Skoberg. Veuillez s'il vous plaît vous en tenir au domaine des transports.

M. Skoberg: Je dirais que mes questions sont plus pertinentes que celles que nous avons entendues cet après-midi.

M. Comeau: Votre Office a-t-il étudié les problèmes économiques qui existent dans le sud-ouest de la province. Il me semble que cette partie de la province se situe à un niveau économique inférieur. Que recommandez-vous? Croyez-vous que c'est le problème du transport qui est le plus important pour ce secteur?

M. Mills: Notre Office n'a pas considéré une région particulière de la province. Notre travail est fait par secteurs, non pas secteurs géographiques, mais secteurs industriels. Par exemple, si nous considérons l'agriculture comme un secteur de notre économie, et elle l'est, et la pêche aussi, nous envisageons le problème dans le contexte de la province dans son ensemble. Évidemment, il nous faut nous arrêter aux parties plus petites, mais notre travail se fait sur le plan de la province.

M. Comeau: Dans le sud-ouest de la province, la situation s'améliorera puisque le CPR vient d'annoncer la construction d'un nouveau traversier et qu'un autre se rendra à Yarmouth. Croyez-vous que les transports sont vraiment la clé du développement de cette partie de la province?

M. Mills: Je ne crois pas qu'il s'agisse de l'aspect le plus important, mais il s'agit certainement d'un aspect important. Dans no

[*Texte*]

hen we have mentioned the importance, if, s and when the tidal project is ever complet- d in the Bay of Fundy—that is, if it goes cross the Bay from Blomidon to Parrsboro r somewhere like that—that a roadway hould be built on top of this facility, in order o give better road transportation access by ndustry in that part of the province to the merican markets.

We also have made recommendations in ther reports that the service of the CNR erry operating from Yarmouth to Bar Har- or in the off season should be better sched- led to better serve that part of the rovince.

Mr. Comeau: Have you studied or looked at ir transportation particularly in that end of ne province, since it is again at a disadvan- age compared with other parts of the rovince.

Mr. Mills: No, we have not.

Mr. Allmand: Mr. Chairman, since your oard takes an over-all look at the economy f Nova Scotia I would like to ask you if you ave ever considered the ideas put forward by he Society of Atlantic Initiative. Did you ear their brief today or read it this morning?

Mr. Mills: No, I did not.

Mr. Allmand: I see. Well, there is no basis o my question. I wanted to ask you if you ad ever considered the ideas in that brief nd whether you had rejected them or con- idered them, or what your attitude was. ut if you are not familiar with them I ill not ask the question.

Mr. Nowlan: I have two questions, Mr. hairman.

In the first recommendation in your brief ou say the Federal Government should test he concepts outlined in the Kauffeld and IcKinsey Reports. Has part of that test egun under this pilot containerization proj- ct in Halifax harbour?

Mr. Mills: No, we mean by that. . .

Mr. Nowlan: And if not, what do you ean?

Mr. Mills: We mean the use of unit trains ver the road bed between the Atlantic egion and Upper Canada.

Mr. Nowlan: This would involve some mas- ive reconstruction of that roadbed; is that orrect?

[*Interprétation*]

mémoire, nous avons mentionné l'importance, si jamais on en termine avec le projet de la Baie de Fundy, de construire une route sur cet ouvrage afin d'améliorer l'accès à cette partie de la province.

Nous avons également recommandé dans d'autres rapports que l'horaire du traversier du CN entre Yarmouth et Bar Harbor soit modifié durant la saison morte afin de mieux desservir cette partie de la province.

M. Comeau: Avez-vous songé au transport aérien, tout particulièrement dans ce bout de la province, étant donné que ce coin est désavantagé par rapport aux autres secteurs de la province?

M. Mills: Non, nous ne l'avons pas fait.

M. Allmand: Monsieur, étant donné que votre office examine, dans son ensemble, l'économie de la Nouvelle-Écosse. Et je voudrais vous demander si vous avez déjà songé aux idées énoncées par la société *Atlantic Incentive Society* qui a présenté un mémoire ce matin; l'avez-vous lu ou entendu?

M. Mills: Non, je ne l'ai pas fait.

M. Allmand: Je vois. Alors ma question n'est pas fondée. Je me demandais si vous aviez déjà entendu parler de ces idées, si vous les aviez étudiées, si vous étiez d'accord ou non. Mais si vous ne les connaissez pas très bien, je ne poserai pas la question.

M. Nowlan: J'ai deux questions à poser, monsieur le président. Dans la première recommendation de votre mémoire, vous dites que le gouvernement devrait faire les preuves des théories énoncées dans les rapports Kauffeld et McKinsey. Est-ce qu'une partie de cette épreuve a été mise en œuvre par le projet-pilote de transport par cadres dans le port d'Halifax?

M. Mills: Non, par cela, nous voulons dire. . .

M. Nowlan: Et si non, que voulez-vous dire?

M. Mills: Nous voulons dire l'emploi de trains homogènes sur la voie entre la région de l'Atlantique et le Haut-Canada.

M. Nowlan: Ce qui demanderait l'amélioration du terre-plein, n'est-ce pas?

[*Text*]

Mr. Mills: It could. It may prove whether it is necessary or not. We hear that there are grades and curves and so on. We feel it is possible to put a unit train together for test purposes quite easily, try it over the line and see if it is an 18-hour run or a 30-hour run, or whatever it might be. This has not yet been tried out.

Mr. Nowlan: This is what you meant by the testing.

Mr. Mills: Yes.

Mr. Nowlan: My last question deals with your fourth recommendation that freight subsidies should be paid to shippers on a non-discriminatory basis which leads me to a two-part question. One, you do not like the present concepts of the Maritime Freight Rates Act of payment to carrier; and secondly, I gather you are inferring that payments should be extended to the trucking industry.

Mr. Mills: More particularly the last remark that you made: we believe it should be extended to the trucking industry and not paid exclusively to the railway.

Mr. Nowlan: Have you any further detailed recommendations on how to administer the payment to the shipper, and especially to the trucker?

Mr. Mills: No, I have not.

The Chairman: Mr. Rose.

Mr. Rose: My question, Mr. Chairman, is supplementary to a couple that have been asked. The first one is a supplementary to some of the remarks made by my colleague Mr. Skoberg. I believe that what Mr. Skoberg was trying to ask the witnesses was whether or not there were any members of his particular group who had degrees in community or regional planning, or was the group made up of interested people and gifted amateurs?

The Chairman: Mr. Rose, you had better relate your question to transport, otherwise I will not let you go any further.

Mr. Rose: Well, I am sorry, Mr. Chairman, I was pursuing a line of questions which you allowed earlier.

The Chairman: I will not allow that.

[*Interpretation*]

M. Mills: Il se peut que ce soit nécessaire Nous entendons dire qu'il y a des courbes e des côtes, etc. Nous croyons qu'il serait possi ble d'avoir un train unitaire, très facilement l'essayer sur le parcours et voir s'il s'agit d 18 heures ou de 30 heures de parcours. Cel n'a pas encore été fait.

M. Nowlan: C'est ce que vous vouliez dir par la mise à l'épreuve?

M. Mills: Oui.

M. Nowlan: Ma dernière question vise votr quatrième recommandation que les subven tions pour le transport des marchandises dar les provinces maritimes soient versées au expéditeurs sur une base non-discriminatoir Ceci m'amène à une double question. Tou d'abord, vous n'aimez pas l'idée actuelle de Loi sur le taux de transport des marchandis dans les provinces Maritimes sur le paieme aux transporteurs; et deuxièmement, j'ai l'in pression que vous voulez que la subventio soit étendue aux camionneurs.

M. Mills: Oui, c'est plutôt votre dernièr partie. Nous croyons que cette subventio doit être donnée aussi aux camionneurs non pas tout simplement aux chemins de f exclusivement.

M. Nowlan: Avez-vous d'autres recomme dations détaillées quant à l'administration d paiement à l'expéditeur et surtout au camionneurs?

M. Mills: Non, je n'en ai pas.

Le président: Monsieur Rose.

M. Rose: Ma question, monsieur le pré dent, est supplémentaire à deux questions q ont déjà été posées. La première est suppl mentaire à certaines observations que m collègue, M. Skoberg, a formulées. Je cr que ce que M. Skoberg tentait de demand aux témoins, c'est s'il y avait des membres son groupe qui avaient des parchemins en qui concerne l'urbanisme et la planificati régionale, ou est-ce qu'il s'agissait d' groupe de gens intéressés et d'amateu doués?

Le président: Monsieur Rose, il ser mieux que vous établissiez le rapport votre question aux transports, autrement, ne vous laisse pas poursuivre ce genre question.

M. Rose: Je m'excuse, monsieur le pré dent, je poursuivais une ligne de questio que vous avez permise plus tôt.

Le président: Je ne permettrai pas cela.

[*Texte*]

Mr. Rose: All right. The next question I would like to ask is again supplementary to a subject that Mr. Nowlan raised earlier, which was this business of paying subsidies to the shippers. I gather from your remarks that you would like to see the subsidies paid to the shippers through the carriers. This concerns me, and you were a little bit vague on the details, because what concerns me is that if MFRA were extended to the truckers it might not trickle down to the shippers and might be absorbed by the carriers. You will agree with me, I think, that the administration would be a much simpler thing because there are far fewer carriers than there are shippers; it would be much easier to administer. But I think your main emphasis would be to have this advantage of approximately 20 per cent ultimately end up in the hands of the shippers; is that not so?

Mr. Mills: Yes.

Mr. Rose: But you have no idea of how this might be administered.

Mr. Mills: No, but I think in its present form you do not have a free market as far as shipping is concerned. It is controlled, you might say, by the railway. I think competition would come into play. If the truckers could offer their services at competitive rates the goods would soon seek their own mode of transport—the cheaper one of the two—which would be the truckers. Even if they are the same price and the trucking is more convenient, then more business might go to the truckers.

Mr. Rose: But at the same time the people of Canada are subsidizing the railroads for this particular purpose, are they not? And the people of western and central Canada are subsidizing one mode of transportation. You are suggesting that what we should do is split the subsidy. Perhaps it would add to it. I think somebody said something like $4 million. I do not know if the truckers were included.

I can see the reasoning behind your statement there. I was more concerned with the administration of it.

Mr. Mills: I am not prepared to offer anything with respect to the administration.

Mr. Perrault: Mr. Chairman, first of all, I think the brief is most constructive and informative.

[*Interprétation*]

M. Rose: Très bien. La question suivante que j'aimerais demander est supplémentaire à celle que M. Nowlan a soulevée plutôt, qui a rapport au paiement de subsides aux expéditeurs. J'ai cru comprendre, d'après ce que vous avez dit que vous aimeriez que les subsides soient versés aux expéditeurs par l'entremise des transporteurs. Ceci concerne, et vous avez été plutôt vague quant aux détails, parce que ce qui me préoccupe, c'est que si les dispositions de la Loi sur les taux de transport étaient étendues aux camionneurs, il se peut que la subvention ne se rende pas aux expéditeurs mais qu'elle soit gardée par les transporteurs. Vous serez probablement d'accord, je crois, que l'administration serait beaucoup plus simple parce qu'il y a beaucoup moins de transporteurs que d'expéditeurs; par conséquent, l'administration serait d'autant plus facile. Je crois toutefois, que vous voulez cet avantage de 20 p. 100 qui finirait tout de même à être entre les mains des expéditeurs. N'est-ce pas?

M. Mills: Oui.

M. Rose: Mais vous n'avez aucune idée comment cela serait administré.

M. Mills: Non, mais je crois qu'à l'heure actuelle, vous n'avez pas un marché libre en ce qui concerne les expéditions? On peut dire qu'il est contrôlé par les chemins de fer. Je crois que la concurrence entrerait en jeu. Si les camionneurs pouvaient offrir leurs services à des taux concurrentiels, les expéditeurs eux-mêmes chercheraient vite le mode le moins coûteux pour le transport et cela se pourrait que ce soit les camionneurs. Même si le prix était le même et que les camions sont plus commodes, alors plus d'affaires iraient aux camionneurs.

M. Rose: Mais en même temps les contribuables du Canada subventionnent les chemins de fer à cette fin, n'est-ce pas? Et les gens de l'Ouest et du centre du Canada subventionnent un genre de transport. Ce que vous figurez, c'est que nous divisions les subventions. Cela pourrait peut-être ajouter quelque chose comme 4 millions de dollars à celles-ci. Je ne sais pas si on avait compris les camionneurs.

Je vois très bien le raisonnement qui a animé votre observation. Je m'intéressais beaucoup plus à l'administration de cette histoire.

M. Mills: Je ne suis pas prêt à me déclarer en ce qui concerne l'administration du versement.

M. Perrault: Monsieur le président, tout d'abord je crois que le mémoire est très constructif et très complet.

[*Text*]

It suggested that containerization combined with the use of unit trains would give the Maritimes a competitive advantage, and I think the position is very well taken.

Let me ask you this: it is suggested that it will be expensive, at least in the early period of time, to establish these facilities. How do you see the costs of these facilities shared among various levels of government? Would you say that the federal government would pay a majority of the expense, or would there be a provincial involvement, or an involvement of private enterprise in assisting in the establishment of this concept which seems to have merit.

Mr. Mills: At this moment there is a provincial and a City of Halifax sharing of the cost of some of the work that is going on.

Mr. Perrault: On the containerization facility going on now?

Mr. Mills: On the containerization facility. But I do not think you mean to suggest that the province might usurp the National Harbours Board role...

Mr. Perrault: No, No.

Mr. Mills: .. in Halifax, nor would they get involved in the railroad transportation business.

Mr. Perrault: No. You talk in terms of improving the roadbed presumably from here to central Canada. Most of the expense would be borne by the federal government, I assume, on this particular program?

Mr. Mills: Yes.

Mr. Perrault: That was the essence of my questions?

Mr. Nowlan: I want to ask one other question. You may not be able to answer it, but perhaps the transport sector man may. The EIU Report suggests that transport cost is approximately 5 per cent in this area. Have you or any particular sector reviewed that section of the Economist Intelligence Unit report to determine how valid their assessment was? Is it five per cent, or is it higher in this area on manufactured goods?

Mr. Mills: I am afraid I cannot answer that specifically as to whether the five is valid or otherwise, but I do know that our sector did examine the EIU Report very thoroughly.

[*Interpretation*]

Le mémoire suggère que le transport par cadres, combiné avec l'utilisation de trains homogènes, donnerait aux Maritimes une position concurrentielle avantageuse. Je pense que c'est un position très sûre.

Permettez-moi de vous demander ceci: on laisse à entendre qu'il en coûtera cher, du moins au tout début, pour établir ces aménagements. Alors, comment envisagez-vous le partage de ces frais parmi les différents niveaux de gouvernement? Est-ce que vous diriez que le gouvernement fédéral paierait la majorité des dépenses ou est-ce que le gouvernement provincial serait impliqué ou est-ce que l'entreprise privée pourrait aider à établir ce concept d'idées qui semble être méritoire d'ailleurs.

M. Mills: A l'heure actuelle, il y a certainement partage entre la province et la ville d'Halifax quant à cet aménagement pour les cadres.

M. Perrault: L'aménagement qui se fait actuellement?

M. Mills: Quant aux installations pour le service des cadres. Mais je ne crois pas que vous vouliez dire par là que la province devrait remplacer le Conseil des ports nationaux...

M. Perrault: Non, non.

M. Mills: ...à Halifax, ni s'ingérer au transport ferroviaire.

M. Perrault: Vous parlez d'amélioration de terre-pleins je suppose d'ici au centre du Canada. La plus grande partie serait donc aux frais du gouvernement fédéral et je présume, dans ce programme particulier?

M. Mills: Oui.

M. Perrault: C'était le sens de mes questions.

M. Nowlan: Je voudrais poser une dernière question. Vous ne serez peut-être pas en mesure d'y répondre, mais peut-être que l'expert du service des transports pourra le faire. Le rapport de *EIU* a laissé entendre que les coûts de transport sont d'environ 5 p. cent pour cette région. Avez-vous ou un autre secteur particulier révisé cette section du rapport de l'*Economist Intelligence Unit* pour déterminer la validité de cette évaluation. Est-ce 5 p. cent, ou est-ce plus élevé ici pour les produits manufacturés?

M. Mills: Je ne pourrais pas répondre à votre question pour ce qui est de la validité de ce 5 p. cent, je sais que notre secteur a étudié la valeur de ce rapport.

[*Texte*]

Mr. Nowlan: Obviously they did not find that out of order, I gather.

Mr. Mills: We did not say so in our brief, although we did say in the first paragraph of our long form of the brief:

> In reviewing the Atlantic Provinces Transportation Study, which had been prepared for the Atlantic Development Board, the Planning Board found several shortcomings, particularly in the section dealing with sea ports. Rather than follow a more constructive approach in arriving at future prospects for the port of Halifax, those conducting the study merely made a projection of past trends. To be content with this procedure would be to passively accept the negative and faulty conclusion that there is very little future for the port of Halifax or any other Nova Scotia port.

In making that criticism of the work done by the EIU, one could almost say this was a general remark with respect to whether this five per cent was right or wrong.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: I have two brief questions, Mr. Chairman.

Has your group or any of your members made specific recommendations as to how the Canadian National Railways could operate more efficiently other than in the projected container facility?

Mr. Mills: No, we have not.

Mr. Nesbitt: Have you any views on the suggestions about the possible Chignecto Canal?

Mr. Mills: As we explained in our brief, we have a sector on transportation and communications, and within that sector there are four or five segments. One deals with railways; another one deals with ocean transport, and so on. Ideas that come up in these segments of that sector, if valid, will get by the segment level and go up to the sector level. If the sector considers they are valid they will pass them on to the Board. The fact that the Board has not referred to this leads me to say conclusively that the Chignecto Canal...

Mr. Nesbitt: They had not thought about it?

Mr. Mills: Well, if they had thought of it they have discarded it.

The Chairman: This completes the questions, Mr. Mills. Thank you very much for coming here.

[*Interprétation*]

M. Nowlan: Évidemment, ils n'ont pas conclu que ce n'était pas juste.

M. Mills: Nous ne l'avons pas dit dans notre mémoire, bien que nous avons dit au premier alinéa du mémoire au long:

> En examinant l'étude sur les transports dans les provinces Atlantiques qui a été faite pour la Commission de développement de l'Atlantique, l'Office de planification y a relevé quelques lacunes, en particulier dans la section traitant des ports de mer. Plutôt que d'adopter une attitude constructive et de chercher de nouvelles perspectives pour le port de Halifax, les auteurs de l'étude se sont bornés à fonder leurs prévisions sur les tendances du passé. Accepter passivement cette conclusion erronée et négative nous condamnerait à n'entrevoir que très peu d'avenir pour le port de Halifax, comme pour les autres ports de Nouvelle-Écosse.

En faisant cette critique du travail de l'EIU, on peut dire que c'est là une observation d'ensemble quant à la validité de ce 5 p. cent, qu'il soit juste ou non.

Le président: Monsieur Nesbitt.

M. Nesbitt: Deux questions très brèves, monsieur le président.

Est-ce que votre groupe ou vos membres avaient formulé des recommendations précises quant à la façon dont le National Canadien pourrait avoir une exploitation plus efficace quant au service projeté de cadres?

M. Mills: Non, nous ne l'avons pas fait.

M. Nesbitt: Est-ce que vous avez des points de vue au sujet des suggestions faites sur le canal de Chignecto?

M. Mills: Comme nous l'avons expliqué dans notre mémoire, nous avons un secteur de transports et communications, et dans ce secteur il y a 4 ou 5 segments. Ils traitent de Chemins de fer, d'autres des transports océaniques, et ainsi de suite. Et les idées qui sont énoncées dans ces segments de ce secteur, s'ils sont valables, alors de toute façon le segment pourra en arriver au secteur et si le secteur est valable, donc il passera au Conseil. S'il n'en est pas question ici au Conseil, j'imagine qu'ils n'ont pas pensé au canal de Chignecto...

M. Nesbitt: Ils n'y ont pas pensé.

M. Mills: Eh bien, s'ils y ont songé, ils l'ont mis de côté.

Le président: Ceci met fin à la période de questions, monsieur Mills. Je demanderais maintenant au Conseil économique des pro-

[*Text*]

I will now call upon the Atlantic Provinces Economic Council: Mr. Nelson Mann, and Mr. Arthur C. Parks.

I would ask Mr. Mann to give us an idea of his brief.

Mr. Nelson Mann (Executive Vice-President, Atlantic Provinces Economic Council): Thank you very much Mr. Chairman, and members of the Committee. I want to express the sincere appreciation of my president, Mr. Charles MacFadden, who unfortunately had to leave for New York yesterday. He had intended to present this brief but has asked me to do it for him.

Accompanying me is Mr. Arthur Parks, our Chief Economist from Fredericton.

What I have to say to you is a summary of our thinking and it is very brief. We have no doubt at all, gentlemen, that during your tour of the Atlantic Region you have received and you will receive and continue to receive many worthy submissions concerned with many aspects of transportation and the problems that surround it.

These, we have no doubt, are directed to such matters as subsidies and freight rates, to the causeway to Prince Edward Island and the corridor road through Maine, to superports and international airports, to more adequate rail services, to the need for additional ferries and to superhighways and land bridges.

Our brief is somewhat different in that it is concerned with the role of transportation in both influencing and servicing the regional development process. It is concerned with integrating all forms of transportation into one consistent framework to serve the development needs. The Atlantic Provinces although perhaps to a lesser degree than certain other regions of Canada, is a region in transition. There are, for example, discernible trends in population, distribution from rural areas and small urban communities to larger urban centres. There are also discernible trends to a changing industrial structure. This is most evident in a shift of employment from primary resources and their activities to manufacturing and the service industries.

Gentlemen, there is a noticeable tendency for both population and economic activities to now concentrate in larger centres and communities and we welcome this.

These movements must be continued and intensified. Indeed, it is the express purpose

[*Interpretation*]

vinces de l'Atlantique de bien vouloir se présenter. M. Nelson Mann et M. Arthur C. Parks. Je demanderais à M. Mann de nous présenter un résumé de son mémoire.

M. Nelson Mann (Vice-président exécutif Conseil Économique des provinces de l'Atlantique): Merci beaucoup, monsieur le président, et les membres du Comité. Je désire formuler notre reconnaissance, au nom de mon président, Monsieur Charles MacFadden, qui, malheurusement, a dû se rendre à New York hier. Il avait l'intention de présenter lui-même cette soumission. C'est pourquoi il m'a demandé de le faire en son nom.

A mes côtés se trouve M. Arthur Parks, notre économiste en chef de Fredericton.

Ce que je voudrais vous dire ce soir consiste en un résumé de notre ligne de pensée et c'est très bref. Nous n'avons aucun doute messieurs, que dans votre tour des provinces de l'Atlantique, vous avez entendu et vous entendrez encore un bon nombre de soumissions traitant des différents aspects des transports et des problèmes connexes.

Nous sommes sûrs que ces soumissions traitent des subventions et de tarifs marchandises, de la chaussée vers l'île du Prince Édouard, de la route de corridor par le Maine, des superports et les aéroports internationaux, un service plus adéquat et le besoin d'avoir des transbordeurs additionnels des grandes routes et des ponts.

Notre mémoire est quelque peu différent en ce qu'il s'intéresse au rôle des transports pour influencer et desservir tout le processus de développement sur le plan régional. Leur intérêts, c'est l'intégration de toutes les formes de transport dans une structure ou un cadre, afin de servir les besoins de l'expansion. Les provinces de l'Atlantique, quoique dans une moins grande proportion que d'autres régions du Canada, sont dans une région en pleine transition. Ainsi, par exemple, on peut observer une tendance marquée dans le déplacement démographique des centres ruraux et des petites collectivités urbaines vers les grands centres urbains. On peut constater également une tendance vers un changement de la structure industrielle. Ces tendances se traduisent surtout par un déplacement de l'emploi à partir des ressources primaires et leurs activités, vers les industries de manufactures et des services.

Messieurs, on peut constater une tendance marquée vers la concentration démographique et économique dans les grands centres et collectivités urbaines, et nous en sommes fort heureux.

Ces déplacements doivent se maintenir et s'intensifier. C'est même l'intention expres

[*Texte*]

of the new federal department of regional economic expansion to concentrate the development effort, as far as this is possible, in a relatively small number of growth centres. We want to see them established, built up and have them supported. This Councill views transportation as one means of encouraging such development and servicing its continual expansion.

You will note, however, that certain transportation technology adds a new dimension to the relationship between transportation and over-all development, and one which may very well give transportation a more active role to play in the development of the Atlantic Provinces.

The region has always been heavily dependent on exports, particularly exports of primary and partially processed materials. As a result of the new super port, land, bridge concept, it may well be that the region is destined to become a distribution route for the export trade, not only of Canada, but of other parts of the world. In other words gentlemen, while it was a change in transportation technology during the mid-19th century which was, in considerable measure, responsible for undermining the previous prosperity of the Maritime provinces, it can be the new development in transport technology a century later which may, in considerable measure, result in a new era of prosperity for the Atlantic Provinces.

Every assistance must be given this region to take advantage of its potential as a key link in the age of super ships, super ports and land bridges. In this way transportation becomes not only a service to total development, but also in itself a cause of development.

In summary, Mr. Chairman, and apart from this leading role, a transportation system for the Atlantic region must provide at least the minimum level of services required for development purposes at the least possible cost. We recognize that costs of such a service may be higher than they would be elsewhere, and the matter of subsidies, therefore, arises. However, it needs to be emphasized that subsidies are not the important consideration. The primary consideration is the development of a transportation system comprising all modes of transport to meet the needs of the present and the future. Subsidies, to whatever form of transport, should be looked at simply as a means of expediting the development of such a system.

Mr. Chairman, we gave you a lot of reading material that surrounded this and I hope that

[*Interprétation*]

du nouveau ministère de l'Expansion économique régionale de concentrer autant que possible les efforts d'expansion dans quelques centres de croissance relativement peu nombreux. Nous voulons les voir se constituer et se développer. Notre conseil considère le transport comme un moyen de servir cette expansion continuelle.

Nous ferons observer toutefois que certaines technologies des transports ajoutent une nouvelle dimension aux rapports qui existent entre les transports et le développement général, lesquelles pourront très bien donner un rôle plus actif aux transports dans le développement des provinces Atlantiques.

La région a toujours dû compter sur les exportations, surtout sur les exportations des matériaux à l'état primaire ou transformés en partie. Grâce au nouveau concept de super port-terre-pont, cette région pourrait devenir une route de distribution pour le commerce d'exportation, non seulement du Canada, mais d'autres parties du monde. En d'autres mots, messieurs, c'est un changement dans la technologie des transports au cours du 19e siècle qui en grande partie était responsable du fait qu'on a ainsi miné la prospérité des provinces maritimes. C'est peut-être le nouveau développement dans les technologies des transports, un siècle plus tard, qui peut en grande partie conduire à une nouvelle ère de prospérité pour les provinces de l'Atlantique.

Cette région doit recevoir toute l'aide voulue pour profiter de son potentiel comme étant un maillon principal dans cette ère de navires géants, de ports et de terre-ponts géants. Ainsi, le transport devient non seulement un service pour l'expansion globale, mais il provoque également le développement.

En résumé, monsieur le président, et outre ce rôle primordial, un système de transport pour la région de l'Atlantique doit assurer au moins un minimum de service requis pour le développement, avec le moins de frais possible. Nous reconnaissons que les coûts d'un tel service peuvent être plus élevés qu'ils ne le seraient ailleurs, et par conséquent la question des subsides se pose. Seulement il nous faut signaler que ce ne sont pas les subsides qui importent tellement. Il faut tout d'abord voir au développement d'un réseau de transport, qui comprendrait tous les moyens et modes de transport afin de répondre aux besoins du présent et de l'avenir. Quelle que soit la forme de transport qui bénéficie des subsides elles doivent être considérées simplement comme étant un moyen d'accélérer l'évolution d'un tel système.

Monsieur le président, nous avons mis à votre disposition une bonne documentation, et

[*Text*]

this very brief summary brings you up to date on how we feel. Thank you very much.

The Chairman: Thank you very much. Mr. Allmand.

Mr. Allmand: Mr. Mann and Mr. Parks, in your brief you have made a statement with respect to subsidies and I would like to ask you some questions on this matter.

Considering what you have said about subsidies, am I to take it that you do not recommend the continuation of MFRA in its present form, or at all?

Mr. Mann: Mr. Chairman, we do not attempt, in any way, to say whether the MFRA is right or wrong. We do not get into this matter of problems. What we are saying is that we do not believe in subsidies as something that should always be. We think that subsidies are a matter which, in order to get something off the ground, in order to get it started and well under way, needs to be put into effect, needs to be created and needs to be done. As for the continuation of subsidies *ad infinitum*, we think this is a wrong principle.

Mr. Allmand: In other words, you look upon a subsidy as a means of stimulating, or as a catalyst but not as a long term solution?

Mr. Mann: That is right.

Mr. Allmand: That is all, thank you.

The Chairman: Mr. Skoberg.

Mr. Skoberg: What population in urban centres do you consider to be a growth area?

Mr. Mann: Do you mean how large should a growth centre be?

Mr. Skoberg: Yes.

Mr. Mann: Again, I cannot tell you exactly, but I am going to ask Mr. Parks to deal with this question in a moment, because it is a matter that he has been studying as our economist. As far as we are concerned there are many different kinds of growth centres: there is the manufacturing centre, the service centre and others.

I do not think one could say just what the minimum amount would be. Halifax, we believe, is a growth centre. We believe that Moncton is a growth centres. We believe that

[*Interpretation*]

nous espérons que ce bref résumé vous mettra au courant de notre façon de penser. Merci beaucoup.

Le président: Merci beaucoup. Monsieur Allmand?

M. Allmand: Monsieur Mann et monsieur Parks dans votre mémoire, vous avez fait une déclaration pour ce qui est des subventions, et je voudrais vous poser d'autres questions à ce sujet.

Si l'on tient compte de ce que vous avez dit à l'égard des subventions, dois-je en conclure que vous ne recommandez pas le maintien des dispositions de la Loi sur les taux de transport des marchandises dans les Maritimes, sous sa forme actuelle ou l'abolition de ces dispositions?

M. Mann: Monsieur le président, nous n'avons pas du tout l'intention de dire que les dispositions de cette Loi sont justes ou pas. Nous ne nous mêlons pas de ce genre de problème. Tout ce que nous disons, c'est que nous ne croyons pas que les subsides doivent toujours être maintenus. Nous croyons que les subsides doivent servir à mettre quelque chose sur pied, à le mettre en marche et à le faire progresser.

Pour ce qui est de consentir des subsides sans aucune limite, nous croyons que c'est un mauvais principe.

M. Allmand: Donc, vous considérez une subvention comme étant un moyen de stimuler, d'encourager ou comme catalyseur mais pas comme étant une solution à long terme?

M. Mann: C'est juste.

M. Allmand: C'est tout. Merci beaucoup.

Le président: Monsieur Skoberg.

M. Skoberg: Quel pourcentage de population des centres urbains doit être considéré comme étant une région de croissance?

M. Mann: Vous voulez dire quelle doit être l'envergure cette région de croissance?

M. Skoberg: Oui.

M. Mann: Une fois de plus, je ne pourrai vous dire exactement ce qu'il en est; mais je vais demander à M. Parks d'y répondre dans un instant, parce que c'est une question qu'il étudie en tant qu'économiste. Il y a d'après nous plusieurs genres de centres de croissance: des centres de fabrication, des centres de service, et d'autres.

Je ne crois pas qu'on puisse dire au juste quel serait le minimum. Halifax, à notre avis est un centre de croissance et nous croyons que Moncton en est un; nous croyons c

[*Texte*]

centres with the population of Fredericton are growth centres. These are matters which must be established. We think for instance in the Port Hawkesbury area that this is going to be, perhaps before too long, a growth centre. It does not have a very large population as yet.

Mr. Arthur Parks (Chief Economist, Atlantic Provinces Economic Council): Mr. Chairman, there is no clear consensus, I think, of how large a growth centre should be.

There are people who have suggested a minimum population of 100,000: there are other people who have suggested when you get to 1 million your whole population, your whole activity, has become too concentrated and you meet all the problems of urbanization and so on. I do not think there is any clear answer to the question. I would suspect that Halifax in the case of the Atlantic provinces is an obvious growth centre. Halifax will likely have a population of 300,000 or so by the next 20 or 30 years. As Mr. Mann said, there are other types of growth centres. For example, the whole Fredericton, Ormocto complex of communities, taken together, was one of the fastest growing centres in Canada between 1961 and 1966. But it is a different type of centre: its economic base is the service industry and not industry as such.

Mr. Skoberg: Mr. Chairman and gentlemen, I am sure everyone in this room could have a different definition of a growth centre as it affected their particular municipality of their city. However, would you give me an indication of what type of commission should be set up to determine what a real growth centre is throughout Canada as applied to the new legislation that has been suggested here as recently as one or two days ago?

Mr. Parks: Mr. Chairman, in the case of the Atlantic Provinces, if I read correctly the legislation which was introduced in the House of Commons earlier this week, the intention is to select those centres which have considerable population at the moment and which show considerable growth prospects. It is a matter of reinforcing growth trends. It is not a matter of reversing trends and establishing new ones. It is a matter of reinforcing those growth trends which already exist. So far as the machinery for the selection of these is concerned, I do not know, but there is provision in the legislation, as I understand it, for

[*Interprétation*]

même qu'un centre de population, comme Fredericton, est un centre de croissance aussi. Ce sont là des questions qui doivent être établies. Nous croyons par exemple que la région de Port Hawkesbury deviendra éventuellement un centre de croissance. La population n'est pas encore tellement grande à ce moment-ci.

M. Arthur Parks (Économiste en chef, Conseil économique des provinces de l'Atlantique): Monsieur le président, les avis sont partagés quant à l'importance d'un centre de croissance. Certains ont parlé d'un minimum de 100,000 personnes; pour ce qui est de la population, d'autres ont dit que lorsque vous atteignez un million vous en êtes rendus au point où la concentration est trop grande et vous avez le problème de l'urbanisation. Il n'y a vraiment pas de réponse claire et précise à cette question, mais je dirais que Halifax, dans le cas des provinces de l'Atlantique, est vraiment un centre de croissance et je dirais que Halifax pourrait avoir une population de 300,000 d'ici les 20 ou 30 prochaines années. Comme M. Mann l'a dit, il y a d'autres genres de centres de croissance. Par exemple, les régions de Fredericton et d'Oromocto prises dans l'ensemble formaient l'un des centres qui croissaient le plus rapidement entre 1961 et 1966. Mais c'est un autre genre de centre de croissance; son assiette économique constitue l'industrie de service et non pas l'industrie comme telle.

M. Skoberg: Monsieur le président, messieurs, je suis sûr que chacun de nous ici pourrait définir différemment un centre de croissance, tel que cela affecte sa municipalité ou sa ville. Mais, pourriez-vous me dire quel genre de commission devrait être constituée pour déterminer ce qu'est vraiment un centre de croissance, à travers le Canada, tel qu'il est appliqué à la nouvelle législation qui nous a été proposée ici, disons il y a à peine un jour ou deux?

M. Parks: Monsieur le président, en ce qui concerne les provinces de l'Atlantique, si j'ai bien interprété la législation présentée à la Chambre des communes plus tôt cette semaine, on a l'intention de choisir les centres à populations très denses en ce moment et qui présentent des perspectives de croissance assez grandes. Il s'agit de renforcer ces tendances de croissance, plutôt que de les renverser et d'en établir de nouvelles. Il s'agit de renforcer de plus en plus ces tendances de croissance qui existent déjà. Pour ce qui est des rouages en vue de choisir les centres de croissance la législation prévoit la consulta-

[*Text*]

joint consultation between the government of Canada and the governments of the provinces concerned.

Mr. Skoberg: Would it be your opinion, sir, that your Atlantic Provinces Economic Council would make recommendations in this regard as to what you consider to be growth centres in your particular Atlantic provinces?

Mr. Mann: I would like to deal with that question.

What you would like to know is the real basis for the establishment of a growth centre. Mr. Parks passed over it rather quickly by saying that it is a centre which shows strong growth trends now and, coupled with that, a fairly sizeable population, that is, one that can support activity. You do not want to take too many of them, because then you are going to have just too many to deal with. You need to take relatively few. We made a suggestion on a number of them in an report which we put out some years ago.

Mr. Skoberg: Would you be prepared to name those now, sir—some of the ones you consider to be growth centres in the Atlantic Provinces.

Mr. Mann: Yes. We consider the Halifax-Dartmouth area as a growth centre; the major area in Saint John, the municipality; Moncton; Charlottetown; the Bathurst area; the Sydney area and the Saint John's, Newfoundland area, and I think the Corner Brook area.

I believe that since we named them, there is certainly the New Glasgow-Pictou area which has definitely come forward to be a growth centre.

Mr. Skoberg: Prior to this proposed legislation, sir, were any of these designated areas?

Mr. Mann: Oh, yes.

Mr. Skoberg: Most of these were?

Mr. Mann: Most of them, yes.

Mr. Skoberg: Have you given any consideration to the fact that the potential growth areas that may be involved in the Atlantic Provinces, which naturally evolve around the transportation system—do you think perhaps under the new proposed legislation that there are other areas that could be growth centres that were outside the realm of the designated

[*Interpretation*]

tion conjointe entre le gouvernement du Canada et les provinces en cause.

M. Skoberg: Êtes-vous d'avis que le Conseil économique des provinces de l'Atlantique formulerait des recommandations à cet égard quant à ce qui, d'après vous, représente un centre de croissance pour les provinces de l'Atlantique?

M. Mann: J'aimerais répondre à cette question. Je pense que ce que vous désirez savoir c'est le véritable fondement pour l'établissement d'un centre de croissance. M. Parks y a répondu assez rapidement en disant que c'est un centre qui présente des tendances de croissance assez marquées à l'heure actuelle, ajoutant à cela, une population assez importante c'est-à-dire une population qui porterait son appui à l'activité. A mon avis, vous ne voulez pas en prendre un trop grand nombre parce qu'alors vous devrez vous occuper d'un très grand nombre. Il vous faut donc un nombre peu élevé. Nous avons présenté un certain nombre de suggestions dans un autre rapport que nous avons publié il y a quelques années.

M. Skoberg: Seriez-vous prêt à nous donner leurs noms maintenant, monsieur, de certains de ces centres qui, à votre avis, sont des centres de croissance dans les provinces de l'Atlantique?

M. Mann: Oui. Nous trouvons que la région d'Halifax-Dartmouth est un centre de croissance. Nous trouvons aussi que Saint-Jean ainsi que Moncton, Charlottetown, Bathurst, Sydney et Saint-Jean de Terre-Neuve et Corner Brook sont des centres de croissance.

Puisque nous les avons nommés, il y a certainement la région de New Gasglow-Pictou qui devient là aussi un centre de croissance.

M. Skoberg: Avant ce projet de loi, monsieur, croyez-vous qu'un de ces centres était une région désignée?

M. Mann: Oui. Certainement.

M. Skoberg: La plupart de ces régions étaient des régions désignées?

M. Mann: Oui, la plupart.

M. Skoberg: Avez-vous tenu compte du fait que les centres de croissance éventuels qui pourraient être dans les provinces de l'Atlantique se développeraient en fonction du système de transport? Croyez-vous qu'en vertu de ce nouveau projet de loi, il pourrait y avoir d'autres secteurs qui pourraient être considérés comme étant des régions de crois-

[Texte]

reas before, because they could not qualify ue to the unemployment figure?

Mr. Mann: From the statement the Minister ade, it seems to us that the areas we were aiming should have been included in the er-all picture of the regional program have w been included.

Mr. Skoberg: No additional ones, though?

Mr. Mann: No. The ones that were outside e designated area program are now includ- and I do not think there are any others at need to be included.

What we are anxious to avoid is getting volved in too many, because once you do at you start to water down your whole pro- am. You need to concentrate on a limited mber and get them going and once they are ing and become strong, then you can start build your other areas. But in the mean- ne, as you can see from what happens in er parts of Canada, these centres will ne along naturally and grow and become y viable, and then there will be others at will start up.

We believe this is the way it should go, and s is the way it looks as if the intention is to ve it go in the Atlantic Provinces now.

Mr. Skoberg: Mr. Chairman, I would like to gest to the gentlemen, if I may, that in the er parts of Canada this is not necessarily way it works. The criteria for designated as is the unemployment figure. That deter- nes the decision as to the designation of h areas. And I am sure that under the new islation there may be other centres in the antic Provinces as well as the rest of nada that may now be included in a wth area, and I would suggest, and I uld ask, that if you think there are other as that could be included in the growth a realm of the new legislation, you should r particular attention to it. There may be ne suggestions you may have in that ard.

Mr. Mahoney: Mr. Chairman, I wonder if witness might tell us about the composi- n of his organization and what sort of staff has, what he considers his terms of refer- e to be, and who finances his work.

Mr. Mann: The Atlantic Provinces Econom- Council, Mr. Chairman, is a private organi- on which is supported financially by mem-

[*Interprétation*]

sance, qui autrefois, ne faisaient pas partie des régions désignées, n'étant pas admissibles étant donné les chiffres du chômage?

M. Mann: A la suite de la déclaration faite par le ministre, il me semble que ces régions qui, d'après nous auraient dû être incluses dans ces tableaux d'ensemble des programmes régionaux, le sont présentement.

M. Skoberg: Il n'y en a pas eu d'autres depuis?

M. Mann: Non. Celles qui n'étaient pas comprises dans le programme des régions désignées sont maintenant incluses et je crois pas qu'il y en ait d'autres qui doivent être incluses.

Ce que nous voulons faire, c'est de ne pas en avoir un trop grand nombre parce qu'alors si vous en avez un trop grand nombre, vous commencez à diluer tout votre programme. Il vous faut donc concentrer vos efforts sur un nombre limité, les relâcher une fois qu'ils vont bon train, et qu'ils se renforcent, vous pouvez construire vos autres régions. Mais, entre-temps, comme nous pouvons voir ce qui se produit dans d'autres régions du Canada, ces centres se manifesteront d'eux-mêmes, connaîtront la croissance, seront viables, et il y en aura d'autres qui se manifesteront par la suite.

C'est la façon dont les choses devraient se dérouler et c'est bien ce qui va se produire, semble-t-il, si c'est là notre intention dans les provinces de l'Atlantique.

M. Skoberg: Monsieur le président, j'aimerais simplement vous dire, messieurs, si on veut bien me le permettre, que dans les autres régions du Canada ce n'est pas nécessairement la façon dont cela fonctionne. Le critère utilisé pour la désignation des régions est le taux de chômage. Je suis sûr qu'en vertu de la nouvelle législation il peut y avoir d'autres régions des provinces de l'Atlantique et du reste du Canada qui sont actuellement incluses dans une région de croissance et si vous croyez qu'il y a d'autres régions qui pourraient être incluses dans les cadres de cette législation, il y aurait lieu d'y accorder une attention particulière. On pourra peut-être vous faire certaines suggestions à cet égard.

M. Mahoney: Monsieur le président, le témoin ne pourrait-il pas nous décrire la composition de son organisation, de son personnel; quel est son mandat et qui finance son travail?

M. Mann: Le Conseil Économique des provinces de l'Atlantique est un organisme privé, monsieur le président; il est appuyé sur le

[*Text*]

bership fees. Members include corporations, industries of all kinds, educational institutions, private members, labour unions. Anyone can join APEC who wants to. The representation is on a personal basis, on an individual basis. If a person comes here as a representative of a Corporation, he does not speak on behalf of that corporation; he expresses his own views when he is sitting in and discussing APEC problems.

We have a staff of sometimes 11, sometimes 12, but we have had a staff of 16, 20 and 24. But our staff at the moment is 11 persons and we have two offices; the central office in Halifax where the main administration is, and there we have a centre for our economic studies; and the office in Fredericton, which Mr. Parks looks after. He has a staff of economists to back him up there.

Our main work is in basic economic research and statistics, and we put out a number of publications which we think are objective. The aim of these is to analyse what is going on in the region, and to tell the people what is actually taking place from a private point of view, and to urge governments to do the things that we think governments should do. We meet five or six times a year. We have an annual meeting every fall which is a highlight of the economic activity in the region, and we have excellent co-operation with governments, with business people, labour people, and so on.

Mr. Mahoney: Do I take it from your answer, sir, that neither governments at any level nor government agencies are members of the association?

Mr. Mann: There are numerous government people. Most of the Premiers are members and pay their membership fees. Many of the government personnel are members. They feel that they would like to get in and support us.

Mr. Mahoney: This is in their personal capacity.

Mr. Mann: That is correct.

Mr. Nowlan: Did you make any specific study on the effect of LCL rates?

Mr. Mann: No, we did not do that, Mr. Nowlan. The Maritime Transportation Commission—we try our best to not do things that other people do.

[*Interpretation*]

plan financier par des cotisations venant d membres qui comprennent des corporatio des industries de tout genre, des institutio d'éducation, des membres privés, des sy dicats ouvriers—enfin n'importe qui peut pa ticiper au CEPA et en devenir membre s'il désire. La représentation se fait sur un pl individuel, personnel. Si vous venez com membre d'une corporation, vous ne parlez p au nom de cette corporation, mais vo exprimez vos propres points de vue lorsq vous nous parlez de problèmes du CEPA.

Nous avons un personnel de 11 à 12, m nous avons eu jusqu'à 16, 20 et 24 personn Notre personnel en ce moment est de 11 p sonnes, et nous avons deux bureaux. bureau central est à Halifax où se trou l'administration centrale et notre cen d'études économiques; il y a aussi le bure de Fredericton dont le responsable est Parks, qui a un personnel d'économistes p le supporter dans son travail. Notre princi travail se fait dans le domaine de la rech che économique fondamentale et de la sta tique. Nous avons présenté un certain nom de publications que nous croyons objecti et qui ont pour but d'analyser la situat dans la région, de dire à la population ce se produit ici du point de vue du sect privé, et de prier le gouvernement de fa ces choses, qui, à notre avis, devraient ê accomplies. Cinq ou six fois par année n avons une réunion. Nous avons une réun annuelle chaque automne qui est le point c tral de nos activités. Nous recevons excellente collaboration des gouverneme des hommes d'affaires et des travailleurs.

M. Mahoney: Je conclus d'après v réponse, qu'il n'y a pas d'agences du g vernement qui sont membres de l'associatio

M. Mann: La plupart des premiers mi tres sont membres et paient leur cotisat De nombreux fonctionnaires sont membres sans hésiter ils aimeraient peut-être pa ciper à notre travail et nous appuyer.

M. Mahoney: C'est à tire personnel et en tant que fonctionnaires.

M. Mann: C'est exact.

M. Nowlan: Est-ce que vous avez fait étude plus particulièrement des effets taux des chargements incomplets?

M. Mann: Non. Nous essayons vraimen ne pas faire des choses qui ont été faites d'autres.

[*Texte*]

Mr. Nowlan: Well, I quite agree. That is ery commendable. My second question has do in part with an answer you gave earlier out subsidies. In your brief and in your nswer there is no doubt that subsidy is a talyst and the ideal is not to have to pay it rever *ad infinitum* as you mentioned. But ou also say that we need a minimum stand- d of service at the lowest possible cost to eet the needs of the region, and since this gion has a scattered population and is vided and has two islands on it, it almost comes inescapable to have public subsidies. re you suggesting—you are not suggesting re today for a moment that the service is to the standard that you would like it to , and that we could roll back subsidies mpletely, regardless of what form. I am not ying necessarily MFRA, but some help defi- tely in the transportation area in the Atlan- Region. Is that not correct?

Mr. Mann: This is so true. For instance...

Mr. Nowlan: I would not want your answer out subsidies and the generality of it to slead anybody in this room.

Mr. Mann: No. I am sure that everybody—I ally feel that everybody feels about subsi- s just as I do. I mean—but then you look ound at our total population, you look at e geography of the Atlantic Provinces, and u say, how can you do it? And the answer that if we had a large population, if we re viable in industrial production, if we re selling our products all over the world d so on, then we probably would not need m. But in the meantime, to do this, for ample—when we made a presentation ently to the Premiers, the Atlantic Premi- , we said that one of the problems here is ability to move from P.E.I. to Moncton, will say, from Charlottetown to Moncton, from Charlottetown to Halifax, and you ks remember on your last visit down here at the problem was.

Mr Nowlan: We could not move.

Mr. Mann: And then over to Newfound- d. So that, from a mere convenience, the t way to get around here is by air, and re certainly needs to be a policy, I think. an example, with respect to air transport this region, subsidies should be created so t air service can link up with the major nscontinental service of Air Canada. There a tremendous need for this, and that is just e example.

[*Interprétation*]

M. Nowlan: Je suis parfaitement d'accord avec vous. C'est très sage, nous vous en félicitons. Ma deuxième question a trait à une réponse que vous avez donnée en partie sur la question des subventions. Dans votre mémoire il est bien évident que les subventions sont un catalyseur et qu'elles n'ont pas à être payées à l'infini. Mais vous dites aussi qu'il nous faut un service minimum au coût le moins élevé pour répondre aux besoins de la région et puisque cette population est éparpillée en deux îles entre autre, il est inévitable ou à peu près qu'on ait des subventions publiques. Est-ce que vous proposez aujourd'hui vraiment que les services sont selon les normes que vous voudriez avoir et que nous pourrons simplement faire disparaître les subsides? Je ne veux pas nécessairement parler de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, mais nous avons vraiment besoin d'aide pour ce qui est du transport dans les régions de l'Atlantique, n'est-ce pas juste?

M. Mann: C'est une vérité évidente.

M. Nowlan: Je ne veux pas vos avis sur les subventions pour induire les gens ici en erreur.

M. Mann: Je suis sûr que tout le monde partage mon avis sur les subventions. Mais alors, si vous tenez compte de l'ensemble de la population, et de la géographie des provinces de l'Atlantique, comment pouvez-vous le faire? Et la réponse est que si nous avions une population plus grande, si nous pouvions vivre de notre production industrielle, vendre nos produits de par le monde, et ainsi de suite, alors on n'aurait sans doute pas besoin de subventions. Entretemps lorsque nous avons fait une présentation aux premiers ministres de l'Atlantique, nous avons dit qu'un des problèmes était la difficulté de passer de l'Île-du-Prince-Édouard à Moncton, disons, de Charlottetown à Moncton, ou de Charlottetown à Halifax, et vous vous rappelez lors de votre dernière visite les problèmes que vous avez eus.

M. Nowlan: Oui, on ne pouvait plus se déplacer.

M. Mann: Ainsi de suite jusqu'à Terre-Neuve, donc la meilleure façon de se déplacer ici c'est par air et il faut donc établir une ligne de conduite. Par exemple, pour ce qui est du transport aérien dans cette région, des subventions devraient être créées pour que les services aériens puissent nous rattacher avec les principaux réseaux transcontinentaux. C'est un seul exemple que je vous donne.

[*Text*]

Mr. Nowlan: You would have to clarify that, because I do not know what your answer will be on this. But would you agree with me that access to central Canadian markets is in effect a condition of Confederation in this part of the country?

Mr. Mann: Everybody thought so.

Mr. Nowlan: But it has been very difficult to maintain.

Mr. Mann: Well, it has been very difficult to maintain. First of all, they built the railroad a little longer distance than some people thought they should because they were getting too close to the border, and we find really that over the years it has been very difficult to get into the Canadian market, because on the doorstep of people in Toronto and Montreal you had all kinds of business activity to serve the customers right there. And the question is, how to compete? Well, if you wanted to get wages here up to the level of other parts of Canada—and as someone said earlier here tonight, in some centres they are not too bad—but how can you do this if you do not get some help somewhere in order to create a viable position for yourself at home?

The Chairman: Mr. Breau.

Mr. Breau: Mr. Chairman, first of all, being a Maritime member, I should say to the members—maybe they do not know—that APEC is respected as a very well thought-of organization in the Atlantic Provinces as far as economics is concerned. I think it is the most respected.

Mr. Chairman, I have a couple of questions for the witness. You have put a great emphasis in your brief on primary industry.

Mr. Mann: On what?

Mr. Breau: Primary industry.

Mr. Mann: Secondary industry.

Mr. Breau: Did you put emphasis on primary industry?

Mr. Mann: We emphasized primary industry.

Mr. Breau: Now, in relation to that, you proposed to have a better transportation system for exportation. I agree with that. But for secondary industry, which is very important to this area, how can you foresee—before we

[*Interpretation*]

M. Nowlan: Il faudrait préciser le tou mais je ne sais pas ce que sera votre répons maintenant. Est-ce que vous conviendri avec moi que l'accès aux marchés du Canad central soit une condition de la Confédératio pour ces parties du pays?

M. Mann: Tout le monde le croyait.

M. Nowlan: Cela a été assez difficile maintenir.

M. Mann: Oui en effet cela a été tr difficile à maintenir. Tout d'abord nous avo construit les chemins de fer sur un parcou un peu plus long que certaines personn auraient cru qu'on allait le faire, étant don qu'ils s'approchaient trop des frontières. Ma nous trouvons qu'au cours des années il a é très difficile de pénétrer le marché canadie car à Montréal et à Toronto on avait tout sortes d'entreprises qui vendaient justeme aux clients là-bas, et alors comment concu rencer? Et si nous voulons que nos salair soient au même niveau que dans les autr parties du Canada, comme quelqu'un l'a d auparavant ce soir, dans certains centres l salaires ne sont pas trop mauvais, mais co ment faire si vous ne recevez pas une aide quelque part afin de créer une situation vi ble pour vous-même chez vous?

Le président: Monsieur Breau.

M. Breau: Monsieur le président, tout d bord, venant des Maritimes moi-même, devrais peut-être dire aux membres qui savent ce qui se passe au CEPA, que le Co seil économique des provinces de l'Atlantiq est un organisme très bien respecté en ce q concerne l'économique dans nos provinc Enfin je dirais que c'est l'organisme le pl respecté.

Maintenant, monsieur le président, j'aur quelques questions à poser aux témoins. Vo avez insisté beaucoup dans votre mémoire s l'industrie primaire...

M. Mann: Sur quoi?

M. Breau: L'industrie primaire.

M. Mann: L'industrie secondaire.

M. Breau: Mais est-ce que vous avez insi sur les industries primaires?

M. Mann: En effet, les industries primair

M. Breau: Et alors, à ce sujet, vous pro sez d'avoir un meilleur système de transp pour l'exportation. Je suis d'accord. M pour l'industrie secondaire, qui a beauco d'importance pour la région, comment p

Texte]

t double or triple the population that we ve now—that you will be able to compete th the industries in central Canada without ving an operational subsidy for transporta-n? You advocate some kind of assistance, t not operational subsidies. You say that e idea would be assistance for a better nsportation system, but how can you resee, before we get double or triple the pulation in the Atlantic Provinces so that can sell enough here to pay enough, that could compete without having operational bsidies?

Mr. Mann: Well, Mr. Chairman, it seems to that the answer I gave to the previous estion applies directly to that question.

Mr. Breau: All right.

The Chairman: Mr. Perrault.

Mr. Perrault: Mr. Chairman, in the brief mitted in March of 1968 by this organiza-n, they talk about the exports from the ion. More than one-half of the total value accounted for by newsprint, iron ore and od pulp. Products of the fisheries, forests mines together account for all but 15 per t of regional exports. I would like to ask Mann whether his organization would our a tariff policy, reducing tariffs in cer-n of the areas affecting Maritime products. t necessarily free trade, but would this be assistance in addition to the other excellent as that have been put forth in this brief? you actively promoting certain tariff luctions?

Mr. Mann: Mr. Chairman, we have not ked on any specific one, but we have con-ually advocated that a free-trade world uld be to our advantage.

Mr. Perrault: Yes. Well, we found, in New nswick and indeed in many of the briefs, suggestion that there would be advan-es. For example, in selling fine papers in United States. Now it is excluded because tariffs, you see.

n British Columbia, for example, the elievable situation is that we could sell niture to the California market if we had iff reduction.

Mr. Mann: If you could get into the market.

Mr. Perrault: That is right. It has been gested on several occasions during this r that transportation subsidies should be ended to the trucking industry on the e basis as the rail subsidies, which it has n suggested should be continued and per-

[*Interprétation*]

voyez-vous—avant d'avoir deux ou trois fois la population que nous avons à l'heure actuelle—pouvoir concurrencer les industries du centre du Canada, sans avoir une subvention pour les transports? Vous avez souhaité une forme d'aide, mais non pas nécessairement une subvention opérationnelle. Vous nous exhortez à adopter un meilleur système de transport, mais comment prévoyez-vous, avant d'avoir deux ou trois fois la population actuelle des provinces de l'Atlantique afin de pouvoir vendre suffisamment ici pour payer, pouvoir faire la concurrence sans avoir une subvention opérationnelle?

M. Mann: Il me semble que ma réponse à la question précédente s'applique directement à celle-ci.

M. Breau: Très bien.

Le président: Monsieur Perrault.

M. Perrault: Dans le mémoire présenté en mars 1968, on dit que la moitié de la valeur totale des exportations est représentée par le papier journal, le minerai de fer et les produits de la pâte. Les produits de la pêche, de la forêt et des mines représentent 15 p. 100 des exportations régionales. J'aimerais donc demander à M. Mann si son organisme serait en faveur d'une politique tarifaire, qui réduirait les tarifs dans certains secteurs qui touchent aux produits des Maritimes. Non pas nécessairement un libre-échange, mais est-ce que cela aiderait en plus des autres excellentes idées que vous avez émises dans votre mémoire? Est-ce que vous demandez activement certaines réductions tarifaires?

M. Mann: Nous n'en avons pas choisi un seul, monsieur le président, mais nous avons toujours demandé et proclamé qu'un monde de libre-échange serait à notre avantage.

M. Perrault: Nous avons trouvé au Nouveau-Brunswick qu'il y aurait beaucoup d'avantages, par exemple, pour la vente de papier fin aux États-Unis. C'est maintenant exclus à cause des tarifs.

Nous trouvons en Colombie-Britannique, par exemple, la situation incroyable que nous pourrions vendre des meubles sur le marché de la Californie s'il y avait réduction tarifaire.

M. Mann: Oui, si vous pouviez pénétrer le marché.

M. Perrault: C'est exact. Il a été suggéré, à plusieurs reprises au cours de notre tournée, que les subventions au transport devraient être étendues à l'industrie du camionnage sur la même base que les subventions pour les chemins de fer, que l'on a aussi suggéré de

[*Text*]

haps extended. Some briefs have suggested that subsidies be paid for air transport. Would you, at least in the short run, favour the extension of subsidies to these other carriers in the Maritime area? The second last paragraph in this brief is rather vague on this point.

Mr. Mann: Well, it is vague because it is a very difficult question to answer. I have listened to a number of people here tonight trying to answer it, and there really was not any clear-cut answer, because whoever it was who asked the question earlier about, you know, how would you do it? This is the problem. How would you do it?

But one of the things that we are satisfied with is that free competition creates a situation which tends generally to be a favourable one, and if you can arrive at that position, you are going to have some advantages. It seems to me possible to calculate how subsidies could be given to the truckers. I do not know how.

Mr. Perrault: You would want to make sure that the advantage would be passed on to the producer.

Mr. Mann: You would want to be sure of that. That is right.

Mr. Perrault: This is one of the difficulties.

Mr. Mann: That is the difficulty, but it seems reasonable to investigate this.

Mr. Perrault: Yes. That is all, Mr. Chairman.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: There has been some reference already this evening, in the last few minutes, to air services in the Maritimes. Has your Council made any recommendations as to what could be done to sustain any regional air carriers that are already established or may be established in the Atlantic region, in particular, say, Nova Scotia or some of the other areas?

It is my understanding that very often projects that could be carried out by regional air carriers are often farmed out to other carriers from Central Canada. Have any recommendations been made on this to sustain regional air carriers that are either (a) in existence, or (b), may come into existence shortly?

[*Interpretation*]

continuer et même d'étendre. Dans certains mémoires, on suggère que des subventions soient accordées au transport aérien. Est-ce que vous êtes en faveur, pour l'avenir immédiat, de l'extension de ces subventions aux autres transporteurs des Maritimes?... L'avant-dernier paragraphe de votre mémoire est un peu vague à ce sujet.

M. Mann: C'est vague parce qu'il est très difficile de répondre à cette question. J'ai écouté plusieurs personnes ici ce soir essayer à vous donner une réponse et franchement il n'y a pas de réponse claire et nette. On s'est interrogé tout à l'heure, sur la façon de le faire. Voilà le problème, comment le faire?

Une des choses dont nous sommes convaincus, c'est que la libre concurrence crée une situation qui normalement a tendance à être favorable. Si vous êtes capables d'en arriver à cette situation, vous aurez certains avantages. Il me semble qu'il serait possible de calculer exactement comment vous pourriez accorder une subvention aux camionneurs. Mais je ne sais pas.

M. Perrault: Vous voudriez vous assurer par exemple que l'avantage soit transmis au producteur.

M. Mann: Évidemment.

M. Perrault: Voilà une des difficultés.

M. Mann: Il semble toutefois raisonnable de faire enquête à ce sujet.

M. Perrault: Très bien, merci.

Le président: Monsieur Nesbitt.

M. Nesbitt: On a parlé déjà ce soir, il y a quelques minutes, des services aériens dans les Maritimes. Est-ce que votre Conseil a formulé des recommandations quant à ce que l'on pourrait faire pour soutenir les transporteurs régionaux aériens qui sont déjà établis ou qui pourraient s'établir dans la région de l'Atlantique, tout particulièrement, mettons en Nouvelle-Écosse ou dans certaines autres régions.

Je crois comprendre que très souvent les projets que les transporteurs régionaux pourraient entreprendre, sont souvent déjà donnés à d'autres transporteurs du centre du Canada. Je me demandais s'il y avait des recommandations à ce sujet afin de soutenir les transporteurs régionaux qui existent déjà ou qui pourraient être mis en service dans un avenir immédiat.

[Texte]

Mr. Mann: Mr. Chairman, this is not one of ur responsibilities. First of all, the answer is o, we did not; and the other would be that e would be very unlikely to do so because e do not consider that we have the capacity r an investigation of this kind, or even to ake a recommendation of this kind. It is for e Maritimes Transportation Commission nd others, as I have said to Mr. Nowlan—his is their job; let them do it.

Mr. Nesbitt: My second short question elates to the Maritime Freight Rates Act hich has been brought up on many occaons in the last day or so. I have here a atement made in September of 1966 by the rmer Minister of Transport, Mr. Pickersgill, ow the very able and capable Chairman of e Canadian Transport Commission. The otation was very brief, as I recall it, that would never be a willing party to an alterion of the Maritime Freight Rates Act that e Atlantic Provinces generally did not conder would give them greater benefits than e Act already gives. Have you any comment that?

Mr. Mann: I really do not have any coment now. Later on, if you would like to talk ith me, I might.

Mr. Pringle: Mr. Chairman, I would like to llow up for just a moment the questioning growth areas that came from the other ble a little while ago.

You were asked what areas you considered be growth areas, and I was very interested that. What are your criteria relative to a owth area? I consider your organization to ve some expertise in this by virtue of the scussion we had. For example, you happened to mention Charlottetown as a growth ea.

Is this based on increase in population over certain period of time, or on an increase in dustrial development in that particular ea, or on reduction in unemployment? What iteria do you feel we should look for when ying to consider what is a growth area?

Mr. Mann: Mr. Chairman, we did not do at just by pulling the names out of a hat. e used a criterion. Mr. Parks did this, and I ill ask him to answer you.

[*Interprétation*]

M. Mann: Monsieur le président, ce n'est pas là une de nos responsabilités. Tout d'abord, la réponse est non, nous ne l'avons pas fait, et deuxièmement, c'est que nous ne le ferions probablement pas, étant donné que nous n'estimons pas que nous avons la compétence voulue pour une enquête de ce genre même pour formuler une recommandation à ce sujet. La Commission des transports des provinces Maritimes et d'autres comme je l'ai déjà dit à M. Nowlan, c'est leur travail, qu'ils le fassent.

M. Nesbitt: Une autre question très brève maintenant au sujet de cette question de la Loi sur le taux des transports des marchandises dans les Provinces Maritimes dont on parle depuis quelques jours. J'ai une déclaration faite en septembre, 1966, par l'ancien ministre des transports, monsieur Pickersgill, qui est à l'heure actuelle le président, très compétent d'ailleurs de la Commission Canadienne des Transports. En voici une brève citation qui se lit ainsi: «Je ne serai jamais consentant à modifier la Loi sur le taux des transports des marchandises dans les Provinces Maritimes que les Provinces de l'Atlantique en général n'estiment leur donner de meilleurs avantages qu'ils n'ont à l'heure actuelle.» Avez-vous des commentaires à formuler à ce sujet?

M. Mann: En fait, non. Je n'ai pas de commentaires à faire en ce moment. Peut-être plus tard si vous voulez me parler, j'en aurai peut-être.

M. Pringle: Monsieur le président. J'aimerais poursuivre pendant un moment les questions quant aux centres de croissance, qui ont été posées de l'autre table. On vous a demandé dans quelles régions à votre avis étaient des centres de croissance, ce qui m'a beaucoup intéressé. Mais je me demandais quels étaient vos critères quant aux centres de croissance. Je considère que votre organisme se connaît suffisamment dans le domaine, vu la discussion que nous avons eue. Par exemple, vous avez mentionné Charlottetown comme étant un centre de croissance.

Est-ce que vous fondez cette affirmation sur la croissance de la population au cours d'une certaine période de temps ou sur le développement industriel dans cette région ou sur la réduction du chômage. Quels sont les critères que nous devrions examiner quand nous essayons de déterminer ce que c'est un centre de croissance.

M. Mann: Monsieur le président, nous n'avons pas tout simplement dressé une liste de noms. Nous avons un critère. M. Parks qui l'a établi et j'aimerais lui demander de vous répondre.

[*Text*]

Mr. Pringle: Thank you.

Mr. Parks: Mr. Chairman, there were two general types of criteria which were used: one was the economic criterion and the other was the political one. We were concerned with industrial growth centres, not service growth centres.

As economic criteria we looked at the present level of population and the growth of population over a reasonable period of time. We examined the labour force and its industrial composition to find out whether there was any trend towards the concentration of manufacturing in a number of communities which we selected. We looked at income levels and all this type of thing.

You have to recognize, in addition to this, that there are four separate political entities in this part of Canada—the four provinces. The political facts of life are beginning to make themselves felt and until maritime union you have to have at least one growth centre in each province.

Mr. Pringle: I am delighted. Thank you very much.

Mr. Carter: I feel compelled, sir, to ask Mr. Mann a few questions. Representing, as he does, the Atlantic Provinces Economic Council, he represents all of the Atlantic provinces, unlike the brief presented this morning by the Society of Atlantic Initiative.

All during our tour we have had quite a lot of discussion and debate about the problems encountered by people who are transporting products, and so on, to Central Canada. We all realize, and we all must admit, that probably one of the weaknesses of Confederation, as I see it, is that the Maritime Provinces have become, in effect—if you want it put this way—a dumping ground for central Canada.

The breakfast cereals we eat in the morning, the tables from which we eat it and the chairs on which we sit are sold in and come from Central Canada to the Atlantic Provinces.

As a Newfoundlander, I raise this problem now because I presume the Atlantic Provinces Economic Council will not be presenting a brief in Newfoundland, and this is probably the last chance I will have to ask this question of them on this tour.

Sir, what are your views on the transport of our human resources? These of course, as we all must agree, are probably the most

[*Interpretation*]

M. Pringle: Merci.

M. Parks: Monsieur le président, il y aurait deux critères généraux, l'un économique l'autre politique, que nous avons employés Ce qui nous intéresse sont les centres de croissance industrielle et non des services. En ce qui concerne le critère économique, nous avons examiné le niveau actuel de la population ainsi que la croissance de la population pendant une période raisonnable de temps Nous avons aussi examiné la main-d'œuvre et sa composition industrielle afin de déterminer s'il y avait tendance à concentrer l'industrie de la fabrication dans un certain nombre de communautés que nous avions choisies. Nous avons examiné les niveaux de revenu et ce genre de choses.

Ensuite il faut reconnaître aussi, en plus de cela, qu'il y a quatre entités politiques distinctes dans cette région, c'est-à-dire les quatre provinces. Les faits de la vie politique commencent à se faire sentir et jusqu'à ce qu'il y ait l'union des Provinces Maritimes il faut nécessairement voir au moins un centre de croissance dans chaque province.

M. Pringle: Je suis très heureux. Merci beaucoup.

M. Carter: Je me sens obligé, monsieur, de poser quelques questions à monsieur Mann étant donné qu'il représente le Conseil Économique des Provinces de l'Atlantique, qui, de par son nombre, implique qu'il représente toutes les Provinces de l'Atlantique et non pas, comme le mémoire ce matin présenté par la Société pour l'initiative de l'Atlantique.

Tout au cours de notre tournée nous avons entendu beaucoup parler des problèmes que rencontrent les gens qui transportent des marchandises vers le centre du Canada. Nous savons tous et il faut avouer que probablement un des points faibles de la Confédération, tel que je l'envisage, est que les Provinces Maritimes, en fait, sont devenues le terrain de dumping pour le centre du Canada.

Les céréales que nous mangeons le matin, les tables sur lesquelles sont posées ces céréales, les chaises sur lesquelles nous sommes assis, sont vendus aux provinces maritimes et nous viennent du centre du Canada. A titre de Terreneuvien, je soulève le problème maintenant parce que le Conseil Économique des Provinces de l'Atlantique, j'imagine, ne présentera pas de mémoire à Terre-Neuve, c'est probablement la dernière fois que j'aurai l'occasion de poser cette question au cours de la tournée.

Je me demande alors quelles sont vos opinions à l'égard du transport de nos ressources humaines. Évidemment nous convenons tous

[*Texte*]

mportant. We have heard comments from ifferent towns—Fredericton yesterday and nother town in Nova Scotia this morning—to ne effect that Canadian National are deliber-tely downgrading their rail passenger service ith a view to eventually phasing out that ervice because it is not economic. I do not ant to appear too regionalistic. I presume at on Friday and Saturday we will have our ound of flesh in St. John's relative to pas-nger rail service—have no doubt about that.

The Chairman: Do you have a question, r. Carter?

Mr. Carter: We will have our pound of esh on that, but while Mr. Mann is here I ould like to ask him this: Notwithstanding I that has been said about transporting pro-ice, and so on, from the Atlantic Provinces the central Canada region, I wonder what e his views, or those of the Atlantic Prov-ces Economic Council—APEC—on the ansportation of our human resources?

I do not think I need elaborate on the point am trying to make. There are certain areas Canada—and I could name one in particu-r but I will not—where this seems to come secondary in that passenger rail ser-ce has been discontinued. I do not wish to nfine my remarks to my province, because has been said here today and yesterday at there are other cities and towns which e pretty well in the same boat. I want to ow the views of Mr. Mann, or of his Coun-, on the Attitude of Canadian National and e CTC—I notice Mr. Hanley is smiling over ere—towards the transportation of our man resources and the obvious attempt of nadian National to downgrade the passen-r rail service in several areas, and particu-ly in one province, with a view eventually eliminating that service altogether in vour of buses with 39 seats and you know at.

The Chairman: Question, question, Mr. rter, please.

Mr. Carter: My question, Mr. Chairman, is vious. I want to know what Mr. Mann nks of the CNR's attitude and policy on ssenger rail service for human resources? e have heard a great deal of talk about nsporting produce and products, and so on. at about the greatest of all resources—man resources?

The Chairman: If you give him a chance witness will give you an answer.

[*Interprétation*]

que ces ressources sont les plus importantes. Nous avons entendu des commentaires de certains endroits, à Fredericton hier, et d'une autre ville de la Nouvelle-Écosse ce matin, qui disaient en somme que le National Canadien recule délibérément son service voyageur en vue d'éventuellement éliminer le service, parce que, financièrement, ce n'est plus rentable. Je ne veux pas être trop régionaliste car j'imagine que vendredi et samedi nous aurons notre part à Saint-Jean en ce qui concerne le service voyageur, j'en suis sûr.

Le président: M. Carter, est-ce que vous avez une question?

M. Carter: Nous exigerons ce qui nous revient. Mais pendant que monsieur Mann est ici, je voudrais lui demander le suivant: Nonobstant de ce qui a été dit au sujet du transport des produits de l'Atlantique vers le centre du Canada, je me demande quelle est son opinion et quelles sont les opinions du Conseil économique des provinces de l'Atlantique en ce qui concerne le transport de nos ressources humaines.

Je ne crois pas qu'il soit nécessaire pour moi d'élaborer un peu plus sur ce point que j'essaie de soulever. Il y a certaines régions du Canada, et je pourrais en nommer une en particulier, mais je ne le ferai pas, où ça semble être secondaire en ce sens que le service voyageur a été discontinué. Je ne veux pas limiter mes remarques à ma province seulement, car il a été dit ici, aujourd'hui et hier qu'il y a d'autres villes qui se trouvent dans la même situation. J'aimerais savoir quelle attitude M. Mann prend au sujet du National Canadien et de la Commission canadienne du transport. Je remarque que M. Hanley sourit en ce qui a trait au transport de nos ressources humaines, et l'attitude évidente du National Canadien de déférer les services voyageurs dans certaines régions, et dans une province en particulier, en vue d'éliminer ce service complètement à la longue, en faveur d'autobus d'une capacité de 39 voyageurs et vous savez quoi.

Le président: Monsieur Carter, quelle est votre question, s'il vous plaît?

M. Carter: Ma question est évidente et manifeste, monsieur le président. Je me demande ce que pense M. Mann de l'attitude et de la politique du National Canadien au sujet du traffic voyageur pour les ressources humaines. On a beaucoup entendu parler du transport des marchandises et des produits. Qu'est-ce qu'il en est de la plus grande des ressources, les ressources humaines?

Le président: Si vous lui permettez de vous répondre.

[*Text*]

Mr. Carter: I am sorry for the speech, Mr. Chairman, but I could not help it.

The Chairman: Thank you.

Mr. Mann: Mr. Chairman, I do not have any real knowledge about "the flyer" from St. John's to Port aux Banques.

An hon. Member: Flyer, did you say?

Mr. Mann: I always call the "Newfie Bullet" the flyer. I really do not have any special views about that. I know that APEC is anxious to see an efficient passenger service established. We know that a new all-weather highway has been established over some of the same route. I have driven over it and find it much faster than the train. Therefore, I have felt that if I were going to go from, say, Sydney to St. John's I would much prefer to drive. This is my own personal feeling; this is what I would like to do. If I wished to get there in a hurry I would take to the air. That is what I meant earlier when I said that there is a need for an integrated policy statement on air transport on a regional basis and how it is to be developed.

Seriously, our geography is such that we have to have that kind of thing—quick service. If you look at it yourself honestly and say: "Which way do I get the quickest service? Do I get it by air or do I get it by road?" I think you would come up with the answers.

Mr. Carter: Mr. Chairman, if we are going from Montreal to St. John's or to Stephenville, or from Montreal to Halifax, I agree that the jet service, and the air service generally, is faster; but I think Mr. Mann must agree that there are areas in Canada—and I am not suggesting Newfoundland is alone in this; there are Nova Scotia and New Brunswick—where it is impossible, or it is not suitable, to use the air service.

I am asking him to state his feelings about an obvious policy of Canadian National—and I say this with great respect to the people here tonight who represent Canadian National—to downgrade, to discourage, the use of rail passenger service in certain parts of Canada, particularly in the Maritime Provinces, and more particularly in Newfoundland.

Mr. Mann: Mr. Carter, I doubt that I could add anything to what I have already said

[*Interpretation*]

M. Carter: Je m'excuse du discours mais je ne pouvais pas faire autrement, monsieur le président.

Le président: Merci.

M. Mann: Monsieur le président, je n'ai pas de réelles connaissances au sujet du «flyer» de Saint-Jean à Port aux Basques.

Une voix: Qu'est-ce que vous entendez par «flyer».

M. Mann: J'appelle que «Newfie Bullet» le «flyer», mais honnêtement, je n'ai pas d'opinion particulière à ce sujet. Je sais qu'en ce qui concerne le Conseil économique des provinces de l'Atlantique nous voudrions voir un service voyageur efficace établit. Nous savons qu'une nouvelle route toutes saisons a été établie dans cette région. En fait je l'ai parcourue et je la trouve beaucoup plus rapide que le train. J'estime donc, que si je devais me rendre mettons de Sydney à Saint-Jean Terre-Neuve, je préférerais de beaucoup aller en automobile. Cela est mon opinion personnelle. C'est ce que je voudrais faire. Et si je voulais m'y rendre très vite, je prendrais l'avion. C'est ce que je voulais dire plus tôt quand j'ai dit qu'il y a un besoin d'une politique sur le service aérien régional et de la façon qu'on va le développer.

Sérieusement, vu la géographie que nous avons ici, nous avons vraiment besoin d'un service rapide. Je crois que si vous vous demandez vraiment de quelle façon vais-je obtenir le service le plus rapide—par air ou par route—je crois que vous aurez la réponse.

M. Carter: M. le président, je suis d'accord. Si vous allez de Montréal à Saint-Jean, ou à Stephenville, ou de Montréal à Halifax, le service aérien à réaction est d'habitude plus rapide. Mais je crois que M. Mann serait d'accord qu'il y a des régions au Canada, je ne veux pas suggérer que Terre-Neuve est seule dans ce sens-là, il y a le Nouveau-Brunswick, la Nouvelle-Écosse, où il est impossible, où n'est pas pratique d'avoir un service aérien. Je lui demande alors, s'il voudrait me dire ce soir, quels sont ses sentiments vis-à-vis d'une politique manifeste du National Canadien. Je le dis en tout respect à l'égard des gens qui sont ici et représentent le National Canadien.

La politique manifeste du National Canadien de détériorer et décourager l'emploi du service voyageur, dans certaines parties du Canada, et en particulier dans les Provinces Maritimes, et plus précisément encore, à Terre-Neuve.

M. Mann: M. Carter, je ne crois pas que je puisse ajouter quoi que ce soit à ce que j'

Texte]

bout it. I do not know their policies on owngrading. I look at it in an over-all way,) see if they are trying their best to do a job ith the money they have. That is how I look t it.

Mr. Carter: I have a supplementary, Mr. hairman. Has the APEC concerned themelves with the sociological results of the bandonment of this particular line, or are ou just expressing a personal view?

Mr. Mann: We did not get into the sociolo- of it at all.

Mr. Carter: In effect, then, you are expresng a personal view?

Mr. Mann: I would have to say that this is personal view more than anything else. I id that I felt personally that I would like to there more quickly. That is all. I do not ally know anything about it, and APEC has ver discussed it.

Mr. Carter: Therefore, you have not invesgated the situation as it affects the commuty in that Province?

Mr. Mann: No; that is right.

Mr. Carter: Thank you.

The Chairman: Have you finished, Mr. rter?

Mr. Carter: I presume APEC does not conne the attitude of CNR in this respect, or es it?

Mr. Comeau: Mr. Chairman, I think my estion has already been answered. Would u agree with me that energy and transportion are the keys to the economic developent of the Atlantic area?

Mr. Mann: Energy?

Mr. Comeau: Energy and transportation; example, the development of the Fundy—e harnessing of the Fundy tides and transrtation. Would you agree with me that ese two things are the keys to the economic velopment of the Atlantic area?

Mr. Mann: I would agree that they are two tors, and two important factors, but not e only keys to it.

The Chairman: Gentlemen, this is the end the questioning. Thank you, gentlemen.

[*Interprétation*]

déjà dit, et je ne connais pas leur politique en ce qui a trait à la détérioration du service. J'envisage la situation d'ensemble dans ce sens que le C.N. essaye de faire de son mieux avec les fonds disponibles. C'est de cette manière qu'il faut l'envisager.

M. Carter: J'aurais une question supplémentaire à poser, monsieur le président. J'aimerais demander si le Conseil économique des provinces de l'Atlantique s'est préoccupé des résultats sociologiques de l'abandon de cette ligne particulière ou est-ce que vous exprimez tout simplement une opinion personnelle?

M. Mann: Non, en fait, nous n'avons pas considéré l'aspect sociologique.

M. Carter: En fait donc, votre opinion est une opinion personnelle.

M. Mann: J'avoue que c'est plutôt une opinion personnelle. J'ai dit que j'estimais personnellement que je préférerais y aller plus rapidement. C'est tout. Et je n'en sais vraiment pas grand-chose et le Conseil économique des provinces de l'Atlantique ne l'a jamais discuté.

M. Carter: Vous n'avez pas fait d'enquête sur la suggestion telle qu'elle influence les collectivités dans cette province.

M. Mann: Non, c'est vrai.

M. Carter: Merci.

Le président: Avez-vous terminé, monsieur Carter?

M. Carter: Je présume que le CEPA n'approuve pas l'attitude du National-Canadien à cet égard, ou est-ce qu'elle le fait.

M. Comeau: Je crois que l'on a déjà répondu à ma question. Êtes-vous d'accord que l'énergie et le transport sont la clé du le développement économique de la région de l'Atlantique?

M. Mann: L'énergie.

M. Comeau: L'énergie, et surtout dans la région des Maritimes, qu'on puisse harnacher la marée de la Baie de Fundy. Est-ce que vous êtes d'accord qu'il s'agit là de la clé pour le développement économique de la région de l'Atlantique?

M. Mann: Je dirais qu'il s'agit de deux aspects, deux facteurs importants mais non pas les seules clés à ce problème.

Le président: Messieurs, voilà la fin de notre période des questions, Messieurs, je vous remercie.

[*Text*]

The next brief is from Guilfords Limited, and I call upon Mr. A. D. Guilford, President, and Mr. G. S. Graham, purchase agent.

Mr. A. D. Guilford (President, Guilfords Limited): Mr. Chairman and gentlemen, my brief will be very short. I am a private concern, employing over 300 people in the Atlantic Provinces.

I am now exhibiting our product on which I have submitted my brief. It is very light, as you can see. We are being penalized on this product by being charged on a cubic basis.

An hon. Member: What is it?

Mr. Guilford: Do you want to see it?

Some hon. Members: Yes.

Mr. Guilford: It is a big advertisement. I have a three-quarter year statement here which shows that there is an increase in LCL freight this year of 26.2 over the other rate, which amounts to $7,500 in round figures to our small industry.

Gentlemen, that is all I have to say about this product. We are now manufacturing fishing buoys, another light product and we are being penalized because of this.

I agree also with the gentleman down there who said something about tariffs. As a company, we have been in business for 63 years. We are looking for larger markets because we have automated machinery. We have not enough people in our area to sell our products to, so we are looking to New England, New York and the Caribbean. To stay in business today you have to automate. A 50,000 pound plant in Canada today is a small plant. A $200,000 plant is considered an economical manufacturing process. Right in Canada today there is Du Pont, Union Carbide and CIL—50,000 pound plants. We have a very small space here and we have problems.

Mr. Nesbitt: Do you have the same problem that one other industry mentioned this afternoon, that they can arrange markets in Europe or in the West Indies but they simply cannot find transportation to deliver their produce.

Mr. Guilford: This is one of the reasons. I might mention, gentlemen, while I am on transportation, that I had a ride in a huge 5 passenger helicopter. It sells for $95,000 in the United States. I think this is the answer for

[*Interpretation*]

Le prochain mémoire est celui de Guildfords Limited et je demanderais à monsieur A. D. Guilford, président, et à monsieur G. S. Graham, directeur des achats de se présenter à la table.

M. A. D. Guilford (Président de la Guildford Ltée): Nous employons plus de 300 personnes dans les Provinces de l'Atlantique. Je vous montre maintenant le produit dont je parlais dans mon mémoire. C'est un produit très léger, comme vous voyez. On nous charge pour le poids par pieds-cube.

Une voix: Qu'est-ce que c'est?

M. Guilford: Vous voulez le voir?

Des voix: Oui.

M. Guilford: On fait beaucoup de publicité. J'ai un état financier pour 9 mois, mais qui vous indique que l'augmentation des marchandises de moins d'une wagonnée était de 26 p. 100, environ $500 dans notre petite industrie en chiffres ronds. Messieurs, c'est tout ce que j'ai à dire sur ce produit. Nous fabriquons maintenant des bouées de pêche, un autre produit léger, mais on nous charge en raison du volume.

Je suis tout à fait d'accord avec ce que la personne là-bas a dit au sujet des tarifs. Nous existons depuis 63 ans. Nous cherchons des plus grands débouchés car nous avons de l'équipement automatique. Il n'y a pas suffisamment de population dans notre région pour y vendre nos produits. Nous cherchons donc à le faire à New York, en Nouvelle-Angleterre et aux Antilles car pour demeurer en affaires de nos jours, il faut absolument automatiser. Une usine de $120,000 au Canada aujourd'hui est une petite usine. Une usine de $200,000 est regardée comme une entreprise de fabrication économique. A l'heure actuelle, au Canada, il y a DuPont, il y a Union Carbide et il y a CIL. Il ont des usines de $120,000. Nous nous avons une très petite usine et nous avons des problèmes.

M. Nesbitt: Avez-vous les mêmes problèmes qu'une autre industrie que nous avons déjà mentionnée, cet après-midi, soit qu'elle peut organiser des marchés en Europe et aux Antilles, mais qu'elle trouve absolument impossible d'assurer le transport de ces produits.

M. Guilford: C'est une des raisons. Je pourrais peut-être dire, pendant que je discute le sujet du transport, que j'ai eu l'occasion de voyager à bord d'un énorme hélicoptère à cinq passagers. Il se vend $95,000 aux États

Texte]

Air Canada because it would provide cheaper transportation for the Atlantic provinces.

Mr. Nesbitt: That was what I had in mind. This afternoon one of the people that sell apple juice stated that they had lots of markets in England and in the Caribbean for their concentrated apple pulp and the like but they could not get them there because there was no regular cargo service that they could rely on between Halifax and either Western European or Caribbean ports. Do you have the same problem?

Mr. Guilford: No sir. We have a firm in Bermuda. We ship by Saguenay Terminals to our company in Bermuda and then we work out the rest from the Carribbean.

Mr. Nesbitt: You do not have this problem.

Mr. Guilford: No, we do not.

Mr. Thomas (Moncton): I think the main problem concerned shipment to Europe. They had assured markets there but they could not find a method of transportation. You do not sell in Europe, do you?

Mr. Guilford: No, we do not sell in Europe. In plastics, for example, Germany is way ahead of everybody.

Mr. Rose: What percentage of the wholesale cost of your product is going for transportation.

Mr. Guilford: I am not too concerned about this, if you are asking me personally about the LCL, because I will find ways of getting my product to its market.

Mr. Rose: Perhaps you could explain what your real concern is to this committee.

Mr. Guilford: I feel that we are being penalized because we are making a very light product and the LCL rates have been changed from weight to cubical.

Mr. Rose: Then, with the utmost respect, you are concerned with the cost of transportation.

Mr. Guilford: We sure are.

Mr. Rose: I asked you, sir, and perhaps you cannot give it to me, the percentage of your

[*Interprétation*]

Unis. Je trouve que c'est là la solution pour Air Canada parce que cela procurerait un transport moins coûteux pour les provinces atlantiques.

M. Nesbitt: Ce n'est pas tout à fait ce que j'avais en tête. Cet après-midi, une personne qui vend du jus de pomme a mentionné qu'il y avait beaucoup de débouchés en Angleterre et aux Antilles pour leur purée de pomme déshydratée, etc., mais qu'il était impossible pour eux de délivrer ces produits car il n'y avait pas de service de cargo régulier entre Halifax et les ports de l'Europe occidentale ou des Antilles. Avez-vous le même problème?

M. Guilford: Non, monsieur. Nous avons une entreprise aux Bermudes. Nous expédions nos marchandises à notre entreprise des Bermudes par *Saguenay Terminals*, et de là, nous réussissons à avoir des débouchés dans les Antilles.

M. Nesbitt: Vous n'avez pas ce problème.

M. Guilford: Non, nous ne l'avons pas.

M. Thomas (Moncton): Le principal problème, je pense, concernait les expéditions en Europe. Ils s'y étaient assurés des marchés, mais ils ne pouvaient trouver de moyens de transport. Vous ne vendez pas en Europe, n'est-ce pas?

M. Guilford: Non, nous ne vendons pas en Europe. Si vous regardez l'industrie des plastiques, par exemple, vous verrez que l'Allemagne l'emporte sur tout le monde.

M. Rose: Quel pourcentage du prix de gros de votre produit est absorbé par les frais de transport?

M. Guilford: Cela ne me préoccupe pas trop, si vous parlez de cette question de chargement incomplet, car je trouverai moyen d'acheminer mes produits aux débouchés.

M. Rose: Je m'excuse, monsieur, mais alors pouvez-vous expliquer au Comité ce qui vous préoccupe vraiment?

M. Guilford: Je trouve qu'on nous pénalise parce que nous fabriquons un produit très léger. Les taux de chargement incomplet ont été changés de poids en volume.

M. Rose: Et alors, vous êtes préoccupé par les frais de transport.

M. Guilford: Oui, nous le sommes certainement.

M. Rose: Et je vous ai demandé, monsieur quel pourcentage de vos frais sont affectés au

[*Text*]

cost that goes to transport, and if you believe such costs are excessive in the marketing of your product?

Mr. Guilford: In some cases they are, but I would say in the minority of cases. In other words, if you asked me if it is going to put us out of business, I would say, no.

Mr. Rose: That is what I was going to ask you, sir. I was going to ask you also if you are making a profit in your business?

Mr. Guilford: We sure are.

Mr. Rose: Are you a union plant, sir?

Mr. Guilford: No sir, we are not, but of our 300 employees outside 75 per cent are unionized.

Mr. Rose: How many of the 300 people are in the plant?

Mr. Guilford: Probably 25 per cent of them.

Mr. Rose: And these are non union people.

Mr. Guilford: Non-union, but just give us a chance and they will be there.

Mr. Rose: Therefore you would be in favour of some union being certified in your plant.

Mr. Guilford: Labour problems are mine. We are talking transportation.

Mr. Rose: I do not want to pursue this line of questioning too far with you, sir, because I realize that this is a very sensitive issue with you but at the same time I have been allowed to put this question to other people and I think it is relevant because of our concern for the economy of the country.

The Chairman: It is not too relevant, Mr. Rose, to transport. I cannot see how quest on unions are relevant at this time.

Mr. Rose: Sir, with respect, you have allowed questions that dealt with profit margins, you have allowed questions that dealt with the economy of this particular region, and have allowed questions from me that dealt with the internal market, and I think that one of the problems here in the Atlantic region is that they lack an internal market because of

[*Interpretation*]

transport et si vous trouvez que ces frais sont excessifs pour la commercialisation de vos produits. Peut-être ne pouvez-vous me répondre?

M. Guilford: Oui, dans certains cas, ils sont excessifs, mais je dirais que c'est dans la minorité des cas. En d'autres termes, si vous me l'aviez demandé, si cela est pour nous mener à la faillite, je dirais non.

M. Rose: C'est en plein ce que j'allais vous demander Monsieur. Et j'allais aussi vous demander si vous faites un profit de votre commerce.

M. Guilford: Oui, certainement.

M. Rose: Êtes-vous syndiqués?

M. Guilford: Non, monsieur, mais de nos 300 employés à l'extérieur, je dirais que 75 p 100 sont syndiqués.

M. Rose: Mais sur les 300 personnes, com bien sont dans l'usine?

M. Guilford: Environ 25 p. 100.

M. Rose: Et ils ne sont pas syndiqués.

M. Guilford: Non, mais donnez-nous l chance et ils le seront.

M. Rose: En d'autres termes, vous êtes e faveur du syndicalisme dans votre usine?

M. Guilford: Cela n'a rien à voir au prc blème du transport; il s'agit d'un problèm ouvrier qui relève de moi.

M. Rose: Je ne veux pas poursuivre c genre d'interrogatoire trop loin avec vou monsieur, car je comprends qu'il s'agit d'un question délicate chez vous, mais en mêm temps j'ai eu la permission de poser la mêm question à d'autres, et je crois qu'elle e pertinente en raison de notre souci de l'écon mie du pays.

Le président: La question n'est pas telle ment pertinente, monsieur Rose, en ce qui trait au transport. Je ne vois pas du tout l pertinence de questions syndicales en moment.

M. Rose: En tout respect, monsieur le prés dent, vous nous avez permis de poser d questions au sujet des marges bénéficiaire de l'économie de cette région particulière vous m'avez permis à moi de poser des que tions au sujet du marché intérieur et je cro que l'un des problèmes ici dans la région l'Atlantique, c'est qu'on manque d'un marc

[*Texte*]

igh unemployment and low wages here. Would you agree with that, sir?

Mr. Guilford: No sir. I would say that our nion people are quite in line with the Montal rates. I happened to be hospitalized with coronary in Toronto and the hospital harges there were a heck of a lot less than ey are in Halifax—and the cost of living is gher here than it is in Toronto.

Mr. Rose: Just so I do not leave you with a mpletely bitter taste in your mouth, sir, I ould like to suggest to you that the kind of dustry that you have here, secondary dustry, is the kind of thing that we should ve more of in Canada. I think this Transrtation Committee is very interested in sisting you with your problems.

Mr. Guilford: Thank you very much.

Mr. Nowlan: How much of your business is the Atlantic area?

Mr. Guilford: I would say 95 per cent of it, t with the new machine that we have and is new process we are going into plastics d other things and we will have to look road for our market because there are not ough consumers in our area. We are getting a size now that we are outgrowing our ea.

Mr. Nowlan: The whole purpose of your ief is to voice your disapproval over this ange from weight to cubical.

Mr. Guilford: That is right, sir—because of e type of product that we are manufacturg.

Mr. Nowlan: But you are not going further saying what some of the other briefs have id, that the thing should be changed om...

Mr. Guilford: No, no. I say give us a ance. A gentleman talked about decreased iffs between here and New England. I ink this would help our company.

Mr. Trudel: Mr. Chairman, I have two ief questions. One of your products is used stly for insulation?

Mr. Guilford: Yes, sir. It is twice as good as ything on the market.

Mr. Trudel: I agree with you on this, but at is not the point that I wanted to raise. e you aware that this product can be ipped in liquid form and reconstituted on e site?

[*Interprétation*]

domestique à cause du chômage élevé et des salaires très bas. N'est-ce pas vrai, Monsieur?

M. Guilford: Non, monsieur. Je dirais que nos ouvriers syndiqués ont des taux de salaires comparables à ceux de Montréal. J'ai subi une crise cardiaque et j'ai été hospitalisé à Toronto et les frais d'hôpitaux y étaient beaucoup moins élevés qu'à Halifax, et le coût de la vie est plus élevé ici qu'à Toronto.

M. Rose: Pour ne pas vous déplaire, monsieur, j'aimerais bien vous dire que le genre d'industrie que vous avez ici, soit l'industrie secondaire, est justement ce qu'il nous faut au Canada. J'estime que le Comité des transports s'intéresse beaucoup à vous aider avec vos problèmes.

M. Guilford: Je vous remercie beaucoup.

M. Nowlan: Quelle proportion de vos affaires se font dans la région de l'Atlantique?

M. Guilford: Je dirais 95 p. 100, mais avec la nouvelle machine que nous avons et ce nouveau procédé, nous allons fabriquer des plastiques et autres articles, il nous faudra chercher des débouchés à l'étranger pour ces produits, car il n'y a pas suffisamment de consommateurs dans notre région pour ce genre de produits. Nous en sommes à l'heure actuelle au point où nous dépassons notre région.

M. Nowlan: Et, donc, le but d'ensemble de votre mémoire est d'exprimer notre désapprobation du changement du poids au volume.

M. Guilford: C'est exact, monsieur, à cause du genre de produits que nous fabriquons.

M. Nowlan: Mais vous n'allez pas plus loin pour dire, à l'instar des autres mémoires, qu'on devrait changer de 1.10 ou de 1.5.

M. Guilford: Non, je dis tout simplement «donnez-nous la chance». Quelqu'un a parlé des tarifs tout à l'heure entre nous et la Nouvelle-Angleterre. Je crois que cela aiderait notre société.

M. Trudel: Monsieur le président, deux questions très brèves. L'un de vos produits est utilisé surtout pour l'isolement?

M. Guilford: Oui, monsieur. C'est deux fois meilleur que n'importe quoi sur le marché.

M. Trudel: J'en conviens, mais ce n'est pas le point que je voulais soulever. Savez-vous que ce produit peut être expédié sous forme liquide et être reconstitué sur place?

[*Text*]

Mr. Guilford: We are doing it every day, sir.

Mr. Trudel: I am now thinking of the transport angle.

I am not trying to be facetious. I know that this can be done. The reason that I asked the question is that I see the product here and you have added liminates to it.

Mr. Guilford: This is done right on the machine, sir.

Mr. Trudel: What I was trying to get at was that by transporting in liquid form possibly your density problem would be different.

Mr. Guilford: Yes, we are working on this now. Our chemicals come from England in liquid form and it expands about 30 times its weight. Now what is your question?

Mr. Trudel: You can get this and use it on the site. There are instructions from the manufacturer or the plant that supplies it to you and it can be expanded on location.

Mr. Guilford: That is right. We are doing this too. We have an application company that does this. This is only part of our business.

Mr. Trudel: This would be a portion of it, but there is another phase of it.

Mr. Guilford: That is right.

Mr. Portelance: Mr. Guilford, do you also use trucks for transportation?

Mr. Guilford: We do sir, yes.

Mr. Portelance: Is that less expensive for you than train at the present time?

Mr. Guilford: It is more expensive.

Mr. Portelance: It is more expensive.

Mr. Guilford: In fact, I think some of the truckers have refused to haul our material because it is so light.

I might say, gentlemen that we are very pleased with the new containerized shipping between here and Newfoundland. We are in this. They bring the boxcar right to our plant. Containerization is a move in the right direction as far as our Newfoundland branch is concerned, but I wish you people would get the Department of Transport to put on heavier ice breakers and not to leave this darn stuff tied up so long in Sydney. This is what puts us behind the eight ball.

[*Interpretation*]

M. Guilford: Nous le faisons tous les jours monsieur.

M. Trudel: Non, mais je songeais surtout a problème des transports. Je n'essaie pas d'ê tre facétieux. Je sais que cela peut être fai La raison pour laquelle j'ai posé la questio est que je vois le produit ici et vous y ave ajouté des laminés.

M. Guilford: Cela se fait sur la machin même, monsieur.

M. Trudel: Ce à quoi je voulais en arrive c'est qu'en le transportant sous forme liquid le problème de densité serait peut-êtr différent.

M. Guilford: Oui. Nous y travaillons mai tenant. Nos produits chimiques vienner d'Angleterre sous forme liquide et la trans formation dilate leur volume de trente foi Et maintenant, quelle est votre question?

M. Trudel: Vous pouvez obtenir cela et l'u tiliser sur place. Il y a les directives du fabr cant ou de l'usine qui vous le fournit et vou pouvez le dilater sur place.

M. Guilford: Nous le faisons aussi, c'e juste. Nous avons une société d'applicatio qui le fait. Cela n'est qu'une partie de not entreprise.

M. Trudel: Cela n'en est qu'une parti mais il y a aussi d'autres aspects.

M. Guilford: C'est exact.

M. Portelance: Monsieur Guilford, est-c que vous utilisez aussi le transport p camion?

M Guilford: Oui, monsieur.

M. Portelance: Est-ce que c'est moins co teux que le train en ce moment?

M. Guilford: Plus coûteux.

M. Portelance: Plus coûteux?

M. Guilford: Je pense même que certai des camionneurs ont refusé de transporter n matériaux parce qu'ils sont si légers.

Mais je pourrais ajouter, messieurs, q nous sommes très satisfaits du nouveau se vice d'expédition par cadres d'ici à Terr Neuve. Nous en sommes. Nous avons un w gon qui vient à la porte de l'usine. L'expéd tion par cadres est un pas dans la bonne vo en ce qui concerne notre succursale de Terr Neuve, mais j'aimerais bien que le Comi convainque le ministère des Transports mettre de meilleurs brise-glaces pour que c marchandises ne demeurent pas à quai longtemps à Sydney. C'est ce qui nous met dernière position.

[*Texte*]

The Chairman: Gentlemen, if there are no rther questions, our next brief will be from e Annapolis Valley Affiliated Boards of rade.

I will like to call upon Mr. Edwin Elliott, resident and Mr. C. D. Snow, Vice-President. ould you give us a briefing or an exposé of ur brief.

Mr. Edwin Elliott (President, Annapolis alley Affiliated Boards of Trade, AVABT): r. Chairman, gentlemen, in our brief of last ar, Appendix A-54, we covered several bjects and this year's brief is just one to ally add to the subjects discussed and bring up to date. With your permission, I will ask at Mr. Grant Mimms summarize the high- ay and the Greenwood Airport and the LCL eight rate portions, that Mr. C. D. Snow mmarize the Digby-Saint John ferry por- n, and that Mr. Leonard Small summarize e Petite Passage section, the reasons being at they are more familiar with these por- ns of the brief.

We will say, because the hour is getting e, that we will be very brief but I cannot lp—and this is not prepared—in listening what has gone on here this evening, to say e or two words. I have not heard in any the briefs any mention of the Annapolis lley. It was probably dealt with this after- on. This delegation that is here now presenting the Annapolis Valley Affiliated ards of Trade is representative of the tion from East Hants to the District of are; in terms of definite points, the ubenacadie-Windsor area to Meteghan ghly and the gentlemen concerned will al with separate sections of this area.

Much has been said about route areas. I uld like to suggest, gentlemen, that it pears to me that the Annapolis Valley area a potential growth area. Since the govern- nt policies of trying to help agriculture, ning, industries, the Annapolis Valley area s taken a renewed interest in updating its ilities and bringing things to a potential which they need good transportation al to other areas of Canada. We do not ask superhighways. We ask for good trans- rtation. We ask for the facilities to get in d out of the double back portion of Nova otia and I would ask these gentlemen to l you briefly what they have to submit.

Mr. C. D. Snow (Chairman, Transportation mmittee, Annapolis Valley Affiliated ards of Trade, AVABT): First, Mr. Chair-

[*Interprétation*]

Le président: Auriez-vous d'autres questions à poser, messieurs? Maintenant nous entendrons l'exposé de l'*Annapolis Valley Affiliated Boards of Trade*. Je demanderais à M. Edwin Elliott, président et à M. C. D. Snow, vice-président de bien vouloir nous présenter leur mémoire.

M. Edwin Elliott (Président, Annapolis Valley Affiliated Boards of Trade, AVABT): Monsieur le président, messieurs, dans le mémoire que nous avons présenté l'année dernière, Appendice A-54, nous traitions de différents sujets. Le mémoire de cette année ne fait que les compléter et les mettre à jour. Avec votre autorisation, je demanderais à M. Grant Mimms de résumer la question de la route de l'aérogare de Greenwood et des expéditions de LCL, à M. C. D. Snow de parler du service de Digby, St-Jean, et à M. Leonard Small de résumer la situation de Petit Passage. Je procède ainsi parce qu'ils connaissent chacun cette partie de la soumission.

Comme il se fait tard, nous aimerions être très brefs mais je ne saurais m'empêcher de dire quelques mots même si je ne suis pas préparé, après avoir entendu ce qui s'est déroulé ici ce soir. Je n'ai pas entendu les lecteurs des mémoires mentionner la Vallée de l'Annapolis sans doute parce qu'on en a parlé cet après-midi. La délégation ici présente représente l'Annapolis Valley Affiliated Boards of Trade qui représente cette section allant de East Hants au District de Clare. Lorsqu'on en viendra aux points bien précis de la région de Shubenacadie-Windsor à Meteghan, chacun sera discuté par la personne concernée.

On a beaucoup parlé de réseaux routiers. Je voudrais vous dire, messieurs, que la région de la Vallée de l'Annapolis apparaît comme un centre éventuel de croissance. Depuis que la politique du gouvernement s'efforce d'aider l'agriculture, la pêche et les industries, la région de la Vallée de l'Annapolis veut de nouveau moderniser ses services pour créer un potentiel qui lui amènera des modes de transports comparables aux autres régions du Canada. Nous ne demandons pas des autoroutes extraordinaires mais de bons moyens de transports. Nous demandons des facilités pour entrer et sortir de cette région de la Nouvelle-Écosse. C'est pourquoi je demanderais à ces messieurs de vous exposer brièvement ce qu'ils ont à proposer sur ces différents sujets.

M. C. D. Snow (Président, Transportation Committee, Annapolis Valley Affiliated Boards of Trade, AVABT): Monsieur le prési-

[*Text*]

man and gentlemen, to take advantage of a new ferry which we know now is coming in in 1970, we are most concerned with our roads leading to the Digby and actually down to the Yarmouth ferry.

I believe this morning that the provincial government submitted another brief dealing with roads, if I am correct in that. Actually our remarks in the brief that we submitted this year were based on the briefs submitted by the provincial government, which is Appendix A-27 to your minutes, and we stated in our brief that we supported the last year's brief. We still do, and although we do not know the content of this morning's brief nor the amounts requested or discussed, we support the government in their efforts in this new brief.

All we are asking this Committee to consider and to recommend is that when discussions are undertaken between the two government levels you recommend the following priorities—Highway 1, priority 1—which is Item 17 of the provincial brief of last year which is the Bear River Bridge Diversion. You will note from our brief that we do not agree with the province in the fact of putting a bridge because we have been hoping and working for a causeway across this mouth for reasons which I set out in the brief on page 4 of this year's brief; namely, it would create a new tourist attraction and industry in that area. Priority 2 is Item No. 16. That is the Annapolis Royal to the east end of the Bear River Diversion. Priority 3 is Item 19—Weymouth, which is on Trunk 1. These, gentlemen, represent four bottlenecks on which I am sure that one or two members here present, Mr. Nowlan or Mr. Comeau, would be only too glad to elaborate.

If these bottlenecks are not corrected in time to meet the new ferry service when it comes into operation we will not be able to take full advantage of the increased traffic flow that we see. There is another item in the provincial brief which we wish to bring to your attention and that is Item A-4 of the Special Projects submitted by the provincial government, the Shubenacadie River Crossing. The AVABT sees this project as another entry and exit to our area of Western Nova Scotia, and with this crossing in we feel that it will open up that end of our area, which is Route 15. This Route 15 is part of the Fundy Trail and we know we can entice tourists along this Trail and hold them longer in the area.

[*Interpretation*]

dient, messieurs, tout d'abord, pour bénéficie du nouveau service de transbordeur qui, nou le savons maintenant sera mis en vigueur e 1970, nous devons nous préoccuper essentiel lement de nos routes allant à Digby et fina lement au transbordeur de Yarmouth.

Sauf erreur, ce matin le gouvernement pro vincial a présenté un autre mémoire traitan des routes. Nos observations dans le mémoir que nous présentons cette année se fonden essentiellement sur les mémoires présenté par le gouvernement provincial, soit l'apper dice «A-27» de votre compte-rendu, et nou disons dans notre mémoire que nou appuyons le mémoire présenté l'année de nière. Nous l'appuyons toujours même si nou ne connaissons pas le contenu du mémoire d ce matin ni les sommes demandées ou disc tées. Nous appuyons le gouvernement dar son nouveau mémoire.

Tout ce que nous demandons au comi c'est d'étudier maintenant et de recommai der, lorsque des discussions seront amorcé entre les deux paliers de gouvernement, q la priorité suivante soit établie. La premiè priorité sera la Route 1 qui est l'article 17 d mémoire provincial de l'année dernièr c'est-à-dire le projet de Bear River Brid Vous verrez dans notre mémoire que nous s sommes pas d'accord avec la province s l'aménagement d'un pont parce que nous vo lons avoir une chaussée en travers cet embouchure pour les motifs que je vous donnés à la page 4 du mémoire de cet année, notamment en vue de créer un no veau centre touristique et des industries da cette région. La deuxième priorité est l'artic 16, soit l'Annapolis Royal du côté est du pr jet de Bear River. La priorité 3 est l'artic 19—Weymouth sur la route 1. Voilà do messieurs, quatre goulots. Je suis sûr qu' ou deux des membres présents, M. Nowlan M. Comeau, se fera un plaisir de vous expliquer en détail.

Si ces goulots ne sont pas rectifiés à tem pour desservir le nouveau service de tra bordeur lorsqu'il débutera ses opératio nous ne pourrons pas bénéficier pleinem du trafic accru qui en résultera. Il y a autre article du mémoire provincial que n désirons vous signaler, soit l'article A-4 projets spéciaux présentés par le gouver ment provincial, le pont de la rivière Shul nacadie. L'AVABT voit ce projet comme u autre voie d'accès et de sortie dans no région de la Nouvelle-Écosse, qui nous p mettrait d'ouvrir ce coin de cette région, s la route 15. La route 15 fait partie du Fur Trail et nous savons que nous pouvons enc rager les touristes à venir ou à demeurer p longtemps dans la région.

xte]

Now I will quickly sum up why we have ntioned commercial air at Greenwood. We re said in our brief this year that we are y in the process of preparing a submission he federal authority to obtain permission use the facilities of the Canadian Forces e at Greenwood.

ll we are asking this Committee to do is when we do make our presentation to D and DOT to lend your support ause as we pointed out in our brief we e no commercial air in that nearly 250 s from Greenwood, which is the central , and we need it and we know that we support both the passenger service and cargo. I sat here this afternoon and I d many people mention the LCL freight s but because of time I do not think I to go on any further. Better people than ve already been on the subject. All I will is that my organization supports them 100 cent. Thank you very much.

r. Leonard Small (Annapolis Valley Af-ed Boards of Trade, AVABT): Mr. Chair- and gentlemen, to summarize the brief nitted regarding Petit Passage Crossing I t of necessity, briefly mention the history e fisheries in the Digby Neck and Islands which had its beginning in 1790 with the ng of the United Empire Loyalists.

ck in those days the Islands were the e of water transportation served by coas- freighters and steamships. Fisheries ucts were then and still are the mainstay e economy of the whole area. Several ges with a population of some 1,300 fami- have been able to live and contribute to growth of the country by virtue of their ue position close to lucrative fishing nds served by cheap water transportation traditional markets to the south—a con- tion amounting to some 50 million to 70 on pounds of fish annually which are ly exported to the U.S.A. realizing some illion in hard U.S. currency—a not in- derable contribution to our annual trade it. Unfortunately, the recent winds of ge which have been blowing across the try have deprived this particular area of dvantages of cheap water transportation. have seen the coastals disappear, small ship companies fold up and we are now with road transportation as our only link the markets on which we depend for our nce.

[Interprétation]

Maintenant je voudrais résumer rapidement les raisons pour lesquelles nous avons parlé d'aviation commerciale à Greenwood. Nous disons dans notre mémoire de cette année que nous sommes en train de préparer une soumission aux autorités fédérales afin d'obtenir l'autorisation de nous servir des aménagements de la Base des forces armées de Greenwood.

Nous demandons tout simplement à ce Comité, lorsque nous ferons notre présentation au ministère de la Défense nationale et au ministère des Transports, de nous appuyer puisque nous n'avons pas de service aérien commercial dans un rayon de 250 milles de Greenwood. Nous en avons besoin et nous savons que nous pouvons l'obtenir tant pour le service voyageur que pour le cargo aérien. J'ai assisté à vos délibérations cet après-midi et j'ai entendu un bon nombre d'entre vous parler du tarif d'expédition LCL, mais je n'élaborerai pas sur ce sujet parce que le temps manque. Des personnes plus compétentes l'ont déjà abordé. Tout ce que je veux vous dire c'est que mon organisation les appuie entièrement là-dessus. Merci.

M. Leonard Small (Annapolis Valley Affiliated Boards of Trade, AVABT): Monsieur le président, messieurs. Pour résumer le mémoire présenté sur la Traverse du Petit Passage, je dois vous parler brièvement de l'histoire de la pêche de Digby Neck et de la région des Îles qui a commencé en 1790 avec l'arrivée des Loyalistes de l'Empire.

Les îles étaient alors le centre du transport maritime desservi par des caboteurs et des navires. Les produits de la pêche étaient alors et sont toujours la pierre angulaire de l'économie de toute la région. Bon nombre de villages de quelque 1,300 familles ont été en mesure de vivre et de contribuer à la croissance du pays en vertu de leur emplacement unique près des riches bancs de pêche desservis par un transport maritime peu coûteux vers les marchés traditionnels du sud. Leur contribution annuelle représente de 50 à 70 millions de livres de poissons exportés principalement aux États-Unis, et rapportant environ 5 millions de dollars en monnaie américaine. C'était donc un apport très grand qu'aidait à contrebalancer notre déficit annuel. Malheureusement, l'évolution récente qui se manifeste à travers le pays a privé cette région des avantages du transport maritime peu coûteux. Nous avons vu les navires côtiers disparaître, les petites sociétés maritimes abandonner peu à peu et maintenant nous ne comptons plus que sur un réseau routier pour accéder aux marchés et assurer notre existence.

[*Text*]

At first glance, such a situation would not appear unusual or undesirable in this age of fast road transportation using refrigerated trucks and trailers. Indeed it would be an ideal situation were it not for the fact that our highway is cut by Petite Passage, a quarter-mile strip of water serviced by a scow carried back and forth by a 30-foot boat, a ferry that has not changed in the living memory of most people in the area, a ferry that has great difficulty in carrying the giant refrigerated trailers used today, a ferry that is shut down completely whenever the wind is out of the north, must shut down each day as soon as it gets dark, and cannot cross vehicles during the spring tides.

In order to provide this service the Department of Public Works built docking facilities on both sides of the Passage costing some $900,000 to construct and approximately $10,000 a year to maintain—docks which are occupied exclusively by our antiquated little ferry and serve no useful purpose for the fishing industry.

As a matter of interest since our brief was submitted last year, the figure for the crossing was that approximately 40,000 vehicles crossed this past year, as compared to approximately 14,000 on the *Princess of Acadia* and perhaps 33,000 on the *Bluenose*. In other words this ferry crossed two and a half times as many as the *Princess of Acadia* crossed. This is practically a bottleneck too because I do not feel that it is possible for it to cross any more although the growth in the past years has been approximately 10 per cent per year. I wish I could take you down to that area and show you what a permanent crossing would mean to that area. For little more than the cost of providing facilities and maintaining them as they exist now, we could have a permanent crossing that would enable us to move our fish easily to New York, Boston and Montreal. It would remove the fear of a sudden illness which might require a trip to the hospital at night.

Gentlemen, more than one person from the Island knows what it is like to be lashed to a stretcher and put aboard a 30-foot boat to make this crossing in the middle of the night in a gale of wind, as do our doctors, ministers, teachers, laymen, as soon as they discover that we are cut off from the outside by this narrow strip of water.

I have spoken at some length about the immediate and personal needs of the people of the Islands for a permanent crossing at Petit Passage. There is more to it than this. In the whole area from Yarmouth to Digby there is no harbour capable of handling the fishing

[*Interpretation*]

A première vue, cette situation ne semb pas inusitée, ni indésirable dans notre époq de transport rapide qu'emploie des camio réfrigérés et des remorques. Ce serait l'idé si notre grande route n'était pas coupée par Petit Passage, un cours d'eau d'un quart mille desservi par un transbordeur qui n pas changé de mémoire d'homme, qui éprou beaucoup de difficultés à accommoder l grosses remorques refrigérées d'aujourd'h qui doit interrompre ses services lorsque vent vient du nord ou lorsqu'il fait noir et ne peut traverser certains genres de véhicu lors des marées le printemps.

Afin d'assurer ce service, le ministre Travaux publics devrait aménager des qu des deux côtés du Passage au coût de quelq $900,000 et devrait dépenser environ $10,(annuellement pour maintenir des quais sont occupés à peu près exclusivement des petits transbordeurs antiques et ne s vent pas vraiment à l'industrie de la pêche.

Depuis que notre mémoire a été prése l'année dernière, environ 40,000 véhicules traversé ce passage l'année dernière compa tivement à 14,000 sur le *Princess of Acadi* 33,000 sur le *Bluenose*. En d'autres mots, transbordeur transporte deux fois et de plus de véhicules que le *Princess of Aca* C'est donc à peu près un goulot et je ne c pas qu'il soit possible de transporter p même si la croissance annuelle dans les dernières années a été d'environ 10 p. J'aimerais bien vous amener visiter c région afin de vous montrer ce que sign rait une traverse permanente pour c région. Pour un peu plus que ce qu'il coûterait pour fournir des facilités et maintenir comme elles existent actuellem nous pourrions avoir un réseau de travers permanent qui nous permettrait de trans ter nos poissons facilement à New York, ton et Montréal et ferait disparaître t inquiétude que présente un voyage à l'hô le soir.

Plus d'une personne de cette île sait ce c'est que d'être mise dans une civière faire cette traversée sur un bateau d pieds en plein vent le soir. Ils ressentir la même chose que nos médecins, nos m tres, nos professeurs, en découvrant c sont coupés du monde extérieur par ce de mer.

J'ai longuement parlé des besoins ir diats et personnels des gens de cette île un moyen permanent de passage à Petit sage. La situation est simple. De Yarmo Digby, il n'y a pas de port qui puisse ac moder les navires de pêche qui peuvent

[*Text*]

ssels that fish out of that area. The con-uction of a causeway across Petite Passage the proper position would provide one of finest deep-water harbours in Eastern nada. It would enable our fishing fleet to pand to its full potential and would turn whole area into a viable and productive tion of the country capable of standing on own two feet.

The Chairman: Thank you very much. uld you make your presentation, Mr. w.

Mr. Snow: Thank you, Mr. Chairman. Gen-nen, the announcement of the new ferry t which was ordered by the C.P.R. in the of Saint John has been wonderful rs for the people of Western Nova Scotia. City of Saint John will benefit from the struction of this boat and I want to thank federal government for thinking in terms elping out industry in the Maritime Prov-s, especially the shipbuilding industry. wharf shall be constructed by the federal rnment and approach highways and king space will be provided by the provin-governments.

his has assured the people of a better by and Saint John ferry service. The mod-equipment shall be able to handle more iently the railway and highway traffic veen the Provinces of Nova Scotia and Brunswick. The remark made by the ter Minister of Transport that the Digby-t John ferry service is essential to the omy of Canada was a recognition that the ral government would support the service ehalf of the people of Canada.

nator Martin made an announcement last on behalf of the government at the annu-eeting of the AVABT that the CPR Com-would order the boat and the federal rnment would construct the wharfs, with understanding that further negotiations d be carried on regarding the operation ie service. He stated that if agreement l not be reached the government would hase the boat and operate the service.

e CPR Company is primarily interested oviding a modern ferry service to handle e railway traffic. The Bay of Fundy is missing link of the railway system een Halifax and Vancouver. The public cally interested in the continued service e CPR between these two points. The Company is prepared to provide the nt of service that is required for their operation. If extra service is required in to stimulate the growth of the trade industry within the area of western Nova

[*Interprétation*]

la pêche dans cette région. L'aménagement d'une chaussée en travers Petit Passage au point approprié, nous fournirait le meilleur port en eau profonde de l'Est du Canada. Notre flotte de pêche pourrait connaître une pleine expansion et ferait de toute cette région une entité productrice et viable et capable de vivre par elle-même.

Le président: Merci beaucoup. A vous monsieur Snow.

M. Snow: Merci, monsieur le président. Ce fut merveilleux pour les gens de la parite occidentale de la Nouvelle-Écosse d'apprendre la création d'un nouveau service de transbordeur annoncé par le Pacifique-Canadien pour la ville de Saint-Jean. La ville de Saint-Jean bénéficiera de la construction de ce navire et je désire remercier le gouvernement fédéral d'avoir ainsi songé à aider les industries des provinces maritimes, surtout l'industrie de la construction maritime. Le gouvernement fédéral construira le quai et le gouvernement provincial aménagera des voies d'approche et des parcs de stationnement.

Ainsi cette population se voit assurer un meilleur service de transport de Digby à Saint-Jean. L'équipement moderne assurera des services ferroviaires et routiers plus efficaces entre les provinces de la Nouvelle-Écosse et du Nouveau-Brunswick. Les observations faites par l'ancien Ministre des Transports à l'effet que le service entre Digby et Saint-Jean est essentiel à l'économie du Canada, démontre que le gouvernement fédéral veut soutenir ce service au nom de la population du Canada.

A la réunion annuelle de l'AVABT, l'honorable sénateur Martin a annoncé au nom du gouvernement que la société du CPR allait commander le navire et que le gouvernement fédéral construirait les quais. Il était entendu que d'autres négociations seraient poursuivies en ce qui a trait à l'exploitation des services. Il a déclaré que si l'on ne pouvait en venir à une entente, le gouvernement achèterait le navire et exploiterait ce service lui-même.

Le Canadien Pacifique est essentiellement intéressé à assurer un service de bac moderne pour répondre aux besoins du trafic ferroviaire futur. La Baie de Fundy est le seul bout qui manque sur la ligne de chemin de fer entre Halifax et Vancouver. Le public s'intéresse énormément au maintien du service du Canadien Pacifique entre ces deux points. Le Canadien Pacifique est prêt à assurer le service requis pour sa propre exploitation. Si un service accru est nécessaire pour encourager la croissance du commerce et de

[*Text*]

Scotia, and this is the thinking of the people who are concerned, a fee for service must then be rated and requirements scheduled to highway traffic and passenger travel requirements, regardless of whether the operation in itself is a profitable one or not, as with any other public ferry service that now serves the public of Canada.

Mr. Chairman, gentlemen, when the question of the operation of the service is discussed this required service must be provided either through the CPR Company, or direct by the Federal Government.

A request to the Prime Minister of the Government of Canada in 1967 was for no less than two trips per day seven days a week fifty-two weeks per year.

Second, that the rate charged for transporting passengers in motor vehicles, including goods carried on the motor vehicles, shall not exceed the rate charged by other ferry services operated by the CNR, and others owned by the Federal Government, in relation to distance. I shall give you some comparative rates as to what is being charged today. As to automobiles going to the United States, at the present time, of course, the ferry is not running, but during the time of the year it is in operation the rate one way is $15.20 and return to Yarmouth is $27.60. To cross on the boat today from Digby to Saint John the rate is $16.00 or $32.00 return. The distance to Digby from Saint John is 42 miles, from Yarmouth to Bar Harbour it is 100 miles; over twice the distance at a lower rate. As to trucks and freight, Digby to Saint John for a half-ton truck is $27.00; the return rate is $54.00. Trucks 16 to 18 feet are $41.95; over 18 feet and fraction thereof an additional charge of $3.86 per foot.

In addition to this, if a truck has any goods on it, it is charged the freight; in other words live lobsters would be $1.50 per hundred, weight, gross weight; meat and poultry $1.50 per hundredweight, gross weight, to cross from Digby to Saint John on your own truck. Other rates such as fresh fish at $1.14 are lower.

At one time western Nova Scotia and southern New Brunswick, as stated in the brief, had a lot in common in trading, but over the years this trade has been lost due to the fact that the coastal traders which used to carry on this trading were forced out of business and we have had to depend on the one connecting link of the Digby—Saint John run.

[*Interpretation*]

l'industrie dans l'ouest de la Nouvelle-Écos et c'est là ce que pensent les personnes cause. Il faut établir un tarif et adapter service aux besoins de la circulation routi et du transport des passagers, que l'exploi tion même de ce service soit rentable ou n comme tout autre service public de bac sert actuellement la population du Canada.

Monsieur le président, messieurs, pour qui est de l'exploitation de ce service, il f que ce service soit assuré par l'entremise Canadien Pacifique, soit directement par gouvernement fédéral.

En 1967, on avait demandé au prem ministre du Canada un minimum de d voyages par jour, sept jours par semaine, semaines par an.

On avait aussi demandé que le tarif transport des passagers des automobiles compris les marchandises transportées d ces automobiles ne soit pas supérieur au t des autres services de bac exploités par National-Canadien, et par le gouvernem fédéral, compte tenu de la distance à parc rir. Je vais vous donner quelques tarifs c paratifs de ce que l'on fait payer aujourd' Pour ce qui est des automobiles se rend aux États-Unis, en ce moment, bien enter le bac ne fonctionne pas, mais à l'époque l'année où il est en service, l'aller c $15.20, et l'aller-retour à Yarmouth, $27.60.

Si vous prenez le navire de Digby à Sa Jean, aujourd'hui, cela coûte $16, ou aller-retour. La distance entre Digby et Sa Jean est de 42 milles, et de Yarmouth à Harbour, de 100 milles, soit plus du doubl la distance à un prix inférieur. Quant transport par camion et aux messageries tarif de Digby à Saint-Jean, pour un can d'une demi-tonne, est de $27; l'aller-re coûte $54. Pour les camions de 16 à 18 pi le tarif est de $41.95, et pour ceux de plu 18 pieds, il y a un supplément de $3.86 pied ou fraction de pied.

De plus, si le camion transporte des r chandises, il faut payer pour les marcha ses. Aussi, cela coûte, à transporter, sur propre camion, de Digby à Saint-Jean, $ par cent livres, poids brut de hom vivants, ou de viande ou de volaille. autres tarifs, $1.14 pour le poission frais, exemple, sont moins élevés.

A un moment donné, l'ouest de la Nou le-Écosse et le sud du Nouveau-Bruns avaient, comme on l'a dit dans le mém beaucoup de caractéristiques en commun ce qui était du commerce; mais, au cours années, ce commerce s'est perdu, du fait ceux qui faisaient du cabotage ont dû fe leurs entreprises, et qu'il nous a donc

[*Texte*]

Comparing the little ferry, which services a opulation of 1,300 people on the two islands f the Digby neck, it transported about 40,000 ehicles during last year compared to about 4,000 which crossed from Digby to Saint John hich ferry services the Province of New runswick west and south and the province f Nova Scotia. There are definitely reasons or this. Therefore, the people are very con-erned that when the new service is put into peration, unless the rates and schedule of ips is a convenience to the west of Nova cotia it will be of little advantage to the eople.

As an example, with the AVABT (An-apolis Valley Affiliated Boards of Trade) we ust deal with a private company where oth-s can deal with the government to get gov-nment service and government provided rvice. We feel that the CPR is not responsi-e to the people to provide the service at a ss in to trying to accommodate our highway affic. After the Prime Minister last spring nounced that there would be a new ferry rvice, those concerned at the rally thought e should have immediate benefits and there-re requested the AVABT to send their let-to the CPR requesting two trips a day for e present ferry. This is in the brief esented to you recently and I will read it.

'A resolution was passed at our Annual eting requesting the Federal Government enter into negotiations with CPR to under-ite this extra trip during the tourist ason."

Prior to that we had asked the CPR to put the second trip and they said the cost uld be too great and they would lose ney on it.

'The resolution was passed to The Minister Transport in November, 1968. The Minis-'s office rejected our recommendation on grounds that the ferry was operated by R; therefore, any decision to extend the sent service would be the sole responsibili-of the operator based on conditions known hem.

t is our recommendation that your com-tee consider this resolution and our recom-ndation to that resolution, with view of

[*Interprétation*]

compter sur le seul lien de Digby à Saint-Jean, le service de bac.

Le petit bac, qui sert une population de 1,300 personnes sur les deux îles de la pointe de Digby, a transporté environ 40,000 véhicules au cours de l'année dernière comparativement à 14,000 environ pour Digby-Saint-Jean, le service de bac qui dessert la province du Nouveau-Brunswick à l'ouest et au sud, ainsi que la province de la Nouvelle-Écosse. Il y a des raisons pour un tel état de choses. Par conséquent, les gens craignent vraiment que lorsque le nouveau service débutera, à moins que le tarif et l'horaire des traversées ne répondent aux besoins de la population de l'ouest de la Nouvelle-Écosse, il ne soit pas d'un grand intérêt pour les gens.

Par exemple, dans le cas de l'*AVABT (Annapolis Valley Affiliated Boards of Trade)*, il nous faut traiter avec une compagnie privée, alors que d'autres peuvent traiter avec le gouvernement pour avoir un service du gouvernement ou fourni par celui-ci. Nous sommes d'avis que le Canadien-Pacifique n'est pas tenu d'assurer un service qui ne serait pas rentable pour essayer de répondre aux besoins de la circulation routière. Après que le premier ministre eut annoncé, le printemps dernier, qu'il y aurait un nouveau service de bac, les personnes intéressées présentes à l'assemblée ont pensé que nous devrions en retirer des avantages immédiats, et ont donc demandé à l'AVABT d'envoyer sa lettre au Canadien-Pacifique, demandant deux traversées par jour pour le bac actuellement en service. Je vais vous en citer des passages, tirés du mémoire qui vous a été présenté récemment.

Lors de notre réunion annuelle, l'assemblée a adopté une résolution selon laquelle on demandait au gouvernement fédéral de commencer les négociations avec le Canadien-Pacifique pour appuyer financièrement ce voyage additionnel durant la saison touristique.

Auparavant, nous avions demandé au Canadien-Pacifique d'ajouter une deuxième traversée, mais il avait dit que cela coûterait trop cher et qu'il travaillerait à perte. La résolution a été transmise au ministre des Transports en novembre 1968. Notre recommandation a été rejetée par le cabinet du ministre qui a invoqué que le Canadien-Pacifique était l'organisme de qui relevait l'exploitation du traversier et que toute décison relative à l'amélioration de ce service relevait exclusivement de l'exploitant, compte tenu des conditions énoncées.

Nous recommandons que votre Comité étudie cette résolution et notre recommandation connexe, en vue d'aider immédiatement au

[*Text*]

helping the development of the area immediately and not wait until after the new ferry is in operation."

According to the announcement, the new service is capable of making three return trips a day, and they will make the three return trips if there is traffic available. As you know, in order to increase traffic you must first provide a service at rates which the public can use. There was a growth of traffic into other areas when better services were provided into PEI last summer. Another new ferry for PEI is being built and we anticipate that in a short time not only this ferry will be required but other boats plying back and forth.

As quoted in the A. D. Margison and Associates Ltd. reports as to long term planning, eventually another boat will be required and maybe a more direct route by highway to the New England States and Upper Canada from Digby to Welshpool which is one of the best routes of travel for highway transportation. The reason why the Annapolis Valley supports a Digby—Saint John ferry service, as well as all the people of Nova Scotia and New Brunswick, is due to the fact that it services the railway and the highway.

So gentlemen, I would request that you will try to have the government provide us with more ferry service with the present boat if they have to underwrite the extra costs that might be involved. Thank you.

The Chairman: Mr. Nowlan.

Mr. Nowlan: I have two questions which Mr. Elliott most likely can answer but they relate to what Mr. Mimms said. At first brush, the bottlenecks he set out which are going to affect traffic would appear to be a provincial problem. Can you explain briefly why you are raising that before the Federal Transport Committee?

Major J. G. Mimms (Executive Manager, Annapolis Valley Affiliated Boards of Trade): We raised that at this point as a fact that in support of the provincial brief which they put in in their five year plan which is obviously to be a cost sharing program, and we are supporting that and asking for the priorities to be placed as we see them and that in your deliberations that they do not slide down on the priority list. It is the provincial-federal coast sharing program which we are support-

[*Interpretation*]

développement de la région sans attendre mise en service du nouveau traversier.

Selon l'annonce faite, le nouveau servic peut faire trois voyages aller-retour par jou et il les fera s'il y a lieu. Comme vous savez, afin d'augmenter le trafic, il faut to d'abord assurer un service à un prix aborda ble pour le public. On a constaté un accroiss ment du traffic vers d'autres régions apr que l'on eut assuré un service plus satisfa sant à l'île du Prince-Édouard, l'été dernie On construit actuellement un autre bac pou l'Île du Prince-Édouard, et nous estimons qu sous peu nous aurons besoin non seulemer de ce bac, mais aussi d'autres bateaux q fassent la navette.

Comme on l'a signalé dans les rapports l'*A. D. Margison and Associates Ltd.* en ce q concerne les projets à long terme on au finalement besoin d'un autre navire, et peu être d'un chemin plus direct par la rout vers les États de la Nouvelle-Angleterre et centre du Canada, de Digby à Welshpool, q est l'un des meilleurs itinéraires pour la ci culation routière. Si l'Annapolis Valle exploite un service de bac entre Digby Saint-Jean tout en servant toute la populatio de la Nouvelle-Écosse et du Nouveau-Brun wick, c'est qu'elle assure un service de tran port ferroviaire aussi bien que routier.

Messieurs, je demanderais donc que vo essayiez d'obtenir du gouvernement qu'il no donne un meilleur service de bac avec le b actuel, s'il doit assumer les frais supplémer taires que cela pourrait entraîner. Je vo remercie.

Le président: Monsieur Nowlan.

M. Nowlan: J'ai deux questions auxquell M. Elliott peut sans doute répondre, mais q se rattachent à ce qu'a dit M. Mimms. I prime abord, les embouteillages qu'il a me tionnés, et qui vont affecter la circulatio semblent être un problème provincial. Pou riez-vous expliquer brièvement pourquoi vo soulevez ce problème devant le Comité d transports du gouvernement fédéral?

Major J. G. Mimms (Directeur général l'Annapolis Valley Affiliated Boards Trade): Nous avons mentionné ce fait à l'a pui du mémoire provincial que l'on a incl dans le programme quinquennal, qui doit toute évidence être un programme à fra partagés nous appuyons ce principe, et no demandons que l'ordre de priorité soit éta comme nous l'envisageons, et qu'au cours vos délibérations ces problèmes ne descende pas sur la liste de priorité. C'est le pr

[*Texte*]

ng. We are asking you to recommend that hese be given priority.

Mr. Nowlan: It is not because the Federal Government is going to be spending money at he terminals at both ends? It is more this ost sharing program—the general program?

Major Mimms: It is the cost sharing pro-ram on the roads.

Mr. Nowlan: My next question is about Greenwood which is a very large Canadian Armed Forces Base right in the heart of the alley, of course. Have you a date arranged or presentation to the Minister on this brief hat you mention?

Major Mimms: No we have not. We have to nd access which will not in any way inter-ere with the operational or training role of hat base. We have got the access road in, here is one there to be developed, and we ave got the approval in principle and sup-ort in principle of all of the municipalities hich support our organization.

Mr. Nowlan: Mr. Mimms, could you tell his committee where the alternate base is ow if you cannot get into Halifax because of g? Where do you land?

Major Mimms: Well, you would never get . If Halifax is fogged out Yarmouth is a retty hot bet to be fogged out. So, there is o place; and the emergency landing would e at Greenwood—it used to be.

Mr. Nowlan: It used to be at Greenwood, ut it is now at Moncton, is it not?

Major Mimms: That is right.

Mr. Nowlan: What is the distance between Moncton and Halifax—a couple of hundred iles?

Major Mimms: 250 miles, I think.

Mr. Nowlan: So, the alternate base for ova Scotia is in another province.

Major Mimms: That is right.

Mr. Nowlan: How many towns belong to he AVABT (Annapolis Valley Affiliated oards of Trade)?

Major Mimms: Well, we have 16 Boards. I ate to tell you it is 250 communities of over) souls in that area.

[*Interprétation*]

gramme à frais partagés entre le gouvernement fédéral et les provinces que nous appuyons. Nous vous demandons d'y donner la priorité.

M. Nowlan: Ce n'est pas parce que le gouvernement fédéral va dépenser de l'argent pour l'aménagement des terminus aux deux bouts? Il s'agit plutôt du programme à frais partagés du programme général?

M. Mimms: Il s'agit du programme à frais partagés en matière de service routier.

M. Nowlan: La question suivante a trait à Greenwood, qui est, bien sûr, une base très importante des Forces armées du Canada au cœur même de la vallée. Avez-vous prévu une date pour la présentation au ministre du mémoire que vous avez mentionné?

M. Mimms: Non. Il faut que nous trouvions une voie d'accès qui ne gêne pas du tout les opérations ou les exercices d'entraînement de la base. Nous avons déjà une route d'accès à la base, il y a là-bas une voie qui va être aménagée, et nous avons l'approbation et l'appui de principe de toutes les municipalités qui appuient notre associatoin.

M. Nowlan: Monsieur Mimms, pourriez-vous dire au Comité où se trouve actuellement la base de secours, sur laquelle vous pouvez atterrir lorsque le brouillard vous empêche de descendre sur Halifax?

M. Mimms: Il n'y en a pas. S'il y a du brouillard à Halifax, il y a de fortes chances pour qu'il y en ait aussi à Yarmouth. Il n'y a donc aucune possibilit, et l'atterrissage d'urgence se ferait à Greenwood—c'est là qu'il se faisait autrefois.

M. Nowlan: Autrefois, c'était Greenwood, mais maintenant, c'est Moncton, n'est-ce pas?

M. Mimms: C'est exact.

M. Nowlan: Quelle est la distance entre Moncton et Halifax? Deux cents milles?

M. Mimms: 250 milles, je crois.

M. Nowlan: Donc, la base de secours pour la Nouvelle-Écosse se trouve dans une autre province.

M. Mimms: C'est cela.

M. Nowlan: Combien de municipalités font-elles partie de l'AVABT?

M. Mimms: Il y a 16 chambres de commerce, qui représentent 250 collectivités de plus de 50 habitants dans cette région.

[*Text*]

The Chairman: Mr. Rose.

Mr. Rose: Mr. Chairman, in Mr. Snow's analogy of the highway system and the ferry system, I believe he suggested that he felt that the ferry system, like the bridge system, was merely an extension of the highway system. Is that so sir? Do I paraphrase you correctly?

Mr. Snow: Yes. Where there can not be a bridge or a causeway built across the Bay of Fundy, we feel that the cost of moving a vehicle from Western Nova Scotia to New Brunswick should not be a high charge to the trade and industry and to the people travelling which would retard the growth of that area.

Mr. Rose: Of course, this also relates to the gentleman who spoke previously about a smaller ferry. The cost of highways is not borne on a user basis; in other words, someone who does not own a car probably shares equally, except for perhaps the gas tax, in the cost of building a highway. You would agree that is true, would you not?

Mr. Snow: The amount of revenue from the gas tax could never provide for the maintenance of the highways in the province of Nova Scotia.

Mr. Rose: And yet someone who rides on the ferry as a pedestrian, whether he has a car or not, usually pays, does he not?

Mr. Snow: He does pay.

Mr. Rose: Can you see any reason why ferries should be treated any differently than highways in that they should be paid for by all the people and be considered an extension of the highway, and therefore there is really no logic in extending a fee for service basis on a ferry—that is, one within a province?

Mr. Snow: It has been requested, I understand, by the people of the Island, in reference to the deep passage crossing, that they cross there without any fee—that is, within the province.

Mr. Rose: You would support this throughout the province, would you?

Mr. Snow: Yes. As to charging toll charges and so on which we know has been charged for crossing bridges and causeways, this is one form of revenue to pay for maybe a special project in a certain area. To my mind, today, where transportation is so extensively used by the public, I feel that if we can help

[*Interpretation*]

Le président: Monsieur Rose.

M. Rose: Monsieur le président, par l'analogie qu'a faite M. Snow entre le réseau routier et le service de bacs, je suppose qu'il voulait dire que le service de bacs, tout comme les ponts, n'était qu'une prolongation du réseau routier. Est-ce bien cela, monsieur? Est-ce que j'interprète bien ce que vous avez dit?

M. Snow: Oui. Lorsqu'on ne peut construire un pont ou une chaussée, pour enjamber la baie de Fundy, nous estimons que les frais de déplacement d'un véhicule de l'ouest de la Nouvelle-Écosse ou Nouveau-Brunswick ne devraient pas être trop élevés pour le commerce et l'industrie, ni pour les particuliers, car cela freinerait l'expansion de cette région.

M. Rose: Bien sûr, cela se rattache aussi à ce que disait tout à l'heure la personne qui parlait d'un plus petit bac. Le coût des routes n'est pas généralement payé par les usagers. En d'autres termes, la personne qui ne possède pas d'automobile paie sans doute la même part que les autres, à l'exception eput-être de la taxe d'essence, pour la construction d'une route. C'est bien cela, n'est-ce pas?

M. Snow: Le montant des recettes retirées rer l'entretien des routes de la Nouvelle-Écosse.

M. Rose: Et pourtant, le piéton qui prend un bac paie la traversée, tout comme les automobilistes, n'est-ce pas?

M. Snow: Oui.

M. Rose: Pour quelle raison, alors, traiterait-on les services de bacs autrement que les routes; tout le monde devrait payer pour ces bacs, que l'on devrait considérer comme une prolongation des routes; et il n'est donc pas logique de faire payer la traversée sur les bacs—du moins sur un service de bac à l'intérieur d'une province.

M. Snow: Je crois comprendre que les gens de l'île ont demandé à pouvoir faire la traversée maritime gratuitement, du moins à l'intérieur de la province.

M. Rose: Vous appuyez ce principe pour toute la province, n'est-ce pas?

M. Snow: Oui. Quant aux péages, que l'on impose parfois pour la traversée de ponts ou de chaussées, ils sont une forme spéciale de revenus en vue d'un projet donné dans une certaine région. A mon avis, aujourd'hui, où le public emprunte tellement les moyens de transport, si nous pouvons encourager les

[*Texte*]

to encourage travel and to cut down costs of moving goods and so on and doing business, that wherever possible it should be as low as possible.

Mr. Rose: You would say that toll charges are an historical anachronism, then, would you? And that, further, because you have a mountain with a highway going over it, that is a special project too, and yet people do not have to pay to use that.

Mr. Snow: Indirectly they have to pay.

Mr. Rose: Well, I know, but I mean the user does not pay any more than the non-user.

Mr. Snow: Of course, a certain amount of the gas tax goes towards it, but not enough to cover it. I would say that if they can do it without putting on additional charges, they should do so.

Mr. Rose: Are you aware that the province has asked the federal government for something like 500 million dollars in highway support?

Mr. Snow: Yes.

Mr. Rose: On what is usually considered a provincial matter except for Trans-Canada.

Mr. Snow: Yes, that is right.

Major Mimms: We did not know about the figure. I was the one who brought that point up and I said I did not know as to the figure quoted this morning.

Mr. Rose: It was quoted in another brief, sir, and I may have recalled it correctly or I may not. Perhaps it could be confirmed by somebody else.

Mr. Snow: As to a city like Montreal with a population of 2 million people, compared to Nova Scotia with a population of about 800,000, and as to the amount of highways we have to maintain to carry on our trade and industry, if the people of Nova Scotia had to bear this entire cost we would not have enough money for our other services.

Mr. Rose: It has been suggested that what the Maritime Provinces get back in special equalization payments and highway transportation subsidies, and other things, has been offset by the number of people who have been educated here and who have emigrated to other parts of Canada.

[*Interprétation*]

voyages et permettre de réduire les frais de transport des marchandises et d'encourager le commerce, il faudrait que les frais soient aussi bas que possible.

M. Rose: Vous diriez, alors, que les péages sont un anachronisme? Et que, de plus, s'il y a une montagne le long de laquelle grimpe une route, cela constitue aussi une construction spéciale, et pourtant l'usager ne doit pas payer.

M. Snow: Indirectement, il paie tout de même.

M. Rose: Oui, je sais, mais l'usager ne paie pas plus que le non-usager.

M. Snow: Évidemment, un certain montant de la taxe d'essence permet d'en payer le coût, mais pas dans sa totalité. A mon avis, si l'on peut assurer un service sans faire payer l'usager, on devrait le faire.

M. Rose: Savez-vous que la province a demandé au gouvernement fédéral une somme qui va chercher dans les 500 millions de dollars pour la construction et l'entretien des routes?

M. Snow: Oui.

M. Rose: Pour ce qui relève normalement du gouvernement provincial, sauf dans le cas de la route transcanadienne.

M. Snow: C'est vrai.

M. Mimms: Nous ne connaissions pas le chiffre. C'est moi qui ai soulevé cette question, et j'ai dit que je n'étais pas au courant du chiffre cité ce matin.

M. Rose: Il était cité dans un autre mémoire, monsieur, et je peux me tromper. Peut-être quelqu'un d'autre pourrait-il le confirmer.

M. Snow: Comparez une ville comme Montréal, qui a 2 millions d'habitants, et la Nouvelle-Écosse, qui en a 800,000 environ, et tenez compte du nombre de routes que nous avons à entretenir pour les besoins de notre commerce et de notre industrie; si les gens de la Nouvelle-Écosse devaient assumer ce fardeau financier dans sa totalité, nous n'aurions pas de fonds suffisants pour nos autres services.

M. Rose: On a dit que ce que reçoivent les provinces Maritimes sous forme de versements spéciaux d'égalisation, de subventions pour le transport routier, et ainsi de suite, est compensé par le nombre de gens qui ont été éduqués ici et ont émigré vers d'autres parties du Canada.

[*Text*]

Mr. Snow: That is one of our greatest exports, to our misfortune.

Mr. Rose: This is my final question, sir.

I realize that I have taken up much time and I do not usually do this.

Mr. Perrault: On a point of order. If it is detailed information that Mr. Rose requires perhaps he could meet with the committee later this evening.

Mr. Rose: Just a final question, sir. Mr. Snow, you made much of the difference between the CP service to St. John's and the CN service to Bar Harbour. It really works out to half the cost for double the distance. Have you any views on why this situation occurs and how it happened?

Mr. Snow: I might go a little further on the figures; I have given you them on automobiles but I would like to give you the figures for trucks, and why the people of Western Nova Scotia cannot trade with the province of New Brunswick.

The Chairman: Could you give those figures to the Committee so that we can provide Mr. Rose with them?

Mr. Snow: Yes, we could do that.

The Chairman: Time is running out and we still have more briefs to answer.

Mr. Rose: Will that go into the record, sir?

The Chairman: Yes.

Mr. Rose: We will put it in the record?

The Chairman: Yes.

Mr. Rose: Thank you.

Mr. Snow: Shall I answer the rest of your question?

Mr. Rose: Yes.

Mr. Snow: The CPR in the past has been a privately operated company trying to make a profit. Now, the operation from Yarmouth to Bar Harbour is to try to upgrade the economy of Western Nova Scotia. In my final remarks I say, regarding any means of assistance or support, I think that the federal government's support to help transportation conditions is the best way of spending the taxpayers' money across Canada—for that purpose. I think it would do more good than any other form of subsidy.

[*Interpretation*]

M. Snow: C'est, pour notre malheur, l'une de nos exportations les plus actives.

M. Rose: C'est, ma dernière question, monsieur.

Je me rends compte que j'ai pris beaucoup de temps, contrairement à mon habitude.

M. Perrault: Un rappel au règlement. Si M. Rose a besoin de renseignements détaillés, il pourrait peut-être rencontrer le comité un peu plus tard, ce soir.

M. Rose: Une dernière question, Monsieur Snow, vous avez fait grand état de la différence qui existe entre le service du Pacifique-Canadien à Saint-Jean et celui du National-Canadien à Bar Harbour. Et en fait, c'est la moitié des frais pour le double de distance. Savez-vous pourquoi et comment cela se produit?

M. Snow: Je pourrais peut-être aller plus loin en ce qui concerne les chiffres; je vous les ai donnés pour les automobiles, mais j'aimerais vous les donner au sujet des camions, et la raison pour laquelle les gens de l'ouest de la Nouvelle-Écosse ne peuvent pas commercer avec le Nouveau-Brunswick.

Le président: Est-ce que vous pourriez remettre ces chiffres au Comité et ensuite, nous les fournirons à M. Rose.

M. Snow: Certainement.

Le président: Le temps passe et nous avons encore d'autres mémoires à recevoir.

M. Rose: Est-ce qu'on va les insérer dans les comptes rendus?

Le président: Oui.

M. Rose: Oui?

Le président: Oui.

M. Rose: Merci.

M. Snow: Dois-je finir de répondre à votre question?

M. Rose: Oui.

M. Snow: Le CP est une société privée qui essaie de faire un certain profit. Et la ligne Yarmouth-Bar Harbour vise à améliorer l'économie de l'ouest de la Nouvelle-Écosse. En guise de conclusion, je dirais que, peu importe les moyens d'aide, tout ce que le gouvernement fédéral fait pour aider les moyens de transport, c'est encore la meilleure façon de dépenser l'argent des contribuables à travers le Canada, à ces fins. Et alors, je crois que cela fait beaucoup plus de bien que toute autre forme de subvention.

[*Texte*]

The Chairman: Thank you. Mr. Comeau?

Mr. Comeau: Mr. Chairman, most of my questions have been asked and answered. I have one question for Mr. Mimms, the same question I asked before of another witness. Realizing again that the economy of that part of the province is not progressing as rapidly as other parts of the province, do you feel that transportation is the key to this?

Major Mimms: For 21 years the AVABT has been saying just that. Without transportation, until we got the bottleneck out, we could not develop. As a result of the announcement of the improved service of the Digby ferry, we were informed a week ago that there is one industry from the States—granted it is small—now that we have a decent ferry service coming that is prepared to move into the valley. So we say it is the key at the moment.

Mr. Comeau: So you feel there would possibly be enough traffic for two runs a day, as you see it now?

Major Mimms: Well, if we do not get two runs how are we going to increase the traffic? We are already suffering under one run per day, so we should have two runs. That is the only way we are going to develop the area. It may well be a year or so before it starts to show any improvement so far as CPR is concerned, or whoever is taking the revenue, but if we do not have two ferry services—even if they are only partially filled for the first while—then we are not getting any better service really if we only have one return trip per day.

Mr. Snow: Mr. Chairman, I might add something to that. In a specific case which took place not too long ago, there was a group of men wanting to go over to Saint John to attend the special announcement of the CPR, which turned out to be the announcement of the construction of the ferry. In order to be there for Tuesday afternoon, if they were taking the boat across, they would have to leave on a Monday and they could not return until Wednesday, just to attend an afternoon meeting in Saint John on Tuesday.

Now, for farmers going over with their produce, at the scheduled rates, and so on they are charging now, it is prohibitive; that is why there are only 14,000 vehicles going across there. It is limited to a certain type of traffic and the highway traffic must be catered to without reservations. In other words, always have service there that you do not

[*Interprétation*]

Le président: Merci. Monsieur Comeau?

M. Comeau: Monsieur le président, la plupart de mes questions ont déjà été posées, et on y a répondu. J'aurais toutefois une question pour M. Mimms, la même question que j'ai posée auparavant à un autre témoin. Compte tenu du fait que l'économie de cette partie de la province ne progresse pas aussi rapidement que les autres secteurs de la province, croyez-vous encore une fois que les transports sont la clé de ces problèmes?

M. Mimms: Depuis 21 ans, l'AVABT dit exactement ça: sans transport, et avant d'avoir réussi à éliminer l'embouteillage, nous ne pourrons pas nous développer. A la suite de l'annonce qu'on allait améliorer le service de traversiers de Digby, on nous a dit, il y a une semaine, qu'une industrie américaine veut s'établir dans la vallée, parce que nous avons un service adéquat de traversiers. C'est la clé à l'heure actuelle, effectivement.

M. Comeau: Vous estimez donc qu'il y a suffisamment de circulation pour justifier deux voyages par jour, à l'heure actuelle?

M. Mimms: Mais, si nous n'obtenons pas les deux voyages, comment allons-nous améliorer la circulation? Un seul voyage est insuffisant, alors, nous devrions en obtenir deux. C'est le seul moyen de développer la région. Cela prendra peut-être un an ou deux avant d'améliorer le service, en ce qui concerne le CPR, ou quiconque encaisse les revenus, mais si nous n'avons pas deux services de traversiers, même s'ils ne sont que partiellement remplis pour un certain temps, nous n'aurons pas un meilleur service, s'il n'y a qu'un seul voyage aller-retour par jour.

M. Snow: Monsieur le président, je pourrais peut-être ajouter quelque chose à cela. J'ai eu connaissance d'un cas précis qui s'est produit il n'y a pas tellement longtemps. Un groupe d'hommes voulaient aller à Saint-Jean pour assister à la conférence de presse du CPR, qui a fini par être l'annonce de la construction du traversier. Afin d'y être le mardi après-midi, s'ils partaient par traversier, ils devaient partir le lundi et ils ne pouvaient pas revenir avant le mercredi, simplement pour assister à une réunion à Saint-Jean, le mardi après-midi.

Pour les fermiers qui traversent avec leurs produits, les tarifs qu'on a à l'heure actuelle sont prohibitifs. C'est la raison pour laquelle seulement 14,000 véhicules y traversent. On est limité à un certain genre de trafic, et il faut absolument servir le trafic routier. En d'autres termes, il faut que le service nous évite de faire des réservations deux ou trois

[*Text*]

have to make reservations for two or three months ahead. That area has been starved; there has been a transportation barrier up to Western Nova Scotia. In order to get that back to the level at which it should be you have to give special concessions.

Mr. Comeau: One final question, Mr. Chairman. I want to thank the gentlemen for presenting their brief very well, and I think Mr. Snow should tell the Committee how many people live on the islands he is talking about.

Mr. Snow: There are approximately 1,300 families in the ferry area as I mentioned in my brief. Since we catch approximately 50 to 70 million pounds of fish, you can appreciate that it is an extensive fishing area and, therefore, the ferry serves people who are on both sides of it. That is why I said there would be approximately 1,300 families involved in this, but there are approximately 1,300 people on the islands.

Mr. Rock: If I may ask a question of the same witness, does that ferry belong to the federal government or is it privately owned?

Mr. Snow: That ferry is supposedly operated by the provincial government, but it is privately owned.

Mr. Rock: By the provincial government and privately owned?

Mr. Snow: The provincial government owns the scow which the cars go on which, by the way, has kerosene lights hung on it approved by the Department of Transport for clearance lights—which is how far back into the Dark Ages we are—and the boat itself is owned by a private party.

Mr. Rock: You said that you want to see a bridge built there. What is the distance between the two shorelines?

Mr. Snow: Twelve hundred feet is the shortest distance.

The Chairman: Mr. Skoberg has a short question.

Mr. Skoberg: Mr. Chairman and gentlemen, have you studied the traffic demand from Saint John to Digby which really would show the need for another ferry?

Mr. Snow: If you refer to the Margison Report which cost the provincial-federal governments approximately $100,000 to compile—and it is on record in the federal govern-

[*Interpretation*]

mois à l'avance. Cette région a été privée; on a imposé une barrière aux transports, jusque dans l'ouest de la Nouvelle-Écosse. Afin de pouvoir remettre les choses au point où elles devraient l'être, il faut absolument avoir des concessions spéciales.

M. Comeau: Une dernière question, monsieur le président. Je vous remercie, messieurs, d'avoir très bien présenté votre mémoire. Je crois que M. Snow devrait peut être dire au Comité combien de gens vivent dans les îles qu'il a mentionnées.

M. Snow: Il y a environ 1,300 familles dans la région du traversier, comme je l'ai mentionné dans mon mémoire. Comme nous prenons environ de 50 à 70 millions de livres de poissons, vous admettrez que la région est plutôt prospère de ce côté-là. Et le traversier dessert donc les gens qui demeurent des deux côtés. Voilà pourquoi j'ai dit qu'il y avait environ 1,300 familles en cause, mais, en fait il y a environ 1,300 personnes dans les îles.

M. Rock: Je voudrais continuer avec le même témoin. A qui appartient le traversier? Au gouvernement fédéral ou est-ce une propriété privée?

M. Snow: Le traversier est censé être exploité par le gouvernement provincial, mais il est propriété privée.

M. Rock: Par le gouvernement provincial et c'est une propriété privée?

M. Snow: Le gouvernement provincial est propriétaire du chaland qui transporte les voitures et qui, soit dit en passant, a des lumières à kérosène approuvées par le ministère des Transports—nous remontons vraiment au Moyen Age—et le navire lui-même est une propriété privée.

M. Rock: Vous avez dit que vous voudriez voir construire un pont. Quelle est la distance entre les deux rivages?

M. Snow: La distance la plus courte est de 1,200 pieds.

Le président: M. Skoberg a une courte question à poser.

M. Skoberg: Monsieur le président, Messieurs, avez-vous fait un relevé du trafic de Saint-Jean à Digby, quant à savoir jusqu'à quel point on a besoin d'un nouveau traversier?

M. Snow: Si vous parlez du rapport Margison qui a coûté environ $100,000 aux gouvernements fédéral et provincial—et le gouvernement fédéral l'a inscrit dans ses dossiers—

[Texte]

ent—you will find out the potential. They commend that there should be a new ferry mediately in addition to the existing ferry rvice, and another ferry besides that by 80. That gives you the potential. We are arest to one of the greatest areas of concenated population in North America—we are st eight, twelve or fifteen hours away. If u go across by ferry, you can be in Boston eight hours or in Montreal. In 16 or 18 urs you can be in New York or Toronto; e potential is terrific.

Mr. Skoberg: Are you suggesting, sir, that second or third ferry would be a straight bsidization situation? I think you suggested would be local traffic to a good extent.

Mr. Snow: I think the boat is going to pply two services: One is for the benefit of PR needs and the other is for the public, d I think it should be a joint operation. The deral government is going to put in $10 llion in wharf construction, the Nova otia and New Burnswick governments are ing to put in another $3 million, besides the bsidy on the boats that have to be built in nada. Therefore, as to the supplying of the pital, there is going to be a greater amount capital put in that service than CPR is tting in, and I would say that indirectly y are going to be partners in this. As to negotiation of terms of operation, I think t in the future at no time should there be limited service created by a lack of sufficnt facilities.

Mr. Skoberg: Has the Annapolis Valley en a designated area before? Are you hopi or have you made application for such a r ult?

Mr. Snow: We are working on it.

An hon. Member: Yes, it is a designated a a.

Mr. Skoberg: Thank you, Mr. Chairman.

The Chairman: I want to thank you, ntlemen.

Our last brief is from Industrial Estates nited. I will call upon Mr. R. S. Brookfield, R. S. Shephard and Mr. R. N. Pugsley.

Mr. R. S. Brookfield (Industrial Estates Limited, Halifax, Nova Scotia): Mr. Chairn and members of the Committee, we nk you for the opportunity of presenting views to you. We are here on behalf of ustrial Estates Limited and I am repreting Mr. Sobey, our President who, unfor-

[*Interprétation*]

vous saurez qu'on recommande immédiatement un nouveau traversier, en plus du service de traversier qui existe déjà, et un autre traversier encore d'ici 1980. Voilà le potentiel. Nous sommes tout près de l'une des plus grandes concentrations de population qui se trouve en Amérique du Nord, nous ne sommes qu'à huit, douze ou quinze heures. Si vous prenez le traversier, vous pouvez vous rendre à Boston en huit heures ou à Montréal. En 16 ou 18 heures, vous vous rendez même à New York ou à Toronto; les possibilités sont énormes.

M. Skoberg: Alors, ce que vous dites, c'est qu'avec un deuxième ou troisième traversier, ce sera une question de pure subvention? Je crois que vous avez dit que ce serait le trafic local, dans une grande mesure.

M. Snow: Si on a deux traversiers, l'un serait pour le CPR, pour ses besoins, l'autre pour le public et je crois que l'exploitation devrait être conjointe. Le gouvernement fédéral doit dépenser 10 millions de dollars pour la construction des quais, les gouvernements de la Nouvelle-Écosse et du Nouveau-Brunswick vont fournir 3 millions, en plus des subventions accordées pour les navires qu'on doit construire au Canada. Alors, il y aura beaucoup plus de capital investi que n'en fait le CPR, et je dirais qu'indirectement ils vont être partenaires. Quant aux négociations concernant les conditions d'exploitation, je crois qu'à l'avenir, on ne devrait pas limiter le service en raison du manque d'installations.

M. Skoberg: Est-ce que la vallée d'Annapolis était une région désignée auparavant? Avez-vous fait une demande à ce sujet?

M. Snow: Nous travaillons là-dessus.

Une voix: Oui, c'est une région désignée.

M. Skoberg: Merci, monsieur le président.

Le président: Je veux vous remercier, messieurs. Notre dernier mémoire vient de la Industrial Estates Limited. Je demanderais à MM. R. S. Brookfield, R. S. Shephard et R. N. Pugsley de bien vouloir s'approcher.

M. R. S. Brookfield (Industrial Estates Limited, Halifax, Nouvelle-Écosse): Monsieur le président, messieurs les membres du Comité, nous vous remercions de l'occasion que vous nous offrez de présenter nos vues. Nous sommes ici au nom de l'Industrial Estates Limited, et je représente M. Sobey, notre

[*Text*]

tunately, is unable to attend and wishes us to convey his regrets to the Committee.

One of the objectives of the National Transportation Act is to ensure that each mode of transport, so far as practicable, carries traffic to or from any point in Canada under tolls and conditions that do not constitute unreasonable discouragement to the development of secondary industry. Industrial Estates Limited is a Crown corporation of the Province of Nova Scotia and since its inception in 1957 has been actively and continuously engaged in promoting the start-up of secondary industries in this Province.

It might prove helpful if we were able to cite examples of those industries that applied to us for assistance but did not locate here because of the freight rate problem, but generally we are not advised of those factors that compel industries to locate elsewhere. We can tell you, however, that one of the first requests directed to us by prospective clients is an analysis of transportation costs to the major markets and there is no doubt that these costs play a large part in the decision to locate or not to locate.

Essentially, because the majority of secondary industry must export the bulk of its products outside the Atlantic Region to survive, we wish to emphasize the need for an over-all permanent solution to the high cost of moving goods to central Canada to encourage greater development of industries in order to diminish regional disparities.

Until the implementation of such a scheme, we urge the deadline on the freeze to be extended. Thank you.

The Chairman: Very good. Are there any comments, gentlemen?

Mr. Skoberg: An excellent brief.

Some hon. Members: Hear! Hear!

Mr. Skoberg: Have you communicated direct with the Minister with regard to the freeze?

Mr. Shephard: Yes; it was done direct by Industrial Estates Limited.

The Chairman: Thank you very much, gentlemen. You have been very kind and very patient.

(End of Volume I—Balance in Volume II)

[*Interpretation*]

président, qui, malheureusement, ne peu assister à la séance, et m'a prié de l'excuse auprès du Comité.

Un des objectifs de la Loi nationale sur le transports, c'est d'assurer que chaque moye de transport, pour autant que c'est possibl permette la circulation vers n'importe que point du Canada, ou à partir de n'import quel point, à des tarifs et dans des condition qui n'empêchent pas le développement d l'industrie secondaire. Industrial Estate Limited est une société de la Couronne de l province de la Nouvelle-Écosse, et depuis se débuts en 1957, elle s'est toujours engagée promouvoir et à commencer les industrie secondaires dans notre province.

Il serait peut-être utile de vous donner de exemples de ces industries qui nous on demandé de l'aide, mais qui ne sont pa venues s'établir ici en raison du problème d tarif-marchandise. Normalement, on ne con naît pas les raisons, mais nous pouvons vou dire que l'une des premières demandes qu nous est parvenue de ces clients, c'est un analyse des frais de transport jusqu'au débouchés normaux. Et il n'y a aucun dout que ces facteurs ont joué un rôle dans ce décisions de s'établir ou de ne pas s'établir.

Essentiellement parce que la majorité de industries secondaires doivent exporter l gros de leurs produits à l'extérieur de l région atlantique pour survivre, nous voulon insister sur le besoin d'une solution perma nente et globale au sujet des frais de trans port élevés jusqu'au centre du Canada pou favoriser l'expansion des industries en vu d'éliminer la disparité régionale.

Jusqu'à ce que nous ayons un tel prc gramme, nous vous demandons d'étendre l date limite du gel. Merci.

Le président: Très bien. Avez-vous de commentaires, messieurs?

M. Skoberg: Excellent mémoire.

Des voix: En effet.

M. Skoberg: Avez-vous communiqué ave le ministre au sujet du gel?

M. Shephard: Oui. L'Industrial Estat Limited l'a fait elle-même.

Le président: Merci beaucoup, messieur Vous avez été très gentils et patients.

EVIDENCE

(*Recorded by Electronic Apparatus*)

Wednesday, February 20, 1969

[*exte*]

The Chairman: Good morning ladies and gentlemen. We have with us this morning the Clare Chamber of Commerce of Digby.

First, I will call on the Nova Scotia Fish Packers Association. I have, on my right, Mr. Smith, Mr. Dunbar, Mr. Cunningham, Mr. Johnson and Mr. Tupper. I would ask Mr. Smith to make a short brief of his presentation.

Mr. R. G. Smith (President of the Nova Scotia Fish Packers Association): Mr. Chairman, the membership of the associations that I'm speaking for this morning is responsible for about 80 per cent of the annual production of fish products in Nova Scotia.

I am speaking on behalf of the Nova Scotia Fish Packers Association, the Canadian Atlantic Salt Fish Exporters Association, the Atlantic Fisheries By-Products Association and the Atlantic Queen Crab Association. These associations include firms and individuals located from Yarmouth to North Sydney in Nova Scotia as well as some operating in the other Atlantic Provinces. As I said before, these dealers are engaged in the processing and marketing of a wide range of fish and seafood products and by-products. Our association members handle some 80 per cent of Nova Scotia's annual production of fish, the total marketed value f.o.b. plant was approximately $110 million in 1968.

Because of the expansion that has taken place in the fishing industry in recent years, the latest DBS figures show that fisheries was Nova Scotia's most important resource based industry. The number of fishermen in 1968 was approximately 13,000. In many parts of the province fishing and fish processing constitute the only industry. Almost all of the fish products and by-products produced must be marketed in the more populous areas of Canada, the United States and abroad.

Mr. Nesbitt: Mr. Chairman, on a point of order, the members do not seem to have a copy of the brief.

The Chairman: You will find this brief on page 676 of the agenda.

TÉMOIGNAGES

(*Enregistrement électronique*)

[*Interprétation*]

Le président: Bonjour mesdames et messieurs, nous allons continuer maintenant notre ordre du jour en demandant à la Chambre de commerce Clare de Digby de se présenter. Je demanderais donc à l'Association des conserveries de poisson de la Nouvelle-Écosse de présenter son mémoire. Un peu d'ordre s'il vous plaît. J'ai ici à ma droite, M. Smith, M. Dunbar, M. Cunningham, M. Johnson ainsi que M. Tupper. Je demanderais à M. Smith de faire une brève présentation de son mémoire.

M. R. G. Smith (Président de l'Association des Conserveries de poisson de la Nouvelle-Écosse): Monsieur le président, les membres pour lesquels je parle ce matin, produisent annuellement environ 80 p. 100 des produits de la pêche en Nouvelle-Écosse. Je parle au nom de l'Association des conserveries de poisson de la Nouvelle-Écosse, de la *Canadian Atlantic Salt Fish Exporters Association*, la *Atlantic Fisheries By-Products Association* et la *the Atlantic Queen Crab Association*. Ces associations comptent leurs membres parmi les sociétés et des particuliers de Yarmouth à North Sydney en Nouvelle-Écosse ainsi que d'autres membres, dans certaines autres provinces Maritimes. Comme je l'ai déjà dit, ces membres transforment et commercialisent une grande partie des poissons et des produits du poisson. Je l'ai dit auparavant, nous comptons 80 p. 100 de la production annuelle totale du poisson, et en 1968 cela représentait environ $110 millions.

En raison de l'expansion dans l'industrie du poisson depuis un certain temps, les plus récents chiffres du Bureau fédéral de la statistique indiquent que la pêche est l'industrie la plus considérable de Nouvelle-Écosse. Il y avait environ 13,000 pêcheurs dans notre province. Dans plusieurs parties de la province la seule industrie est la pêche et la transformation du poisson. On doit trouver des débouchés dans les régions les plus populeuses du Canada, aux États-Unis et à l'étranger.

M. Nesbitt: J'en appelle au règlement. Est-ce que nous pourrions avoir une copie de son mémoire?

Le président: Avez-vous votre agenda? Vous trouverez ce mémoire à la page 676.

29691—12½

[*Text*]

Mr. Nesbitt: No, that is not it, page 676 is the Clare Chamber of Commerce.

Mr. Ian Dunbar (Nova Scotia Fish Packers Association): Mr. Chairman, I am sorry but I have only a few copies. I mailed 40 copies to the Committee. I just have these few left, if they would be helpful.

Mr. Smith: As I was saying, Mr. Chairman, almost all of the fish products and by-products produced must be marketed in the more populous areas of Canada, the United States and abroad, i.e. beyond the North American continent. It follows that transportation is a very important factor in this industry and all available forms of transportation are utilized—rail, truck, vessel and air.

The magnitude of this usage of transportation becomes evident when it is noted that some seventy per cent (70%) of the production of Nova Scotia's fishing industry was sold in export markets in 1968, chiefly in the U.S.A.

Notwithstanding the ever increasing usage of frozen fish products there is still a large market for fresh fish and some twelve (12) million pounds of fresh fish and fish products is shipped annually from various points in the Maritimes, chiefly in Nova Scotia, to destinations within the Maritimes and in Quebec, Ontario and adjacent U.S.A. areas. The principal means of making these shipments is by LCL rail.

In 1967 the rail carriers served notice that only fresh fish shipped in leak-proof containers would be transported. However, as a result of meetings between the carriers and shippers the railways demonstrated a co-operative attitude by suspending application of this Rule 1.17 on a month to month basis to permit industry to develop a suitable and practicable container which would be leak-proof. Progress has been made in developing such a container and experimental shipments are encouraging, and in the meantime the railways have continued to handle shipments of fresh fish in ice in other than leak-proof containers.

It is essential to the welfare of the fishing industry that transportation facilities be available for moving its large volume of highly perishable products to the markets in Canada and the U.S.A. as rapidly as possible.

[*Interpretation*]

M. Nesbitt: Je m'excuse à la page 676 d the *Clare Chamber of Commerce.*

M. Ian Dunbar (Association des Conser ries de poisson de la Nouvelle-Écosse): m'excuse, monsieur le président, je n'ai suffisamment de copies, mais j'en ai env une quarantaine par la poste et il m'en r quelques-unes. Si cela peut vous aider.

M. Smith: Merci, comme je l'ai dit, pres sous les produits du poisson doivent trou des débouchés dans les parties les plus po leuses du Canada aux États-Unis et à l'étr ger, soit au-delà des frontières de l'Améri du nord. Les transports constituent donc apport très important dans cette industrie tous les modes de transport disponibles s employés, navires, avions, chemins de fe camions.

L'usage considérable des transports devi manifeste quand on constate que 70 p. 100 la production de l'industrie de la pêche d la Nouvelle-Écosse a été vendue à l'étran en 1968 et principalement aux États-Unis.

Malgré la consommation croissante de p sons congelés, il existe néanmoins un grand marché pour le poisson frais, et en ron 12 millions de livres de poisson frais et produits de la mer sont expédiées annue ment de divers points des Maritimes, prin palement de la Nouvelle-Écosse, à destinat d'autres endroits dans les Maritimes, au Q bec, en Ontario et aux régions avoisinan des États-Unis. Le principal moyen uti pour ces expéditions sont les chargeme incomplets.

En 1967, les compagnies de chemins de ont avisé que le poisson frais sera transp té uniquement dans des cadres étanch Cependant, après diverses réunions entre compagnies et les expéditeurs, les chemins fer se sont montrés coopératifs en suspend l'application du règlement 1.17 sur une b mensuelle, afin de permettre à l'industrie produire des cadres pratiques et étanch Des progrès ont été réalisés dans le dével pement de tels cadres et des expédition titre expérimental ont été effectuées et s encourageantes. Pendant ce temps, les com gnies de chemins de fer ont continué à tra porter le poisson frais sur glace dans emballages non étanches.

Il est essentiel pour le bien-être de l'ind trie de la pêche que les moyens de transp soient mis à sa disposition pour perme l'expédition de denrées périssables en gran quantités vers les marchés du Canada et États-Unis, dans les délais aussi courts possible.

'exte]

Delays and careless handling in transit con-bute to spoilage and financial loss, and it is ually important that there be no curtail-ent of present rail services. Except for the gher priced species of fish the high cost of ipment by air adds too greatly to the con-mer price to make this means of transpor-ion an alternative at present. Lower rates air shipments of fresh fish would be a eat boon to the fishing industry.

Road transport is used extensively by the lustry, chiefly in shipping frozen fish hough trailer trucks are also used in ship-g fresh and iced fish.

However, at certain seasons when weight trictions are imposed on some roads and hways great inconvenience, disruption and ra expense results and we urge that all w main roads and highways be constructed all-weather standards and that there be iformity between Provinces of weight and e regulations for trucks.

There has been a great expansion in the st Coast herring fishery in the past couple years and further expansion is anticipated. is has resulted in a substantial increase in production of fish meal and fish oil and ater usage of rail hopper cars for the bulk pment of fish meal and tank cars for the pment of fish oil. A severe shortage of pper cars was experienced in the Summer Fall of 1968 with the result that a consid-ble quantity of herring meal had to be d in plant warehouses longer than is visable.

There was deterioration in quality and loss value as a result of the inability of the lway to provide these hopper cars. There re also some instances involving fish oil ere it could not be saved due to late arriv-f tank cars.

On February 10, 1969, the producers of fish al in South Western Nova Scotia were ised by the C.N.R. that effective February 1969, there would be an embargo on the of large hopper cars in that area.

Since some producers had anticipated mar-ing almost all of their 1969 herring meal in k this will add to their cost in moving ir product to domestic and U.S.A. markets ause of the higher rail rate applicable to than 100,000 lb. carloads. It is imper-

[Interprétation]

Les délais et les manutentions peu soignées en transit contribuent à des pertes de marchandises et des pertes financières, et il est tout aussi important qu'il n'y ait pas de réduction des services actuels des chemins de fer. A l'exception des produits de la pêche coûteux, le coût élevé des expéditions par avion ne permet pas de prendre ce moyen de transport en considération actuellement parce que le coût au consommateur devient trop onéreux. Des tarifs moins élevés pour les expéditions de poisson frais par avion seraient une vraie bénédiction pour l'industrie de la pêche.

Le transport routier est utilisé d'une façon intensive par l'industrie, principalement pour l'expédition de produits congelés. Cependant, certains camions sont aussi utilisés pour l'envoi de poisson frais sur glace.

A certaines saisons, cependant, lorsque les restrictions de poids sont imposées sur certaines routes, il s'ensuit des inconvénients majeurs, et des dépenses supplémentaires; nous demandons donc que toutes les nouvelles grandes routes soient construites selon des normes qui permettent de les utiliser toute l'année, et qu'il y ait une uniformité entre les provinces concernant le poids et la dimension des camions.

Il y a une grande expansion de la pêche au hareng sur la côte depuis quelques années, et une autre expansion semblable est attendue, ce qui a produit une augmentation substantielle de la production de farine et d'huile de poisson, et un usage accru de wagons-trémies pour l'expédition en vrac de farine de poisson et de wagons-citernes pour l'expédition d'huile de poisson. Une grave pénurie de wagons-trémies à l'été et à l'automne de 1968 a causé un stockage de quantités considérables de farine de poisson dans les entrepôts d'usines pour une période anormale.

Il y a eu une détérioration de la qualité et une perte de valeur dues directement à l'incapacité des compagnies de chemins de fer de procurer ces wagons-trémies. La même chose s'est produite aussi pour l'huile de poisson qui a été perdue à cause de l'arrivée tardive de wagons-citernes.

Le 10 février 1969, les producteurs de farine de poisson du sud-ouest de la Nouvelle-Écosse ont été informés par le National-Canadien qu'à partir du 15 février 1969, il y aurait un embargo sur l'utilisation de grands wagons-trémies dans cette région.

Étant donné que certains producteurs avaient déjà décidé de vendre presque toute leur farine de hareng de 1969 en vrac, leur coût de transport pour expédier leurs produits au Canada et aux États-Unis sera donc plus élevé à cause du taux supplémentaire

[*Text*]

ative that this embargo on large hopper cars be lifted and that the carriers provide an adequate supply of suitable hopper cars for the transport of fish meal, or alternatively that compensatory adjustments be made in the freight rate on less than 100,000 lb. carloads.

Fish meal is used as an ingredient in poultry and animal feeds and must be competitive with different types of agricultural products that are used for the same purpose. Many of these agricultural products enjoy the advantage of freight assistance so that any increases in freight rates on fish meal worsen the competitive position of the industry.

Herring and other marine oils must also compete with vegetable oils, as well as with imported marine oils which have the benefit of low ocean freight rates to inland destinations through the St. Lawrence seaway, so that tank car rail rates on marine oils are very important to this developing East Coast Canadian industry.

The fishing industry like most primary industries serving a Canada-wide and world market has always had many serious problems and has operated close to the marginal line. It is, and has to be, extremely cost conscious in every aspect of its operations. The industry is in the midst of one of its most difficult periods of world fish surpluses and price declines.

For six months in 1968, the Canadian Atlantic Coast groundfish industry was assisted to the extent of some millions of dollars by the Federal Government in order that fishermen might not suffer greatly reduced earnings and to prevent a widespread cessation of processing operations. Notwithstanding this assistance several large firms went out of business within the past year. There has been no significant improvement in these conditions and prospects for an early improvement are not encouraging.

Fishermen and fish processors, supported by their Members of Parliament, are continuing to appeal to the Federal Government for a reinstatement of last year's assistance, and the Minister of Fisheries has stated that he will be making an announcement in this connection within the next few weeks. In these

[*Interpretation*]

applicable aux chargements de moins de 000 livres. Il est essentiel que cet embarg les grands wagons-trémies soit retiré e les compagnies de chemins de fer proc un nombre suffisant de wagons-trémies le transport de la farine de poisson, elles préfèrent, de verser des ajuste compensatoires sur le tarif de tran visant les chargements de moins de 1 livres.

La farine de poisson est utilisée comm ingrédient pour les moulées destinées volailles et au bétail et doit concurrencer différents types de produits agricoles qui utilisés aux mêmes fins. Le transport de sieurs de ces produits agricoles est sub tionné ce qui fait que toute augmentatio tarif de transport visant la farine de po nuit à la position compétitive de cette i trie.

L'huile de hareng et les autres huiles nes doivent aussi concurrencer avec les h végétales, aussi bien qu'avec les huiles nes importées qui bénéficient de tau transport maritime très bas vers l'inté du pays, en utilisant la Voie maritim Saint-Laurent. Ainsi, le tarif de transpor wagons-citernes pour les huiles marines très importants pour le développemen l'industrie canadienne de la côte est.

L'industrie de la pêche, comme la pl des industries primaires desservant to marché canadien et les marchés mondiau toujours eu à faire face à de sérieux pr mes et ont été exploités sans grands béné Cette industrie est nécessairement extr ment consciente des coûts dans tous aspects de ses opérations. L'industrie actuellement au milieu d'une de ses pér les plus difficiles à cause des surplus de son dans le monde et de la chute des prix.

Pour les six premiers mois de 1968, l'ir trie de la pêche du poisson de fond de la atlantique du Canada a reçu quelques lions de dollars du gouvernement fédéral, que les pêcheurs ne souffrent pas d'une b considérable de revenu et afin de préven fermeture d'usines de préparation. M cette aide, plusieurs grandes industries fermé leurs portes au cours de l'année nière. Il n'y a eu aucune amélioration no dans les conditions et les perspectives amélioration à court terme ne sont encourageantes.

Les pêcheurs et les apprêteurs de pois soutenus par leurs représentants au P ment, continuent d'en appeler au gouv ment fédéral pour rétablir l'aide de l'a dernière. Le ministre des Pêcheries a même annoncé qu'il ferait une déclarati ce sujet d'ici quelques semaines. Dans

Texte]

ircumstances we urge that the present freeze" on freight rates be extended beyond larch 23, 1969, until the Government can ring into force a rational regional transpor- tion policy and program.

Because of the time factor we have been nable to develop more specific examples of eas in which we feel transportation service ould and should be improved. We feel we ould however, make some brief reference the need for improvement in transportation frozen fish products, in particular to the aribbean. There is an increasing market in ich countries as Puerto Rico, Jamaica and rinidad for these products and because of ck of refrigeration facilities together with e need for more frequent sailings we are nable to compete in these markets with .S.A. and European suppliers.

In summary, our fishing industry in Nova otia and in the other Atlantic Provinces as ell, must sell more than four-fifths of its tput in other areas of Canada and in export arkets; its main products are among the ost perishable of all foodstuffs; transporta- on is of paramount importance to the dustry and, therefore, it must be not only aintained but upgraded in terms of service, cilities and equipment.

And while cognizant of the problems faced the carriers and not asking for unrealisti- lly low rates we do seek the opportunity to t our products to the domestic and world arkets at costs that will enable us to be mpetitive in the very highly competitive od industry. There are many foods which mpete with fish and seafood for the house- ife's dollar. Many of these are produced in eas adjacent to the centres of large con- mption and consequently are not affected to e same degree by transportation costs. Any rtailment of services and/or increases in tes could be very detrimental to the future owth of all segments of the important Nova otia fishing industry.

The foregoing is respectfully submitted, r. Chairman.

The Chairman: Thank you very much. Mr. oberg.

Mr. Skoberg: In looking at the first para- aph of your brief on the second page, you id that in 1967 the rail carriers served tice that only fresh fish shipped in leak- oof containers would be transported and en you go on to explain that you still had

[*Interprétation*]

circonstances, nous demandons instamment que le présent gel des taux de transport soit prolongé après le 23 mars 1969, jusqu'à ce que le gouvernement puisse mettre en vigueur une politique et un programme rationnel de transport régional.

A cause du manque de temps, nous avons été incapables d'élaborer davantage sur d'autres exemples de régions où il nous semble qu'on devrait et qu'on pourrait améliorer les services de transport. Toutefois, nous voulons mentionner en passant qu'il faut améliorer le transport des produits congelés du poisson, en particulier vers les Caraïbes. Il y a un marché croissant dans de tels pays, comme Porto-Rico, la Jamaïque et Trinidad et, en raison du manque d'aménagements de réfrigération, en plus du besoin de départs plus fréquents, nous sommes incapables de soutenir la concurrence des États-Unis et des pays européens.

En résumé, notre industrie de la pêche en Nouvelle-Écosse et dans les provinces de l'Atlantique doit vendre plus des quatre cinquièmes de sa production dans d'autres régions du Canada et aux marchés d'exportation. Les principaux produits sont parmi les plus périssables. Les transports sont donc d'importance capitale pour l'industrie, ce qui veut dire qu'on doit non seulement maintenir le service des transports mais l'améliorer sous forme de services, d'aménagement et d'équipement.

Nous connaissons les problèmes des transporteurs, mais nous ne demandons pas des taux tellement bas; nous demandons seulement de pouvoir envoyer nos produits vers les marchés domestiques et internationaux à des prix qui nous permettront de faire concurrence dans cette industrie hautement concurrentielle de l'alimentation. Il y a plusieurs aliments qui font la concurrence avec le poisson et les autres produits de la mer pour obtenir le dollar ménager. Plusieurs sont produits dans des régions avoisinant les centres de grande consommation et par conséquent ne sont pas affectés de la même façon par les frais de transport. Toute réduction de services ou toute augmentation des taux pourraient nuire à la croissance future de tous les aspects de cette importante industrie.

Ceci vous est respectueusement soumis, monsieur le président.

Le président: Je vous remercie. Monsieur Skoberg.

M. Skoberg: Je vois à la deuxième page de votre présentation, au premier alinéa, que vous avez dit, qu'en 1967 les transporteurs ferroviaires ont annoncé que le poisson frais ne serait expédié que dans des contenants étanches et vous continuez en disant qu'il y a

[*Text*]

co-operation there. I am wondering whether or not you could supply the Committee with a letter of intent of the rail carriers saying that they would only ship your fish if leak-proof containers were provided?

Mr. Smith: I do not know, sir, whether we have such official notice from the railways. I will have to ask Mr. Johnson if he knows.

Mr. R. F. Johnson (Nova Scotia Fish Packers Association): Mr. Chairman and gentlemen. We had received through the Maritimes Transportation Commission advice of the changes which the railways were making at that time.

Mr. Skoberg: Well, did you receive that in writing.

Mr. Johnson: Yes, in the form of a bulletin from the Maritimes Transportation Commission.

Mr. Skoberg: Could you possibly supply it to the Committee...

Mr. Johnson: Yes.

Mr. Skoberg: ...at a later date.

How many people are actually engaged in the fishing industry in your area?

Mr. Smith: There are, as I said in the brief, sir, about 13,000 fishermen and in Nova Scotia I would say there are probably 8,000 employed in shore plants—that may be a little high, 5,000 roughly. I do not have the figures, sir, but I would estimate at least 5,000.

Mr. Skoberg: Are the rails used only when necessary; and what assurance have the railway companies of being given any traffic by your industry?

Mr. Smith: Well, for the transportation of fresh fish rail service is used very extensively. There has been some diversion of traffic in the last number of years from rail to truck transport, the reason being the speed of service. For instance, a truck from Nova Scotia to Boston will go there roughly in 28 hours, to New York roughly in 48 hours, but it is much faster than rail can handle it.

Mr. Skoberg: Are you using inter or intra refrigerated truck facilities?

Mr. Smith: We use both, sir. For instance, a good deal of Nova Scotian fish goes to the United States. There are trucks that come straight through, say, from Boston to Halifax

[*Interpretation*]

encore collaboration. Pourriez-vous fournir au Comité une déclaration d'intention des transporteurs ferroviaires selon laquelle ils n'expédieront le poisson que si les contenants étanches sont fournis?

M. Smith: Nous ne savons pas si nous avons reçu un avis officiel des compagnies de chemins de fer. Je dois demander à M. Johnson s'il le sait.

M. R. F. Johnson (Association des Conserveries de poisson de la Nouvelle-Écosse): Monsieur le président et messieurs, la Commission des transports des Maritimes nous a informés que les compagnies de chemins de fer procédaient aux changements à ce moment-là.

M. Skoberg: Est-ce que cet avis a été envoyé par écrit?

M. Johnson: Ce fut envoyé par écrit sous forme de bulletin.

M. Skoberg: Pourriez-vous le fournir au Comité plus tard?

M. Johnson: Oui.

M. Skoberg: D'accord. Combien de personnes font la pêche dans votre région?

M. Smith: Comme je l'ai dit dans notre mémoire, environ 13,000 pêcheurs et, en Nouvelle-Écosse, je dirais qu'il y en a peut-être 8,000, disons plutôt 5,000 qui travaillent dans les usines. Ce n'est pas le chiffre mais c'est une évaluation approximative.

M. Skoberg: Est-ce que les chemins de fer sont utilisés seulement lorsque c'est nécessaire, et quelle assurance ont des compagnies ferroviaires quant au trafic de votre industrie?

M. Smith: Nous utilisons vraiment beaucoup le service ferroviaire pour le transport du poisson frais. Mais, depuis quelques années, on tend de plus en plus à adopter le transport par camion à cause de la rapidité du service. Un camion peut prendre 28 heures pour aller de Nouvelle-Écosse à Boston, et 48 pour se rendre à New York. C'est beaucoup plus rapide que par chemin de fer.

M. Skoberg: Est-ce que vous utilisez les services internationaux ou domestiques de camions réfrigérés?

M. Smith: Les deux. Ainsi, il y a une bonne partie du poisson de la Nouvelle-Écosse qui est acheminée vers les États-Unis. Il y a des camions qui viennent directement des États

[*Texte*]

and other points and then there are Nova Scotia-based trucking companies that transport a good deal of the fish to the American market, particularly, and to the upper Canadian markets too.

Mr. Skoberg: Does your company have any interests at all in any truck lines?

Mr. Smith: No, we do not, sir. However, one of our companies owns and operates quite a number of trucks used in the lobster industry, for instance, but these are used practically for our own purposes.

Mr. Skoberg: What name do they run under?

Mr. Smith: The name of the company is Maturel Division of National Sea Products in Shediac, N.B.

Mr. Skoberg: On page 3, sir, you refer to the severe shortage of hopper cars. I presume that you made an appeal to the railway companies in this regard?

Mr. Smith: I will ask Mr. Cunningham if he would answer that question.

The Chairman: Will you repeat your question, Mr. Skoberg.

Mr. Skoberg: I am referring to the top of page 3, your first paragraph. You are referring to the fact that a severe shortage of hopper cars was experienced. Of course this brief was presented in 1968. I am wondering whether or not you made any appeal to the railway companies and the official representatives of these companies regarding the shortage of hopper cars?

Mr. A. Cunningham (Nova Scotia Fish Packers Association): Yes, we have. We have recently been informed that in so far as the rail line is concerned from Caraquet and Shippegan to Bathurst, N.B. and the south shore points from Yarmouth to Halifax the rail lines will not handle these larger hopper-type cars. Now apparently the characteristics of the large cars—wheel base, speed of train and spacing of the rail joints—prevent their use. The railway will only supply cars of a capacity not exceeding 3,000 cubic feet, which is not large enough to load 100,000 pounds.

Mr. Skoberg: Well, you have suggested here that it is imperative that this embargo on large hopper cars be lifted. Is this embargo still on?

Mr. Cunningham: Yes, it went on last Friday, I think, and was effective then. It has

[*Interprétation*]

Unis vers Halifax et les compagnies de camionnage de la Nouvelle-Écosse transportent aussi beaucoup de poisson vers les marchés américains et aussi vers le Canada central.

M. Skoberg: Est-ce que votre compagnie a des intérêts particuliers dans des services de camionnage?

M. Smith: Non. Cependant, une de nos sociétés est propriétaire et exploite un certain nombre de camions pour l'industrie du homard, mais simplement pour notre propre usage.

M. Skoberg: Quel est son nom?

M. Smith: *Patural Division of National Sea Products,* à Shédiac (N.-B.)

M. Skoberg: A la page 3 du mémoire, vous parlez de l'insuffisance de wagons-trémie. Alors est-ce que vous avez fait une demande aux sociétés ferroviaires à cet égard?

M. Smith: Je demanderai à M. Cunningham de bien vouloir répondre à cette question.

Le président: Pourriez-vous répéter la question, monsieur Skoberg.

M. Skoberg: Au haut de la page 3, le premier alinéa, vous dites qu'il y a pénurie de wagons-trémie, c'était en 1968 au moment où le mémoire a été présenté. Est-ce que vous avez demandé aux représentants des sociétés ferroviaires de supprimer cette pénurie de wagons-trémie?

M. A. Cunningham (Association des Conserveries de poisson de la Nouvelle-Écosse): Oui, et on nous a dit qu'en ce qui concerne le service ferroviaire entre Caraquet, Shippegan et Bathurst, au Nouveau-Brunswick, et de Yarmouth à Halifax, le chemin de fer, n'utilisera pas ces wagons-trémie plus grands. Apparemment, les caractéristiques de ces wagons, comme leur empattement, la vitesse du train et l'espacement des joints des rails empêchent leur utilisation. Ils utilisent les wagons d'au plus 3,000 pieds cubes, ce qui ne suffit pas pour charger 100,000 livres.

M. Skoberg: Vous dites aussi qu'il est essentiel que cet embargo sur les grands wagons-trémie soit enlevé. Est-ce que cet embargo existe toujours?

M. Cunningham: Oui, il est entré en vigueur vendredi dernier. Cela a été annoncé

[*Text*]

been announced for southern Nova Scotia but it is now going on in the northern New Brunswick area as well.

Mr. Skoberg: Have you indicated your displeasure at the availability of these cars to the Minister of Transport?

Mr. Cunningham: No, we have not—not thus far. The industry is just developing to a point now where this year, for example, the volume of traffic out of the northern New Brunswick area—out of the Gulf—if fishing comes up to expectations and with the plant capacity up there, might be three times what it was last year.

Mr. Skoberg: Have you indicated your displeasure at all to the Canadian Transport Commission? Have you made any direct representation to them?

Mr. Cunningham: We have made no direct representation, no.

Mr. McGrath: Mr. Chairman, I wonder if I could supplement that. We have the Director of Traffic for the CTC with us; he has been following our Committee around and listening attentively to all the evidence. I wonder if perhaps he could answer a question?

The Chairman: I am sorry, Mr. McGrath, he is not an official spokesman of the government. He is only here as an observer. If you want any information you could sit down with Mr. Henry and I am sure he will be glad to give you the information you wish.We cannot treat him as a witness.

Mr. McGrath: We cannot call him as a witness?

The Chairman: No.

Mr. Skoberg: Mr. Chairman and gentlemen, what specific solution is your association suggesting in the second paragraph on the fourth page of your brief? You have the facts well drawn out in this well-prepared brief, but I am wondering if you could give a specific recommendation to this Committee in regard to your problem at this time?

Mr. Smith: Well, on this question of shipping to the West Indies the services there by steamship are most infrequent and it is almost impossible to develop a business in that area unless you are able to supply the market on a regular basis. An improvement in the type of transportation to those areas would, feel sure, enable Nova Scotia oper-

[*Interpretation*]

pour le sud de la Nouvelle-Écosse, mais aus pour le Nord du Nouveau-Brunswick.

M. Skoberg: Est-ce que vous avez indiqu au ministre des Transports le fait que vou étiez mécontents de la pénurie de wagons?

M. Cunningham: Non. L'industrie est e train de se développer et on est rendu a point où, par contre, cette année le volum pour le Nord du Nouveau-Brunswick et d Golfe, si les opérations de pêche sont aus bonnes que prévues et avec la capacité de usines qu'on y trouve, devrait être trois fo supérieur à celui de l'année dernière.

M. Skoberg: Est-ce que vous avez fait pa de votre mécontentement à la Commissio canadienne des Transports? Est-ce que vou avez fait des instances directement?

M. Cunningham: Non, nous n'en avons p fait.

M. McGrath: Monsieur le président, ur question complémentaire. Nous avons Directeur du trafic de la CTC ici qui accon pagne notre comité, il a assisté à toutes l réunions. Peut-il répondre à une question?

Le président: Je m'excuse, monsieu McGrath, il n'est pas autorisé à prendre parole en tant que fonctionnaire. Il n'est i qu'en tant qu'observateur. Pour obtenir d renseignements, vous n'avez qu'à vous adre ser à M. Henry. Je pense qu'il se fera u plaisir de vous faire part de ces renseign ments. Nous ne pouvons pas l'assigner comm témoin.

M. McGrath: Nous ne pouvons l'assign comme témoin?

Le président: Non.

M. Skoberg: Monsieur le président, me sieurs, à la quatrième page de votre mémoi deuxième alinéa, quelle solution précise vot association, propose-t-elle en ce qui concer cette situation? Les fait sont très bien prése tés mais pourriez-vous nous donner d recommandations plus précises pour ce q est du problème qui se présente?

M. Smith: Pour ce qui est des expéditio vers les Antilles, les services par navire sont pas tellement fréquents et il est à p près impossible de mettre sur pied une ent prise quelconque à moins que nous puissio approvisionner ce marché assez régulièr ment. Je suis sûr qu'une amélioration transport vers ces régions permettrait a

[*Texte*]

ators to develop a regular business in the West Indies. Does that answer your question, sir?

Mr. Skoberg: Have you any recommendations to make in so far as land traffic is concerned in your area?

Mr. Smith: We did not have too much to complain about in respect of the land services provided. But with fresh fish, for instance, when things go wrong and a car gets delayed there is only one thing you can do with the fish...

An hon. Member: Throw it out.

Mr. Smith: That is right.

The Chairman: Mr. Skoberg, you have questioned for over 15 minutes now and I think you should give others a chance to put questions.

Mr. Thomas (Moncton): Sir, Mr. Skoberg has asked most of the questions I had in mind in transportation. However, I have one or two other follow up questions. What is the difference, sir, between the 100,000 pound carload rate—you said the CNR has now put on an embargo—and the under 100,000 pounds crate? And do you then go to what used to be called the L.C.L. rate, or do you get another rate for 50,000?

Mr. Smith: I will ask Mr. Cunningham to speak to this, but there are different rates for minimum weights.

Mr. Thomas (Moncton): But do you have to go down to the less than carload rate then?

Mr. Cunningham: I would be speaking specifically of carload loadings. Now if you are talking about L.C.L. loadings, naturally they do not load either fishmeal or oil in L.C.L. shipments.

Mr. Thomas (Moncton): You mentioned that the railway will not supply the large hopper cars under 1,000 pounds so you cannot get that rate, but do they supply, say, for 50,000 pounds and give you a carload rate on that?

Mr. Cunningham: 3,000 cubic feet hopper cars, but it depends upon the density of the product. Now the density of fishmeal will vary in relationship to the process used in manufacturing it—if it is a steam dried meal it will be fluffier and bulkier than from a

[*Interprétation*]

entrepreneurs de la Nouvelle-Écosse de met-Antilles. Est-ce que cela répond à votre question?

M. Skoberg: Est-ce que vous auriez des recommandations à formuler pour ce qui est de la circulation routière dans votre région?

M. Smith: Les services qui nous sont fournis, nous n'avons pas tellement à nous en plaindre. Mais, avec le poisson frais, disons, lorsque les choses vont mal et que les wagons sont retardés, il n'y a rien d'autre à faire avec le poisson...

Une voix: Que de le jeter.

M. Smith: C'est exact.

Le président: Monsieur Skoberg, je voudrais vous rappeler que vous avez pris quinze minutes. Je pense que vous devriez donner l'occasion à d'autres de poser des questions.

M. Thomas (Moncton): M. Skoberg a posé la plupart des questions auxquelles je songeais en matière de transport, mais il y aurait une ou deux autres questions pour reprendre sa ligne de pensée. Quelle différence existe-t-il entre les taux pour les 100,000 livres d'une wagonnée alors sur lesquels vous dites que le National-Canadien met un embargo et le taux des chargements de moins de 100,000 livres. Ensuite est-ce que vous adoptez le tarif des chargements incomplets ou est-ce que vous avez un autre tarif pour les chargements de 50,000 livres?

M. Smith: Je demanderai à M. Cunningham de vous en parler, mais il a des taux différents pour les poids minimums.

M. Thomas (Moncton): Alors est-ce qu'il faut passer au taux des chargements incomplets?

M. Cunningham: Je parlerais plutôt de chargements complets. Maintenant, si vous parlez de chargements incomplets, les compagnies ne transportent pas de farine de poisson ou d'huile à chargement incomplet.

M. Thomas (Moncton): Vous dites que les chemins de fer ne voulaient pas vous fournir les grands wagons-trémie à moins de 1000 livres. Est-ce qu'ils vous en donnent pour 50,000 livres, et vous accordent le taux de chargement complet?

M. Cunningham: Des wagons de 3000 pieds cubes. Tout dépend de la densité du produit. La densité de ces mélanges à poisson varie suivant le procédé de transformation. Si c'est de la farine séchée à la vapeur, elle sera plus légère et encombrante que celle qui est séchée

[*Text*]

flame dryer. We understand these 3,000 cubic feet cars will load perhaps 90,000 to 95,000 pounds. Now assuming your loading is 95,000 pounds, then you have to figure whether it is better to pay the rate on 100,000 minimum or go back to the 80,000 minimum. There are minimums now of 50,000, 60,000, 80,000 and 100,000. So if you get in between an incentive rating you have to make up your mind whether it is more economical for you to pay the full rate on the full car or to go to the lower rate, depending on the quantities in it.

Mr. Thomas (Moncton): Sir, how many of these fish plants would have rail siding facilities? Do all of them have rail siding facilities? Are they all able to ship by rail or are some removed from rail facilities?

Mr. Cunningham: Well, unfortunately, the ones that are off rail have to haul to the rail.

Mr. Thomas (Moncton): This is what I was wondering about. What do these plants do in that period every spring when our roads are closed because of weight restrictions. How do they get their shipments out from their plant to the siding?

Mr. Cunningham: Well, they are mostly short hauls and they have to get down to extracts so that they will be carrying less weight.

Mr. Thomas (Moncton): So this, too, would add to the costs of your transportation because you have to haul smaller loads and make more frequent trips.

Mr. Cunningham: That is right.

Mr. Thomas (Moncton): That is all I have, Mr. Chairman. Thank you.

The Chairman: Mr. McGrath.

Mr. McGrath: Mr. Chairman, I have a few brief questions but, before putting them, I would like to suggest, Mr. Chairman, that this Committee endeavour to find out why it is that the railways could place an embargo on hopper cars which is seriously affecting a very important exporting industry in this way, and why the full weight of the facilities of the CTC and our silent partner over there, the Director of Traffic,—I do not mean that in a disparaging way, Mr. Chairman, because we all appreciate Mr. Hanley's presence here—should not be brought to bear on this situation. Why should an act of the railways, have this very serious effect on the industry? I just say that for the record.

My question, Mr. Chairman, is regarding the lack of reefers for the Caribbean market, which is referred to on page 4 of your brief.

[*Interpretation*]

à la flamme. Ces wagons à 3,000 pieds cubes prendront de 90,000 à 95,000 livres. Si, disons, vous chargez 95,000 livres, alors il nous faut voir s'il est préférable de payer le tarif pour un minimum de 100,000 ou passer à 80,000 comme minimum. Il y a des minimums de 50,000, 60,000, 80,000 et 100,000. Si vous êtes entre un taux stimulant il vous faut décider s'il est plus rentable de payer le plein tarif sur un wagon plein ou un tarif inférieur, selon la quantité.

M. Thomas (Moncton): Combien de ces usines de transformation pour le mélange à poisson ont des voies d'évitement? Est-ce qu'elles peuvent toujours faire des expéditions par rail?

M. Cunningham: Ceux qui ne sont pas près des voies d'évitement doivent s'y rendre.

M. Thomas (Moncton): Je voulais simplement savoir ce que font ces lignes lorsque les routes sont fermées. Au printemps alors, comment font-elles pour faire la livraison de leur poisson jusqu'à la voie d'évitement?

M. Cunningham: Ce ne sont pour la plupart que de petites distances et il leur faut alléger le chargement.

M. Thomas (Moncton): Il faut donc faire un plus grand nombre de voyages, ce qui ajoute à vos frais de transport.

M. Cunningham: C'est exact.

M. Thomas (Moncton): C'est tout ce que j'avais, monsieur le président, merci.

Le président: Monsieur McGrath.

M. McGrath: Monsieur le président, j'ai quelques questions très brèves à poser, mais avant de ce faire, je voudrais proposer, monsieur le président, que ce Comité essaie de voir pourquoi les chemins de fer peuvent imposer un embargo sur les wagons-trémies qui affecte vraiment une industrie importante pour l'exportation et pourquoi on n'a pas recours à la CCT ou au directeur du trafic, on n'a pas recours à ses bons services. Nous apprécions beaucoup le fait qu'il soit ici avec nous maintenant, mais c'est une question très importante afin de savoir le pourquoi, une décision des chemins de fer pourrait avoir des effets pour l'industrie.

Ma question, monsieur le président, a trait à l'expédition vers les marchés des Caraïbes comme vous le dites à la page 4 de votre

[*Texte*]

You make no specific recommendation in this area. You just referred to the lack of refrigerated ships but you did not come to any specific conclusions. Do you have any specific recommendations to make in this regard?

Mr. Smith: In very general terms, to increase the services that are now almost non-existent.

Mr. McGrath: They are non-existent.

Mr. Smith: I do not think so. Would you like to speak to that, Mr. Johnson?

Mr. Johnson: Mr. Chairman and gentlemen, there were some shipping lines which provided refrigerated service to the Caribbean. However, these were discontinued and at the moment, so far as I am aware, there is no such service available. We, the association and the industry, have talked with one of the shipping lines that operate a regular service.

They are now making a survey of their service and have indicated that they might be able to provide something along this line for us.

Mr. McGrath: In essence then, what you are referring to is the lack of an ocean-going Canadian fleet of reefer ships out of Halifax.

I note that the Newfoundland Associated Fish Exporters Ltd. have a brief which calls for subsidies in the area of shipping so that they can get to the Caribbean market to sell fish.

Would it not have been better, sir, for the industry as a whole in the Atlantic Provinces to get together and submit a brief? What association does your association have with the Newfoundland Associated Fish Exporters?

Mr. Smith: No very close association, sir, but on certain common problems we do talk with them. But the transportation problem in Newfoundland is quite different from the transportation problems in Nova Scotia.

Mr. McGrath: Will you clarify that?

Mr. Smith: Our geographical situation is much more favourable than Newfoundland's.

Mr. McGrath: But you are both exporting to the same market?

Mr. Smith: That is right, sir. But, for instance, where we ship a great deal of fresh or frozen fish to the markets of Ontario, Quebec and the eastern states, there is practically none of this coming out of Newfoundland.

[*Interprétation*]

mémoire. Vous ne formulez pas de recommandation précise. Vous parlez simplement du manque de navires frigorifiques, mais vous ne donnez pas de conclusions précises. Est-ce que vous avez des recommandations à faire là-dessus?

M. Smith: Dans l'ensemble, oui, pour augmenter les services qui sont à peu près inexistants.

M. McGrath: Ils sont non existants.

M. Smith: Je ne crois pas. Aimeriez-vous parler, monsieur Johnson?

M. Johnson: Monsieur le président, messieurs, il y a eu des transporteurs maritimes qui ont assuré un tel service vers les Caraïbes, mais on a discontinué ces services et en ce moment il n'y a pas de services de ce genre. Nous, l'association et l'industrie, nous en sommes entretenus avec des lignes de navigation qui exploitent un service régulier.

Elles sont maintenant en train de faire un relevé de leurs services et elles nous ont indiqué qu'elles seraient peut-être en mesure d'assurer un service de ce genre.

M. McGrath: Ce dont vous parlez en fait, c'est l'absence d'une flotte de frigorifiques canadiens qui serait basée à Halifax.

La *Newfoundland Associated Fish Exporters, Ltd.* a préparé un mémoire dans lequel elle demande des subventions dans le domaine du transport maritime afin de pouvoir vendre du poisson dans les Caraïbes.

Alors, est-ce qu'il n'aurait pas été préférable pour l'ensemble de l'industrie dans les provinces de l'Atlantique de se réunir pour présenter un mémoire? Quels rapports avez-vous avec la *Newfoundland Associated Fish Exporters Ltd.*?

M. Smith: Rien de très étroit. Nous avons certains problèmes communs dont nous discutons avec eux. Mais les problèmes de transport à Terre-Neuve, diffèrent vraiment de ceux de la Nouvelle-Écosse.

M. McGrath: Pourriez-vous préciser, s'il vous plaît, monsieur Smith?

M. Smith: Vu l'emplacement géographique, c'est beaucoup plus favorable ici qu'à Terre-Neuve.

M. McGrath: Mais vous exportez tous deux vers le même marché?

M. Smith: C'est juste, mais, par exemple, lorsque nous expédions beaucoup de poisson frais, non congelé, vers les marchés de l'Ontario, du Québec et de l'Est des États-Unis, il nous en vient très peu de Terre-Neuve.

[*Text*]

Mr. McGrath: I have just one final observation, Mr. Chairman. This is perhaps hypothetical, but I just want to note for the record that the Minister of Fisheries will be making a statement today—he promised to make a statement regarding aid to the industry—and if he does continue with the deficiency payment program would this have any bearing whatsoever on some of the problems you raised in your brief?

Mr. Smith: I would not think so, sir.

Mr. McGrath: They are not related?

Mr. Smith: They are unrelated.

The Chairman: Mr. Nowlan.

Mr. Nowlan: Mr. McGrath touched on one of my two questions, that having to do with refrigeration service. While you mentioned one line in this connection—I understand that Saguenay will be going down there with a form of refrigeration service on a regular basis—could you comment briefly on the situation when Canadian National had refrigeration boats going to the Caribbean before the war, and if access to the Caribbean market was easier before the war than it is today because of the depletion in this service?

Mr. Smith: I certainly think it would have been if they had provided a regular service. Things have changed so much since that time in the way of product lines, for instance. At that time it was mostly a salt fish market area. This was before the days of fish sticks and prepared fish when the consumer packed fillets and so on. So the same situation did not exist in regard to products to be moved.

Mr. Nowlan: I understand from your answer then that because of the change in the fish industry and fish products there is actually more need now for refrigeration services to get the frozen fish down there now than it was before the war?

Mr. Smith: That is right.

Mr. Nowlan: Am I not correct that—we have experienced the same thing with natural fruit products from the Annapolis Valley—because of this change in fish products and in the fruit processing industry there actually is more need for a refrigeration service now to open up markets than there was when there was a service?

Mr. Smith: That is correct, sir.

Mr. Nowlan: My last question has to do with the freeze on L.C.L. rates which are

[*Interpretation*]

M. McGrath: Une dernière observation monsieur le président. Je sais que c'est purement hypothétique, mais je voudrais dire au compte rendu que le ministre des Pêches et Forêts a proposé, a l'intention de faire une déclaration aujourd'hui au sujet de l'aide à l'industrie et s'il maintient le programme de versement d'appoints, est-ce que cela se rapportera ou se rattachera aux problèmes que vous soulevez dans votre mémoire?

M. Smith: Je ne crois pas.

M. McGrath: Cela n'aura aucun rapport?

M. Smith: Aucun rapport.

Le président: Monsieur Nowlan.

M. Nowlan: M. McGrath a posé une de mes questions au sujet du service avec réfrigération. Vous avez dit qu'une compagnie de transport, la Saguenay Shipping, je crois, va offrir un service régulier de frigorifiques. Et alors pourriez-vous faire un commentaire plutôt bref sur ces navires frigorifiques du National-Canadien qui faisaient vers les Caraïbes le service avant la guerre, et si l'accessibilité à ces marchés était plus facile avant la guerre qu'elle ne l'est aujourd'hui à cause de l'affranchissement de ce service?

M. Smith: Oui, ce serait plus facile s'il y avait eu un service régulier. Les choses ont tellement changé depuis lors, les produits que nous offrons, par exemple. C'était alors la zone du marché du poisson salé surtout. C'était avant les bâtonnets de poisson, avant le poisson préparé pour la consommation alors que le consommateur empaquetait les filets. La même situation n'existait pas pour ce qui était des produits à transporter.

M. Nowlan: Je crois comprendre, d'après votre réponse, qu'en raison des modifications qui sont intervenues dans l'industrie du poisson et de ses produit, on a en fait davantage besoin de services de réfrigération pour transporter le poisson congelé là-bas à l'heure actuelle qu'avant la guerre?

M. Smith: C'est exact.

M. Nowlan: Si je comprends bien, nous avons connu la même chose avec les fruits de la vallée d'Annapolis. A cause de ces changements dans l'industrie des produits du poisson et des fruits, on a maintenant beaucoup plus besoin d'un service de navires frigorifiques pour accéder aux marchés que lorsqu'il y avait un service régulier?

M. Smith: C'est exact, monsieur.

M. Nowlan: Ma dernière question a trait au gel du tarif de transport des marchandises

'exte]

ing to expire on March 23—and we certain- urge that these be extended until there is a ansportation policy. Have you, as an sociation, communicated that desire to the inister?

Mr. Smith: No, I do not believe we have,

Mr. Nowlan: Well, I must say, Mr. Chair- n, if many organizations and associations ve set out the same request in their briefs this Committee, I think it might help in tending the freeze if a formal communica- n were communicated to the Minister owing their concern. It is not that this mmittee is not going to take your recom- ndation into account, but time is of the ence. The premiers already have sent a egram and I would think that any interest- parties wanting to extend the freeze would d it constructive to join in with the Pre- ers or, on their own, express their concern some formal way.

Mr. Smith: Thank you for your suggestion, We work very closely with the Maritime nsportation Commission.

Mr. Nowlan: I appreciate that, Mr. Smith, we are here listening to transportation blems. We are politicians and the Minister Transport is also a politician. The fact is t if we do not hear from anybody down e on this problem and you leave it to the ritime Transportation Commission, which orking on this in a technical way, you are going to build up public concern to nd the freeze. There has not been an anization yet that I know of—I do not w about Fredericton—that has been com- nicating their concern directly to the ister. It has been left to the premiers. I the more communications, the better it be.

he Chairman: Mr. Horner.

Mr. Horner: I was interested, Mr. Smith, in umber of questions Mr. Skoberg asked n regard to 100,000 pound carload lots, but ill let that go for now.

have one question with regard to the lication of the Maritime Freight Rates in the future. I note that you are erned about moving foodstuffs and products by air, by truck and by rail. ld it be worked and would it be more ficial to your industry if it were

[Interprétation]

par chargement incomplet, qui va expirer le 23 mars—et nous demandons que ce tarif soit prolongé jusqu'à ce qu'on ait établi une politique en matière de transport. Est-ce que vous avez, en tant qu'association, fait part de ce désir au ministre?

M. Smith: Non, je ne crois pas, monsieur.

M. Nowlan: Je dois dire, monsieur le président, que si de nombreuses associations ont formulé la même demande dans les mémoires qu'ils ont présentés à ce Comité, je pense que cela pourrait aider à prolonger le gel, si ces associations faisaient part au ministre de leurs préoccupations dans une communication officielle. Ce n'est pas que le Comité ne tiendra pas compte de vos recommandations, mais le temps est un facteur essentiel. Les premiers ministres provinciaux ont déjà envoyé un télégramme, et j'imagine que toute partie intéressée à faire prolonger le gel pourrait avoir intérêt à s'associer aux premiers ministres ou à faire part officiellement, de son côté, de ses préoccupations à cet égard.

M. Smith: Merci pour votre suggestion, monsieur. Nous travaillons en collaboration très étroite avec la Commission des transports des Maritimes.

M. Nowlan: Je m'en rends compte, monsieur Smith, mais nous étudions ici les problèmes du transport. Nous sommes des hommes politiques, de même que le ministre des Transports. La vérité, c'est que si vous ne parlez pas de ces problèmes ici, et que vous laissiez la chose à la Commission des transports des Maritimes, qui étudie ces problèmes du point de vue technique, vous n'allez pas soulever l'opinion publique de manière à amener une prolongation du gel. A ma connaissance, il n'y a pas encore d'association—je ne sais ce qu'il en est de Fredericton—qui ait communiqué cette préoccupation directement au ministre. On en a laissé le soin aux premiers ministres. A mon avis, plus il y aura de communications, mieux ce sera.

Le président: Monsieur Horner.

M. Horner: J'ai été intéressé, monsieur Smith, par un certain nombre de questions qu'a posées M. Skoberg relativement aux wagonnées de 100,000 livres, mais je vais laisser cela de côté pour le moment.

J'ai une question relative à l'application future de la Loi sur les taux de transport des marchandises dans les provinces Maritimes. Je vois que vous désirez transporter des denrées alimentaires et des produits du poisson par avion, par camion et par chemin de fer. Est-ce qu'il serait possible, et plus avanta-

[*Text*]

paid to the shipper rather than the shipping company hauling the products? In other words, if your freight bill on a product was X number of dollars and the government picked up, say, 20 per cent or a little better of it, which is nearly covered now under the MFRA on rail, would this be more beneficial to your company?

Mr. Smith: If the subsidy were paid directly to the shipper?

Mr. Horner: Yes.

Mr. Smith: I think it would be, sir.

Mr. Horner: I asked this question because a number of interested companies have requested it be made applicable to the trucking industry and I can foresee a bit of difficulty in making the payments to the various truckers. If it was made beneficial maybe a lot of the big truckers would move in from the Montreal or other areas of Canada and take advantage of it. But if it was paid directly to the industry in freighting their product out of the Maritimes, or even in the Maritimes, you think it might be more beneficial to your industry?

Mr. Smith: I would think so, sir. I can see some great problems in doing it, but it probably would be beneficial.

Mr. Horner: That is fine. I will not ask any more questions.

The Chairman: Mr. Nesbitt.

Mr. Nesbitt: Very briefly, Mr. Chairman, as a layman on these matters I would like to ask the gentleman if perhaps he could clarify something for us. The brief refers to the difficulties concerned with the hopper type cars. Could you describe what kind of cars these are, what makes them especially adaptable for your product, and since we cannot find out from other sources at the moment why they would not be available, if you have any idea why these cars might not be available to your industry when, apparently, they are able to some others. In other words, what other kinds of product do these cars carry?

Mr. Smith: Would you care to answer that, Mr. Cunningham?

[*Interpretation*]

geux pour votre industrie, de faire des vers ments à l'expéditeur plutôt qu'à la compagn d'expédition qui fait le transport des pr duits? Si, disons, la feuille de route pour produit était de X dollars, et que le gouvern ment en paie 20 p. 100, ou un peu pl comme le prévoit, pour le transport ferr viaire, la Loi sur les taux de transport d marchandises dans les provinces Maritim est-ce que ce serait plus avantageux po votre société?

M. Smith: Si la subvention était pay directement à l'expéditeur?

M. Horner: Oui.

M. Smith: Je pense que oui, monsieur.

M. Horner: J'ai posé cette question par qu'un certain nombre de sociétés intéressé ont demandé que cela s'applique à l'industr du camionnage, et que je conçois qu'il pou rait y avoir pas mal de difficultés pour fai les versements aux diverses sociétés camionnage. Si cela rapportait, peut-êt qu'un grand nombre des grosses sociétés camionnage de Montréal ou d'autres régio du Canada essaieraient d'en bénéficier. M l'on faisait des versements directs à l'indu trie pour le transport de ses produits à l'ex rieur des Maritimes, ou même dans les Ma times, vous pensez que ce serait peut-êt plus avantageux pour votre industrie?

M. Smith: Oui, je crois, monsieur. J'im gine que cela serait assez difficile à réalis mais ce serait sans doute avantageux.

M. Horner: Très bien. Je n'ai plus questions.

Le président: Monsieur Nesbitt.

M. Nesbitt: En bref, monsieur le préside je ne suis pas spécialiste de la question, j'aimerais demander à monsieur de nous do ner quelques précisions. On parle, dans mémoire, des difficultés que posent wagons-trémies. Pourriez-vous décrire ce sorte de wagons, nous dire ce qui les re particulièrement adaptables à vos produi et, vu que nous ne pouvons, pour le m ment, apprendre d'autres sources pourq ils ne sont pas disponibles, nous expliq pourquoi on ne pourrait les mettre à la d position de votre industrie, alors qu'appare ment ils sont disponibles pour d'autr Autrement dit, quels autres types de produ transportent les wagons de ce genre?

M. Smith: Voudriez-vous répondre à ce question, monsieur Cunningham?

exte]

Mr. Cunningham: Mr. Chairman and gen-men, bulk hopper cars are used for various ds of commodities, for bulk feeds and so The advantage of the closed hopper-type is the convenience of loading through the f of the car as well as the convenience of oading from the bottom. You can unload per cars right from the bottom. There is a rcity of these cars, in my opinion, because railway has not kept pace with the move-nt of products in bulk. They do not have icient hopper cars to handle that type of ffic and I firmly believe they have fallen n in that particular area. In lieu of closed per cars they will often give us a boxcar. v while we will load cars in bulk they are y inconvenient because it requires a scoop vel to load them. There are no openings ugh the roof of the car and they have to loaded through the doors. At destination must use scoops again to take the erial out rather than just opening the bot- and flowing it out.

r. Nesbitt: I think I know the answer to question but I would like it confirmed for record. If regular refrigerated steamship ice were provided between the Atlantic vinces and the West Indies and perhaps tern Europe, would this greatly help the ort of your product?

r. Smith: The answer to that is yes, sir.

ne Chairman: Mr. Perrault.

r. Perrault: Mr. Chairman, I would like sk Mr. Smith a question which arises out paragraph on page 2 of his brief, which I e:

Lower rates for air shipments of fresh fish would be a great boon to the fishing industry.

n he carries on page 4 to say:

Transportation is of paramount impor-tance to the industry.

so on. Would you like to see an extension ansportation subsidies to air transport as s your products are concerned?

. Smith: Yes, if that would lower the —certainly.

. Perrault: What is the estimated extent e subsidies you propose, either in per-ge terms or in dollar terms? What would st the Treasury of Canada to provide subsidies? Have you worked that out?

691—13

[Interprétation]

M. Cunningham: Monsieur le président, messieurs, on peut utiliser les wagons-trémies pour différents types de denrées—fourrages en vrac, et ainsi de suite. L'avantage des wagons-trémies fermés, c'est que l'on peut les charger par le toit et les décharger par le bas. On peut les décharger directement par le dessous. Il n'y en a pas beaucoup de ce genre parce que, je crois, les chemins de fer n'ont pas réussi à progresser au même rythme que le transport des produits en vrac. Ils n'ont pas suffisamment de wagons-trémies pour répondre aux besoins, et je considère qu'ils ont réellement échoué dans ce domaine. Au lieu de wagons-trémies fermés, ils nous donnent souvent des wagons couverts. Nous pouvons charger les wagons couverts en vrac, mais ils sont très peu commodes, car il faut les charger à la pelle. Il n'y a pas d'ouverture dans le toit des wagons, et il faut les charger par les portes. Puis, une fois les wagons rendus à destination, il faut les décharger à la pelle, au lieu d'ouvrir simplement le fond et de laisser couler la marchandise.

M. Nesbitt: Je pense avoir la réponse à ma question, mais, pour le compte rendu, j'aimerais en avoir confirmation. Si l'on assurait un service régulier de navires à vapeur réfrigérés entre les provinces Atlantiques et les Antilles, et peut-être l'Europe occidentale, est-ce que cela aiderait beaucoup l'exportation de votre produit?

M. Smith: Oui, monsieur.

Le président: Monsieur Perrault.

M. Perrault: Monsieur le président, je voudrais poser à M. Smith une question qui m'est suggérée par un paragraphe de la page 2 de son mémoire, où il dit qu'un tarif moins élevé pour l'expédition par avion de poisson frais serait très avantageux pour l'industrie. Puis il dit, à la page 4, que le transport est de toute première importance pour cette industrie, et ainsi de suite. Est-ce que vous voudriez que l'on étende au transport aérien, en ce qui concerne vos produits, les subventions au transport?

M. Smith: Bien entendu, si cela peut diminuer le coût.

M. Perrault: De quel ordre seraient, selon vous, ces subventions, soit en dollars soit en pourcentage? Qu'en coûterait-il au Trésor du Canada pour fournir ces subventions? Avez-vous fait le calcul?

[*Text*]

Mr. Smith: Do you mean to equate them with other forms of transportation?

Mr. Perrault: Well, you regard air transport being important to get a perishable product to market quickly and the present cost, ostensibly, is too high. What effective reduction in rates would you like to see as far as air transport is concerned?

Mr. Smith: Of course, we would like the rates to be as low as they possibly could be. I would not like to put a percentage on it at the present time.

Mr. Perrault: It has not been worked out in that detail yet?

Mr. Smith: No.

Mr. Perrault: In your view, how long would such additional subsidies be required? Do you have a target date?

Mr. Smith: Speaking particularly on air transport, I think you would always need some form of sudsidization because you are moving, let us say, cod or haddock fillets or something that is of comparatively low value.

Mr. Perrault: What do you regard as your normal market so far as the marketing of these products is concerned? Are you talking in terms of central Canada or are you talking about New York?

Mr. Smith: New York, Boston; with regular air service you could cover the whole North American continent.

Mr. Perrault: You are talking about putting cod fillets into Vancouver, subsidized by...

Mr. Smith: It would be possible to do that sir.

Mr. Perrault: This is of interest to me as a West Coaster. My final question, Mr. Chairman, is this: do you see any technological or product-marketing advances which may, in the future, eliminate the need for transportation subsidies so far as your industry is concerned? Is any research proceeding in the fishing industry which will enable this industry to achieve greater economic help than perhaps it enjoys at the present time? Are processes being developed?

I have in mind, you know, the protein fishmeal research going on in North America at the present time. I understand that a plant is being opened on the East Coast. Will that assist the industry here?

[*Interpretation*]

M. Smith: Pour que ce soit sur un p d'égalité avec les autres modes de transp Est-ce là ce que vous voulez dire?

M. Perrault: Vous estimez que le transp aérien est important pour acheminer rapi ment une denrée périssable vers le marché le coût actuel en est, de toute évidence, t élevé. Quelle réduction aimeriez-vous voir pratique dans le tarif du transport aérien?

M. Smith: Bien entendu, nous aimeri que le tarif soit aussi bas que possible. Je voudrais pas donner de pourcentage pour moment.

M. Perrault: On n'a pas encore fait de cul détaillé?

M. Smith: Non.

M. Perrault: A votre avis, pendant comb de temps devrait-on verser ces subventi supplémentaires? Avez-vous fixé une d limite?

M. Smith: Pour ce qui est du transp aérien en particulier, je pense qu'il faud toujours une forme de subvention, car transporte, disons, des filets de morue ou hareng, ou un produit quelconque d' valeur relativement peu élevée.

M. Perrault: Qu'est-ce que vous considé comme vos débouchés normaux en ce concerne la commercialisation de ces p duits? Est-ce que vous parlez du Canada c tral ou de New-York?

M. Smith: New-York, Boston, avec un s vice aérien régulier on peut couvrir tout continent nord-américain.

M. Perrault: Vous voulez mettre des fi de morue à Vancouver, subventionnés par.

M. Smith: Ce serait possible.

M. Perrault: Cela m'intéresse en tant d député de l'Ouest. Une dernière quest monsieur le président. Est-ce que vous pou voir des progrès technologiques ou de co mercialisation qui à l'avenir pourraient fa disparaître le besoin de ces subventions p les transports en ce qui concerne vo industrie?

Je pense à la recherche sur les protéines poisson actuellement en cours en Amérique Nord. Si je comprends bien il y a une us qui a été ouverte sur le littoral est. Est-ce cela pourrait vous aider, ici?

[*exte*]

Mr. Smith: It would be an entirely new pe of industry. There has not been sufficient rketing of this type of product to know st where it could go.

Mr. Perrault: Yes.

Mr. Smith: But per unit of protein it would tainly cut your transportation cost, cause you would be reducing your weight product by about 80 per cent.

Mr. Perrault: Would you agree that the end ect of subsidies should really be eventually eliminate the need for subsidies?

Mr. Smith: I cannot quite see how that uld ever happen. Due to our geographical ation, I think we would always require a m of cheap transportation to get into the rket. Now, if this has to be done by sub- zation I think you will always require sidization.

Mr. Perrault: Let me ask you this: Do you e difficulty marketing some of your prod- s in the United States? Are there tariff bar- s against certain of your products?

Mr. Smith: There are tariff barriers against od many of them.

Mr. Perrault: Would negotiations between ada and the United States for a reduction those barriers assist the industry?

Mr. Smith: Under the Kennedy Round e of these reductions will come in over next four years.

Mr. Perrault: Yes, thank you.

The Chairman: Before going any further, I just asked by Station CGCH whether could come inside and film a silent film for the day. I cannot take it upon myself lecide, so I am asking the Committee for r views, will you allow them to come in?

Mr. McGrath: I had a question which I did raise at the time, Mr. Chairman. I did ce there was a man there shooting stills, I do not recall the Committee's giving nission for this. This is a privilege that is nded by the Committee and I suggest we take care to make sure it does not pen again.

The Chairman: Are we going to allow this ht film?

Some hon. Members: Agreed.

Mr. Turner (London East): Mr. Smith, you in your brief that effective February 15,

[*Interprétation*]

M. Smith: Ce serait un type entièrement nouveau d'industrie. Il n'y a pas eu suffisamment d'études de marché de faites sur ce produit pour savoir où on pourrait le vendre.

M. Perrault: Oui.

M. Smith: Mais, cela pourrait diminuer nos frais de transport car avec ces protéines le poids est diminué dans une proportion de 80 p. 100.

M. Perrault: Êtes-vous d'avis que l'objet de la subvention devrait être de faire disparaître le besoin de tels subsides?

M. Smith: Je ne peux voir comment cela pourrait se produire. Vu notre situation géographique, il nous faudra toujours un mode de transport peu coûteux pour acheminer nos produits. S'il faut le faire par des subsides, alors il faudra toujours des subsides.

M. Perrault: Permettez-moi de vous poser une autre question. Est-ce que vous éprouvez des difficultés à vendre certains de vos produits aux États-Unis? Est-ce qu'il y a des barrières tarifaires à l'égard de certains de vos produits?

M. Smith: Oui, il y a des barrières pour nombre d'entre eux.

M. Perrault: Est-ce que des négociations entre le Canada et les États-Unis pour abaisser ces barrières vous aideraient?

M. Smith: En vertu des négociations Kennedy certaines réductions interviendront dans les quatre ans.

M. Perrault: Oui, merci.

Le président: La station CGCH vient de me demander s'ils ne pourraient pas prendre un film muet ici, maintenant. Je ne peux pas prendre cela sur moi je voudrais donc savoir ce que vous en pensez? Est-ce que vous les autoriseriez à venir?

M. McGrath: J'avais une question que je n'ai pas posée sur le moment, monsieur le président. J'ai vu qu'on prenait des photos et je ne me souviens pas que le Comité en ait donné l'autorisation. C'est un privilège qui appartient au Comité et je propose que nous prenions des mesures pour que cela ne se produise plus.

Le président: Est-ce que nous autorisons ce film muet?

Des voix: Oui.

M. Turner (London-Est): Monsieur Smith, vous dites dans votre mémoire que le Cana-

[*Text*]

1969 the CNR said there would be an embargo on these large hopper cars in your area. Do you know the reason why this embargo was put on?

Mr. Cunningham: Mr. Chairman, I believe I already pointed that out. Because of the characteristics of the car, the wheel base and the spacing of the rail joints, they cannot operate these cars; they become top heavy and they roll off the rails.

Mr. Turner (London East): Did you ever have a derailment in this area?

Mr. Cunningham: I believe there have been in the southwest and they have had problems down in southwestern Nova Scotia.

Mr. Turner (London East): Thank you.

Mr. Cunningham: Mr. Chairman, we were speaking about minimum carloadings. Now, I would like to ask the question why the Canadian National Railways require a minimum carloading of 110,000 pounds, whereas the minimum carloading to the United States is 100,000 pounds. The CNR or the other railway are prepared to accept 100,000 pounds going into the United States but we have to load to 110,000 pounds in Canada. Why the differences in the two minimum carloadings? Why should it be 110,000 in Canada and 100,000 in the United States?

The Chairman: Mr. McCleave?

Mr. McCleave: A brief multi-million dollar question, Mr. Chairman. Would Mr. Smith comment on what prospects there would be for more sales of his product if there were refrigeration facilities at the major Canadian airports?

Mr. Smith: I did not catch the last part of your question.

Mr. McCleave: If there should be refrigeration facilities at the major Canadian airports.

Mr. Smith: I think there would be greatly increased prospects for business. This is some problem too, getting it there by air and then getting it away from the airport after you get it there. It would be very helpful. Is that the answer to your question, Mr. McCleave?

Mr. McCleave: It is. Have you ever taken this up with the Department of Transport or seriously explored the matter, sir?

[*Interpretation*]

dien National a dit, qu'à partir du 15 fév 1969, il y aurait un embargo sur les gra wagons-trémie dans votre région. Savez-v pourquoi ils ont imposé cet embargo?

M. Cunningham: Monsieur le président pense que je l'ai déjà signalé. A cause caractéristiques des wagons, de l'écartem des roues et l'espacement des joints des ra ils ne peuvent utiliser ces wagons, ils viennent trop lourds vers le haut et déraill

M. Turner (London-Est): Est-ce qu'il déjà eu un déraillement dans cette région?

M. Cunningham: Oui, je pense qu'il y e eu dans le sud-ouest et ils ont des problè dans le sud-ouest de la Nouvelle-Écosse.

M. Turner (London-Est): Merci beaucoup

M. Cunningham: Monsieur le présid nous parlions des chargements minimum. voudrais poser une question pour sa pourquoi le Canadien National exige un m mum de chargement de 110,000 livres, a que le chargement minimum pour les Ét Unis est de 100,000 livres. Le Canadien Na nal et les autres compagnies ferroviaires ac tent 100,000 livres pour aller aux États-U mais il nous faut charger 110,000 livres Canada. Pourquoi y a-t-il cette distinct entre les deux minimums? Pourquoi es 110,000 au Canada et 100,000 aux États-Uni

Le président: Monsieur McCleave?

M. McCleave: Une question très brève, quelques millions de dollars, monsieur le p sident. M. Smith pourrait peut-être nous quelles seraient les perspectives d'augmer tion des ventes de son produit s'il y avait installations de réfrigération dans les p grands aérogares du Canada.

M. Smith: Je n'ai pas entendu la fin votre question.

M. McCleave: S'il y avait des installati de réfrigération aux plus grands aérop canadiens?

M. Smith: Je pense que cela pourrait a menter considérablement nos possibilités vente. C'est aussi un problème, il faut f l'envoi par avion, il faut aller le cherche l'aérogare par la suite, mais ça aider Est-ce que j'ai répondu à votre question, m sieur McCleave?

M. McCleave: Oui. Est-ce que vous en a saisi le ministère des Transports, ou sérieu ment étudié cette possibilité?

exte]

Mr. Smith: No, I do not think we have. I ieve there are some small facilities provid- now at some of the airports for refrigerat- merchandise, but to get a volume move- nt of fresh fish these would have to be reased very materially, I should think.

Mr. McCleave: Have you or your company ried out market studies in this direction?

Mr. Smith: No, we have not. I should say have not done too much in the way of rket studies but we are using air to a ch greater extent than ever before.

Mr. McCleave: In that regard, are these are shipments within Canada, Mr. Smith, as ll as abroad?

Mr. Smith: As well as abroad.

Mr. McCleave: In which direction does st of this go by air?

Mr. Smith: For instance, our off-shore ship- nts of live lobster are all by air now.

Mr. McCleave: Do you suffer much loss of perishable food because of lack of refrig- tion at airports?

Mr. Smith: No, we do not.

Mr. McCleave: I suppose the lobsters are pped live, are they not?

Mr. Smith: They are shipped alive and they picked up on arrival of the plane.

Mr. McCleave: What about the fish that are shipped live?

Mr. Smith: You must make arrangements handle them very quickly at the other end, it would be helpful if refrigeration facili- were available at the various airports to dle these products.

Mr. McCleave: Thank you.

The Chairman: This is the end of our ques- n period, Mr. Smith, and I would like to nk you very much indeed.

Our next brief will be from the Nova tia, New Brunswick, Prince Edward nd, Newfoundland Federations of Labour.

Mr. J. K. Bell: Mr. Chairman and gentle- n, we are very sorry our chief spokesman, Carew, just stepped out, apparently at crucial moment. This brief was originally pared by the four Federations of Labour roximately a year ago. We have not

[*Interprétation*]

M. Smith: Non, je ne crois pas que nous l'ayons fait. Je pense qu'il y a actuellement de petites installations de réfrigération à certains aéroports mais il faudrait qu'elles soient considérablement accrues pour que nous puissions transporter un fort volume de poissons frais.

M. McCleave: Est-ce que vous avez fait des études de marché à cette fin?

M. Smith: Non. Nous avons fait peu d'études de marché mais nous utilisons les transports aériens, notablement plus qu'autrefois.

M. McCleave: A cet égard, il s'agit là d'expéditions au Canada, aussi bien qu'à l'étranger?

M. Smith: Aussi bien qu'à l'étranger.

M. McCleave: Dans quelle direction allez-vous par air?

M. Smith: Les expéditions de homards vivants se font toutes par air, maintenant.

M. McCleave: Est-ce que vous encourez beaucoup de pertes de ces denrées périssables, du fait du manque de réfrigération aux aéroports?

M. Smith: Non.

M. McCleave: Les homards sont expédiés vivants?

M. Smith: Oui et quelqu'un vient les chercher à l'arrivée de l'avion?

M. McCleave: Que dire des poissons qui ne sont pas expédiés vivants?

M. Smith: Il faut prendre des dispositions pour aller les chercher assez rapidement à leur point d'arrivée. Ce serait alors fort utile s'il y avait des installations de réfrigération dans les divers aéroports pour la manutention de ces produits.

M. McCleave: Merci.

Le président: Voilà la fin de votre période de question, monsieur Smith, et je voudrais vous remercier.

Notre prochain mémoire sera celui des Fédérations des travailleurs de la Nouvelle-Écosse, du Nouveau-Brunswick, de l'Île du Prince-Édouard et de Terre-Neuve.

M. J. K. Bell: Monsieur le président, messieurs, je m'excuse, notre porte-parole principal M. Carew, vient de s'absenter, apparemment au moment crucial. Le mémoire a été préparé par les quatres fédérations provinciales du travail, il y a environ un an. Nous

[*Text*]

revised the brief because we feel that the main basic points we wish to bring before this Committee are essentially still with us. Our problems are basically still the same and for this reason, while it may perhaps need a slight updating, we feel that the general points in the brief are certainly ones that are as in need of consideration now as in the past.

This brief is being presented by the four federations of trade unions in the Atlantic Provinces, and we point out that our views on the need for a comprehensive regional economic policy for the Atlantic region has recently been made known to the federal government. It is only within the context of this over-all policy that our attitude on matters of transportation can be fairly judged.

The economic problems of the Atlantic provinces are such that they will yield to nothing short of a massive program of co-ordinated and comprehensively planned regional economic development.

To this end, we suggest that the Federal Government take the initiative by establishing a single agency, or department of government and since we have written this brief we do know the regional disparity council has been formed. After looking over the estimates that have been provided by the government we feel that this still falls far short of the economic needs if we are going to give the necessary stimuli, the shot in the arm, to the economy of this particular region.

At this particular point I see that my confrere, Mr. Carew, is here and I am going to ask him to take over if you do not mind, Mr. Chairman.

Mr. A. B. Carew (Director of Research, Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland Federations of Labour): Do you wish me to go ahead with reading the brief?

The Chairman: As we have so many briefs, please summarize it briefly.

Mr. Carew: Well, as Mr. Bell has pointed out, we are extremely concerned with the continuing stagnation of this Maritime economy and we believe, as we have stated to the government before, that it is only going to yield to a massive injection of capital in a co-ordinated and comprehensively planned regional economic development.

Because of the disadvantageous state of the economy we feel that a regional transportation policy for the Maritimes requires a different emphasis from that which one finds in

[*Interpretation*]

n'avons pas revisé le mémoire car nous p sons que les points principaux sont toujo les mêmes. Nos problèmes sont pratiquem toujours les mêmes et pour cette raison b que le mémoire ait probablement besoin d tre mis à jour, nous estimons que les poi principaux du mémoire sont ceux qui doiv être étudiés maintenant tout comme par passé.

Ce mémoire est présenté aux noms quatre fédérations provinciales du travail provinces de l'Atlantique. Nous disons jus ment que nos opinions concernant une pol que de transport ont récemment été comm niquées au gouvernement fédéral. C'est seu ment dans ce contexte que notre attitude matière de transport peut être adéquatem jugée. Les problèmes économiques des p vinces de l'Atlantique sont d'un tel ordre leur solution exigera la mise en vigueur d programme de développement coordonné p tant sur toute l'économie de la région d son ensemble.

A cette fin, nous suggérons donc que gouvernement fédéral prenne l'initiative établisse soit une agence, soit un minist gouvernemental qui sera la seule autorité r ponsable. Depuis que nous avons rédigé mémoire, nous savons que le Conseil sur disparités régionales a été établi, mais examinant les prévisions budgétaires du g vernement, nous estimons que cela ne va assez loin quant aux besoins économiques, nous voulons donner un encouragem sérieux à l'économie de cette région.

Je vois, maintenant, que M. Carew est je vais donc lui demander de continuer, vous n'y voyez aucune objection, monsieur président.

M. A. B. Carew (Directeur de la recherc Fédérations du travail de Nouvelle-Écosse, Nouveau-Brunswick, de l'Île du Prin Édouard et de Terre-Neuve): Voulez-vous q nous lisions le mémoire?

Le président: Non, je préférerais que v le résumiez, étant donné le nombre mémoires que nous avons.

M. Carew: Comme M. Bell l'a suggéré, n sommes très préoccupés par le marasme p manent de l'économie dans les Maritimes nous pensons, comme nous l'avons déjà dit gouvernement, que ce qu'il faut c'est u injection de massive de capitaux dans un p gramme coordonné et planifié de développ ment régional.

Du fait de l'état déplorable de l'économ nous pensons qu'une politique régionale transports dans les Maritimes devrait ê établis sur des bases entièrement différen

[exte]

MacPherson Commission Report on which National Transportation Act was based. e objective of the Transportation Act was isolate the transportation policy from pub- policy essentially, the public policy consid- tions, and that a system be created where- competing modes of transport would carry ffic according to their natural cost advan- e, and under which subsidies which had viously distorted the competitive picture re to be gradually eliminated. This is the ic concept which we agree with; organized our has agreed with this position.

Thus, as a basic principle, the transporta- n system was not to be inextricably bound with public policy considerations so as to der it fundamentally inefficient in the way t it has been over the years. But under rticular circumstances it is entirely appro- ate for the government to use transporta- n to subsidize communities and areas ich are at an economic disadvantage or for ne other public policy reason require sub- ization. We feel that this argument applies ticularly to the Maritime region at the ment.

While we feel that there is a definite need subsidization, we also feel that the princi- of the MacPherson Royal Commission and National Transportation Act should not be orted and so we feel that so as not to ert from the basic principles underlying it, government must equalize its subsidies r various transportation modes, thus rding against any distortion of the natural t relationships under which an efficient tem must be based.

This type of subsidization has its precedent the Maritime Freight Rates Act of 1927, we feel that this should be continued h some definite changes, both qualitative quantitative.

We feel that the Freight Rates Act has been dequate because with the 20 per cent roll- k on intra-Maritime region freight move- nts and the 30 per cent rollback on ght originating within the Maritime region moving west, this has still not enabled Atlantic shipper to compete effectively in markets of central Canada.

To rectify this we suggest that the extra of transportation falling on Atlantic ducers as a result of the length of haul ween the Maritimes and central Canada be pletely underwritten by the government. It means that we would suggest that the 20 cent or 30 per cent rollback be scrapped that the total amount of the extra cost of nsportation for shippers in this area be ered by the federal government.

[*Interprétation*]

de celles du rapport de la commission MacPherson sur lequel, d'ailleurs, la *Loi nationale sur les transports* a été fondée. Le but de la Loi était d'isoler la politique en matière de transport des considérations de la politique publique et de créer un système des modes de transport concurrentiel en fonction de leurs avantages naturels et aux termes desquels les subventions qui avaient préalablement déformé la concurrence seraient progressivement éliminées. C'est le concept de base que nous acceptons; le syndicalisme a toujours été d'accord avec cette attitude.

Tout d'abord, comme principe de base, les réseaux de transport ne devraient pas être liés inextricablement aux questions de politique pour les rendre foncièrement inefficaces comme il l'a été depuis un certain nombre d'années. Mais, vu les circonstances particulières, il devient très approprié pour le gouvernement de subventionner les transports dans les régions où il y a un désavantage économique ou sil y a une autre raison pour la justifier. Nous croyons que cet argument s'applique tout particulièrement aux Maritimes à l'heure actuelle.

Bien que nous soyons d'accord et que nous convenions qu'on a besoin de subventions, nous admettons aussi que le principe du rapport de la commission MacPherson et de la *Loi nationale sur les transports* ne doit pas être déformé. Évidemment le principe de base qui l'anime, donc, veut que le gouvernement égalise ces subventions et les répartisse sur les divers modes de transport, éliminant ainsi les différences qu'il y a entre les divers modes de transport.

Ce type de subvention a son précédent dans la Loi sur les tarifs de transport dans les Maritimes de 1927 et nous pensons que cela doit continuer avec quelques changements qualitatifs et quantitatifs.

Nous estimons que la Loi sur les taux de transport des marchandises des provinces Maritimes a été inadéquate, étant donné la réduction de 20 p. 100 à l'intérieur des Maritimes et la réduction de 30 p. 100 du tarif marchandises dont l'origine est dans les Maritimes et qui sont transportées vers l'Ouest ce qui n'a pas encore permis à l'expéditeur de l'Atlantique de faire la concurrence sur les marchés du centre du Canada. Pour corriger cette situation, nous suggérons que les frais supplémentaires de transport pour les producteurs de l'Atlantique, du fait du long parcours entre les Maritimes et le centre du Canada, soient complètement défrayés par le gouvernement. En d'autres termes, nous suggérons que les 20 p. 100 ou les 30 p. 100, la réduction de 20 ou de 30 p. 100 soit éliminée et que le total des frais supplémentaires de transport

[*Text*]

We feel that this could be done, as was suggested by the Maritime Transportation Commission before the MacPherson Royal Commission, on the basis of the 1 per cent waybill analysis under which you would take any given commodity sold in central markets and shipped from the Atlantic region and over a period of a year you would find out what the cost of shipping a certain quantity or a certain weight would be, and compare it with the cost of shipping the same commodity from other areas of Canada to the central Canadian market. This is what we suggested in terms of a quantitative improvement of the Maritime Freight Rates Act.

Qualitatively we feel that this subsidization should be offered to all modes of transportation so as not to distort, as we say, the natural competitive picture. In the railway industry, for instance, this would include the extension of any subsidization offered to express freight, which at the moment I understand is excluded from the freight rate subsidization under the Act. We feel that it should be extended to this area.

A point that we did not bring out in our brief at the time this was presented, but which is now, perhaps, a more relevant aspect, is that in view of the anticipated blossoming of Halifax as the natural focal point in the North American land-bridge transportation network, and since it appears to be the fundamental fact the federal government is relying upon to inject some stimulant into the Maritime economy, the stimulus for indigenous industries within this area, we feel that the subsidization under the Maritime Freight Rates Act should be extended also to cover the following types of shipment which have so far been excluded from its coverage.

First of all, we feel that traffic originating in or destined for the United States should also be covered by this type of subsidy because, if Halifax is to become the focal point of this containerization unit train system, it would be drawing on traffic originating in or bound for the United States. In effect, it would be competing with New York and if it is to be effective it has to win the American traffic that would otherwise go to New York.

Second, we feel that import traffic should now be covered by the freight rates subsidization which is not the case at the moment. Third, export traffic not originating within

[*Interpretation*]

pour les expéditeurs de cette région soi couverts par le gouvernement fédéral.

Nous croyons qu'on pourrait le faire com il a été suggéré par la Commission des tra ports maritimes devant la Commission roy d'enquête MacPherson, sur la base de l'a lyse de 1 p. 100 des feuilles de route p certaines marchandises expédiées des régi de l'Atlantique au cours d'une année et v sauriez alors ce que serait le coût d'expé tion pour un produit donné. Vous pourr ensuite le comparer aux frais de transport la même denrée d'autres parties du Cana vers les marchés du centre du Canada. C' ce que nous avons suggéré sous forme d'ar lioration quantitative de la Loi sur les ta des transports dans les Maritimes.

Du point de vue de la qualité, nous e mons que cette subvention devrait être offe à tous les modes de transport afin de ne déformer la nature de la concurrence na relle. Dans l'industrie des chemins de fer, exemple, ceci comprendrait l'extension toute subvention jusqu'aux messageries marchandises, parce que, si j'ai bien comp cela n'est pas compris. Nous croyons co prendre que les transports des marchandis messageries sont à l'heure actuelle exclus la Loi. Nous estimons qu'on devrait l'éten à ce domaine.

Un point que nous n'avons pas soulevé d notre mémoire, au moment où nous l'av rédigé, et qui serait peut-être mainten beaucoup plus pertinent, c'est que, vu développement possible d'Halifax comme t de pont de l'Amérique du Nord. Le fait que gouvernement fédéral compte sur cela, jus ment pour encourager le pays et stimuler conomie des Maritimes, stimuler les ind tries indigènes de cette région, nous estim que la subvention, en vertu de la Loi sur taux de transport des marchandises dans provinces Maritimes, devraient aussi s'éte dre à d'autres secteurs, qui, jusque-là, n' pas été visés.

Tout d'abord, nous croyons que le tra dont l'origine ou la destination est les Éta Unis devrait aussi être visé par ce genre subventions, car si Halifax devient la tête pont du système de trains unitaires et transport par cadres, il aura un trafic ven des, et destiné aux États-Unis. En fait, il f concurrence à New York. Si, donc, on veut rendre efficace, il doit gagner le trafic amé cain qui autrement serait destiné à New Yor

Deuxièmement, nous croyons que le tra d'importation devrait aussi être maintena visé par la subvention, ce qui n'est pas le à l'heure actuelle. Troisièmement, les exp

Texte]

ne Maritime freight rate area should be cov-ed. At the moment export traffic originating ithin the area is eligible for subsidization. Ve feel that this should be extended to traffic iat originates east of the Atlantic region.

This is the substance of our original sub-ission. We would also like to point out that e feel less than elated about the proposed evelopment plan for the Atlantic area which as announced earlier this week by the Min-ter of the new department—the regional onomic expansion department, I believe it called. It seems to us that what the Atlantic gion is being offered here is some more "ad ocery". There is still no cover-all plan for e Atlantic region that would make any kind sense of the piecemeal developments that e taking place.

Included in this is the very transportation olicy which your Committee is considering w, which the Department of Transport has en working on for this region for the last uple of years. It seems to us that the gov-nment has not brought its various depart-ents together in considering this. Depart-ent of Manpower is, from our experience, adequate and not equipped to deal with the nd of problems that will be facing it if this jection of capital in particular regions with-the Atlantic area goes ahead.

It seems to us rather senseless that a trans-rtation policy is being considered separate d apart from the regional economic devel-ment program itself, and while we agree th the establishment of the department, we el that the timing and the co-ordination of activities has been less than adequate.

The Chairman: Mr. Allmand?

Mr. Allmand: Mr. Chairman, in the brief Federation of Labour suggests that the bsidies that presently apply to railways be tended to truckers. When we were in New unswick and heard the Trucking Federa-n I was surprised to learn that most of the cking industry in New Brunswick is not ionized.

Mr. Carew: Yes.

Mr. Allmand: What is the situation in Nova otia and the other Atlantic provinces with pect to the trucking industry?

[*Interprétation*]

tations qui n'ont pas leur origine dans la région visée par la Loi devraient faire l'objet de subventions. A l'heure actuelle, les exportations venant de l'extérieur de la région sont visées par les subventions, et nous trouvons que cela devrait s'appliquer aussi au trafic qui vient de l'est de la région de l'Atlantique.

Voilà le cœur même de notre mémoire original. Nous voudrions aussi signaler que nous ne sommes moins qu'enthousiastes au sujet du projet de développement de la région de l'Atlantique qui a été annoncé, plus tôt cette semaine, par le ministre du nouveau ministère de l'expansion économique régionale. Il nous semble que ce qu'on offre à la région de l'Atlantique maintenant c'est encore des mesures temporaires et il n'y a aucun plan d'ensemble pour la région de l'Atlantique qui donnerait un certain sens au développement fractionnaire qu'on a favorisé jusque là.

Et la preuve c'est justement la politique sur les transports que votre Comité étudie à l'heure actuelle et que le ministère des Transports essaie de développer dans cette région depuis quelques années.

Il nous semble que le gouvernement n'a justement pas coordonné ses différents ministères sur cet aspect. Le ministère de la Main-d'œuvre, d'après notre expérience, est insuffisant et n'est pas organisé de façon à pouvoir régler le genre de problèmes auxquels il devra faire face si le capital et les investissements dans cette région de l'Atlantique se poursuivent.

Il nous semble plutôt stupide qu'une politique en matière de transport soit étudiée indépendamment du programme de développement économique régional lui-même.

Nous croyons tout simplement que le moment choisi, bien que nous soyons d'accord sur le principe même de la politique, pour mettre en vigueur cette politique, semble loin d'être adéquat.

Le président: Monsieur Allmand.

M. Allmand: Monsieur le président, dans le mémoire, la Fédération du travail suggère que les subventions qui s'appliquent à l'heure actuelle aux chemins de fer s'appliquent aussi aux camionneurs. Quand nous étions au Nouveau-Brunswick, nous avons entendu la Fédération des camionneurs, j'ai été surpris d'apprendre que la plus grande partie de l'industrie du camionnage n'est pas syndiquée.

M. Carew: Exact.

M. Allmand: Quelle est la situation en Nouvelle-Écosse et dans les autres provinces, à cet égard?

[*Text*]

Mr. Bell: Pretty well the same; the trucking industry in this part of the country, the entire Atlantic region, is not organized to the same extent that the rail industry is. Nevertheless, we look upon highway transportation as being tied up with highway transportation equally in the over-all solution to the problem. For this reason, while we regret the fact that they are not organized, nevertheless we feel that industry should also be developed to a greater degree than is the case at the moment.

Mr. Allmand: Despite the fact that it is not organized, are the wage rates in the trucking industry on a par with wage rates in the railway industry and trucking in other parts of Canada?

Mr. Bell: No, but at least they are covered by the Canada Labour (Standards) Code which does provide minimum standards such as limitation on hours or work, overtime, the question of hours per week and the minimum wage under the federal code, which is perhaps a factor of unfair competition. We acknowledge that but at the same time we are naturally hopeful that in time this unfair competition will be eliminated by standards being improved.

There is also the question of supply and demand. Competent truckers are scarce; they are a skilled type of workman and in the general play of supply and demand naturally the wage rates of truckers and conditions of employment now are naturally substantially better than what they were in the past, even though they are still below the standards of the railway workers who are organized.

Mr. Allmand: Do you have any information on how well the trucking companies are doing? We sort of get the impression that the trucking companies in the Maritime provinces are doing quite well now without the subsidies.

Mr. Bell: We are thinking in terms of promoting a type of subsidy that will encourage perhaps an organized, scheduled long-haul type of arrangement, not the inter-regional transportation that perhaps you have heard about in Fredericton. We are thinking in terms of promoting and encouraging road transport to the point where we will have scheduled services to other parts of Canada, and perhaps this type of service would call for some type of subsidization.

Mr. Carew: May I make a point on that particular aspect? At the bottom of page 6 of the brief you will notice that we mention that

[*Interpretation*]

M. Bell: Pratiquement la même; l'industr du camionnage, dans cette partie du pays dans toute la région de l'Atlantique n'est p syndiquée de la même façon que l'industr du chemin de fer l'est. Néanmoins, nous es mons que le problème des transports est au problème des transports pour la soluti d'ensemble au problème. Pour cette raiso bien que nous regrettions que cette industr ne soit pas syndiquée, nous estimons qua même que l'industrie devrait être développ plus qu'elle ne l'est à l'heure actuelle.

M. Allmand: Malgré le fait qu'elle ne s pas organisée, est-ce que les salaires da l'industrie du camionnage sont sur un pi d'égalité, par exemple, avec les salaires pay dans l'industrie du chemin de fer dans d'a tres parties du Canada?

M. Bell: Non, mais au moins ils sont co verts par la Loi sur le code du travail q prévoit certaines normes, des limites sur l heures de travail, qui prévoit des heures su plémentaires, et la question des heures travail par semaine. Le salaire minimu garanti, etc .. En même temps, nous esp rons à la longue que cette concurren déloyale sera éliminée par l'amélioration d normes.

Il y a aussi la question d'approvisionn ment. Les camionneurs compétents sont rar C'est un travail spécialisé et même en l'a sence de syndicats, les conditions de trav et les salaires sont beaucoup mieux qu'ils l'étaient autrefois, bien qu'ils soient enco inférieurs au niveau des chemins de fer. C les employés des chemins de fer so organisés.

M. Allmand: Auriez-vous des renseign ments quant aux résultats obtenus par l sociétés de camionnage? Nous avons l'impre sion que ces compagnies réussissent ass bien maintenant sans la subvention.

M. Bell: Nous songeons à promouvoir genre de subventions qui pourraient peut-êt encourager un programme intégré, et non p le transport régional dont on vous a peut-êt parlé à Frédéricton. Nous songeons surtout promouvoir et à encourager le transport ro tier au point où nous aurons un programm déterminé, un horaire déterminé, vers l autres endroits du Canada. Ce genre de se vice exigerait peut-être une certaine forme subventions.

M. Carew: Est-ce que je pourrais ajout quelque chose à ce que vous avez dit sur c aspect? A la page 6 de notre mémoire, vo

Texte]

e want the subsidization extended to all odes of transport, but we would also like me study made of hidden subsidization, and is is a very complex area. We are not par-cularly interested in doing the truckers a g favour by advocating that they be given a g hand-out in the same way as the railways, ecause we feel that the truckers here are ready subject to a considerable amount of dden subsidization.

One of the points you raised, the abysmally w wage rate in this region for truckers, is itself a form of subsidization. There is also e subsidization of the road system. We feel at the truckers probably do not pay anywhere near their fair share of the cost of ads; they use them, in effect, as private izens. They are not really contributing to e upkeep of the roads in the way the railys are forced to keep up their own rail twork, so we feel that as part of the quid o quo of extending subsidization to the ucking industry, there would also be an amination made of all kinds of hidden subsdies to that industry.

Mr. Allmand: Going to another point, in ur brief at page 7 you state that following e change of rates for L.C.L. freight there re 700 lay-offs in the Maritimes, and you re or less imply that the 700 lay-offs were e to the change in rates. I notice your ures are for September, 1967 and it is my derstanding that since that time total tonge railway traffic in the Maritimes has reased.

Mr. Carew: We have later figures now for t. In actual fact, total carload freight in Maritimes has increased since that period. the last four quarters, that is, say, the iod from September, 1967 to September, 8 total carload traffic in the Maritimes has reased by about 8 per cent.

n the last twelve-month period less-than-load traffic has been 75 per cent less than was in the twelve-month period preceding change in freight rates, and this has had a ect effect on employment. Employment in railway industry in the Atlantic region is nething like 17 per cent less than it was 18 nths ago.

Mr. Allmand: I felt that the cargo connecin that you tried to make, between the nge in the LCL rates and unemployment, y not have been quite fair because of the t that I think total tonnage has increased. what areas were these 700 laid off? Were y in the running trades?

[*Interprétation*]

remarquerez que nous avons mentionné que la subvention s'applique à tous les modes de transport. Nous voudrions aussi qu'on fasse une étude des subventions cachées, c'est un domaine très complexe. Nous ne sommes pas tellement intéressés à faire des faveurs pour les camionneurs en leur donnant les mêmes choses que les chemins de fer, car nous estimons que les camionneurs ont déjà l'avantage de subventions cachées.

Un des points que vous avez soulevés vous-même, soit les salaires très bas dans cette région pour les camionneurs, est dans une certaine mesure une forme de subventions. Il y a aussi la subvention du réseau routier. Nous estimons que les camionneurs ne paient pas vraiment leur juste part du coût de l'entretien des routes, dans le sens qu'ils les emploient à titre de citoyens normaux. Ils ne contribuent vraiment pas au maintien et à l'entretien des grandes routes, tout comme les chemins de fer, par exemple, doivent le faire pour leur propre réseau de ligne. Et alors, la raison d'être des extensions et des subventions à l'industrie du camionnagé comportent aussi ces subventions cachées.

M. Allmand: Dans votre mémoire, à la page 7, vous dites qu'à la suite du changement de tarif pour les chargements incomplets il y a eu 700 mises en disponibilité dans les Maritimes. Et, vous prétendez que cela est dû justement au changement de structure des taux. Mais, je remarque que vos chiffres remontent à septembre 1967. Si j'ai bien compris, depuis ce temps-là, le trafic total dans les Maritimes a augmenté.

M. Carew: Nous avons des chiffres plus récents à cet égard. En fait, le volume total des marchandises depuis ce temps a augmenté. Au cours des quatre derniers trimestres, soit de septembre 1967 à septembre 1968, le total a augmenté d'environ 8 p. 100. Depuis douze mois, le trafic des chargements incomplets a passé de 75 p. 100 par rapport à la période de douze mois qui a précédé la modification du tarif-marchandises, ce qui a évidemment influé sur l'emploi. L'emploi dans l'industrie ferroviaire de la région de l'Atlantique est environ 17 p. 100 moins élevé qu'il y a dix-huit mois.

M. Allmand: J'estimais que le lien avec le frêt que vous essayiez d'établir entre la modification du tarif des chargements incomplets et le chômage n'était pas tout à fait juste en raison du fait que le volume des marchandises transportées a augmenté. Mais, dans quels secteurs ces 700 ont-ils été mis à pied? S'agit-il du personnel roulant?

[*Text*]

Mr. Carew: No; I believe they were mostly in express freight, the cartage section of the railway industry.

Mr. Allmand: Most of them were in express freight?

Mr. Carew: I believe so; those involved in pickup and delivery, warehousing, and so on.

Mr. Allmand: Were they more or less spread out throughout the Maritimes or were they centered in one region, such as Moncton?

Mr. Carew: Perhaps Mr. Abbott could answer that question. Mr. Abbott is from the Canadian Brotherhood of Railway Transport and General Workers.

Mr. L. K. Abbott (Canadian Brotherhood of Railway Transport and General Workers): Mr. Chairman, at the time of the sudden layoff last year approximately 500 people were laid off from the express freight services; others were laid off from the Moncton shops, and these were machinists or federated craft people. Actually 700 was the figure, but there were more than that, because of spare employees who had been working at the time who also were laid off. Therefore, the actual figure would be more than 700 at that time.

Mr. Allmand: Since that time, sir, have any of these men been back on or has there been an increase in employment on the railways in other areas?

Mr. Abbott: There has been some increase. An important matter for the Committee to bear in mind is that the flow of traffic at the moment is fairly steady, but a lot of this is due to the dock strikes in the United States. We feel that as soon as these strikes are settled the traffic is going to decline again and we will probably be faced with another layoff on the railway. But we hope not.

Mr. Allmand: That is all, Mr. Chairman.

The Chairman: Mr. Perrault?

Mr. Perrault: Mr. Chairman, I would like to ask a question arising out of the suggestion that subsidies should be extended.

First of all, on the proposal that there should be a subsidy paid to the trucking industry, I would like to ask the labour

[*Interpretation*]

M. Carew: Non, je crois que c'est plutôt d service marchandises rapide, le secteur factage de l'industrie ferroviaire.

M. Allmand: La plupart étaient dans le se vice de factage?

M. Carew: Oui, je le crois. Ceux qui tr vaillaient dans les entrepôts, aux livraison etc.

M. Allmand: Est-ce qu'ils étaient de tout les parties des Maritimes ou d'un endroit e particulier, comme Moncton?

M. Carew: M. Abbott pourrait peut-êt répondre à votre question. M. Abbott repr sente la Fraternité canadienne des chemino et employés des transports et autres ouvriers

M. L. K. Abbott (Fraternité canadienne d cheminots et employés des transports autres ouvriers): Au moment de la mise disponibilité l'an dernier, environ 500 perso nes ont été mises en disponibilité du servi de factage; d'autres employés des ateliers Moncton ont été mis en disponibilité. Il s'agi sait surtout de machinistes ou des hommes métier. On a cité le chiffre de 700, mais il en avait plus en raison des surnuméraires q travaillaient en ce moment-là et qui ont ég lement été mis à pied. En d'autres termes, chiffre total aurait été de plus de 700 à moment-là.

M. Allmand: Depuis ce temps, monsieu est-ce que certains de ces hommes ont é rappelés au travail ou est-ce qu'il y a eu u augmentation du nombre d'emplois offerts p les chemins de fer dans d'autres régions?

M. Abbott: Oui, il y a eu une augmentatio Je crois que la Commission ne devrait p oublier que même si, à l'heure actuelle, trafic est plutôt constant, c'est dû en gran partie aux grèves des débardeurs aux État Unis. Nous estimons que du moment que grève des débardeurs aux États-Unis se réglée, le trafic diminuera encore une fois nous aurons probablement à faire face à u autre mise en disponibilité de la part d chemins de fer. Nous espérons que non.

M. Allmand: C'est tout, monsieur président.

Le président: Monsieur Perrault?

M. Perrault: J'aimerais poser une questi relative à la proposition qu'on devrait prolo ger les subventions.

Tout d'abord, la proposition de verser u subvention à l'industrie du camionnage. J'a merais demander aux représentants synd

Texte]

epresentatives here whether or not, in their iew, the suggestion seems to ignore the fact iat it would still be impossible to ensure that ie carrier passes the benefit on to the ship-er? It seems to ignore the difficulty of defin-ig the phrase "trucking industry". Would is subsidy extend only to public carriers, or ould shippers operating a private means of ansport receive some kind of benefit?

Let me explain, Mr. Chairman. If a shipper ith a private mode of transport is denied e subsidy will he not be encouraged to form s own public company, thereby encouraging proliferation of truckers? I think the impor-nt thing is to make certain that the benefit passed on. Could they comment on that?

The Chairman: I would rather have them swer a question.

Mr. Perrault: That is a question.

The Chairman: It is not a question; it is a mment. If we ask everyone to answer a mment...

Mr. Perrault: Mr. Chairman, that is a ques-n and they are ready to answer it. Let us ar their answer.

Mr. Bell: I would prefer that it be passed to the shipper. I also think it should be ntingent on the shipper receiving the ulti-ate benefit.

Mr. Perrault: You suggest there is a dan-r, though. Do you think this is a valid...

Mr. Carew: I think this is a danger. If a uation such as you describe arose perhaps s would be a matter that the Prices and come Board, which has just been estab-hed here, would have the power to look at d report on.

Mr. Perrault: It was suggested that the 1 r cent waybill analysis be used as a basis comparing charges paid by Atlantic area ppers with those paid by their competitors.

s breaking down a 1 per cent sample to npare individual movements statistically id? It seems to be very roughly worded.

Mr. Carew: I am not a transportation nomist myself, but I believe this is a sys-n which is used by the CTC for analyzing

[Interprétation]

caux ici, si, à leur avis, la suggestion semble ignorer le fait qu'il serait toujours impossible d'assurer que le transporteur fasse bénéficier l'expéditeur de cette économie. On semble négliger la difficulté de définir «l'industrie du camionnage». Est-ce que cette subvention s'appliquerait simplement aux transporteurs publics ou si les expéditeurs qui avaient leurs propres moyens de transport en bénéficieraient aussi?

Permettez-moi d'expliquer, monsieur le président. Si un expéditeur ayant ses propres moyens de transport n'a pas droit à la subvention ne serait-il pas alors tenté de former sa propre société constituée, augmentant ainsi le nombre de camionneurs? A mon avis, l'important est de s'assurer que l'expéditeur bénéficie de cet avantage. Je me demande s'ils pourraient commenter a ce sujet.

Le président: Je préférerais qu'ils répondent à une question.

M. Perrault: C'en est une.

Le président: Non, ce n'est pas une question mais bien un commentaire. Si on demande à chacun de donner la réplique à un commentaire...

M. Perrault: Il s'agit bel et bien d'une question et ils sont prêts à nous donner la réponse. Écoutons donc leur réponse.

M. Bell: Nous préférerions que l'expéditeur bénéficie des économies entraînées. Il faudrait en faire une condition nécessaire.

M. Perrault: Vous laissez entendre qu'il y a un risque, cependant. Vous croyez que c'est valide...

M. Carew: Je crois que c'est un risque. Si la situation était telle que vous la décrivez, il s'agirait d'un domaine où la Commission des prix et des revenus, qu'on vient de créer ici, pourrait faire enquête et présenter un rapport.

M. Perrault: On a proposé qu'on utilise l'analyse de 1 p. 100 de la feuille de route pour comparer les tarifs payés par les expéditeurs de la région de l'Atlantique avec ceux de leurs concurrents.

Est-ce qu'il serait valide du point de vue statistique de ventiler un échantillon de 1 p. 100 pour comparer des expéditions individuelles? Il me semble que c'est exprimé assez vaguement.

M. Carew: Je ne suis pas économiste dans le domaine des transports, mais je crois comprendre que la CCT emploie ce système pour

[*Text*]

all kinds of aspects of transportation in Canada. I understand it is the most convenient way they have of analyzing trends in freight shipping, and so on.

Mr. Perrault: It seems to be a very small sample on which to determine policy.

Mr. Carew: You would be basing that sample on the performance of a whole year. We are suggesting that it would be taken over a year. You are testing a fairly wide net over that length of time. It is 1 per cent for the whole year.

Mr. Perrault: Mr. Chairman, the Canadian Labour Congress has pointed out on many occasions, and again recently, the danger of inflation in this country, and we are all concerned about it. On page 6, where we read of subsidies paid to transportation facilities, this phrase appears:

> Such a program need not be too cumbersome

Obviously, there has been some analysis of the cost to the Canadian treasury of providing these additional subsidies. Would you provide us with a suggested estimated burden which will not be too cumbersome?

Mr. Carew: We have no figures on that. The reference there to the system being cumbersome is not to the amount of money implicit in the subsidization, as you would go about analyzing freight shipped. We are suggesting that the 1 per cent waybill analysis is not cumbersome. I feel that the subsidization may be very handy.

Mr. Perrault: So the word "cumbersome" refers to the method of analyzing how the subsidy can be determined.

This is my final question, Mr. Chairman. In your view should subsidies be paid for an indeterminate length of time, or do you regard a program of increased subsidization as one step, in conjunction with other measures, to build up the economic health of the Maritimes, and that eventually subsidies can be removed?

Mr. Carew: On principle, I do not feel that subsidies should be continued indefinitely, but in the absence of any comprehensive, regional economic plan for this area—and a comprehensive and economic plan, I would imagine, would set time limits and precise goals—I feel that the subsidization has to continue on and on until some change is detected in the quality of economic life in this region.

[*Interpretation*]

analyser de nombreux aspects des transpor au Canada. Si j'ai bien compris, c'est la mei leure façon, à l'heure actuelle, d'analyser l' volution des expéditions et ainsi de suite.

M. Perrault: Il me semble que l'échantillo est plutôt restreint pour qu'on puisse y bas une politique.

M. Carew: Votre échantillon sera basé s le rendement d'une année entière. Nous pr posons que ce soit étendu sur une année. U telle période de temps nous permet d'analys un champs assez vaste. C'est 1 p. 100 de tou l'année.

M. Perrault: Monsieur le président, le Co grès du travail du Canada a signalé à pl sieurs reprises, et encore récemment, le da ger d'inflation dans notre pays, et cela no préoccupe tous. A la page 6, lorsque vo parlez de subventions versées aux transpo teurs, vous dites:

> «un tel programme ne sera pas nécessa rement trop lourd»

Évidemment, il y a eu une certaine analys du coût de ces subventions supplémentaire au Trésor canadien. Est-ce que vous pourrie nous donner le coût estimatif du fardeau e cause qui ne serait pas trop lourd?

M. Carew: Nous n'avons pas de chiffres ce sujet. Lorsqu'on dit que le système const tue un lourd fardeau, on ne parle pas de l somme d'argent en cause pour les subver tions, c'est plutôt la façon dont on fait l'ana lyse des expéditions. Nous proposons que l'a nalyse de 1 p. 100 des feuilles de route n serait pas compliqué. Il me semble que le subventions seraient utiles.

M. Perrault: Donc lorsqu'on parle de lou deur on parle de la façon dont on établit l subvention.

Et ma dernière question, est-ce que, à votr sens, on devrait verser des subventions per dant un temps illimité ou est-ce que vou estimez qu'un programme de subvention accrues est un pas, entre autres mesures, ver une amélioration de l'économie des Maritime et qu'à la longue nous pourrions les enlever?

M. Carew: En principe, je n'estime pa qu'on doive continuer les subventions indé finiment. Mais en l'absence d'un programm économique régional d'ensemble pour ce sec teur, et j'imagine qu'un tel programme d'en semble comporterait aussi des objectifs préci ainsi que des dates limites, il me semble qu'i faudrait maintenir la subvention jusqu'à c qu'il y ait un changement notable dans l

[*Texte*]

I feel that this is a very unsatisfactory way going about it, but until the federal gov-ment is prepared to state some precise als in its regional economic policy, in its gional program, I think our policy for nsportation has to be just as vague.

Mr. Perrault: I was interested in . . .

Mr. Bell: Mr. Chairman, if I may interrupt, r view on the questions of the justification , and the continuation of, subsidization in s particular region, being an economic dis-rity region, is that they are justified as long they are economic pump-primers. To the nt that we can get into the main flow of economic stream of the nation we feel t subsidization can be justified in a region economic disparity.

Mr. Perrault: But you would like to see a ble economic base estabished, which would ntually eliminate the need for subsidies?

Mr. Bell: Yes, certainly; if we can come up the national standards. You have got in-ion. We see no signs of inflation in this t of the country. You may be constipated British Columbia or Ontario, but we are from constipated down here!

Mr. Perrault: Yes, I know; but the cost of ng is disturbingly high in the Maritimes, ether with other parts of the country.

et me just end with an observation, Mr. airman. I think that a week after a region-levelopment policy has been announced is soon really to condemn it as ineffectual.

Mr. Trudel: Mr. Chairman, I would like to r to the second paragraph of the brief, in ch it is stated:

> deterioration of the economic standing of our region vis-à-vis the rest of Canada.

elative to that same period of time, is it true that in the region labour conditions contracts that have been signed have been the increase rather than on the decrease, efore there is no deterioration in that ect?

Mr. Carew: I am sorry, Mr. Chairman, I not get all of that question.

The Chairman: Would you please repeat r question, Mr. Trudel?

[*Interprétation*]

qualité même de la vie économique de cette région.

Je trouve que c'est une façon peu satisfaisante de procéder, mais jusqu'à ce que le gouvernement fédéral soit prêt à énoncer les objectifs précis de sa politique de développement régional, j'ai l'impression que notre politique en matière de transport doit être tout aussi vague.

M. Perrault: J'étais intéressé à . . .

M. Bell: Si vous me le permettez, monsieur le président, notre opinion en ce qui concerne la justification de la continuation des subventions dans cette région en particulier, étant donné que la région est défavorisée au point de vue économique, est qu'elles sont justifiées aussi longtemps qu'elles constituent un stimulant économique. Jusqu'à ce que nous fassions partie de l'économie du pays, il nous semble que la subvention peut se justifier dans une région de disparité économique.

M. Perrault: Mais vous voudriez qu'on établisse une base économique viable afin que nous puissions, à la longue, éliminer les subventions?

M. Bell: Certainement, si nous pouvons atteindre le niveau national. Vous avez de l'inflation, mais il n'y en a pas dans ce coin du pays. Vous souffrez peut-être de constipation en Colombie-Britannique et en Ontario, mais ce n'est pas le cas ici.

M. Perrault: Oui, mais le coût de la vie est très élevé dans les Maritimes en comparaison des autres parties du pays.

Permettez-moi de terminer par une observation. Je crois qu'une semaine après avoir annoncé une politique de développement économique régional, c'est trop tôt pour la condamner.

M. Trudel: J'aimerais parler du deuxième paragraphe du mémoire, où l'on dit:

> la détérioration du niveau économique de notre région par rapport au reste du Canada

Au cours de la même période de temps, n'est-il pas vrai que les conditions de travail des contrats qui ont été signés ont augmenté et non pas diminué, et par conséquent, il n'y a pas de détérioration à cet égard.

M. Carew: Je m'excuse, je n'ai probablement pas saisi toute votre question.

Le président: Est-ce que vous pourriez répéter votre question, monsieur Trudel?

[*Text*]

Mr. Trudel: I am referring to the second paragraph of the brief, where it is stated?

> deterioration of the economic standing of our region vis-à-vis the rest of Canada

I am suggesting to the witness that labour conditions, where there is unionized labour in the region, have not been on the down trend but rather on the up trend?

Mr. Carew: You are suggesting that it has been on the up trend?

Mr. Trudel: Yes; that wage conditions and wage parity compared with other areas of Canada have not been detrimentally affected in this area?

Mr. Carew: I think you are right when you are referring to organized labour, but I do not think that there has been any noticeable improvement in income levels in the Maritime region, as a whole, in relation to the rest of the country. I do no have any figures to support one on this, but it is my impression that over the last 10 or 15 years the situation has not improved in any noticeable way.

Mr. Trudel: I gather from your answer, then, that organized labour in this area has not been suffering particularly, compared to the other areas of Canada?

Mr. Bell: Our complaint is that we are usually the last to feel the effects of national prosperity and the first to feel the effects of national depression. We seem to get it both ways. We get the tail end of prosperity and take the first count on depression. However, we do agree that the general improvements in labour standards across the country certainly have not been of any economic disadvantage to this particular region.

Mr. Trudel: That answers my question, Mr. Chairman. I have one other point which I believe has been partially answered. It is on page 7, relative to the decrease in carload loading by 15 per cent. You corrected that figure, I believe, when you gave an answer to Mr. Allmand.

This is a subsidized and highly organized part of the transport industry in the Maritimes. We have had presentations by other people, also in the transport industry in the Maritimes, referring to the same period of time that you are referring to; they are not organized; they are not subsidized; and yet they have been able to show increases of 25 per cent year after year.

Mr. Carew: These are truckers?

[*Interpretation*]

M. Trudel: Je me reporte au deuxièr paragraphe où vous parlez de «la détérior tion du niveau économique de notre régi par rapport au reste du Canada». Je dis q les conditions de travail, lorsque le syndi lisme existe dans cette région, ne se détér rent pas mais s'améliorent plutôt.

M. Carew: Vous suggérez qu'el s'améliorent?

M. Trudel: Oui. La parité de salaire et conditions de travail avec les autres régio du Canada ne s'est pas détériorée dans ce région.

M. Carew: Je crois que vous avez rais quand vous parlez du syndicalisme, mais ne crois pas qu'il y ait eu des améliorati sensibles du niveau des salaires dans région des Maritimes, dans l'ensemble, p rapport au reste du pays. Je n'ai pas les ch fres à l'appui, mais j'ai l'impression q depuis 10 ou 15 ans, la situation ne s'est p tellement améliorée.

M. Trudel: D'après ce que vous dites, syndicalisme n'a pas souffert tout particuli rement dans cette région par rapport a autres régions du Canada?

M. Bell: Nous nous plaignons de ce q nous sommes les derniers à sentir les effets la prospérité nationale et nous sommes l premiers à souffrir de la dépression nationa Par conséquent, nous sommes privés dans l deux sens. Nous sommes les derniers à jou de la prospérité et les premiers à souffrir la regression économique. Nous estimons to tefois que les améliorations des conditions travail dans tous le pays n'ont pas été u désavantage économique pour cette région particulier.

M. Trudel: Cela répond à ma questio J'aurais un autre point à soulever auquel crois que vous avez répondu en partie. A page 7 en ce qui a trait à la diminution de p. 100 du volume de trafic. Je crois que vo avez corrigé ce chiffre en réponse à M Allmand.

Il s'agit d'une partie subventionnée et tr bien organisée de l'industrie des transpor des Maritimes. Nous avons reçu des comm nications de la part de certaines autres pe sonnes de l'industrie des transports d Maritimes relatives à la même période d temps. Ils ne sont pas syndiqués ni subver tionnés, mais ils ont pu tout de même réalis des augmentations de 25 p. 100 année apr année.

M. Carew: Il s'agit de camionneurs?

exte]

Mr. Trudel: Yes.

Mr. Bell: Of course, the situation is rather nplex. For example, those who presented previous brief indicated that they ship a of their fish from here to the United tes. These trucks that come in from the ited States are organized; the truck ship- nts that we get from central Canada and stern Canada into this part of the country organized; and they take out outgoing oments.

ctually the big problem relative to organi- on and wages, as we see it, is largely the r-regional trucking; not so much the king that comes in and out of the region, ause generally speaking there is very little that that originates here. There are no king companies of any consequence in the on with regular services outside the ntic region. A large part of our trucking iness carried on the highways is by com- ies which come from outside the region pick up and lay down cargoes.

Mr. Trudel: In other words, the area is also osed, and has access, to facilities originat- from outside this area?

Mr. Bell: Yes.

Mr. Trudel: Thank you, Mr. Chairman.

Mr. Nesbitt: Yes, Mr. Chairman; I have a very brief question of Mr. Carew. In hearing at Fredericton we heard from the or transport industry certain evidence in er specific figures, as I recall, that wages he trucking industry were relatively the e in the Atlantic provinces as they were in ario, or just very slightly below; and also ber of figures to show that the trucking stry paid its full share in the unkeep and tenance of the highways.

your reply to a question a little earlier indicated otherwise. As I recall, you tioned the effect of abysmally low wages also that you did not feel that the truck- industry was paying its full share in ces and the like.

that we may have some information on could you give us some figures? You not have them with you, I realize, but aps you could forward them to the Clerk ne Committee at some later date. I think matter of hidden subsidies is very impor- relative to any report we may wish to e.

[*Interprétation*]

M. Trudel: Oui.

M. Bell: Évidemment, la situation est un peu complexe. Par exemple, le mémoire précédent indiquait qu'on expédie beaucoup de poissons aux États-Unis. Les camions qui nous viennent des États-Unis sont organisés en syndicat, les expéditions que nous recevons de la partie centrale et de l'Ouest du Canada dans les Maritimes sont organisées, et ils prennent des livraisons destinées à d'autres endroits.

Évidemment le gros problème, comme nous l'envisageons, quant aux problèmes d'organisation et des salaires, c'est le camionnage inter-régional; non pas particulièrement le camionnage de marchandises vers ou à partir de la région, car il y a, effectivement, très peu de marchandises dont le point d'origine est ici. Il n'y a pas d'entreprise de camionnage importante dans cette région qui offre des services réguliers vers l'extérieur. Une bonne part du camionnage qui se fait dans la région est confiée à des entreprises de l'extérieur qui viennent ici livrer des cargaisons et repartent avec d'autres.

M. Trudel: En d'autres termes, la région est ouverte et a accès à des services qui proviennent de l'extérieur.

M. Bell: Oui.

M. Trudel: Merci, monsieur le présient.

M. Nesbitt: Je voudrais poser une question très brève à M. Carew. A Fredericton, lorsque nous avons entendu l'industrie du transport routier, on nous a donné des chiffres très précis, si je me souviens bien, à l'effet que les salaires dans l'industrie du camionnage étaient à peu près les mêmes dans les provinces de l'Atlantique et dans l'Ontario, ou peut-être juste un peu moins élevés. Et on nous a cité certains chiffres pour indiquer que l'industrie du camionnage payait sa juste part en ce qui concerne l'entretien des grandes routes. Je crois qu'en réponse à une question un peu plus tôt, vous avez dit le contraire. Si je me souviens bien, vous avez mentionné l'effet des salaires extrêmement bas et aussi le fait qu'à votre avis l'industrie du camionnage ne payait pas sa part des frais en ce qui concerne les permis d'exploitation, et ainsi de suite.

Je me demande si vous pourriez nous donner des renseignements à ce sujet, ou des chiffres. Vous ne les avez peut-être pas avec vous, je comprends, mais vous pourriez peut-être les communiquer au Secrétaire du Comité plus tard. Je crois que cette question de subventions cachées est importante pour tout rapport que nous ferons.

[*Text*]

Mr. Carew: Yes, I think we could do that. I do not have figures here now.

It seems to me, from my experience, that rates of pay for truckers in this area, as compared with, say, those working in southwestern Ontario, are about half as much as they are there. I may say that this is just a very rough approximation. It is based on my experience of people who are organized within my own union in this area and those working in the same industry in Ontario under agreements negotiated by my organization.

Mr. Nesbitt: I would be very grateful if you could produce at a later date and forward to the Committee some specific information. Thank you.

Mr. Rock: What co-operation would the railway companies receive from labour if through experiments with turbo-trains, it were found feasible to put into operation new turbo freight trains, with new type of cars and with speeds as high as 150 to 160 miles an hour, to be used as a land bridge for a containerization system?

Mr. Carew: I think you could expect the same kind of co-operation that labour always gives to Canadian railways when they introduce...

Mr. Rock: Let me put it another way. If the train were to travel twice as fast it would mean that the worker would work half the amount of hours. Do you expect them to get the same amount of pay for half the amount of time? This is the co-operation I am asking about.

Mr. Bell: Our problem to date has been that most of the technological advances that have been introduced by industry have been introduced without prior consultation with unions and have been unilaterally and arbitrarily imposed.

We live in the present-day society, and we appreciate and recognize the technological progress with which we are going to be confronted. We know we have to be flexible and have to negotiate on these technological changes. Our big problem is the fact that up until now there has been no actual honest contract between management and labour to give us advance notice.

These things are usually planned and it takes a year or two years to bring them into being. We do not hear about them until the actual equipment arrives on the scene, and within a matter of a week or so beforehand

[*Interpretation*]

M. Carew: Oui, je crois que nous pourri le faire. Je n'ai pas les chiffres en main.

Il me semble que d'après ma propre ex rience, le taux de salaires des camionneurs cette région, en comparaison de ceux qui t vaillent, par exemple, dans le sud-ouest l'Ontario, sont d'environ la moitié. Evide ment, il s'agit d'un chiffre approximatif est fondé sur ma propre expérience de ce de mon propre syndicat dans cette région ceux qui travaillent dans le même indus en Ontario en vertu de conventions collecti négociées par mon organisation.

M. Nesbitt: Nous serions très reconnaissa si vous pouviez nous communiquer des ch fres précis à ce sujet. Merci.

M. Rock: Quelle collaboration les chem de fer recevraient-ils des syndicats si, ap les essais avec les turbo-trains, on décidait mettre en exploitation de nouveaux tur trains de marchandises, avec de nouvea wagons qui atteindraient une vitesse de ou 160 milles à l'heure et serviraient jus ment de pont terrestre pour le système cadres?

M. Carew: Je crois qu'on aurait le mê genre de collaboration que les syndicats d nent toujours aux chemins de fer lorsqu introduisent...

M. Rock: Permettez-moi de m'exprir autrement. Si le train voyage à une vite deux fois plus grandes, les employés feron moitié moins de travail. Est-ce que vous v attendez à ce qu'ils obtiennent le mê salaire pour la moitié du temps? Voilà genre de collaboration dont je parle.

M. Bell: Le problème jusqu'ici c'est que plupart des progrès technologiques qui s introduits par les industries, l'ont été s consultation préalable avec les syndicats et été imposés unilatéralement et arbitrai ment. Dans la société actuelle, nous rec naissons qu'il faut toujours affronter le p grès technologique. Nous savons qu'il f être souple, qu'il nous faut négocier au su de ces modifications technologiques. Le gr problème qui se pose c'est que jusqu'ici il a pas eu de contacts sérieux entre la dir tion et les syndicats pour nous donner préavis.

Ces choses sont habituellement prévues l'avance, et il faut deux ou trois ans pour mettre en vigueur. On n'en entend jam parler avant que l'équipement soit arrivé place, et on est mis au courant qu'

exte]

are practically told what the program is. I nk that has created the conflict.

do not think that organized labour is ng to be a stumbling block to technological ancement in this country. It has not been the past, providing there has been some sible relationship on it.

Ir. Rock: I am glad to hear that. I did not the same answer out West two years ago, I am very happy that you fellows here that way.

o you feel, then, that with the time factor ced the cost of shipping would be ced?

Ir. Carew: We would hope so. You are ing about the land bridge?

Ir. Rock: I am talking about the new tech- l change that I believe is going to take e in Canada.

Ir. Carew: I think it is inevitable that the factor will...

Ir. Rock: And do you think that this will have a lot to do with the possible elimi- on of subsidies?

r. Carew: One would hope so, eventually,

r. Rock: Thank you.

r. Skoberg: Mr. Carew, is the Federation esented on the task force for the Atlantic vinces?

r. Bell: What task force? We have had ral.

Ir. Skoberg: The Premier's task force?

Ir. Bell: No; we have made no representa- s, nor are we represented on it.

Ir. Skoberg: You are not represented. e you asked to be represented on these ous boards that are in effect in the Atlan- rovinces?

Ir. Bell: Yes; we have made a continual of representation to governments, on ers that affect the welfare and the well- g of the general public and the work , that we be represented on agencies and ds set up by either provincial or federal rnments.

r. Skoberg: Yesterday a representation e us suggested that the present modes of portation were not sufficient, and I ve it was suggested that we should, if ssary, purchase the roadbed and the

[Interprétation]

semaine ou deux avant quel sera le programme. Et c'est ce qui crée le conflit.

Je ne crois pas que le syndicalisme puisse nuire au progrès technologique dans ce pays. Ce ne fut pas le cas par le passé lorsqu'il y avait des rapports adéquats.

M. Rock: Je suis fort aise de l'entendre. Ce n'est pas la réponse qu'on m'a donnée dans l'Ouest, il y a deux ans. Mais je suis très heureux de voir que vous avez ce sentiment.

Alors, croyez-vous que, le facteur temps étant ainsi réduit, le coût de l'expédition sera abaissé?

M. Carew: Nous l'espérons. Est-ce que vous parlez du pont terrestre?

M. Rock: Oui. Je parle des nouvelles évolutions technologiques qui se produiront probablement au Canada.

M. Carew: Je crois qu'il est inévitable que le facteur temps...

M. Rock: Croyez-vous également que cela entraînera l'élimination possible des subventions?

M. Carew: Nous l'espérons, éventuellement. Oui.

M. Rock: Merci.

M. Skoberg: Monsieur Carew, est-ce que la Fédération est représentée sur l'équipe spéciale des provinces de l'Atlantique?

M. Bell: Quelle équipe spéciale? Il y en a eu plusieurs.

M. Skoberg: Celle du premier ministre.

M. Bell: Non, nous n'avons pas formulé d'instances, et nous ne sommes pas représentés dans cette équipe spéciale.

M. Skoberg: Est-ce que vous avez demandé d'y être représentés sur les différentes commissions des provinces de l'Atlantique?

M. Bell: Oui. Nous n'avons pas cessé de faire des instances auprès des gouvernements sur les questions qui affectent le bien-être de l'ensemble de la population, et aux équipes spéciales, pour que nous soyons représentés au sein d'offices et de commissions créés par le gouvernement provincial ou fédéral.

M. Skoberg: Hier, nous avons été saisis d'une soumission qui laissait entendre que les modes actuels de transport ne sont pas suffisants et je pense qu'on a même dit qu'il nous faudrait acheter l'équipement et le ter-

[*Text*]

equipment to create a new transportation system.

Of course, one of the prime questions that had been put by the member for Burnaby-Seymour, on the cost of this to the public, was not asked by that individual at that time.

Do you, or do you not, consider that the present modes of transportation are sufficient? Perhaps they need upgrading, but do you consider with what we have in Canada and in the Maritime provinces are sufficient at this time?

Mr. Bell: Are you speaking about the Maine corridor?

Mr. Skoberg: No; all modes of transportation—trucking, railway and airlines?

Mr. Bell: We believe it is certainly necessary to have greater capital expenditure on upgrading and improving our modes of transportation out of the Maritimes to central Canada and the New England states. We feel that this is one of the compensating considerations that the federal government should give to the Atlantic provinces in view of the large expenditures they are making relative to the Seaway, which has been detrimental to the interest of this particular region. This is one of the counter-balancing types of considerations we have been asking for.

Mr. Skoberg: I have one final question, sir. I think you should be commended for your immediate look at the new proposed legislation. I do not agree with any member here who says that it is against any principle to have a very close look at this before it becomes legislation. I think this is what we are talking about when we refer to the dialogue in democracy.

What I would like to know is how you think it would actually affect the individual growth areas in the Atlantic provinces that are really concerned about growth. Are you in agreement that a growth area should be included in the legislation, and, if so, how large should that particular growth area be?

Mr. Carew: I think we agree in principle with the idea of the growth areas. One of the drawbacks to earlier plans for regional economic development in this area has been that the designated areas have been too small to become viable focal points. Therefore, we are happy that the federal government is taking to itself the power to designate a much broader area based on urban points that have shown some growth potential. This is fine.

[*Interpretation*]

rain pour créer un nouveau réseau transport.

Évidemment, une des principales questi posées par le député de Burnaby-Seymc ayant trait au coût pour le public, ne fût posée à ce moment-là.

Pourriez-vous me dire si vous considé les motifs actuels de transport suffisar Peut-être faut-il les mettre à jour, mais tr vez-vous que ce que nous avons au Canada dans les provinces Maritimes soient suffisa en ce moment?

M. Bell: Est-ce que vous parlez du corri du Maine?

M. Skoberg: Non, de tous les modes transport, camions, chemins de fer, lig aériennes.

M. Bell: Nous croyons qu'il est essen d'accroître les dépenses en immobilisati pour améliorer les modes de transport partent des Maritimes vers le Canada cen et les états de la Nouvelle-Angleterre. N sommes d'avis que c'est une des considé tions que le gouvernement fédéral dev accorder aux provinces de l'Atlantique vu fortes dépenses qui sont consacrées à la v maritime qui nuit aux intérêts de c région. C'est donc une de ces compensati que nous avons toujours réclamées pour re blir l'équilibre.

M. Skoberg: Une dernière question. pense qu'on doit vous féliciter d'avoir étu de près cette nouvelle mesure législative. ne suis pas d'accord avec ceux qui disent c'est contre tout principe d'étudier la mes avant qu'elle ne devienne Loi. Je pense c'est ce dont nous parlons lorsque nous p lons de dialogue à l'intérieur de démocratie.

Mais comment voyez-vous que les régi individuelles des provinces de l'Atlanti vraiment préoccupées de leur expansion trouveront affectées. Mais êtres-vous d'acc pour que la Loi prévoit une région d'exp sion et quelle serait son étendue?

M. Carew: Je pense que nous sommes d cord en principe avec l'idée d'une rég d'expansion. Une des difficultés des prem programmes d'expansion économique ré nale dans cette région c'est que certai régions désignées n'étaient pas assez gran pour devenir un centre d'attraction via Nous sommes donc heureux que le gouver ment fédéral ait assumé la responsabilité désigner une région plus grande d'après centres urbains, qui semblent indiquer possibilité d'expansion. C'est très bien.

[Texte]

We are a little worried, though, that backlaters are going to be created in this process, nd this is inevitable. We would not be too orried about that either if we felt that some lequate supplementary planning was going take care of this.

For example, we understand that the epartment of Manpower has not been fully ought into this picture at all. The Departent of Manpower programs are far too inxible to cope adequately with the kind of slocation that will come about if this proam of regional expansion gets under way. e understand that they have no trouble at finding new jobs and being able to locate skill, but their ability to find new bdes of employment for people with half ills, or no skills at all, is very slight.

This is what is going to happen in smaller eas that are washed to the side in this plang program. It is not a planning process; it is a program. Places like Halifax will benefit m it, and smaller outlying areas are going t lose employment potential and people there e going to have to move. Yet they do not calify for relocation grants, and to a large tent they do not qualify for upgrading proams. It seems to us that this is a basic ficiency in the whole concept.

Mr. Skoberg: Could you put on the record, you have had time to consider it, how large a rowth area should be?

Mr. Carew: I do not know whether I would prepared to specify that in any detail, sir. I ink the fact that the whole Atlantic region now potentially a designated area, and that Minister has flexibility in this program, is ood point.

The Chairman: Mr. Mahoney, on a plementary?

Mr. Mahoney: Has the witness had an portunity to examine the legislation setting the department of regional economic pansion, which was introduced in the use of Commons the day before yesterday?

Mr. Bell: We have looked at the meat of the estimates.

Mr. Mahoney: The estimates for this parlar department? The legislation has just n introduced in the House. Have you mined it in detail up to this point?

[Interprétation]

Nous nous inquiétons du fait que ce processus pourra entraîner des remous, ce qui est inévitable. On ne s'en préoccuperait pas tant si nous savions qu'une planification additionnelle y remédierait.

Nous croyons comprendre, par exemple, que le ministère de la Main-d'œuvre n'a pas vraiment été engagé dans ce programme. Son programme est trop rigide pour faire face à la dislocation qui pourrait se présneter à la suite de la mise en vigueur de ce programme d'expansion régionale. Je crois comprendre qu'ils n'ont pas de difficulté à trouver de nouveaux emplois dans d'autres régions, pour les ouvriers spécialisés; mais ils éprouvent plus de difficulté à trouver de nouveaux emplois pour les personnes qui n'ont pas de spécialisation ou qui ne sont qu'à demi-spécialisés.

Voilà ce qui va se produire dans les petites régions qui sont ainsi poussées de côté dans ce programme de planification. Ce n'est pas un processus de planification mais un programme. Des endroits comme Halifax en bénéficieront, et les petites régions périphériques vont perdre des possibilités d'emplois et les gens de ces régions devront se déplacer. Et ils ne sont pas, pour la plupart, admissibles aux subventions de déplacement et ne peuvent pas participer aux programmes de recyclage. À notre avis, c'est donc une faiblesse de tout ce concept.

M. Skoberg: Pourriez-vous verser au compte-rendu, si vous avez le temps d'étudier la question, quelle devrait être la dimension d'une région d'expansion, pour déterminer quelles zones?

M. Carew: Je ne sais pas si je serais prêt à vous le préciser. Je pense qu'il est bon que toute la région de l'Atlantique est, en puissance, une région désignée et que le Ministre jouit d'une certaine souplesse dans ce programme.

Le président: Une question complémentaire, monsieur Mahoney?

M. Mahoney: Le témoin a-t-il eu l'occasion d'étudier le projet de loi visant à constituer le ministère d'Expansion économique régionale, qui fut présenté à la Chambre des communes avant-hier?

M. Bell: Nous en avons vu l'essentiel, les prévisions budgétaires.

M. Mahoney: Les prévisions budgétaires de ce ministère? Mais le projet de loi vient à peine d'être présentée à la Chambre. Est-ce que vous l'aviez étudié en détail?

[*Text*]

Mr. Carew: We have had a chance to look at it, and we have taken the trouble to talk with some of the senior officials in that department. We were quite surprised and disappointed when they told us that planning, as such, was no longer a priority.

Mr. Mahoney: Have you seen the bill?

Mr. Carew: Yes.

Mr. Mahoney: When?

Mr. Carew: I saw it two days ago, when it was introduced.

Mr. Mahoney: Were you here or in Ottawa?

Mr. Carew: I was in Ottawa.

Mr. Mahoney: Thank you.

The Chairman: Mr. Rose?

Mr. Rose: What stimulated my question was your suggestion that the truckers should be included in the 20 per cent MFRA subsidy. This was briefly examined and discussed in answer to Mr. Perrault's question. Have you any particular idea of how this subsidy might trickle down to the shipper, or would it be absorbed by the carrier?

Mr. Carew: I have no firm ideas on this. I fully appreciate the difficulty that has been raised here—the fact that the consumer may not, in the end, be the beneficiary. This has to be guarded against.

My immediate reaction is that if cases arose, as they probably would, where a consumer was not benefiting, then we would immediately present this problem for examination by the Prices and Income Board which has been set up under the Department of Consumer and Corporate Affairs.

Mr. Rose: This is what concerns me about the total picture in the Maritimes. I have not been really satisfied that the hidden subsidy of low wages and transportation subsidy and all this sort of thing actually trickles down to consumers. I am concerned about that. Can you tell me what percentage of the labour force in the Maritimes is organized?

Mr. Bell: The general percentage, taking everybody into account, including those employed in industry and service trades, and

[*Interpretation*]

M. Carew: Nous avons eu l'occasion de vo ce qu'il en est et nous avons pris la peine nous entretenir avec certains hauts fonctio naires de ce ministère. Nous étions vraime étonnés et même déçus lorsqu'ils nous ont d que la planification comme telle n'avait pl la priorité.

M. Mahoney: Est-ce que vous avez vu projet de loi?

M. Carew: Oui.

M. Mahoney: Quand?

M. Carew: Il y a deux jours, lorsqu'il f présenté.

M. Mahoney: Étiez-vous ici ou à Ottawa?

M. Carew: J'étais à Ottawa.

M. Mahoney: Merci.

Le président: Monsieur Rose?

M. Rose: Ce qui m'a poussé à poser u question ce fut la proposition que vous av faite pour que les camionneurs soient incl dans les subventions de 20 p. 100 de la L sur le taux de transport des marchandis dans les provinces Maritimes. Nous avo étudié et discuté la question brièvement réponse à la question posée par M. Perrau Est-ce que vous avez une idée comment ce subvention sera versée à l'expéditeur est-ce qu'elle sera absorbée par le tra porteur?

M. Carew: Je n'en suis pas certain. Je co prends très bien qu'il y a des difficultés qui présentent du fait que le consommateur n' bénéficiera pas en dernière analyse. Je cr qu'il faut s'efforcer d'éviter une te possibilité.

Ma réaction immédiate c'est que si un c de ce genre se présente, ce qui est presq inévitable, ou le consommateur n'en bér ficierait pas, nous soumettrions immédia ment le problème à la Commission des prix du revenu du ministère de la Consommati et des Corporations pour qu'elle l'étudie.

M. Rose: C'est ce qui me préoccupe dans perspective d'ensemble des Maritimes. Je suis pas encore convaincu que les consomm teurs bénéficient, en dernière analyse, c subventions cachées des salaires inférieurs des subventions aux transports. J'en s inquiet. Pourriez-vous me dire quel pource tage de la main-d'œuvre des Maritimes syndiqué?

M. Bell: Je pense que le pourcentage, tenant compte de toutes les personnes, que soit des employés des industries, des servic

Texte]

hat sort of thing, is around the 30 per cent ark. But if you confine it to industry it is round 70 per cent.

Mr. Rose: I suppose it resides largely in the igger industries, does it? I was thinking of ie chocolate industry, for one. That is organ-ed, is it?

Mr. Bell: Yes.

Mr. Rose: I would like to go on to another pic. It deals with the so-called growth areas. o you find that unemployment here is nfined to any one area? Is it perhaps more rominent in the so-called rural areas as pposed to the growth areas?

Mr. Carew: Well, the regional statistic at ie moment, I believe, is 10 per cent of per-ns unemployed, and I think that perhaps at ne moment where we do have a bit of con-ntrated industrial development, for exam-le at Hawkesbury, and there is—I would say iat generally speaking it is pretty well divid-l evenly throughout both the urban and ural districts of the region. I do not think iere is any large noticeable differential in ercentage.

Mr. Rose: Perhaps the regional statistics do ot give the whole picture because the Prov-ce of Newfoundland is included as well, and erhaps it is considerably higher.

Mr. Carew: That is right.

Mr. Rose: We heard yesterday that the election of the so-called growth areas was at ast in part political, that is, the designation, nd I do not want to confuse that term with esignated areas. Do you have any quarrel ith the areas that were suggested as growth reas?

Mr. Bell: The original growth areas, as you now, excluded Halifax, Saint John, Freder-ton, and Moncton. Organized labour took ie position that economic conditions in the rban centres in the Atlantic Provinces were qually as critical as they were in other parts f the provinces, and we have certainly sup-orted the representations that have been ade by local governments, municipalities, nd Members of Parliament in the area that ie entire region justifies the designation of n economic disparity region.

Mr. Rose: Would you agree that unless the ssistance is in a comprehensive form, includ-ng upgrading of skills and all the rest

[*Interprétation*]

et ainsi de suite, est d'environ 30 p. 100. Mais si l'on s'en tient à l'industrie, c'est environ 70 p. 100.

M. Rose: J'imagine que cela se fait surtout dans les plus grandes industries, n'est-ce pas? Je pensais à l'industrie du chocolat, par exemple.

M. Bell: Oui.

M. Rose: Je voudrais passer à un autre sujet, celui des régions d'expansion. Croyez-vous que le chômage ici soit confiné à une zone donnée? Est-il peut-être plus marqué dans les régions rurales contrairement aux régions de croissance?

M. Carew: Les statistiques sur le plan régional en ce moment nous disent que 10 p. 100 des personnes sont sans travail. Et peut-être qu'en ce moment, où nous avons une certaine concentration d'activité industrielle, par exemple, à Hawkesbury, je dirais qu'en règle générale, le chômage est assez bien réparti, tant dans les centres urbains que dans les régions rurales. Je ne crois pas que le pourcentage différentiel soit très évident.

M. Rose: Peut-être que les statistiques régionales ne donnent pas une bonne idée d'ensemble parce que Terre-Neuve y est incluse, et il se peut que les chiffres soient bien plus élevés.

M. Carew: C'est juste.

M. Rose: Hier, nous avons entendu que le choix de ces soi-disant régions de croissance était partiellement d'ordre politique, du moins pour ce qui est de la désignation et je ne veux pas confondre ce terme avec les régions désignées. Avez-vous quelque objection en ce qui concerne les régions qui ont été proposées comme étant des régions de croissance?

M. Bell: Comme vous le savez le premier choix des régions de croissance excluait Halifax, Saint-Jean, Fredericton et Moncton. Les organismes syndicaux étaient d'avis que la situation économique des centres urbains dans les provinces de l'Atlantique était tout aussi critique qu'elle ne l'était dans les autres régions des provinces, et nous avons certainement appuyé les instances qui ont été faites par les gouvernements locaux, les municipalités, les députés dans ces secteurs disant que toute la région devait être désignée comme étant une région de disparité économique.

M. Rose: Croyez-vous qu'à moins que l'aide soit générale et qu'elle comprenne le recyclage et les divers autres aspects, le pauvre

[*Text*]

of it, what is going to happen with these growth areas is that the rural, unskilled poor will be forced into the cities to become the urban poor?

Mr. Bell: That is a very good point, because right now we find that the situation is that, for example, in the Atlantic Provinces we have a surplus of skilled welders and yet we have a shortage of welders. We attribute this to the fact that the government has assisted a number of unskilled people to become trained in an elementary sort of way to establish what they think is a classification. Yet when they apply for job opportunities with industry, they are told that they have not the necessary skills for a specific industry. And therefore you have got that contradiction. You could have people registered at local manpower offices as welders, and yet industry is asking for welders.

I think we certainly need a plan, and the other point that Mr. Carew was making is that even where we do have growth areas, we do not seem to see any overlap or overplay of economic improvement in the region as a whole. It merely seems to solve the economic problem of the immediate locality.

And for this reason we feel that there should be some type of co-ordinated plan by which we are going to locate industries and promote industry in particular areas that in some way will be tied in, so that they give general growth to the region.

Mr. Rose: My final question then, along the same lines. Would you in principle believe it is wiser to move people to the industries or the industries to the people?

Mr. Bell: I know that we have been told that we are a lost cause down here and we should all migrate to greener fields, but I think there is still some hope for us down here and I think there is quite a bit of potential. I think what is happening is that you people are polluting yourselves to death up there, you know, in the Niagara Peninsula. I think that whether you like it or not you will have to allow us a share of industry.

The Chairman: Mr. Turner.

Mr. Turner (London East): Mr. Carew, do you think that all forms of transportation should be nationalized in this Maritime area?

[*Interpretation*]

ouvrier rural non spécialisé sera forcé quitter ces régions de croissance, pour dev nir le pauvre citoyen des centres urbains?

M. Bell: C'est une excellente observatio Nous avons cette situation qui se préser dans les provinces de l'Atlantique où no avons un excédent de soudeurs qualifiés to en ayant un manque de soudeurs. Cette situ tion provient du fait que le gouvernement aidé un certain nombre de personnes à spécialiser de façon élémentaire, pour qu puisse établir ce qu'il pensait être une clas fication. Et cependant lorsque ces personn se présentaient pour occuper des postes da l'industrie, on leur disait qu'ils n'avaient p les qualités voulues pour une industrie do née. Voilà pourquoi vous avez cette contradi tion. Vous pourriez avoir des soudeurs q s'inscriraient comme tels aux bureaux de main-d'œuvre alors que certaines industri sont en quête de soudeurs.

Je pense qu'il nous faut vraiment un pr gramme bien établi, et l'autre observati que M. Carew a faite, c'est que, même lor que nous avons des régions de croissan nous ne semblons pas voir l'amélioration éc nomique s'étendre à toute la région dans s ensemble. Cela semble simplement résoud les problèmes économiques de la localité cause.

Et c'est pourquoi, nous sommes d'avis qu devrait y avoir une certaine planificati coordonnée au moyen de laquelle nous insta lerons et encouragerons les industries à s'ét blir dans les régions données, lesquell industries s'y attacheront en quelque sorte façon à favoriser la croissance générale de région.

M. Rose: Une dernière question, suivant même ligne de pensée. Croyez-vous en pri cipe qu'il faille amener les industries à population ou la population aux industries?

M. Bell: On nous a dit que c'est une cau perdue ici, et que nous devrions tous no déplacer vers des régions plus prometteus mais je pense qu'il y a encore des possibilité Ce qui arrive, c'est que vous autres êtes train de vous rendre la vie dure dans péninsule du Niagara. Que cela vous plaise pas, vous devrez nous allouer une part l'industrie.

Le président: M. Turner.

M. Turner (London-Est): Croyez-vous qu tous les modes de transport devraient êt nationalisés dans les régions des Maritimes?

Texte]

Mr. Carew: My personal opinion is yes. I m not speaking on behalf of the Federations f Labour.

Mr. Turner (London East): We have heard rong rumors down in this area that there is n empire builder down here of roughly 600,000,000. Now, if this is a depressed area, an you tell us how one man can set up an mpire of $600,000,000?

Mr. Carew: I do not know the man.

The Chairman: I do not think we should llow this question. Gentlemen, this is the nd of our question period, and I would like thank the gentlemen who appeared.

At this time I would call upon Stanld Limited. I have here on my right Mr. homas Stanfield, who will give us a résumé the brief. I hope it will be short, Mr. anfield.

Mr. Thomas Stanfield (Stanfield's Limited): r. Chairman and gentlemen, I will read the nclusions and recommendations that were cluded in the memorandum submitted last ebruary.

This brief is intended to present a point of ew. The recommendations of this Committe may have a substantial bearing on the velopment of an adequate transportation stem within the Atlantic Region that takes the economic characteristics of the carriers d the needs of the region.

The region needs a transportation system at is reasonable in cost and fast and icient in the handling of freight. This eans recognizing the problems that carriers the transportation industry face. We are t seeking dual transportation costs, but we e seeking the opportunity to compete as irly as possible for a share of the total nadian market. We are not afraid of comtition, but the transportation industry is a ol by which we can be competitive and we ould like to see it used this way.

The Maritime Freight Rates Act could posly be criticized for not equalizing the oprtunity for firms operating in the Atlantic gion to compete in the central Canadian rket with manufacturers located in that rket. This I believe was the intention of s freight rate Act. Opportunity cannot be ualized for everyone, and it is most difficult determine when opportunity is equalized. wever, attempts must be made to try to nieve the goal of equal opportunity.

[*Interprétation*]

M. Carew: A mon avis, oui. Je ne parle pas au nom de la Fédération du Travail.

M. Turner (London-Est): On a entendu des rumeurs dans cette région voulant qu'il y ait un bâtisseur d'empire d'environ 600 millions de dollars. Si c'est une région sous-développée pouvez-vous nous dire comment un homme peut se tailler un empire de 600 millions de dollars?

M. Carew: Je ne connais pas cet homme.

Le président: Je ne crois pas que ce soit une question qu'on puisse poser. Messieurs, c'est la fin de la période des questions, et je voudrais remercier ceux qui ont bien voulu comparaître.

Maintenant, je demanderais le représentant de la *Stanfield Limited.* J'ai à ma droite M. Thomas Stanfield qui nous donnera un résumé de sa présentation. J'espère qu'elle sera brève, monsieur Stanfield.

M. Thomas Stanfield (Stanfield's Limited): Monsieur le président, messieurs, je lirai simplement les recommandations et les conclusions incluses dans la soumission du mois de février dernier.

Le présent mémoire a pour objet de présenter un point de vue. Les recommandations que ce Comité adoptera pourront influer considérablement sur le développement d'un réseau de transport satisfaisant à l'intérieur de la région de l'Atlantique qui tiendra compte des caractéristiques économiques des transporteurs et des besoins de notre région.

La région a besoin d'un système de transport dont le coût soit raisonnable, et qu'il soit rapide et efficace dans le transport des marchandises. Ce qui veut dire que l'on reconnaît les problèmes auxquels doit faire face l'industrie du transport. Nous ne voulons pas un service gratuit de transport, mais nous voulons qu'on nous donne les moyens de soutenir la concurrence afin de nous tailler une place sur le marché canadien. Nous n'avons pas peur de la concurrence, mais l'industrie du transport est un outil qui nous permettra de soutenir la concurrence. Et nous voulons qu'on s'en serve à cette fin.

On peut reprocher à la Loi sur les taux de transport des marchandises dans les Maritimes de n'avoir pas donné aux entreprises faisant affaire dans la région de l'Atlantique la chance de concurrencer, sur le marché du Canada central, les entreprises établies à l'intérieur de ces marchés. C'était, je crois, le but de cette Loi. Il est à peu près impossible de donner à tous une chance égale. Il est très difficile de constater quand cette chance est égale pour tous. Il faut toutefois tenter d'at-

[*Text*]

ETA 100 in its present form is unsatisfactory. The hidden or so-called surcharges should be removed and the cost of insurance should be borne by the railway, since it is their responsibility to make sure that the merchandise is handled properly and delivered in good condition.

The cubic density regulation should either be abandoned in favour of actual weight or reduced to five pounds per cubic foot. Attempts should be made to institute full-car service on west-bound traffic to the central Canadian market. Piggy-back service, full-car service and less-than-carload service would provide three basic ways for the manufacturer to reach the market, depending upon the size of the shipment and the location of the customer.

Special consideration should be given to raw materials being brought into the Maritimes for manufacture. These raw materials should come under the Maritime Freight Rates Act and be subject to special rates.

The railways must improve their service. They should be encouraged to continue to develop a piggy-back and containerization service, and in the use of highway vehicles in conjunction with rail equipment to provide the area with the best service at reasonable rates. Truckers should likewise be encouraged to develop in those areas where they are best equipped to provide a real service to the region.

The Chairman: Mr. Portelance.

Mr. Portelance: Mr. Stanfield, what percentage of your business would be done in the Maritimes?

Mr. Stanfield: Not more than 15 per cent.

Mr. Portelance: That means 85 per cent would be made outside.

Mr. Stanfield: That is right, sir.

Mr. Portelance: And apparently in B.C., which is one of the furthest places for you, you are doing extremely well, or in the western part of Canada.

Mr. Stanfield: That is correct, sir.

Mr. Portelance: How would you explain? Is it because you have a 20 per cent free transportation which helps you out?

Mr. Stanfield: I think first of all, that some of the reasons why we do so well in B.C. are historical. One reason was that we were established there a lot longer than anybody else.

[*Interpretation*]

teindre ce but. L'ETA 100, dans sa for actuelle, ne donne pas satisfaction. Les fr additionnels cachés doivent être abolis et coût pour l'assurance doit être versé par compagnie ferroviaire puisqu'il lui apparti de faire en sorte que la marchandise s manipulée avec soin et livrée en bon état.

Le règlement concernant la densité cubiq devrait être soit rayé pour qu'on tien compte du poids réel ou encore réduit à livres par pied cube. On devrait tenter d'i tituer un service de transport en commun destination du marché du Canada central. service rail-route, le service en commun et service d'envoi en lots brisés permettrai aux manufacturiers d'avoir accès au marc selon l'importance de la cargaison et du li de résidence du client.

On devrait accorder une attention spéci aux matériaux bruts qui sont introduits da les Maritimes pour y être manufacturés. C matériaux devraient être soumis à la Loi s les taux de transport des marchandises da les provinces Maritimes et jouir de taux pré rentiels. Les compagnies de transport par r devraient également améliorer leurs servic On devrait les encourager à continuer d'am liorer leur service rail-route, et le service d wagons spéciaux, et à utiliser des véhicu afin de fournir à la région le meilleur servi possible aux taux les plus bas possible. L'i dustrie du camionnage devrait égalem prendre de l'expansion dans les endroits elle est la mieux en mesure d'offrir les me leurs services à la région.

Le président: Monsieur Portelance.

M. Portelance: Monsieur Stanfield, que proportion de votre chiffre d'affaires ser réalisé dans les Maritimes?

M. Stanfield: Pas plus de 15 p. 100.

M. Portelance: Cela veut dire que 85 p. 1 du chiffre d'affaires vient de l'extérieur.

M. Stanfield: C'est juste.

M. Portelance: Et, il paraît qu'en Colomb Britannique, qui est pour vous l'un des ma chés les plus éloignés de l'ouest du Cana vous faites de très bonnes affaires.

M. Stanfield: C'est juste.

M. Portelance: Comment expliquez-vo cela? Est-ce parce que vous avez une pos bilité de 20 p. 100 de transport gratuit pourrait vous aider?

M. Stanfield: Je pense tout d'abord qu'u des raisons pour lesquelles nos affaires so bonnes, en Colombie, c'est que, sur le pl historique, nous y étions avant bien d'autr

[Texte]

his goes way back to the early 1900s. But econdarily, we can reach the B.C. market heaper than we can reach Montreal or oronto, and reach it faster. We can ship om Truro to Vancouver in two weeks.

It takes the best part of 10 days to get to oronto on LCL. Four days is not very much o go an extra 1,500 to 2,000 miles. Another ing is that there is an agreed charge from lontreal to Vancouver that is competitive ith a round the Panama Canal waterways, hich we can take advantage of. We can ship piggy-back lots to Montreal, so the rate to ancouver is not that much higher, and cerinly it is lower in equivalent terms than om Truro to Toronto or Montreal.

Mr. Portelance: Do you also use warehousg in the west part of Canada?

Mr. Stanfield: Yes, sir, we have three warehouses, one in Toronto, one in Edmonton and ne in Vancouver.

Mr. Portelance: Most of these complaints om customers regarding—you are shipping O.B. mill are you?

Mr. Stanfield: Yes.

Mr. Portelance: Most of the complaints ould be on part shipment, would they not? a customer.

Mr. Stanfield: Yes, that is true.

Mr. Portelance: That is where the biggest mplaint comes from.

Mr. Stanfield: Yes. You have to realize that e are not shipping a television set or someing that might weigh two or three hundred unds. We have a very low-density product, d the customer, if he is only, say, buying o hundred packets of merchandise, it may ry in cubic density, something in the order three hundred on a cube rule, at ten unds per cubic foot. This is the problem at he has, and that we have.

Mr. Portelance: Thank you.

Mr. Chairman: Mr. Turner.

Mr. Turner (London East): Mr. Stanfield, w much of your goods do you ship by truck d how much by rail?

[Interprétation]

soit au début des années 1900. Mais deuxièmement, nous pouvons atteindre le marché de la Colombie plus vite et moins cher que pour ce qui est des marchés de Toronto et de Montréal. Nous pouvons expédier de Truro à Vancouver en deux semaines.

Il faut près de dix jours pour aller à Toronto avec des chargements incomplets. Ce n'est pas tellement de parcourir 1,500 milles à 2,000 milles de plus en quatre jours. D'autre part, il existe des tarifs convenus entre Montréal et Vancouver qui peuvent concurrencer avec les tarifs maritimes, pour le transport à travers le Canal de Panama, ce dont nous pouvons tirer profit. Nous pouvons nous servir du transport rail-route vers Montréal, ce qui fait que le taux pour Vancouver n'est pas tellement plus élevé et certainement inférieur aux conditions de transport de Truro à Toronto ou à Montréal.

M. Portelance: Est-ce que vous utilisez aussi des entrepôts dans la région ouest du Canada?

M. Stanfield: Oui, nous en avons trois, un à Toronto, un à Hamilton et un à Vancouver.

M. Portelance: La plupart de ces plaintes formulées par vos clients concernant...Expédiez-vous vos marchandises f.a.b. à l'usine, n'est-ce pas?

M. Stanfield: Oui.

M. Portelance: Donc, la plupart des plaintes seraient à propos des livraisons partielles à vos clients, n'est-ce pas?

M. Stanfield: Oui.

M. Portelance: C'est de là que proviennent vos principaux griefs.

M. Stanfield: Oui. Nous n'expédions pas un appareil de télévision qui pourrait peser 200 ou 300 livres. Nous avons un produit à faible densité et le client, s'il n'achète que, disons, 200 colis de marchandise, celle-ci peut varier selon la densité en brique, c'est-à-dire quelque chose dans l'ordre de 300, à raison de dix livres par pied cube. C'est là son problème et en même temps notre problème.

M. Portelance: Merci.

Le président: Monsieur Turner.

M. Turner (London-Est): Monsieur Stanfield, quelle proportion de vos livraisons se fait par camions et quelle autre se fait par rail?

[*Text*]

Mr. Stanfield: Do you consider piggy-back to be trucks?

Mr. Turner (London East): Yes.

Mr. Stanfield: Well then, we ship 100 per cent of the merchandise into Western Canada by piggy-back and then by pool car forwarding, so you have to say 50 per cent of that would be going in trucks as far as Montreal. We do not use trucks in a great deal of places with the exception of within the Maritime Region, to service P.E.I., New Brunswick and Nova Scotia. We do use some trucks to Montreal.

Mr. Turner (London East): Is your shop a union shop?

Mr. Stanfield: No.

Mr. Turner (London East): How do your wages compare with...?

Mr. Stanfield: They are competitive. With what I know of the wages—I do not know them all—I would say our wages compare reasonably favourably, from what I have seen.

The Chairman: Mr. Horner.

Mr. Horner: Mr. Stanfield, have you ever tried the pool car service, or has any real attempt been made to use the pool car service out of Truro?

Mr. Stanfield: There is not such a thing. This is one of the recommendations that I had in my brief. You have pool car service from Montreal and Toronto into this region, but you do not have anything in reverse that approximates this type of service. This is something that I think should be looked into.

Mr. Horner: Just to clear it up in my mind, you envision, say, two or three different manufacturers in the Truro area loading the same car. This is what you mean by pool car service?

Mr. Stanfield: Yes, this could be. Or it could work this way. For instance, we have to bring all our raw materials from some place in central Canada with the exception of very few products, and they may be from Saint Hyacinthe, Three Rivers, or some such place outside of Montreal. They will ship it into Montreal, and it will come by pool car service to Truro. I can envision the same thing; maybe we cannot have pool car service in Truro. I would like to see it, but at least we could have it out of Halifax, which would be a help.

[*Interpretation*]

M. Stanfield: Considérez-vous le transp rail-roule comme étant un camion?

M. Turner (London-Est): Oui.

M. Stanfield: Nous expédions la totalité notre marchandise par rail-route vers l'ou du Canada, et par le service de transport commun, ce qui veut dire que 50 p. 100 acheminé par camion jusqu'à Montréal. No n'utilisons pas de camions dans beauco d'autres endroits sauf dans la région d Maritimes pour desservir l'Île du Princ Édouard, le Nouveau-Brunswick ou la No velle-Écosse, et quelques camions à Montré

M. Turner (London-Est): Êtes-vous sync qués?

M. Stanfield: Non.

M. Turner (London-Est): Comment v salaires se comparent-ils...?

M. Stanfield: Ils soutiennent la concurren Malgré mes connaissances limitées à ce suj je dirais que les nôtres se compare favorablement.

Le président: Monsieur Horner?

M. Horner: Monsieur Stanfield, n'avez-vo jamais essayé le service de transport en co mun ou avez-vous déjà utilisé un tel service partir de Truro?

M. Stanfield: Cela n'existe pas. C'est u des recommandations formulées dans mémoire. Vous avez des services de transpo en commun à partir de Toronto et de Mon réal vers cette région, mais rien en se inverse, qui puisse égaler ce genre de servic Nous devrions étudier cette question, à m avis.

M. Horner: Si je comprends bien, vous pr voyez, disons, deux ou trois différents fabr cants dans la région de Truro qui chargent même wagon. C'est ce que vous entendez p transport en commun?

M. Stanfield: Oui, ça se pourrait. Ou enco de cette façon. Par exemple, nous fero apporter toutes nos matières premières quelque part dans le Canada central, à l'e ception de quelques produits qui seraie commandés à St-Hyacinthe, Trois-Rivières ailleurs à l'extérieur de Montréal. Ils l expédieront à Montréal, et ce sera à bo d'un wagon de transport en commun qu'i arriveraient à Truro. Je conçois la mêm chose. Peut-être que nous ne pourrions p avoir un service de transport en commun Truro. Mais si nous pouvions l'avoir au moi à partir de Halifax, ce serait une grande aide

[Texte]

Mr. Horner: Have you ever suggested it to ıe railroads?

Mr. Stanfield: I have suggested it to the ilroads and I have suggested it to the May-, that a couple of pool-car operators should ow come east-bound, and they say that it is question of regulation or it is a question of emand. I understand one of them is looking to it, but I have not seen anything in the apers or anything further on it.

Mr. Horner: I hope the representative of e C.T.C. here takes cognizance of the fact at the question is worthy of looking into.

Mr. Chairman: Mr. Trudel.

Mr. Trudel: Mr. Chairman, I would like to k Mr. Stanfield if he has discussed this with e Maritime Transportation Commission, this uestion of pooling.

Mr. Stanfield: I personally have not dis-ssed it with the men at the Transportation ommission, but a representative of the firm s talked to the Commission and they are vare of this brief.

Mr. Trudel: Do you agree, Mr. Stanfield, at this pooling is possible between local ippers here. I mean, it does not necessarily st on the railroad, that local manufacturers uld pool and be accepted by the railway out the area.

Mr. Stanfield: If people can pool it in other eas, we are not different down here. There no reason why they could not do the same ing.

Mr. Trudel: Do you feel that through your aritime Transportation Commission this uld be achieved?

Mr. Stanfield: Yes, but let me say one thing re about this. You have to realize that there a lot more east-bound freight than there is st-bound freight. This is the basic problem hich you are all very familiar with. This is obably one reason why some of the carriers y be hesitant about this thing, why the ol carriers may be hesitant about instituting ng west-bound. But I submit that this uld probably be the single cheapest way the area to achieve an efficient, fast trans-rtation service.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Thomas.

[*Interprétation*]

M. Horner: L'avez-vous déjà proposé aux chemins de fer?

M. Stanfield: Oui, je l'ai proposé aux chemins de fer ainsi qu'au maire, pour que quelques opérateurs de service de transport en commun viennent vers l'est. Mais ils nous disent que c'est une question de règlement, une question de demande. Je sais que la question est à l'étude, mais je n'ai absolument rien vu dans les journaux à ce sujet.

M. Horner: J'espère que les représentants de la Commission canadienne des transports, ici présents prennent connaissance du fait que cette question mérite d'être étudiée.

Le président: Monsieur Trudel.

M. Trudel: Monsieur le président, je voudrais demander à M. Stanfield s'il a parlé avec la Commission des transports des Maritimes, de cette question du transport en commun.

M. Stanfield: Non, je n'en ai pas parlé personnellement à la Commission, mais un représentant de notre société en a parlé à la Commission, et ils sont au courant de ce mémoire.

M. Trudel: Est-ce que vous convenez que cette mise en commun est possible entre les expéditeurs locaux, qu'il n'incombe pas nécéssairement aux chemins de fer de le faire, et que les fabricants locaux pourraient le faire?

M. Stanfield: Si d'autres peuvent mettre le transport en commun dans d'autres régions, nous ne différons pas d'eux. Je ne vois pas pourquoi nous ne pourrions pas faire la même chose ici.

M. Trudel: Croyez-vous que, par l'entremise de la Commission des transports des Maritimes, cela pourrait se faire?

M. Stanfield: Oui, mais laissez-moi vous dire une chose à ce sujet. Il faut reconnaître qu'il y a beaucoup plus de traffic vers l'est que vers l'ouest. C'est là le principal problème. C'est peut-être une des raisons pour lesquelles certains expéditeurs hésitent un peu à ce sujet, et que les transporteurs en commun hésitent aussi à le faire en direction de l'ouest. Mais j'estime que ce serait la seule façon la plus économique d'obtenir un service de transport rapide et efficace.

M. Trudel: Merci, monsieur le président.

Le président: Monsieur Thomas.

[*Text*]

Mr. Thomas (Moncton): I was very interested in your remarks on the lack of pool car service east to west, because being in business myself in Moncton I know what you are up against.

And I think what is not understood here, and I would like to clarify it with you, is that provision of pool car services is not a railway service. This is done by private companies who use the rail facilities. In other words, Maritime Forwarding would have to be satisfied that the demand was here in Truro before they put the service on. You do not go to the railway and ask them to put on a pool car. This is operated by private companies. Am I right?

Mr. Stanfield: This is correct.

Mr. Thomas (Moncton): So you would have to satisfy them that the need was there.

Mr. Stanfield: My point there, sir, is that if they can provide east-bound, they already have the facilities. There is no reason why they could not provide west-bound if they were asked to, or required to as part of their license to come east-bound.

Mr. Thomas (Moncton): As a private company, not as...

Mr. Stanfield: That is correct. I do not think the government should get involved.

Mr. Thomas (Moncton): The government would have nothing to do with it anyway; it is a private service.

The Chairman: Mr. Perrault, a supplementary question.

Mr. Perrault: Yes, just a brief question, Mr. Chairman. In the brief submitted in 1968 by Mr. Stanfield, the argument was advanced that there should be no subsidization of motor carriers. The motor carriers are not bearing a fair share of user-cost of building and maintaining our highway system. Now, this viewpoint has been opposed in other parts of our hearings in the Maritimes. I wonder if you still feel that way about it? It is rather emphatically stated here in your March 1968 brief.

Mr. Stanfield: Yes, I do, and in spite of what I have read in the newspapers and the other briefs I read that were mailed to me. They did not present anything that would materially change my mind about it, but I did state that they were an inter-region concept,

[*Interpretation*]

M. Thomas (Moncton): J'ai été très int ressé par ce que vous avez dit au sujet manque de wagons est-ouest. Et étant don que je suis en affaires à Moncton moi-mêm je réalise les difficultés que vous éprouvez.

Je crois que ce qui n'est pas compris ici, que j'aimerais tirer au clair avec vous, c'e que les services de transport en commu n'appartiennent pas aux chemins de fer. service est assuré par des compagnies privé qui utilisent les installations ferroviaires. d'autres termes, *Howell Forwarding* ou *Mar Time Forwarding* devraient être sûrs de demande à Truro avant d'installer le servic Ce n'est pas quelque chose qu'on peut dema der aux chemins de fer. C'est fait par d compagnies privées. Ai-je raison?

M. Stanfield: C'est juste.

M. Thomas (Moncton): Alors il faut les co vaincre que la demande existe.

M. Stanfield: Ce que je veux dire, c'est q s'ils peuvent assurer le service vers l'est, i ont déjà les aménagements. Je ne vois p pourquoi ils ne pourraient pas assurer transport vers l'Ouest, si on le leur demand ou si on les y oblige puisque cela fait part de leurs franchises pour assurer l'expéditi vers l'est.

M. Thomas (Moncton): Oui, mais à titre société privée, comme...

M. Stanfield: Vous avez raison. Je ne pen pas que le gouvernement devrait se mêler.

M. Thomas (Moncton): De toute façon, gouvernement n'a rien à y voir; c'est un se vice privé.

Le président: M. Perrault, une questi supplémentaire.

M. Perrault: Une brève question, monsie le président. Dans le mémoire présenté e 1968 par M. Stanfield, il a soutenu qu'il devrait pas y avoir des subventions pour l transporteurs routiers car il ne contribue pas à la construction et à l'entretien des gra des routes. Ce point de vue a été opposé da d'autres parties du témoignage dans les Mar times. Je me demande si vous êtes toujou du même avis, étant donné que vous avi tellement insisté dans votre mémoire du mo de mars 1968?

M. Stanfield: Oui. Malgré ce que j'ai l dans les journaux, dans les autres mémoir et périodiques, qui m'ont été envoyés. Pe sonne n'a présenté quoi que ce soit pour m faire changer d'idée. J'ai dit toutefois qu' s'agissait d'une idée interrégionale et non pa

[*Texte*]

ot an intra-region concept. That is the way I el about it, as far as the Atlantic Region is ncerned.

Mr. Perrault: You would not favour subsi-es to the truckers or to air transport in the ea then.

Mr. Stanfield: Well, truckers I would not pport subsidies for at this point in time. Air avel—I really do not think that air travel in nada, or air freight, let us put it this way, ith the exception of perhaps frozen foods, in is area is really a feasible thing because ere are not enough aircraft flying in and t and they cannot take enough freight.

Mr. Perrault: Thank you, Mr. Chairman.

The Chairman: Mr. Rose.

Mr. Rose: Mr. Stanfield, one of the prob-ms the railroads have is with what they call mattress-type cargo. In other words, it kes up a great deal of space, but it does not eigh very much. And yours is a product hich is a high-quality, fairly high-priced oduct, but it does not weigh very much. Do u feel—it is a relatively high-quality, low-eight product. What do you feel the rail-ads should charge for your kind of product shipping?

Mr. Stanfield: Well, I think that the...

Mr. Rose: Excuse me, it would not be the me as something like raw steel that eighed a great deal and yet it was not as pensive per unit as yours, or per unit of ace.

Mr. Stanfield: I think this is one of the oblems perhaps that the railway has with r product, that it is about eight pounds to e cubic foot rather than the ten pounds that y use. And from the point of view of retail ople, it has therefore a high percentage of ail selling price for transportation. For stance, underwear may go anywhere from o to five per cent, depending on where it is ing. Whereas it may be a half to one per nt on the steel, or even less than a half per nt.

As to what the railways should charge, in r estimation the railway here should charge ual weight because I do not think that it sts them that much more to handle addi-nal boxcars on a unit train going from here Montreal or Toronto. What they should arge I do not know. I am not familiar with

[*Interprétation*]

intra-régionale. C'est ce que j'en pense, du moins pour ce qui est de la région de l'Atlantique.

M. Perrault: Alors vous n'êtes pas en faveur des subventions aux camionneurs ou au transport aérien dans la région.

M. Stanfield: Je n'appuierais pas les subventions aux camionneurs à l'heure actuelle. En ce qui concerne le service de transport aérien, je ne crois pas vraiment que le *freight* aérien à l'exception peut-être des aliments congelés, soit vraiment pratique car les avions qui desservent la région ne sont pas suffisants pour prendre assez de marchandises.

M. Perrault: Merci, monsieur le président.

Le président: Monsieur Rose.

M. Rose: Monsieur Stanfield, un des problèmes que les chemins de fer éprouvent est à l'égard de ce qu'ils appellent une cargaison du genre «matelas». En d'autres termes, des marchandises qui occupent beaucoup d'espace sans être trop pesantes. Et le vôtre est un produit de haute qualité au prix assez élevé, tout en ne pesant pas grand-chose. Croyez-vous que c'est un produit relativement de haute qualité qui ne pèse pas grand-chose. Combien croyez-vous que les chemins de fer devraient vous charger pour les frais d'expédition?

M. Stanfield: Je pense que le...

M. Rose: Excusez-moi, ce ne serait pas quelque chose comme l'acier brut qui pesait beaucoup mais qui par unité d'espace, ne coûtait pas autant que le vôtre.

M. Stanfield: Je pense que c'est une des difficultés justement que les chemins de fer éprouvent avec notre produit, c'est-à-dire qu'il y a environ 8 livres par pied cube plutôt que les 10 pieds cube qu'ils emploient. Et du point de vue des détaillants, le prix de vente au détail est par conséquent élevé à cause du transport. Par exemple, les sous-vêtements peuvent avoir des frais de transport de 2 à 5 à 10 p. 100 selon la destination, tandis que l'acier pourrait avoir des frais de transport de 0.5 à 1 p. 100, ou même moins que 0.5 p. 100.

En ce qui concerne ce que devraient charger les chemins de fer, à mon avis, les chemins de fer ici devraient charger le poids réel, car je ne crois pas que cela leur coûte tellement plus de manutentionner plus de wagons dans un train unitaire allant d'ici à Montréal ou à Toronto. Ce qu'ils devraient

[*Text*]

all their costs. That is a very loaded question to ask.

Mr. Rose: It is a loaded question, but it seems to me that perhaps a cargo that was less valuable should probably be carried—you see, we are talking about subsidies and this sort of thing. Your firm is a very successful one and you seem to be able to have prospered in spite of the fact that you claim that you have been at a severe disadvantage because of freight rates and your location.

Mr. Stanfield: That is right.

Mr. Rose: I want to ask you something else. Do you own any trucks, sir?

Mr. Stanfield: No.

Mr. Rose: Do you ship any of your material by truck? Your company owns no trucks?

Mr. Stanfield: We do not own any trucks.

Mr. Rose: Is there any reason for this? Do you think you could gain any advantage by owning your own trucks?

Mr. Stanfield: The problem with trucks for us is that they would always be eastbound and coming back empty westbound because the yarn comes in huge quantities and is knitted into merchandise that is as wide as the table as opposed to half the table in raw materials. You would run up against that and I do not think that it would be feasible for us to use trucks for that reason.

Mr. Rose: Would it not be because your products take up so much space, according to their weight, that they are really not worth it? They are really not worth it to do this?

Mr. Stanfield: It is not worth it mainly because we cannot come westbound loaded. If you come back empty this is the problem of people leaving here and going back to central Canada after they come here full eastbound.

Mr. Rose: I would be interested in your opinion of how any subsidy that you might gain, that your company might gain or your area might gain through this transportation MFRA would be passed on and improve the prosperity of the people in your area.

[*Interpretation*]

charger, je ne le sais pas. Je ne connais p tous leurs frais, tous leur tarifs. C'est u question très acablante à poser.

M. Rose: La question est peut-être ac blante, mais il me semble que, peut-être, u cargaison de moindre valeur devrait prob blement être transportée. Voyez-vous, no parlons de subventions et de choses du gen Vous avez une entreprise qui réussit très bi en affaires et vous semblez avoir prospé malgré le fait que vous prétendez avoir eu grand désavantage en raison du tarif ma chandises et votre emplacement.

M. Stanfield: C'est exact.

M. Rose: Je voudrais vous poser une aut question. Possédez-vous des camions, Mo sieur?

M. Stanfield: Non.

M. Rose: Expédiez-vous de vos matéria par camion? Votre société ne possède pas camions?

M. Stanfield: Non, nous ne possédons p de camions.

M. Rose: Est-ce qu'il y a une raison à cel Croyez-vous qu'il y aurait un avantage ayant vos propres camions?

M. Stanfield: Le problème, si nous avio des camions, c'est qu'ils viendraient toujou vers l'Est et qu'ils reviendraient toujou vides vers l'Ouest, car le fil arrive en gran quantité et est tricoté pour donner une ma chandise est aussi grande que la table p raport à la moitié de la table en matiè première. Ce serait alors un problème, et c'e pourquoi je ne crois pas que ce serait pra que pour nous d'utiliser des camions.

M. Rose: Est-ce que parce que vos produi prennent trop d'espace par rapport au poi que cela ne vaut pas la peine? Ils ne vale pas la peine que vous le fassiez?

M. Stanfield: Ça ne vaudrait pas la pei de le faire car nous ne pouvons venir ve l'Ouest avec des camions chargés. S'ils revie nent vides, c'est le problème des personn qui partent d'ici et retournent au Canada ce tral après être venus ici, vers l'Est, avec d camions chargés.

M. Rose: Je serais intéressé de savoir, votre avis, comment une subvention qu vous, votre société ou votre région pourra obtenir grâce à la Loi sur le taux de transpo de marchandises des provinces Maritime pourrait être passée aux consommateurs votre région pour améliorer leur situatio économique.

Texte]

Mr. Stanfield: I think if we do more busi-ess it is bound to help Truro, it is bound to lp Nova Scotia but more particularly uro, just because we are a labour intensive dustry, you might call it. Every time we ll "x" more dozens we have to have "x" ore sewing machines to sew them. Our lume is directly related to the prosperity of e region.

Mr. Rose: I was thinking more in terms of ages as far as your company's employees e concerned.

Mr. Stanfield: In what regard?

Mr. Rose: You answered another question rlier here saying that you were unorganized d I was wondering, since you were talking rlier in the previous speech about getting osidies, if perhaps your firm might not be example of this—that your workers were fact subsidizing the firm through lower ges.

Mr. Stanfield: No, I do not think this is e. Not from what I know about competitors, es, of which I see some. Naturally they not send me the whole structure.

Mr. Rose: That is from central Canada.

Mr. Stanfield: Yes, I am talking about cen-l Canada.

Mr. Nowlan: I think Quebec is not noted high wages either.

Mr. Chairman, before we carry on this eco-nic council study of Mr. Rose's I think the ness has already answered one of the stions I had about the amount of transpor-ion costs there was in your product. You d it rises between 2 per cent and 5 per t, depending on the way it is going.

Mr. Stanfield: Yes, you have to separate rself from Montreal, Toronto, Winnipeg, monton and Vancouver into situations like ebec City, North Bay, Ontario, Dauphin, n Flon or Prince Albert and places like s—all these places to which we ship. They ve naturally a higher percentage. You have remember too that all the department res in Canada have their own forwarding npany called Tormon and this, of course, ers their transportation costs.

[*Interprétation*]

M. Stanfield: Si nous faisons plus d'affaires cela doit nécessairement aider Truro et la Nouvelle-Écosse, et plus particulièrement Truro. Parce que nous sommes une société ayant une forte densité de main-d'œuvre, pourrait-on dire. Chaque fois que nous vendons x fois plus de douzaines, nous devons avoir x fois plus de machines à coudre pour les coudre. Notre volume de production est directement relié à la prospérité de la région.

M. Rose: Je pensais plus en fonction des salaires pour autant que vos employés sont concernés.

M. Stanfield: Qu'est-ce que vous voulez dire?

M. Rose: Vous avez répondu à une question antérieure en disant que vous n'étiez pas syndiqués, et je me demandais, étant donné que nous parlions plus tôt, dans le discours antérieur, d'obtenir des subventions, si votre entreprise ne serait pas un exemple de ceci, savoir, que vos employés, de fait, subventionnent l'entreprise par leurs salaires peu élevés.

M. Stanfield: Non, je ne crois pas que ce soit exact. Du moins, pas d'après ce que je connais des taux de salaire de nos concurrents, dont je vois quelques-uns. Évidemment ils ne m'envoient pas la structure complète.

M. Rose: Vous parlez du Canada central.

M. Stanfield: Oui, je parle du Canada central.

M. Nowlan: Le Québec n'est pas reconnu pour avoir des hauts salaires non plus, vous savez.

Monsieur le président, avant de continuer cette étude de conseil économique de M. Rose, je crois que le témoin a déjà répondu à une question que j'avais en tête au sujet de la somme des frais de transport qu'il y avait dans votre produit. Vous avez dit que cela se monte entre 2 à 5 p. 100 selon la distance à parcourir.

M. Stanfield: Oui, il faut s'éloigner de Montréal, Toronto, Winnipeg, Edmonton et Vancouver, pour aller dans des endroits comme Québec, North Bay (Ontario), Dauphin, Flin Flon ou Prince-Albert et autres endroits du genre, tous des endroits où nous expédions nos produits. Naturellement, le pourcentage y est plus élevé. Il faut se rappeler aussi que tous les magasins à rayons du Canada ont leur propre entreprise de transport, appelée *Tormon*, ce qui réduit énormément leurs frais de transport.

[*Text*]

To answer your question very directly most retailers use a factor of between 4 and 5 per cent as their transportation costs.

Mr. Nowlan: And this would apply basically to yourself.

Mr. Stanfield: We have to figure it in the mark-up that we have to give them. Although we are not paying that transportation cost it has to be figured in our selling price because they have to have an adequate mark-up in order to do business.

Mr. Nowlan: When you mentioned there is an agreed charge between Montreal and Vancouver, that the time element was almost equivalent to Montreal and Toronto, did you also say that the agreed charge was almost not that much more?

Mr. Stanfield: Not related to distance, it is not. It is more, not related to distance.

Mr. Nowlan: And for other shippers shipping to the west is there a sort of land bridge concept in agreed charge rates?

Mr. Stanfield: Yes. People in Montreal can take advantage of this rate in Quebec, or in Ontario.

Mr. Nowlan: This is a kind of thing within the industry.

Mr. Stanfield: You see, this is one of our problems. We can reach Western Canada more easily than we can reach central Canada, and central Canada is two thirds of the market. So we have to operate on an east and west concept in a lot of cases.

Mr. Nowlan: I see.

Mr. Horner: On that very point, will the disappearance of the bridge subsidy to western Canada which is now being phased out be phased out over a three-year period? Will this change that aspect of your freight costs?

Mr. Stanfield: I was not aware that this was going to be phased out.

Mr. Horner: The bridge subsidy in western Canada, yes. It is being phased out right now.

Mr. Stanfield: I think that any increase above normal in transportation costs is bound

[*Interpretation*]

Pour répondre à votre question très dir tement, la plupart des détaillants emploi un facteur entre 4 et 5 p. 100 comme frais transport.

M. Nowlan: Cela s'appliquerait fondamen lement à vous aussi.

M. Stanfield: Nous devons le calculer d la marge de prix que nous devons leur d ner. Bien que nous ne payions pas les frais transport, il faut que cela figure dans no prix de vente évidemment, car il faut qu aient une marge appropriée eux aussi, p faire des affaires.

M. Nowlan: Quand vous avez mentionné tarif convenu entre Montréal et Vancouv que le facteur temps était presque le mê pour Montréal et Toronto, avez-vous dit au que le taux convenu était presque pas bea coup plus que cela?

M. Stanfield: Pas par rapport à la distan ce ne l'est pas. C'est plus, sans égard à distance.

M. Nowlan: Et pour les autres expéditeu qui envoient leurs produits vers l'Ouest, a-t-il une sorte de principe de transport dir dans les taux convenus?

M. Stanfield: Oui. Les gens de Montr peuvent profiter de ce taux dans le Québec dans l'Ontario.

M. Nowlan: Oui, c'est un genre de cho dans l'industrie.

M. Stanfield: Evidemment, c'est un de n problèmes. Nous pouvons justement atteind l'Ouest beaucoup plus facilement que Canada central, et ce dernier constitue deux-tiers du marché. Nous devons do fonctionner suivant un principe d'est d'ouest dans beaucoup de cas.

M. Nowlan: Je vois.

M. Horner: Sur ce point-là précisémen est-ce que la disparition de la subvention pont pour l'ouest du Canada, qui subit actue lement une diminution progressive sera dim nuée progressivement dans une période trois ans? Est-ce que cela changera cet aspe de vos frais de transport?

M. Stanfield: Je ne savais pas qu'on allai la diminuer progressivement.

M. Horner: Oui, la subvention de pont po l'ouest du Canada. On est en train de la dim nuer progressivement.

M. Stanfield: Je crois que toute augment tion au-dessus de la normale dans les frais

[*exte*]

hurt us more than anybody else because have to get from here to central Canada fore we start to ship. They are already re and shipping from there. If we were re then we would be treated on the same is; they would have the same transporta- n costs. But we have to get that far before start being competitive.

Mr. Nowlan: The ETA-100 in its present m is unsatisfactory according to the last e of your brief. Is it unsatisfactory in the y you have set it out there, or is there—do insurance charges and the density regula- n...

Mr. Stanfield: I think the most unsatisfacto- thing about it is probably the density regu- on, as far as we are concerned.

Mr. Nowlan: Which leads me to part of the stion Mr. Rose was asking. We had a brief night on another product that was very t and bulky and was also caught in this sity problem. From your experience there ld not be another category. You have not lored the possibility or made any resentations to have a special category or ssification to get away from this 10 pounds the cubic foot?

Mr. Stanfield: We have not done it within A-100, but we have made representations category changes within carload and with- classifications that the pool trucks use. It is ery interesting situation that for trucks y were classified as class 55 and for the ways they were classified as class 70. It is ery interesting situation.

Mr. Nowlan: That is very technical. What s that mean?

Mr. Stanfield: They go by classification— numbers mean nothing. As you go down n 100 to zero your rates get lower and as go up they get higher. The trucks have n able to get the regulating board to give m a class 55 for our merchandise whereas railways have not been able to obtain the e thing.

Mr. Nowlan: And for the railways it is 70.

Mr. Stanfield: Yes.

Mr. Nowlan: I see. Are you considering a mmended change in ETA-100?

[*Interprétation*]

transports inévitablement nous fera tort plus qu'à tout autre car il nous faut nous rendre au Canada central avant de pouvoir l'expédier plus loin. Les autres concurrents sont déjà là et expédient de là. Si nous y étions installés, alors nous serions traités de la même manière; ils auraient les mêmes frais de transport. Mais il nous faut nous rendre là avant de pouvoir commencer à être concurrentiels.

M. Nowlan: D'après la dernière page de votre mémoire, le tarif ETA-100 est peu satisfaisant. Est-ce en raison de l'explication que vous avez donnée ou est-ce en raison des frais d'assurance et du règlement sur la densité.

M. Stanfield: Je crois que là c'est le règlement sur la densité qui est le moins satisfaisant, pour autant que nous sommes concernés.

M. Nowlan: Ce qui m'amène à une partie de la question de M. Rose. Nous avons eu un mémoire, hier soir, au sujet d'un autre produit qui était très léger et prenait beaucoup plus de place, et qui avait le même problème au sujet de la densité. D'après votre expérience, il ne pourrait y avoir une autre catégorie. Vous n'avez pas étudié la possibilité ou présenté des instances pour avoir une catégorie ou une classe spéciale afin d'éviter justement cete exigence de 10 livres au pied cube.

M. Stanfield: Nous ne l'avons pas fait pour le tarif ETA-100, mais nous avons présenté des instances pour avoir des changements de catégorie dans les chargements et les classifications qu'emploient les camions en commun. C'est une situation très intéressante que cela ait été classé à 55 pour les camions et à 70 pour les chemins de fer. C'est une situation très intéressante.

M. Nowlan: C'est très technique. Qu'est-ce que cela veut dire?

M. Stanfield: Cela se fait par classification. Les chiffres ne signifient rien. Mais au fur et à mesure que vous baissez de 100 à 0, vos taux baissent, et à mesure que vous montez, vos taux augmentent. Les camions ont pu obtenir de l'Office de réglementation, une catégorie de 55 pour nos marchandises, alors que les chemins de fer n'ont pas pu obtenir la même chose.

M. Nowlan: Et pour les chemins de fer c'est 70.

M. Stanfield: Oui.

M. Nowlan: Je vois. Envisagez-vous de recommander un changement du tarif ETA-100?

[*Text*]

Mr. Stanfield: From our firm point of view I am hoping that we will get pool car service and that would be our answer to it. For the smaller shippers it will be their answer too if they can ship to a central point and take advantage of the pool cars.

Mr. Nowlan: The pool car concept would...

Mr. Stanfield: A pool truck, but I would take the pool car.

Mr. McCleave: One point I would like to have expanded, Mr. Chairman. On page 593, Mr. Stanfield has said:

> Special consideration should be given to raw materials being brought into the Maritimes for manufacture.

First, in dealing with your own industry, Mr. Stanfield, where do these raw materials come from?

Mr. Stanfield: I think that the biggest percentage of raw materials that we deliver are yarns, knitted yarns which come mainly from the province of Quebec—about 80 per cent—and about 20 per cent is from the province of Ontario. Then there is the foreign element in that too.

Mr. McCleave: You asked that special consideration should be given to these. In what way? By subsidies on the payment of this material coming in, or just what?

Mr. Stanfield: I do not know if you could call this a subsidy or not. I think that if raw materials are coming in here for manufacture there should be some set of rates set up that would allow them to come in as reasonably as possible.

This does not necessarily involve subsidy because there is a lot of it, for instance, coming in by truck that could go by rail, or the other way around. I do not think this involves that much subsidy. I think that it would help a lot of manufactuers in this area and help potential manufacturers in this area if their raw materials could come in here as quickly and as efficiently as possible. Some of us have them coming this way and some of us do not.

Mr. McCleave: Is this then the key to industrial growth in Atlantic Canada, in your opinion, Mr. Stanfield?

[*Interpretation*]

M. Stanfield: Du ferme point de vue d notre société, j'espère que nous obtiendron un service de wagons en commun, et ce serai là notre réponse à cela. Ce serait aussi l réponse des petits expéditeurs, s'ils peuven expédier vers un point central du Canada e profiter des wagons en commun.

M. Nowlan: Le principe de wagon e commun ...

M. Stanfield: Un camion en commun, mai je prendrais le train en commun.

M. McCleave: J'ai un point pour lequel j'ai merais un éclaircissement. A la page 593, M Stanfield a dit:

> «On devrait accorder une attention spé ciale aux matériaux bruts qui sont intro duits dans les Maritimes, pour y êtr manufacturés.»

En parlant d'abord de votre propre industri monsieur Stanfield, d'où viennent ces maté riaux bruts?

M. Stanfield: Je crois que le plus gro pourcentage de matériaux bruts que nou délivrons sont des fils, des tricots qui nou viennent surtout du Québec, soit environ 8 p. 100, et peut-être 20 p. 100 de l'Ontario. Il a aussi les matières premières qui nous vien nent de l'étranger.

M. McCleave: Vous avez demandé qu'o leur accorde une attention spéciale. De quell façon? Par des subventions sur les matériau qui arrivent ou comment?

M. Stanfield: Je ne sais pas si vous pouve appeler cela une subvention. Je crois que des matériaux bruts sont introduits ici au fins de fabrication, on devrait établir un série de taux qui leur permettraient d'êtr introduits à un taux aussi raisonnable qu' est possible. Cela n'implique pas nécessaire ment une subvention, car il y a bien de matériaux, par exemple, arrivant par camio qui pourraient venir par chemin de fer, réciproquement.

Ça n'implique pas tellement une subver tion. Mais je crois que cela aiderait beaucou de fabricants et de futurs fabricants de l région, si leurs matériaux bruts pouvaien arriver ici le plus rapidement et le plus eff cacement possible. Certains d'entre nous on cet avantage et d'autres pas.

M. McCleave: Est-ce la clé vers la croi sance économique de la région atlantique, votre avis, monsieur Stanfield?

[*Texte*]

Mr. Stanfield: Just one of the keys. Transportation in general is one of the keys. There are other factors too, but one of your biggest roadblocks if you are dealing in a service industry, which we are as we have to service our retailers, is that you have to service them. If you cannot get it there fast enough and at the right price compared with somebody else you are a dead duck. This is one of the problems that all industries face in this area.

The Chairman: Mr. Stanfield, this is the end of our question period and I would like to thank you very much for your brief.

Our next group will be the Truro Area Industrial Commission. I would call upon Mr. John M. Murphy.

Mr. J. M. Murphy (Secretary, Truro Area Industrial Commission): Mr. Chairman and gentlemen, the brief was prepared a year ago. Other than just a couple of paragraphs or so in it which are a little out of date, the rest of the brief, the theme of it, pretty well stands. It is a short brief in itself and with your permission, Mr. Chairman, I will summarize here two or three of the paragraphs and just give the gist of the brief.

The Chairman: You will find the brief on page 594.

Mr. Murphy: This submission is for and on behalf of The Truro Board of Trade, The Council of the Town of Truro, The Council of the Town of Stewiacke, The Council of the Municipality of Colchester County, The Council of the Municipality of East Hants, and The Truro Area Industrial Commission, whose members take the view that the Atlantic Provinces have very legitimate and important transportation needs for which national policies must be modernized or developed, or both.

These needs are as real and vital to the people of the Atlantic Provinces as were, for example, the aspirations of the citizens of the St. Lawrence Seaway area for construction of the seaway and for maintenance of tolls which are less than compensatory, or the Western grain growers' need for export rates on grain to remain at the 1897 level.

The Atlantic Provinces transportation needs can no more be met by a uniform national transportation policy than either of the above needs could be met by such a policy.

[*Interprétation*]

M. Stanfield: C'est une des clés seulement. Le transport en général est l'une des clés. Il y a d'autres facteurs aussi. Mais si vous traitez dans une industrie de services, ce que nous faisons puisque nous desservons nos détaillants, l'un des obstacles les plus importants que vous rencontrez est qu'il faut absolument desservir le détaillant. S'il est impossible de lui livrer ses produits assez vite et à un prix concurrentiel convenable alors vous perdez tout. C'est le problème qui confronte la majeure partie des industries de la région.

Le président: Voilà la fin de notre période de questions, monsieur Stanfield. Je voudrais vous remercier beaucoup pour votre mémoire.

Le prochain mémoire nous vient de la Commission industrielle de la région de Truro. Je demanderais à M. John M. Murphy de venir à l'avant.

M. J. M. Murphy (secrétaire de la Commission industrielle de la région de Truro): Monsieur le président, messieurs, le mémoire a été préparé il y a un an. A part quelques paragraphes qui s'y trouvent, et qui sont désuets, le reste du mémoire demeure à peu près le même. Le mémoire lui-même est très court, et avec votre permission, monsieur le président, je résumerai deux ou trois paragraphes et je donnerai seulement l'essence du mémoire.

Le président: Vous trouverez le mémoire à la page 594.

M. Murphy: Le mémoire est présenté au nom de la Chambre de Commerce de Truro, le Conseil de la ville de Truro, le Conseil de ville de Stewiacke, le Conseil de la municipalité du comté de Colchester, le Conseil de la municipalité d'East Hants, la Commission industrielle de la région de Truro, dont les membres croient que les provinces de l'Atlantique ont des problèmes légitimes et importants de transport, pour lesquels il faut moderniser ou développer des programmes nationaux ou encore adopter ces deux points de vue.

Ces besoins sont aussi réels et vitaux pour la population des provinces maritimes que l'étaient, par exemple, les aspirations des citoyens de la région de la Voie maritime du Saint-Laurent, en faveur de la construction de cette voie navigable et du maintien des taux de péage qui sont moins que compensatoires et les besoins des producteurs de céréales de l'Ouest qui exigeaient que les taux à l'exportation demeurassent au niveau de 1897.

On ne peut répondre aux besoins de transport des provinces maritimes par l'adoption d'une politique nationale et uniforme de transport, pas plus qu'on ne pouvait répondre

[*Text*]

It is important, therefore, that these less-than-carload rates be reinstated as they were prior to September 5, 1967, at least until a suitable and adequate regional transportation policy has been developed and implemented.

The effect of the new tariff appears to fall most heavily on local manufacturers attempting to supply local markets in competition with manufacturers outside the Atlantic region. Certainly the new rates discourage the development of local industry for local markets, something the Government of Canada tells us we should be doing.

Evidence tends to point to the Atlantic Provinces being asked to bear a greater portion of the railways' increased revenue needs because it appears that the increase in the Atlantic region was greater than elsewhere; that is, our rate was frequently lower prior to September 5, 1967, but is now generally the same as, or higher than elsewhere in Canada.

This not only imposes an unfair burden on the people of the Atlantic Provinces, who are the greatest users per capita of railway non-carload service than any other region of Canada except Saskatchewan, but we do not have an alternative means of transportation such as is the case in Central Canada.

In consideration of the latter, may we suggest that Maritime Freight Rates Act subsidies be extended to the movement of goods by other modes of transport such as highway carriers, this step being deemed most important to assist in the development of a more effective and competitive transportation climate in this part of Canada.

May we suggest your Committee make a review of the terms and conditions under which Nova Scotia entered Confederation, the main consideration of which was that a railway be built linking Nova Scotia with the central provinces.

Coupled with this construction was the promise of a freight rate structure to meet the needs of our commerce. This was given quasi official recognition by the Royal Commission on Maritime Claims (the so-called Duncan Commission of 1926) and it said on page 21 and I quote:

[*Interpretation*]

aux besoins déjà mentionnés par l'adopti d'une politique semblable.

Il est donc important de rétablir ces ta qui s'appliquent aux envois en lots brisés à qu'ils étaient avant le 5 septembre 1967, moins jusqu'à ce qu'on ait trouvé une poli que régionale de transport convenable appropriée et qu'on l'ait mise en vigueur.

Ces nouveaux tarifs frappent plus du ment les manufacturiers locaux qui tentent répondre aux besoins du marché local en sc tenant la concurrence des producteurs deme rant hors de la région de l'Atlantique. C nouveaux tarifs ont tendance à décourag le développement de certaines industries loc les, ce que le gouvernement du Canada aim rait pourtant voir.

Avec preuve à l'appui, nous pouvons di que les provinces maritimes sont appelées combler une plus grande partie des besoi accrus en revenus des chemins de fer, par que l'augmentation des taux a été plus impo tante dans la région de l'Atlantique que n'i porte où ailleurs; ainsi notre taux était gér ralement plus bas jusqu'au 5 septembre 19(mais il est actuellement égal et même sup rieur à celui qui est en vigueur dans l autres régions du Canada.

Cette situation en plus de constituer nouveau fardeau pour les gens des Maritim qui font un plus grand usage des envois lots brisés que toute autre région à l'exclusi de la Saskatchewan, laisse ces gens sa moyen de transport contrairement au Cana central.

En tenant compte de ce fait, pouvons-no proposer que les subsides versés en vertu la Loi sur les taux de transport des marcha dises dans les Maritimes servent égaleme au transport des marchandises par d'autr modes de transport comme le transport ro tier. Une telle mesure contribuerait au dév loppement d'un système de transport pl efficace et plus concurrentiel dans cette régi du Canada.

Pouvons-nous également proposer q votre Comité fasse une revue des ententes des conditions qui ont donné suite à l'entr de la Nouvelle-Écosse dans la Confédératio une des conditions principales de cette enten était la construction d'un chemin de f devant relier la Nouvelle-Écosse aux provi ces centrales.

La construction de cette voie ferrée deva s'accompagner d'une structure tarifaire prop à satisfaire les besoins commerciaux de not région. La Commission royale d'enquête s les revendications des provinces maritimes, Commission Duncan de 1926, a donné u reconnaissance presque officielle à ces dema

[*Texte*]

"The Intercolonial Railway was completed in 1876, and it would appear from the evidence we have received that from then until 1912 the interests of the Maritime Provinces were fairly well safeguarded, the freight rate structure being such as to take into account the requirements of their traffic. The lower level of rates that prevailed on the Intercolonial Railway System prior to 1912 is, in our view, rightly to be interpreted as the fulfillment by successive governments of the policy and *pledges* that surrounded the railway from its inception, whatever impressions may have been created by the form of administration."

nd of quote.

We are not suggesting, gentlemen, that the eight rates in the Atlantic region should be t back to the same structure as prevailed in 912 but we do suggest that they be adjusted the extent that we continue to enjoy the me competitive advantages in the transportion of goods as was promised Nova Scotia the time of Confederation.

In summary, Mr. Chairman and gentlemen, e ask only that the policy and pledges hich surrounded the railway's inception not ow be arbitrarily abrogated as was done ith the institution of the new tariffs on September 5, 1967.

Just as much as the citizens of Central anada depend upon the St. Lawrence Seaay for the development of their economy, e in Nova Scotia depend upon the railway our "Seaway". For our economic survival e must have railway freight rates low ough to maintain our industries in a comtitive position with industries in other parts Canada until such times as an alternative ode of transportation to make this possible provided.

The Chairman: Mr. Thomas.

Mr. Thomas (Moncton): Mr. Chairman and r, possibly you know what we heard from a roup yesterday who tossed out all the ideas nd anything I had ever studied or learned bout the origin of Confederation. Would you gree—your brief seems to indicate—and is it our feeling that we in the Maritime Provnces were not only guaranteed access to the ntral Canadian markets in the original rms of Confederation and the context of roceedings and remarks by statesmen at the

[*Interprétation*]

des quand elle déclare à la page 21 de son rapport, et je cite:

«Le chemin de fer Intercolonial a été terminé en 1876 et il semble, d'après les témoignages que nous avons recueillis, que, jusqu'à 1912, on a sauvegardé de façon satisfaisante les intérêts des provinces maritimes, la structure tarifaire étant établie de façon à tenir compte de leurs besoins. Les taux inférieurs qui étaient en vigueur avant 1912 remplissaient, selon nous, l'engagement pris par les gouvernements successifs relativement à la construction de cette voie ferrée, quelle que soit l'impression qui ait été créée par la forme de l'administration.»

Nous ne prétendons pas, messieurs, que le taux de transport dans la région de l'Atlantique devrait être le même que celui qui prévalait en 1912, mais nous proposons qu'il soit modifié afin de nous permettre de continuer à profiter des avantages de la concurrence qui ont été promis à la Nouvelle-Écosse au moment de la Confédération en ce qui a trait au transport de la marchandise.

En résumé, monsieur le président, messieurs, nous demandons simplement que la politique et les promesses qui ont donné naissance au chemin de fer, pas celles qui existent actuellement, soient arbitrairement abrogées comme on l'a fait avec l'adoption des nouveaux tarifs le 5 septembre 1967.

La Nouvelle-Écosse compte sur son chemin de fer comme les citoyens du Canada central comptent sur la Voie maritime du Saint-Laurent pour l'expansion de leur économie et considère ce chemin de fer comme sa propre «voie maritime». Pour permettre à notre économie de survivre, nous devons bénéficier de taux de transport assez bas pour que nous puissions soutenir la concurrence des industries des autres régions du Canada jusqu'à ce que d'autres moyens de transport qui rendront la chose possible soit mis à notre disposition.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Monsieur le président et monsieur, vous savez peut-être ce que nous a dit hier un groupe qui mettait de côté toutes les idées et tout ce que j'avais étudié ou appris au sujet de l'origine de la Confédération. Êtes-vous d'accord, et votre mémoire semble l'indiquer, et croyez-vous que nous, dans les provinces maritimes, avons reçu non seulement une garantie d'accès aux marchés du Canada central, dans les conditions originales de la Confédération, le contexte des

[*Text*]

time, but also that this is essential to our survival here as an economic entity?

We must be able to compete on the central Canadian markets on equal terms. That was agreed in 1864, I think, at the conference of all delegates.

Whether this be by so-called subsidies or further massive assistance in supplying alternative modes of transportation so that our rates will be competitive is a matter of question, but what would you suggest as aid to the region to enable us to compete successfully?

Mr. Murphy: I think our freight rates, our less-than-carload rates, should be set back exactly as they were to September 5, 1967, until such time as your Committee comes up with some new policy which will provide us with a chance to compete on an equal plane with the rest of Canada.

Mr. Thomas (Moncton): In other words, what would your opinion be then on the present two-year freeze on carload rates which is due to expire on March 23 of this year? How do you feel about that?

Mr. Murphy: We think that should be continued until such time as you people make your deliberations and report.

Mr. Thomas (Moncton): Would your group be prepared to make representations to the government to ask that this freeze be extended?

Mr. Murphy: Definitely.

Mr. Thomas (Moncton): Thank you.

The Chairman: Mr. Horner.

Mr. Horner: I was interested in your remarks with regards to your rights under Confederation, but in the setting of rates do you not believe, and are you not really saying this in your brief, that the Maritimes position has been eroded greatly by the use of the clause in the Maritime Freight Rates Act which suggests that express shipments are exempt from it?

In other words, what I am saying is that it was not the intention in the Maritime Freight Rates Act in 1927 to exempt less-than-carload lots. It was the intention to exempt express packages travelling with a passenger and so

[*Interpretation*]

procédures et les observations des homm d'État de l'époque, mais encore que cela e essentiel pour notre survie comme enti économique?

Nous devons pouvoir faire concurrence s les marchés du Canada central aux mêm conditions. Je crois que cet engagement a é pris en 1864, à la conférence de tous l délégués.

Que ce soit par de supposées subventio ou par une autre aide massive en fournissa d'autres modes de transport afin que nos tau soient concurrentiels, cela peut se discute mais qu'est-ce que vous proposeriez pou nous aider à faire la concurrence avec succè

M. Murphy: Je crois que les taux de tran port de marchandises, nos taux d'envois e lots brisés, devraient être rétablis exactemer à ce qu'ils étaient jusqu'au 5 septembre 196 jusqu'au moment où votre Comité propos une nouvelle politique qui nous assurera l'occasion de pouvoir faire la concurrence s un pied d'égalité avec le reste du Canada.

M. Thomas (Moncton): En d'autres terme qu'est-ce que vous pensez alors du gel d deux ans, à l'heure actuelle, sur les taux d chargement complet, qui doit expirer le 2 mars de cette année? Qu'en pensez-vous?

M. Murphy: Nous estimons que cela devra être continué jusqu'au moment où vous aure fait vos délibérations et votre rapport.

M. Thomas (Moncton): Est-ce que votr groupe sera prêt à présenter des instances a gouvernement pour demander qu'on étende c gel?

M. Murphy: Définitivement.

M. Thomas (Moncton): Merci.

Le président: Monsieur Horner.

M. Horner: J'étais intéressé dans vos obser vations au sujet de vos droits en vertu de l Confédération, mais dans l'établissement de taux, ne croyez-vous pas, et n'est-ce pas pré cisément ce que vous dites dans votr mémoire, que la situation des Maritimes a ét affectée grandement par cette disposition d la Loi sur les taux de transport des marchan dises dans les provinces Maritimes qui sug gère que les expéditions de messageries e soient exemptées?

En d'autres termes, je dis que dans la Lo sur les taux de transport des marchandise dans les provinces maritimes, en 1927, on n'a vait pas l'intention d'exempter les envois e lots brisés. On avait l'intention d'exempter le

Texte]

orth, but not less-than-carload lots. Would ou agree with me on this?

I just wonder if what you are saying in our brief is that under the 1927 Act all eight moving in and out of the Maritime gion or the special region, as it was called, ould move at a reduced rate except—and e Act says, "except passenger movement d express movement."

It is under this clause that the railroads on ptember 5 decided that they could move in d increase the rates drastically on less-an-carload loadings. They consider that as press, whereas it certainly was not the tent of the Act in 1927. Would you not ree with me on that?

Mr. Murphy: I am sorry I cannot agree th you. I would agree with the basic funda-ental part of it that we were guaranteed wn here that we could market our goods up central Canada.

Mr. Horner: Did this include all movements did it include a specific area that was empt from that?

Mr. Murphy: At that time presumably it eant all movements of all products.

Mr. Horner: Of all products, yes. This is in sense what I am saying, that this was the ent at that time. Now it is not being lfilled by the way in which the railroads e getting around it.

Mr. Murphy: These new less-than-carload riffs are just abrogating the whole ndamentals.

Mr. Horner: Yes.

The Chairman: Mr. Pringle.

Mr. Pringle: I just have one small question. am quite interested—and have heard this d I agree and I am not arguing the point or puting it, that there was a guarantee given be able to market the products or produce you say central Canada. I did not know re was a central Canada in 1834. I thought vas probably Upper Canada.

Mr. Murphy: I am sorry, sir, 1864.

[*Interprétation*]

colis des messageries qu'un voyageur transportait, et ainsi de suite, mais non pas les envois en lots brisés. Êtes-vous d'accord avec moi sur ce point?

Je me demande seulement si ce que vous dites dans votre mémoire est, qu'en vertu de la Loi de 1927, tous les mouvements de marchandises entrant et sortant de la région des Maritimes, de la région spéciale, comme on l'a nommée, devraient se faire à un taux réduit, sauf, comme le dit la Loi, «les mouvement des voyageurs et les mouvements des messageries».

C'est en vertu de cette disposition que les chemins de fer, le 5 septembre, ont décidé qu'ils pouvaient justement augmenter les tarifs rigoureusement pour les chargements de moins d'une wagonnée. Ils estiment cela comme étant des messageries, alors que ce n'était certainement pas l'objet de la Loi en 1927. N'êtes-vous pas d'accord avec moi à ce sujet?

M. Murphy: Je regrette, je ne peux être de votre avis. Je serais d'accord avec la partie fondamentale de la Loi à l'effet qu'on nous avait garanti que nous pourrions envoyer nos produits sur les marchés du Canada central.

M. Horner: Est-ce que cela comprenait tous les mouvements ou est-ce que cela incluait une région précise qui était exemptée de cela?

M. Murphy: A ce moment-là, probablement, cela voulait dire les mouvements de tous les produits.

M. Horner: Oui, de tous les produits. C'est dans un sens ce que je dis, que c'était l'objet à ce moment-là. Et à l'heure actuelle, on ne fait pas cela, de la façon dont les chemins de fer procèdent.

M. Murphy: Ces nouveaux tarifs pour les envois en lots brisés abrogent tout simplement tout le concept fondamental.

M. Horner: Oui.

Le président: Monsieur Pringle.

M. Pringle: J'aurais juste une petite question à poser. Je suis très intéressé, j'ai entendu dire cela et je suis d'accord, et je ne veux pas mettre le point en doute ou en discuter, qu'il y a eu une garantie de donnée pour permettre d'acheminer les produits vers le Canada central ou de les y fabriquer. Je ne savais pas qu'il existait un Canada central en 1824. Je croyais qu'il s'agissait du Haut-Canada.

M. Murphy: Je regrette, monsieur, 1864.

[*Text*]

Mr. Pringle: Eighteen sixty-four, pardon me. First of all, have you in effect ever received what you expected or what you deemed to be the fulfillment of this promise over the years? From the very day it was given?

Mr. Murphy: I wonder if I may refer again to a section of the brief. I omitted a paragraph there. This is the position that was taken by the Nova Scotia delegation in discussions bearing on Confederation at the time of the Duncan Royal Commission.

> "An Intercolonial Railway would give the means of communication at present wanting. It would open to Canada an Atlantic seaboard on British soil, from which she is now cut off; and it would offer to the Lower Provinces *a ready access to the vast field of enterprise and progress occupied by their fellow subjects in the interior*. It would prove a benefit of incalculable value, should it be the precursor of, as it is an absolute necessity towards, a legislative union of Her Majesty's North Atlantic Provinces—*a measure essential to the full development of the power which their situation and character are calculated to confer* and without which they can never attain the high position to which their united energies and advantages would lead them."

Mr. Pringle: I do not know whether I can interpret the answer to the question from that remark, but it says "ready access". I heard that in there. Have you not always had access? I am just really interested because it seems to me that we keep getting back to this promise, this right of access, or right of marketing as a result of an agreement or a deal made at a time prior to Confederation. Is there a possibility that this has inhibited the people of the area with regard to expanding and developing and industrializing this area? Because as I understand it we still are deemed to be a designated area, to a degree a distressed area, in the Maritimes.

When the original arrangement was made there must have been, I would think, an arrangement made regarding this right of access or this ready access. Do you feel it was ever fulfilled, or from the outset did it just never happen?

Mr. Murphy: I suppose there was a certain degree of fulfillment, and the degree of

[*Interpretation*]

M. Pringle: 1864, en effet. Tout d'abor avez-vous reçu de fait, ce que vous vo attendiez de recevoir ou ce que vous jugi être la tenue de cette promesse au cours d années, à partir du moment de l'engageme même?

M. Murphy: Est-ce que je pourrais maint nant référer à une partie du mémoire. J' omis un paragraphe de mon mémoire. Voici position prise par la délégation de la Nouve le-Écosse lors des discussions portant sur Confédération, à l'époque de la Commissi royale d'enquête Duncan:

> «Un chemin de fer Intercolonial répo drait aux besoins actuels de communic tion. Il ouvrirait au Canada une porte s littoral dont il est détaché actuellement il offrirait aux basses provinces accès a vaste domaine de l'entreprise et du pr grès déjà occupé par leurs amis à l'int rieur des terres. Il serait d'une vale incalculable pour permettre l'union légi lative des provinces de l'Atlantique no de sa Majesté, il est d'une absolue néce sité pour atteindre à cette fin, et cet mesure est essentielle pour réaliser plein développement de la puissance q leur position et leur caractère sont des nées à leur conférer et sans lequel ell n'atteindront jamais à la haute situati vers laquelle leurs énergies combinées leurs avantages les conduiraient».

M. Pringle: Je ne sais pas si je puis inte préter la réponse à la question d'après cet observation, mais vous avez parlé d'«accè facile. Je l'ai entendu. N'avez-vous pas to jours eu accès? Je suis vraiment intéres parce qu'il me semble que nous revenons to jours à cette promesse, ce droit d'accès droit de commercialisation, à la suite d'u accord ou d'un marché conclu à un mome antérieur à la Confédération. Est-ce qu'il y une possibilité que cela ait nui aux gens de région en ce qui a trait à l'expansion, développement, à l'industrialisation de région? Car, si j'ai bien compris, on considè toujours qu'il s'agit d'une région désignée, jusqu'à un certain point, une région détresse, dans les Maritimes.

Quand on a formulé l'accord original, j'im gine qu'on a dû tenir compte de ce dr d'accès ou de cet accès facile. Croyez-vo qu'on a déjà donné suite à cet engagement croyez-vous que dès le début cela ne s'e jamais produit?

M. Murphy: J'imagine que dans une ce taine mesure on l'a rempli, et cette mesure

[*Texte*]

fulfillment is borne out by discussions at the ime of the Duncan Royal Commission.

The serious part of it today is that we in he Maritimes without less-than-carload new ariffs, the fundamental deal was back at Confederation that we could market our goods n central Canada, but today you cannot. You an barely manufacture in Nova Scotia and narket in Nova Scotia in competition with Ontario.

Mr. Pringle: Thank you.

The Chairman: Mr. Thomas.

Mr. Thomas (Moncton): Just a short supplementary here. Sir, is it not fair to state that up until 1927 these promises had been fairly well carried out?

We had the old Duncan Royal Commission and the freight rates set, but the whole thing we are trying to get at in these two weeks is the fact that since 1927 the position has been steadily eroded by these horizontal freight increases right across the country. They have destroyed our position, they have eroded our position from what it was 40 years ago.

The Chairman: A last question by Mr. McCleave.

Mr. McCleave: I wonder, Mr. Chairman, if Mr. Murphy can comment on the point made by the previous witness, Mr. Stanfield, about the raw materials. Mr. Murphy and his Commission have had success in attracting industry to Truro, but is there a possibility—I will just ask for a comment on Mr. Stanfield's point that special consideration should be given to raw materials being brought into the Maritimes for manufacture.

Mr. Murphy: I am sorry, Mr. Chairman, I cannot answer that. It is unfortunate that I had Mr. McLeod of Crossley Karastan Carpets Ltd. here as part of the delegation and that he had to leave. He perhaps could have answered that quite fully.

The Chairman: Mr. Nowlan.

Mr. Nowlan: This brief is by the Truro Area Industrial Commission and, Mr. Chairman, I would like to ask this witness if Truro is looking with anticipation or expectation, or some other type of station—hesitation—if Truro is going to be a growth area within the concept of this new act when you have Truro related to Halifax.

[*Interprétation*]

été prouvée par les discussions qui ont eu lieu au moment de la Commission royale d'enquête Duncan.

Ce qu'il y a de grave aujourd'hui, c'est que nous, dans les Maritimes, sans les nouveaux tarifs pour envois en lots brisés, l'entente fondamentale remonte à la Confédération, à l'effet qu'on devait pouvoir envoyer nos produits vers le Canada central, mais aujourd'hui on ne peut même pas le faire. On peut à peine fabriquer et vendre en Nouvelle-Écosse en concurrence avec l'Ontario.

M. Pringle: Merci.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Une brève question complémentaire monsieur, n'est-il pas juste de dire que jusqu'en 1927, ces promesses avaient été assez bien remplies.

Nous avions les tarifs établis par l'ancienne Commission royale d'enquête Duncan, mais ce à quoi nous voulons en venir, au cours de ces deux semaines, c'est que depuis 1927, la position a été régulièrement affectée à la suite de ces augmentations horizontales du transport des marchandises dans tout le pays qui ont détruit notre position comparativement à ce qu'elle était il y a 40 ans.

Le président: Une dernière question posée par M. McCleave.

M. McCleave: Monsieur le président, M. Murphy peut-il faire des observations sur le commentaire du témoin précédent, M. Stanfield, au sujet des matières premières? M. Murphy et sa Commission ont réussi à attirer des industries à Truro, est-ce qu'il y a possibilité, enfin je demande simplement un commentaire sur le point de vue énoncé par M. Stanfield, qu'une attention particulière soit accordée aux matières premières qui sont introduites dans les Maritimes aux fins de fabrication?

M. Murphy: Je m'excuse, monsieur le président, je ne saurais répondre à cette question. Il est malheureux que M. McLeod, de Crossley Karastan Carpet Ltd. ne soit pas ici en ce moment. Il a dû quitter la salle. Il pourrait répondre à votre question.

Le président: Monsieur Nowlan.

M. Nowlan: Ce mémoire est présenté par la Commission industrielle de la région de Truro, et, monsieur le président, voici, je voudrais demander au témoin si Truro envisage avec un certain sentiment d'espoir, ou avec stoïcisme, de devenir une région de croissance suivant le concept de cette nouvelle loi, si vous reliez Truro à Halifax.

[*Text*]

This is not too related to the brief, but has your Commission had time to even think about Truro? Truro has been a fairly active growth area itself as far as western Nova Scotia is concerned, but now with the new concept and if there is going to be one in the province, I just wonder if your Industrial Commission feels it should go out of business.

Mr. Murphy: No, as far as we are concerned as members of the Industrial Commission, Truro is going to be a growth area. We do not care what the government says.

The Chairman: I will call upon the Maritime Cans Limited. The Polymer International (N.S.) Limited. St. Peters Board of Trade. Shelburne District Board of Trade. They have left?

Gentlemen, this is the end of our agenda for this morning. I would like to ask all the members to get their luggage ready at noon, but leaving it in your rooms.

I understand that the luggage will be picked up in your rooms at the hotel and taken by truck to the airport. So please have it ready in your own rooms. Yes, Mr. Nesbitt?

Mr. Nesbitt: Mr. Chairman, in view of the fact that we have a relatively small number of briefs in any event this afternoon, perhaps you might extend the time to 2.30 p.m. in view of the fact that there are two hotels to get to and that bags have to be packed.

The Chairman: Mr. Nesbitt, we still have eight briefs this afternoon.

Mr. Nesbitt: Are they all here, though?

The Chairman: As you know our agenda is to leave the hotel at six o'clock by bus. So I think we will adjourn until two o'clock this afternoon.

AFTERNOON SITTING

The Chairman: Good afternoon ladies and gentlemen. Our first brief this afternoon is from the Maritime Lumber Bureau. It will be presented by Mr. Bragg. I will now call upon him to give us a resumé of his brief.

Mr. C. E. Bragg (Past Chairman, Transportation Committee, Maritime Lumber Bureau): Mr. Chairman and gentlemen of the Committee, I really only want to make two main points in our brief and I believe you all have copies of the brief before you.

[*Interpretation*]

Ce n'est pas tellement rattaché disons votre mémoire, mais est-ce que votre Commission a eu le temps même de songer à Truro? Truro a été un centre de croissance assez actif pour ce qui est de l'ouest de la Nouvelle Écosse mais avec le nouveau concept d'un pa province, est-ce que votre Comission industrielle est d'avis qu'elle devrait s démembrer?

M. Murphy: Non, en ce qui concerne le membres de notre Commission, peu import ce que dit le gouvernement, Truro sera un région de croissance.

Le président: Maintenant, je cède la parol aux représentants de *Maritime Cans Limited* Le *Polymer Internat onal (N.S.) Limited, S Peter's Board of Trade*, le *Board of Trade* d district de Shelburne. Ils ont quitté la salle.

Alors, messieurs, voici la fin de la rubriqu prévue ce matin. Je demanderais à tous le membres de préparer leurs bagages à mid mais laissez-les dans vos chambres.

Nous avons prévu que vos bagages seron cueillis dans vos chambres à l'hôtel, et seron transportés par camion à l'aérogare. Veuille les préparer, mais laissez-les dans vos cham bres. Oui, monsieur Nesbitt?

M. Nesbitt: Vu que nous avons un pet nombre de mémoires à entendre cet après midi, peut-être que nous pourrions prolonge la période à 2 h 30, vu que nous devons nou rendre à deux hôtels et que nous devons fair les bagages.

Le président: Monsieur Nesbitt, nous avon huit mémoires à entendre.

M. Nesbitt: Mais on ne sait pas s'ils son tous là.

Le président: Notre ordre du jour prévo que nous quitterons l'hôtel à six heures pa autobus. Donc, nous levons la séance jusqu deux heures cet après-midi.

SÉANCE DE L'APRÈ-MIDI

Le président: Bon après-midi, mesdames messieurs. Notre premier mémoire, cet après midi, sera celui de la *Maritime Lumbe Bureau*. Il sera présenté par M. Bragg.

Je lui demanderais donc de nous résume son mémoire.

M. C. E. Bragg (Ancien président, comi des transports, Maritime Lumber Bureau Monsieur le président, messieurs les membr du Comité, je crois que je voudrais tout sim plement insister sur deux points de not mémoire. Je crois que vous avez tous mémoire devant vous.

[*Texte*]

I would like to go back to December of 1966 and the early part of 1967. At this time the Department of Transport brought in this rate freeze on certain commodities from the Maritimes. At that time it came to our attention that lumber was not included and on behalf of the Maritime Lumber Bureau I called the Minister of Transport's office and spoke to the Minister about this matter. He agreed that leaving out lumber was merely an oversight and that it would be included, and this was done at a later date. This Act was passed and proclaimed on March 23, 1967, and the effective date was March 23, 1967. The expiry date of this freeze was March 23, 1969. The freeze on lumber rates was not allowed by the transportation company. They took the attitude that lumber was not shipped on commodity rates but was shipped under competitive rates.

Our contention is merely that this action was contrary to the intent of Parliament because the inclusion of lumber was passed in the House without any opposition. The only opposition recorded in *Hansard* was some very brief opposition to the manner in which this was introduced but there was no opposition to the inclusion of lumber. We contend that disallowing the freeze on lumber is contrary to the intent of Parliament. We would also like to ask for the extension of this freeze until legislation is provided to take care of this matter.

The second point I would like to make is that we in the lumber industry would like to ask for the extension of the subsidy to all other modes of transportation as well as to rail transportation, and more particularly to truck transportation, in which case I believe we would then have truly competitive rates. We also ask that this subsidy be paid to either the carrier, the shipper or to the receiver so that the benefit of this will really be a benefit to the ultimate user of the product. Thank you very much, Mr. Chairman.

The Chairman: Mr. Corbin?

Mr. Corbin: I have a very brief question, Mr. Chairman. You say that the Maritime Lumber Bureau is a non-profit organization, and so on, but does it comprise industry from every area of the Maritimes?

Mr. Bragg: It is chiefly from Nova Scotia and New Brunswick. There is very little shipment of lumber, if any, from the Province of

[*Interprétation*]

Je remonterais à décembre 1966 et au début de 1967, au moment où le ministère des Transports a imposé le gel sur les tarifs marchandises des Maritimes. A ce moment-là, on nous a dit que le bois de sciage n'était pas inclus, et, au nom de *Maritime Lumber Bureau,* je me suis mis en communication avec le cabinet du ministre des Transports, et j'ai parlé au ministre lui-même à ce sujet. Il était d'accord que si on n'avait pas inclus le bois de sciage, c'était tout simplement un oubli et qu'on l'inclurait. Ce qui a été fait d'ailleurs un peu plus tard. La loi a été sanctionnée le 23 mars 1967, et la date de mise en vigueur a été le 23 mars 1967. Le gel devait expirer le 23 mars 1969. Le gel des tarifs du bois de sciage n'a pas été accepté par les compagnies de transport. Elles ont pris l'attitude que le bois le sciage n'était pas transporté en raison des tarifs des marchandises, mais plutôt aux taux concurrentiels.

Ce que nous prétendons, c'est que cette mesure était contraire à l'intention du Parlement, car l'inclusion du bois de sciage avait été prévue par la Chambre des communes, sans opposition. La seule opposition qu'on trouve dans le *Hansard* c'est une opposition très brève au sujet de la façon dont on a présenté la chose, mais il n'y avait pas d'opposition au fait que l'on inclue le bois de sciage. Nous prétendons donc que ce gel est contraire aux intentions du Parlement. Nous voudrions aussi demander l'extension de ce gel jusqu'à ce qu'une mesure législative soit prévue pour y remédier.

Le deuxième point que je voudrais soulever ici à ce sujet, c'est que dans l'industrie du bois de sciage, nous aimerions demander l'extension de la subvention à tous les autres modes de transport, et que cela s'applique non seulement aux chemins de fer, et plus particulièrement au transport par camions; dans ce cas, je crois que nous aurions vraiment des taux concurrentiels. Nous demandons aussi que cette subvention soit payée soit au transporteur, soit à l'expéditeur, soit au destinataire, afin que l'usager puisse vraiment en profiter, étant donné que c'est lui qui prend le produit. Merci beaucoup, monsieur le président.

Le président: Monsieur Corbin?

M. Corbin: Une question très brève, monsieur le président. Vous dites que la *Maritime Lumber Bureau* est une organisation sans but lucratif; mais est-ce que cela comprend des industries de toutes les régions des Maritimes?

M. Bragg: Principalement de la Nouvelle-Écosse et du Nouveau-Brunswick. Il y a très peu d'expéditions de bois de sciage, s'il y en a,

[*Text*]

Prince Edward Island and it does not include Newfoundland. There is shipment of lumber to the Province of Newfoundland from both Nova Scotia and New Brunswick. The same applies to Prince Edward Island.

Mr. Corbin: But do a majority of the sawmill operators belong to your organization?

Mr. Bragg: Yes, sir, they do.

Mr. Corbin: Thank you.

The Chairman: Are there any other questions, gentlemen?

Mr. Bragg: Mr. Chairman, if you would like to refer to the bottom of page 5, I think you will see that it sets out my first point. Also, the second paragraph at the bottom of page 8 relates to my second point.

The Chairman: Thank you very much.

I will now call upon the Simpsons-Sears Limited of Halifax to present the next brief. We have before us Mr. R. Mossman, Assistant to the Operating Superintendent and Mr. C. A. MacDonald, Traffic and Customs Manager. I will ask Mr. Mossman to summarize his brief.

Mr. Mossman: Thank you, sir. On behalf of Simpsons-Sears Limited in the Atlantic Provinces we wish to thank the Standing Committee on Transport and Communications for this opportunity to appear before them to outline our brief which was mailed in its complete form to the Committee in February of 1968.

In the fifty years of serving our customers in the Atlantic Provinces we have developed to the point where we expend in excess of $2½ million on the transportation of merchandise into and within the Atlantic Provinces each year. The point of our submission is that of necessity this cost must be passed on to the consumer, decreasing his buying power. We have attempted to prove that the increase is unnaturally high as it applies to the Atlantic Provinces—higher, in fact, than in the rest of Canada—making disproportionate the burden placed upon the consumer here. We have tried, and continued to try, all means possible to alleviate the burden of the cost of distributing our merchandise which our customers must eventually bear.

[*Interpretation*]

à partir de l'Île du Prince-Édouard, et cela n comprend pas Terre-Neuve. Il y a des expédi tions de bois de sciage vers Terre-Neuve, partir de la Nouvelle-Écosse et du Nouveau Brunswick. Il en est de même pou l'Île du Prince-Édouard.

M. Corbin: Mais, est-ce que la majorité de employés des scieries font partie de votr organisation?

M. Bragg: Oui, monsieur.

M. Corbin: Merci.

Le président: Y a-t-il d'autres questions messieurs?

M. Bragg: Monsieur le président, si vou voulez vous reporter au bas de la page 5, j crois que vous verrez qu'on y expose le pre mier point que j'avais soulevé. Ensuite, a bas de la page 8, au deuxième paragraphe vous trouverez mon deuxième point.

Le président: Je vous remercie beaucoup.

Maintenant, je vais demander à *Simpsons Sears Limited* d'Halifax de présenter le pro chain mémoire.

J'ai ici devant moi, MM. R. Mossman adjoint au surintendant de l'exploitation, e C. A. MacDonald, directeur du trafic et d service de la clientèle.

Je vais donc demander à M. Mossman d résumer son mémoire.

M. Mossman: Merci, monsieur. Au nom d *Simpsons-Sears Limited,* des provinces d l'Atlantique, nous voulons remercier l Comité permanent des transports et des com munications de nous donner l'occasion d comparaître devant lui pour résumer l mémoire qui a été envoyé au Comité en fé vrier 1968.

Depuis 50 ans que nous desservons notr clientèle des provinces de l'Atlantique, nou avons réussi à nous développer au point d dépenser plus de $2,500,000 par an pour l transport des marchandises dans les province de l'Atlantique. Le point de notre mémoire c'est qu'essentiellement, ces frais doivent êtr passés aux consommateurs dont le pouvoi d'achat est ainsi réduit. Nous avons essayé d prouver que l'augmentation, pour ce qui es des provinces de l'Atlantique, est beaucou plus élevée que dans le reste du Canada, c qui veut dire que le fardeau imposé aux con sommateurs, ici, est disproportionné. Nou avons toujours essayé, par tous les moyen possibles, d'alléger le fardeau du coût de l distribution de notre marchandise, que l client doit éventuellement assumer.

Texte]

We work closely with the railways to find reas where their costs can be reduced ecause of the volume and handling, and onsequently we can be relieved from the full pplication of tariff rates. Such negotiations ust of necessity be done on a national basis nd the benefits therefrom apply nationally, hich minimizes their effect in the Atlantic rovinces.

Because truly competitive means of transrtation are not fully available in the Atlanc region we are powerless to improve our lationship to the rest of Canada. The only liable means of local arbitration of rates is take the traffic from the railways, and this quires a satisfactory alternative which is ot freely available in sufficient areas in the tlantic Provinces. The examples attached to ur brief specifically indicate the effect of the pplication of the ETA tariff 100 rates to the stribution of our merchandise.

The Chairman: Thank you very much. Mr. errault?

Mr. Perrault: Mr. Chairman, is it the ggestion here that transport subsidies be tended to trucking as well?

Mr. Mossman: I would agree, yes.

Mr. Perrault: We had a submission this orning from one Nova Scotia company, I ink it was Stanfield's Limited, that this was t a good idea, it would not be beneficial, d this is the reason I asked the question.

Mr. Mossman: I consider that this would pend upon the distribution pattern that is tablished between companies.

Mr. Perrault: Yes. Let me ask you this estion. Have high transport costs in the aritimes influenced you to purchase more of ur products from Maritime industries? For ample, does Simpsons-Sears purchase stoves anufactured in New Brunswick by Enterise and Fawcett, and other lines of that nd?

Mr. Mossman: If you are speaking of these ecific manufacturers, no. Generally we buy thin the Atlantic Provinces those products at we can obtain in sufficient quantities.

[*Interprétation*]

Nous avons travaillé en étroite collaboration avec les chemins de fer pour essayer de trouver un moyen de réduire leurs frais, en raison du volume et de la manutention, et par conséquent, nous pourrions alors éviter le plein tarif des marchandises. Ces négociations doivent nécessairement se faire sur une base nationale, et les avantages s'appliqueraient par conséquent sur le plan national, ce qui minimiserait les effets dans les provinces de l'Atlantique.

Car des moyens de transport vraiment concurrentiels ne sont vraiment pas disponibles dans la région de l'Atlantique, et par conséquent, nous sommes incapables d'améliorer nos relations avec le reste du Canada. Le seul moyen sûr d'arbitrer ces taux dans la région serait de les enlever aux chemins de fer, et cela exige un choix satisfaisant qui n'est pas vraiment possible dans un assez grand nombre de régions des provinces de l'Atlantique. Nous insistons dans notre mémoire sur les effets du tarif 100 de l'Association des messageries sur la distribution de nos marchandises.

Le président: Merci beaucoup. Monsieur Perrault?

M. Perrault: Monsieur le président, est-ce qu'on suggère ici que les subventions au transport soient étendues au camionnage en même temps?

M. Mossman: Oui, je serais d'accord pour cela.

M. Perrault: Dans son mémoire, une des compagnies de la Nouvelle-Écosse, je crois qu'il s'agit de la *Stanfield's Limited*, nous a dit ce matin que ce ne serait pas à l'avantage des sociétés. C'est la raison pour laquelle je pose la question.

M. Mossman: Je crois que tout dépendrait du système de distribution établi entre les compagnies.

M. Perrault: Oui. Permettez-moi de vous poser cette question: est-ce que les frais élevés de transport dans les Maritimes vous ont poussé à acheter plus de produits aux industries situées dans les Maritimes? Par exemple, est-ce que *Simpsons-Sears* achète des cuisinières fabriquées au Nouveau-Brunswick par *Enterprise* et *Fawcett*, et autres compagnies du genre?

M. Mossman: Si vous parlez de ces marques de commerce précises, non. Généralement, nous essayons d'acheter au sein des provinces de l'Atlantique les produits que nous pouvons trouver en quantité suffisante.

[*Text*]

Mr. Perrault: What kinds of products would those be?

Mr. Mossman: Upholstered furniture, mattresses...

Mr. Perrault: You buy in the Maritimes when you are able to do so.

Mr. Mossman: When they can be supplied in sufficient quantities.

Mr. Perrault: Thank you, Mr. Chairman.

Mr. Chairman: Any other question, gentlemen? Mr. Portelance?

Mr. Portelance: Does Simpsons-Sears not also use the Torman car from Toronto or Montreal?

Mr. Mossman: From Toronto and Montreal to Halifax, yes, sir.

Mr. Portelance: This must help you in reducing...

Mr. Mossman: Definitely.

Mr. Portelance: Do you work it the same way back to Montreal?

Mr. Mossman: There is no service going back.

Mr. Portelance: Thank you.

The Chairman: Mr. Corbin?

Mr. Corbin: Is the warehouse in Saint John one way you have of fighting high freight rates within the Maritimes?

Mr. Mossman: The warehouse in Saint John is representative on the warehouses that we have distributed around the Atlantic Provinces to assist us in the distribution pattern, yes, so that we can move in bulk. The warehouse in Moncton was specifically set up to eliminate the problem of distribution of white goods, which is refrigerators, ranges, washers, and that sort of thing, to a central point in bulk so that they can be distributed more economically.

Mr. Corbin: And you consider Moncton to be sort of the hub of the Maritimes.

Mr. Mossman: Yes.

Mr. Corbin: Thank you, sir.

The Chairman: Mr. McGrath?

Mr. McGrath: I just have one question, Mr. Chairman. You refer to transportation costs and you calculate them to be about 25 per cent in the Atlantic Provinces. Is this re-

[*Interpretation*]

M. Perrault: Quel genre de produits?

M. Mossman: Les meubles rembourrés, l matelas...

M. Perrault: Vous achetez autant que pos ble dans les Maritimes?

M. Mossman: Autant que possible, lo qu'on n'utilise pas aussi les wagons de la co

M. Perrault: Merci, monsieur le président.

Le président: D'autres questions, me sieurs? Monsieur Portelance?

M. Portelance: Chez Simpsons-Sears, est qu'on n'utilise pas aussi les wagons de la co pagnie Tormon de Montréal ou de Toronto?

M. Mossman: De Toronto et Montréal Halifax, oui, monsieur.

M. Portelance: Cela doit vous aider réduire...

M. Mossman: En effet.

M. Portelance: Est-ce que vous n'emplo pas les mêmes moyens de transport pour retour à Monréal?

M. Mossman: Cela n'existe pas pour retour.

M. Portelance: Merci.

Le président: Monsieur Corbin?

M. Corbin: Est-ce que l'entrepôt situé Saint-Jean est un moyen de combattre taux élevés de transport dans les Maritimes?

M. Mossman: L'entrepôt de Saint-Jean représentatif des entrepôts que nous avo partout dans les provinces Maritimes po nous aider à effectuer la distribution en gr L'entrepôt de Moncton a été établi préci ment pour éliminer le problème de la dist bution des produits tels que les réfrigér teurs, les cuisinières, les machines à lav etc., vers un point central, afin de le fa d'une façon plus économique.

M. Corbin: Et vous considérez que Monct est en quelque sorte le centre des Maritim

M. Mossman: Oui.

M. Corbin: Merci, monsieur.

Le président: Monsieur McGrath?

M. McGrath: Une seule question, monsie le président. On a parlé des frais de transp et vous les calculez à environ 25 p. 100 d les provinces de l'Atlantique. Est-ce que c

Texte]

ected in your retail prices when compared ith similar stores in Central Canada?

Mr. Mossman: The pricing is substantially igher in the Atlantic Provinces.

The Chairman: Mr. Trudel?

Mr. Trudel: Do you use road transportation xclusively in the Maritimes or do you use il?

Mr. Mossman: We use both.

Mr. Trudel: Both. Would you give us the rcentage?

Mr. Mossman: Within Nova Scotia I would ink truck transport would account for about per cent of the volume. Outside Nova otia it would be almost entirely rail.

Mr. Trudel: Do your own trucks in the aritime Provinces do some of this delivery?

Mr. Mossman: No. We have used them of cessity on occasion during a rail strike, and s sort of thing.

Mr. Trudel: You mentioned, I believe, if I ard you correctly, that your transport cost tor is 25 per cent. How would this compare th similar areas, possibly, in Western nada? Are you able to give us a percentage mparison?

Mr. Mossman: I think there is probably a ference in the range of 7 to 9 per cent.

Mr. Trudel: This would be what, ntral...

Mr. Mossman: Central and Western, right the coast.

Mr. Trudel: Thank you, Mr. Chairman.

Mr. Perrault: A supplementary, Mr. airman.

The Chairman: Mr. Perrault?

Mr. Perrault: How do you bring goods in m the United States? Are they brought in ough Central Canada?

Mr. Mossman: No.

Mr. Perrault: You bring them up through w England.

Mr. Mossman: Basically by truck transport.

[*Interprétation*]

se reflète dans vos prix de détail lorsqu'on les compare à ceux des magasins semblables dans le centre du Canada?

M. Mossman: Les prix de vente sont substantiellement plus élevés dans les provinces de l'Atlantique.

Le président: Monsieur Trudel?

M. Trudel: Est-ce que vous employez le transport routier exclusivement, dans les Maritimes, ou employez-vous les chemins de fer?

M. Mossman: Les deux.

M. Trudel: Les deux. Pourriez-vous nous donner le pourcentage?

M. Mossman: En Nouvelle-Écosse, pour ce qui est des camions, je dirais environ 20 p. 10 du volume. A l'extérieur de la Nouvelle-Écosse, ce serait pratiquement tout par chemins de fer.

M. Trudel: Vos propres camions, dans les provinces Maritimes, font-ils la livraison?

M. Mossman: Non. De temps à autre, nous avons employé des camions, au cours de la grève des chemins de fer, par exemple.

M. Trudel: Vous avez mentionné, je crois, si j'ai bien compris, que vos frais de transport seraient de l'ordre de 25 p. 100. Comment cela se compare-t-il avec les autres régions du Canada, par exemple l'Ouest du Canada? Pouvez-vous nous donner une idée de la comparaison en pourcentage?

M. Mossman: Je dirais qu'il y a peut-être une gamme de 7 à 9 p. 100 de différence.

M. Trudel: Ce serait dans le centre ..

M. Mossman: Dans le centre et dans l'Ouest, jusqu'à la côte.

M. Trudel: Merci, monsieur le président.

M. Perrault: Une question supplémentaire, monsieur le président.

Le président: Monsieur Perrault?

M. Perrault: Comment importez-vous les produits à partir des États-Unis? Est-ce qu'ils passent par le centre du Canada?

M. Mossman: Non.

M. Perrault: Par la Nouvelle-Angleterre?

M. Mossman: Tout particulièrement par camions.

[*Text*]

Mr. Perrault: What percentage of the goods provided by Simpsons-Sears would originate in the United States?

Mr. Mossman: I would think about 35 per cent.

Mr. Perrault: Thank you.

Mr. Pringle: I have a supplementary. You mentioned 25 per cent. Is that entirely transportation costs or are any distribution costs included in that?

Mr. Mossman: Distribution costs.

Mr. Pringle: What proportion of the distribution costs would the freight be?

Mr. Mossman: I do not know but I would think that the distribution aspect of it would really be very minimal. The major portion of it would be transportation.

Mr. Pringle: Thank you.

The Chairman: Mr. Carter?

Mr. Carter: I wonder if the witness could tell the Committee how the wages paid in Newfoundland and the other Maritime Provinces compare with wages in Central Canada, Ontario. .

Mr. Mossman: By our company?

Mr. Carter: Yes.

Mr. Mossman: They are substantially lower in areas that we control from Halifax than from Vancouver, for instance, which is on a higher level than we are. It is probably nearly comparable with the Prairie Provinces and just slightly lower than Toronto.

Mr. Carter: Would this not be reflected in the final cost of the goods? A moment ago you mentioned that a full 25 per cent of your costs, I believe, was freight. Did you not say that?

Mr. Mossman: No, no.

Mr. Carter: Added to your cost is this 25 per cent freight charge. Would not the fact you are paying lower wages in places like Newfoundland and the other Maritimes offset part of your freight costs and reduce this 25 per cent somewhat?

Mr. Mossman: We have two areas here. In Newfoundland, for example, we have autonomous stores that control their own wages.

[*Interpretation*]

M. Perrault: Quel pourcentage des ma chandises de Simpsons-Sears vient d États-Unis?

M. Mossman: Environ 35 p. 100.

M. Perrault: Merci.

M. Pringle: Une question supplémentair Vous avez mentionné des frais de transpo de 25 p. 100. Est-ce seulement pour le tran port, ou y a-t-il des frais de distribution auss

M. Mossman: Des frais de distributi aussi.

M. Pringle: Quel serait le pourcentage d frais de distribution attribuable au fret?

M. Mossman: Je ne sais pas, mais j'ai l'i pression que les frais de distribution seraie très minimes effectivement. La plus gran partie serait les frais de transport.

M. Pringle: Merci.

Le président: Monsieur Carter?

M. Carter: Je me demande si le témo pourrait dire au Comité si les salaires q sont payés à Terre-Neuve et dans les aut provinces des Maritimes se comparent a salaires versés dans le centre du Canada, Ontario. . .

M. Mossman: Par notre compagnie?

M. Carter: Oui.

M. Mossman: En fait, ils sont beauco moins élevés dans les régions que nous c trôlons d'Halifax que, par exemple, de Va couver, qui est à un niveau supérieur nôtre. Ils sont probablement comparab d'assez près à ceux des provinces des Prair et juste un peu moins élevés qu'à Toronto.

M. Carter: Est-ce que cela se reflèter dans le coût final des produits? Il y a moment, vous avez mentionné qu'il y a 25 100 de vos frais qui sont représentés par marchandises, n'est-ce pas?

M. Mossman: Non.

M. Carter: Ajoutés à vos frais, ces 25 p. représentent les tarifs marchandises? Le de payer des salaires moins élevés dans endroits comme Terre-Neuve et les provin Maritimes ne compense-t-il pas pour une p tie de vos frais de transport en réduis ainsi quelque peu ces 25 p. 100.

M. Mossman: Il y a deux régions. A Ter Neuve, par exemple, nous avons des magas autonomes qui contrôlent leurs propres sa

Texte]

The areas that we control from Halifax are on the same plane in Newfoundland as they are in any other Atlantic province. This would be a standardized area.

Mr. Carter: I presume your criterion is the wages paid in other stores in the same area.

Mr. Mossman: Yes, that is correct. This is done on a survey basis right across Canada.

The Chairman: Mr. Pringle?

Mr. Pringle: Is it possible for this gentleman to give us some detail with regard to this 25 per cent? When you say 25 per cent, being your distribution and freight handling costs, it is 25 per cent of what?

Mr. Mossman: This 25 per cent that we are talking of is an increase of 25 per cent. This is not a 25 per cent factor. There are transportation factors apart from that factor.

Mr. Pringle: Thank you. That settles that.

The Chairman: Any other questions, gentlemen? I want to thank you Mr. Mossman and Mr. MacDonald.

At this time I call the Canadian Keyes Fibre Company, Limited. Gentlemen, I am going to ask Mr. Pugsley to read a summary of his brief.

Mr. R. E. Pugsley (Solicitor, Canadian Keyes Fibre Company): Mr. Chairman, with me are Mr. Holmes and Mr. Dillman of Canadian Keyes Fibre Company Limited. We thank you for the opportunity of presenting our views to you.

Canadian Keyes Fibre Company is located at Hantsport, Nova Scotia, has approximately 300 employees and manufacturers molded wood pulp products such as egg cartons, carry boxes, trays for packing eggs, disposable tableware and a variety of other items, all from pulp wood and natural resources of the Province of Nova Scotia Eighty-three per cent of the market for the Company's goods is outside the Atlantic Region.

Transportation costs amount to 11.48 per cent of gross sales. While theoretically one can argue that the company is not captive to the railway because it is actually possible to ship goods by truck, the company's experience has been that highway carriers are only interested in moving the products until they

[*Interprétation*]

res. Les régions que nous contrôlons d'Halifax sont au même niveau que Terre-Neuve, comme dans les autres provinces de l'Atlantique. Il s'agit d'une région normalisée.

M. Carter: Je présume que votre critère, ce sont les salaires que versent les autres magasins, dans la même région.

M. Mossman: Oui, en effet. La même chose se produit à travers le Canada, selon un relevé.

Le président: Monsieur Pringle?

M. Pringle: Je me demande s'il serait possible pour ce monsieur de nous donner des détails au sujet de ces 25 p. 100. Quand nous parlons de 25 p. 100 des frais de distribution et de transport, qu'est-ce que nous voulons dire, 25 p. 100 de quoi?

M. Mossman: Les 25 p. 100 dont nous parlons, correspondent à une augmentation de 25 p. 100. Ce n'est pas un facteur de 25 p. 100. Il y a des facteurs de transport, qui sont distincts de ce facteur.

M. Pringle: Je vous remercie, cela règle la question.

Le président: Y a-t-il d'autres questions? Donc, je veux vous remercier monsieur Mossman et monsieur MacDonald.

Je voudrais maintenant demander à la *Canadian Keyes Fibre Company Limited.*

Messieurs, je demanderais à monsieur Pugsley de donner un résumé de son mémoire.

M. R. E. Pugsley (Solliciteur, Canadian Keyes Fibre Company Limited): Monsieur le président, j'ai avec moi messieurs Holmes et Dillman de la *Canadian Keyes Fibre Company Limited*, et nous vous remercions de l'occasion de vous présenter notre point de vue. La *Canadian Keyes Fibre Company Limited* est située à Hantsports (Nouvelle-Écosse) et elle compte environ 300 employés. On y fabrique des produits de pâte de bois moulu tels que les cartons pour les œufs, les casseaux de fruits, les boîtes d'œufs, des nappes en papier et une variété d'autres produits, tous à partir du bois de pâte et d'autres ressources naturelles de la Nouvelle-Écosse: 83 p. 100 du marché se trouve à l'extérieur de la région de l'Atlantique.

Les frais de transport se chiffrent par 11.48 p. 100 des ventes brutes. Bien qu'en théorie en pourrait dire que la compagnie n'est pas soumise aux chemins de fer parce qu'il est en fait possible d'expédier les marchandises par camion, la compagnie sait par expérience que les transporteurs routiers étaient seulement

[*Text*]

are able to find customers with higher density items. The large bulk and low unit rate militate against the company's ever meeting its transportation requirements outside the Atlantic Region by anything other than the railways.

For the most part, the Company pays class rates which are the highest scale of rates charged by the rail carriers. If the freeze in non-competitive carload rail rates is not extended beyond March 23 the Company foresees the following problems: First, trade from Eastern Canada to Western Canada moving through Franz on the CPR and Oba and Herst on the CNR is being subsidized under the provisions of CFA Tariff 76-D CTC. This subsidy is being removed in stages under the provisions of the National Transportation Act and, in fact, has been reduced almost 50 per cent in other parts of Canada, and would have been reduced here except for the freeze. Hence, if the freeze is lifted one would expect that the rail carriers will increase their rates at least to an amount equal to that part of the subsidy that has been removed.

The company anticipates that this will increase its freight costs by an amount of $3,000 per annum.

One can also anticipate that carload rates will be advanced by amounts ranging from 8 to 17 per cent, as these percentages represent the increases that have been applied to corresponding rates elsewhere in Canada, during the period the freeze has been in effect.

The increased costs resulting to the company in this regard will amount to an additional $26,000 per annum. These two increases amount to $30,000, and this is really the minimum—and I emphasize this—really the minimum increase the company anticipates it will suffer if the freeze is lifted.

The company suffers a further disadvantage in that it is required to route its goods by the Dominion Atlantic Railway to Truro and then transfer to the CNR. Examples of the higher freight rates charged as a consequence of the use of these two railway lines are illustrated on the schedule of the company's brief, a copy of which has been filed with each of you.

The alternative to shipping via Truro is to ship via Digby, and this simply does not appear to be practical. Since the distance from Hantsport to Truro is approximately the same as the distance from Halifax to Truro,

[*Interpretation*]

intéressés à transporter les produits jusqu ce qu'ils puissent trouver des clients aya des produits d'une plus forte densité. U grande quantité et un tarif unitaire bas mi tent contre la compagnie qui doit répond aux exigences à l'extérieur de la région l'Atlantique par des moyens de transpo autres que les chemins de fer.

En grande partie, la compagnie paie d taux de classement qui sont les plus élev chargés par les chemins de fer. Si le gel s le tarif ferroviaire de chargements compl non concurrentiel n'est pas prolongé au-de du 23 mars, la compagnie prévoit les probl mes suivants: tout d'abord, les marchandis qui vont de l'Est du Canada vers l'Ouest passant par Franz par le Pacifique-Canadi et par Oka et Herst avec les chemins de f Nationaux du Canada sont subventionnées vertu du tarif nº 76-D CCT de la CFA. Ce subvention est enlevée par étapes en vertu la Loi nationale sur les transports et, en fa a été réduite de 50 p. 100 dans d'autres pa ties du Canada, et il l'aurait été ici si n'eut été du gel. Par conséquent, si on élimi le gel on pourrait s'attendre à ce que transporteurs par chemins de fer augmente leurs taux au moins jusqu'à un montant éga cette partie de la subvention qui a enlevée.

La compagnie prévoit donc que cela au mentera leurs frais de transport de $3,000 p année. On pourrait aussi prévoir que les ta de chargement complet augmenteront de 8 17 p. 100 étant donné que ces chiffres rep sentent les augmentations qui ont été app quées ailleurs au Canada au cours de période du gel.

Les taux augmentés pour la compagnie cet égard s'élèveront à $26,000 par année. I deux augmentations se chiffrent donc à $3 000 et c'est là le minimum et j'insiste pc dire que c'est le minimum. La compagnie p voit en être touchée si le gel est enlevé.

Il y a un autre désavantage dû au f qu'elle doit acheminer ses produits par le *I minion Atlantic Railway* jusqu'à Truro ensuite transférer au CN. Vous trouverez exemples de l'augmentation des taux transport chargés à la suite de l'emploi deux lignes de chemins de fer dans l'anne du mémoire de la compagnie dont vous a reçu copie.

La solution de rechange pour le transp via Truro est le transport via Digby, ce qui semble pas pratique. Étant donné que la d tance qui sépare Hantsport de Truro est en ron la même qu'entre Halifax et Tru

Texte]

ie company submits that the Committee ıould give consideration to making recom-endations to government so that the Hants-ort rates can be reduced to the Halifax level. this were accomplished it would result in a ving of approximately $17,000 per annum to ie company.

In the last few years the Company has nbarked on an extensive expansion program hich was greatly influenced by the grants ailable under the Area Development Act. ad freight rates been substantially increased this interval, the grants received from the deral government under ADA could very sily have been more than offset, and the mpany would have had to restrict its pansion plans.

In brief, the Company recommends that the llowing action be taken:

1. Government action to see that rate increases are held to a level which will not jeopardize existing markets or prevent reaching new markets by some form of assistance on transportation being maintained, especially on finished goods being sold outside the Atlantic region, this action to be taken prior to lifting of the rate freeze.

2. Rates from Hantsport be reduced to the Halifax level.

3. Subsidization be extended to raw materials for manufacturing purposes which must be purchased outside the region.

4. Continued federal government assistance to Nova Scotia for building of all-weather trunk highways.

5. Any assistance given to rail also be extended to trucking.

As I indicated, Mr. Holmes and Mr. Dillan are here, and they would be most eased to answer any questions, Mr. Chairan, that you may care to direct to them.

The Chairman: Thank you, very much. Mr. ringle?

Mr. Pringle: Thank you, Mr. Chairman. ould you tell me, sir, how long your plant as been located here in Nova Scotia?

Mr. E. L. Dillman (Traffic Manager, anadian Keyes Fibre Company): It started peration in 1934.

Mr. Pringle: Since 1934?

[Interprétation]

la compagnie, indique le Comité, devrait apporter une attention spéciale et peut-être demander et présenter des propositions au gouvernement de façon à réduire les taux de Hantsport au niveau de ceux de Halifax. Si cela était réalisé, il y aurait une épargne d'environ $17,000 par année pour la compagnie.

Au cours des dernières années, la compagnie a entrepris un programme d'expansion qui a été grandement influencé par les subventions offertes en vertu de la Loi sur le développement de certaines régions. Si les taux de transport avaient sensiblement augmenté pendant cet intervalle de temps, les subventions reçues du gouvernement fédéral en vertu de la Loi auraient pu facilement être plus que contrecarrées et la compagnie aurait été obligée de limiter son programme d'expansion.

Bref, la compagnie recommande qu'on prenne les mesures suivantes:

1. Que le gouvernement veille à garder les majorations de tarifs à un niveau qui ne mettrait pas les débouchés en péril ou n'empêcherait pas l'acquisition de nouveaux marchés, à l'aide d'assistance au transport, surtout des produits finis vendus en dehors de la région de l'Atlantique.

2. Réduction des taux de Hantsport à parité de ceux d'Halifax.

3. Extension des subventions aux matières premières destinées à la fabrication, en provenance de l'extérieur de la région.

4. Maintien de l'aide du gouvernement fédéral à la Nouvelle-Écosse pour la construction de grandes routes carrossables à l'année longue.

5. Extension aux camionneurs de toute subvention accordée aux chemins de fer.

Comme je l'ai dit, messieurs Holmes et Dillman seraient heureux de répondre aux questions que vous aimeriez poser.

Le président: Merci. Monsieur Pringle?

M. Pringle: Pourriez-vous me dire, monsieur le président, depuis combien de temps votre fabrique est établie en Nouvelle-Écosse?

M. E. L. Dillman (gérant du trafic, Canadian Keyes Fibre Company): Depuis 1934.

M. Pringle: Depuis 1934?

[*Text*]

Mr. Dillman: Right.

Mr. Pringle: Then you have been here for some considerable time. You did not establish on an incentive program. Was it because of supply and labour that you came here?

Mr. Dillman: That is right; this is an expansion to an existing facility.

Mr. Pringle: Since we have heard quite a number of briefs and statements with regard to operating here in the Maritimes, how do you find productivity here as compared to some of your other Canadian plants, especially on unit costs and unit labour costs?

Mr. Dillman: Compared with what type of manufacturing?

Mr. Pringle: I am thinking of the same type of product.

Mr. Dillman: There is only one other manufacturer in Canada.

Mr. Pringle: I am sorry; I understood you had another plant in Ontario, but you do not?

Mr. Dillman: No.

Mr. Pringle: I see. You distribute, of course, throughout the length and breadth of Canada because we see your product in British Columbia a lot. So you do not really have a comparable cost. Then can you tell me if you have seen any improvement in unit cost of over, say, the last few years?

Mr. Dillman: We are continually striving to mechanize and reduce the labour content in our articles. We have been able to keep about the same labour content over the last several years.

Mr. Pringle: Thank you, very much.

The Chairman: Mr. McGrath?

Mr. McGrath: How much of your market do you enjoy in the Atlantic provinces?

Mr. Dillman: I would say the majority of the market.

Mr. McGrath: I beg your pardon?

Mr. Dillman: We have the majority of the market in the Atlantic Provinces in moulded pulp articles.

Mr. McGrath: There is a competition factor, though?

[*Interpretation*]

M. Dillman: Oui.

M. Pringle: Donc, vous êtes ici depuis ass longtemps, et vous ne vous êtes pas install en vertu d'un programme d'encouragemer Était-ce à cause de la main-d'œuvre et d produits que vous êtes venus ici?

M. Dillman: Vous avez raison; c'est l'expa sion d'une installation déjà existante.

M. Pringle: Étant donné que nous avo entendu plusieurs mémoires et déclaratio sur les Maritimes, comment trouvez-vous productivité ici en comparaison avec certain autres usines du Canada, et tout particulièr ment en ce qui concerne le coût unitaire et coût uniforme de la main-d'œuvre?

M. Dillman: Par rapport à quel genre fabrication?

M. Pringle: Je songeais au même genre produits.

M. Dillman: Il n'y a qu'un seul autre fabr cant de ces produits au Canada.

M. Pringle: Je m'excuse. J'avais compr que vous aviez une autre usine en Ontar mais vous n'en avez pas.

M. Dillman: Non.

M. Pringle: Et alors vous assurez la distr bution d'un bout à l'autre du Canada car vois vos produits en Colombie-Britanniqu Par conséquent, nous ne pouvons pas comp rer les frais. Pouvez-vous me dire si vo avez vu une amélioration du coût unitaire cours des dernières années?

M. Dillman: Nous essayons constamment mécaniser et de réduire la main-d'œuvre da nos dépenses. Nous avons pu maintenir même quantité de main-d'œuvre au cours d dernières années.

M. Pringle: Merci.

Le président: Monsieur McGrath.

M. McGrath: Quel est le pourcentage votre marché dans les provinces l'Atlantique?

M. Dillman: J'oserais dire la majorité marché.

M. McGrath: Pardon?

M. Dillman: Nous avons la majorité marché dans les provinces de l'Atlantiq pour ce qui est des produits de la pâte.

M. McGrath: Il y a la concurrence toutefoi

[Texte]

Mr. Dillman: Yes.

Mr. McGrath: From whence does it manate?

Mr. Dillman: Brantford, Ontario.

The Chairman: Mr. Rose?

Mr. Rose: Mr. Chairman, this morning we eard Mr. Stanfield say—I believe it was Mr. tanfield—that the concept of air freight was remature. Would you agree with that as far s your company is concerned, gentlemen?

Mr. C. C. Holmes (Treasurer, Canadian eyes Fibre Company): Yes, I would say if I ay that as far as our company is concerned, ue to the nature of our goods, air freight is ot going to play a very large role in our tal transportation requirements.

Mr. Rose: Because your product is too ulky for air freight?

Mr. Holmes: Yes.

Mr. Rose: I am told that there is an air eight service flying into this area—I believe Halifax—of approximately five or six lanes a day loaded which go out empty, or irtually so. Do you believe that more of the cal industries should take advantage of this resent air freight because it is dead-heading ne way? We have heard arguments this orning that the dead-heading is the other ay.

Mr. Holmes: Of course I cannot speak for ther industries, but I cannot see how our ndustry could make use of an air freight ervice at this time or in the foreseeable ture because of the nature of our product. is a bulky item and it is a light item per be.

Mr. Rose: You have never investigated this ourself, have you?

Mr. Holmes: No.

Mr. Rose: I was interested too, although our group did not mention it, in the land ridge concept. This is a similar problem and has been mentioned in several other briefs at the land bridge idea is a great thing—it like motherhood, and all the rest of it; we hould be very interested in it—but apparent- one of the big problems with the land ridge idea is that there is much more com- ng from west to east than there is from east

[*Interprétation*]

M. Dillman: Oui.

M. McGrath: D'où provient-elle?

M. Dillman: En grande partie de Brantford (Ont.).

Le président: Monsieur Rose.

M. Rose: Ce matin, nous avons entendu monsieur Stanfield, dire, je crois, que le concept du transport aérien était prématuré. Est-ce que vous êtes d'accord en ce qui concerne votre compagnie, messieurs?

M. C. C. Holmes (Trésorier de la Canadian Keyes Fibre Company Limited): Oui, si vous me permettez de répondre je dirais qu'en ce qui concerne notre compagnie et en raison de la nature même de nos produits, le transport aérien ne jouerait pas un très grand rôle dans l'ensemble des exigences en matière de transport.

M. Rose: Parce que votre produit est trop lourd pour le service aérien?

M. Holmes: Oui.

M. Rose: On me dit qu'il y a un service de transport aérien dans cette région, je crois vers Halifax, composé de cinq ou six avions par jour qui arrivent chargés mais qui retournent vides ou presque. Croyez-vous que plus d'industries locales devraient profiter du service actuel étant donné qu'ils retournent dans un sens? Ce matin, on nous a dit justement que les voyages vides étaient dans l'autre sens.

M. Holmes: Je ne saurais parler au nom d'aucune des autres industries mais je ne vois pas du tout comment notre industrie pourrait profiter d'un service de transport aérien maintenant ou dans un avenir prévisible en raison de la nature même de notre produit. Il s'agit de quelque chose de léger au cube mais de grande dimension.

M. Rose: Vous n'avez jamais fait enquête à ce sujet?

M. Holmes: Non.

M. Rose: J'étais très intéressé, même si votre groupe ne l'a pas mentionné, dans le concept du pont terrestre. C'est un problème analogue et qui a été souligné dans plusieurs autres mémoires à savoir que ce serait une grande chose tout comme la maternité, et tout le reste; nous devrions nous y intéresser, mais apparemment, un des grands problèmes de ce concept vient de ce qu'il y a beaucoup plus de marchandises qui viennent de l'Ouest vers

[*Text*]

to west. Would that not be a problem of dead-heading as well?

Mr. Holmes: Yes, probably there would be a problem of dead-heading, but the land bridge concept, as I understand it, is not going to benefit our industry.

Mr. Rose: Not yours particularly.

Mr. Holmes: No.

Mr. Rose: Following up Mr. Pringle's question, I was wondering about your labour cost compared to similar plants in other parts of the country. Is your plant organized?

Mr. Dillman: Yes.

Mr. Rose: It is organized. Are your labour costs substantially cheaper here?

Mr. Dillman: On skilled trades, no.

Mr. Rose: But on unskilled labour?

Mr. Dillman: Our general labour rates are somewhat lower here than they are in Ontario.

Mr. Rose: Would you say the productivity is as high here as with a more skilled labour force in, say, Ontario?

Mr. Dillman: Well, I have heard it stated that the productivity may not be as high.

Mr. Rose: But the productivity would be the responsibility of the firm, perhaps, rather than labour in instituting new machines, new techniques and that sort of think. Would you agree with that?

Mr. Dillman: Yes.

Mr. Rose: It is up to the firm, really, to establish the productivity rather than the work force.

Mr. Dillman: Exactly.

Mr. Rose: Thank you.

The Chairman: Mr. Horner?

Mr. Horner: With retard to your third recommendation that all raw materials coming in for manufacturing purposes that are purchased outside the region should be subsidized, do you envision any real difficulty in differentiating between the raw materials

[*Interpretation*]

l'Est que de l'Est vers l'Ouest. Et alors est-qu'il ne s'agirait pas encore une fois d' problème de voyage vide aussi?

M. Holmes: Oui. Il y aurait probableme le problème du voyage libre mais l'idée pont terrestre si j'ai bien compris, n'avan gerait pas notre industrie.

M. Rose: Pas la vôtre en particulier.

M. Holmes: Non.

M. Rose: Pour faire suite à la question monsieur Pringle, je me demandais quel éta le coût de votre main-d'œuvre par rapport celui des usines semblables dans d'autres pa ties du pays. Est-ce que votre usine e organisée?

M. Dillman: Oui.

M. Rose: C'est organisé. Est-ce que le co de votre main-d'œuvre est sensibleme moins élevé ici?

M. Dillman: Pour la main-d'œuvre spécia sée, non.

M. Rose: Mais pour la main-d'œuvre n spécialisée?

M. Dillman: Pour la main-d'œuvre gén rale, elle est un peu moins élevée qu'e Ontario.

M. Rose: Et est-ce que la productivité e aussi élevée ici qu'avec une main-d'œuv plus spécialisée dans l'Ontario disons?

M. Dillman: J'ai déjà entendu dire que productivité peut ne pas être aussi élevée.

M. Rose: Mais la productivité se trouve relever de la compagnie plutôt que la mai d'œuvre qui installe de nouvelles machine introduit de nouvelles techniques et ainsi suite, n'est-ce pas?

M. Dillman: Oui.

M. Rose: En fait, il revient à la compagn de déterminer le rendement plutôt qu'à main-d'œuvre.

M. Dillman: En effet.

M. Rose: Merci.

Le président: Monsieur Horner.

M. Horner: Quant à la troisième recommar dation où vous dites que toutes les matière premières destinées à la fabrication, en pro venance de l'extérieur de la région devraier être subventionnées, voyez-vous une difficult réelle en ce qui a trait à la distinction

Texte]

oming in to the Maritimes and, say, finished aterials or partly finished materials?

Mr. Holmes: No, I envisage this as applying materials that would have to be proven to e federal agency, or whoever it might be, at the materials brought in were used irectly in the manufacturing of a finished roduct.

Mr. Horner: There is one other word that others me in that recommendations and that the word "must"—"which must be purased outside the region". You mean there, I ould imagine, raw materials that could not e purchased in the Maritime area.

Mr. Dillman: We are not recommending at subsidies be extended to materials rought in from outside the area which would ork to the detriment of suppliers within the gion.

Mr. Horner: But you can see the difficulty a federal agency's deciding that A compoent is nearly as good as B and asking why ou did not buy A, because while it may not the same it still could be used in a fibre dustry such as yours. Do you see any fficulty there? You know the industry better an I do.

Mr. Holmes: Not really because most of the roducts that we would bring in are of the ture of chemicals and resins, and this type item, that would not presumably be rought into the province in any great nount for any purpose other than what we e using them for.

Mr. Horner: From your recommendation umber 2, I see that there is only two miles fference between Hantsport and Halifax, d yet a fair amount of difference in the rail tes. What do the CNR give you as an cuse as to why they have to have more? I e where you handle 904 box cars a year.

Mr. Holmes: I think it is a general practice rate making that where two railways are volved your rates are going to be higher an they would be if you had one carrier. ow, my argument is that because of the fact at we happen to be located on the DAR in ova Scotia, why should we be discriminated ainst over the same mileage of rails as the oducers, say, in Halifax?

[*Interprétation*]

établir entre les matières brutes en provenance des provinces Maritimes, et disons, les produits finis ou en partie finis?

M. Holmes: Non. Je trouve qu'il s'agit là de matériaux où il faudrait prouver à l'organisme fédéral ou à quiconque qu'ils ont servi, dès leur arrivée, directement à la fabrication des produits finis.

M. Horner: Il y a une autre chose aussi qui me préoccupe et c'est le sens d'obligation dans l'expression «en provenance de l'extérieur de la région». Vous voulez dire par là, je crois, les matières premières qui ne peuvent pas être achetées dans la région des Maritimes?

M. Dillman: Nous ne recommandons pas que la subvention s'applique aux matières que l'on prend de l'extérieur de la région, ce qui nuirait à l'industrie de la région.

M. Horner: Vous pouvez voir la difficulté à ce qu'un organisme fédéral essaie de décider si le composant A est presque aussi bon que B et à se demander pourquoi vous n'avez pas acheté A, parce que même si ce n'est pas la même chose, cela pourrait servir dans une industrie du textile comme la vôtre. Y voyez-vous certaines difficultés? Vous connaissez cette industrie mieux que moi.

M. Holmes: Pas nécessairement parce que la plupart des produits que nous importerions sont des produits chimiques, de résines et ce genre de produits qui ne seraient pas importés en grande quantité dans la province pour une raison ou pour une autre pour laquelle nous les employons.

M. Horner: Dans votre deuxième recommandation, je vois qu'il n'y a qu'une distance de deux milles entre Hantsport et Halifax, et qu'il y a une différence considérable dans le tarif ferroviaire—qu'est-ce que le CN vous donne comme prétexte pour en avoir plus? Je vois où vous prenez 904 wagons par année.

M. Holmes: Je crois que pour les taux, la pratique courante veut que lorsqu'il y a deux chemins de fer en cause, les taux seront plus élevés que s'il n'y avait qu'un seul transporteur. Maintenant, parce que nous sommes situés sur le réseau de la *Dominion Atlantic Railway*, en Nouvelle-Écosse, pourquoi devrait-il y avoir une distinction injuste à notre égard quand il s'agit du transport des marchandises sur la même distance que le producteur d'Halifax, par exemple.

[*Text*]

Mr. Horner: Let me understand this. The DAR runs through Hantsport to Truro, and the rest is CNR.

Mr. Holmes: Right.

Mr. Horner: What would be that distance?

Mr. Holmes: Sixty-two miles.

Mr. Horner: Has the CNR granted any permission to run trains over that distance? Or do you think there could be an agreement worked out for a rationalization of that line use?

Mr. Holmes: This would involve an engine and quite an involved process between the two rail carriers and the federal government and so on. But we are recommending that it should be looked into.

Mr. Horner: It used to be when I was moving some cars around, that it cost $5 a car to ship from a CP line to a CN line. Would this rate be greater than that, or less? This is years ago, mind you, but would it amount to more or less than that amount?

Mr. Holmes: In the appendix in the back there, it indicates the differential, Halifax in favour of Hantsport. We are primarily interested in carload rates, and our commodities move across 45. You see the case of Calgary, for example, with a differential of 16 cents per hundredweight. And now if you multiply that by a car of 25,000 pounds, that would give you your answer. In the case of Winnipeg, of course, Winnipeg and Saskatoon, it has a differential of 18 cents on a car of say 25,000.

Mr. Horner: Just looking at that quickly, that looks like, in the Calgary case, $58, which is quite a substantial amount. Have you taken this case to the railroads or to the Transport Commission, this newly formed body, the Canadian Transport Commission? Have you made any attempt to appeal to them for...?

Mr. Pugsley: Not as yet, but it is definitely in the realm of possibility for the future.

Mr. Horner: Well, I would recommend that you do that, and I would be very interested in hearing a reply on it, because I think that Canadians and shippers generally should make themselves more aware. It is a newly formed body, and I think the Chairman of the Committee and the rest of the Committee

[*Interpretation*]

M. Horner: Je ne suis pas sûr de compre dre ce que vous venez de dire. Le *Domini Atlantic Railway* va de Hantsport à Truro, le National-Canadien fait le reste?

M. Holmes: C'est exact.

M. Horner: Et quelle serait la distance?

M. Holmes: Soixante-deux milles.

M. Horner: Le CN a-t-il obtenu la perm sion de faire le parcours sur la même lign Est-ce qu'à votre avis, on pourrait en venir un accord pour rationaliser l'emploi de ce ligne?

M. Holmes: Cela supposerait l'emploi d'u locomotive et une série d'ententes complex entre les deux sociétés ferroviaires et le go vernement fédéral, etc. Mais nous recomma dons qu'on étudie la chose.

M. Horner: Autrefois, pour déplacer c wagons, il en coûtait $5 pour faire passer wagon de la ligne du CP sur la ligne du C Est-ce que le taux est demeuré le même? Il a quelques années de cela, et je me deman si le taux est resté plus ou moins le même.

M. Holmes: Dans l'Annexe, à la fin mémoire, vous verrez quel est le taux dif rentiel entre Halifax et Hantsport, en fave de cette dernière localité. Nous nous intér sons surtout au taux par wagonnée, et r produits traversent la frontière américai Voyez le cas de Calgary, par exemple, où taux différentiel est de 16 cents du ce livres. Si vous faites le calcul pour un wag de 25,000 livres de capacité, vous aurez réponse à votre question. Dans le cas de W nipeg, bien entendu, Winnipeg et Saskato il y a un taux différentiel de 18 cents, pc un wagon, disons, de 25,000 livres.

M. Horner: En faisant le calcul rapideme on arrive, dans le cas de Calgary, à $48., qui représente une somme assez substantie tout de même. Est-ce que vous en avez pa aux sociétés de chemin de fer ou à la Co mission canadienne des transports?

M. Pugsley: Non, pas encore, mais c' certainement possible dans un avenir as rapproché.

M. Horner: Je vous recommanderais de faire et je serais vraiment intéressé à ent dre la réponse que vous obtiendrez, parce q je pense que les Canadiens et les expédite dans l'ensemble devraient être plus co cients. La Commission est un nouvel or nisme, et je pense que le président et

Texte]

vould agree with me that with a newly ormed administrative body, the only way we an know its limitations and capabilities is to rmly test it in all areas. I wish you would, nd let me know the results.

The Chairman: Mr. Trudel.

Mr. Trudel: Mr. Chairman, so far we have eard several briefs and in many of them the orth-south flow was mentioned, even going s far as saying that the tariff barrier pre- ented these people from enjoying a large mount of the market. Here we have a com- any that is shipping—at least from what I ather from their brief—they are going east nd west and doing about 90 per cent of their usiness in the central and western markets. lave you explored the possibilities of this orth-south factor in your business?

Mr. Dillman: We are a licensee of an merican company, so that this would pre- lude us from marketing anything in the .S.A.

Mr. Trudel: That answers my question, hank you.

The Chairman: Any further questions, gen- emen? I want to thank you gentlemen for oming.

At this time I will call upon Anil Canada imited. Mr. L. H. Coffin. I will ask Mr. offin to make a resumé of his brief.

M. L. H. Coffin (Directeur Général, Anil anada Limited): Monsieur le président, en uelques mots je voudrais vous souhaiter la ienvenue en Nouvelle-Écosse.

Le président: C'est très bien, merci.

M. Coffin: Amis canadiens-français, je vous emande votre indulgence parce que la tra- uction n'est pas faite. Elle le sera peut-être i semaine prochaine.

Thank you, gentlemen. I trust you all have copy of the brief. I will try and deal with icts and be as short and as quick as I can. o put it briefly, we find ourselves as a ianufacturing plant in Nova Scotia at a very erious disadvantage because of our transpor- ition costs. Transportation cost expressed as per cent of sales averages between 19 and) per cent. Now, to bring this figure into ontext, we can compare with similar Ameri-

[*Interprétation*]

membres du Comité conviendront avec moi que la seule façon de connaître les possibilités et les limitations d'un nouvel organisme est de le mettre à l'épreuve dans tous les domaines. Je serais curieux de connaître les résultats de vos démarches.

Le président: Monsieur Trudel.

M. Trudel: Monsieur le président, jusqu'ici nous avons entendu bon nombre de mémoires et, dans plusieurs cas, on a parlé d'un flux de marchandises nord-sud et on a même dit que les barrières tarifaires empêchaient ces personnes de profiter d'une bonne partie du marché. Dans le cas qui nous occupe, il s'agit d'une société qui, selon ce que je peux en voir dans ce mémoire, fait des expéditions, à l'est et à l'ouest et dont 90 p. 100 des affaires se font sur les marchés de la région centrale et de l'Ouest. Est-ce que vous avez exploré la possibilité de profiter de cette tendance aux échanges nord-sud dans la conduite de vos affaires?

M. Dillman: Nous sommes concessionnaires d'une société américaine, ce qui nous empêche de commercialiser quoi que ce soit aux États-Unis.

M. Trudel: Bon, cela répond à ma question, je vous remercie beaucoup.

Le président: Auriez-vous d'autres questions à poser messieurs? C'est tout. Je vous remercie, messieurs, d'être venus.

Maintenant, je cède la parole à la société *Anil Canada Limited* représentée par Monsieur L. H. Coffin. Je demanderais à Monsieur Coffin de faire un résumé de son mémoire, s'il vous plaît.

M. L. H. Coffin (Directeur général, Anil Canada Ltd): Mr. Chairman, I would like to welcome you to Nova Scotia.

The Chairman: I thank you very much.

Mr. Coffin: My French Canadian friends, I would like to ask your indulgence because we do not have a translation of our brief. Perhaps you will have it next week.

Merci Messieurs. J'espère que vous avez tous un exemplaire du mémoire. J'essaierai de m'en tenir aux faits et d'être aussi bref que possible. En résumé, donc, nous sommes, en tant que manufacturiers situés en Nouvelle-Écosse, très défavorisés par les frais de transport. Le coût du transport, exprimé en pourcentage de nos ventes, représente en moyenne 19 à 20 p. 100. Pour replacer ces données dans leur contexte, nous pouvons les

[*Text*]

can producers who operate with a freight or transportation cost of 7.5 per cent of sales. Correspondingly, we find ourselves perhaps a larger branch employer of the railroads rather than of our local labour force. Our transportation cost is roughly equivalent to all of our raw material costs, and is even larger than our total wages, all of our salaries.

This is a subject that we have discussed with the various transportation committees and the railways. We have examined ocean freight, and we would be prepared to answer any questions you might have on that. We would also be prepared to discuss any questions you have on our markets.

Rather briefly, we have three basic recommendations for your consideration. First, a reduction of rail rates to at least the equivalent of other Canadian manufacturers with respect to the major Canadian markets, namely Ontario and Quebec. Secondly, with respect to American or export shipments, the provision of a government subsidy to cover cost of transportation to border crossing points. We have not included any subsidy for transportation beyond, because we realize this presents an international problem.

Thirdly, a revision of the Canadian rail rate structure to provide a more realistic incentive for large carload shipments. Basically, we are asking for the same incentive structure as is available on American railroads.

Gentlemen, I would be prepared to answer any questions.

Mr. Trudel: On the last portion of your statement, would you elaborate, sir, as to what is available on the American railroad that you do not find on the Canadian railroad.

Mr. Coffin: I have to search in my ammunition file. This, I believe, will answer your question. If any other members of the Committee are interested. This is a comparison of the incentive rail rates in the American railroads as compared to Canadian. I think that will illustrate our problem. Mr. Chairman, are any of the others interested in it?

[*Interpretation*]

comparer aux données de certains pr ducteurs américains, œuvrant dans le mêr domaine que nous et dont les frais de tran port représentant 7½ p. 100 de leurs vent Ainsi, nous sommes peut-être un plus impo tant employeur de cheminots que de mai d'œuvre spécialisée travaillant dans not usine. Nos frais de transport sont à peu pr égaux au coût de toutes nos matières pr mières et sont même plus élevés que le tot de la rémunération que nous donnons à n employés.

Nous avons décrit cette situation à tous l comités de transport et aux sociétés chemin de fer. Nous avons étudié les frais transport par bateaux, et nous sommes prê à répondre à toutes vos questions sur ce suj Nous serions prêts aussi à répondre aux que tions que vous auriez à poser sur nos marché

En résumé, nous avons trois recommand tions à vous présenter. Tout d'abord: u diminution des tarifs ferroviaires qui puis nous permettre, pour le moins, d'avoir d tarifs équivalents à ceux des autres fabrican canadiens qui expédient de la marchandi vers les principaux marchés, c'est-à-di l'Ontario et le Québec. Deuxièmement, ce qui concerne nos expéditions vers l États-Unis ou nos exportations, nous aimerio avoir de la part du Gouvernement une su vention qui couvrirait nos frais de transpo jusqu'aux postes frontières. Nous n'avo pas demandé de subvention pour les tran ports au-delà de la frontière parce que no nous rendons compte que cela présente u problème sur le plan international.

Troisièmement, une revision du mode d'a plication des tarifs ferroviaires canadiens vue d'encourager de plus gros chargement Fodamentalement, nous demandons l mêmes avantages dont bénéficient les chemi de fer américains au point de vue tarifs.

Messieurs, je me ferai un plaisir de répo dre aux questions que vous voudrez bien m poser.

M. Trudel: Dans la dernière partie de vot déclaration pourriez-vous préciser les avant ges dont bénéficient les chemins de fer amér cains et que vous n'avez pas au Canada?

M. Coffin: Sûrement. Je dois consulter m dossiers. Ceci, je crois, va répondre à v questions. Si cela intéresse d'autres membr du Comité, voici une comparaison entre l tarifs d'encouragement aux expéditions q existent aux États-Unis et ceux du Canad Cela vous donne une idée de notre problèm Est-ce qu'il y a d'autres membres qui so intéressés?

[*Texte*]

Mr. Trudel: May I ask another question, Mr. Chairman?

The Chairman: Yes.

Mr. Trudel: Is this a wholly owned company, or is it a branch of an American company?

Mr. Coffin: No, sir, this is a wholly owned company. It is a subsidiary of an Indian company, from Bombay, India.

Mr. Trudel: In your brief you mention that you have door coverings and we now find, at least in the central markets, that the competition is not from Canadian companies, but it is mostly from others, Israel or even Poland. In central Canada this is where we are finding our problems. You are centering a lot of your complaints on transportation.

Mr. Coffin: You are quite correct, actually imports in some of our basic commodities. Import competition is more serious than is domestic competition. Domestic competition itself cannot, like us, compete with foreign imports, not effectively that is.

Mr. Trudel: One of the reasons that we have received in the other part of the country that they were using water transportation, and I think in your original statement you mentioned that you had explored this possibility to the inland market. Would this be of some advantage to you?

Mr. Coffin: Frankly, no. I have to acknowledge that our present rail rates are far cheaper than any water rates that I have been able to negotiate. But I believe our major problem with imports—they come from countries such as Poland and Russia in Canada particularly—is the lower labour rates and the fact that they do subsidize exports.

Mr. Trudel: You mention that the rates are maybe not favourable but reasonable. With the continuation of these rates, do you feel that you can meet the competition?

Mr. Coffin: I would say that we must at least continue the present rates. But to say that we can continue and grow and expand

[*Interprétation*]

M. Trudel: Est-ce que je peux poser une autre question, monsieur le président?

Le président: Oui.

M. Trudel: Est-ce une société à part entière ou une filiale d'une société américaine?

M. Coffin: Non, c'est une Société à part entière. C'est la filiale d'une société indienne de Bombay, en Inde.

M. Trudel: Dans votre mémoire, vous dites que vous avez des protections douanières et nous constations, au moins sur les marchés de la région centrale, que la concurrence ne vient pas de sociétés canadiennes mais d'autres sociétés, société israélienne ou même polonaise. C'est dans la région centrale du Canada que nous avons des problèmes. Vous faites porter une bonne partie de vos griefs sur des questions de transport.

M. Coffin: Vous avez tout à fait raison, du moins en ce qui concerne les importations de certains produits de base. La concurrence des produits importés est plus forte que celle des produits nationaux. La production nationale, comme dans notre cas, ne peut concurrencer les importations étrangères, du moins pas efficacement.

M. Trudel: Une des raisons qui a été évoquée dans les autres régions du pays, c'est que les concurrents utilisaient le transport par eau et je pense que dans votre première déclaration, vous avez mentionné que vous aviez étudié cette possibilité pour les marchés de l'intérieur. Est-ce que cela vous serait plus avantageux?

M. Coffin: Franchement, non. Je dois reconnaître que le tarif ferroviaire que nous payons actuellement est beaucoup moins élevé que tous les tarifs maritimes que j'ai pu négocier jusqu'ici. Je pense que le principal problème qui se présente pour les importations —dans le cas du Canada, elles nous viennent particulièrement de la Pologne et de la Russie —c'est que les taux de rémunération de la main-d'œuvre y sont plus faibles et que ces pays subventionnent leurs moyens de transport.

M. Trudel: Vous avez dit que les tarifs ne sont peut-être pas favorables, néanmoins raisonnables. Si on maintient ces tarifs au même niveau, croyez-vous que vous pouvez faire face à la concurrence?

M. Coffin: Je pense qu'il nous faut au moins maintenir le tarif actuel. Mais, à savoir si nous pouvons prendre de l'expansion avec

[*Text*]

under these rates, that is a very doubtful question.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Corbin.

Mr. Corbin: Mr. Chairman, since we are nearing the end of our sittings here in Halifax, I wonder if the witness would like to philosophise with me for a minute or so. I would like to know, first of all, sir, if you are a native Maritimer? It really does not matter, but just for...

Mr. Coffin: That is a good question. I suppose I am a Quebecois or a Gaspésien.

Mr. Corbin: I see.

Mr. Coffin: I went to school in Nova Scotia, and after the war and since I have spent most of my industrial life in Quebec and Ontario.

Mr. Corbin: I see. A lot has been said about giving a fair deal to Maritime products, Maritime industries, to facilitate easy access of their goods, on a competitive basis that is, into central Canada. Have you ever considered that perhaps people in central Canada would rather not have your competition? And in that respect competition-wise do you feel that they would have any serious grievances about a Maritime product entering their market?

Mr. Coffin: Two months ago I had another hat on my head; I was in that position. You are quite right. There is no question about whether they would object. They are objecting. They are waiting with considerable interest on our brief for this reason. This is a major problem, where you are trying to subsidize an industry in one area, you do enforce competition elsewhere. I realize this. They realize it. But I have my case to fight.

Mr. Nowlan: A supplementary question on the same subject, Mr. Chairman. I wonder if the witness would agree that also in the East there is legitimate complaint, not only because we do not have access to the central Canadian market, but because of the tariff structure we have to play that way and our natural flow is north and south. So you have a sort of stand-off, do you not?

[*Interpretation*]

ces mêmes tarifs, c'est une question plut douteuse.

M. Trudel: Merci, monsieur le président.

Le président: Monsieur Corbin?

M. Corbin: Monsieur le président, vu q nous sommes à peu près à la fin de nos a diences ici à Halifax, je me demande si le t moin accepterait de philosopher un peu av moi. Je voudrais tout d'abord savoir si vo êtes originaire des Maritimes. Cela impor peu, vraiment, mais j'aimerais savoir.

M. Coffin: C'est une excellente questio J'imagine que je suis un Québécois, ou, plu précisément, un Gaspésien.

M. Corbin: Je vois.

M. Coffin: Je suis allé à l'école en Nouve le-Écosse et, depuis la fin de la guerre, j' passé la plus grande partie de ma vie à m'o cuper d'industrie dans le Québec et l'Ontario.

M. Corbin: Merci beaucoup. On a beaucou parlé de la possibilité de donner un traite ment juste aux produits des Maritimes, d leur faciliter l'accès sur une base concurrer tielle, au Canada central. Ne vous êtes-vou jamais demandé si les gens du Canada centra préféreraient ne pas avoir cette concurrence Croyez-vous que ces gens pourraient proteste sérieusement en voyant un produit des Mari times envahir leur marché?

M. Coffin: Il y a quelques mois, j'avais u autre point de vue. Vous avez raison. Ils s' opposeraient, vous pouvez en être certain. D fait, ils s'y opposent. Ils attendent avec u vif intérêt la présentation de notre mémoir pour cette raison. C'est un problème de taill que nous abordons: lorsque vous subvention nez une industrie dans une région, vous aug mentez la concurrence ailleurs par le fai même.

Je m'en rends compte, ils s'en renden compte eux-mêmes, mais je dois lutter pou ma cause.

M. Nowlan: J'ai une question supplémen taire sur le même sujet, monsieur le prési dent. Le témoin conviendra-t-il avec moi qu l'Est a des griefs tout à fait légitimes, non pa simplement du fait que nous n'avons pa accès aux marchés du Canada central, mai aussi à cause de la structure tarifaire qu nous est imposée. Il nous faut adopter ce comportement. N'oublions pas de plus que la tendance normale des échanges est nord-sud Ainsi donc, vous en arrivez à une espèce de position d'équilibre, n'est-ce pas?

Texte]

Mr. Coffin: Exactly. I agree. I am not dis-ussing the pros and cons. The question is ere.

The Chairman: Mr. Corbin.

Mr. Corbin: This may not be a fair ques-on, and if it is not...

Mr. Coffin: Well, if it is not, you said it.

Mr. Corbin: I am going to take a chance. o you feel that Maritimers have a persecu-on complex in relation to...

The Chairman: Mr. Horner.

Mr. Corbin: Well, some do, let us be onest.

The Chairman: Order, please. Mr. Horner.

Mr. Horner: With regards to your recom-endation on page 2, the second recommen-ation you make with regard to the govern-ent subsidy, I imagine you are referring to ie MFRA rate to be applied to shipments to ie border. Do you anticipate any difficulty on ie valuation for duty of goods at the border you did receive a subsidy on your goods oing to the border?

Mr. Coffin: Quite frankly, any of the ecommendations are fraught with problems. 'e recognize this. We recognize that as soon s we start tampering with international rates iat have been set up, we have to deal with ie Interstate Commerce Commission. I am ot entirely familiar with these bodies, but I o know that this is a problem.

Mr. Horner: Are you shipping goods now to ie United States?

Mr. Coffin: Very much so.

Mr. Horner: Just to give the Committee ome idea, what is the difference in the rates etween Chester, Nova Scotia, and Boston, ay, and between Chester and Montreal? Is iere any difference, or which one is the igher? Can you give us some idea?

Mr. Coffin: Can you just give me one inute? Yes, the rate to Boston is 65 cents a undred-weight, and the rate to Montreal is 8 cents a hundredweight.

Mr. Horner: On the rate to Montreal you ould receive the MFRA subsidy for the dis-ance that those goods remain in the select rea. Am I right?

[*Interprétation*]

M. Coffin: Je suis d'accord. Je ne discute pas le pour et le contre de ce problème, mais les faits sont là.

Le président: Monsieur Corbin?

M. Corbin: Ce n'est peut-être pas juste de poser la question que j'ai à l'esprit...

M. Coffin: De toutes façons, posez-la.

M. Corbin: Je vais essayer tout de même. Croyez-vous que les gens des Maritimes ont un complexe de persécution...?

Le président: Monsieur Horner?

M. Corbin: Certains ont un tel complexe, il faut l'avouer.

Le président: A l'ordre. Monsieur Horner?

M. Horner: Je me reporte à votre recommandation, qu'on trouve à la page 2, la deuxième recommandation que vous formulez en rapport avec les subventions du gouvernement. J'imagine que vous voulez parler du tarif appliqué en vertu de la Loi sur les taux de transport des marchandises dans les provinces Maritimes, tarif qui pourrait s'appliquer dans le cas des expéditions vers la frontière. Prévoyez-vous des complications pour l'évaluation des marchandises par la douane à la frontière, si les marchandises que vous passez ont été subventionnées?

M. Coffin: Sincèrement, toutes les recommandations présentent des problèmes. Nous le reconnaissons. Nous savons par exemple que, dès que nous commençons à jouer avec les tarifs fixés par une entente internationale, il nous faut alors faire affaire avec la Commission du commerce inter-états. Je ne suis pas tout à fait renseigné sur ce sujet mais je sais que c'est un problème.

M. Horner: Est-ce que vous expédiez des produits vers les États-Unis, en ce moment?

M. Coffin: Beaucoup, oui.

M. Horner: A titre d'exemple, pourriez-vous nous donner la différence des tarifs entre Chester, en Nouvelle-Écosse et Boston et entre Chester et Montréal? Est-ce qu'il y a une différence? Quel est le tarif le plus élevé? Pourriez-vous nous en donner une idée?

M. Coffin: Un instant, s'il vous plaît. Oui, le tarif pour Boston est de 65 cents le cent livres et, pour Montréal, 48 cents le cent livres.

M. Horner: Dans le cas du tarif pour Montréal, vous allez bénéficier de la subvention au titre de la Loi sur les taux de transport des marchandises dans les provinces mariti-

[*Text*]

Mr. Coffin: That is correct.

Mr. Horner: So there is justification for you asking for that to apply and to lower the rates to Boston, because the Boston rate is higher.

Mr. Coffin: That is correct.

Mr. Horner: If the Boston rate is lower, then that would weaken your case. Seeing that it is higher, you as a Maritime firm would be equally justified in asking for either a special rate to get you into central Canada or a special rate to get you into another market area or a comparable market area. This is your logic, I would assume.

Mr. Coffin: That is the basis for our recommendation.

Mr. Horner: You have not attempted to approach the government. Right now the government is carrying on—and we and the Task Force are part of it—an intensified study on whether or not to re-introduce the Maritime Freight Rates Act as it was or to remove it completely. You have not made any other submission to the Minister of Transport?

Mr. Coffin: No.

Mr. Perrault: Mr. Chairman, I would like to ask what influenced this company to locate in the Maritimes in view of what is termed "serious disadvantages in comparison with other Canadian manufacturers"? It is encouraging to see this vote of confidence in the Maritimes and I wondered what factors influenced this company to locate here?

Mr. Coffin: Well, I cannot honestly speak for all of the factors. I was not present in the initial design or building of the plant. I have been there roughly a year. However, I would assume that it was basically that Nova Scotia wished to have an industry that would provide employment and utilize their own native raw materials.

Mr. Perrault: Were incentives provided for the establishment of this company?

Mr. Coffin: There were.

Mr. Perrault: As a per cent of sales, your transportation cost seems to be abnormally

[*Interpretation*]

mes, pour la distance que ces marchandis auront parcourue dans la région désigné Est-ce correct?

M. Coffin: Oui.

M. Horner: Vous avez donc raison d demander une réduction des tarifs pour Bo ton, parce qu'ils sont plus élevés.

M. Coffin: C'est juste.

M. Horner: Si le tarif pour Boston éta plus bas, cela pourrait affaiblir votre positio Comme il est plus élevé, vous pourri demander, avec raison, en tant que socié des Maritimes, un tarif spécial pour expédi vos marchandises dans le Canada central o encore pour acheminer vos produits vers u autre marché de taille comparable.

M. Coffin: Oui, c'est là le fondement d notre recommandation.

M. Horner: Vous n'avez pas tenté de pres sentir le gouvernement sur cette question.

Maintenant, le gouvernement étudie l question. Nous et l'équipe spéciale prenon part à une étude vraiment intense afin d savoir si on doit introduire de nouveau la Lo sur les taux de transport des marchandise dans les Maritimes telle quelle ou la fair disparaître complètement. Est-ce que vou avez présenté d'autres instances au ministr des Transports?

M. Coffin: Pas du tout.

M. Perrault: Monsieur le président, je vou drais demander qu'est-ce qui a influencé cett société à venir s'établir dans les Maritime alors que cela représente «des désavantage sérieux par rapport aux autres sociétés»? I est très encourageant de voir ce vote d confiance à l'égard des Maritimes et je vou drais savoir quels facteurs ont influencé cett société pour qu'elle vienne s'établir ici?

M. Coffin: Je ne puis vous en parler, parc que lorsque l'on a construit et aménagé cett usine, je n'y étais pas. Je suis ici seulemen depuis un an à peine. Toutefois, j'imaginerais que c'est essentiellement que la Nouvelle-Écosse désirait une industrie qui donnerait de l'emploi et utiliserait les matières premières locales.

M. Perrault: Est-ce qu'on a donné des encouragements pour l'établissement de cette société?

M. Coffin: Oui.

M. Perrault: En pourcentage des ventes, vos coûts de transport semblent être énormé-

[*Texte*]

gh. Is one of the factors low labour costs? Is ur labour force paid abnormally low wages cause of lack of competition?

Mr. Coffin: No, I would say not. To be ctual, we are currently slightly under com- rable industries in Ontario. Our labour con- ict within one and a half years will be on a r with Upper Canada.

Mr. Perrault: Your transportation cost per- ntage figure is one of the highest we have en in these hearings. Is there a special fac- r in this type of industry which leads to is.

Mr. Coffin: It is a very very heavy product, ry dense.

Mr. Perrault: Would you like to see the vernment of Canada pay a transportation osidy to all companies in the Maritimes porting to the United States?

Mr. Coffin: I would have no objection natsoever.

Mr. Perrault: Have you estimated the cost such a program?

Mr. Coffin: I have not, sir.

Mr. Perrault: Would you like to see this nd of subsidization extended to companies the rest of Canada to encourage U.S. ports?

Mr. Coffin: I would think this would have ne rather interesting sidelights because ny of the other companies either have nerican subsidiaries or are controlled by nerican companies and as such do not have ready access to the American market. We

Mr. Perrault: As an alternative to transpor- ion subsidies would you like to see free de in forest products between Canada and United States and, if so, would it work to ur benefit?

Mr. Coffin: Yes, it would work to our nefit.

Mr. Perrault: And you would choose this as alternative to transportation subsidies?

Mr. Coffin: That is correct.

Mr. Perrault: Thank you, Mr. Chairman.

Mr. Rose: I am interested in the idea of an lantic free trade area with the United ates. That implies a customs set-up with

[*Interprétation*]

ment élevés. Est-ce que le coût de la main-d'œuvre en est un facteur? Est-ce que la main-d'œuvre a des salaires très bas par suite de l'absence de concurrence?

M. Coffin: Non, je ne dirais pas cela. En fait, nous sommes présentement un peu plus bas que les industries comparables de l'Ontario. Notre contrat de travail dans un an et demi sera au pair avec le Haut-Canada.

M. Perrault: Les chiffres donnés ici pour ce qui est du pourcentage des frais de transport sont parmi les plus élevés que nous ayons vus à nos séances. Est-ce qu'il y a un facteur particulier pour ce genre d'industrie?

M. Coffin: C'est un produit très lourd, très dense.

M. Perrault: Est-ce que vous aimeriez voir le gouvernement du Canada payer une subvention pour le transport à toutes les sociétés des Maritimes exportant vers les États-Unis?

M. Coffin: Je ne m'y opposerais pas du tout.

M. Perrault: Est-ce que vous avez évalué le coût d'un tel programme?

M. Coffin: Non, monsieur.

M. Perrault: Aimeriez-vous que des subventions de ce genre soient aussi prévues pour les autres sociétés dans le reste du Canada pour encourager les exportations vers les États-Unis?

M. Coffin: Cela pourrait avoir des aspects assez intéressants parce que bon nombre des autres sociétés ont soit des filiales américaines ou un contrôle venant de sociétés américaines et, de ce fait, n'ont pas accès aux débouchés américains. Mais nous avons un tel accès.

M. Perrault: Comme une alternative aux subventions de transport, aimeriez-vous voir un libre-échange pour les produits forestiers entre le Canada et les États-Unis et, dans l'affirmative, est-ce que ce serait à votre avantage?

M. Coffin: Oui, sûrement que ce le serait.

M. Perrault: Et vous choisiriez cette alternative aux subventions de transport?

M. Coffin: C'est exact.

M. Perrault: Merci, monsieur le président.

M. Rose: Je m'intéresse à la question d'une région Atlantique de libre-échange avec les États-Unis. Il faudrait établir une barrière

[*Text*]

a barrier between the free trade area and the rest of Canada, or it might be done, like in the auto industry, through an industry agreement. What concerns me about the concept is the reciprocal arrangements of it. I would think that we are a highly exporting nation now. As a matter of fact, one of our problems is that we are exporting too much raw products and not enough manufactured articles. What do you envisage would be the result of this kind of arrangement as far as American exports reciprocally into this area is concerned—because I cannot see the Americans participating in this.

Mr. Coffin: You are quite right, this is not a simple problem. But to perhaps illustrate our specific problem in greater detail, our basic raw material product has a duty equivalent to 7.5 per cent. In other words, we can in effect ignore the tariff on our basic board assuming equivalent dollars. But as soon as we move into a finished product where there has been painting or additional labour input then the duty—well at one stage it was 30 per cent and with the Kennedy Round it has been dropping now to 21 per cent.

Mr. Rose: Could you explain why you can ignore the tariff of 7 per cent?

Mr. Coffin: Well, there is the exchange on the dollar.

Mr. Rose: And would it have anything to do with your productivity or labour costs compared to, say, a similar American product?

Mr. Coffin: We compare manufacturing costs with a similar American plant.

Mr. Rose: And you are lower.

Mr. Coffin: We are slightly lower.

Mr. Rose: And it is largely because of the difference in the exchange rate.

Mr. Coffin: Oh, no. I am talking equivalent dollars now. I think the simplest way to put it is that we ignore the fact that they are paying in American dollars.

Mr. Rose: Thank you.

Mr. Rock: In your brief you have compared your freight rates with sales rather than with actual costs—19 to 20 per cent in Canada compared to 7.5 per cent in the United States. This chart shows that in Canada you start off with $1.60 for 50,000, which is the same as in

[*Interpretation*]

douanière entre cette zone de libre-échange le reste du Canada, ou encore cela pourra être accompli, comme dans l'industrie aut mobile par une entente industrielle. Ce q m'inquiète à propos de ce concept, c'est réciprocité. Je crois que nous sommes u nation qui exporte beaucoup maintenant. c'est un de nos problèmes, du fait que no exportons beaucoup de matières premières non pas suffisamment de produits finis. Alo qu'est-ce que vous prévoyez à la suite d'u telle entente en autant que cela concerne réciprocité des exportations américaines ve cette région, car je ne puis voir les Amé cains y participer.

M. Coffin: Vous avez tout à fait raison, n'est pas là le seul problème. Mais pour vo donner un exemple plus en détail, notre pri cipale matière première fait l'objet d'un ta équivalent à 7.5 p. 100. En d'autres mots, no pouvons ne pas tenir compte du tarif s notre bois brut en supposant l'équivalence d dollars. Mais seulement dès que nous no acheminons vers un produit fini où il y a une main-d'œuvre additionnelle pour le pr duire, alors le tarif qui à une époque était 30 p. 100 et, avec le *Kennedy Round*, a bais et est maintenant à 21 p. 100.

M. Rose: Pourriez-vous nous dire pourqu vous n'avez pas à tenir compte de ce tarif 7 p. 100?

M. Coffin: Il y a l'échange sur le dollar.

M. Rose: Est-ce que cela a quoi que ce s à voir avec votre productivité et le coût de main-d'œuvre par rapport, disons, à un pr duit américain analogue?

M. Coffin: Nous comparons nos coûts fabrication avec une usine américai analogue.

M. Rose: Et c'est moins élevé chez vous.

M. Coffin: C'est un peu moins élevé.

M. Rose: Et c'est essentiellement à cau d'une différence entre les taux d'échange.

M. Coffin: Oh non. Je parle d'équivalen en dollars. Je pense que c'est la façon la pl simple d'en parler. Nous ignorons le fait qu' nous paient en dollars américains.

M. Rose: Merci.

M. Rock: Dans votre mémoire, vous av comparé votre tarif-marchandises avec ventes plutôt qu'avec le coût réel, de 19 à p. 100 au Canada comparativement à 7.5 100 aux États-Unis. Ce tableau ici nous mo tre qu'au Canada vous commencez avec $1.

Texte]

ie United States; then in the United States ey have a lower tariff, $1.40 and $1.20 for),000 and 100,000, while we still remain at 1.60. Is that right?

Mr. Coffin: I am not exactly sure of your gures, but I believe that is so.

Mr. Rock: This is actually a rate that goes om Chester, Nova Scotia to a U.S. point. ou have not actually supplied us with other pes of freight costs throughout the United ates and compared them with ours. You ve just done this as a percentage of sales.

Mr. Coffin: Maybe I have misled you. These gures represent the incentive rates on merican railroads, which I have checked ith other companies as well and they are e same. In other words, if I have a 50,000 ound car my rate is so much; if I now load e car to a 100,000 pounds my rate or cost r unit is less—it is about 22 per cent less on merican railroads and about 10 per cent in nada.

Mr. Rock: Well, your chart shows that the te in Canada remains the same at $1.60. his is from Chester, Nova Scotia to the U.S. elow here you have the Canadian rate and ove you have the American rate. Is that not ur comparison?

Mr. Coffin: The one with Canadian on it is ere.

Mr. Rock: That is what I say. This is the ie of Canada.

Mr. Coffin: There is another sheet...

The Chairman: Mr. Mahoney, did you have supplementary question?

Mr. Mahoney: No, I just wanted to make re that Mr. Rock gets everything he needs.

Mr. Rock: I will study this, Mr. Chairman.

Mr. Horner: Do all your goods go from ester through to the Boston area or do any your supplies go to the New England ates via Montreal? Do you understand what mean?

Mr. Coffin: To answer the first part of that estion, if we are shipping to Boston our ains our routed Montreal, yes. If we ship to rtland, Maine they generally go through anceboro. However, I cannot overemphasize at our shipments cover a much wider range an the neighbouring United States. I have

[*Interprétation*]

pour 50,000, ce qui est à peu près le même qu'aux États-Unis; et ensuite aux États-Unis, ils ont un tarif inférieur de $1.40 et de $1.20 pour 70,000 et 100,000, alors que nous demeurons toujours à $1.60. C'est juste?

M. Coffin: Je ne suis pas tout à fait sûr de vos chiffres, mais je pense qu'il en est ainsi.

M. Rock: Réellement, il s'agit d'un taux qui va de Chester, Nouvelle-Écosse, à des points aux États-Unis. Vous ne nous avez pas donné les autres coûts du transport de marchandises aux États-Unis comparativement aux nôtres. Vous l'avez fait simplement en raison du pourcentage des ventes.

M. Coffin: Je vous ai induit en erreur. Ces chiffres représentent les taux d'encouragement pour les chemins de fer américains qui ont aussi été vérifiés auprès d'autres sociétés et ils sont les mêmes. En d'autres mots, si j'ai un wagon de 50,000 livres, le taux est de tant, et si je le porte à 100,000 livres, mon taux au coût par unité est moins élevé; soit 22 p. 100 moins élevé sur les chemins de fer américains, et environ 10 p. 100 au Canada.

M. Rock: Eh bien, votre tableau montre que le taux au Canada demeure le même, soit $1.60. Cela va de Chester en Nouvelle-Écosse aux États-Unis. En bas ici, vous avez le taux canadien et au-dessus vous avez le taux américain. N'est-ce pas la comparaison?

M. Coffin: Celui montrant le taux canadien est ici.

M. Rock: C'est ce que je dis. C'est celui du Canada.

M. Coffin: Il y a une autre feuille.

Le président: Monsieur Mahoney, avez-vous une question supplémentaire?

M. Mahoney: Non, je voulais simplement être sûr que M. Rock obtienne tout ce dont il a besoin.

M. Rock: Je vais étudier ce tableau, monsieur le président.

M. Horner: Est-ce que tous vos produits vont de Chester vers la région de Boston ou est-ce que vous en expédiez vers les États de la Nouvelle-Angleterre par Montréal? Vous comprenez ce que je veux dire?

M. Coffin: Pour répondre à votre question, je pense, tout d'abord, pour la première partie, à savoir si nous expédions vers Boston, nos trains doivent passer par Montréal. La réponse est oui. Si nous expédions à Portland, Maine, ils passent par Vanceboro. Toutefois, on ne saurait trop signaler que nos expédi-

[*Text*]

here a listing of shipping destinations in the last 5½ week period. We cover in Nova Scotia and the Atlantic Provinces, we go as far as Jamaica, Alabama, Georgia, Virginia, Texas—it reads like a roll call of the United States.

Mr. Horner: Well, I commend you for your enterprise in getting into that market, but I want to clear up my previous question with regard to rates. Now, I mentioned from Chester to Boston, and you said 65 cents per hundred.

Mr. Coffin: That is correct.

Mr. Horner: And 48 cents per hundred to Montreal. Now would that shipment going to Boston at that rate go via Montreal?

Mr. Coffin: It would.

Mr. Horner: Suppose it was only boated to Montreal and you received a subsidy on it as far as Montreal. Would it then be feasible to rebill it to Boston—although it may not be morally honest?

Mr. Coffin: I do not know whether it is morally honest but we tried it anyway. Unfortunately, through rates are generally cheaper than the shorter hauls.

Mr. Horner: But you would agree this shows a weakness.

Mr. Nesbitt: I have one question, Mr. Chairman. In one part of your brief you mentioned that you faced a great deal of trouble with imports of similar products because of certain low-costing in other countries such as Poland and so on, with the result that the Canadian market for your product was much more inland. Later on in your brief, however, you mention that your exports to the United States were quite large, and particularly you mentioned the areas of Georgia and Texas. Now both of these of course have seaports, such as Savannah and so on. Apart from that, do you ever attempt to ship any of your products to Georgia or Texas or any of those areas by water rather than land?

Mr. Coffin: No, we have not. I have to asknowledge that with rail shipment we can ship relatively small quantities from our

[*Interpretation*]

tions comprennent une plus grande gam que celles de nos voisins aux États-Unis. ici une liste des points de destination pour période des cinq semaines et demie dernièr Nous couvrons la Nouvelle-Écosse et les p vinces de l'Atlantique, nous allons jusqu'à Jamaïque, l'Alabama, la Georgie, la Virgi le Texas, et c'est à peu près une carte déta lée des États-Unis.

M. Horner: Je vous félicite de vous ê engagés dans ce marché, mais ma derni question a trait aux taux. Maintenant, mentionné de Chester à Boston, et vous di 65c. le cent livres.

M. Coffin: C'est exact.

M. Horner: Et 48c. le cent livres à Mo réal. Est-ce que ce chargement qui va à B ton à ce tarif ira par Montréal?

M. Coffin: Oui.

M. Horner: Disons que vous recevez u subvention pour aller jusqu'à Montréal. Su poson que votre ligne de route n'était qu bateau jusqu'à Montréal. Vous pourriez al la réacheminer vers Boston, peut-être, mê si ce ne serait pas honnête?

M. Coffin: Je ne sais si c'est moralem honnête, mais enfin nous l'avons essayé. M habituellement, c'est moins coûteux si cela en ligne directe que lorsque le parcours moins long.

M. Horner: Mais, vous serez d'accord q ceci indique une faiblesse de système?

M. Nesbitt: J'ai une dernière question poser, monsieur le président. Je vois q dans une partie de votre mémoire, vous di que vous devez faire face à beaucoup difficultés face aux importations de produ analogues et qui coûtent peu cher, concu rence qui vient de la Pologne et ainsi suite. Il en résulte que le marché canadi pour votre produit se trouve plus à l'intérie du pays. Plus tard, dans votre mémoire, tc tefois, vous parlez du fait que vos expor tions aux États-Unis étaient assez importa tes, surtout vous parlez des régions de Georgie et du Texas. Chacune de ces régio a un port maritime, comme Savannah, etc. plus de cela, est-ce que vous n'avez jam essayé d'expédier vos produits à la Georg au Texas, ou à une autre partie de c régions, par eau plutôt que par rail?

M. Coffin: Non, nous n'avons pas essayé. dois reconnaître que, pour les expéditions fe roviaires, nous pouvons expédier de petit

[Texte]

ant directly to our customer's plant thereby voiding any in-between transit or handling.

Mr. Nesbitt: How about distances such as exas or Georgia?

Mr. Coffin: Well, even with Texas and eorgia it is possible we could, and we have oked into this. But if we were to ship large uantities, say, 600 tons, we could ship eaper by water to Mobile, Alabama. Unfornately the plants that we are supplying are nsiderably away from the seaports.

Mr. Nesbitt: Have you made any enquiries ether or not if you should decide to do this at you could find shipping space, or indeed ips?

Mr. Coffin: This is one of the problems. It very difficult to get a shipping company to mmit itself to any extended tonnage. Curntly Halifax is not a port of call for a great mber of lines.

Mr. Nesbitt: You feel then that you probaly could not even consider this because of e lack of regular ships calling at Halifax.

Mr. Coffin: I would not say exactly that, t there is no question that this is a major tor.

The Chairman: Gentlemen, this completes s witness's brief and I would like to thank n for coming.

Our next brief will be from the Shubenacae River Crossing Committee. I have on my mediate right Mr. MacDuffie. He will give a ort briefing.

Mr. H. MacDuffie (Shubenacadie River ossing Committee): Mr. Chairman, ladies d gentlemen, I will give a short brief on e Shubenacadie River Crossing which, as we ll all know, has been under study for sevl years. For the past six years I have been airman, and there have been several surys conducted. The Department of Highways nducted one in 1962, ARDA conducted one, D. Margison and Associates Ltd. conducted e and there was one by Acadia University.

Now our problem of course is, firstly, mile. We are, of course, of the North Hants a which, as well as being a great centre, is best market, our best shopping area, has

[*Interprétation*]

quantités à partir de notre usine directement jusqu'à l'usine de notre client, évitant ainsi tout transit et toute manutention intermédiaire.

M. Nesbitt: Que dire des distances telles que pour aller jusqu'au Texas ou en Georgie?

M. Coffin: Même pour aller jusqu'à la Georgie ou au Texas, nous pourrions le faire et nous avons étudié cette possibilité. Mais si nous devions expédier de grandes quantités, soit 600 tonnes, nous pourrions le faire à meilleur coût par eau à Mobile, Alabama. Malheureusement, les usines que nous approvisionnons sont assez éloignées des ports maritimes.

M. Nesbitt: Est-ce que vous vous êtes informés afin de voir si vraiment, si vous décidiez de le faire, vous pourriez trouver des navires pour transporter vos produits?

M. Coffin: C'est assez difficile d'avoir un armateur pour transporter un certain tonnage. En ce moment, Halifax n'est pas un port d'arrêt pour un très grand nombre de lignes.

M. Nesbitt: Alors, vous croyez que vous ne pourriez peut-être pas y songer vu qu'on n'a pas suffisamment de facilité pour faire de tels acheminements à partir de Halifax.

M. Coffin: Ce n'est pas tout à fait ce que je dirais, mais il est bien évident que c'est là un facteur important.

Le président: Messieurs, ceci complète la présentation de ce témoin et je tiens à le remercier d'être venu.

Maintenant, nous entendrons la présentation du *Shubenacadie River Crossing Committee*. J'ai à ma droite M. MacDuffie qui nous fera une brève présentation de cette soumission.

M. H. MacDuffie (Shubenacadie River Crossing Committee): Monsieur le président, mesdames et messieurs, je vous donnerai un bref résumé de la traversée de la rivière Shubenacadie. Comme vous le savez, cela a fait l'objet d'une étude depuis bon nombre d'années. Depuis les six dernières années, je suis président de cette Commission d'étude. Il y a bon nombre de relevés qui ont été faits, le ministère de la Voirie en a fait un en 1962, ARDA en a fait un, A. D. Margison and Associates Ltd. en ont fait une autre, et l'Université Acadia a fait aussi un relevé.

Notre problème alors en est un qui a trait tout d'abord au millage. Nous sommes de la région de *North Hants*, qui tout en étant un grand centre, est notre meilleur marché,

[*Text*]

the best facilities for education—especially in the North Hants section of East Hants. Our religious education is very definitely tied in with that area. Our hospitalization is very definitely tied in with the town of Truro. From a standpoint of industry many of our people go into Truro for employment.

As Chairman of Industrial Development, we have approached many secondary industries to settle in East Hants but the same answer comes up all the time— that we are too far away. Mileage and transportation is a real factor and it has always handicapped us.

Our area is shown here on the map. If there were a crossing of the river here, we would be exactly 12 miles from Truro. As of now our people from all this area have to drive away down here to Shubenacadie.

From all of this section of East Hants we have to drive from Maitland to Shubenacadie, which is approximately 25 miles, and then 23 miles down the other way, which makes a total from Maitland to Truro of 48 miles.

If a crossing were implemented we could go to Truro. It would not be more than 15 miles to almost any point of central Truro which, of course, would be a tremendous advantage to our farmers, schools, hospitals and church operations. Surveys have been conducted as this report will show that we have handed to you. The last one conducted by ARDA, I think it was, showed a 75 per cent feasibility on a traffic count alone. That did not include by any means of the intangibles that would go along with it.

I do not think any of us locally visualize the entire value that crossing would be to both Hants and Colchester. For example, here is a note I received from the Department of Manpower and Immigration. I will read you the four items that he has pointed out:

> It will make it possible for East Hants residents to compete effectively in the Truro labour market by placing them within convenient commuting distance. At the present time a resident of Maitland has a choice of travelling approximately 60 miles to the Avon River valley area, the same distance to Halifax-Dartmouth, or 35 miles to Truro to seek work, whereas with the crossing that same person would only be 12½ miles from the Truro labour market.

[*Interpretation*]

notre meilleur centre de service pour l'édu tion de nos enfants, surtout dans la pa nord des *East Hants*. L'éducation religie est rattachée à cette région. Sûrement l'hos talisation est aussi rattachée à la ville Truro. Pour ce qui est de l'industrie, nombre des nôtres vont à Truro pour trou de l'emploi.

A titre de président de la Commiss de développement industriel, nous av demandé à bon nombre d'industries second res de s'établir à *East Hants*, mais nous so mes toujours parvenus à obtenir la mê réponse. Nous sommes trop éloignés qu aux milles et aux possibilités de transp C'est là un facteur, c'est toujours handicap.

Notre région est indiquée ici sur la ca S'il était possible de traverser la rivière nous nous trouverions à exactement 12 mil de Truro. Alors que, maintenant, toute population de cette région doit aller jusq Shubenacadie.

Les habitants de la région de *East Ha* doivent passer de Maitland à Shubenacadi environ 25 milles, puis parcourir 23 milles sens inverse jusqu'à Truro, ce qui fait total de 48 milles.

Si la traversée était possible, nous po rions nous rendre à Truro, qui se trouverai 15 milles, ce qui serait évidemment un t grand avantage pour les agriculteurs, les é les, les hôpitaux et les églises. Des études été faites à ce sujet, et figurent dans le r port que nous avons distribué. La p récente, effectuée par l'ARDA, établit la r tabilité du projet à 75 p. 100 sur le seul p de la circulation routière. On ne fait aucu ment état des impondérables.

Je me demande si nous nous rendons vr ment compte des avantages que ce pass représente pour Hants et Colchester. Vo une lettre que j'ai reçue du ministère de Main-d'œuvre et de l'Immigration. Je v donnerai lecture des quatre éléments qu'e contient:

> Ce passage permettra à East Hants e ses habitants de concurrencer effica ment le marché ouvrier de Truro en plaçant à une portée raisonnable. l'heure actuelle, les résidents de Maitla doivent soit parcourir 60 milles jusqu'à vallée de la rivière Avon—la même d tance qu'entre Halifax et Dartmouth—s parcourir 35 milles jusqu'à Truro, p trouver un emploi, alors, qu'avec un p sage ces personnes ne seraient plus q 12 milles et demi du marché ouvrier Truro.

[*Texte*]

The added work force of approximately 4,700 adults within convenient commuting distance would make Truro more attractive to industry as a place to locate plants, warehouses and branch offices.

The savings in travel and transfer expenses for residents of East Hants, who would not be obliged to drive to Halifax through the Avon valley area to find work, would generate more local business in the East Hants area.

It would be a considerable net gain to the community through lower social assistance requirements and concomitant higher tax collections.

All of the above effects would result to a considerable and easily measurable degree upon completion of this important project. I trust that this considered expression of opinion will be useful to you in your efforts.

The Chairman: Thank you, very much.

Mr. MacDuffie: There are many other factors at we should include. There is the fact of rism. I believe tourism is becoming recoged as the second largest industry in Cana. We have a beautiful area there as the map ll show. Tourists love to come there. We ve the highest rise and fall of tide in the rld, a rise and fall of 53 feet at mean high le.

If the Fundy Trail should come to pass, ich we hope it will, our contribution in va Scotia—the crossing of the Shubenacae River in the Maitland-Princeport area—uld constitute 95 per cent of Nova Scotia's ntribution to a Fundy Trail.

I have here with me Mr. Murphy, Mr. Johnn and our member from the area. Perhaps ey could add something or if there are any estions perhaps I or the others can answer em.

The Chairman: Mr. McCleave?

Mr. McCleave: Mr. Chairman, first of all I nk when the map was held up west was in e usual north position and east in south sition, which may have confused some of e members. Mr. MacDuffie, what you are ring to prove or argue first of all is that s would be a very natural part of the ndy Trail around the northwestern end of va Scotia.

Second, I suggest that you are trying to gue too that when the Bay of Fundy power velopment takes place, a multibillion dollar position, that the roadway from Truro to

[*Interprétation*]

Ce supplément de main-d'œuvre de 4,700 adultes, qui se trouvent à une distance raisonnable, permettrait à Truro d'accueillir des industries, des usines, des entrepôts et des bureaux.

Les économies en frais de transport et de déplacement qu'effectueraient les habitants de East Hants, qui n'auraient plus besoin de se rendre à Halifax par la vallée de l'Avon pour trouver du travail contribueraient à stimuler les entreprises de la région de East Hants.

La localité bénéficierait énormément de ce projet, qui lui permettrait de réduire quelque peu l'assistance sociale et de percevoir plus d'impôts.

Tous ces avantages découleraient de l'exécution de cet important projet. Je suis sûr que notre déclaration vous sera utile dans vos efforts.

Le président: Merci beaucoup.

M. MacDuffie: Il y a beaucoup d'autres facteurs qui entrent en jeu, comme le tourisme. Le tourisme est considéré comme la seconde industrie la plus importante au Canada. Nous avons une magnifique région, comme on peut le voir sur la carte. Les touristes aiment s'y rendre. Nous avons les plus fortes variations de marée au monde, soit 53 pieds en moyenne.

Si la route de la baie de Fundy devenait une réalité, comme nous l'espérons, notre contribution en Nouvelle-Écosse—le passage de la rivière Shubenacadie dans la région de Maitland-Princeport—se chiffrerait à 95 p. 100 de la contribution de la Nouvelle-Écosse pour la route de la baie de Fundy.

Il y a ici MM. Murphy, Johnston et le député de la région. Ils pourraient peut-être ajouter quelques observations; si vous avez des questions à poser, nous tâcherons d'y répondre.

Le président: Monsieur McCleave.

M. McCleave: Monsieur le président, lorsqu'on nous a montré la carte, l'ouest était dirigé vers le nord et l'est vers le sud, ce qui a pu entraîner une certaine confusion. Monsieur MacDuffie, vous voulez sans doute montrer qu'il serait normal que la route de la baie de Fundy longe l'extrémité nord-ouest de la Nouvelle-Écosse.

Deuxièmement, vous prétendez que lorsque l'aménagement hydroélectrique de la Baie de Fundy sera terminé, la route de Truro à Windsor deviendra une voie naturelle d'ache-

[*Text*]

Windsor would be a natural way to bring material in for the development of the Bay of Fundy power. Am I correct in that?

Mr. MacDuffie: Yes, sir.

Mr. McCleave: You have not argued this, but would not part of your argument be that if the Trans-Canada Highway system were to be developed—a secondary highway system—this would be part of that as well? That is, to go east-west in Nova Scotia rather than the trail from Cape Breton Island through to New Brunswick. Am I right in that?

Mr. MacDuffie: Yes.

Mr. McCleave: For the benefit of the members who are not familiar with this area, when you speak about a crossing you do not commit yourself to either a causeway or bridge, but leave that point to be decided later on.

Mr. MacDuffie: Yes; I am glad you brought that out.

Mr. McCleave: You speak about tourism. Could you tell the members of Parliament not familiar with the area about the fact that Maitland, which would be near one side of the crossing, was once the site of the most developed shipbuilding industry in Canada and the world.

Mr. MacDuffie: Yes sir, I would like to tell them that. The Township of Maitland, in the days of the wooden shipbuilding industry, was one of the most industrious areas in Nova Scotia. The largest sailing ship that was built in Canada, the *W. D. Lawrence,* was constructed right near the mouth of Shubenacadie River. A cairn has been erected there in commemoration of that, and the province has bought the Laurence homestead, which is to be known as the Lawrence House, a museum commemorating the days of wooden shipbuilding.

Mr. McCleave: Finally, Mr. MacDuffie, we have heard a lot in this Committee and in Parliament about a link between the Annapolis Valley and New Brunswick through Digby and Saint John, but would this not also provide a link between the Annapolis Valley and the eastern part of New Brunswick, namely the Moncton area, by means of cutting across northwestern Nova Scotia?

Mr. MacDuffie: It would; it would cut the mileage down considerably. It would cut approximately 50 miles off the distance now travelled.

[*Interpretation*]

minement des matériaux pour le développe ment hydroélectrique de la Baie de Fundy.

M. MacDuffie: C'est juste.

M. McCleave: Bien que vous ne l'ayez pa dit expressément, n'êtes-vous pas d'avis qu si le réseau de la Trans-canadienne était éte du—un second réseau d'autoroutes—ce résea pourrait être compris dans votre projet? L'o pourrait traverser la Nouvelle-Écosse d'est e ouest plutôt que de suivre l'île du Cap-Breto par le Nouveau-Brunswick. Ai-je raison?

M. MacDuffie: Oui.

M. McCleave: Pour les députés qui ne co naissent pas cette région, précisons que p passage nous n'entendons pas nécessaireme une chaussée, ou bien un pont, mais que no réservons la décision pour plus tard.

M. MacDuffie: Je suis heureux que vous e ayez parlé.

M. McCleave: Vous parlez du tourism pourriez-vous dire aux députés qui ne co naissent pas cette région, que Maitland, q serait près du passage, était autrefois le cha tier naval le plus important du Canada même du monde.

M. MacDuffie: Je le leur dirai. Le canton Maitland, à l'époque où l'on construisait d navires en bois, était l'une des régions l plus industrieuses de la Nouvelle-Écosse. l plus gros navire qui ait été fabriqué Canada, le *W. D. Lawrence,* a été constru près de l'embouchure de la rivière Shuben cadie. Un monument commémoratif a é édifié à cet endroit et la province a récupé le *W. D. Lawrence,* qui deviendra le *La rence House,* un musée destiné à commémor l'époque où les navires étaient en bois.

M. McCleave: On a beaucoup parlé, au se du Comité et au Parlement, de relier la vall d'Annapolis et le Nouveau-Brunswick, p Digby et Saint-Jean; cela ne permettrait pas également de relier la vallée d'Annapo à la partie est du Nouveau-Brunswic c'est-à-dire la région de Moncton, en passa par le nord-ouest de la Nouvelle-Écosse?

M. MacDuffie: Oui; cela réduirait considér blement la distance, de cinquante mill environ.

[*Texte*]

Mr. McCleave: Mr. Chairman, I realize I m here perhaps on sufferance because I am ot a regular member of the Committee, but ay I just make a twenty-second observation hat if the members in dealing with this ould look at Volume II of the Atlantic Provnces Transportation Study, page iii, where it eals with the development of a highway sysem in Nova Scotia and page 74 I think they ould have a greater appreciation of what Ir. MacDuffie and his group in dealing with he Shubenacadie River Crossing are trying o convey to the Committee. Thank you very uch.

The Chairman: Mr. Perrault?

Mr. Perrault: Mr. MacDuffie, this is an xcellent brief. During this tour a number of odies have suggested a number of projects, ncluding bridges and highways and that kind f thing, and they have asked for federal overnment financing of these projects. Under erms of Confederation roads and bridges vere established as a provincial responsibility nd nowhere in this brief is there the suggesion that there is a clear national benefit to e derived from this crossing, meritorious as t is.

It has been suggested in part that the rans-Canada Highway could possibly be reouted. Could you provide some justification or the federal government rather than the rovincial government to build this bridge? hat is my first question.

Mr. MacDuffie: Sir, I do not think in the irst place we are asking the federal governnent to build it in its entirety. We are asking he federal government to share the cost.

Mr. Perrault: What percentage would that e?

Mr. MacDuffie: Fifty per cent.

Mr. Perrault: Would the provincial governnent assume the other portion?

Mr. MacDuffie: Yes; I understand that the rovincial government would.

Mr. Perrault: That, in effect, is the Transanada Highway formula, is it not? Fifty per ent of two lanes; is that right?

Mr. MacDuffie: I suppose so, yes.

Mr. Perrault: That was the extent of my uery. I think many excellent ideas have een advanced in this brief. Just attempting o establish the national priority, did the tlantic Development Board establish this roject in its list of priorities?

[*Interprétation*]

M. McCleave: Monsieur le président, je sais que je suis ici par tolérance, car je ne suis pas membre régulier du Comité, mais j'aimerais faire une brève observation; les députés pourront consulter le volume 2 de l'étude sur les transports dans les provinces maritimes, page iii, où l'on traite de l'aménagement d'un réseau routier en Nouvelle-Écosse, et également la page 74; je pense qu'ils comprendront mieux ce que veulent dire M. MacDuffie et son groupe, au sujet du passage de la rivière Shubenacadie. Merci beaucoup.

Le président: Monsieur Perrault?

M. Perrault: M. MacDuffie, voilà un excellent mémoire. Au cours de la tournée, un certain nombre d'organismes nous ont présenté certains projets, dont la construction de ponts et de routes; ils ont demandé au gouvernement fédéral de financer ces projets. Aux termes du pacte confédératif, les routes et les ponts ont été confiés à la compétence des provinces, et ce mémoire n'a pas démontré les avantages que le pays pourrait retirer de ce projet, en dépit de son mérite.

On a proposé par ailleurs que la Transcanadienne soit restructurée. Pouvez-vous justifier une initiative fédérale plutôt que provinciale en ce qui concerne la construction du pont? C'est ma première question.

M. MacDuffie: Nous n'avons pas demandé au gouvernement fédéral de se charger entièrement de la construction. Nous demandons au gouvernement fédéral de partager les frais.

M. Perrault: Quel pourcentage?

M. McDuffie: Cinquante pour cent.

M. Perrault: Est-ce que le gouvernement provincial assumerait le reste?

M. MacDuffie: Je pense que oui.

M. Perrault: Alors, il s'agit de la même formule que pour la route transcanadienne, n'est-ce pas? Moitié moitié des frais.

M. MacDuffie: J'imagine, oui!

M. Perrault: C'est tout ce que je voulais savoir. Je trouve qu'on a fait valoir de bonnes idées dans ce mémoire, mais pour ce qui est de déterminer un ordre de priorité national, est-ce que l'Office d'expansion économique de la région atlantique y avait inclus ce projet?

[*Text*]

Mr. MacDuffie: The Atlantic Development Board was consulted and asked for support through the Department of Industry, Trade and Commerce. I have a letter from the Minister of Industry, Trade and Commerce stating that the Atlantic Development Board at that time did not see the river crossing as a cost-sharing project in itself, but the Department took from that that if the crossing were tied in with a highway project the Atlantic Development Board would see it in a different light.

Mr. Perrault: Yes; made part of the Trans-Canada Highway system.

Mr. MacDuffie: This highway that we speak of, which you can see on the map, from Truro to Windsor is a highway that needs upgrading anyway, and I believe the province would tie it in with that in the hope of the federal department's helping to finance it to the extent of 50 per cent.

Mr. Perrault: My final question, Mr. Chairman, is: Do you have any firm commitment from the provincial government of Nova Scotia that they will assume 50 per cent of the cost of this if they have matching federal participation?

Mr. MacDuffie: I think we have. Our MLA, Mr. Ettinger, is here.

Mr. J. A. Ettinger (MLA, Hants East): I cannot speak for the Minister of Highways or for our Premier; therefore, I cannot give you that assurance.

The Chairman: Mr. Thomas?

Mr. Thomas (Moncton): As you know, in the past few years ARDA has supplied a good deal of assistance in reclamation of marshlands. We have had a great deal of assistance in the Petitcodiac tidal waters and the thought occurs to me that you could possibly apply for assistance on the same basis as the Petitcodiac River crossing which had the effect of reclaiming quite a bit of tidal land and protecting marshlands. Would that apply in your case?

Mr. MacDuffie: It would if the crossing were a causeway. As Mr. McCleave just stated a few minutes ago, we are not suggesting what kind of crossing.

Mr. Thomas (Moncton): But if you built a causeway you could probably qualify for assistance under ARDA for marshland reclamation.

[*Interpretation*]

M. MacDuffie: L'Office a été consulté, il a aussi sollicité un appui par l'intermédiaire du ministère du Commerce et de l'Industrie. J'ai ici une lettre du ministre du Commerce et de l'Industrie, où il est dit que l'Office, à ce moment-là, n'entrevoyait pas la construction du pont comme un programme à frais partagés, mais que le ministère présumait que si ce projet devait se réaliser en conjonction avec une grande route, l'Office verrait alors la chose d'un autre œil.

M. Perrault: En tant que partie intégrante du réseau transcanadien.

M. MacDuffie: Cette route de Truro à Windsor, qu'on peut voir sur la carte, a besoin d'être améliorée, de toute façon. Je pense alors que la province la relierait au réseau, avec l'espoir que le gouvernement fédéral aiderait à son financement dans la mesure de 50 p. 100.

M. Perrault: Une dernière question, monsieur le président: avez-vous obtenu de la part de la Nouvelle-Écosse l'engagement ferme qu'elle acquittera la moitié des frais si le gouvernement fédéral paie le reste?

M. MacDuffie: Je crois que oui. Le député provincial, M. Ettinger, est ici.

M. Ettinger (député de Hants-Est, Assemblée législative provinciale): Je ne saurais parler au nom du ministre de la Voirie, ni à celui de notre premier ministre; je ne peux donc vous donner cette assurance.

Le président: Monsieur Thomas.

M. Thomas (Moncton): Comme on le sait, l'ARDA a fourni passablement d'aide, ces dernières années, à la réclamation des terres marécageuses; notamment dans la région de Petitcodiac; il me semble que l'on pourrait peut-être demander de l'aide financière, selon la même formule que pour le projet du pont sur la rivière Petitcodiac, lequel a entraîné la réclamation d'une grande superficie. Est-ce que cela s'appliquerait dans l'autre cas?

M. MacDuffie. Oui, s'il s'agit bien d'une chaussée. Mais comme l'a dit M. Macleave, il y a quelques minutes, nous n'avons rien précisé à cet égard.

M. Thomas: Mais si vous construisiez une chaussée, vous pourriez probablement faire appel à l'ARDA, au titre du programme de réaménagement des terrains marécageux.

Texte]

Mr. MacDuffie: Mr. McCleave could answer iat question better than I.

Mr. McCleave: There is always a certain mount of juggling between the federal and ie provincial governments, but I think it can e stated that it could become a 50 per cent ontribution on either side, Mr. Chairman.

The Chairman: Mr. Trudel?

Mr. Trudel: Mr. Chairman, I believe Mr. IacDuffie stated in his presentation that this ould create a large reservoir of fresh water. assume by the same token that you would ave a dam, and a harbour built on top if it.

Mr. MacDuffie: Yes.

Mr. Trudel: Would this interfere with the avigation you have at present on the river?

Mr. MacDuffie: Of course, there is not any avigation on the river.

Mr. Trudel: This is what I wanted to find ut.

Mr. MacDuffie: There has not been any avigation on that river for many, many ears. All there ever has been in my lifetime ere some scows. They used to scow some mber down, but that has not been going on or 50 years any way.

Mr. Trudel: So it would not interfere ith the natural flow of navigation at the resent time.

Mr. MacDuffie: No.

Mr. Trudel: Thank you, Mr. Chairman.

The Chairman: Mr. Corbin?

Mr. Corbin: Mr. MacDuffie, I tried to find ut in your brief the answer to the question I m about to ask you. If a causeway were uilt there, would the advantages to agricul- ire be greater than to transportation? Which ould come first, in your mind?

Mr. MacDuffie: That is hard to say, but it ould be very beneficial in both ways. I ould say it would be about 50-50, agricul- ire and transportation. The brief will show iat from a survey that was conducted this rea would be fed from a crossing. This is the ost productive soil not only in Nova Scotia, ut I believe in the Maritimes.

The Chairman: Mr. Pringle?

Mr. Pringle: I have a supplementary, Mr. hairman. I do not know whether Mr. Mac- uffie is aware of the new Navigable Waters rotection Act which is at least in the report

[*Interprétation*]

M. MacDuffie: Je pense que monsieur McCleave pourrait répondre mieux que moi à cette question.

M. McCleave: Il y a toujours un peu de tergiversation, de part et d'autre, entre la province et le gouvernement fédéral, mais l'un et l'autre paieraient leur moitié, je pense.

Le président: Monsieur Trudel.

M. Trudel: Monsieur le président, je crois que M. MacDuffie a déclaré dans son mémoire qu'il se formerait, en l'occurence, un grand bassin d'eau douce. Je présume, par le fait même, qu'il y aura un barrage et les installations portuaires.

M. MacDuffie: Oui.

M. Trudel: Est-ce que cela nuirait au traffic maritime sur la rivière?

M. MacDuffie: Il n'y en a pas, voyons.

M. Trudel: Justement, c'est ce que je voulais savoir.

M. MacDuffie: Il n'y en a pas eu depuis bien des années, sauf, à ma connaissance, quelques petites barges qui s'employaient pour le transport du bois, mais déjà la chose ne se fait plus depuis cinquante ans.

M. Trudel: Alors, rien ne viendrait gêner le trafic sur la rivière, n'est-ce pas?

M. MacDuffie: Non.

M. Trudel: Merci, monsieur le président.

Le président: M. Corbin.

M. Corbin: J'ai essayé de trouver dans votre mémoire la réponse à la question que je vais vous poser. Si l'on construisait une chaussée, selon vous, est-ce que cela profiterait plus à l'agriculture qu'aux transports? Qui en bénéficierait le plus?

M. MacDuffie: C'est très difficile à dire, mais ce serait avantageux dans les deux sens. Je dirais moitié moitié, côté agriculture et côté transports. Selon l'étude dont il est fait mention dans le mémoire, la région bénéficierait d'une telle entreprise, car elle compte les sols les plus productifs, non seulement de la Nouvelle-Écosse, mais aussi des Maritimes.

Le président: Monsieur Pringle.

M. Pringle: Une question supplémentaire. Je ne sais pas si M. MacDuffie connait la nouvelle Loi sur la protection des eaux navigables au Canada, qui en est au moins à

[*Text*]

stage from this Committee. Its terms are now rather broad as it relates to navigable waters and I would suggest, although I would not want to say so for certain—I am not qualified—that you would definitely be damming or preventing navigation; you would be obstructing navigation.

You would require, of course, a permit from the federal government to proceed with your plan.

If you mail an application so to do, do you envisage opposition from anyone in the area relative to the dam? You may run into some fairly severe problems because of the new Navigable Waters Protection Act, and you may have very seriously to consider opposition that may arise from certain people in the area. This is probably something you should include in your further study. I merely bring it to your attention.

Mr. MacDuffie: The only opposition thus far has been from some game fishermen, even though the plan does allow for a fishway, as opposed to a causeway. But there has been no opposition to a crossing. They are very much in favour of a crossing, but they are opposed to a causeway.

The Chairman: Yes, Mr. McCleave?

Mr. McCleave: Mr. MacDuffie, the fact is that your plan calls for something to span the river, rather than for either definitely a causeway or a bridge. Therefore, the point does not really arise. Is that correct?

Mr. MacDuffie: That is right.

The Chairman: Are there any further questions, gentlemen?

Mr. J. A. Ettinger (M.L.A.): I am from the district where this bridge is expected to be.

I spoke to the Premier recently and he said he did make a statement on a cost-sharing basis but the exact sharing he would have to check from his records. He did make a statement that the province would share on a cost-sharing basis.

The Chairman: Thank you.

Gentlemen, this is the end of our questioning period. Yesterday I received a brief from the Surrette Battery Company. It is not on our agenda and I just wondered whether these gentlemen were here today?

[*Interpretation*]

l'étape du rapport dans notre comité, mais so libellé est assez large, en ce qui concerne l eaux navigables. Je ne saurais l'affirme avec certitude, car je ne suis pas compéten mais j'ai l'impression que vous feriez obstac ou nuiriez à la navigation.

Il faudrait, bien entendu, se procurer u permis auprès du gouvernement fédéral, l'on voulait mettre le projet à exécution.

Si vous en faites la demande, croyez-vou que des objections viendront des gens de l région, au sujet du barrage? J'ai l'impressio que vous auriez de graves problèmes vu l nouvelle Loi sur la protection des eaux nav gables. Il serait nécessaire d'étudier l'oppos tion que vous pourriez recevoir de la part d certaines personnes de la région. C'est proba blement quelque chose que vous pourrie recevoir de la part de certaines personnes d la région. C'est probablement quelque chos que vous devriez inclure dans votre prochain étude. Je vous en fais simplement part.

M. MacDuffie: La seule opposition que nou avons rencontrée jusqu'à maintenant vena de la part des pêcheurs sportifs, quoique l projet prévoit justement les aménagement voulus pour le poisson par opposition à un chaussée. Mais il n'y a pas eu d'opposition la traversée, au contraire on est bien e faveur de la traversée, mais on s'oppose à l chaussée.

Le président: Oui, M. McCleave.

M. McCleave: M. MacDuffie, le fait est qu votre projet demande quelque chose qui tra verse la rivière, plutôt que de demander un chaussée ou un pont. Alors, la question ne s pose pas vraiment. N'est-ce pas exact?

M. MacDuffie: Oui, c'est exact.

Le président: Y a-t-il d'autres question messieurs.

M. J. A. Ettinger (M.A.L.): Je viens juste ment de la région où le pont sera construi J'en ai récemment parlé au premier ministr et il m'a dit qu'il a fait une déclaration pou le partage des coûts mais quant au partag exact, il faudrait vérifier ces dossiers. Toute fois, il a déclaré que la province partagera les frais de la construction.

Le président: Je vous remercie, messieurs Voici la fin de la période des questions.

Messieurs, hier j'ai reçu un mémoire, mai je ne l'avais pas à l'ordre du jour alors j voulais savoir si les représentants de l *Surette Battery Company* se trouvent ici ce après-midi.

Texte]

Would you agree to our making this brief n appendix to the report of our proceedings?

Some hon. Members: Agreed.

The Chairman: This is the end of our meet-ıg for today. I want to thank everyone for ıeir kindness and patience.

[*Interprétation*]

Est-ce que vous êtes d'accord dans ce cas que le mémoire soit annexé à notre rapport?

Des voix: D'accord.

Le président: Messieurs, voilà la fin de notre réunion de cet après-midi. Je voudrais remercier tout le monde de votre complaisance et de votre patience.

APPENDIX "I"

SUBMISSION
to the
STANDING COMMITTEE
on
TRANSPORT AND COMMUNICATIONS
by
SYDNEY STEEL CORPORATION
SYDNEY, NOVA SCOTIA

1. The Sydney Steel Corporation appears before this committee to request an amendment in the Maritime Freight Rates Act to provide for a greater degree of assistance to enable the Sydney Steel Corporation to compete in the Central and Western Canadian market. In making this request it is necessary to set the scene as to the existence of Sydney Steel Corporation by relating the all too familiar details of the Oct. 13th, 1967 Hawker-Siddeley (Canada) Limited announcement.

2. On Oct. 13th, 1967 the Hawker-Siddeley (Canada) Limited gave notice that they were going to abandon the operations of the then known Sydney Works of the Dominion Steel & Coal Corporation. Among the reasons cited were the high cost of operations and the high cost of shipping their products into the market place. Among the ramification arising from this decision which faced the Province of Nova Scotia was the maintenance of the livelihood of the people of Cape Breton, and to a large extent the Province of Nova Scotia, and to some degree the Maritimes themselves. Without going into all the detail which went into the decision which was taken the Province of Nova Scotia undertook the establishment of a Crown Corporation known as the Sydney Steel Corporation to operate the former Sydney Works of the Dominion Steel & Coal Corporation. While definite progress has been made in the operation of the Sydney Steel Corporation it is still faced with major transportation problems in moving its products to market.

3. This is even more strongly indicated when one takes into consideration the very narrow product range which is produced at Sydney, Nova Scotia. This product range can be roughly stated as being (1) rails and rail accessories accounting for approximately 22% of our out-put (2) semi-finished steel being ingots, billets, blooms, and slabs which account for approximately 70% of our out-put (3) the reinforcing steel and nails which accounts for about 8%.

APPENDICE «I»

MÉMOIRE SOUMIS AU COMITÉ PERM
NENT DES
TRANSPORTS ET DES
COMMUNICATIONS
PAR

LA *SYDNEY STEEL CORPORATION*,
de SYDNEY (N.-É.)

1. *La Sydney Steel Corporation* se présen devant le Comité dans le but d'obtenir u modification de la Loi sur les taux de tran port des marchandises dans les Maritime qui lui permettrait de soutenir la concurren sur les marchés du Centre et de l'Ouest Canada. Il convient aussi de brosser u tableau de la situation de la société, en rel tant les détails par trop bien connus de déclaration faite par la *Hawker-Siddel (Canada) Limited* le 13 octobre 1967.

2. A cette date, la *Hawker-Siddeley (C nada) Limited* annonçait en effet qu'elle allé fermer ce qu'on appelait alors les ateliers Sydney de la *Dominion Steel & Coal Corp ration*. La société invoquait le coût d'exploit tion élevé et le coût onéreux d'expédition ses produits vers les marchés. Entre autr conséquences, cette décision plaçait la pr vince de Nouvelle-Écosse dans une situati délicate: comment assurer l'avenir d'abord la population du Cap-Breton, ensuite de province dans son ensemble et, dans une ce taine mesure, celui des provinces Maritime Nous vous épargnons tous les détails inh rents à cette décision, mais toujours est-il q la province de Nouvelle-Écosse décida créer une société de la Couronne portant nom de la *Sydney Steel Corporation* et charg d'exploiter les anciennes usines de Sydney la *Dominion Steel & Coal Corporation*.

Bien que la *Sydney Steel Corporation* a enregistré des progrès marquants dans s entreprise, elle connaît encore de grand difficultés pour ce qui est d'acheminer s produits vers les marchés.

3. Ces difficultés sont d'autant plus grand que nous manufacturons une gamme de pr duits très restreinte à Sydney (N.-É.). On pe dire *grosso modo* que cette production résume à (1) des rails et leurs accessoire représentant environ 22 p. 100 de notre pr duction (2) de l'acier semi-ouvré: lingots, bi lettes, brames et plaques, soit à peu près p. 100 de la production et (3) de l'acier d'a mature et des clous, représentant environ 8 100.

4. With respect to rails, by and large it is afe to say that these are sold on a F.O.B. ydney basis with very few exceptions and re carried by the Canadian National Rail-ays and connecting carriers on an own com-any service basis. That is to say, there is no eight rate as such paid for the movement of ese products. We nevertheless must bear e burden of O.C.S. (own company service) sts in selling our rails to the railways and re forced as a result to make allowances for ur geographical disability in relation to our mpetitor without any assistance under the laritime Freight Rates Act. Since we have to eet competition with the other major pro-ucer of rails, at Sault Saint Marie and the ct that a large portion of these rails are stined to Central and Western Canada, we e required to make an allowance in our ice to compensate for the differential in the stance to the final destination as compared ith the shorter distance from Sault Ste. arie, Ontario thus adding to our costs a gher figure than should be absorbed if the FRA were operative on this segment of our siness.

5. With respect to our semi-finished prod-ts which are sold primarily in the Montreal-ntrecoeur Area, the price at which this aterial is sold is set to an extremely rge degree by the competitiveness of off-ore steels. Despite this we must meet this mpetition in the face of our major Ontario mpetitor for these products at Hamilton. e feel that, while we are both in effect eeting an off-shore compeled price that we ould not be penalized to the extent of pay-g a freight rate in excess of that paid by is competitor in the Montreal-Contrecoeur rea. What we mean to say here is that the eight rate from Sydney, Nova Scotia to ntrecoeur, Quebec which will become $5.59 r net ton on March 5th as compared to the rrent rate from Hamilton to Contrecoeur of .14. The difference of 45c. per net ton comes an increased cost of production to us hen compared with the cost of production of is competitor. This statement presupposes at the actual costs of production, excluding eight, are constant, although we do feel that cause of the age of our mill at Sydney, va Scotia that this is probably not an accu-te one as the costs of production would obably favour this competitor.

6. Our reinforcing steel and nail business to the Canadian market place would repre-nt a total of about 8 per cent of our total oduction and while relatively speaking ight rates on these items have appeared to

4. En ce qui concerne les rails, on peut dire que, dans l'ensemble, ils sont vendus à Sydney sur une base franco à bord à quelques exceptions près et qu'ils sont transportés par les Chemins de fer nationaux et des transporteurs contractuels indépendants desservant le CN. Ce qui veut dire qu'il n'y a pas de frais de transport comme tels pour l'acheminement de ces produits. Nous devons néanmoins acquitter les frais de service lorsque nous vendons nos rails aux sociétés ferroviaires et, sans l'assistance fournie en vertu de la Loi sur les taux de transport dans les Maritimes, nous devons faire des remises car, compte tenu de notre situation géographique, nous ne sommes pas en mesure de soutenir la concurrence. Étant donné que nous devons faire face à la concurrence de l'autre grand fabricant de rails à Sault-Sainte-Marie, et que la majeure partie de ces rails sont vendus dans les régions du Centre et de l'Ouest, nous devons prévoir des remises afin de contrebalancer l'avantage que notre concurrent de Sault-Sainte-Marie a sur nous en fait de distance par rapport au point de destination final. En conséquence, faute de bénéficier de l'aide garantie par la Loi sur les taux de transport dans les Maritimes, nos coûts s'en trouvent considérablement accrus.

5. Quant aux produits semi-finis que nous vendons surtout dans la région de Montréal-Contrecœur, le prix auquel nous les vendons dépend dans une très large mesure des prix pratiqués par la concurrence étrangère. Malgré cela, nous devons soutenir la concurrence du plus grand fabricant ontarien, qui manufacture ces produits à Hamilton. Nous estimons que, bien que ce concurrent et nous-mêmes devions pratiquer ce prix appliqué ailleurs, il n'y a pas de raison que nous payions un taux de transport plus élevé que ne paie ce concurrent dans la région de Montréal-Contrecœur. En résumé, pour acheminer les produits de Sydney (N.-É.) à Contrecœur (P.Q.) il en coûtera $5.59 la tonne nette dès le 5 mars prochain, alors que de Hamilton à Contrecœur, il n'en coûte que $5.14. La différence de 45c. la tonne s'ajoute à notre coût de production, si l'on compare celui-ci à celui de notre concurrent. Ce qui donne à penser que le coût effectif de production, exclusion faite du transport, ne varie pas, bien que nous estimions que, vu la vétusté de notre aciérie de Sydney, ça ne soit pas tout à fait exact: notre concurrent étant favorisé sur ce plan.

6. Nous estimons que notre production d'acier d'armature et de clous vendue sur le marché canadien représente environ 8 p. 100 de notre production globale et, si les prix de transport de ces produits ont pu sembler rela-

be more in line than on our other products this has only been the result of the strongest negotiations with the carriers as it has been in the case of our semi-finished products.

7. A larger problem here is that the price on many of these items is set in the Montreal market place because of local producers of the same items who, in effect, have established an F.O.B. Montreal price which must be met by ourselves thus representing total absorption of all transportation charges.

8. The over-riding question in this submission is, if we need assistance to maintain ourselves in the market place and to provide some degree of stability to the local community how much further assistance is requested and how is it to be applied. We provide the following as the method by which this could be accomplished.

9. As our semi-finished steel represent by far the largest freight generating business which we have and we feel that a rate assistance of 45c per net ton is required, it is necessary to state this in the form of an increased amount of assistance under the Maritime Freight Rates Act. According to our calculations appended hereto (Appendix 1) this further assistance would require that the Maritime Freight Rates Act be amended to call for the assistance of the portion of the hall east of Levis and Diamond, Quebec to the extent of 62.96 per cent in lieu of the current 30 per cent. If this request were granted this would then put us on a freight parity basis with our major competitor located in Hamilton in delivery of steel to Contrecoeur.

10. Since there is no freight revenue generated on the movement of rails and for which very substantial dollar values are absorbed because of the distance differential in the construction of delivered prices it is felt that the extension of the requested amendment to the MFRA on this segment of our volume is necessary. The fact that a theoretical freight rate is used in setting these prices deprives Sydney Steel Corporation of the benefits of the MFRA. This should be corrected by permitting the railways to make a proper recapture of available MFRA funds to provide the Sydney Steel Corporation with the benefit of this act without compelling the railways to resort to published rates. This is advisable as deliveries are not as a rule made to specific centers but are allocated at various mileage points where they will be installed.
